Priority System, Intended Use Plan, Project Priority List and Response Document for Federal Fiscal Year 2014 (FFY2014) (including the Intended Use Plan for Superstorm Sandy CWSRF Financing)

- Clean Water Financing -

PROGRAM OVERVIEW

The Water Quality Act of 1987, which amended the federal Clean Water Act (CWA), required states to establish a Clean Water State Revolving Fund (CWSRF) program to qualify for federal capitalization grants. The CWSRF provides financial assistance for the construction and implementation of projects that help to protect, maintain and improve water quality. It is a self-perpetuating program, in that loan repayments are used to finance future projects.

Established in 1988, New Jersey's CWSRF program is included in the Environmental Infrastructure Financing Program (EIFP). The EIFP is a partnership between the New Jersey Department of Environmental Protection (Department) and the New Jersey Environmental Infrastructure Trust (Trust) providing low-interest loans for environmental infrastructure projects. The Department and the Trust also administer New Jersey's Drinking Water SRF (DWSRF) under the Safe Drinking Water Act, the priorities and policies for which are established in a separate Priority System document. Since 1988 the clean water and drinking water components of the EIFP have awarded more than $5.5 billion in loans throughout the State. As of August 15, 2014, 952 of the 1179 funded projects totaling more than $4.6 billion in construction costs have been completed, have initiated operations, and have been administratively closed out; 227 projects totaling slightly more than $1.1 billion in project costs are actively contracting or under construction.

On October 29, 2012, Superstorm Sandy made landfall in New Jersey which resulted in extensive flooding, power outages and other adverse impacts to infrastructure systems (including wastewater and stormwater conveyance and treatment facilities) throughout the State. Superstorm Sandy was the largest storm to hit the northeast U.S. in recorded history, knocking out power to millions and causing $70 billion in damage to eight states. In a continued effort to assist municipalities recover and rebuild, the Department of Environmental Protection (Department) in concert with the NJ Environmental Infrastructure Trust (Trust) have been working with other federal and State agencies to develop financial assistance programs to benefit those impacted by Superstorm Sandy and to

finance other infrastructure improvements needed to help protect, maintain and improve water quality.

The Department has completed the development of the Priority System, Intended Use Plan, Project Priority List and Response Document for FFY2014 and the Intended Use Plan for Superstorm Sandy CWSRF assistance made available through the Disaster Relief Appropriations Act. The Department made the proposals of these documents available for public review and comment. The Department will submit the "Priority System, Intended Use Plan, Project Priority List, and Response Document" to USEPA for its approval. The State's final Priority System document must be approved for the Department to be awarded the base and Sandy CWSRF capitalization grant from USEPA. The FFY2014 CWSRF capitalization grant is targeted to be awarded to the Department and available for loan awards to project sponsors beginning in September 2014, for use in the State's 2015 Financing Program (July 1, 2014 to June 30, 2015). The Priority System document is posted on the Department's web site at http://www.nj.gov/dep/dwq/cwpl.htm. In addition to the complete Priority System, Intended Use Plan, Project Priority List and Response Document, the web posting includes a project description and project ranking worksheet for each listed project.

INTENDED USE PLANS

USEPA requires the Department to develop Intended Use Plans (IUPs) to qualify for CWSRF capitalization grants to support the program and the project loans and to complete the application process for the Sandy CWSRF financing. This combined IUP provides information on funds available through the EIFP to provide financial assistance for clean water projects and identifies State policies governing loan awards.

Sandy Financing Programs

The Department and the Trust have developed 3 distinct financing programs that can help finance projects impacted by Superstorm Sandy and for non-impacted communities wishing to implement resiliency measures to protect wastewater and stormwater infrastructure.

1. Base DEP/Trust Financing Program – designed for facilities not directly impacted by Superstorm Sandy and interested in implementing resiliency measures or other improvements to their wastewater or stormwater conveyance or treatment facilities. Financing is generally in the form of a low-interest loan as low as one-quarter the market rate, with limited opportunities for principal forgiveness.

2. Sandy SRF Financing Program- a subset of the base financing program only available to project sponsors whose facilities were impacted by Superstorm Sandy and are implementing one or more of the purposes outlined in subsection 5. of the Sandy SRF Financing section below.

3. Disaster Relief Emergency Financing Program (DREFP)/FEMA Match Loan Program – Administered by the Trust and designed for project sponsors that are certain that FEMA will provide grant funding for a substantial portion of the overall project costs. It is expected that loans will only be offered to projects in this category since FEMA grant funding may be

jeopardized if the funding package includes a source that is considered federal funding (including Sandy SRF funding and new CWSRF allocations).

A. Base DEP/Trust Financing Program

Projects eligible for financing through the base DEP/Trust Financing Program include a wide variety of wastewater treatment, stormwater management and nonpoint source pollution abatement projects. Eligible applicants include local government units, including municipalities, counties, sewerage authorities, municipal utilities authorities, county improvement authorities and other subdivisions of government.

The SFY2015 Base Financing Program offers two loan packages as follows:

1. For projects eligible for **the principal forgiveness package** from the Barnegat Bay and CSO abatement reserves, 50% of the allowable project costs (up to $1M for CSOs) will be financed with a principal forgiveness loan, 25% of the allowable project costs through an interest-free loan and the remaining allowable project costs through a market-rate loan from the New Jersey Environmental Infrastructure Trust (Trust). If the total allowable costs (including the leveraged Trust portion) for a CSO project is greater than $2 million, then the remainder of the project costs will be covered by the Program's 2014 Financing Package described below.

2. For all new projects, **the 2014 Financing Package** includes an interest-free loan from the Department for up to 75% of the allowable project costs and a market-rate loan from the Trust for the remaining allowable costs.

Please note that loan terms for supplemental loans will be the same terms as were made for the original executed CWSRF loan with no provisions for principal forgiveness. Supplemental loan projects that received a 60% DEP/40% Trust package as a base loan qualify for a 75% DEP/25% Trust supplemental package.

All local government units that have a project or projects listed or eligible for listing on the FFY2014 Priority List were required to commit to the following schedule by October 7, 2013 to be considered for the SFY2015 Financing Program.

CWSRF Program Schedule (FFY14/SFY15)

Activity	Deadline
Commitment Letter (Letter of Intent) and Planning Documents	October 7, 2013
Design Documents and Loan Application	March 2, 2014

For the SFY 2015 Base DEP/Trust Financing Program, the Department established the following reserve funds:

- The Department reserved a maximum of $500,000 to provide principal forgiveness loans for communities to repair and/or replace sanitary and stormwater sewers that are identified as having leaks and cracks in the area of Wreck Pond.

- The Department reserved a maximum of $6M to provide principal forgiveness loans for up to 50% of the allowable project costs (not to exceed $1M per project sponsor) for Combined Sewer Overflow (CSO) abatement projects utilizing green practices (such as green roofs, rain gardens, porous pavement, and other activities that maintain and restore natural hydrology by infiltrating, evapotranspiring and harvesting and using stormwater). If there are insufficient requests from sponsors of CSO abatement projects utilizing green practices, the funds reserved would then be available to provide principal forgiveness loans to the more traditional (non-green) CSO abatement activities (such as CSO sewer rehabilitation and repair, solids/floatables controls, sewage treatment plant expansion for wet weather flows, etc.). Project priority is based on the project ranking methodology included in the FFY2014 Proposal which takes into consideration the water quality of the receiving waters and other factors.

- The Department reserved a maximum of $6M to provide principal forgiveness loans for up to 50% of the allowable project costs for stormwater and non-point source pollution management projects in the Barnegat Bay Watershed. If there are insufficient requests from sponsors of stormwater and non-point source pollution management projects in the Watershed, the funds reserved would then be available to provide principal forgiveness loans to sanitary sewer rehabilitation and repair projects, sewage treatment plant improvements and other wastewater treatment activities in the Watershed. Project priority is based on the project ranking methodology included in the FFY2014 Proposal.

- If there are insufficient applications to utilize the funds allocated to either of these reserves, the leftover funds may be reallocated to the other reserve or the base program as determined by the Department.

In addition, the Department reserved funds in a Green Project Reserve (GPR) equal to a minimum of 10 percent of the State's FFY2014 allocation, subject to federal requirements. The FFY2013 Appropriation to the CWSRF Program included language requiring states to use a minimum of 10 percent of their allocation to support green technologies and the establishment of a GPR may be required in FFY2014 as well. If the Department determines that there are insufficient applications or there are deficiencies in the application for projects eligible to be financed through the GPR, the Department may use the funds allocated to the GPR to finance other clean water projects in the SFY2015 Program.

The Department also established a $30 million "Brownfield Set-Aside" for the SFY2015 Financing Program be allocated to brownfield remediation projects in order of their ranking. In cases where the available Fund loan does not cover 75 percent of the allowable project costs, the Trust may finance the remaining allowable costs. Financing above and beyond the amount set-aside for such projects will be considered if monies are available after the need for funding of higher ranking projects during the funding cycle has been satisfied. Conversely, if any set-aside funds are not used up because of reduced demand for brownfield remediation loans, the leftover funds may be used to

finance projects listed on the Priority List that may otherwise not receive financing in the 2015 Program.

The FFY2014 Priority System maintains the requirement for projects involving publicly-owned brownfields projects. Project sponsors must pledge that the site on which the improvements occur will remain in public ownership for the term of the loan (typically 20-23 years). While the Financing Program will allow the public sponsor to sell the improved land to a private entity and use it for private purposes, the loans provided by the Department and the Trust to finance the improvements must be repaid in full upon the transfer of ownership. This requirement does not apply to conduit borrowers' projects, which by their nature, involve private developer(s) and private ownership interests.

Efforts are underway at the federal level to reauthorize the Clean Water Act. Loan repayments and a limited amount of State bond proceeds are available to address some clean water needs, but additional federal funding will be necessary to fully address the overall water quality improvement needs of the State.

B. Sandy SRF Financing Program

On January 23, 2013, the Disaster Relief Appropriations Act (DRAA) was approved by Congress and included in P.L. 113-2 which was signed by the President of the United States on January 29, 2013. The purpose of the DRAA was to provide additional funding to the State's Clean Water and Drinking Water SRF Programs to provide financial assistance to communities impacted by the Superstorm Sandy and for projects whose purpose is to reduce flood damage risk and vulnerability or to enhance resiliency to rapid hydrologic change or a natural disaster.

The DRAA and the USEPA Guidance contain the following provisions that impact the Sandy SRF Programs in New Jersey:

1. USEPA allotted $191,136,855 to New Jersey's Clean Water SRF and $38,189,086 to the Drinking Water SRF.

2. The State must provide a 20% match to the Sandy SRF monies. The Department is coordinating with the Department of Community Affairs' Community Development Block Grant (CDBG) program and the Board of Public Utilities' Clean Energy Program to meet this requirement. We are also evaluating alternative funding sources.

3. A minimum of 20%, and no more than 30%, of the SRF grant can be used for additional subsidization (or principal forgiveness loans (PFLs)).

4. The Sandy SRF monies must be expended within 24 months of obligation to the State (i.e, the award of the SRF capitalization grant) unless a waiver is granted by the federal Office of Management and Budget (OMB). USEPA is working with the states to seek a waiver from the 24-month spending limit and expects to have a waiver that would extend the limit 5-7 years.

5. The Sandy SRF assistance must be provided to facilities that were impacted by the Superstorm (including physical damage, loss of power, loss of mission-essential services,

etc.) and for projects that are otherwise SRF eligible and serve at least one of the following purposes:

- Reduces the likelihood of physical damage to a treatment works or drinking water system;
- Reduces a treatment works' or water system's susceptibility to physical damage or ancillary impacts caused by floods;
- Facilitates preparation for, adaptation to, or recovery from a sudden, unplanned change in the amount of and movement of water in proximity to a treatment works or water system; or,
- Facilitates preparation for, adaptation to, or recovery from climate change or any other type of natural disaster.

A complete listing of projects types that USEPA has determined are categorically eligible for Sandy CWSRF financing is included in Attachment 1 of the IUP. Eligible applicants include local government units, including municipalities, counties, sewerage authorities, municipal utilities authorities, county improvement authorities and other subdivisions of government. Projects will be eligible for funding through the Sandy CWSRF Program based on the project's rank on the Priority List, the amount of available funds and the project sponsor's ability to meet the deadlines below.

The Department and Trust are considering various Sandy CWSRF financing program options to offer the most attractive financing package to prospective borrowers. While the DRAA and USEPA allow up to 30% of the grant to be used for principal forgiveness loans, that percentage is diluted when the 20% State Match is added and when the Trust's 25% market-rate share is included.

For the vast majority of the projects expected to be financed through the Sandy CWSRF Program, it is anticipated that the Trust will provide a 25% share of the loan amount and that the Department will provide financing for 75% of the allowable project costs, **of which approximately 18-19% will be in the form of a principal forgiveness loan.**

Project sponsors were encouraged to make complete submittals as early as July 31, 2013 so that project approvals and the rebuilding process could begin as early as possible. The SFY15 project document submittal schedule for Sandy CWSRF funding was identical to the base program schedule-

Sandy CWSRF Program Schedule (FFY14/SFY15)

Activity	Deadline
Commitment Letter (Letter of Intent) and Planning Documents	October 7, 2013
Design Documents and Loan Application	March 2, 2014

To ensure that all projects ranked below the Sandy CWSRF fundable range have an opportunity to access to NJEIFP funding, the Department will grant priority status to approved projects that are

ranked below the fundable range in the Sandy CWSRF Program based on the date of project approval. As such, there was a strong incentive for applicants to submit necessary application related documents and secure approvals soon as possible. The Department has committed resources for the timely approval of all applications. Moreover, funding of such projects will be available immediately upon approval through either the Interim Financing Program or the SAIL Financing Program, further ensuring that such projects commence construction as soon as possible.

For the Sandy CWSRF Program, the Department established the following reserve funds:

- The Department reserved a maximum of $7.5M to provide financial assistance to communities to develop Asset Management Plans. The minimum requirements for eligibility will require an inventory and condition assessment within 2 years of scope approval and acceptance of a loan condition that the planning activities are reasonably expected to result in a capital project as per USEPA requirements. The financing package for asset management plan projects includes **a principal forgiveness loan for 30% of the allowable costs**, an interest-free loan for 45% of the costs and a Trust market-rate loan for 25%. Project priority would be based on the project ranking methodology included in the FFY2014 Proposal. Combined with the Trust contribution, the reserve can support up to $10M in Asset Management Plan development.

- The Department reserved a maximum of $15M to provide financial assistance to projects that provide auxiliary power to a facility that was impacted by Superstorm Sandy. Financing from this reserve will be in the form of a 25% market rate loan, and a loan from the Department for 75% of the allowable project costs, **of which approximately 18-19% will be in the form of a principal forgiveness loan.** Project priority is based on the project ranking methodology included in the FFY2014 Proposal. Combined with the Trust contribution, the reserve can support up to $20M in auxiliary power projects.

- The Department reserved a maximum of $3.75M to provide financial assistance to small system projects (serving populations less than or equal to 10,000) that provide auxiliary power to a facility that was impacted by Superstorm Sandy. Financing from this reserve will be in the form of a 25% market rate loan, and a loan from the Department for 75% of the allowable project costs, **of which approximately 18-19% will be in the form of a principal forgiveness loan.** Project priority for the small system power reserve is based on population served with smaller population prioritized over larger populations. Combined with the Trust contribution, the reserve can support up to $5M in auxiliary power projects for small systems.

- If there are insufficient applications to utilize the funds allocated to these Sandy CWSRF reserves identified above, the leftover funds may be reallocated to the other reserves or for other eligible Sandy CWSRF projects as determined by the Department.

In addition to the above set-asides, the Department is proposing to reserve 4% of the Sandy CWSRF allotment for program administration and reserving an amount equal to the 20% State Match to ensure that the source funding the State Match is used in a manner compatible with its source of origination.

C. DREFP/FEMA Match Loan Program

State Legislation authorized the establishment of a Disaster Recovery Emergency Loan Fund (DRELF). The DRELF is capitalized with Trust funds (including operating funds) and have the ability to obtain a line-of-credit or similar financial instrument to make financing available.

Projects eligible for financing through the Trust-administered Disaster Relief Emergency Financing Program (DREFP) includes a wide variety of wastewater treatment, stormwater management and nonpoint source pollution abatement projects that were impacted by Superstorm Sandy and are certain that FEMA will provide grant funding for a substantial portion of the overall project costs. The DREFP is designed to be a short-term bridge loan program to help facilitate the cash flow needs of municipalities and authorities in anticipation of reimbursement through the FEMA grant program to pay for construction costs related to the repair of infrastructure damaged during Sandy and projects to improve infrastructure resiliency in future disasters.

Eligible applicants include local government units, including municipalities, counties, sewerage authorities, municipal utilities authorities, county improvement authorities and other subdivisions of government.

The DREFP will significantly broaden the options available for financing such projects by providing funding opportunities to projects otherwise unable to secure financing and expanding funding sources through low interest loans for terms up to 3 fiscal years.

Projects will be financed through the DREFP on a first-approved, first-funded basis provided the project satisfies the requirements to be classified as a DREFP project under the proposed legislation and the Trust Board Resolution approved June 13, 2013, which include:

1. The Commissioner of the Department of Environmental Protection has determined and certified in writing that the Project is necessary and appropriate to (a) repair damage to a wastewater treatment system or water supply facility directly arising from an act of terrorism, seismic activity or weather conditions that occurred within the prior three State Fiscal Years and that gave rise to a declaration by the Governor of the State (the "Governor") of a state of emergency, provided that such wastewater treatment system or water supply facility is located in a county included in the Governor's state of emergency declaration, or (b) mitigate the risk of future damage to a wastewater treatment system or water supply facility from an act of terrorism, seismic activity or weather conditions comparable in scope and severity to an act of terrorism, seismic activity or weather conditions that occurred within the prior three State Fiscal Years and that gave rise to a declaration by the Governor of a state of emergency, provided that such wastewater treatment system or water supply facility is located in a county included in the Governor's state of emergency declaration;
2. The Project is listed on the Disaster Relief Emergency Financing Program Eligibility List for funding in the forthcoming State Fiscal Year submitted to the Legislature in a form provided by the Commissioner of the NJDEP;
3. The proposed Borrower has submitted a complete application for the Project to the Trust; and
4. The Board of Directors of the Trust has certified the Project.

Additional CWSRF Provisions

Programmatic requirements imposed by the Water Quality Act of 1987 include 1 through 5 below.

1. The schedule of state capitalization grant payments, jointly agreed upon by the Administrator of the EPA and each state, is based upon the state's IUP.
2. States are required to deposit in the CWSRF, from state monies, an amount equal to at least 20 percent of the total amount of all capitalization grants made to the state.
3. The fund created with federal capitalization grants can only be used to provide assistance for (a) the construction of publicly owned treatment works, (b) the implementation of a NPS (nonpoint source) management program, which includes construction of stormwater/NPS management facilities, and (c) the development and implementation of an estuary conservation and management plan. Although CWSRF loans may only be provided for publicly-owned wastewater treatment and stormwater sewer systems, if a government unit assumes ownership of a privately-owned system, a loan may be provided under the authority of section 603(c) of the federal CWA. A state may also deem the public ownership requirement as being met for small/on-site systems if adequate inspections and operations are ensured through the establishment of a septic management district or use of service easements.
4. Monies in the CWSRF may be used to provide loans at or below market interest rate, for terms not greater than 20 years (after completion of construction). Repayments must begin no later than one year after completion of the project and must be credited to the CWSRF (principal and interest) for Title VI purposes. The recipient of a loan must establish a dedicated source of repayments. The CWA also authorized the use of federal CWSRF monies to refinance local debt obligations, provide guarantees, or purchase insurance.
5. Prior to and including FFY94, states were required to reserve the greater of $100,000 or one percent of their annual allotment for the development and implementation of NPS management programs. This reserve may be re-enacted or otherwise modified for FFY2014 as a result of reauthorization of the CWA or subsequent federal guidance.

The Table below represents estimated amounts of the available sources and anticipated uses for the Clean Water component of the Environmental Infrastructure Financing Program:

SFY2014 Financing Program

Anticipated Sources:

Funds Available from prior years	$314.0M
Repayments from prior years' loans	$80.0M
FY2013 CWSRF Grant	$50.0M
Subtotal	$444.0M
Anticipated Trust Share:	$148.0M
Total Program Sources:	**$592.0M**

Anticipated Uses:

Projects to be financed in the SFY2014 Program	$194.0M
IFP Uses	$150.0M
Total	$344.0M

Projected Amount available for SFY2016 CWSRF Program: $248.0M

SFY2015 Financing Program

Anticipated Sources:

Funds Available from prior years	$248.0M
Repayments from prior years' loans	$ 80.0M
FY2014 CWSRF Grant (Projected)	$ 50.0M
Total	$378.0M

Anticipated Trust Share: $126.0M

Total Program Sources: $504.0M

Anticipated Uses:

Projects to be Financed in the SFY2015 Program	$350.0M
Trust Debt Service Reserve	$ 0.0M
Total	$350.0M

Projected Balance for SFY2016 CWSRF Program: $154.0M

SFY2016 Financing Program

Anticipated Sources:

Funds Available from prior years	$154.0M
Repayments from prior years' loans	$ 80.0M
FY2015 CWSRF Grant (Projected)	$ 50.0M
Total	$284.0M

Anticipated Trust Share: $94.0M

Total Program Sources: $378.0M

Sandy SRF Financing Program

Anticipated Sources:

Sandy CWSRF Grant	$191,136,855

Sandy CWSRF State Match	$38,227,371
Subtotal	$229,364,226
Anticipated Trust Share:	approx. $73.8M
Total Program Sources:	**as much as 303.1M**

Anticipated Uses:

Program Administration	$7,644,238
Asset Management Reserve	$10,000,000
Auxiliary Power	$20,000,000
Auxiliary Power (Small Systems)	$5,000,000
Other Projects to be Financed thru Sandy CWSRF Program	as much as $260.5M

A. Financial Relationships between the CWSRF and the DWSRF

The Safe Drinking Water Act Amendments of 1996 offer states the flexibility to meet the funding needs for drinking water and wastewater facilities by transferring funds from one SRF program to the other. Annually, an amount up to 33% of the Drinking Water SRF Capitalization Grant may be transferred from the CWSRF program to the DWSRF program, or vice versa. The USEPA has issued guidance that would allow utilization of transfer credits and transfer of funds on a net basis (i.e., funds could be moved in both directions), provided that the final transferred amount does not exceed the authorized ceiling.

The CWSRF program evaluates funds available to determine if adequate monies are available to be utilized for clean water projects in the current fiscal year. In addition, the type and number of DWSRF projects are reviewed and a determination is made on the need of the funds to be transferred from the CWSRF loan repayments to the DWSRF accounts or vice-versa.

The Department fully supports efforts to enact legislation to continue to allow the transfer of funds and the transfer provision has been extended by the USEPA. If approved, the Department reserves the right to transfer funds from the CWSRF to the DWSRF (or vice-versa) each fiscal year to the extent allowed by law. The Department will annually evaluate the monies available in each SRF program and whether there is a need to transfer funds. While all projects that meet the program requirements and are ready to proceed have been able to receive a CWSRF or DWSRF loan in the past, the ability of the programs to finance all qualifying projects in the future is uncertain because of reduced funding.

In addition to the potential transfer of funds between the CWSRF and DWSRF, the Department is continuing its policy to cross-collateralize the DWSRF with the CWSRF. This feature results in significant savings to project sponsors and, in particular, the drinking water project sponsors since

there is a large source of revenue available to cover possible loan defaults. Under the EPA-approved procedures associated with cross-collateralization, a temporary transfer of funds between the two SRFs may occur as may be necessary to cover the default of a loan repayment or other financial obligation. The Department and the Trust would take steps to collect any obligations resulting from a loan default and reimburse the appropriate drinking water or clean water account.

B. Planning/Design Requirements

The planning and design documents for clean water projects must consist of:

1. A complete project report.
2. The environmental assessment report (level 1, level 2 or level 3, as determined by the Department). For those projects that have the potential to facilitate growth or cause significant adverse environmental impacts, the Department will thoroughly evaluate the planning submitted by the project sponsor which may include but not be limited to the water quality/quantity impacts, location in the State, impacts to riparian corridors, the existing pollution control needs, assessment of the resulting environment, detailed assessment of proposed alternatives and cost-effectiveness of the proposal. The Department's funding decisions will take into account the project's growth potential, the project's location and the project's aggregate impacts as determined through such evaluations.
3. Complete cultural resources survey documentation.
4. Long-term sludge management plan for projects involving a treatment plant upgrade or expansion.
5. Documentation of completed public participation activities.
6. The results of preliminary coordination activities with lead agencies regarding environmental and permit concerns.
7. Plans and specifications for the project, including appropriate environmental mitigation/restoration components.
8. For open space land acquisition projects, an evaluation of the land to be acquired, including the water quality benefits to be derived from the proposed land purchase.
9. For any stormmater/NPS management project, the water quality benefits to be achieved by the proposed work.
10. Documentation that all applicable permits and approvals to implement the project have been received from all applicable federal, State and County agencies.

Projects with unacceptable planning documentation and those lacking the required construction permits and approvals will be bypassed (removed from funding consideration in the current funding cycle). If the local government unit does not commit to the document submittal schedule, the Department interprets this as a decision to not pursue funding in FFY2014/SFY2015 and will result in a "BEYOND 14" designation under the estimated State certification date column on the Priority List.

C. Loan Awards

Loan awards for new projects will be made in SFY2015 for up to 100 percent of the allowable project costs to cover the low bid building costs and other allowable project costs that are identified in the program rules at N.J.A.C. 7:22-3, 4, and 5. The loan term will generally be 20 years but cannot exceed the useful life of the facility. The initial loan amount will be limited to the certified project cost, which may reflect (1) the estimated allowable project cost based on the project sponsor's loan application and included in the legislative appropriation or (2) the allowable project costs based on the actual low bid building cost, whichever is less. For projects financed in prior years, the adjustment to provide funding based on the low bid building cost will be made only after all project-related contracts have been awarded.

Adjustments to provide warranted loan increases for differing site conditions will be made only after all allowable project costs have been incurred. Consideration will be given to providing warranted loan increases, subject to the Department's and the Trust's approval, legislative approval in the form of an appropriations bill(s) providing such monies, and the availability of funds. Any dollar changes in cost estimates for projects on the Priority List may result in the Department requesting the municipality to provide a third-party concurrence on the cost change. Should cost underruns occur after a low bid building cost adjustment and the completion of construction, budget line item changes may be approved for allowable cost overruns. In these cases, administrative/legal/fiscal costs will not be subject to the three percent limit as specified in the rules. A greater amount could be approved should sufficient funds remain and if sufficient justification and documentation for the higher costs are submitted and approved. If a recipient receives Department approval to reduce the project scope through the elimination of a contract (or portion thereof), the eligible project cost (and therefore the financial assistance amount) will be reduced through the Department's and the Trust's "deobligation". The amount to be deobligated will be equal to the estimated cost of the scope of work included in the original loan award.

Local government units are required to meet the technical, administrative, and environmental provisions of the rules of the Department and the Trust (N.J.A.C. 7:22-3, 4, 5, 8, 9, and 10). Disbursement and loan repayment provisions must also be consistent with the rules.

Planning and design costs may be fully reimbursable and eligible for financial assistance from the EIFP at the time of loan award. Alternatively, a project sponsor can opt for an allowance to assist in defraying planning and design expenses. If State funding for planning and design costs has otherwise been awarded for the same project scope (such as through the Sewage Infrastructure Improvement Act Grants Program), the planning and design costs eligible for EIFP financing would be reduced accordingly.

Financial assistance will only be awarded to a distinct project segment that will result, in itself, in an operable treatment works (i.e., not relying on award of funds for additional portions of the project). Financial assistance awards will not be made to projects that are under an enforcement action unless a federal or State court-sanctioned order, a State administrative order or an administrative consent order specifying a compliance schedule has been established. A copy of the enforcement order will be required at the time of submittal of the project application.

All wastewater treatment projects must be sized in accordance with a cost-effective analysis to accommodate existing needs as well as 20-year reserve capacity. Historically, the recipient's financial assistance from the Department was limited to the cost of the project with a capacity based upon flow records and flows anticipated prior to the date of initiation of operation as established in the Fund loan agreement. In order to advance the State's smart growth initiatives, the Department and the Trust have adopted amendments to the Financing Program rule that allows the Department to fully fund its share of project costs related to reserve capacity for projects that serve areas designated as Urban Centers and Complexes.

Amendments to the Trust's enabling legislation authorized the establishment of a short-term financing program. CWSRF loan repayments have been channeled to the Trust for this purpose in the past. The interim loans provide funds to project sponsors that are eligible for financing in the forthcoming fiscal year to cover project costs anticipated to be incurred prior to the award of the long-term loans from the Department and the Trust, which are typically awarded in March or April. The Trust, in consultation with the Department, adopted amendments to the Trust's rule to make the short-term financing option available to prospective borrowers that receive preaward approval and project certification from the Department and the Trust.

D. State Strategic Plan and the Financing Program

The State Strategic Plan focuses the Department and all other agencies of New Jersey State government on four goals:

- Targeted Economic Growth
- Effective Planning for Vibrant Regions
- Preservation and Enhancement of Critical State Resources
- Tactical Alignment of Government

To advance efforts to incorporate these goals into State policies and financing programs, the Department continues to make low-cost financing available for the following project types, locations and/or designations:

Urban Centers and Urban Complexes – Wastewater treatment and stormwater management projects that serve Urban Centers and Urban Complexes designated by the State Planning Commission are considered Smart Growth. To date, the State Planning Commission has designated Asbury Park, Atlantic City, Camden, Elizabeth, Jersey City, New Brunswick, Newark, Paterson and Trenton as Urban Centers and one Urban Complex, the Hudson County Urban Complex, which includes the following municipalities: Bayonne, East Newark, Guttenberg, Harrison, Hoboken, Jersey City, Kearny, North Bergen, Secaucus, Union, Weehawken, and West New York.

Combined Sewer Overflow Abatement – Combined sewer systems (CSSs) are wastewater collection systems designed to carry sanitary sewage, industrial and commercial wastewater, and storm water runoff in a single system of pipes to a publicly owned treatment works (POTW). During dry weather, all flow (composed primarily of sanitary sewage and industrial/commercial wastewater) is conveyed to the POTW. During periods of rainfall or snow melt, the total wastewater flows entering the collection system can exceed the capacity of the system or the treatment facility. Under such conditions, CSSs are designed to overflow at predetermined CSO

points and result in discharges excess wastewater flows directly to surface water bodies such as rivers, estuaries, and coastal waters.

Because CSOs discharges include raw sewage, they contain a combination of untreated human waste and pollutants discharged by commercial and industrial establishments. CSOs also have a significant storm water component that includes pollutants from urban and rural runoff. These pathogens, solids, and toxic pollutants may be discharged directly to the waters of the state during wet weather events. Combined sewer overflows are a human health concern because they can create the potential for exposure to disease-causing pathogens, including protozoa, bacteria, and viruses. Exposure to CSO contaminants through swimming or other contact can lead to infectious diseases such as hepatitis, gastrointestinal disorders, dysentery, and swimmer's ear infection. Other forms of bacteria can cause typhoid, cholera, and dysentery. Human health also can be impacted from ingesting fish or shellfish contaminated by CSO discharges.

All projects that contribute to the correction of combined sewer systems and discharge points including elimination, relocation or consolidation of discharge points and construction of facilities or purchase of equipment to remove solids and floatables are eligible.

On-Site Rehabilitation of Septic Systems - Under the Financing Program, a local government unit may apply for funding to upgrade or replace failing on-site systems. The nature and extent of failures would be documented during planning and a Septic Management District (SMD) would have to be established in order to assure on-going operation and maintenance (typically, this involves implementing a system to assure regular, usually once every three years, pump out and/or inspection of the on-site systems). While some SMDs have formed in New Jersey (so there is institutional precedent on which to advance this option), none have tackled the costly job of system rehabilitation as yet.

Designated Brownfields Development Areas - These are areas that have applied for and have received formal designation by the Department under the BDA Initiative. Wastewater treatment and stormwater management projects that are located in DEP designated BDAs are eligible. The sites within the BDA will be handled by a single project manager, who will coordinate with partnering state agencies to direct targeted technical and financial assistance to sites within the BDA neighborhoods.

Currently, there are twenty-three BDAs (www.state.nj.us/dep/srp/brownsfields/bda/bdalist.htm) in New Jersey and they are as follows: Cramer Hill BDA in Camden, Camden County; North Camden BDA in Camden, Camden County; Monument/Magic Marker BDA in Trenton, Mercer County; Elizabethport BDA in Elizabeth, Union County; Milltown Ford Avenue BDA in Milltown Borough, Middlesex County; Route 73 South BDA in Palmyra Borough, Burlington County; Coit Street BDA in Irvington, Essex County; Lister Avenue BDA in Newark, Essex County; and Pennsauken Waterfront in Pennsauken Township, Camden; Waterfront South in Camden, Camden County; Bayonne Route 440 BDA in Bayonne, Hudson County; Harrison Waterfront BDA in Harrison, Hudson County; Assunpink Greenway BDA in Trenton, Mercer County; Keyport Waterfront BDA in Keyport Borough, Monmouth County; Great Falls Historic Distric BDA in Paterson, Passaic County; West Lake Avenue in Neptune Township; Central Valley in Orange/West Orange; Salem Industrial Green way in Salem City; Bellmawr Landfills in Bellmawr; Chrome Waterfront in Carteret; Grand Jersey in Jersey City; and North Outerbridge Crossing in

Perth Amboy. It is anticipated that the municipality will most often serve as the loan recipient under this option to effect remediation at multiple sites in the designated BDA, although county improvement authorities or similar entities could also participate and provide assistance in this environmental improvement effort.

Designated Transit Villages - The New Jersey Department of Transportation (NJDOT) and NJ TRANSIT spearhead a multi-agency Smart Growth partnership known as the Transit Village Initiative. The Transit Village Initiative helps to redevelop and revitalize communities around transit facilities to make them an appealing choice for people to live, work and play, thereby reducing reliance on the automobile. The Transit Village Initiative is an excellent model for Smart Growth because it encourages growth in New Jersey where infrastructure and public transit already exist. Wastewater treatment and stormwater infrastructure needed to address improvements in Transit Village areas are eligible.

Studies have shown that an increase in residential housing options within walking distance of a transit facility, typically a one quarter to one half mile radius, does more to increase transit ridership than any other type of development. Therefore, it is a goal of the Transit Village Initiative to bring more housing, more businesses and more people into communities with transit facilities.

Municipalities that have been designated a Transit Village by the inter-agency Transit Village Task Force must have an adopted land-use strategy for achieving compact, transit-supportive, mixed-use development within walking distance of transit facilities. This can be in the form of a redevelopment plan, zoning ordinance, master plan or overlay zone. There are currently 17 designated Transit Villages. They are Pleasantville (1999), Morristown (1999), Rutherford (1999), South Amboy (1999), South Orange (1999), Riverside (2001), Rahway (2002), Metuchen (2003), Belmar (2003), Bloomfield (2003), Bound Brook (2003), Collingswood (2003), Cranford (2003). Matawan (2003), New Brunswick (2005), Journal Square/Jersey City (2005), and Netcong (2005).

Transfer of Development Rights (TDR) Receiving Areas - The transfer of development rights is a realty transfer system where development potential in a specified preservation area can be purchased by private investors for use in a targeted growth area. In exchange for a cash payment, landowners in the preservation area place a restrictive easement on the property that will maintain the resource in perpetuity. The land in the designated receiving area can then be developed at a higher density than allowed under the baseline zoning. This process reduces the consumption of our critical resources, while still accommodating growth, and eliminates "windfalls and wipeouts" in property values normally associated with zoning changes. The transfer of development rights is only allowed where a municipality has implemented a TDR program. Sponsors of projects that serve areas designated as TDR Receiving Areas under the State TDR Act (P.L. 2004, c.2), by the Highlands Council, by the Pinelands Commission or by Burlington County pursuant to the Burlington County Transfer of Development Rights Demonstration Act (P.L. 1989, c. 86) are considered Smart Growth. The participating municipality (or municipalities in a regional program) designates sending and receiving areas based on their preservation and growth goals, respectively. Planning and implementation documents are created by the municipality that governs where and how development rights can be transferred. Implementing a transfer of development rights program requires a major planning initiative on the part of the participating municipality. Before any credits can transfer from landowner to developer, certain planning and implementation documents must be adopted. The State TDR Act requires several items including a Development Transfer Plan

Element, a Capital Improvement Plan, a Utility Service Plan, Transfer Ordinance, Plan Endorsement and other approvals.

In addition, the Department is broadening the existing smart growth categories to include projects in growth areas that have been endorsed by the State Planning Commission or any development project that is consistent with the "Garden State Values" contained in the State Strategic Plan. This provision is being added to maximize the program's ability to move forward and promote the goals and objectives included in the State Strategic Plan before it is finalized.

For those project types that have the potential to facilitate growth or cause significant adverse environmental impacts, the Department will continue to thoroughly evaluate the planning submitted by the project sponsor. Such evaluation will include, but will not be limited to the water quality/quantity impacts, location in the State, impacts to riparian corridors, the existing pollution control needs, assessment of the resulting environment, detailed assessment of proposed alternatives and cost-effectiveness of the proposal. The Department's funding decisions will take into account the project's growth potential, its location and the project's aggregate impacts as determined through such evaluations.

Collectively, these initiatives will enhance the Department's and the Trust's ability to promote smart growth, support the State Strategic Plan and will also allow the Environmental Infrastructure Financing Program to provide the funds needed to make it a reality.

E. Preaward Approvals and Emergency Projects

Eligible projects can qualify to receive preaward approvals if the requirements of the rules (N.J.A.C. 7:22-3.32 and 4.32) are met and executed contracts to implement the project have been received by the Department. To obtain preaward approval, project planning (including the issuance and expiration of an Environmental Assessment prepared by the Department) and design and contract documents (including issuance of authorization to advertise and award contracts for which reimbursement is sought) must be reviewed and approved by the Municipal Finance and Construction Element. Further, all permits and approvals for the construction of the project must be secured. It should be noted that federal policy limits the amount of funds the States may withdraw from capitalization grants for "refinancings." Since federal policy defines any costs incurred prior to loan award to be "refinanced," there is a possibility that reimbursement for all preaward costs may not be feasible at the time of loan award.

The Department recognizes that environmental infrastructure emergencies may occur that endanger public health and welfare and can result in substantial environmental damage. Such circumstances require an immediate response for which a complete technical and environmental review in advance of construction is not possible. The Department has developed a process to respond expeditiously when emergencies occur, obtain basic project information, make an eligibility determination and issue a preaward approval so that owners/operators can undertake the needed repairs and maintain eligibility for those expenditures through the EIFP.

Qualifying emergency conditions would be limited to those where failure has occurred or where failure is imminent and unless corrected, will result in substantial pollution of the environment

(such as collapse of a wastewater line) and/or substantial curtailment of the functions of the infrastructure.

As indicated in the Priority System section of this document, emergency projects will receive funding priority over all other new projects on the Project Priority List, both for interim as well as long-term financing.

F. Socially and Economically Disadvantaged (SED) Business Participation

Project sponsors are required to set a goal of awarding at least 10 percent of a project's costs for construction, materials, or services to small business concerns owned and controlled by SED individuals as defined in the Small Business Act (15 *U.S.C.* 637(a) and (d)) and any rules promulgated pursuant thereto. The Department and the Trust have adopted the SED rules (at N.J.A.C. 7:22-9), that identify the SED utilization requirements that project sponsors will have to meet.

G. Stormwater/Nonpoint Source (NPS) Management Projects

Because of the need to address water quality concerns related to stormwater runoff, the Department and the Trust have expanded the scope of the Financing Program to include construction costs for a wide variety of stormwater/NPS management projects. If the project will impact the capacity, hydrology, or hydraulics of existing stormwater management facilities, systems, or downstream waterbodies, a watershed-based implementation plan appropriate to the project's location should be prepared. Watershed-based planning assesses the overall needs of an area to ensure that proposed projects will improve/maintain water quality, water quantity and ecosystem health in a cost-effective manner. Watershed-based planning differs from the individual project planning which is site-specific and which is a routine requirement of funding under the EIFP. Although the EIFP does not fund watershed-based planning, the EIFP does provide an allowance for a project's site-specific planning and design. The allowance is based on a percentage of the building costs. Stormwater/NPS management projects must support efforts to achieve and/or maintain water quality, compatible with designated uses of the water body.

Implementation of USEPA's Phase II Municipal Stormwater Program requires municipalities, counties and other public entities to control stormwater discharges from new and existing developments. In New Jersey, the program is being implemented through the issuance of NJPDES general permits. Program implementation requires capital expenditures for equipment acquisition, additional personnel to implement best management practices, and expenses for public education (an innovative component, to change the behavior of people to reduce environmental impacts). Low-cost funding for the equipment procurement and construction of needed facilities is available through the EIFP, and is described in more detail below. In 2004 and 2005, the Department awarded $6 million each year in grants to municipalities and counties to implement the NJPDES permit requirements. The Department has also provided additional funding for some capital improvement projects that can be combined with CWSRF loans (up to 20% grants and 80% SRF loans).

The stormwater/NPS management projects that are eligible for EIFP loans include both new or modifications of stormwater management systems, facilities, basins, or other stormwater/NPS

management facilities (including land acquisition to site the eligible facilities). Stormwater/NPS management projects also include, but are not limited to: green roofs, green streets, tree filters, rain gardens, rain barrels, porous pavement, installation of packed media filters, replacement of existing storm drains with newer designs that incorporate features to remove solids, floatables, oil and grease, and/or other pollutants; purchase or replacement of equipment to reduce solids and/or floatables, such as netting on outfalls and skimmer boats; purchase of maintenance equipment, such as street sweepers, leaf collection equipment, beach cleaning equipment, and aquatic weed harvesters; rehabilitation of tide gates and existing basins or other stormwater systems, including pump stations; extension and/or stabilization of outfall points; implementation/construction of systems that will result in water quality benefits, such as salt storage structures/runoff control systems, feedlot manure/runoff control systems, and streambank/lake stabilization/restoration projects which are consistent with habitat protection.

In FFY2000, the Financing Program added the water quality aspects of landfill closure and new cell construction to the list of eligible NPS projects as described below. In FFY2001, open space land acquisition and conservation, remedial action activities and well sealing were added to the list of eligible NPS projects under the EIFP as described further below:

Landfill Closure and Construction - The Financing Program also includes landfill closure and landfill construction projects (including new landfill cells) under eligible NPS projects. The Department recognizes that landfills are a major pollution concern and are identified as a nonpoint source of pollution in the State's Stormwater and NPS Program Plan developed under Section 319 of the Clean Water Act. Eligible landfill closure activities include such items as landfill capping systems, leachate collection, storage and treatment systems, side slope seepage prevention and controls, gas condensate systems and other activities. Financing for landfill construction projects is generally limited to those project elements that prevent, reduce, or control the generation of leachate or are required for the collection, storage and treatment of leachate. Elements of a landfill construction project that may be financed include landfill liner systems, leachate removal or collection systems, and related maintenance equipment, toe-drains and cut-off walls, leachate sampling facilities and equipment, leachate storage facilities (lagoons, tanks, tank covers and aeration systems), leachate evaporation systems, and others. In addition to leachate controls, other eligible elements include barge shelters, containment booms, litter fences, and other means to prevent municipal solid waste from blowing off the landfill site and polluting surface waters. Before any landfill closure or construction project is approved under the Financing Program, the project sponsor must submit and receive all applicable permits and approvals from the Department's Division of Solid and Hazardous Waste.

Open Space Land Acquisition and Conservation - The EIFP provides loans to municipal and county applicants for the preservation of open space land as a means to provide an overall water quality benefit to the project area. A conservation restriction (easement) is applied, which ensures that the water quality is protected in perpetuity. Passive recreational uses such as hiking, cross-country skiing, horseback riding and birding are allowed on the portion of the parcels that are purchased with loans from the EIFP. Development is not allowed on the properties that are acquired through the EIFP, since this encourages the use of impervious surfaces and causes land alterations which can adversely affect the hydrology of an area as well as other nonpoint source impacts. Surface runoff can increase and groundwater filtration can decrease. Since most of New Jersey consists of sole source aquifers, which "are those aquifers that contribute more than 50% of

the drinking water to a specific area and the water would be impossible to replace if the aquifer were contaminated" (NJ Geological Survey), the protection of these resources is an environmental priority. When the land remains as open space with no development pressures, the water recharge to these vital aquifer systems is maintained. In addition, other environmental resources (i.e., endangered species, wetlands, stream corridors, floodplains, etc.) that may be present will also benefit from the preservation of the open space.

Remedial Action Activities - The clean-up of hazardous waste sites and other contaminated sites is critical to preventing further contamination of groundwaters in the State. The water-quality related components of projects for spill cleanups, brownfields restoration and hazardous waste site cleanups are some examples of the activities that are eligible through the Financing Program. Treatment of contaminated groundwater also qualifies for financing if the treated water is returned to the environment. While treatment solely to provide a safe, potable drinking water supply is ineligible for CWSRF financing, it is eligible for DWSRF financing.

Well Sealing - The proper sealing of unused monitoring and water supply wells is also important to protect groundwaters in the State. Municipalities and other public entities can sponsor projects through the Financing Program to properly fill and seal abandoned wells in accordance with N.J.A.C. 7:9-9.

H. Conduit Borrowers/Private Activity

The Department is also continuing the practice of setting a limit of $25 million on the amount of Fund monies that any conduit borrower project can receive. If a local government unit that sponsors a project on behalf of a private entity commits to providing a general obligation pledge (including its unlimited taxing power) or municipal guarantee as security for the DEP and Trust loans, the project is considered exempt from the conduit financing classification and corresponding funding limitations. In addition, previously-financed conduit borrowers will not be eligible for supplemental loans from the Department to cover unanticipated cost increases due to bid receipt, differing site conditions, change orders or other circumstances. The Trust may offer loans to cover cost overruns for these projects subject to the limitations of N.J.A.C. 7:22-4 and 5.

I. Short-Term and Long-Term Goals; DEP Fee; Miscellaneous Items

The short-term goal of New Jersey's financing program is to provide funding to needed, high-ranked water quality improvement projects. The long-term goal of the program is to establish and maintain a sound, self-sufficient, self-perpetuating financing program with adequate funds to assist communities with the financial burden of providing costly wastewater treatment and stormwater/nonpoint source management facilities to meet on-going water quality enhancement/preservation needs of the State.

As provided for in the January 1988 Initial Guidance for State Revolving Funds, a state that has deposited monies in a dedicated revolving fund after March 7, 1985 and prior to receiving a capitalization grant, may credit these monies toward the match, binding commitments, and equivalency requirements. Since some of the projects certified by the Department receive state-

only sources of funding, these state-only projects may qualify under the federal criteria to bank monies to satisfy the CWSRF's match, binding commitment, and equivalency requirements.

In recognition that modifications to the IUP may occur, the Department may provide updates of the IUP to the USEPA. Department will submit an Annual Report representing the actual use of the CWSRF funds to the USEPA in accordance with the requirements of the Water Quality Act of 1987 and Agency guidance.

In accordance with the USEPA Policy on Fees Charged on Assistance Provided Under the SRF Programs, states must disclose information regarding the assessment and use of any fees associated with SRF activities that are passed on to the program participants. In New Jersey, the Department reserves 4% of the annual CWSRF capitalization grant to cover a portion of the administrative costs of administering the program. In addition, the annual legislation for the SFY2006 Program established a "Department Loan Origination Fund" that is administered by the Trust. The program now has a stable fixed fee of 2 percent of the participant's loan amount. There is no SRF funding involved in the Department loan origination fee. The Department's loan origination fee is not included in the principal amount of the CWSRF loan and is separately accounted for.

The Trust's loan is issued at the same market interest rate as the Trust obtains from the sale of its bonds. Rather than bonding for all of the eligible closing costs associated with each financing, the Trust charges the borrowers a one-time surcharge of up to 0.4% of the principal Trust loan amount to partially cover the costs associated with that particular year's bond sale. These issuance costs include such activities as: bond counsel, financial advisor, rating agencies, printing and publishing of the Notice of Sale, the Preliminary Official Statement, the Official Statement, and other costs related to the Trust's bond sale. In addition, the Trust charges an annual administrative fee of up to 0.3% of the Trust's bond principal loan amount to cover the balance of the closing cost and the annual operating expenses associated with the operations of the Trust and the on-going costs associated with the Loan Servicer and Trustees. The Trust Annual Fee is not included in the principal amount of the loan. The annual fees collected by the trust are held in an account outside of the SRF. In SFY2015, the Trust anticipates collecting administrative fees associated with the CWSRF and DWSRF programs of approximately $5.8 million.

The FFY2014 Priority System continues the reporting process introduced in in 2005 to show how the CWSRF impacts compliance, water quality and designated uses and a form that captures the reach of the CWSRF in terms of subsidy, population affected and volume of wastewater treated. The Department and the project sponsors will complete the "CWSRF Benefits Reporting Form" and the Department will submit this information to USEPA.

2015 Financing Program Schedule for Clean Water Projects	
Date	**Action**
As soon as possible	Prospective applicants attend a pre-application meeting with Department – MF&CE representatives.
July 24, 2013	Public hearing on Proposed FFY2013 PS document.
July 31, 2013	Close of Comment Period.

October 7, 2013	Deadline for 2015 applicants to submit commitment letter, all planning documents (i.e., project reports) to Department, including final NJPDES permit (as applicable)
(on or before) January 15, 2014	Department/Trust submits list of projects (based on Priority System ranking methodology) to Legislature for forthcoming State Fiscal Year.
February 2014	Trust conducts Financial Seminars for 2015 applicants.
March 2, 2014	Deadline for 2015 applicants to submit design and complete loan application
May 2014	Financial Plan for State Fiscal Year 2015 submitted by Department/Trust to Legislature.
July 2014	Legislature acts on Financial Plan.
March 2015	Department/Trust loan closing with project sponsors.

APPENDIX 1: Priority System Ranking Methodology

I. Project Priority List — General Information

Clean water projects must be listed on the Project Priority List in order to be considered eligible for financial assistance under the EIFP. The applicant must also submit all the required application material in a timely manner.

The Priority List identifies the estimated total eligible building costs under the appropriate project category. Except for open space land acquisition projects, the figure under the "Total Eligible Project Cost" includes the estimated total eligible building costs, the related costs for construction services (i.e., administrative, legal, engineering, inspection, one year start-up services, etc.), the allowance for planning and/or design, three percent for the recipient's administrative costs, and a five percent contingency cost. The figure under the "Total State Amount" column represents 100 percent of the estimated total eligible project costs. Project scope changes and related cost updates submitted by project sponsors in response to the public participation process have been included on the final FFY2014 List.

Any significant revisions to the Priority List during the fiscal year will be subject to a public participation process, including a 30-day comment period. The Department does not, however, consider the following revisions to the Priority List to be significant:

1. Bypassing (i.e., deferring the funding of) a project to a future fiscal year if all requirements (including commitment to and compliance with the project document submittal schedule) of the CWSRF are not satisfied on schedule.
2. Increases or decreases in allowable project costs that may change the fundable range of the Priority List.
3. The addition of a project or projects to the fundable range as a result of their qualifying under the emergency project criteria.
4. The revision of the fundable range of the Priority List as a result of a change in (1) the allocation that New Jersey receives, (2) the State's contribution to the CWSRF, and/or (3) the total amount of monies made available for clean water projects from the EIFP.
5. The revision of the fundable range of the Priority List as a result of ensuring the proper dollar amount is obligated to the set asides and reserves identified herein, including appropriate uses for green project categories (if requirements are included under the CWA's reauthorization or CWSRF appropriation).
6. The replacement of a project sponsor identified on the Project Priority List with another eligible project sponsor that willingly assumes the role of loan applicant for the project.

II. Ranking Methodology

The Department ranks all projects on the basis of the total number of ranking points each project receives and places the projects on the Priority List according to their ranking. The ranking system gives highest priority to projects that address discharges of raw, diluted, or

inadequately treated sewage to the State's waters during wet weather, including projects to abate combined sewer overflows (CSOs) and projects to address sanitary sewer systems that overflow. CSO abatement projects are expensive and are usually located in financially distressed urban areas, making cost a serious concern. Discharges from combined sewer systems and sanitary sewer overflows impair water uses, and can lead to the closing of beaches and shellfish beds. Lower-ranked projects can also qualify for financing since projects are certified/approved based on the project's rank, the amount of available funds, and compliance with the Program's requirements and deadlines for planning, design and application submittal.

In addition, the FFY14 Priority System broadens the existing smart growth categories to include projects in growth areas that have been endorsed by the State Planning Commission or any development project that is consistent with the "Garden State Values" contained in the State Strategic Plan. This provision is being added to maximize the program's ability to move forward and promote the goals and objectives included in the State Strategic Plan before it is finalized.

The project ranking methodology for the 2015 Financing Program provides an additional 50 points to projects whose sponsor has an existing Asset Management Plan and an additional 100 points to projects that are identified in an existing Asset Management Plan. To obtain these points, project sponsors were required to have an authorized representative certify that the facilities that they own and operate have an approvable, up-to-date Asset Management Plan that considers the facility's assets, life cycle costs, and risks of system failures to optimize capital investments.

The Department encourages project sponsors that do not have an existing Asset Management Plan to develop and implement one. Asset management is actively managing infrastructure capital assets to minimize the total cost of owning and operating them, while delivering the service levels customer's desire. Each utility is responsible for making sure that its system stays in good working order-regardless of the age of components or the availability of additional funds. Asset management programs with long-range planning, life-cycle costing, proactive operations and maintenance, and capital replacement plans based on cost-benefit analyses can be the most efficient method of meeting this challenge.

The Department's Vision Statement and Priorities List provide a strategic foundation for structural changes and include objectives to implement projects that will help to protect, maintain and improve water quality in and around the Barnegat Bay while determining the best long-term approach for restoring the ecological health of Barnegat Bay. To support these efforts to improve the water quality of the Bay, the project ranking methodology for the 2014 Financing Program provides an additional 300 priority points to nonpoint source and stormwater runoff control projects that are intended to benefit the Barnegat Bay. The additional 300 points will also be assigned to wastewater reuse projects that are intended to offset the loss of freshwater flows caused by the regionalization of sewage treatment plants and the use of ocean outfalls.

In addition to Asset Management Plans and Barnegat Bay projects, projects receive points under five categories. These are (1) Local Environmental Enhancement Planning Activities,

(2) Project Discharge Category, (3) Water Use/Water Quality, (4) Smart Growth Approvals, and (5) Population.

A. Local Environmental Enhancement Planning Activities

The purpose of the provisions in this section is to encourage and facilitate implementation of environmentally sustainable practices at the local government level. Prudent environmental planning that incorporates sustainability measures is necessary to achieve cost-effective and environmentally sound water quality improvement within the watershed. Additional priority points will be awarded to projects located in or benefiting municipalities that have implemented programs and actions that go beyond compliance with existing regulatory requirements and incorporate the following environmental enhancement planning strategies.

Watershed-Based Implementation Plans: Watershed-Based Implementation Plans address impairment(s) found on Sublists 4 or 5 of the New Jersey Integrated Water Quality Monitoring and Assessment Report. Prudent watershed planning is necessary to achieve cost-effective and environmentally sound water quality improvement within the watershed. To provide an incentive for project sponsors to complete watershed-based plans that promote the implementation of point and nonpoint source pollution control projects that are consistent with Department goals, projects located in or benefiting municipalities that demonstrate implementation of watershed-based plans will be given an additional 50 priority points.

Implementation of Regional Stormwater Management Plans: Regional stormwater management plans are voluntary local analyses that provide targeted protection to a specific area based on local issues and conditions. Regional stormwater management plans are adopted into Water Quality Management Plans and may include specific implementation projects that address existing impacts of stormwater runoff. Projects located in or benefiting municipalities with adopted regional stormwater management plans will be provided an additional 50 priority points.

Sustainable Community Planning: Sustainable communities develop and adopt master plans and ordinances that improve the overall quality of life for citizens of today as well as generations of tomorrow by planning within natural resource capacity constraints and providing for a healthy economy, environment and society. Projects located in or benefiting municipalities where sustainable community strategies have been developed and master plans and/or ordinances adopted will be awarded an additional 100 priority points. These strategies/ordinances must include but are not limited to the following:

- A plan to reduce water consumption and increase water efficiency and re-use.
- Policies that require consideration of green design in municipal construction projects and redevelopment projects, such as green roofs, green streets, tree filters, rain gardens, rain barrels, porous pavements, etc.

The FFY2014 Priority System reflects the Department's priorities to encourage sustainable growth in communities by incorporating consistent criteria for the protection of natural resources and implementation of smart growth and green design principles.

Green design principles include green building practices that increase energy and water efficiency; use renewable energy; use environmentally friendly building materials that are made with recycled materials, are durable, sustainability harvested or produced locally; improve indoor air quality; and makes appropriate site selection and minimizes site disturbance to reduce environmental impacts.

B. Project Discharge Category Points

All projects receive ranking points based on the project discharge category. In case of multiple purpose proposals, projects qualify for the discharge category that represents the major scope of the project. If a project has aspects that can be described by more than one category, the project may be broken into separate projects. Tables IA and IB show the project discharge categories and their corresponding ranking points.

Table IA. Ranking Points Related to Project Discharge Category For Wastewater Treatment Facilities

Project Discharge Category	Description	Points
Combined Sewer Overflow (CSO) & Sanitary Sewer Overflow (SSO)	This category includes projects that involve combined sewer system (CSS) rehabilitation/repair, the construction of treatment and/or storage facilities within CSS, at discharge locations or at STPs that reduce or eliminate CSOs, or the separation of combined sewer systems by the consolidation and elimination or sealing of CSO discharge points. Also included are projects that implement corrective measures to fix overloaded conveyance systems that experience chronic overflows.	600
Sewage Treatment Plant (STP) Improvements	STP improvements include upgrades or other improvements to a treatment process or the elimination of an existing STP and the connection to an alternative treatment facility to meet applicable treatment levels. This category also includes the purchase and installation of security and energy efficiency measures at the STP.	500
Sanitary Sewer System Rehabilitation	This category includes a wide variety of corrective measures to sanitary sewer collection and conveyance systems that do not experience chronic overflows, such as the rehabilitation, repair, or replacement of sanitary sewers, pump stations, interceptors, or the purchase of equipment to properly maintain the sanitary sewer system.	450
Sludge Treatment/Disposal Facilities	Included in this category are projects involving the construction of facilities to manage sludge from STPs or from potable water treatment activities, such as the installation of dewatering equipment, or the implementation of land application or composting	350

	activities. Also included in this category of projects are improvements or repairs to sludge incinerators.	
Wastewater Reuse	Wastewater reuse includes the construction of facilities that promote the reclamation of water for beneficial reuse such as the use of treated effluent for agricultural or other purposes. This category includes the construction of conveyance and distribution systems to allow for reuse activities.	300
Septic System Repair/Replacement	Under this category are projects that involve repairs, improvements, and/or replacement of individual or small community, on-site septic systems.	275
New Systems	This category includes projects that involve the expansion of a STPs' treatment capacity, and the construction of new facilities to provide collection, conveyance or treatment of sanitary sewage.	250

In addition to the point assignments above, projects that implement green infrastructure, water or energy efficiency improvements (including projects that are designed to reduce greenhouse gas emissions) will receive an additional 50 priority points. Green infrastructure includes such practices as replacing existing pavement with porous pavement, bioretention, green roofs and other practices that mimic natural hydrology and reduce effective imperviousness. Water and energy efficiency activities that can qualify for the additional points include the installation of digester or landfill gas recovery/reuse systems, photovoltaic cells, wind turbines, wastewater reuse, etc. Projects that are a mix of traditional and green technologies are only assigned the points if the green components represent a significant amount of the overall project activities.

Table IB. Ranking Points Related to Project Categories for Stormwater and Nonpoint Source Pollution Management Facilities

Project Category	Description	Points
Stormwater Management and Other NPS activities	This category includes the construction or rehabilitation of stormwater basins, sewer systems or storm drains, the extension of outfall pipes, green roofs, green streets, tree filters, rain gardens, rain barrels, porous pavement or the purchase of maintenance equipment (such as street sweepers, aquatic weed harvesters and skimmer boats). Also included in this category are projects that stabilize streambanks, restore lakes or address runoff from salt storage facilities and the implementation of measures to address pollution concerns from agricultural cropland activities and manure runoff management and feedlot operations.	225
Landfill Closure, Open Space Land Acquisition and Conservation and Well Sealing	Included in this category is the implementation of measures to prevent and control pollutants from entering groundwater at non-operating landfill sites that are publicly owned and at abandoned well	150

	locations. The category also includes open space land acquisition and conservation projects that help to protect or maintain water quality.	
Landfill Construction and Remedial Action Activities	This category includes the construction of facilities to collect, convey and/or treat leachate and runoff from new publicly-owned landfill cells or from publicly-owned contaminated sites.	75
Projects sponsored by Conduit Borrowers/ Private Activity	This category generally includes environmental infrastructure projects where a developer, LLC, partnership or other private party is involved in the project. Also included in this category are landfill closure measures and remedial action activities where the project site is privately owned. If a local government unit that sponsors a project on behalf of a private entity commits to providing a general obligation pledge (including its unlimited taxing power) or municipal guarantee as security for the DEP and Trust loans, the project is considered exempt from the conduit financing classification and corresponding funding limitations.	50

C. Water Use/Water Quality Points

Points are awarded based on the designated water uses of the receiving water as well as the existing water quality conditions in comparison to the ambient water quality standards. The assignment of points for "public nuisance" is given to on-site system projects where failures have been identified. Table II below shows the breakdown of the ranking points for water use; in general, the highest values are given for projects that discharge to water bodies with potable, recreational, and fishing uses.

Table II. Ranking Points Related to Water Use (Existing and Potential)

Water Use		**Basis/Description**	**Points**
Public Potable Water Supply		Wastewater treatment plant discharges likely to have adverse impacts on an existing downstream potable surface water supply intake. Projects are evaluated based on relative distance between STP discharge and public potable water intake locations.	200
Recreation ("Primary Contact")		Waters with bathing areas monitored routinely as public beaches as well as the Delaware River upstream of Trenton (north of East Bridge Street at the Lower Trenton Bridge).	125
Fishing	Shellfish	State water bodies that are designated as shellfish growing waters by *N.J.A.C.* 7:12.	125
	Trout	State freshwater bodies designated for trout production or maintenance by the NJ Water Quality Standards (*N.J.A.C.* 7:9B).	75
		State freshwater classifications not designated trout production	

	Non-trout	or maintenance by *N.J.A.C.* 7:9B (see Trout description above), including all Delaware River freshwater zones above mile-point 85 as defined by the Delaware River Basin Commission.	25
Public Nuisance		Indirect water use impacts; applies to areas with identified on-site wastewater treatment system failures.	50
Agriculture		Surface water for agricultural use, such as irrigation and farm ponds, based on Department diversion permit (permits required for >70 gal/min diversion).	25
Industry		Surface water known to be used for industrial use such as cooling.	25

Table III shows the points for not meeting or marginally meeting certain water quality parameters. The points reflect the impact the parameters have on meeting the State's goal to protect and enhance surface water resources, quality criteria, and designated water uses. The magnitude of the contribution that municipal sewerage facilities have on each of the conditions is reflected in the points awarded under these categories. Dissolved oxygen and fecal coliform have the highest points because of their immediate and direct impact on the fishable/swimmable water use, coupled with the fact that inadequate municipal treatment facilities can be a major cause of contravening water quality standards.

Nutrients reflect the presence of phosphorus/phosphates and nitrates/nitrites in a water body. Excessive nutrient levels in freshwater streams and lakes may result in impacts on water uses, including algal blooms; depleted oxygen levels; odor, taste and increased treatment costs for purveyors; impacts on aquatic populations, and esthetic concerns. Points are given for nutrients only if the surface waters involved significantly impact existing potable water reservoirs, surface water impoundments or lakes, public bathing areas, or shellfish growing waters. Since there are no nutrient standards for coastal and estuarine waters, no points were assigned for discharges to those water bodies.

Points for toxics address the relative magnitude of ammonia, metals, pesticides, and organic chemicals in the water body. Toxics were also given lower points since in most cases the significant contributions of toxic substances come from industrial sources that are better controlled through pretreatment and are only incidentally abated by municipal treatment facilities. In the case of the toxicity of ammonia, municipal facilities are usually the main source, but the most significant impact is associated with streams designated for trout production/maintenance, which already receive a high number of points under the water use category.

Table III. Ranking Points Related to Water Quality			
	Points for Water Quality that		
Water Quality	**Meet**	**Marginally Meet**	**Do Not Meet**
	The Water Quality Standard*		

Parameter	Dissolved Oxygen	0	50	100
	Fecal Coliform	0	50	100
Parameter	Nutrients	0	25	50
Category	Toxics	0	25	50

*The Surface Water Quality Standard for the applicable parameter or category.

D. Smart Growth Approvals

The Department seeks to coordinate and enhance the efforts to encourage smart growth through the implementation of the State Development and Redevelopment Plan. The Department assigns ranking points to projects that serve municipalities that have been approved under the Center Designation or Plan Endorsement Process.

For a project serving more than one municipality, the points were included for ranking purposes if the designated center or the endorsed plan is a significant component of the overall project. For further information regarding the State Development and Redevelopment Plan, contact the Office of Planning Advocacy in the NJ Department of State at 609) 292-7156.

Table IV. Ranking Points Related to State Planning Commission Approvals

Community Type	Points
Urban Centers and Complexes	50
Regional Centers	25
Existing Designated Towns	15
Existing Villages	10
Hamlets	5

In addition, projects located in or benefiting areas designated as Brownfield Development Areas, TDR receiving areas or Transit Villages also receive 10 points, so that these projects will rank higher than similar projects that are not located in, or provide benefit to, these smart growth areas.

E. Population Points

Projects are also assigned points based on the population of the area served by the project. One point is given for every million people living in the project area on a year-round basis. Thus, if projects have the same number of ranking points after having received all eligible points, population points become the tiebreaker, with higher priority given to the project serving the higher population.

F. Emergency Repair Projects

The Department recognizes that environmental infrastructure emergencies may occur that endanger public health and welfare and can result in substantial environmental damage. Such

circumstances require an immediate response for which a complete technical and environmental review in advance of construction to address the emergency situation is not necessary or feasible. The Department has developed a process to respond expeditiously when emergencies occur, obtain basic project information, make an eligibility determination and issue a preaward approval so that owners/operators can expeditiously undertake the needed repairs and maintain eligibility for those expenditures through the EIFP.

The FFY2014 proposal continues to recognize a new classification for projects that receive all the necessary approvals and are awarded an Interim Loan in SFY2014, but are approved too late in the fiscal year to escrow close on a Trust loan and be included in the Trust's bond sale. This new class of projects or legacy projects will be prioritized over any new projects seeking loans in the SFY2015 Program.

Projects eligible for financing in the 2015 Program will be offered loan awards in the following order: (1) Supplemental Loans, (2) Emergency Projects, (3) Legacy Projects, (4) New Projects in rank order based on Project Priority List ranking methodology.

Appendix 2: Asset Management Plan Certifications

Asset management is actively managing infrastructure capital assets to minimize the total cost of owning and operating them, while delivering the service levels customer's desire. Each utility is responsible for making sure that its system stays in good working order-regardless of the age of components or the availability of additional funds. Asset management programs with long-range planning, life-cycle costing, proactive operations and maintenance, and capital replacement plans based on cost-benefit analyses can be the most efficient method of meeting this challenge.

A. Certification of an existing Asset Management Plan (50 points)

I, (insert name and title of individual certifying to the statement), as an authorized representative of (insert name of municipality, county, sewerage or utility authority) hereby certifies that an asset management plan dated (insert date of latest version or most recent update) that considers the facility's assets, life cycle costs, and risks of system failures to optimize capital investments has been developed and is being implemented.

Please complete as applicable:
PE License # _____
Wastewater Operator's License # _____

_____ _____
Authorized Representative and Title Date

B. Certification of a Project included in an existing Asset Management Plan (100 points)

I, (insert name and title of individual certifying to the statement), as an authorized representative of (insert name of municipality, county, sewerage or utility authority) hereby certifies that an asset management plan dated (insert date of latest version or most recent update) that considers the facility's assets, life cycle costs, and risks of system failures to optimize capital investments has been developed and is being implemented. I further certify that the project for which financing is sought is identified in the plan on page(s) ___ (copies attached).

Please complete as applicable:
PE License # _____
Wastewater Operator's License # _____

_____ _____
Authorized Representative and Title Date

ATTACHMENT 1: Projects Eligible under the DRAA

Clean Water SRF List of Eligible Projects

If a project is not specifically listed below, an explanation of how the project addresses the purposes outlined in Section IV.2.d. of the Guidance must be included.

I. Projects that prevent interruption of collection system operation in the event of a flood or natural disaster, including but not limited to:

a. Physical "hardening" or waterproofing of pumps and electrical equipment at pump stations and other components of collection systems (including storage facilities and associated equipment) through upgrade or replacement, including:

- Installation of submersible pumps
- Waterproofing electrical components (e.g. pump motors)
- Waterproofing circuitry
- Dry floodproofing/sealing of structure to prevent floodwater penetration
- Installation/construction of wind resistant features (e.g. wind resistant roofing materials, wind-damage resistant windows, storm shutters)

b. Relocation of pump stations or other collection system facilities to less flood prone areas

c. Installation of physical barriers around pump stations or other collection system facilities (e.g. levies or dykes)

d. Installation of back-up generators or alternative energy sources (including switch boxes) that service pump stations or other collection system facilities

e. Correction of significant infiltration and inflow problems that increase the likelihood of sewer backups or flooding of a treatment works

f. Separation of combined sewers that will result in a reduced risk of flooding of the collections system and/or treatment works

g. Installation/construction of redundant collection system components and equipment

h. Regionalization project that enables diversion of wastewater flows to an alternate system for emergency wastewater collection and treatment services

i. SCADA system projects to allow remote or multiple system operation locations

j. Replacement of damaged equipment with more energy efficient equipment

k. Construction or installation of flood attenuation, diversion, and retention infrastructure within or beyond the boundaries of a treatment works that protects the collection system

- Green infrastructure that reduces flood risk by reducing stormwater runoff, including permeable pavement, green roofs and walls, bioretention infrastructure (e.g. constructed wetlands, detention basins, riparian buffers, or stormwater tree trenches/pits/boxes), stream daylighting, and downspout disconnection
- Natural systems, and features thereof, capable of mitigating a storm surge, such as barrier beach and dune systems, tidal wetlands, living shorelines, and natural berms/levees
- Floodwater pumping systems
- Flood water channels/culverts, physical barriers, and retention infrastructure

II. Projects that prevent floodwaters from entering a treatment works, including but not limited to:

a. Installation of physical barriers around a facility (e.g. levies or dykes around the facility to prevent flooding)

b. Relocation of facilities to less flood prone areas

c. Construction or installation of flood attenuation, diversion, and retention infrastructure within or beyond the boundaries of a treatment works that protects the treatment works

- Green infrastructure that reduces the risk of flooding by reducing stormwater runoff, including permeable pavement, green roofs and walls, bioretention infrastructure (e.g. constructed wetlands, detention basins, riparian buffers, or stormwater tree trenches/pits/boxes), stream daylighting, and downspout disconnection
- Natural systems, and features thereof, capable of mitigating a storm surge, such as barrier beach and dune systems, tidal wetlands, living shorelines, and natural berms/levees
- Floodwater pumping systems
- Flood water channels/culverts, physical barriers, and retention infrastructure

III. Projects that maintain the operation of a treatment works and the integrity of the treatment train in the event of a flood or natural disaster, including but not limited to:

a. Physical "hardening" or waterproofing of pumps and electrical equipment at treatment works through upgrade or replacement, including:

- Installation of submersible pumps
- Waterproofing electrical components (e.g. pump motors)
- Waterproofing circuitry
- Dry floodproofing/sealing of structure to prevent floodwater penetration
- Installation/construction of wind resistant features (e.g. wind resistant roofing materials, wind-damage resistant windows, storm shutters)

b. Relocation of critical equipment to less flood prone areas of a facility and/or elevation of critical structures

c. Installation of physical barriers around individual treatment processes

- Flood walls around treatment tanks
- Elevated walls or capping of treatment tanks

d. Installation of larger capacity storage tanks

- Installation of larger capacity chemical storage tanks for continued treatment in absence of delivery service
- Installation of larger capacity fuel storage tanks for back-up generators
- Construction of storage tanks at treatment works to store overflows for future treatment

e. Installation of back-up energy supply or alternative energy sources and/or hardening of existing connections to the power grid

f. Installation/construction of redundant components and equipment

g. Replacement of damaged equipment with more energy efficient equipment

h. SCADA system projects to allow remote or multiple system operation locations

IV. Projects that preserve and protect treatment works equipment in the event of a flood or natural disaster, including but not limited to:

a. Relocation of critical equipment to less flood prone areas of a facility and/or elevation of critical structures
b. Prevention of saltwater damage to materials and equipment
    - Installation of salt water resistant chemical storage tanks
    - Installation of salt water resistant fuel storage tanks
    - Installation of salt water resistant equipment and appurtenances

V. Planning projects that assess a treatment works' vulnerability to flood damage or that analyze the best approach to integrate system and community sustainability/resiliency priorities in the face of a variety of uncertain futures including natural disasters and more frequent and intense extreme weather events, provided the planning work is reasonably expected to result in a capital project, including but not limited to:

a. Risk/vulnerability assessments considering recent floodplain maps and projected sea level rise
b. Alternatives analysis
c. Asset Management Plans, Emergency Preparedness, Response, and Recovery Plans

RESPONSE DOCUMENT FOR THE FFY2014 PRIORITY SYSTEM, INTENDED USE PLAN AND PROJECT PRIORITY LIST

(CLEAN WATER FINANCING)

The Clean Water Act and its amendments require the United States Environmental Protection Agency (USEPA) and the states to provide for and encourage public participation in the development and implementation of the federally supported Clean Water State Revolving Fund (CWSRF) Program. In New Jersey, the CWSRF is a component of the Environmental Infrastructure Financing Program (EIFP) that provides financing for a wide variety of wastewater, stormwater and nonpoint source pollution control projects. The requirements for public participation activities also apply to the development and/or major revision(s) of the State's Priority System, Intended Use Plan and Project Priority List.

This response document addresses the comments received during the public participation process for the FFY2014 Proposed Priority System, Intended Use Plan and Project Priority List issued in June 2013.

Public Participation Processes

On June 28, 2013, the New Jersey Department of Environmental Protection (Department) issued a notice regarding the availability of the FFY2014 Proposal document to the standard list of approximately 1,200 potential applicants and other interested parties to seek public input. On July 24, 2013 at 10:00 a.m., the Department held the public hearing at the offices of the New Jersey Environmental Infrastructure Trust located in Lawrence Township, New Jersey. One individual attended the hearing, but provided no testimony. Several individuals attended the Public Hearing, but there were no comments or responses at the hearing or prior to the submittal deadline of July 31, 2013.

Transcripts of the July 24 hearing are available from the transcription services (Guy J. Renzi & Associates of Trenton, NJ) to any interested person or organization upon request. In addition, copies of the transcripts may be reviewed at the MF&CE's offices in Trenton.

The written comment submitted in accordance with the deadlines has been considered in the preparation of the Final FFY2014 IUP.

One written comment was received on January 17, 2014 from the Natural Resources and Defense Council (NRDC). The NRDC submitted comments to the New Jersey Department of Environmental Protection based on the "Proposed Amendments to the New Jersey FFY14/Clean Water Priority System/Intended Use Plans (IUP) and a Track II Call for Projects." This notice published on December 20, 2013, proposed changes to two Intended Use Plans issued June 28, 2013: "Clean Water State Revolving Fund (CWSRF) Proposed FFY2014 Priority System, Intended Use Plan, and Project Priority List" and "Proposed Superstorm Sandy Funding Priority System,

Intended Use Plan, and Project Priority List." The IUP amendment of December 20, 2013 proposed a Track II opportunity for those projects that missed the October 7, 2013 deadline to submit projects for financing in the FFY2014/SFY2015 Financing Program, by extending the deadline for submitting certain documents to March 4, 2014.

SUMMARY OF PUBLIC ISSUES AND RESPONSES

COMMENT

The NRDC identified the following three major areas for improvement in the Superstorm Sandy and FFY14 CWSRF Base Program IUPs.
1. Climate resilience should be a fundamental component of all projects funded, instead of an eligible project type,
2. The Sandy IUP should include guidance on how to integrate flood hazard data into the proposed projects,
3. The benefits of natural and green infrastructure and water conservation and efficiency measures should be more prominently emphasized, and all projects should be required to implement these measures to the maximum extent possible.

RESPONSE

In the wake of Super Storm Sandy and the prospects of variable weather conditions in the future, the Department quickly assembled a team of subject experts informed about drinking water and wastewater system construction and operation. The team consisted of staff representing multiple program areas throughout the Department including drinking water, wastewater, land use, air permitting, compliance/enforcement, and sustainability and green energy. The team's charge was to evaluate the lessons learned from impacts borne by Hurricanes Irene and Sandy, and to recommend measures to promote greater resiliency in system siting, infrastructure design/construction, and operation and maintenance.

The team was tasked with exploring the need for appropriate regulatory changes and the development of guidance/BMPs to promote FEMA's "safer, stronger, smarter" ethic as it applies to the repair, rehabilitation and/or construction of system facilities throughout New Jersey.

Over the past year, the draft guidance developed by the team has been presented to and vetted through various professional and interest groups around the State. On February 21, 2014, individual guidance documents covering topics were posted on the Department's web site. See http://www.nj.gov/dep/dwq/mface.htm under "What's New?".

The Guidance Documents cover the following four areas:
• Auxiliary (or Back-up) Power,
• Infrastructure Flood Protection,
• Asset Management Planning, and
• Emergency Response Planning and Preparedness

The following statement appears on the Cover Page of each of these Guidance Documents:

The standards and best practices contained in this document are required elements for new projects seeking State funding under the New Jersey Environmental Infrastructure Finance Program (NJEIFP). Further information on the NJEIFP can be found at the following link(s): http://www.njeit.org/ and http://www.nj.gov/dep/dwq/mface.htm

One of the primary goals of these guidance documents is to inform entities who qualify for Sandy mitigation or SRF funding (administered through the NJEIP) that applicants will be held to the highest siting, construction, and operation standards regarding qualified projects. The obvious purpose is to ensure that public funding dollars are utilized in a manner that leads to long-term effectiveness and sustainability. Moreover, Federal Executive Order 11988 requires that Federal actions (including disbursement of funding assistance issued by FEMA, HUD, EPA, etc.) adhere to the strictest flood design standards (e.g. 500-year flood elevation).

Finally, the Department expects to promulgate revisions to its rules that are intended to specify state-of-the-art standards relative to infrastructure construction and operation, codify certain areas of the above-referenced guidance, and generally promote consistency and understanding of applicable standards.

The NRDC also expressed a concern that the benefits of natural and green infrastructure and water conservation and efficiency measures should be more prominently emphasized in both the IUP for the CWSRF Base Program and the IUP for the Superstorm Sandy Program. The Department's ranking system in the CWSRF Base Program provides supplemental points to projects which implement green infrastructure, water conservation or efficiency measures to ensure that these projects rank highest in their category.

For the Superstorm Sandy IUP, the United States Environmental Protection Agency (EPA) issued guidance on May 1, 2013 regarding DRRA eligible activities. The Department incorporated the project types listed in the memorandum into the ranking system presented in the proposed IUP. The Department believes that projects that prevent the interruption of sewage distribution and treatment, such as projects that provide protection for existing wastewater system assets including backup power, are priorities for the DRAA funding. The Department included a copy of the EPA clean water eligible project types in the IUP so that an applicant may view the eligible project types and provide an explanation of their project as it relates to the IUP. Based on the published ranking criteria, the Department has received approximately $325 million in Superstorm Sandy–related project proposals for clean water projects that are currently under review.

EPA DISCLAIMER

Although the information in this document has been funded wholly or in part by the United States Environmental Protection Agency under a federal assistance agreement to the State of New Jersey, it may not necessarily reflect the views of the Agency and no official endorsement should be inferred.

Need for Project

Camden City's combined sewer system lacks adequate stormwater management during rain events. During these events, raw sewage can backup into people's homes, streets and parks. This is a public health issue and an environmental problem as well.

Project Description

The proposed project calls for construction of green infrastructure projects (rain gardens and other projects), and grey infrastructure (improvements to failing/overburdened sewer lines) in order to increase conveyance capacity.

Service Area

The RVSA member communities are Clark, Cranford, Garwood, Kenilworth, Mountainside, Rahway, Roselle Park, Scotch Plains, Springfield, Westfield and Woodbridge. In addition the Authority serves Winfield Park through an agreement with Clark, and also serves a section of Fanwood and a section of Linden.

Need for Project

The project is needed in order to reduce the possibility of sanitary sewer overflows and/or the bypassing of wastewater treatment which would result in the discharge of raw wastewater to the Rahway River.

Project Description

The proposed project at the RVSA's treatment plant include several components. The first one would be the replacement of 12 electric slide gate operators with hydraulic units. These operators are located in the wet well area and are subjected to flooding under intense storm conditions. They have become inoperarable because of flooding and were replaced in kind. However the long term plan is to replace them with hyrdraulic operators. The second element is the construction of a 10,000 gallon diesel storage tank for fuel supply to the emergency generators. The third element is the installation of a digester gas cleaning system in order to remove siloxanes and sulfur which will then allow the burning of digester gas in the Cogeneration Engines. The last element is the construction of flood doors for the basement of our Administration Builiding in order to prevent flooding of that area.

In addition the Authority serves Winfield Park through an agreement with Clark, and also serves a section of Fanwood and a section of Linden.

Need for Project

The project is needed in order to make the WWTP more energy efficient and reliable to reduce the possibility of loss of power causing sanitary sewer overflows and/or the bypassing of wastewater treatment which would result in the discharge of raw wastewater to the Rahway River.

Project Description

This project includes construction of a waste receiving station and digester, installation of a plant hot water heat exchanger on the cogeneration engine exhaust, LED lighting for the plant, digester gas fired boilers, installation of a 750-800 KW CHP engine, and installation of an adsorption chiller.

Service Area

Raritan Borough

Need for Project

Many of the sewers in the Borough of Raritan are at least 75 years old and have never been rehabilitated. The infiltration/inflow (I/I) resulting from sewer pipe decay is estimated at 40-50 percent of the total flow from the Borough. This condition results in raw sewage overflows which adversely impact the Raritan River by contributing to the elevated nutrient and bacteriological levels in the River, which is classified as FW2-NT. Toxic levels marginally meet existing standards. The River is used as an industrial water supply and as a potable water supply for the Elizabethtown Water Company.

Project Description

The project will include rehabilitating a portion of the existing 20 miles of sewers or replacing that which is beyond repair. It may also be necessary to replace some of the undersized sewers with larger ones. This rehabilitation work will eliminate the sewage overflows from this system and reduce excessive flow into the Somerset-Raritan Valley Sewerage Authority (SRVSA) plant.

Need for Project

Studies performed by NJDEP and the Cape May Board of Health have shown a need to find an alternate water source. The U.S. Geological Survey also indicated the need for an alternative water source. The existing discharge adversely impacts primary contact recreation and shellfish harvesting uses. Water quality does not meet standards for fecal coliform and nutrients and marginally meets standards for dissolved oxygen and toxics.

Service Area

Borough of Oakland

Need for Project

The area is currently served by septic systems and some small package treatment plants. As treatment requirements increase from Level 4 to Level 5, the plants will be unable to meet their effluent requirements. Ground and surface waters (Ramapo River, FW2-NT), are used for recreation as well as a potable water source, and are being degraded by the failure of existing disposal facilities.

Project Description

The proposed project includes the construction of a wastewater treatment plant, interceptor sewer and collection system. The proposed interceptor sewer and collection system will convey all flows from the six (6) wastewater treatment plants (that will be abandoned) to the proposed wastewater treatment plant.

Service Area

The study area consists of that portion of Sparta Township (48%) which is situated within the Upper Wallkill River Basin. On-site rehabilitation in conjunction with a Septic System Management District would consider the entire Township as a service area during implementation.

Need for Project

All existing point source discharges must be addressed. Should these discharges remain in existence, they must be upgraded to meet the effluent limitations needed to protect existing water quality. In cases of discharge to the Wallkill River (FW2-TM) (Plaza and H.S. #1 and #2 plants), advanced wastewater treatment will be required to diminish any impacts to Franklin Pond, a downstream potable water source for Franklin Borough. Primary contact recreation is also adversely impacted by these discharges. The Wallkill river marginally meets standards for fecal coliform, nutrients and toxics. In addition, the failure rate for individual septic systems is averaging about 3% per year. Many of the existing systems (e.g., cesspool) cannot meet the minimum requirements for subsurface disposal and must be replaced.

Project Description

A likely alternative for wastewater disposal in Sparta Township is on-site rehabilitation in conjunction with initiation of septic management district planning. Therefore, the major scope of work for this project would include the upgrading of all existing point source discharges to acceptable treatment levels. This would preclude development of any future point source discharges in Sparta Township for the 20 year planning period.

Need for Project

The existing Stage IV Oxidation Ditch/Final Clarifier Process tanks were put on line in 1991. The aerators show signs of wear, bearings need to be replaced and several paddles are missing. Rust is prevalent throughout the structure. The scum collection system no longer functions properly and is a potential safety hazard when scum removal operations are conducted. The existing UV disinfection unit was put on line in approximately 1993 and has reached the end of its useful life. Necessary cleaning and changing of bulbs and sleeves is very cumbersome and presents a safety hazard due to extremely restrictive space. Maintenance activity requires that racks be pulled out manually and suspended on a makeshift apparatus. Utilization of a sleeve cleaning unit is not feasible due to limited space. Structural modifications to the existing structure will be required to install a new self-cleaning UV disinfection system.

Project Description

The proposed project includes upgrades to the Oxidation Ditch/Final Clarifiers and Replacement of the existing Ultraviolet Disinfection System at the Stage IV Wastewater Treatment Plant.

Need for Project

Sewers targeted for rehabilitation are over 100 years old with some over 150 years old and identified as structurally deficient. The project will rehabilitate deteriorated combined sewers and provide structural upgrade to prevent sewer and street collapses and sewer back ups to residences and businesses, and to maintain public health and safety cured-in-place lining rehabilitation will be utilized as far as possible to minimize city street excavation and disruption.

Project Description

The proposed project includes cured in place rehabilitation of 45 sewer segments of approximately 6,154 linear feet of brick combined sewers and rehabilitation of 59 manholes.

Need for Project

Current conditions with a blockage of the main oulet sewer from the queen district diversion chamber and siltation in queen ditch continue to restrict the overflow of combined sewage during wet weather periods, and create back water conditions throughout the combined sewer system resulting in frequent surface flooding at Frelinghuysen Ave at noble street, and Route 22 at Meeker Ave underpass.

Project Description

The proposed project includes installation of approximately 380 linear feet of 108" wide x 60" high precast box culvert, end-of-pipe netting facilities at the transition to the drainage ditch, and dredging of the existing drainage ditch.

Need for Project

The City has identified a need to replace the existing inoperative pneumatic air ejector pump station with a new station utilizing submersible pumps.

Project Description

This task involves the replacement of the existing "can" lift station located at Broadway and Morgan Boulevard. The existing lift station is inoperable and requires frequent jetting/vacuuming. The proposed scope of work includes removal of existing sewer lift station, installation of new station, reconnection/replacement of force main, and installation of safety equipment.

Need for Project

The MCUA treatment plant currently discharges its treated effluent into the Raritan Bay (SE-1) through a submerged outfall constructed in 1958. Despite the initiation of secondary treatment in 1978, this discharge, acting in conjunction with various other discharges, serves to degrade the water quality of the Bay. Fecal coliform and toxics standards are in violation while DO levels are marginally acceptable. This water quality degradation ultimately limits the use of the Bay for its intended uses of shellfish harvesting and primary contact recreation.

Project Description

This project entails the construction of an extended outfall to discharge to the Raritan Bay. The point of discharge will be determined to maximum diffusion and dilution. When this project is constructed, the Bay should be able to be utilized for its intended uses.

Need for Project

North bergen is decommissioning its Central Treatment Plant and diverting flows to PVSC.

Project Description

The project includes installation of an underground force main and the retrofitting of the Central Treatment Plant. The force main will transport wastewater from North Bergen's Central Treatment Plant to the Northwest Interceptor in Jersey City and ultimately to the PVSC Treatment Plant.

Need for Project

To meet new permit limits the proposed project will make modifications to the existing treatment processes to allow for dentrification.

Project Description

The proposed upgrade includes modifications to the existing treatment processes to allow for dentrification. Additional work includes necessary improvements to the sludge digestion equipment, rehabilitation of sand filters, and the replacement of the grit classifier and conveyor. The project also includes replacement of the equalization basin liner.

Service Area

Borough of Hopatcong

Need for Project

This project is necessary to protect the waters of Lake Hopatcong (FW2-TM), a potable water supply source. Wastewater treatment methods in Hopatcong Borough consist of individual on-site systems. There are reported septic system failures which have been determined to adversely affect fishable (trout) and primary contact recreation uses of the lake. Water quality does not meet standards for dissolved oxygen and nutrients and marginally meet standards for fecal coliform and toxics. Nutrient inputs from existing septic systems would continue to be a major source of excessive aquatic plant and algae growth even if all systems were operating properly. The project is needed to eliminate septic systems in the densely developed portion of the watershed.

Project Description

The proposed project includes the installation of a collection and conveyance system to connect approximately 609 homes to the Musconetcong Sewerage Authority’s STP which will treat the new flows from the Borough of Hopatcong.

Service Area

Township of Pennsauken

Need for Project

A portion of Pennsauken Township is served by combined storm and sanitary sewers. During high intensity rainfalls, the capacity of the system is exceeded resulting in sanitary sewer overflows into homes, streets and waterways. The existing situation results in sewage discharges to the Back Channel of the Delaware River near the Cooper River. Public water supply, shellfish, agricultural and industrial water uses are adversely impacted. Water quality in the area of the discharge marginally meets standards for dissolved oxygen, nutrients and toxics.

Project Description

The project involves the construction of a large diameter storm sewer along Browning Avenue from Route 130/Madison Avenue to the Delaware River to prevent flow from entering the combined sewer system and the Camden City system, stormwater detention facilities to detain stormwater prior to its entering the combined system, the separation of the sanitary and storm sewer systems in portions of the Township and the enlargement of the existing storm sewer system to handle a greater capacity.

Service Area

City of Elizabeth

Need for Project

Deterioration of conduits has led to sinkholes and erosion of soil which is entering the Elizabeth River.

Project Description

This project will rehabilitate drainage structures along the Elizabeth River Flood Control Project. Interior drainage is accomplished through multiple culverts equipped with tide gates and redundant sluice gates. Many of the culverts were constructed of corrugated metal pipe, and some of these have experienced significant deterioration. As a result, the levees are compromised. There are culvert sections missing between their outfall and sluice gate, where floodwaters can enter the protected area. Areas of the levee where the culverts are completely deteriorated are susceptible to collapse and failure. This project will replace or repair the appropriate components of the flood control drainage structures. In addition, any areas of the levee that have subsided will be restored to their original elevation and any areas with vegetative overgrowth will be removed. Part of the project is under emergency construction.

PROGRESS STREET FLOOD CONTROL

Priority List Rank

24

County

UNION

Existing Population

124,969

Service Area

City of Elizabeth

Need for Project

The industrial properties along the north side of Progress Street are subject to frequent flooding; approximately nineteen (19) times a year the flooding exceeds six inches (6”) in depth. Temporary modifications to the system as part of a dredging project reduced the frequency of flooding to eight (8) times a year. The properties between Progress Street and Division Street experience flooding during even moderate rainfall events and sometimes for storms as small as 0.2”. During the period when the Regulator R-002 outfall was temporarily blocked the frequency declined to several times a year. The property owners have expressed that the frequent flooding inhibits their business operations, while the reduced flooding frequency during the temporary blockage of the outfall, allows them to conduct business in an acceptable manner. The flooding is related to inadequate capacity in the CSO outfall that passes under the properties, providing local drainage and which discharges to the Great Ditch and high tail water levels in the Great Ditch.

Project Description

The recommended alternative calls for isolating the flooding area from the CSO outfall by rerouting the existing outfall through an industrial property to Progress Street and reconnecting to the existing outfall on Progress Street. The local drainage that connected to the outfall will be connected to an existing storm sewer on Dowd Avenue. Additional protection against high water levels in the great ditch will be provided by using box culverts in the Progress Street right-of-way to provide storage for excess runoff low areas. Flow into the box culverts will be controlled by a weir and tide gates which will allow stormwater to drain until the tail water becomes too high at which point the stormwater will overtop the weir and enter the storage conduit. The netting facility adjacent to Dowd Avenue will have its walls extended vertically to contain any potential overflows. The cost of the recommended plan is $3.3M, and greatly reduces the frequency of flooding, matching the temporary condition that allowed for reasonable operation of the local businesses.

TRUMBULL STREET FLOOD CONTROL

Priority List Rank

24

County

UNION

Existing Population

124,969

Service Area

City of Elizabeth

Need for Project

The combined sewer system on Trumbull Street drains an area of 320 acres, approximately 3.5% of the total City by area, and experiences flooding first at Sixth Street during the five month storm, and soon after at Dowd Avenue. This flooding is primarily the result of inadequate capacity in the downstream sewer pipe. When these locations are flooded, access to the industrial areas is limited and residents are impacted

Project Description

The proposed repairs for the intersection of Trumbull Street and Sixth Street are intended to limit the roadway flooding to maintain passable travel lanes. Inlets will be installed at the intersection several feet off the curb, allowing the existing drainage system to function during smaller storms. When the capacity of the existing storm inlets is exceeded, excess stormwater will flow into the new inlets. Piping connecting the inlets will direct flow to a watertight 1.5 million gallon concrete vault which will store the flow below grade rather than allowing the surface to flood. The concrete vault will consist of modular precast concrete unit to maximize the volume; the entire structure will be wrapped in an impermeable pond liner. It will extend under Block 7, Lot 1227 as well as under Bond Street, and will be rated for traffic loads. The exiting business on Block 7 Lot 1227 will be acquired and demolished. The vault will be equipped with a small pumping station. A level sensor will be installed in the combined sewer. When the water level in the sewer has receded, the level sensor will activate the pumps and the tank will be emptied into the combined sewer and the flow treated at the Joint Meeting of Essex and Union County WWTP. The pump is capable of dewatering the vault in one day and it is intended that the tank will be emptied within two days of a storm event, allowing one day for the water level in the combined sewer to recede. The existing roads and curbing will be restored. Block 7 Lot 1227 will be converted into a passive park for the enjoyment of the residents. This project will also serve as a test case for installing Green Stormwater Infrastructure. A bioswale will be installed on the northeast side of Trumbull Street, a rain garden will be installed in the proposed park and if possible tree boxes will be installed along Bond Street.

Need for Project

There have been a number of sewer collapses in the project area over the last 15 years and are increasing in frequency. This project will replace the 100 year old deterorating sewer with new pipes

Project Description

The project includes replacement of sewer lines beginning at the intersection of Brown Place and Princeton Avenue, extending westward on Brown Place to Garfield Avenue, also north along Princeton Avenue to Linden Avenue, then west on Linden Avenue crossing Garfield and ending near Old Bergen Road.

Need for Project

These projects are needed to replace existing deteriorated combined sewer mains which are constantly surcharged.

Project Description

The project consists of 3 planning reports: 1) 425 linear feet of deteriorated 8-inch vitrified clay, gravity-fed, combined sewer (CS) pipe will be abandoned in-place and replaced with an 8-inch PVC sanitary sewer pipe, which runs behind homes along Trenton Avenue. The existing storm water connections will be removed from the CS and routed to Trenton Avenue to an existing storm drain. 2) Approximately 1,000 LF of existing deteriorated 44-inch x 72-inch corrugated aluminum gravity CS sewer main will be replaced in-kind with a new 6-foot by 10-foot concrete box culvert gravity CS main in SIP Avenue. 3)Approximately 6,200 LF of existing, deteriorated 36-inch CS main will be replaced with 36-inch reinforced concrete (gravity-fed) CS main in the right-of-way of Newark Avenue.

Jersey City

Need for Project

In the 1980s, the Duncan Avenue 84 inch outfall project was initiated starting from from the waterfront but only approximately 1500 linear feet was completed upsteam. The project was discontinued at that time due to funding limitations. The existing 72 inch and 48 inch diameter sewers located upstream of the newer 84 inch sewer were not upgraded and remain at their original size from where the 84 inch construction ended and upstream to the Duncan Avenue CSO Regulator, RW-7. In recent years, street flooding on Duncan Avenue East of Route 1 and 9 has increased as a result of the smaller size pipes (i.e. 48 and 75 inches) and the JCMUA has determined that the project is necessary to correct outfall deficiencies to alleviate these flooding issues.

Project Description

In order to correct these deficiencies, this project will require the following stages of construction : •Replacement of 60 linear feet of 48 inch outfall sewer between the existing regulator, RW-7 •Construction of a multiple pipe barrel siphon that is approximately 100 linear feet in length •Replacement of the existing 1,140 linear feet of 48 inch and 72 inch diameter existing piping located downstream of the Duncan CSO Regulator, RW-7 with new 84 inch pipe • The existing 48 and 72 in pipe will be demolished or filled in. • Realignment the slope of the existing 1500 linear feet of 84 inch outfall to match the slope of the new 84 inch pipe to optimize design flows through the outfall. The total length being replaced and modified is 2800 linear feet.

Need for Project

The immediate cost of the no action alternative is zero. Pursuing this alternative will allow continued deterioration and eventual failure of the existing infrastructure resulting in the backup and overflow of raw sanitary sewage and stormwater that would create a health hazard for residents, workers and transients in the area served by the sewer and in the waters receiving the discharge from the collapsed sewer. The discharge would further degrade the waters receiving the discharge which already have impaired water quality according to the NJDEP which threatens their designated uses: secondary contact recreation, propagation and maintenance of fish and wildlife populations, the migration of anadromous fish, industrial water supply and other reasonable uses. No action would also be contrary to the Consent Decree that the JCMUA has entered into with the USEPA.

Project Description

This project will clean and inspect approximately 7,000 linear feet of combined sewers ranging in size from 12-inch to 54-inch in diameter located in Grand Street between Clinton Avenue and Hudson River and the following side streets: Clinton Avenue, Harmon Street, Prescott Street, Garfield Avenue, State Street, Bishop Street, Johnston Avenue, Fairmont Avenue, Prior Street, Colden Street, Bates Street, Louis Munos Marin Boulevard, Van Vorst Street and Warren Street. It will also provide for minor spot repairs such as loose or hanging bricks, spot repairs at laterals and hanging debris.

Need for Project

This project will carry out sewer rehabilitation work included in the Consent Decree between JCMUA and USEPA. Under its Combined Sewer System Capacity and Condition AssessmentStudy, the Authority has implemented an extensive program to inspect and evaluate its sewer system in order to identify actions needed to address structural and functional issues. The sewers scheduled to be addressed under this improvements project were initially evaluated under Phases 3 and 4 of the Capacity and Condition Assessment Study. During these initial investigations, field data was collected at over 2,000 manholes using an InfraMetrix zoom camera to record the structural and operational condition of the inspected manholes and connecting pipes. Based on this field information, the Authority has compiled recommendations and prioritized blockage removal, repair and rehabilitation needs in accordance with the Consent Decree agreement with the United States Environmental Protection Agency(EPA).

Project Description

The Project will consist of three contracts. Contract 1A will remove blockage and conduct emergency repairs for approximately 17,000 linear feet of existing combined sewers with the goal of the restoring the capacity of the existing sewers. Contract 1B will include replacement of sections of sewers that were determined to be beyond repair under Contract 1A. Contract 2 will replace approximately 11,500 linear feet of existing combined sewers which have been identified through detailed video inspection.

Need for Project

This project is needed to correct a serious problem with silt damming the Sixth Street Combined Sewer Outfall preventing the discharge of wet weather flows, which causes the flows to back up into the combined sewer system creating flooding conditions.

Project Description

The proposed project includes the extension of the Sixth Street Combined Sewer Outfall. The outfall will be extended 1,300 linear feet into the Hudson River, where it will be submerged on timber pipe cradles to prevent the pipe from floating. A tide flex valve will also be installed to prevent backflow from the river.

The proposed wet weather pump stations are intended to protect the City from tidal flooding in the same manner as occurred during Hurricane Sandy. The other projects are intended to repair and harden facilities that have been damaged by Hurricane Sandy.

Project Description

This project is for the construction of eight (8) new wet weather pumping stations, replacement of the Claremont Carteret Tide Gate Chamber, Repairs to the East Side Plant and Repairs to various regulators, outfalls and solids floatables facilities that are owned and operated by the Jersey City Municipal Utilities Authority (JCMUA), located in Jersey City, Hudson County, New Jersey. The project includes the construction of new below-grade wet weather pumping stations, electrical room and standby generators.

Need for Project

The sewage collection system in Jersey City is mostly combined. The system carries away the sanitary sewage on a daily basis and handles most storm flow adequately. Recently heavy rains experienced during periods of high tide have resulted in street and building flooding. The residents of this area have experienced many backups and suffered property loss and have voiced their concern about possible health hazards created by these backups.

Project Description

JCMUA is proposing to install submersible pumps downstream of the nets in the netting facility. The pumps will facilitate pumping the water out which would normally be gravity fed into the receiving waterway but is hindered due to high tide conditions.

Need for Project

The combined sewer overflows in the planning area discharge to the Hackensack and Hudson Rivers, and Upper New York Bay. The designated uses for these waters include secondary contact recreation, propagation and maintenance of fish and wildlife populations, the migration of anadromous fish, industrial water supply and other reasonable uses. The water quality is defined as poor due to the presence of high concentrations of indicator organisms such as fecal coliforms and toxic substances, and the observation of depressed levels of dissolved oxygen. The unsatisfactory water quality has been attributed to high pollutant loadings from inadequately treated municipal and industrial effluents, combined sewer overflows and non-point sources.

Project Description

The proposed project includes construction of a grit chamber on the interceptor just downstream of the CSO regulator to collect and remove inorganic material that could potentially clog the interceptor and cause DWOs. The MUA also proposes to construct a new pump station, sewer line, and force main to handle sanitary flows while separating out the stormwater flow.

Need for Project

The JCMUA sewer system is in need of a number improvements and repairs to eliminate excess flows and improve overall efficiency.

Project Description

The proposed project includes reconstruction/realignment of the Northwest Interceptor, replacement of a pump station and improvements to other pump stations, relocation of sewers from under buildings to the street and separation of sanitary and storm lines in the buildings, elimination of an interconnection, and rehabilitation of storm and sewer lines. The installation of new tide gates and regulator repairs are also proposed.

Need for Project

The EPA CSO Control Policy requires that all CSO discharge points come into compliance with water quality standards and that all CSO permittees undertake the development and implementation of a CSO Long Term Control Plan. The Authority's existing CSO Permit required the development of a plan for disinfection of CSO discharges. In the development of the plan it was recognized that there is very little information on the use and effectiveness of various treatment and disinfection methods for CSO discharges and it was stated that pilot testing needed to be undertaken. The information developed from this project will provide valuable data for the evaluation and implementation of treatment and disinfection of CSO discharges and will be valuable to any and all permittees with CSOs.

Project Description

Project will include pilot testing of various means of treatment and disinfection of CSO discharges at the Oak Street Pumping Station and CSO Outfall Serial No. 001/005. Project will include modifications to the existing piping and possible re-activation of one or more primary settling basins from the old primary STP, which has been decommissioned, but not eliminated, in addition to provisions of other chemical feed and treatment technologies.

Need for Project

The Woodcliff Wastewater Treatment Facility was constructed in 1991 and since that time no major upgrades or rehabiliation has occurred. Portions of the facility have aged or are in need of rehabiliation to continue operating effectively. The Woodcliff Wastewater Treatment Facility is part of the North Bergen Utility Authority's combined sewer system.

Project Description

The proposed project includes required rehabilitation and upgrades to allow the treatment plant to operate effectively, continue to meet permit limits and treat CSOs.

Need for Project

The Bergen Avenue Pumping Station will serve the western portion of the KMUA Meadowlands Sewer District. The pumping station will collect leachate from the Keegan Landfill and serve existing development. The Harrison Avenue Force Main will serve the Bergen Avenue Pumping Station and the proposed MSLA 1-D Landfill Pumping Station, which will allow for the closure of the landfill.

Project Description

The construction of the Bergen Avenue Pumping Station includes construction of a control and generator building, a triplex wet well, manholes, sewage grinder manhole, two metering vaults, a valve chamber, installation of a flow meter, a sewage grinder, site piping, an instrumentation shelter and three submersible pumps. The Harrison Avenue Force Main project includes placing approximately 7,600 linear feet of 8” diameter HDPE pipe from the future Bergen Avenue Pumping Station to the existing Harrison Avenue Pumping Station. The other portion of the project includes installing approximately 200 linear feet of 6” HDPE pipe from the new MSLA 1-D Pumping Station to a tie-in point with the Harrison Avenue Force Main.

Need for Project

This project addresses an immediate public health threat that is currently present in the Town due to the devastation of Superstorm Sandy which has resulted in three sewage pumping stations being placed out of service as well as the remaining 6 storm and sanitary stations operating at limited capacity.

Project Description

This project addresses the rehabilitation and hardening of the towns existing stormwater and sanitary pumping station infrastructure at 9 existing stations that have been damaged by Superstorm Sandy. All 9 stations will not only be restored, but also improved to meet all current codes and standards set by state and federal regulation.

The area of Dukes Street, in the vicinity of Schuyler Avenue in the Town of Kearny, continually experiences significant drainage problems. The area frequently floods during and after heavy rainfall events causing undue burden to the residential community west of Schuyler Ave as well as a blend of commercial, warehousing, and industrial establishments in the low lying area east of Schuyler Ave.

Project Description

The proposed project includes construction of a new stormwater pumping station at Dukes Street, tide gate replacement at Frank’s Creek, rehabilitation of stormwater pump stations at Harrison Ave., Garfield Ave. and John Hay.

Need for Project

The combined sewer overflow in the planning area discharges to the Hudson River. The designated water uses for the Hudson River include secondary contact recreation, propagation and maintenance of fish and wildlife populations, the migration of anadromous fish, industrial water supply and other reasonable uses. The water quality has been defined as poor due to the presence of high concentrations of indicator organisms such as fecal coliforms and toxic substances, and the observation of depressed levels of dissolved oxygen.

Project Description

The proposed project involves the construction of solids/floatables control measures at the combined sewer overflow point located off River Road, which discharges to the Hudson River.

MEDFORD LAKES BOROUGH
340463-06
STP UPGRADE

Priority List Rank

51

County

BURLINGTON

Existing Population

5,000

Service Area

Medford Lakes Borough, portions of Medford Township

Need for Project

The Rancocas Creek and the lakes in the headwaters of the Haynes Creek are classified as FW2-NT nontrout waters with primary contact recreational uses. The existing water quality does not meet standards for fecal coliform, nutrients and toxics and marginally meets standards for dissolved oxygen. The effluent from the existing wastewater treatment facilities have exceeded the assimilative capacity of the stream and the facilities do not afford the degree of treatment to safely accommodate the current and future population within the service area. The project is needed to provide advanced wastewater treatment in order to comply with the Borough's NJPDES permit and ACO requirements. The following is the existing inventory of the wastewater facilities:

Sewage Treatment Plant (STP) Name (NJPDES #)	Flow (mgd)		Effluent			
			Reported BOD		Reported SS	
	Design	Present	%	mg/l	%	mg/l
Medford Lakes Borough (NJ0021326)	0.55	0.41	89.7	19.3	95.6	5.1

Project Description

The proposed project consists of the construction of a new "Bardenpho" treatment process (biological treatment for BOD, SS and nutrient removal) combined with rapid sand filters for effluent polishing and the demolition of existing Imhoff tanks, trickling filter and slow sand filter.

The ultimate sludge disposal will be incorporated into the county-wide sludge management facility.

COLLECTION SYSTEM/INDIVIDUAL SYSTEMS

Priority List Rank

52

County

MORRIS

Existing Population

8,690

Service Area

Jefferson Township (Musconetcong River Basin)

Need for Project

Existing on-site systems are failing and may eventually lead to serious health hazards throughout this part of the Township. The failures are occurring because of certain soils limitations: shallow depth to bedrock, high water tables and steep slopes. Repairs have been attempted but with few successful results. A large number of on-site systems border Lake Hopatcong (FW2-TM), a potable water supply, and Lake Shawnee (FW2-TM). These waters are fishable (trout) and primary recreation quality. This portion of Jefferson Township contains a package sewage treatment plant servicing the Consolidated School. This system provides secondary treatment and discharge into tributaries of Lake Hopatcong. Water quality marginally meets standards for fecal coliform and toxics. Nutrient and D.O. levels violate existing standards.

Sewage Treatment Plant (STP) Name (NJPDES #)	Flow (mgd)		Effluent			
			Reported BOD		Reported SS	
	Design	Present	%	mg/l	%	mg/l
Consolidated School Secondary (NJ0021091)	0.0075	0.01156	97.8	4.35	96.2	4.85

If the plan to connect into the Musconetcong Sewer Authority (MSA) is implemented, this sewage treatment plant will also connect into the MSA.

Project Description

This project includes the construction of a collection system for the Musconetcong River Basin portion of Jefferson which may also include an interceptor, pump station, and force main. Also, a septic system management plan will be recommended for the remaining portion of the Township.

Anticipated Recipient	:	WARREN CO-PAULINSKILL/BLAIRSTOWN

STP, INTERCEPTOR, PUMPING STATION

Priority List Rank

53

County

WARREN

Existing Population

4,890

Service Area

Blairstown Township

Need for Project

Portions of Blairstown have documented septic failure which may eventually lead to health problems. It was determined that the fecal coliform count violates the water quality standards and marginally meets standards for nutrients and toxics. At present, there are two privately owned and operated STP's in the study area. At the time the regional facilities become available the existing plants will tie into it. North Warren Regional High School is occasionally in noncompliance with their NJPDES permit requirements, which indicates inadequate secondary treatment. Primary contact recreation and agricultural water use are adversely impacted. This project is proposed in order to meet the stringent requirements established for the receiving waters.

Sewage Treatment Plant (STP) Name (NJPDES #)	Flow (mgd)		Effluent			
			Reported BOD		Reported SS	
	Design	Present	%	mg/l	%	mg/l

Need for Project

The main purpose of the project is to reduce the energy costs, and corresponding carbon footprint, of the treatment plant. However, the replacement of old, outdated, equipment with newer generation equipment will increase the reliability of the treatment plant, with a correspondingly positive impact on water quality of the Delaware River.

Project Description

The proposed improvements includes installation of four new variable frequency drives, and one electric motor for the CCMUA wastewater treatment plant's four raw sewage pumps. In addition, two emergency generators will be installed to ensure that primary treatment and disinfection will be sustained, even in the event of a power failure.

RESTORATION & FLOOD MITIGATION

Priority List Rank

55

County

MONMOUTH

Existing Population

478,000

Service Area

The municipalities of Hazlet, Holmdel, Union Beach, Keyport, Keansburg, Aberdeen, Matawan and parts of Marlboro

Need for Project

The purpose of this work is two-fold: to return the Facilities (BRSA's Water Pollution Control Plant, remote meter chambers and pump stations) to pre-storm design condition, and to protect the Facilities from incurring the damages associated with a future flood event of equivalent or greater magnitude than Hurricane Sandy, therefore both restoration and mitigation measures are included. These measures require the restoration of numerous components throughout the Facilties that have yet to be fully repaired, as well as the protection of all critical structures and aspects of the wastewater treatment process. These projects are intended to maintain proper operations and maintenance of the Facilities as required by regulations, thereby preventing improperly treated wastewater discharges from the Facilities caused by equipment failures, power outages and flooding, to enter the nearby wetlands and surface waters.

Project Description

The Project involves the restoration of mechanical, HVAC and electrical equipment, instrumentation and control equipment and building repairs for various structures and components within the BRSA Treatment plant and collection system. The Project also involves the mitigation measures including dry flood-proofing and elevating of equipment and components to prevent damage from future flood events.

Need for Project

Due to the location of City Island, and the coastal region it serves, hurricanes and storm tide conditions have the highest potential for natural disaster affecting the Atlantic County Utilities Authority (ACUA) Wastewater Treatment Plant. High tide and hurricane conditions can impose three (3) major problems; (1) loss of power, (2) blocked access to and within the treatment plant and pump stations, and (3) inundation of plant and collection systems buildings.

Project Description

The proposed project includes several mitigation measures to provide emergency power to the ACUA's Treatment plant.

HUDSON

Existing Population

194,440

Service Area

Guttenberg, Hoboken, Union City, Weehawken, West New York (HCUA Planning Area III)

Need for Project

The combined sewer overflows in the planning area discharge to the Hudson River. The designated water uses for the Hudson River include secondary contact recreation, propagation and maintenance of fish and wildlife populations, the migration of anadromous fish, industrial water supply and other reasonable uses. The water quality has been defined as poor due to the presence of high concentrations of indicator organisms such as fecal coliforms and toxic substances, and the observation of depressed levels of dissolved oxygen. The unsatisfactory water quality has been attributed to the continuous diversion of dry and wet weather sanitary sewer flows to the river. The combined sewer system, which is 100+ years old, contains collapsing sewer lines, and regulators and tide gates that are deteriorated and stuck. This condition has resulted in diversions of sewage flows to the river and intrusion of tidal flows into the system and treatment works.

Project Description

The construction of in-line storage facilities utilizing existing sewers is planned for Hoboken. In West New York, the construction of swirl concentrators is proposed. Studies indicate that facilities to abate pollution in Union City and Weehawken would not be cost effective.

Although this project has not been formally adopted by HCUA, studies indicate that this work is the most cost effective solution to pollution abatement.

The rehabilitation of tide gates and regulation in Hoboken, Weehawken and Union City has been funded under Marine CSO funds. However, the major portion of the project in this planning area has not been funded.

Need for Project

Upgrades at the Two Rivers Water Reclamation Authority Treatment Plant will improve reliability and productivity.

Project Description

The proposed project includes retrofitting the existing Sludge Processing System, installation of a new Supervisory Control and Data Acquisition System throughout the Authority’s collection system, installation of buoyancy prevention devices for plant clarifiers, and installation of electrical devices to eliminate single point failures.

Need for Project

The project is needed to protect the wastewater treatment plant from future storm damage and provide emergency electrical power in the event of a storm. The majority of the project is associated with the wastewater treatment plant which services the entire service area.

Project Description

Middletown SA is proposing to purchase a new generator, upgrade its electrical system, install flood protection devices and install a new flood protection wall, install an alarm system, install a co-generator system, raise its existing equipment, and seal the buildings.

Service Area

The planning area includes the City of Linden and the Borough of Roselle

Need for Project

The Authority is required to complete a rehabilitation program to eliminate discharge points 003 and 004, and a sewer separation program to eliminate discharge points 001 and 002 as per the Part IIIb Special Conditions of the existing grant No. C340299-01. These discharges affect the quality of the Rahway River (SE-3). Fishable non-trout and industrial water uses are presently impacted due to fecal coliform, toxics, and DO (marginal) levels being unacceptable.

Project Description

The project is for the construction of relief sewers to enable the LRSA to eliminate discharge points 003 and 004 in the City of Linden. Elimination of these discharge points will improve water quality in the receiving stream. The alignment of relief sewers falls within the Wheeler Park Easement. This project requires the approval from Green Acres.

WET WEATHER PUMP STATION

Priority List Rank

64

County

HUDSON

Existing Population

50,005

Service Area

City of Hoboken

Need for Project

The purpose of this H5 wet weather pump station is to allow discharge of combined sewer overflow at the outfall number 006 into the Hudson River during storm events which occur when the river is at maximum high tide. The influent to the pump station will be taken from the outfall conduit, downstream of the existing solids/floatables (S/F) facility. The construction and operation of this pump station will help alleviate flooding in the City of Hoboken.

Project Description

The City of Hoboken is applying for funding to install pump stations that will help alleviate flooding that occurs during storm conditions and high tide. The City of Hoboken is also proposing implementation for an approximately 14,000 gallon rainwater cistern, rainwater bio-swales and a re-visualized rear area for passive recreation (i.e., tables and seating) at Hoboken City Hall. The 11,696 square foot City Hall roof generates a monthly average of 28,196 gallons of stormwater runoff per month. This stormwater is currently directed into the city’s combined sewer system.

Need for Project

The Township of North Bergen-Central WWTF will be required to meet "Level 3" treatment. The plant discharges to the Cromakill Creek Tributary-Hackensack River (SE-2). DO and fecal coliform levels are unacceptable and toxics marginally acceptable. The existing STP is also in need of extensive rehabilitation. The receiving waterway has industrial water uses as well as freshwater fishery (non-trout) uses.

Need for Project

The replacement of the main plant generator will provide more reliable backup power for the facility during periods when utility power is not available in order to both protect the public health and safety, and meet NJDEP permit discharge requirements. The TBSA intends to improve the resiliency of the existing facility by replacing equipment which has reached the end of its useful life and installing new facilities with the capability to provide a more robust treatment during extreme wet weather events. The existing grit removal system requires significant improvements to increase the effectiveness of grit removal and to protect the downstream hydraulic capacity of treatment tanks.

Project Description

The project would include the installation of a new 1.5 MW Generator at the Authority's existing wastewater treatment facility. The project would include the rental of a temporary generator and associated civil and electrical work. The project also includes installation of Grit Removal and Classification Equipment, installation of Mechanical Bar Screens, installation of Odor Control Facilities for the Headworks Facility and Plant Sewer Pumping Station, upgrades to existing Plant Sewer Pumping Station, installation of a new Primary Standby Generator and upgrades to associated Switchgear Equipment, installation of temporary pump suction lines at Meter Chamber M-3, and SCADA integration of new equipment, to increase operational flexibility during extreme weather events

Service Area

Village of Ridgewood

Need for Project

An Infiltration/Inflow (I/I) analysis has been completed which documents the existence of excessive I/I within the service area. An additional study will be undertaken to further define the quantity of excessive I/I that can be cost-effectively removed from this system. This project is needed to eliminate periodic overflow, causing discharge of untreated sewage into the HoHoKus and Diamond Brooks (FW2-NT, previously FW-2) which is adversely affecting the quality of these waterways, and posing a potential public health problem. The brooks have fishing and industrial uses. The affected waterways do not meet standards for fecal coliform and toxics, and marginally meets the dissolved oxygen standard.

Project Description

The proposed project will consist of 820 feet of gravity sewers and 8,400 feet of force main. Three pumping stations will be modified - Ridgewood Lawns P.S.; Bellair Road P.S. and Andover P.S. These mechanical improvements will enable the pump stations to handle additional sewage flows previously bypassed. These improvements are currently being designed.

Service Area

Borough of Cliffside Park

Need for Project

The purpose of the project is to separate stormwater flows from the combined system which flows to a regulator in Edgewater Borough, the overflow of which enters the Hudson River. This area of the Hudson River is classified as an SE-2 watercourse and is currently used for nontrout fishing. Water quality does not meet standards for dissolved oxygen and fecal coliform and marginally meet standards for toxics. The 38-acre area currently includes about 25 drainage inlets which are directly connected to the sanitary or combined system.

Project Description

The proposed project includes the separation of combined sewers within the Section I sewer service area. The project will include the installation of approximately 3,800 LF of 15”, 1,900 LF of 18”, 1,100 LF of 24” and 800 LF of 30” diameter pipes. Also manholes, inlets and appurtenances will be installed and roof leaders will be disconnected and reconnected to the storm system.

Service Area

Riverton Borough

Need for Project

The existing STP was constructed in the early 1950's and is becoming obsolete. The Borough's STP discharges to the Delaware River and impacts potable water, fishable-nontrout and agricultural water uses. Water quality marginally meets standards for dissolved oxygen and fecal coliform.

Sewage Treatment Plant (STP) Name (NJPDES #)	Flow (mgd)		Effluent			
			Reported BOD		Reported SS	
	Design	Present	%	mg/l	%	mg/l
Riverton Borough STP (NJ0021610)	0.22	0.204	97.4	14.3	93.4	17.6

Project Description

The proposed project involves the construction of a new wastewater treatment plant utilizing a sequencing batch reactor process.

Service Area

Jefferson Township

Need for Project

The need for the development of a wastewater management plan for the Township of Jefferson has resulted from problems being experienced with existing on-site disposal systems. These systems are adversely affecting fishable trout and primary contact recreation waters, and the limited ability of four small treatment plants to provide adequate treatment. Fecal coliform and toxics levels are marginally acceptable and nutrients levels are totally unacceptable. Also, the sludge generated is being stored in an old tank on-site at the White Rock Lake STP, which is an unsatisfactory sludge disposal method. The receiving stream is a tributary of Mitt Pond which ultimately flows in the Boonton reservoir. High and Middle School discharges to Russia Brook (FW2-TM).

Sewage Treatment Plant (STP) Name (NJPDES #)	Flow (mgd)		Effluent			
			Reported BOD		Reported SS	
	Design	Present	%	mg/l	%	mg/l
High and Middle School (secondary)	0.28	Not Available	99.6	5.96	99.9	7.15
White Rock Lake (AWT) (NJ0026867)	0.155	0.0621	98.7	6.375	95.7	5.0

Project Description

Jefferson Township performed a 201 Study for portions of Jefferson which lie both in the Rockaway Basin and Upper Musconetcong Basin (See C340747-05 for description of the Musconetcong plan). The proposed plan for Rockaway consists of expansion and upgrading of the existing White Rock Lake STP to 250,000 gpd and using the oxidation ditch process. Wastewater from the Cozy Lake, Lake Swannomoa and the White Rock Lake areas would be treated there. The proposed facility would include a pumping station, force main, interceptor and collection system.

Service Area

Wrightstown

Need for Project

The 0.2 mgd treatment plant in Wrightstown must be upgraded to meet required water quality standards; the plant will also be expanded. The treatment plant discharges to North Run, thence to Crosswicks Creek. The waters do not meet water quality standards for dissolved oxygen, fecal coliform, or nutrients, and levels of toxics are only marginally acceptable. Thus, use of these waters for non-trout fishing and agriculture are adversely impacted.

Sewage Treatment Plant (STP) Name (NJPDES #)	Flow (mgd)		Effluent			
			Reported BOD		Reported SS	
	Design	Present	%	mg/l	%	mg/l
Wrightstown STP (NJ0022985)	0.2	0.155	98.4	2.4	99.1	5.0

Project Description

The proposed project will upgrade the plant's secondary treatment processes. A pump station and emergency generator will be installed. The following process units will also be added to the existing facilities: nitrification/denitrification, sludge dewatering and handling, ultraviolet disinfection, and 24-hour composite sample controls.

5TH STREET PUMP STATION

Priority List Rank

73

County

HUDSON

Existing Population

200,000

Service Area

City of Hoboken and portions of the Township of Weehawken, Union City, and West New York

Need for Project

The proposed replacement and upgrade projects are required to maintain the current reliability and operability of the existing wastewater collection system.

Project Description

The pumps at the 5th Street Pump Station clog frequently, particularly after storm events, which affect the reliable pumping of sewage through this station. An analysis was conducted to evaluate the potential screening/grinding technologies which would help protect the pumps from clogging. Evaluation indicated that the ABS contrablock pump offers the best combination of minimum installation costs and the highest potential for reduced operational issues. Therefore the 5th Street Pump Station Contrablock Pump Replacement project is conducted to replace the existing pumps at the 5th street pump station with the ABS contrablock pumps.

Need for Project

Improvements will help maintain the integrity of the aging infrastructure and reduce the quantity of infiltration into the combined sewers. 1.Repair/Upgrade of Combined Sewer Regulators (W1 through W5) - Regulators have antiquated technology and the float and gate mechanisms for all five regulators do not operate efficiently. 2.Repair/Upgrade of Combined Sewer Regulators (H1 through H7, Hillside Road) - devices within the regulators require increased maintenance to keep them operational and have antiquated technology. 3.Sewer Rehabilitation- plant influent is diluted due to excessive groundwater infiltration entering the sewer mains. 4.Sewer Main Extension/Sewer Repair – Baldwin Ave.P.S.'s force main has reached the end of its useful life.The combined sewer flow within Hamilton Ave backs up into upstream sewer mains and tributary homes located upstream. 5.Siphon Improvements - these siphons have not had a significant inspection and one barrel of one siphons if partially blocked.

Project Description

1.Repair/Upgrade of Combined Sewer Regulators (W1 through W5) - float and gate mechanisms be replaced, vortex valves installed to control velocities. 2.Repair/Upgrade of Combined Sewer Regulators (H1 through H7, Hillside Road) - all floats and gates within these structures to be replaced in-kind. 3.Sewer Rehabilitation-rehabilitating various sections of deteriorated piping along New York Avenue between 19th Street and 49th Street. Selected sections of piping to be lined with cure-in-place pipe 4.Sewer Main Extension/Sewer Repair - the influent line to the Baldwin Avenue Pump Station to be rerouted to the18th Street Pump Station, thus allowing decommissioning of the Baldwin Avenue Pump Station. The piping on Hamilton Ave. will require epair/correction. 5.Siphon Improvements - Isolate, dewater, clean, and line the entire 3,100 linear feet of the 12-inch barrel of one siphon and inspect the other siphon using sonar technology.

Service Area

Hoboken, Union City, and Weehawken

Need for Project

As part of the New Jersey Pollutant Discharge Eliminatino System (NJPDES) permit for the NHSA Adams Street Wastewater Treatment Plant, the NHSA must implement measures that will capture, remove, and prevent the discharge of Solids and Floatables which can not pass through a bar screen having a bar spacing of 0.5 inches from all CSO points. The NHSA has negotiated an Administrative Consent Order (ACO) with the New Jersey Department of Environmental Protection for implementation of the Solids and Floatables Control Program. The W1234 outfall is the final remaining outfall within the S/F Control Program that requires a Solids/Floatables Screening Facility.

Project Description

The proposed project includes construction of an end-of-pipe solids and floatables screening facility. Including in the project is a pier structure to facilitate access and maintenance of facility.

COLLECTION SYSTEM

Priority List Rank

80

County

HUDSON

Existing Population

11,660

Service Area

Portions of North Bergen (Area III)

Need for Project

North Bergen Area III is serviced by the Woodcliff STP. A portion of this district is currently unsewered and contains malfunctioning septic systems. Sanitary connections have been made to an existing storm water system resulting in discharge of untreated sewage to the Hudson River. This discharge impacts industrial water use and freshwater-nontrout uses, as well as contributing to fecal coliform violations. The Hillcrest pumping station contains an overflow and requires rehabilitation.

Project Description

A new sanitary sewer collection system will be constructed to convey flows from the unsewered areas. The illegal connections will be corrected and the flow collected for treatment. Sewage will be transported to the Woodcliff STP or to a neighboring facility for treatment. The Hillcrest Pumping Station will also be rehabilitated.

Service Area

Hamilton Township, Washington Township, 31% of West Windsor Township

Need for Project

The effluent from the existing treatment plant is not meeting water quality standards for ammonia, required under the NJPDES permit conditions. The Hamilton Township facility discharges into Crosswicks Creek (FW2-NT) classified as fishable, non-trout which also has agricultural and industrial uses; this water body does not meet standards for fecal coliform and nutrients and is marginally acceptable for dissolved oxygen.

City of Perth Amboy

Need for Project

These projects are with the intention to reduce the amount of raw sewerage and floatables overflowing into the receiving waters. The lining project will improve the performance of the collection system by increasing the "c" factor and therefore improving the self-flushing velocity in these mains as well as improving the capacity of the mains. The debris handling system will remove floatables that otherwise may overflow into the receiving waters. Similarly, the replacement of broken catch basins will also reduce the amount of floatables getting into the sewer system. The replacement of broken manholes will reduce the amount of material (grit, soil, black top, concrete, bricks, etc.) getting into the sewer system and consequently reducing the capacity of the sewer main and therefore causing excess of overflowing into the receiving waters.

Project Description

The lining project will include the lining of various sections of sewer main using cure-in-place lining method. No excavation would be required. All manholes within the section of main been lined will be rehabilitated as well. Replacement of manhole and catch basins – this includes the replacement of broken catch basins and manholes whose conditions are beyond repairs. All manhole and catch basins will be replace in kind. Debris Handling System Project - this is a new construction. The installation of this system is with the purpose to remove most of the floatables from the State St. pump station wet well before reaching the pumps. It is expected that this system would help reduce the amount of floatables overflowing into the receiving waters as well as providing the pumps some protection and therefore last longer in operation. It will also help improve the capacity of the sewer mains by reducing the amount of floatables in the main.

West Milford Township

Need for Project

The project is intended to correct deficiencies noted in Administrative Consent Orders being issued by the NJDEP. The treatment plants to be improved discharge either to small streams that are upstream from primary recreation areas and drinking water intakes or to groundwater. The discharge violations currently being experienced impair these water bodies.

Project Description

The proposed project includes replace the Olde Milford STP with new facilities to provide advanced treatment in accordance with its NJPDES permit. Renovate the two disposal fields at the Bald Eagle STP. Rehabilitate rapid media filters at two STP's. Installation of influent grinder at the Highview STP and an odor control system at the Crescent Park STP. Rehabilitate generators at various STP's and pumping stations throughout the town.

Service Area

City of Hackensack

Need for Project

This project will minimize combined sewer overflows by separating storm water in the project area. This is the first phase of a multi-phase project to separate sewers in the City.

Project Description

The City has designated a portion of the downtown business district as a redevelopment area. The City desires to encourage redevelopment and provide adequate infrastructure in the redevelopment area. In an effort to minimize combined sewer overflows and remediate sewer lines that do not have adequate capacity during storm events, the City is proposing this project for separation of sewers in the redevelopment area in three (3) phases. The project area is in the Anderson Street vicinity. Phase 1 will allow the existing sanitary sewer flow to continue to flow into the Anderson Street trunk line and the storm water to be directly discharged into the Hackensack River. This will reduce the overall flow currently going to the Bergen County Utilities Authority (BCUA), which will provide a cost savings to the municipality. The City will televise the existing combined sewer within the project limits and will perform rehabilitation under contract, if deemed necessary.

Need for Project

The Authority’s treatment plant has struggled to meet the permit limitatoins for the toxicity of its discharge.

Project Description

The proposed project includes installation of a BIOFOR-N biological aeration system to provide tertiary for the Authority’s effluent.

Need for Project

The South Branch of the Pennsauken Creek is classified as FW2-NT nontrout waters with industrial water use. The existing water quality is voilated for fecal coliform and toxics with marginal violation of dissolved oxygen. The effluent from the existing wastewater treatment facilities have exceeded the assimilative capacity of the stream and the facilities do not afford the degree of treatment to safely accommodate the current and future population within the Project Area. The following is the existing inventory of the wastewater facilities:

Sewage Treatment Plant (STP) Name (NJPDES #)	Flow (mgd)		Effluent			
			Reported BOD		Reported SS	
	Design	Present	%	mg/l	%	mg/l
Woodstream (NJ0024040)	1.25	0.91	96.8	10.9	99.1	3.3

Project Description

This project is to provide a cost effective regional sewerage system for the Southwest Branch Rancocas Creek drainage basin. Implementation of the project will accomplish the attainment of water quality in area streams, the prevention of health hazards and the protection of the environment. Presently, the facility planning effort is evaluating the various alternatives which will accommodate the required levels of treatment necessary to alleviate the pollution problem. The alternatives which can be implemented are land disposal, discharge to the confluence of the Southwest Branch or discharge at the present location. The ultimate sludge disposal will be incorporated into the on-going countywide sludge and septage management plan recommendations.

Need for Project

Upgrade existing clarifiers - updraft of the sludge blanket due to density currents coupled with poor settling sludge quality Third secondary clarifier - to complete upgrades to the ex. clarifiers, and comply with discharge requirements. RAS Pumps - pumps oversized RAS Piping - mods for addt'l flexibility RAS Chlorination - reduce frothing which causes slippery foam. Walkway from Splitter Box to Aeration Tank - Allow staff to move btwn locations Auto Cleaned Strainer - ex. strainer clogs overnight causing pump failure Rotary Presses - ex. presses produce solids content well below what is desired by disposal outlets. DumpsterVeyor - staff manually distributes sludge in dumpsters. Sludge Process Building - roof leaks, masonry cracked, reduce energy costs Foam Skimmer - frothing in aeration tanks UV Disinfection - old technology and is failing resulting in fecal coliform violations Check valves on Odor Control - air in ductwork reverses from the building to Odor contro

Project Description

Upgrade existing clarifiers - install density current baffles, seal cracks in launders third secondary clarifier - construct addt'l clarifier RAS Pumps - install smaller pumps RAS Piping - Modify ex. RAS piping RAS Chlorination System - Install new sodium hypochlorite system Walkway from Splitter Box to Aeration Tank - construct walkway Auto Cleaned Strainer for Utility Water System - install new strainer Rotary Presses - replace with rotary presses DumpsterVeyor - install track-mounted container Sludge Process Building - new roof, repair masonnry, consolidate sludge rooms Foam Skimmer - Install surface skimmer system UV Disinfection System - install new UV system and inlet chamber Check Valve on Odor Control System - install new check valve.

Need for Project

The proposed project will serve a dual purpose. The project will improve the overall quality of the Authority’s effluent and also improve the method by which the effluent is discharged into the Hudson River.

Project Description

The proposed project includes installation of an automated filtering system to remove particles 20 microns or larger, and an extension of the treatment facility’s outfall pipe further into the Hudson River to provide an adequate mixing zone.

Need for Project

Based on NJPDES Permit (NJ0027561) issued December 30, 2005 with an effective date of March 1, 2006. Current plant flow 0.045 MGD with Design Flow of 0.065MGD. Project is needed to meet new effluent limits imposed by permit (Deadline for meeting limits - February 2011). In particular, new effluent limits for phosphorus (Existing limit - 1.0 mg/liter Proposed Limit - 0.5 mg/liter), copper (No existing limit - Proposed 14.4 micrograms/liter) and bromodichloromethane (No Existing Limit - Proposed 1.1 micrograms/liter). Current plant is not capable of meeting proposed limits. Permit limits are currently being adjudicated through the formal appeals process. Settlement discussions with NJDEP are on going with a reasonable expectation for a settlement agreement. Deadline for compliance is likely to be extended beyond February 2011.

Delran Township

Need for Project

In late 2010, the Township undertook an evaluation of the Delran Township Sewer Utility wastewater facilities in order to develop a 10-Year Capital Improvements Plan (CIP). The purpose of the CIP was to encourage proactive planning and implementation of said plan to increase process efficiency and reduce the risk of equipment failure which can lead to substantially greater maintenance costs. The CIP was completed and presented to the Township Council on January 19, 2011. Subsequently, the three Projects listed above were identified as priority projects in order to strengthen "weak links" in the treatment process and improve the ability to effectively operate the plant.

Project Description

The proposed project will involve the following improvements to the Township's existing Wastewater Treatment Plant: • Sludge Conveyor Rehabilitation • Grit Facilities Upgrades • Headworks Facility Upgrades

Need for Project

Improvements to the pump station are required to ensure that sanitary and combined sewage is conveyed to the treatment plant.

Project Description

The project consists of installation of a new flow meter, replacement of existing pumps with dry pit submersible pumps with VFD controllers, replacement of all suction and discharge piping and valves, replacement of sump pumps, improvements to the existing communutors and slide gate support system. The work will also include sidewalk repairs, leak repairs and miscellaneous electrical and instrumentation upgrades.

Need for Project

PVSC's treatement plant was severly damaged due to storm surge flooding as a result of Superstorm Sandy causing complete bypassing of the treatment facilities for multiple days following the storm and the inability to fully comply with its effluent permit requirements for months following the storm. This project will provide standby power, to prevent loss of power due to future grid failures, enabling PVSC to continue to operate its treatment plant and avoid future bypasses. It will also provide perimeter flood walls to prevent storm surge flooding of buildings, process equipment and electrical systems.

Project Description

This project includes the construction of flood walls around the perimeter of PVSC's treatment plant, the construction of an onsite standby power plant of sufficient capacity to power the entire process in the event of a grid failure and stormwater pumping stations to prevent flooding within the permiter of the flood walls.

Need for Project

PVSC's treatment plant buildings, equipment and electrical systems were severely damaged due to flooding of its utility tunnels and galleries from Super Storm Sandy. To prevent a future similar event, this project will raise the tunnel system sump pump control panels above ground which will be accessible to connect generators in the event of a power outage. In addition, bulkheads will be installed to provide the ability to isolate sections of the tunnels and galleries to contain floodwaters.

Project Description

This project includes improvements to the PVSC's sump pump systems to raise the control control panels above ground to prevent possible future flood damage and to allow for generator connections in the event of a power failure to allow for the aiblity to maintain operation of the facilities sump pump systems. The project also includes the installation of bulkheads in areas of the tunnels to provide the ability to isolate sections of the tunnels and galleries.

The municipalities of Absecon, Atlantic City, Brigantine, Egg Harbor City, Egg Harbor Township, Galloway, Hamilton, Linwood, Longport, Margate, Northfield, Pleasantville, Somers Point and Ventnor.

Need for Project

Improvements to the STP are needed to ensure operational reliability and component integrity. Certain process equipment must be replaced or improved. The existing discharge to the Atlantic Ocean has the potential to adversely impact shellfish and recreational uses.

Project Description

The project involves (1) installation of new variable speed drive units to replace existing single speed drive units controlling 500hp effluent pumps allowing the equalization basin to be taken off line for maintenance and cleaning (2) installation of a new bar screen and conveyor system to reduce rags and solids from passing through the process system (3) installation of a CEM/DAS system to monitor the sludge furnace emission levels of oxygen and carbon-dioxide (4) replacement of the centrifuge back drive units with new units and a control panel for automatic torque control for higher efficiency (5) replacement of Dezurik valves to prevent leaking and the cross contamination of processes (6) installation of a supervisor computer and data acquisition system (SCATA) to electronically optimize unit processes (7) replacement and relocation of the plant washdown pumps and (8) sludge hopper enlargement. This project also includes minor necessary improvements to ensure operational reliability.

Service Area

Gibbstown - Greenwich Township

Need for Project

The Gibbstown plant is discharging to Wiggins Pond, a tributary of the Delaware River. The effluent is not in compliance with the permit requirements. Due to the stringent effluent limitations as established by the Department, discontinuation of the discharge to Wiggins Pond has become necessary. Wiggins Pond (SE-2) is a non-trout stream with severe violations of fecal coliform and marginal violations of D.O. and toxics. Wiggins Pond supports industrial water use. Also, there exists a major problem due to the presence of high-strength chemical wastes. The plant also receives intermittent discharges of slaughtering wastes from a local butchery. The combined effect of these wastes tend to upset the biological processes.

Sewage Treatment Plant (STP) Name (NJPDES #)	Flow (mgd)		Effluent			
			Reported BOD		Reported SS	
	Design	Present	%	mg/l	%	mg/l
Gibbstown(Secondary)(NJ0030333)	1.0	0.77	92.2	19.8	89	25.7

Project Description

The project consists of upgrading the existing Gibbstown plant by using the oxidation ditch process and construction of an outfall for direct effluent discharge to the Delaware River. It also includes the construction of influent and effluent pump stations and force mains.

The BCUA's Service Area consists of forty-seven municipalities and a portion of five non-member municipalities. The thirty-eight municipalities entirely served by the BCUA WWTP include Bergenfield, Bogota, Carlstadt, Closter, Demarest, Dumont, Emerson, Edgewater, Englewood, Englewood Cliffs, Fairview, Harrington Park, Haworth, Hillsdale, Leonia, Little Ferry, Maywood, Montvale, Moonachie, New Milford, Northvale, Norwood, Old Tappan, Oradell, Palisades Park, Paramus, Park Ridge, Ridgefield, Ridgefield Park, River Edge, River Vale, Rochelle Park, Teaneck, Tenafly, Teterboro, Westwood, Woodcliff Lake and Wood-Ridge. The eight municipalities partially served by the BCUA WWTP include Cliffside Park, East Rutherford, Fort Lee, Hackensack, Hasbrouck Heights, Rutherford, South Hackensack and Washington Township. The five nonmember municipalities partially served by the BCUA WWTP include Alpine, Lodi, Lyndhurst, North Bergen, and Ridgewood. Portions of Cliffside Park, Fort Lee, Hackensack.

Need for Project

The Authority utilizes two 1.4 megawatt Combined Heat and Power (“CHP”) cogeneration units to burn the annual average 300 million cubic feet of biogas produced from the five anaerobic digesters. The CHP units primarily use biogas but occasionally requires the additional of natural gas to sustain the engine operation. Even with two CHP units, the Authority has to flare of the biogas due to periodic shutdown of the unit for maintenance, variability of biogas content and shutdown during the summer months. In 2012, the two cogeneration engines burned a combined total of 138 million cubic feet of biogas or 69 million cubic feet per engine while under maximum capacity of 200 million cubic feet of biogas. Over the last two years, the Authority has being flaring approximately 100 million cubic feet of biogas per year. The quantity is expected to increase with the retrofitting of antiquated and inefficient boilers from biogas to natural gas. A third similar sized CHP engine installed in the unit can easily consume any biogas that would be flared and can operate during down times for either of the other two engines.

Project Description

The proposed project for improvements to cogeneration units at the Little Ferry Water Pollution Control Facility includes the retrofitting of antiquated and inefficient boilers from biogas to natural gas and installation of a CHP engine to consume any biogas that would be flared and can operate during down times for either of the other two engines. A third CHP cogeneration unit is recommended in lieu of flaring of the biogas to increase onsite generation of electricity thus less electricity can be purchased.

Service Area

Town of Phillipsburg

Need for Project

The project is needed to relocate the outfall closer to the confluence with the Delaware River and extend the regulatory mixing zone into the Delaware River. Currently, the mixing zone is within Lopatcong Creek. By completing this project, the possible anti-degradation issues for Lopatcong Creek are eliminated; therefore improving local water quality. In addition, in December 2008, the NJDEP approved permit limits contingent upon the relocation of the outfall to the proposed location. Accordingly, this project is vital to the plant to meet the discharge effluent water quality limits.

Project Description

Relocation of the Town's Wastewater Treatment Plant outfall to a location agreed upon by the NJDEP and DRBC as a condition of revised permit limits.

Need for Project

This project is needed to enable ELSA to comply with a new effluent limitation for dichlorobromomethane (DCBM) via the installation of a UV disinfection system thereby improving the water quality of Assunpink Creek. It is also needed to replace equipment and systems at the end of their useful service life so the ELSA's ability to continue achieving reliable permit compliance and thus water quality protection is not compromised.

Project Description

The key elements of this project are: (1) construction of a new UV disinfection facility to enable compliance with a new DCBM effluent limitation, (2) replacement various equipment and systems at or near the end of their useful service life, (3) correcting hydaulic bottlenecks that during severe wet weather conditions can cause the primary clarifiers to overflow, (4) and construction of new prelilminary treatment facilities to provide screeening of influent wastewater and improved grit removal.

Need for Project

Currently, some of the plant's existing equipment is reaching the end of its useful life: (1) The raw wastewater influent comminutors are obsolete, spare parts are no longer available and in need of replacement; (2) The Primary Digester No. 2 cover is over 30 years old and in need of replacement to effectively store digester gas; (3) The Primary Digester No. 2 sludge mixing system is reaching the end of its useful life, resulting in declining digester performance; replacement is needed; and, (4) The Sulfur Dioxide chemical feed dechlorination system uses hazardous gas requiring costly safety measures. The plant was designed for a flow of 4.61 MGD. The average flow for the period of 9/1/2010 through 12/31/2010 was 1.9 MGD. The average effluent BOD concentration for the same period was 1 mg/l,a 98.7% removal rate. The average effluent TSS concentration for the same period was 0.8 mg/l, a 99% removal rate.

Project Description

This project includes rehabilitation of Primary Digester No. 2, installation of mechanical bar screens in the Raw Sewage Pumping Station, construction of a new Sodium Bisulfite feed system and building, and installation of digester gas fired cogeneration units. Modifications will also include miscellaneous site work such as paving improvements, piping, structural work and electrical work.

Need for Project

Prior to Hurricane Sandy, the Authority's longest power outage was less than 24 hours. During and following Hurricane Sandy the Wastewater Treatment Plant was without power for over 10 days. During this time deliveries of fuel oil were difficult to obtain. If the plant were to run out of fuel, treatment processes would be disrupted and raw sewage would overflow, resulting in violation of State and Federal laws and the Authority's operating permit. This project will provide a secondary fuel source for an emergency generator and boilers as well as increase the amount of fuel oil storage on site to allow for a more reliable power and heating supply in the event of another super storm.

Project Description

The Authority's emergency generators currently operate on No. 2 fuel oil. The boiler system currently operates on No. 2 fuel oil or biogas. The fuel oil supply is the same that is used for the emergency generators. The duration of the utility power outage during Hurricane Sandy and the difficulty in obtaining fuel oil demonstrated the need for alternative fuel sources. This project would convert one of the generators to operate with natural gas as a secondary fuel supply and provide an on-site natural gas supply as a source of fuel for the generator, boilers and future CHP unit. Additionally, the fuel oil storage for the emergency generators will be increased by 20,000 gallons. As a result, the run time of the generators would be extended and the refueling frequency decreased.

Service Area

The BCUA currently serves 51 municipalities.

Need for Project

This project consists of reducing rainfall-induced infiltration and inflow (RII/I) and elimination of sanitary sewer overflows (SSO) caused by the RII/I in the BCUA's and its 47 member municipalities' sanitary sewers. The BCUA's goal is to reduce RII/I by 30 percent in those service areas with the most problems within a five-year period. These areas were identified in the work plan and include the municipalities of Leonia, Fort Lee, Cliffside Park, Edgewater, Englewood Cliffs, Palisades Park, South Hackensack, East Rutherford, Haworth, Maywood, Tenafly, and Englewood.

Project Description

The project will include cleaning of approximately 200,000 lf of 8 to 24 inch diameter sewer; video inspection, during significant rain events, of approximately 150,000 lf of 8 to 24 inch diameter sewer. Based on the results, the BCUA will implement a "Fix It" remedy that will include the following: sealing of sanitary sewer joints in pipe ranging in size from 8-inch to 24-inch diameter; grouting of manhole leaks; rehabilitation by partial or complete cured-in-place-pipe (CIPP) lining of sewers ranging in size from 8-inch to 24-inch diameter; rehabilitation by CIPP lining of 4 to 6 inch PBSC's; repair by partial or complete excavation and replacement of 8-inch to 24-inch diameter sewers; repair of pipe defects by excavation and installation of repair clamps for 8-inch to 24-inch diameter sewers; replacement of defective branch connections by excavation and replacement; repair of 4-inch to 6-inch defective PBSCs by excavation and replacement; replacement of severely damaged and leaking manholes; installation of rain barrels where roof leaders are connected to the sanitary sewer system; installation of splash pads where roof leaders are disconnected; redirection of sump pumps that are currently discharging into the sanitary sewer system; disconnection and redirection to the storm sewer system of prohibited roof leaders and foundation drains, which are currently discharging into sanitary sewers; and installation of 6-inch to 8-inch clear water systems to collect sump pump clear water flow, which currently discharge into sanitary sewers where there is no storm sewer system.

Service Area

The BCUA currently serves 51 municipalities.

Need for Project

The effluent from the BCUA treatment plant is discharged into the Hackensack River classified as SE waters, which is a tidal estuary below the Oradell Reservoir dam. Water quality in the Hackensack River violates standards for dissolved oxygen, fecal coliform and toxics. Improvements at the treatment plant will increase reliability and efficiency.

Project Description

The proposed project includes various improvements at the Little Ferry Water Pollution Control Facility. The improvements include a new centralized polymer building, a new clarified effluent water sysytem, sludge digester system improvements, and second phase security improvements. The project also includes construction of two biogas storage tanks, including gas bag, steel tank, foundation piles, valve vault, site work, instrumentation, and electrical work.

Service Area

The BCUA's Service Area consists of forty-seven municipalities and a portion of five non-member municipalities. The thirtyeight municipalities entirely served by the BCUA WWTP include Bergenfield, Bogota, Carlstadt, Closter, Demarest, Dumont, Emerson, Edgewater, Englewood, Englewood Cliffs, Fairview, Harrington Park, Haworth, Hillsdale, Leonia, Little Ferry, Maywood, Montvale, Moonachie, New Milford, Northvale, Norwood, Old Tappan, Oradell, Palisades Park, Paramus, Park Ridge, Ridgefield, Ridgefield Park, River Edge, River Vale, Rochelle Park, Teaneck, Tenafly, Teterboro, Westwood, Woodcliff Lake and Wood-Ridge. The eight municipalities partially served by the BCUA WWTP include Cliffside Park, East Rutherford, Fort Lee, Hackensack, Hasbrouck Heights, Rutherford, South Hackensack and Washington Township. The five non-member municipalities partially served by the BCUA WWTP include Alpine, Lodi, Lyndhurst, North Bergen, and Ridgewood. Portions of Cliffside Park, Fort Lee, and Hackensack

Need for Project

Currently, treated wastewater from the Edgewater WPCF is discharged from the existing 42-inch diameter outfall at the shoreline of the Hudson River. During periods of low water, the river bottom is exposed and the effluent flows over the tidal mud flats before reaching the receded river level. At high tide, the outfall is submerged. This condition limits the amount of dilution of the effluent with the receiving waters. In order to provide adequate dilution of the effluent and achieve permit limits for ammonia, copper and zinc, an extension of the outfall to the deeper waters of the Hudson River is required before the NJPDES permit expires on August 31, 2014.

Project Description

The proposed project includes extension of the outfall at the Edgewater Municipal Utility Authority to the deeper waters of the Hudson River.

Need for Project

The treatment plant needs to be functional during storm events. Significant direct impacts from sewage backups and overflows can occur if the facility is damaged or unable to function properly.

Project Description

This project protects high value power supply assets and protects the plant power supply using a Biogas Powered Electric Microgrid (BPEMG). Power supply assets include the Switchgear (SG) Building, Vault, the CoGen Building, and the Main Substation. The project includes expansion of the CoGen facility; installation of a digester gas storage tank; modification of the blowers and aeration control system to increase energy efficiency and improve process control, and installation of a fats, oil and grease receiving and handling station to augment digester gas production.

Diamond Hill Development

Need for Project

The existing facilities at the Diamond Hill Sewer Company (NJ0028592), which serves the Diamond Hill Development, is inadequately treating sewage and has been doing so for a few decades. The discharge is to Hances Brook, which is classified as FW2-Trout Production Category One waters. The private owner of the sewer company would not make the necessary repairs to the facilities, so Mansfield Township is evaluating whether or not to takeover the Diamond Hill Sewer Company.

Need for Project

The project consists of three elements: Aeration Improvements, Secondary Settling Tank Improvements and Sludge Dewatering Improvements. The aeration improvements and the secondary settling tank improvements will improve the operability of the activated sludge process and decrease the likelihood of permit violations. The sludge dewatering improvements will provide a more manageable solids disposal process.

Project Description

The project consists of three elements: Aeration Improvements, Secondary Settling Tank Improvements and Sludge Dewatering Improvements. All three will address operational needs at this nearly 50 year old plant. The activated sludge process will be modified by replacing the current surface aerators with a diffused air aeration system. The secondary settling tanks will be provided with internal baffles to combat solids underflow and carry-over. The inlet ports to the secondary settling tanks will also be modified. The current sludge dewatering machines (Somat Presses) will be replaced with a gravity belt thickener.

Need for Project

PVSC currently accepts sludge from the Bergen County Utilities Authority (BCUA) for treatment. Maintenance dredging is required to continue to accept the BCUA sludge. Dewatering the BCUA sludge at PVSC reduces nitrogen loadings to the Hackensack River. This project will also make improvements to PVSC's plant wide fire alarm system.

Project Description

The proposed project includes improvements to the plant wide fire alarm system. PVSC's docks require maintenance dredging to continue to bring sludges by barge from the Bergen County Utilities Authority and New York City.

COMBINED HEAT & POWER FACILITY

Priority List Rank

131

County

ESSEX

Existing Population

1,350,000

Service Area

Parts of Bergen, Essex, Hudson and Passaic Counties

Need for Project

Although the Commission already has qualifying back-up for power outages through 2 PSEG sub-stations, this CHP Facility will make the Commission wholly independent from utility outages, thereby allowing the Commission to continue processing sewerage materials under all power conditions, including that of a grid black-out. This would prevent the flow of untreated materials in those power challenged situations. The CHP Facility would allow the Commission to increase power to meet all demand during wet weather flow periods. The CHP Facility should result in operational efficiencies, including cost savings in electricity, heating and cooling, so that the Commission can undertake other priority list projects through the Trust Program.

Project Description

The proposed project includes installation of a Combined Heat and Power Facility to be located on Commission property.

Service Area

Princeton Borough, Princeton Township, West Windsor Township, a portionof South Brunswick, a portion of Plainsboro Township, and a portionof Franklin Township

Need for Project

The River Road Wastewater Treatment Plant (RRWWTP) is an advanced wastewater plant that discharges to the Millstone River. The plant effluent is subject to water quality based standards. The purpose of the project (installation of a natural gas Emergency Generator (EG) at the RRWWTP) is for resiliency. With the installation of a natural gas EG there will be enhanced reliability for the emergency power source. During Superstorm Sandy there were issues in getting fuel oil deliveries needed to run the generators. With the installation of the natural gas EG, SBRSA will have the ability to run sludge incinerator (the current EG runs on No. 2 fuel oil and does not have the capacity to operate the sludge dewatering/incineration process). With the sludge dewatering/incineration process connected to the EG, SBRSA will be able to process sludge, customer sludge and aid other authorities process their sludge should the need arise as with the last storm.

Project Description

The proposed project is to supply backup power to both the wastewater and sludge processing equipment and provide resiliency to our backup power. This project involves the installation of a natural gas emergency generator to be used as backup power for both the wastewater and incineration process. The new emergency generator will require a new building or addition to an existing building to house the unit.

Service Area

The Wanaque Valley Regional Sewerage Authority's (WVRSA) Water Pollution Control Facility includes the service areas of Wanaque, Ringwood, and West Milford.

Need for Project

The project is necessary for several reasons. The generators are required to prevent power outages, which will result in sewer overflows and untreated wastewater to be discharged. The other improvements are upgrades to the existing equipment that have been damaged by Superstorm Sandy, at the end of their useful life or appropriate to facilitate operations and ensure a reliable and high level of wastewater treatment.

Project Description

The proposed Authority capital improvement projects consist of the following: (1) installation of a new gas generator at the wastewater treatment facility and at the main pumping station; (2) mechanical aerators and drives with increased aeration capacity for the existing oxidation ditch process system; (3) upgrade of three influent pumps and drives to 40 HP; (4) installation of a rotary drum sludge thickener system; (5) non-potable water pumps, dilution water pumps and drives; (6) covering of septage receiving area; (7) mixers on sludge holding tanks; (8) replacement of microscreen grid screens and backwash pumps; and (9) upgrade of discharge channel ultraviolet disinfection system.

Need for Project

Maintaining fully operational wastewater treatment plan equipment is essential for proper treatment of sanitary sewer wastewater. Failure of plant systems could result in partially trated sewage to be discharged to the South Branch of the Pennsauken Creek or the Southwest Branch of the Rancocas Creek.

Project Description

The project will replace the current process control systems with state of the art SCADA systems. New instrumentation will be provided in the process tanks along with full PC based SCADA servers and workstations. The systems will be capable of sending alarms to operations personnel remotely to their mobile communication devices and will allow them to monitor the plants from remote locations.

Need for Project

The existing equipment is nearing the end of its useful life and is in need of replacement. In addition, the old model pumps and blowers and the outdated controls consume much more energy than currently available models. The equipment replacements will provide a reduction of operation and maintenance cost and will provide for greater efficiency for processing wastewater and sludge. Replacement of the equipment is not only necessary to avoid system breakdown, but will provide considerable energy savings in the future.

Project Description

Improvements to the Woodstream and Elmwood Plants include replacing the equalization tank mixing system; Upgrading the contact stabilization system by installing new centrifugal blowers with VFDs; upgrading ultraviolet disinfection system by integrating a flow pacing system; Replacing Biofor Building air scour blower motors and process blower motors; Replacing blower building air scour blower motors, process blower motors, standby blower motor; other motors

Need for Project

JMEUC operates a 75 mgd secondary sewage treatment plant. Due to recent experience with unreliable electric service, which resulted in violations, JMEUC proposes to install an on-site co-generation facility to ensure plant reliabilty.

Project Description

The proposed project includes installation of a co-generation power plant, which will serve as the primary power source at the JMEUC facilities.

Need for Project

Sewer maintenance equipment and vehicles are needed for the operation and maintenance of the sewer system throughout the City of Newark. Proper maintenance of the sewer system by reducing flooding and back ups improves water quality and public health.

Project Description

The project involes the aquisition of 4 jet/vacuum sewer cleaning trucks, 4 catch basin bucket trucks, 2 large dump trucks, 4 small mason/dump trucks, 6 crew cab pick up trucks, 3 backhoes, 1 mini excavator, 2 utility trucks, 4 mini vans, 4 suv’s, 1 cctv equipment trucks, and other equipment such as rodder, jetters, tampers, jack hammers & pumps required for the operation and maintenance of sewer system throughout the City of Newark.

Seaside Park Borough

Need for Project

Stormwater runoff is the most common way that nonpoint source pollution reaches local rivers, creeks and other water ways, including Barnegat Bay. If the runoff is not absorbed by soil and vegetation or by other measures, rainwater carries chemicals, nutrients, sediments and other forms of nonpoint source pollution into surface waters. The newly constructed parking lot will utilize underground storage recharge structures which will help eliminate runoffs high in organic and inorganic compounds, thus helping to reduce addition of artificial or natural substances, such as nitrates and phosphates, through fertilizers or sewage, that flow into the Barnegat Bay Watershed which contributes to eutrofication.

Project Description

The work on this project consists of the installation an underground storm water recharge system capable of handling a two year storm (which will reduce the amount of discharge into the Barnegat Bay and Atlantic Ocean), high efficiency lighting system, electric car charging stations, and the repaving of the parking lots to still serve the original intended purpose of the proposed area and to promote better drainage of the site. All work will be designed and constructed to utilize the current "green" technologies to help eliminate the carbon footprint that tourist areas leave with the increase in population of the summer months. The area sees a tenfold increase in population in the summer months which is why this project is beneficial for the Borough and the environment.

Service Area

Townships of Manalapan and Marlboro, the Borough of Englishtown and a portion of the Township of Freehold

Need for Project

The proposed project is needed to reduce the amount of electricity consumed at the plant. Continued operation using grid power would require a continued reliance on non-renewable energy sources. The project will reduce the production of greenhouse gases which are a by-product of burning fossil fuels. It will also reduce the cost of plant operation while providing a positive impact on our environment.

Project Description

The WMUA proposes installation of a new photovoltaic (PV) solar array system in two areas, the north and south sections of the plant. The purpose of the project is to alleviate the electricity demand from the power plant during its operation. The PV array proposed in the south runs along the southern border of the site adjacent to Pine Brook and the area to the north is the existing site presently utilized by the WMUA for construction staging. The proposed solar array will cover approximately 146,300 sq. ft. of land. As proposed, the solar array will produce a total of 2 Mw of electricity and will offset approximately 1/3 to 1/2 of the current energy used by the plant.

Need for Project

The project will reduce the GTMUA's reliance on public electric supply and in turn fossil fuels. The solar array will supply power to the Authority facilities that handle the operations and maintenance for the MUA.

Project Description

The GTMUA Sewer System Rehabilitation Project consists of a single project as delineated in this planning document. All aspects of the components will be located within the boundary of GTMUA's current Gloucester Township service area and collection system. The project consists of the installation of a 175kW Solar Array to supply power to the MUA facilities. The project will include the necessary site work and installation of solar hardware to connect to the existing Authority buildings. The solar array will supply power to the Authority facilities that handle the operations and maintenance for the MUA. The proposed project objectives are to maintain permit compliance and increase operational efficiencies, thereby enhancing the integrity of the overall wastewater collection system.

Township of Long Hill

Need for Project

The STP routinely receives flow in excess of its permitted capacity. Significant operational challenges occur as a result of high peak flows. STP improvements are necessary in order to meet these flows and future effluent requirements. The existing UV disinfection system is at the end of its useful service life and replacement is necessary in order to ensure reliable disinfection and protection of water quality, and more effective screening of influent wastewater is necessary to reduce operating costs.

Project Description

The project consists of replacement of an existing UV disinfecion system at the end of its useful life with a new more efficient UV disinfection system, and replacement of the existing influent screens with a new influent screening system to reduce operating costs.

Township of Maple Shade

Need for Project

The Maple Shade Wastewater Treatment Plant treats all of the wastewater from its Community and discharges to the Pennsauken Creek. The proposed improvements are necessary to address aging infrastructure needs for the purpose of ensuring proper and reliable operation as required to meet discharge limits.

Project Description

Due to the age of the Maple Shade Wastewater Treatment Plant, various equipment is approaching the anticipated lifespan for adequate operation. Therefore, the Township intends to upgrade the Orbal system equipment, the Orbal system instrumentation and the WWTP's Supervisory Control & Data Acquisition (SCADA) system. The Orbal system equipment upgrades will consist of installing high efficiency disc aerators with variable speed capability, new drives and shafts and Smart BNR Instrumentation. Replacement equipment and controls will consume approximately 20% less energy than current operations, while also achieving greater nutrient reduction. Improvements to the SCADA system are vital to the operation and maintenance of the WWTP since antiqued parts are no longer available, which results in the controls to no longer function properly.

Service Area

Jefferson Township (Rockaway River Basin)

Need for Project

Some of the on-site systems that exist in the Rockaway River Basin of Jefferson Township have documented repeated failures. Most of the systems are failing due to shallow depth to bedrock, high water tables and steep slopes. Rehabilitation has been attempted on some systems but the results have been generally unsuccessful. Trout fishing and primary contact recreation uses of Russia Brook (FW2-TM) are adversely impacted due to the unacceptable levels of nutrients and marginally acceptable levels of toxics and fecal coliform. These facilities may pose serious health hazards in the future for the township if not corrected.

Project Description

This project includes the design and construction of a local wastewater system for the Rockaway River Basin portion of Jefferson Township. The recommended wastewater management plan for this portion of Jefferson Township consists of two major parts: 1) centralized sewer service for Cozy Lake, Lake Swannanoa and White Pine Lake area in the Rockaway Basin and 2) Septic Management for the remaining portions.

Service Area

Howell Township

Need for Project

The Freewood Acres section of Howell Township is currently relying on on-site septic disposal systems for the treatment of wastewater. Many of these existing systems provide inadequate treatment, which has resulted in the degradation of Aldrich Lake. Aldrich Lake experiences high fecal coliform, toxics, and nutrients concentrations. Consequently, trout fishing, primary contact recreation, and farming are impacted.

Project Description

Preliminary investigations indicate that a collection system will need to be constructed in the planning area. The collection system will be connected via an interceptor into the Manasquan River Regional Sewerage Authority conveyance system for treatment and disposal.

Need for Project

Stormwater runoff is the most common way that nonpoint source pollution reaches local rivers, creeks and other water ways, including Barnegat Bay. If the runoff is not absorbed by soil and vegetation or by other measures, rainwater carries chemicals, nutrients, sediments and other forms of nonpoint source pollution into surface waters. Installation of pervious surface will allow all stormwater to enter the ground.

Project Description

The proposed project includes installation of approximately 20,000sq/ft of permeable subsurface and pavers to an existing packed gravel parking lot.

Need for Project

The Boyer Avenue site is currently approved to treat 1.6 MGD of treated wastewater effluent. The currently approved land application method is rapid infiltration utilizing the five existing on-site slit trenches. It is the Town's objective to maximize the on-site recharge and disposal of the treated effluent at this facility. Therefore, utilizing the recreation fields as means of infiltration will meet this objective.

Project Description

The Boyer Avenue facility is currently irrigated using potable quality water from the Town's water system resulting in substantial seasonal demands. Hammonton proposes to install overland effluent recharge and underground drip irrigation systems.This project will allow the Town to meet the requirements of the NJDEP Wastewater Discharge Permit and the Pinelands Commission directive to maximize on-site recharge. The project will also allow the Town to conserve potable water.

The BCUA's Service Area consists of forty-seven municipalities and a portion of five non-member municipalities. The thirtyeight municipalities entirely served by the BCUA WWTP include Bergenfield, Bogota, Carlstadt, Closter, Demarest, Dumont, Emerson, Edgewater, Englewood, Englewood Cliffs, Fairview, Harrington Park, Haworth, Hillsdale, Leonia, Little Ferry, Maywood, Montvale, Moonachie, New Milford, Northvale, Norwood, Old Tappan, Oradell, Palisades Park, Paramus, Park Ridge, Ridgefield, Ridgefield Park, River Edge, River Vale, Rochelle Park, Teaneck, Tenafly, Teterboro, Westwood, Woodcliff Lake and Wood-Ridge. The eight municipalities partially served by the BCUA WWTP include Cliffside Park, East Rutherford, Fort Lee, Hackensack, Hasbrouck Heights, Rutherford, South Hackensack and Washington Township. The five non-member municipalities partially served by the BCUA WWTP include Alpine, Lodi, Lyndhurst, North Bergen, and Ridgewood. Portions of Cliffside Park, Fort Lee, and Hackensack

Need for Project

Currently, treated wastewater from the Edgewater WPCF is discharged from the existing 42-inch diameter outfall at the shoreline of the Hudson River. During periods of low water, the river bottom is exposed and the effluent flows over the tidal mud flats before reaching the receded river level. At high tide, the outfall is submerged. This condition limits the amount of dilution of the effluent with the receiving waters. In order to provide adequate dilution of the effluent and achieve permit limits for ammonia, copper and zinc, an extension of the outfall to the deeper waters of the Hudson River is required before the NJPDES permit expires on August 31, 2014.

Project Description

The proposed project includes extension of the outfall at the Edgewater Municipal Utility Authority to the deeper waters of the Hudson River.

Need for Project

The JMEUC has developed, and continually updates, a Capital Improvements Plan (CIP). The purpose of the CIP is to encourage proactive planning and implementation of said plan to increase process efficiency and reduce the risk of equipment failure which can lead to substantially greater maintenance costs. The three components of this project have been identified as priorities in order to strengthen “weak links” in the treatment plant and/or improve the ability to effectively operate the plant.

Project Description

The scope of work will include the following projects: Aeration Equipment Upgrade, Digester #1 Cleaning and Modification,and Dewatering Facility Upgrade.

The municipalities of Absecon, Brigantine, Egg Harbor City, Egg Harbor Township, Galloway, Hamilton, Linwood, Longport, Margate, Northfield, Pleasantville, Somers Point Ventnor, Port Republic, and Weymouth Township

Need for Project

The ACUA’s regional collection system has 20 pumping stations throughout the county. These pump stations are often housed at the sites of former municipal treatment works facilities that were in operation prior to the regionalization of the county system in 1978. The ACUA’s pump stations require significant amounts of energy to send the wastewater collected in the local municipal sewer systems throughout the eastern portion of Atlantic County, to the ACUA treatment plant in Atlantic City. The ACUA believes that the installation of solar photovoltaic electric generation system (PV System) at these pump stations can provide a considerable benefit to the system ratepayers. By installing PV Systems at the pump stations the ACUA would see significant savings in its electricity bills at the pumping stations. These savings will ultimately be passed along to the system’s ratepayers.

Project Description

The proposed project includes the installation of solar photovoltaic generation at 8 of ACUA's pump stations.

Need for Project

The Parsippany-Troy Hills wastewater treatment plant treats sanitary sewer discharges prior to surface water discharge. This proposed project is intended to reduce the Township's reliance on conventional electric power generation methods by substituting a sustainable alternative source of power for the treatment plant, which will result in environmental benefits not only in improved water quality but also improving air quality and less reliance on natural resources.

Project Description

The proposed projct includes design and construction of a photovoltaic power system to provide energy to the wastewater treatment plant.

Need for Project

Barnegat Bay has been classified as highly eutrophic by both state and federal authorities. This eutrophication, which continues to threaten ecological health of the Bay, is particularly the result of excessive pollutant loading. Total suspended solids have been identified as one of the primary pollutants that can adversely affect the quality of water in the Bay. Reductions in the amount of total suspended solids, floatables, and other harmful pollutants delivered to the Bay by streams and waterways are primary objectives of both the Barnegat Bay Partnership and the New Jersey Department of Environmental Protection's (NJDEP) Barnegat Bay Initiative. The need for the proposed project is evident in the fact that it is intended to reduce stormwater-borne total suspended solids and floatables from a highly developed drainage areas that discharge directly into the Barnegat Bay's stream network.

Project Description

The proposed project involves constructing a new manufactured treatment device upstream of the basin for the purpose of removing total suspended solids and floatables from stormwater runoff. The project also includes retrofitting of existing stormwater outfalls and existing stormwater conveyance systems to include manufactured treatment devices for the purpose of removing total suspended solids and floatables from stormwater runoff.

The need for the proposed project is evident in the fact that it is intended to reduce stormwater-borne total suspended solids and floatables from a highly developed drainage areas that discharge directly into the Barnegat Bay's stream network.

Project Description

The proposed project involves retrofitting 16 existing stormwater outfalls and 32 existing stormwater conveyance systems to include manufactured treatment devices for the purpose of removing total suspended solids and floatables from stormwater runoff. The project design for the manufactured treatment device includes a precast concrete structure with 2 chambers. The footprint of disturbance for each manufactured treatment device will be less than 300 square feet. The manufactured treatment devices will be constructed below grade directly underneath the first paved road upstream from each individual outfall.

Project Description

Construction of a regional automated truck wash for use by County Departments and municipalities. Currently there are no privately operated truck wash facilities in the County and only two public facilties, which are both located in the northern part of the County. This facility would serve the needs of the southern part of the County. Recycling of the washwater will be incorporated into the design.

Project Description

The Aqualete Industries Starr Water Treatment System WTS 2000 uses a dual angle inclined plate directional hydrodynamic water treatment system. The WTS 2000 is portable so it can be used throughout the County. The system can be used at construction sites to effectively reduce total suspended solids, turbidity, nitrogen, phosphorus, hydrocarbons, and heavy metals. The WTS 2000 can be used to meet standards for Soil Erosion, Sediment Control and Dewatering.

Project Description

The equipment includes a Ford E-450 truck, cargo box, 5500 Watt generator, lockable storage container for camera, OZ2 pan, tilt and zoom camera, steerable Pipe Ranger Wheeled transporter, electric lift, rubber tire kit, 19" LCD monitor, DVR, wireless controller, gold cable assembly and cable reel, 20 gal washdown, electric pump, and hose, tool kit, computer and software and support plan. The equipment will be used to view the inside of storm water pipes and determine the locations of deterioration in need of repair. The objective is to reduce the amount of total suspended solid pollutants that enter the drainage system through deteriorated pipes.

Need for Project

Rockaway Valley Regional Sewerage Authority is proposing improvements to its treatment facility to ensure continued compliance with the current NJPDES effluent parameters.

Project Description

The four existing clarifiers were installed and place in operation in 1985. The drive turntables have failed and have been repaired. The structural members are highly corroded and the loss of metal is to such a degree that sand blasting is not recommended as it may cause structural failure. The Clarifer mechanisims are a critical element of the treatment process essential for the maintenance of the effluent limits. The four clarifier mechanisms must be replaced.

Need for Project

Facility was previously upgraded under a federal Construction Grant as Project No. C340461-02-2 and TWA SO-8-86-6073 without grit and scum removal. Under existing conditions, the influent flow is pumped twice and this is inefficient. The project will result in one central pumping facility with grit/scum removal which will improve the operational reliability of downstream treatment units.

Project Description

Construction of four (4) 60-inch diameter open flight screw pumps (archimedes screw) for a design flow of 12.2 MGD and peak of 24.3 MGD. Each screw capacity will be 8.1 MGD, with one unit as standby. Due to the efficiency of the screw pump, estimated power savings would be $10,000/yr. Metering will be by two Parshall flumes, chart recorded and mechanical barscreens. The grit/grease removal system will consist of a 3.2 x 36 meter grease removal channel and a 3.4 x 36 meter grit removal channel with the associated mechanical and aeration systems. A biofilter will be constructed to control odors from the proposed enclosed screw pumps as well as the headworks facility.

Need for Project

Stormwater runoff is the most common way that nonpoint source pollution reaches local rivers, creeks and other water ways, including Barnegat Bay. If the runoff is not absorbed by soil and vegetation or by other measures, rainwater carries chemicals, nutrients, sediments and other forms of nonpoint source pollution into surface waters.

Project Description

The proposed project includes retrofitting storm drain inlet.

Need for Project

The Maple Shade Wastewater Treatment Plant treats all of the wastewater from its Community, the Plant discharges to the Pennsauken Creek. These referenced improvements will allow the Plant to maintain its operations in order to meet their discharge limits.

Project Description

This project involves the replacement of the Plant's Headworks pumps, sludge return pumps and the sludge transfer pumps, the upgrades to the Plant's electrical system, chemical systems and site lighting.

Service Area

Borough of Beachwood

Need for Project

The Borough is located on the Toms River which discharges directly into the Barnegat Bay. The runoff from the Beachwood Beach outfall consists of storm water from the wooded and paved areas in the drainage area. The catch basins upstream of the outfall do not have the capability to reduce suspended solids. The hydrodynamic separator is the logical BMP at this location due to the close proximity of the drainage area to the river and the lack of space in this developed area to provide a storm water management basin or other facility to intercept and treat solids, sediments and other pollutants. Evidence of a water quality based need for measures to reduce non-point pollution in Beachwood Borough is provided by the results of testing for water quality at the Beachwood beaches. In many cases the water quality of many beaches is adversely impacted by contaminated storm water runoff. Information published by the National Resources Defense Council in "Testing the Waters, 2010" listed the Beachwood Beach West in a list of 15 beaches in the nation with more than 25 samples exceeding the EPA's Single Sample Maximum Standards for designated beach areas each year, 2006- 2009. In 2009 alone, of 47 samples at the Beachwood Beach west, the EPA maximum standards were exceeded over 50% of the time. The outfall is located near the Borough beach and serves as the discharge point for the associated parking area . The drainage is 4.65 acres and includes paved areas.

Project Description

The proposed project includes relocating existing outfall pipe #1 and #2 and installing lift station (pump station) to accommodate the outfall relocation in order improve water quality and stormwater flooding.

Point Pleasant Beach Borough

Need for Project

The Borough is proposing to desilt and remove snags Little Silver Lake, in order to provide for dredging of the lake for stormwater management enhancement. The lakeshore would be stabilized to prevent erosion and the outfall structure would be replaced. A tide gate will be installed on the inflow to reduce the effects of tidal flooding, as well as a
stormwater pump station will be constructed to reduce flooding in the residential area surrounding the lake that sustained substantial damage due to Sandy. In addition the Borough is proposing to stablize the lake bank with naturalized vegation to improve water quality.

Project Description

The Borough of Point Pleasant Beach is proposing to dredge Little Silver Lake and install a stormwater pump station and back flow preventer to ensure proper functioning of the new pump station.

Need for Project

A sewer system evaluation survey recently performed by Elson T. Killam Associates for the Passaic Valley Sewerage Commissioners' service area found excessive infiltration/inflow (I/I) in this municipality's sewer system.

Project Description

An Infiltration/Inflow correction program, which will consist of grouting slip lining, and repairing/replacing structurally damaged pipes and manholes will be undertaken to remove the identified excessive I/I.

Need for Project

The City of Trenton's brick sewers date back to the 1800's. They are in dire need of repair and are subject to exfiltration, which threatens the quality of the surrounding groundwater.

Project Description

The City proposes to line and stabilize deteriorated brick using various trenchless rehabilitation processes.

Need for Project

While the CCMUA's Sicklerville sewage treatment plant does meet its NJPDES permit limits, the permit limits exceed the normal standards required for discharges into the groundwater of the Pinelands National Reserve because the plant happens to be just outside the Pinelands area. Thus, the plant is discharging compliant, treated sewage into the groundwaters of the PNR at levels that are much higher than the normal Pinelands limits. This project will result in the elimination of the CCMUA's Sicklerville sewage treatment plant which currently discharges treated sewage into the groundwaters of the Great Egg Harbor River, and the Pinelands National Reserve. This project will eliminate this discharge and convey the flow to the CCMUA's Delaware No.1 WPCF for treatment.

Project Description

The proposed project includes instalation of aproximately 7,200 feet of 8 and 15 inch PVC sanitary sewer gravity pipe.

Need for Project

The sanitary and storm sewer systems are over 80 years old and have deteriorated to point where City has between 3 to 5 major sewer repairs per year at a cost of $10-15,000 each. There are numerous offset joints and cracks in both systems resulting in exfiltration into surrounding soils. Project is intended to replace or reline these systems to mitigate infiltration/inflow (sanitary & storm), sedimentation (storm sewers), and exfiltration (sanitary & storm).

Project Description

The project involves replacement or relining of storm and sanitary sewers in the Springwood Avenue Redevelopment Area and adjacent streets. In addition, the upgrade of the storm sewer system in the Central Business District (CBD) Redevelopment Area is part of the loan request.

4,041

Service Area

North Wildwood City

Need for Project

The sanitary sewer lines are over 60 years old. Many leaking joints have caused sinkhole problems, accelerated street deterioration and results in excessive infiltration and inflow into the City's sewer system. The sewage has the potential to pollute surface water through exfiltration of the sanitary system combined with infiltration into the storm sewer system which discharges to the back bay.

Project Description

The proposed project involves reconstruction and replacement of sewer mains, manholes, and sewer laterals in a forty block area of the City.

Need for Project

The sanitary sewer mains are deteriorated with the City experiencing emergency sewer breaks on an ever increasing basis. The breaks could cause sewage spillage which would be discharged into coastal waters. The inadequate and deteriorating storm sewer systems causes a flooding condition that could result in the sanitary sewer system becoming overburdened which would result in discharge of sewerage into coastal waters.

Project Description

Street & Utility Reconstruction as follows: Surf Avenue between 1st & 11th Avenues; Ocean Avenue between 2 & 18th avenues; Beachfront storm sewer between 4th & 15th Avenues; 7th, 8th, & 12th Avenues, between Surf Avenue and JFK Blvd.; 4th Avenue between Ocean Avenue and JFK Blvd.

Need for Project

The sanitary sewer mains are deteriorated with the Borough experiencing emergency sewer breaks on an ever increasing frequency. The breaks could cause sewage spillage which will be discharged into coastal waters. The pump stations are in a state of disrepair and must be replaced. If one of the stations failed during our summer season, a major sewage spillage could occur causing a discharge of sewage into coastal waters.

Project Description

The proposed project is the replacement in kind of the existing deteriorated sanitary sewer mains along New Jersey Avenue and service laterals along several side streets. We will also be replacing the two (2) existing sanitary sewer pumping stations located along New Jersey Avenue.

Need for Project

WMUA's treatment plant and pumping stations are located on or adjacent to the Rancocas Creek. The plant discharges into the Rancocas Creek, which is used for non-trout fishing, boating and other recreational uses. The sanitary sewer lines are located within or adjacent to municipal, county roadways and the Mill Creek. Failure of the collection system would result in service disruption, traffic delays and possible contamination of Mill Creek.

Project Description

The proposed project includes the replacement of two (2) obsolete collection system wastewater pumping stations and lastly the project includes the cleaning, televising and lining (if necessary) of selected portions of the WMUA's sanitary sewer collection system.

Need for Project

WMUA's treatment plant and pumping stations are located on or adjacent to the Rancocas Creek. The plant discharges into the Rancocas Creek, which is used for non-trout fishing, boating and other recreational uses. The sanitary sewer lines are located within or adjacent to municipal, county roadways and the Mill Creek. Failure of the collection system would result in service disruption, traffic delays and possible contamination of Mill Creek.

Project Description

The project includes the replacement of three obsolete collection system wastewater pumping stations and the cleaning, televising and lining (if necessary) of selected portion of the Authority's sanitary sewer collection system. Improvements within the floodplain include: raising manholes/installing watertight castings, constructing access drives, bank stabilization and erosion control at vulnerable manholes, rehabilitation of aerial sewer crossings, removal of floodplain obstructions, purchase of an all-terrain easement machine. Insulation of a natural gas emergency generators at Windsor and Tweedstone pumping stations.

Delran Township

Need for Project

In late 2010, the Township undertook an evaluation of the Delran Township Sewer Utility wastewater facilities in order to develop a 10-Year Capital Improvements Plan (CIP). The purpose of the CIP was to encourage proactive planning and implementation of said plan to increase process efficiency and reduce the risk of equipment failure which can lead to substantially greater maintenance costs. The CIP was completed and presented to the Township Council on January 19, 2011. Subsequently, the three Projects listed above were identified as priority projects in order to strengthen "weak links" in the treatment process and improve the ability to effectively operate the plant.

Project Description

The proposed project will involve the improvements to the Fifth Street Pump Station.

Service Area

Warren Township

Need for Project

The Fox Hill and Heather Lane pump station projects are needed in order to maintain conveyance of sewerage flows to Warren Township Sewerage Authority wastewater treatment facilities for proper disposal. The Fox Hill Pump Station was put in operation in 1970 and has reached the end of its useful life. This pump station is a dry well pump station, requiring a confined space permit to enter. Pumps are subject to becoming air bound, which requires personnel to enter the confined space dry well to "bleed" the pumps. The emergency generator is in a constant state of repair and at the end of its useful life. The upgrades to the pump station will include conversion to a submersible type pump station with equivalently sized pumps to those existing, and including a new wet well, valve chamber and related ancillary facilities. The project also includes replacement of the emergency generator. The Heather Lane Pump Station was put on line in 1985. The current segmented concrete valve pit is subject to groundwater infiltration, and is constantly filled with water. The gate valves are rusted in the open position and cannot be properly accessed. The gate valves cannot be operated to isolate the wet well and pumps from the force main when line maintenance is needed. The upgrades at the Heather Lane Pump Station include the construction of a new valve chamber to replace the existing non-functional valve chamber.

Project Description

Fox Hill West Pump Station project involves conversion of the wet-pit dry pit pump station to a submersible pump station and replacement of aging pump station components. Heather Lane Pump Station Upgrades involves replacement of the existing in-operable valve chamber.

Totowa Borough

Need for Project

The Township's sewer system contains excessive infiltration/inflow (I/I) as documented by the I/I analysis. Additional studies will estimate the quantity of I/I in the system to eliminate a portion of excessive I/I.

Project Description

This project is for the I/I correction of Totowa Borough's existing sewer system to eliminate a portion of infiltration/inflow that is excessive. The project will be for the minor rehabilitation of sections of sanitary sewer pipe including grouting, sealing, and repair of defective manholes.

Service Area

The sewer service area generally consists of three sections of Waretown. The first area generally extends from the Barnegat Bay west to Route 9, extending from the Lacey Township municipal border to Barnegat Township, including some developed portions of Bayshore Drive located within Barnegat Township. The second area extends from Route 9 west to the Garden State Parkway and from the Barnegat Township municipal border north to Wells Mills Road (County Road 532). The final area includes all non-environmentally sensitive areas west of Route 9, north of Wells Mills Road to the Lacey Township municipal border.

Need for Project

In ACP sewer mains, the degradation of the pipe is less obvious than in the water mains. The ACP in Montclair Road is 44 years old. As the pipe ages, it does not burst, but rather starts to leak. In high water table areas and during periods of seasonal high water, there is increased flow in the pipe as a result of increasing infiltration. The higher flow results in a higher treatment cost at the wastewater treatment plant, a cost that is passed on to the users. Occasionally, the sewer will collapse or be blocked by tree roots resulting in the backup of sewage into user facilities or at the manholes in the street. Considering the proximity of the project area to adjacent lagoon areas and the Barnegat Bay, any backup could result in an overflow at the manholes in the street, which if unchecked, could impact the lagoons or the Barnegat Bay. The replacement of the ACP sewer will eliminate or substantially reduce infiltration and the additional associated treatment costs. Furthermore, the replacement will eliminate contamination that may be caused by leaks or breaks in the pipe, as well as minimize the chances of clogging and backups.

Project Description

The applicant proposes to replace the existing 8" asbestos cement sewer main in Montclair Road with 1000 linear feet of 8" polyvinyl chloride pipe (PVC). This project includes the replacement of all manholes and sewer laterals.

Service Area

Borough of Milltown, New Brunswick, East Brunswick

Need for Project

The project is required in order to mitigate the flooding of the electrical substation by removing it from the flood plain. During the storm in April 2007 and during Hurricane Irene in August of 2011 the existing electrical substation along with the Borough of Milltown suffered major damages due to flooding due to its location within the flood plain of the Lawrence Brook. The purpose of the project is to relocate the existing electrical substation to a location outside of the flood plain. In order to protect the Borough's Electrical Utilities and the residents from further physical and financial damages it is necessary to relocate the substation to an alternate location at a higher elevation. The proposed location for the new substation is at an elevation approximately 20 feet higher then the existing substation and is approximately 10 feet higher than the 500 year flood plain elevation and the measured flood elevation from Hurricane Irene, which will reduce the risk of flooding.

Project Description

The substation is located in the Lawrence Brook Flood Plain. The substation was flooded twice in the past five years causing power to the entire Borough to be shut down for an extended period. During the Flood of August 2011, the substation building had approximately 2ft of flood water inside the building. The power was shutdown for approximately five days while the switchgear was cleaned, dried, and repaired due to the flooding. The proposed improvements consist of reconstructing the electrical substation at a location that is outside of the flood plain. The new electrical substation will be installed on an adjacent property to minimize the extension of the feeder cables from PSE&G and to the Borough circuitry and reduce the overall project cost. The proposed location for the reconstruction of the substation is Lot 5.06 Block 60, adjacent to the existing substation. This property is owned by Middlesex County and is included on the Green Acres Program Open Space Database.

Borough of Manasquan

Need for Project

The air release valve assemblies are located on an existing 30-inch diameter DIP wastewater force main which conveys an average of 5 MGD. The force main has been in continuous operation for almost 25 years. In accordance with NJDEP requirements to evaluate the integrity of existing wastewater infrastructure, the MRRSA conducted inspections of the air release valve assemblies and discovered significant corrosion. If any of these air release valve assemblies were to fail, there would be a significant untreated wastewater discharge within the vicinity of an environmentally sensitive area and a commercial corridor. Replacement is necessitated to avoid failure of the force main at these locations. The MRRSA has no other means of conveying wastewater flow from the Upper Manasquan Pump Station.

Project Description

The project involves the replacement of three (3) existing air release valve assemblies on the 30-inch diameter Upper Manasquan Force Main within the Township of Howell. Line stops will be implemented to isolate the force main so that the air release assemblies can be replaced. Inspections of the existing air release assemblies have revealed significant corrosion and replacement is necessary to avoid failure of the force main at these three (3) locations. All work is to be performed within the previously disturbed right-of-way of Casino Drive and NJSH Route 9.

Need for Project

The existing VCP (Clay) sewer transmission lines are experiencing excessive infiltration and inflow. This is increasing the treatment costs at the Wastewater Treatment Plant and causing overflows.

Project Description

The proposed 15-inch sanitary sewer line will help remediate the infiltration/inflow situation by preventing the leakage of groundwater into the collection system and therefore reducing the treatment costs at the plant as well as the transmission line’s maintenance costs. This will also increase the capacity of the collection system. The existing deteriorated lines will be capped and abandoned.

Need for Project

The existing 25 year-old force main suffers from external corrosion and has had several breaks, each break causing a discharge of untreated sewerage which has flowed into the Navesink River. Examination of the pipe and soil conditions show that this corrosion affects the entire line on Route 36 and will cause additional failures and discharges.

Project Description

The proposed project includes replacing a twenty-five year old sewerage force main that has had repeated failures and discharges of untreated sewerage into the Navesink River. The existing failed force main carries sewerage from the Borough of Highlands & some parts of the Township of Middletown from our Pump Station in Highlands to our Pump Station in the Borough of Atlantic Highlands. There, it is re-pumped to Middletown into the Township of Middletown Sewerage Authority's (TOMSA) collection system and then treated by TOMSA. This force main has failed because of external corrosion. Examination of the pipe and soil conditions show that this corrosion affects the entire line on Route 36 and will cause additional failures and discharges. The new force main will go directly into the TOMSA gravity collection system in Middletown , reducing ongoing operational costs as well as maintenance costs for both pump stations.

Service Area

Borough of Tuckerton

Need for Project

The need for the project is to replace old asbestos cement sewer main which show signs of cracks, breaks, spalls and settlement. Increased cost of infiltration and the potential for blocked pipes is present. As a result of Sandy and the loss of homes in the "Tuckerton Beach" area of the Borough, flood water and heavy debris entered the sanitary sewer conveyance system. The pipes were cleaned and video inspected after the storm which provided evidence for the most critical areas of damages.

Project Description

The proposed project includes removal and replacement of gravity sewer mains, manholes and service laterals within paved roadways.

Need for Project

Infiltration/Inflow (I/I) studies conducted have revealed that the Borough Sanitary Sewer System is possibly subject to excessive I/I. Sanitary sewer lines are in excess of 80 years old. The leaking joints have caused sinkhole problems, accelerated street deterioration and excessive infiltration/inflow. Additional work is needed on the stormwater sewer system as well.

Project Description

The Borough proposes to replace the existing deteriorated sanitary sewer lines, service laterals and storm sewer lines including: refurbishing approximately 500 sanitary sewer manholes, relining the influent sewer line at the 23rd Street Pump Station, replacing sanitary lines on Heron Drive, Pelican Drive and the Business District, replacing storm lines in the Business District and replace/relocate 11th Street Pump Station and stormwater outfall.

Stone Harbor Borough

Need for Project

The Borough of Stone Harbor is experiencing rapid deterioration of their infrastructure in the project area. Over recent years, the Borough has been addressing numerous breaks in their existing terra cotta sewer main. The breaks in the main have created potential safety hazards. Severe inflow and infiltration at sewer laterals and manholes is prevalent throughout the system.

Project Description

The Borough proposes to replace in-kind approximately 2,000 linear feet of sanitary sewer main, 13 manholes and 144 sanitary sewer services located at the following locations: a. 83rd, 84th, 85th, 86th, 87th, 88th, 89th, 92nd, 93rd, 94th, 96th, 97th and 98th Streets (First Avenue to the Bulkhead). b. 82nd Street (Second Avenue and Third Avenue) c. 97th Street (First Avenue and Third Avenue) d. First Avenue between 82nd and 84th Streets, 86th and 89th Streets, 94th and 96th Streets. Project also includes the elimination of five beach stormwater outfalls and storm sewer reconstruction.

Need for Project

This project is needed because inflow/infiltration of the 75 year old or older sanitary sewer piping systems and interconnection storm water overflows, allow sanitary sewer to flow into the Rahway River untreated, especially during storm events. The river is the drinking water source downstream for Rahway. This is required to minimize the risk of a system failure, to assure proper functioning, and to prevent backups.

Project Description

The proposed project includes reduction of inflow/infiltration into the Rahway River through elimination of 1200 linear feet of old 15" sanitary sewer main, lining of 1,200 linear feet of 8" pipe, lining of 100 vertical feet of manhole, and removing four storm water sanitary sewer cross connections.

Town of Morristown

Need for Project

An Infiltration/Inflow (I/I) analysis has concluded that excessive I/I exists within the town's sewer system. Additional studies are underway to further define the quantity of excessive I/I and to propose an I/I correction program to eliminate a portion of the excessive I/I.

Project Description

This proposed project will be for the minor rehabilitation of sections of sanitary sewer pipe, grouting of sewer lines, grouting and sealing leaking manholes and repair or adjustments of defective manholes.

Service Area

City of South Amboy

Need for Project

The sewer systems in the City of South Amboy, constructed prior to the use of secondary treatment methods, did not set strict limits on the volume of infiltration and inflow within sanitary sewers since treatment costs were not greatly affected by these extraneous flows. However, in recent years, the construction costs of conveyance facilities, coupled with rising treatment costs associated with secondary treatment methods, have resulted in efforts to eliminate infiltration and inflow in areas where it is proven to be cost-effective.

Project Description

The proposed project is to provide I/I correction for South Amboy's existing sewer system.

Need for Projec

The MCUA will be replacing and protecting major mechanical and electrical components at the Sayreville Pump Station through these Projects. The work will have no impact to surface waters. The restoration and mitigation measures proposed for these projects will significantly reduce the potential for adverse impacts from future failure of this pump station equipment following a similar storm event.

Project Description

The Project involves the restoration of mechanical, HVAC and electrical equipment, instrumentation and control equipment and building repairs for both the Sayreville Relief Pump Station and the Original Sayreville Pump Station facilities damaged by flood water from the Hurricane Sandy surge. The Project also involves the construction of a Flood Wall as a mitigation measure to protect the entire site from future flood events which will require the relocation of the present Main Electrical Substation and the Diesel Generator.

Need for Projec

The MCUA will be rehabilitating a portion of its Main Trunk Sewer through this Project. There will be no impact to surface waters, however, the rehabilitiation work will significantly reduce the potential of adverse impacts from the failure of old and deteriorated sanitary sewers.

Project Description

The MCUA is intending to rehabilitate a portion of the existing Main Trunk Sewer (MTS) located in Piscataway, New Jersey, using trenchless rehabilitation technologies. This is the second of seven (7) phases that are required to address deterioration within portions of the MTS constructed of Corrugated Metal Pipe (CMP) segments. This Phase will rehabilitate the CMP pipe segments that can carry up to 46 million gallons per day (MGD) of raw wastewater. The Project will include segmental sliplining of approximately 5,900 feet of 60" CMP sewer pipe installed in the 1950's, repair and restoration of manholes, bypass of flows, environmental protection and site restoration activities.

Need for Projec

The MCUA will be rehabilitating a portion of its Main Trunk Sewer through this Project. There will be no impact to surface waters, however, the rehabilitiation work will significantly reduce the potential of adverse impacts from the failure of old and deteriorated sanitary sewers.

Project Description

The MCUA is intending to rehabilitate a portion of the existing Main Trunk Sewer (MTS) located in Piscataway, New Jersey, using trenchless rehabilitation technologies. This is the first of seven (7) phases that are required to address deterioration within portions of the MTS constructed of Corrugated Metal Pipe (CMP) segments. This Phase will rehabilitate the CMP pipe segments that can carry up to 46 million gallons per day (MGD) of raw wastewater. The Project will include segmental sliplining of approximately 5,100 feet of 60" and 66" CMP sewer pipe installed in the 1950's, repair and restoration of manholes, bypass of flows, environmental protection and site restoration activities.

County

OCEAN

Existing Population

600,000

Service Area

The OCUA complete service area includes all of Ocean County and a portion of southern Monmouth County. Southern Monmouth County communities served include Howell Township, Freehold Township, Freehold Borough, Farmingdale Borough, and a portion of Wall Township.

Need for Project

During Superstorm Sandy the commercial electrical power grid and availability of public water was heavily compromised eliminating the feed of electrical power and water to many Authority pump stations. A portion of Authority standby generators were limited in run time due to diesel fuel storage and the availability of diesel fuel; and another portion were not able to run due to a loss of cooling water supply from the local water system. This project will address the fuel storage and water issue with the installation of larger capacity fuel storage tanks and closed loop radiator cooling systems. This project will minimizing the risk of an interruption in the operation of the collection system and the possibility of the discharge of raw wastewater during flooding and natural disasters.

Project Description

This project includes generator improvements to twenty five (25) Authority pump stations to provide additional electrical power generation protection during periods of commercial power and domestic water outages.

NSA PUMP STATION IMPROVEMENTS

Priority List Rank

247

County

OCEAN

Existing Population

600,000

Service Area

The Northern Water Pollution Control Facility (NWPCF) is located on Adamston-Mantoloking Road in Brick Township, Ocean County and receives effluent from the municipalities of Farmingdale, Freehold Borough, Freehold Township, Howell, and a portion of Wall Township in Monmouth County and the municipalities of Bay Head, Brick, (mainland portion) Jackson, Lakewood, Point Pleasant Beach and Point Pleasant in Northern Ocean County.

Need for Project

During Superstorm Sandy, much of the above grade electrical grid was destroyed eliminating the availability of electrical power to Authority pump stations. Additionally, inflow flooding resulted in the inundation of salt water within the pump stations. In the northern service area, this resulted in flood damage to electrical, mechanical and structural elements of the NPS-2, NPS-4, NPS-7 and NPS-8 pump stations. This project will protect the integrity of the collection system and ward against interruptions in the collection system, thereby protecting from the discharge of raw waste water during and after flooding and natural disasters.

Project Description

This project includes the rehabilitation of impacted concrete surfaces and the replacement of screw pumps exhibiting accelerated wear to increase the functional life of the station. Additionally, this project will provide for the installation of influent slide gates, effluent slide gates and hydraulic operators to protect the facilities from flooding and reduce the potential for interruptions in regional sanitary sewer service after flooding and natural disasters. These improvements will harden the Authority’s collection system and make it less susceptible to future natural disasters.

Service Area

The OCUA complete service area includes all of Ocean County and a portion of southern Monmouth County. Southern Monmouth County communities served include Howell Township, Freehold Township, Freehold Borough, Farmingdale Borough, and a portion of Wall Township.

Need for Project

The purpose of this project is to provide additional emergency power generation sources for the Authority in the event of extensive and prolonged commercial power outages to ensure no interruptions in collection system operations are experienced and to minimize the possibility of raw sanitary sewage discharge to the Barnegat Bay.

Project Description

This project involves the procurement of one trailer mounted generator for use as emergency backup power for 38 of the forty (40) Authority pump stations located throughout Ocean County. The Authority is proposing to purchase a 500 kW diesel generator capable of providing electrical power during periods of commercial power outage.

Need for Project

To eliminate excessive infiltration and inflow and to extend the useful life of the sewer.

Project Description

RVSA operates a 35 mgd secondary sewage treatment facility with a sewer configuration 300 miles in length. The I/I report indicates that the RVSA's sewer system is susceptible to an excessive I/I of 3 mgd which may be cost-effectively removed. This will be verified in the upcoming SSES phase. An Infiltration/Inflow correction program will follow thereafter.

Service Area

The municipalities of Absecon, Brigantine, Egg Harbor City, Egg Harbor Township, Galloway, Hamilton, Linwood, Longport, Margate, Northfield, Pleasantville, Somers Point Ventnor, Port Republic, and Weymouth Township

Need for Project

Due to the location of City Island, and the coastal region it serves, hurricanes and storm tide conditions have the highest potential for natural disaster affecting the Atlantic County Utilities Authority (ACUA) Wastewater Treatment Plant. High tide and hurricane conditions can impose three (3) major problems; (1) loss of power, (2) blocked access to and within the treatment plant and pump stations, and (3) inundation of plant and collection systems buildings.

Project Description

The proposed project includes several mitigation measures to make the ACUA’s pump stations resistant to storm conditions.

City of Plainfield, Township of Scotch Plains, Borough of South Plainfield, Borough of Watchung, Borough of Fanwood, Borough of Dunellen, Green Brook Township, North Plainfield Borough, and a portion of Bridgewater Township

Need for Project

These projects are needed to maintain reliable sewage conveyance. These projects will update existing facilities that are no longer reliable. Failure of the existing facilities will result in a large sewage spill.

Project Description

The Plainfield Area Regional Sewerage Authority proposes to construct a pump station to replace the Rock Avenue siphon in Plainfield/North Plainfield and convert one of the existing siphon barrels into a force main. The siphon was constructed circa 1913 and a portion was rebuilt in 1973. The siphon has become problematic and unreliable. The pump station will be sized for a peak flow of 7.0 MGD. One of the existing 20" CIP siphon barrels will be lined with 18" HDPE. The second contract will be to slipline 800 L.F. of 42" diameter RCP with 36" PVC liner. The existing pipe has extensive damage and is in danger of failure.

Need for Project

The Authority treats over 12 million gallons per day of sewage, which approximates 4 billion gallons per year. All of the sewage treated by the Authority flows first to the Main Pump Station. The continuous operation of the Main Pump Station station is critical to the Authority's ability to protect the environment.

Project Description

The proposed project includes replacement of the main pumping station.

Service Area

The locations involved in this project services multiple areas of Cape May County. The CMCMUA services the county of Cape May.

Need for Project

The primary water based need for this project is that of lowering the risk of a negative environmental impact due to major equipment failure. All the equipment to be replaced in this project has an essential purpose in the operation of its particular wastewater treatment facility. If any or all of this equipment fails and becomes unreliable, the ability for the facility to properly accomplish its object of meeting its discharge permit becomes compromised.

Project Description

The Authority owns and operates twenty five (25) pump stations of various sizes. These stations were put in service in approximately 1985. Several of them are in need of major concrete restoration within the wet wells of the station. This project includes the specification of necessary repairs and the hiring of an outside contractor to perform them.

Need for Project

The concrete trunk sewers are over 50 years old and suffer from hydrogen sulfide damage. They will collapse sometime in the next 50 years if not repaired, resulting in the overflow of raw sewage into the environment and buildings within Hamilton Township.

Project Description

The proposed project includes rehabilitation of sanitary sewers that are over 50 years old. Most of the pipes involved are concrete trunks 39 inches in diameter or less. All the associated man holes, structures and some adjacent contributory pipes will also be refurbished. Total length of pipe involved is about one mile. The majority will be lined. Some spot repairs or pipe replacement may be needed. The pipes involved are mostly under Hamilton Avenue in Hamilton Township.

Service Area

Boonton Town, Boonton Township, Denville, Dover, Jefferson (48%), Kinnelon (32%), Mine Hill (65%), Randolph (78%), Rockaway Borough, Rockaway Township, Roxbury, Victory Gardens, Wharton

Need for Project

As a result of Hurricane Irene, a portion of the Old Jersey City Trunk Sewer Crossing of the Rockaway River had been washed away and destroyed beyond repair causing wastewater from the Jersey City Trunk Sewer to discharge into the Rockaway River. Since this is an emergency project, and the temporary by-pass pumping is not an acceptable alternative due to the risk of spillage, costs and impact associated with its temporary nature, there is no real no action alternative which can be considered for this project.

Project Description

The design of a permanent gravity sewer connection of the Park section sewers, which previously crossed under Route I-287 and connected to the Jersey City Trunk Sewer (JCTS)just upstream of the river crossing. The new gravity sewer will extend the existing sewer along Morris Avenue and connect to the existing JCTS on the west side of Route I-287. The construction of a pumping station located upstream of the washout on Monroe Street will discharge into a 12" force main located along Lincoln Street, which will connect to the existing JCTS downstream of the washed out river crossing. In addition, gravity sewers will be constructed on Monroe St and Forbush St, to provide service to the properties that were discharging into the now abandon portion of the JCTS. The Authority also proposes to rehabilitate approximately 4,400 lf of Jersey City Trunk Sewer will remain in service receiving wastewater flow from the new Lincoln Street force main.

Need for Project

Although TRMUA has a rigorous preventative maintenance program, studies have revealed that much of the TRMUA system is in fair condition and a majority of the system has either exceeded or will exceed its expected life over the next couple of years. In this regard the TRMUA has embarked on a Capital Improvement Program (CIP). The goal of the CIP is to ensure that the TRMUA infrastructure is to provide efficient operations while preventing catastrophic failures which could result in a detriment to the surrounding water bodies which are contributory to the Barnegat Bay. The CIP was developed from the results of a thorough Infrastructure Inspection and Analysis which was prepared by TRMUA consultants with input from TRMUA staff.

Project Description

There is approx. 8,000 LF of various gravity sewer pipe ranging from 8" to 24" in diameter which are candidate(s) for trenchless rehabilitation and 50 manholes in need of rehabilitation. The West Point Island Pump Station and associated force main is six (6") inch diameter cast iron pipe is at the end of its useful life. The TRMUA will construct a new parallel six (6") inch force main to replace the existing 47-year old pipe. The Chadwick Island Pump Station and associated force main is six (6") inch diameter cast iron pipe, approximately 600 l.f. in length, and is at the end of its useful life. A new parallel six (6") inch force main will be constructed to replace the existing 47-year old pipe. Some existing piping and manholes in this location are severely deteriorated. The by-pass connection will provide an alternate route for sewage conveyance and eliminate deteriorated piping. New manholes will facilitate by-pass pumping operation for future maintenance repairs.

The CIP was developed from the results of a thorough Infrastructure Inspection and Analysis which was prepared by TRMUA consultants with input from TRMUA staff.

Project Description

TRMUA has embarked on a Capital Improvement Program to ensure that the infrastructure provides efficient operations while preventing catastrophic failures. Proposed improvements include Pump Station Conversions, specifically conversion from suction lift/dry pit pumps to submersible pumps, reconditioning of wet wells, construction of valve chambers with provisions for by-pass pumping, new pump controls, alarms and miscellaneous site work. Additionally, New Natural Gas Fired Generator pump stations have been identified as candidates for new natural gas fired standby generators. The existing generator at PS#21 is to be raised up sufficiently to minimize the threat of damage due to flooding .New Pump Controls and Alarms Only are proposed with Miscellaneous Structural Improvements including but not limited to rehabilitation of concrete slab, trolley/hoist to facilitate removal of equipment, rehabilitation of wet well, and repairs to generator building.

Need for Project

The proposed pump station improvements are designed to achieve the following objectives: • Improve pump station effectiveness by replacing outdated equipment. • Standardization of equipment and methods of operation. • Provide better access for maintenance purposes. • Improve confined space entry. • Ensure code compliance. Without the proposed improvements, the five wastewater pump stations will continue to function with their existing configuration and outdated equipment. As a result maintenance costs and the likelihood of emergencies can be expected to continue to increase. The decrease in reliability and the increase in maintenance costs will result in increased costs to the WMUA and its ratepayers.

Project Description

The proposed project will involve improvements to the following WMUA wastewater facilities: • Brunswick Drive Pump Station • Greenwood Road Pump Station • Lloyd Road Pump Station • Prince William Pump Station • Texas Road Pump Station The proposed improvements vary by station but generally consist of replacing outdated pumps and controls, installing new emergency generators, improving telecommunications, and new piping to enable emergency bypass pumping. In addition, the Lloyd Road and Texas Road Pump Stations will be evaluated for the need for additional pumping capacity due to anticipated development.

Eight of the waste water pump stations in the sewer collection system that suffered severe damage are located between15-20 feet below grade and consist of 6 "can-type" pump stations and 2 "ejector-type" pump stations. These stations became completely submerged in salt water damaging the stations' pumps, motors, starters, controls, disconnect switches, wiring, elevators and lighting.

Project Description

The proposed project includes converting the "can-type" and "ejector-type" stations to "submersible pump stations". The existing below grade pumps, motors and compressors along with associated motor starters, controls and disconnect switches will be eliminated and replaced with new submersible pumps with all associated equipment located above the current high water level in the existing generator building. Also included is the replacement of the existing diesel generator and transfer switch with a natural gas fueled generator and switch for the six "can-type" stations.

Need for Project

The Bay Harbor Boulevard, Drum Point Road and Riverside Drive Waste Water Pump Stations (WWPS) are the three largest WWPS that The Brick Township Municipal Utilities Authority (Brick Utilities) owns and operates and are within the FEMA Advisory Base Flood Elevation Map. The controls, electrical equipment and emergency generators for the WWPSs are located on the upper level just slightly above existing grade. In order to minimize the flooding of the upper level, flood proofing of each WWPS is required. Potential options include flood proofing the entire station perimeter or the individual equipment buildings at each location.

Project Description

The proposed project includes converting pre-fabricated can-type stations to submersible pump stations. Upgrades include the installation of submersible pumps in the wet wells with the motor starters, controls and disconnect switches located in the existing generator buildings in order to minimize the impact of potential flooding of the drywell which currently houses motors, pumps, compressors, controls, elevators, lighting, disconnect switches and other electrical components and is located 15' to 20' below grade.

Service Area

Woodbridge Township, Sewaren and Keasby sections

Need for Project

The sewer systems in the Sewaren and Keasby sections, constructed prior to the use of secondary treatment methods, did not set strict limits on the volume of infiltration and inflow within sanitary sewers since treatment costs were not greatly affected by these extraneous flows. In recent years, however, the construction costs of conveyance facilities, coupled with rising treatment costs associated with secondary treatment methods, have resulted in efforts to eliminate infiltration and inflow in areas where it is proven to be cost-effective.

Project Description

The proposed project is an Infiltration/Inflow Correction program for Woodbridge's existing sewer system within the Sewaren and Keasby sections. The Sewaren sewer system serves Avenel, Port Reading, Sewaren, and Woodbridge proper. Its drainage area encompasses 6,090 acres and contains 89.9 miles of sanitary sewer. The Woodbridge Interceptor (approximately parallel to the Woodbridge River) serves a majority of the system. The Keasby sewerage system serves Fords, Hopelawn, and Keasby. Its drainage area encompasses 2,389 acres and contains 30.2 miles of sanitary sewer.

Need for Project

The Authority has an on-going program to eliminate sources of excessive I/I in their sewer system. The project is needed due to the deterioration of the structural integrity of the sewers. In addition, the Rams Field and Farrington Pump Stations are old and need to rehabilitated and upgraded to ensure proper operation, to facilitate routine maintenance, and to control odors.

Project Description

The project includes the relining of problem sewer mains throughout the Township and the rehabilitation of two pump stations, including the installation of comminutors with submersible motors and carbon filters for odor controls. A new bypass chamber will be installed in one pump station.

County

MERCER

Existing Population

60,000

Service Area

Princeton Borough, Princeton Township, West Windsor Township, a portionof South Brunswick, a portion of Plainsboro Township, and a portionof Franklin Township

Need for Project

The project is for the installation of a new emergency generator. During Superstorm Sandy the Millstone PS was without commercial power for approximately 70 hours. it was difficult to get fuel oil delivered to the site due to many roadways blocked with debris. The existing EGen is inefficient and oversized. If in the future we cannot get fuel oil delivered to the site during emergency situations there is the potential for sewer backups and worst case the flow from the pump station could "overflow" onto the ground and the surrounding streets and waterways nearby (D&R Canal, Lake Carnegie, and the Millstone River).

Project Description

The proposed project is to supply backup power to the Millstone pump station to provide resiliency. This project involves the installation of a turbine emergency generator with a new diesel generator.

Need for Project

The West Branch Interceptor is a major source of SSO discharging into an environmentally sensitive area along Fairway Drive East. Overflows from manholes occur during moderate to heavy rainstorms and discharge sewage into freshwater wetlands and state open waters, i.e., West Branch of the Elizabeth River. Sewer backups into residential basements occur along Fairway Drive South and Evergreen Parkway causing a serious public health risk.

Project Description

The project includes replacement of 2,350 linear feet of 24-inch sanitary sewer along Fairway Drive East in the Township of Union, Union County. The project also includes the elimination of a siphon beneath the West Branch of the Elizabeth River to be replaced with an armored ductile iron pipe installed at the invert of the channel.

Need for Project

A sewer system evaluation survey recently performed by Elson T. Killam Associates for the Passaic Valley Sewerage Commissioners' service area found excessive Infiltration/Inflow (I/I) in this municipality's sewer system. Raw sewage overflows were reported to have occurred on area streets.

Project Description

This project consists of the removal and replacement of numerous sections of sanitary sewer piping of varying diameters throughout the City Limits. The City maintains an inventory of deficient areas which note deficiencies relating to alignment, extraneous inflow through joints and cracked pipe sections, broken pipe sections and manholes which have out lived their service life. The City has identified these areas for point repairs, in kind replacement and trenchless lining after conducting extensive televising and cleaning operations over the past five-year period as part of their Sewer O & M Contract. The City also desires to acquire a Jet/Vacuum Truck.

Need for Project

This project is for the minor rehabilitation of the Township's existing sewer system. A sewer system evaluation survey concluded that approximately 1.5 million gallons per day (MGD) of excessive Infiltration/Inflow could be removed from the system cost-effectively. This project would ensure the removal of the 1.5 MGD by the accomplishment of this rehabilitation work.

Project Description

The proposed Phase I project (C340393-06) is to rehabilitate portions of the existing sewer system in the area of Pines Lake and Packanack Lake. The work for Phase I includes inversion lining of 3,160 linear feet (LF) of sewer pipe, replacement of approximately 5,130 LF of sewer pipe, grouting and air testing, and rehabilitation of 11 manholes. Phase II investigations (C340393-07) will be required to eliminate all excessive infiltration/inflow for other portions of the existing sewer system.

Need for Project

During Superstorm Sandy, three (3) existing sanitary sewage pump stations were damaged. Improvements are needed to put the pump stations back online and providing sanitary sewer service. The existing stations are running on bypass which increases the potential for sewage backups and or spillage into adjacent water bodies.

Project Description

The Authority proposes various mechanical, structural and electrical improvements to three (3) existing sanitary sewer pump stations that were damaged by Superstorm Sandy. Improvements include replacement and/or relocation of the control building, replacement of mechanical and electrical equipment, modifications to existing gravity sewer and force main connections and stormproofing of the pump stations for future protection.

Need for Project

As a result of the systems age and deteriorated conditions of the ACP, lining the pipes will reduce I&I into the collection sewer system, and decrease operations and maintenance costs. Reconstruction of an existing pump station facility will help comply with NJDEP/OSHA requirements, and facilitate maintenance and increase system’s reliability.

Project Description

The proposed project includes rehabilitation of approximately 2900 LF of existing ACP collections sewer by way of lining to provide improved sanitary sewer reliability, reduce I&I into the collection sewer system, and decrease operations and maintenance costs as a result of the system’s age. The project also includes reconstruction of an existing pump station and removal of the existing Welsh Pump Station to convey sewage by way of gravity.

Need for Project

The existing pipe is deteriorating and is in an unacceptable condition. The structural integrity of the pipe will continue to deteriorate if the pipe is not rehabilitated.

Project Description

The project involves the lining and replacement of two portions of an existing RCP gravity interceptor main that originates in Egg Harbor Township and terminates in the adjacent municipality of the City of Pleasantville. The interceptor main is owned and maintained by the Egg Harbor Township Municipal Utilities Authority. A portion of the interceptor located along Washington Avenue will be lined due to the deterioration of the existing RCP from hydrogen sulfide gases. The main to be lined ranges in size from 27" to 36" diameter RCP and will be approximately 5,000 linear feet in length. A second portion of the interceptor located within an easement area within the City of Pleasantville will be abandoned and replaced with the construction of a new 36" PVC gravity main approximately 670 linear feet in length.

Need for Project

The existing wet well has reached the end of its useful life and must be replaced.

Project Description

The Egg Harbor Township Municipal Utilities Authority (EHTMUA) proposes the construction of a new wet well structure and control building for the FAA Pump Station Reconstruction Project. A new duplex pumping system with control system and motor starters shall be provided. The improvements include approximately 140 linear feet of new eight-inch force main that will connect into the existing force main. The upgrades will also involve the provision of a cellular base remote telemetry system, a diesel powered backup pumping unit and redundant control system.

Need for Project

Following recent flooding conditions, the Authority has reviewed operating practices and identified critical items that will provide additional protection and operational flexibility during emergency conditions. These improvements will assist the Authority in returning without delay to normal operation and minimizing damage to critical facilities.

Project Description

The project includes five components of the Authority's existing collection system including construction of portable pump connections at Meter Chamber M-3 to simplify emergency procedure and improve worker safety, flood protection at the South Side Pump Station including a flood wall to protect the existing transformer and removable bulkheads for the pump station entrance to prevent infiltration, purchase of spare rotating pump sections for Central and South Side Pump Stations to provide backup during extreme wet weather events, improvements to the Deepavaal Brook Pump Station including a new actuated influent sluice gate and a portable pump connection manifold, improvements to the Jane Road Pump Station including a portable pump connection.

Need for Project

The project is necessary to correct inflow and infiltration problems within the 27” interceptor and associated manholes.

Project Description

The project includes the correction of inflow and infiltration of the 27” interceptor sewer main, the raising and waterproofing of several manholes and the in-situ lining of the 27” main.

City of Orange

Need for Project

A sewer system evaluation survey recently performed by Killam Associates for the City of Orange recommended that the combined sanitary/storm sewer systems should be eliminated by internally sealing the overflow weirs in the combination sanitary/storm sewer manholes. In conjunction with sealing the overflows, a program of sewer pipe rehabilitation should be undertaken to reduce infiltration and sewer surcharging conditions.

Project Description

A phased program of sewer system rehabilitation to eliminate sanitary sewer overflows to the Wigwam Brook is being undertaken by the City. The first phase of this program will include sealing the overflow weirs in 21 combination sanitary/storm sewer manholes, replacement of approximately 250 linear feet of 15" and 18" sewer pipe, and sealing underdrain access openings in 20 manholes. The second phase includes replacing approximately 245 linear feet of sewer pipe and slip lining approximately 830 linear feet of pipe. The third phase includes eliminating a bend in the interceptor sewer by constructing a new manhole.

Township of Ocean

Need for Project

The Township of Ocean Sewerage Authority owns and maintains a siphon that crosses Deal Lake. The Authority's system maps indicate the 6" and 8" pipes are cast iron and are from a manhole on Hetrick Point Road in the Wanamassa section of Ocean Township to a manhole located in the backyard of a residence located along Windermere Avenue in the Borough of Interlaken. As a minimum, the Authority checks the flow in the manhole downstream of the siphon weekly to confirm flow across Deal Lake.

On Monday morning, March 28, the flow through the downstream manhole was greatly reduced. The Authority placed dye in both the 6" and 8" pipes and determined flow was entering the lake. The Authority installed a bypass pump system that is pumping flow to a manhole located on Wickapecko Drive. The bypass system includes three pumps and over 3,500 ft of temporary piping installed along narrow streets with houses located close to the road.

Project Description

The proposed project includes replacement of the 6” and 8” siphon pipes that cross Deal Lake.

Township of Ocean and customers in the Boroughs of Interlaken, Allenhusrt and Deal, and in the Village of Loch Arbor

Need for Project

The configuration of the existing gravity sewer in this area causes blockages and the manhole is not accessible because it is located in the travel lane of Rt 35. Roseld Avenue Sanitary Sewer - The Wickapecko pump station force main discharges along Roseld Avenue. The shallow manholes along Roseld Avenue that are downstream of the Wickapecko pump station force main discharge surcharge during high flows. Interlaken Pump Station - The existing main sewage pump motors were installed in the 1960's and the pumps are no longer operating at their design point. The pump station building needs upgrades including ventilation, access to the wet well and method of pump removal.

Project Description

The proposed improvement is to install a new sanitary sewer pipe across Route 35. The proposed configuration would remove the sharp bend from the manhole and have manholes moved from the travel lane of Route 35. Roseld Avenue Sanitary Sewer - The proposed improvement is to extend the existing Wickapecko pump station force main so it discharges to the gravity sewer system along Roseld Avenue downstream of the shallow manholes. Interlaken Pump Station - The proposed improvement will include replacing the three existing pumps, building upgrades, pump control upgrades and replacing 400 lf of the existing force main.

Need for Project

The Authority proposes the improvements to upgrade the existing pump station to handle actual flows coming into the pump station particularly during storm events. Surcharging of the station could potentially result in sewage backup onto the adjacent Deal Lake. Additionally, improvements are being proposed to improve the resiliency of the pump station, which was impacted by Sandy, against future storm events.

Project Description

The proposed project includes reconstruction of the Interlaken Pump Station to raise the building to prevent future flooding.

Need for Project

The Hamilton Point pump station and the Wal-Mart pump station require mechanical upgrades in order to provide the proper conveyance of sanitary sewer as well as improve efficiencies and reduce O&M costs. The Hamilton Point PS is reaching the end of its useful life and is in need of a comprehensive upgrade. Failure to address the need for improvements could result in failures at the pump station and undesirable back-ups to the system. With regard to the Wal-Mart PS, the addition of a communitor will avoid down time and potential back-ups at the station thus protecting the surrounding environment. HTMUA is obligated to make the appropriate maintenance upgrades in order that the system will continue to operate in accordance with the requirements of the State for tertiary treatment and conveyance.

Project Description

The proposed project includes a comprehensive replacement from wet well/dry well type to submersible type station at the Hamilton Pointe PS and the addition of a communitor at the Wal-Mart PS.

Service Area

Borough of Bergenfield

Need for Project

The project is needed to help reduce the Borough's current I/I issues. Inflow and Infiltration contribute to sanitary sewer overflow conditions as well as surcharge of the system. Due to the influx of additional unanticipated flow the sanitary sewer system becomes overloaded and fails due to capacity constraints. By repairing the worst section of the system as noted from Borough inspections and maintenance programs, this will be a significant first step in reducing I/I in the Borough of Bergenfield.

Project Description

The Borough in an effort to combat an ever-growing Inflow and Infiltration (I/I) problem with its sanitary sewer system intends to rehabilitate approximately 10,000 to 12,000 linear feet of existing vitrified clay sanitary sewer main which is approximately 80 years old. The Borough plans to use trenchless technology, specifically Cast-In-Place-Pipe (CIPP) slip-lining to reestablish the integrity of the sanitary sewer main specified. The Borough is comprised of approximately 300,000 linear feet of piping and this represents approximately 5% of the total piping deemed most urgent through the Borough's preventative maintenance and inspection program. In addition to the piping rehabilitation, the Borough plans to rehabilitate approximately 30 manhole structures by means of repairing larger cracks with cementitious repair mortars followed by epoxy coating of the interior of the structures. It is assumed that I/I in the sanitary manholes contribute up to approximately 30% of the I/I problems faced by the Borough. The final facet of the project includes the furnishing and installing of approximately 30 area velocity flow meters throughout the Borough to implement a flow monitoring program in an effort to continually pinpoint areas throughout the Borough which require addition rehabilitation work.

Need for Project

New emergency power generator set will provide uninterrupted power supply to Pump Station No. 3, to avoid the pump station from overflowing into nearby Rocaps Run, a tributary of the Cohansey River, when there is a power outage durinhg major storm events or other circumstances. Preventing sewer overflow of the pump station into the nearby streams, tributaries and rivers is in the best interest to the health and safety of the residents of the City of Bridgeton and neighboring communities.

Project Description

The proposed project includes installation of new emergency power generator set.

Need for Project

The Bergen County Utilities Authority conducted an Infiltration/Inflow (I/I) analysis and sewer system evaluation survey which concluded that excessive I/I existed in the sewer system. The correction of this I/I will be cost-effective and result in the improved operation of a 13.8 MGD pump station used for the conveyance of sewage from the Joint Meeting STP to the Bergen County Utilities Authority system. Water Quality violations are currently experienced for dissolved oxygen, fecal coliform, and toxics standards due to the raw discharges of the existing Triboro Joint Meeting Treatment plant into the Hacken-sack River (SE-2).

Project Description

The project will consist of rehabilitation work to remove a portion of the excessive I/I. The rehabilitation project may include repair and/or grouting of sewers and joints, sealing manholes, repair/replacement of defective manhole covers and other standard rehabilitation measures. This project will also eliminate sewerage system overflows.

Need for Project

The proposed project will remove an existing inverted siphon which clogs regularly causing significant sewage backups. The sanitary relining will eliminate inflow and infiltration of groundwater into the system and leakage of sewage out of the system. The project also proposes locking watertight frames and covers to protect the system which is located in the floodplain.

Project Description

The proposed project includes lining of antiquated lines. All sewer manholes, inlets, services, piping, and other appurtenances will be replaced to promote full functioning sewer systems. Locking watertight frames and covers will be installed.

Need for Project

The proposed equipment and pipe improvements are necessary to address aging and undersized infrastructure to minimize potential future failures and eliminate surcharging of the system. The Roosevelt Avenue Pump Station and trunkline are adjacent to the Arthur Kill, which is classified as a saline estuarine (SE3) waterway, and the Noes Creek, which would adversely be impacted if the improvements are not undertaken.

Project Description

The proposed project includes upgrades to the existing Roosevelt Avenue Pump Station and trunkline. Upgrades include new pumps, new odor and corrosion system control, and replacement of approximately 2500 linear feet of 15 inch pipe with 21 inch PVC to increase capacity to handle the periodic high flows and minimize surcharging of the system.

Service Area

RTMUA sewer service area in Raritan Townsip, Readington Township and Flemington Boro

Need for Project

The proposed project will improve energy efficiency of pumping, improve reliability of station to pump without manual operation through updated controls system.Improve operator access to station for maintnenance and emergency response and improve raw sewage screening/communition.

Project Description

The proposed project includes rehabilitation of the Woodside Farms Pump with up-to-date technology to make it more reliable, efficient, and easier to repair in the future. Improvements include flow metering devices, emergency lighting, valve chamber, emergency back-ups, new pumps, and efficient motors.

City of Clifton

Need for Project

The purchase of the above reference equipment is to meet state regulated mandates associated with the Stormwater Management Program as well as provide the borough with the means to clear blockage and back-ups of their existing sanitary and storm sewer areas reducing the potential for adjacent stream and/or water body areas contamination.

Project Description

The Borough of South Plainfield is proposed to purchase of new mobile combination sewer and catch basin cleaning machine. The apparatus will be capable of high pressure water cleaning of sanitary sewer or storm sewer drain lines, while simultaneously removing debris from a manhole or catch basin with a Three Stage Fan air compressor vacuum system in order to minimize the adverse impact of stormwater runoff on water quality.

Service Area

Township of Long Hill

Need for Project

The STP routinely receives flow in excess of its permitted capacity. Significant operational challenges occur as a result of high peak flows. It is suspected that there are portions of the existing sewer that contribute significant flow rates of infiltration and inflows. Sanitary sewer rehabilitation in these suspected areas is necessary to reduce peak flows to the STP.

Project Description

The purpose of the project is to reduce rainfall-induced surcharging of the collection system and sewage treatment plant. The project involves an infiltration/inflow correction program in conjunction with the replacement/rehabilitation of sections of the sewer system. The Township also proposes to install phosphorous removal equipment at the treatment plant.

Need for Project

To eliminate the excessive infiltration and inflow to extend the useful life of the sewer.

Project Description

There are approximately 25 miles of existing sewers in the Borough. The Edgewater STP presently has an influent rate of 3.3 mgd, of which 0.37 mgd has been identified as possibly being excessive. The sewer system evaluation survey program is currently in the process of identifying and verifying those areas which are susceptible to the excessive I/I. I/I correction as determined to be cost effective will follow.

Barnegat Township.

Need for Project

The renovation of this pump station is required due to the age (over 30 years) of the pump station and the existing design. The existing design uses a dry well system for the pumps which requires confined space entry and makes routine maintenance very difficult. The proposed design will utilize a submersible pump arrangement will be a more reliable and easily maintained system.

Project Description

The Georgetown Boulevard Sewage Pump Station is located on Georgetown Boulevard just west of the intersection of Georgetown Boulevard and Route 9 in Barnegat Township, Ocean County. The Georgetown Boulevard Sewage Pump Station Upgrade will consist of converting the existing wet well/dry well type pump station into a submersible type pump station utilizing new submersible pumps installed in the existing wet well. The existing dry well will be abandoned in place. A new valve chamber with bypass connection will be provided adjacent to the wet well. The existing diesel fire generator at the site is in excess of 30 years old. The existing generator will be replaced with a natural gas fired generator. The generator and all electrical including motor control center, pump control panel, alarm system and automatic transfer switch will be installed within a new decorative block building. In addition, a chemical feed system for odor control will be installed within the new generator building.

OCEAN

Existing Population

20,936

Service Area

Barnegat Township.

Need for Project

The purpose of the project is to improve resiliency of the pumping station facilities to improve reliability of the pumping stations during storm events abnd power outages.

Project Description

The project includes construction of improvements to the sanitary pumping stations including new back-up generators at three stations.

Service Area

Borough of Carteret

Need for Project

The project is needed to help reduce the Borough's current I/I issues. Inflow and Infiltration contribute to sanitary sewer overflow conditions as well as surcharge of the system. Due to the influx of additional unanticipated flow the sanitary sewer system becomes overloaded and fails due to capacity constraints. By repairing the worst section of the system as noted from Borough inspections and maintenance programs, this will be a significant first step in reducing I/I in the Borough.

Project Description

The Borough in an effort to combat an ever-growing Inflow and Infiltration (I/I) problem with its sanitary sewer system intends to rehabilitate approximately 10,000 to 12,000 linear feet of existing vitrified clay sanitary sewer main which is approximately 80 years old.

Burlington Township

Need for Project

The purpose of the project is the rehabilitate existing Asbestos Cement Sanitary Sewer Mains that are currently deteriorating and are in danger of collapse. The mains will be cleaned and relined to reestablish optimal flow conditions and to prevent failure of the system.

Project Description

The Township is proposing to continue with the next phase of the Sanitary Sewer Rehabilitation program as part of the 2014 Capital Improvements Budget. The work will be concentrated in the Beverly Road section of the Township and will focus on the sanitary sewer mains upstream from the Central Avenue Wastewater Treatment Plant. A TV inspection of this sanitary sewer has revealed that the asbestos cement pipe sewer main is in a very deteriorated condition. The work involved to rehabilitate this section of sanitary sewer will involve the application of cast-in-place-pipe lining, a trenchless technology. Leaking Sewer Lateral connections are also proposed to sealed utilizing trenchless technology. Manholes will also be repaired utilizing an internally applied epoxy coating system.

West Deptford Township

Need for Project

The three existing pump stations are submarine style stations that were built in the early 1970s. The stations are proposed be replaced with suction lift stations to remove the need for Township workers to enter confined spaces for maintenance work that becomes increasingly necessary as the stations age. The new stations would have backup generators, where none currently exist. Currently, extended power outages cause failures of the station and create a backup of sewage to the local residents.

Project Description

Replace existing pump station number one located at Grove and Cumberland; pump station number six located at the corner of Prince and Linden; and pump station ten located on the north side of Crown Point Road, west of its intersection with Church Street.

Need for Project

Upgrading the equipment in the pump stations will greatly reduce the chance of a sewage overflow and potential water contamination. In-line storm sewer and sanitary pipe improvements would reduce all types of inflow/infiltration increasing system capacity. Outfall improvements will reduce erosion and stream degradation.

Project Description

This proposed proposed project includes upgrades to two sanitary pumping stations and one storm sewer station. The project also includes storm and sewer pipe rehabilitaion, and outfall improvements.

Service Area

Dumont

Need for Project

The existing Sanitary Sewer System serves the Borough of Dumont and is approximately 65 years old. Treatment of the wastewater collected is provided by the Bergen County Utilities Authority at the Little Ferry Treatment Plant. Field investigations and existing records available at the Department of Public Works of the Borough of Dumont reveal that the condition of the sanitary sewer system is substandard. There are many sections of this mostly clay pipe system that have been troublesome, resulting in frequent blockages and requiring significant efforts and time by the Department of Public Works to clear the lines. These blockages and problems are caused mainly by undersized piping, cracking of pipes, root intrusion, offset joints and inadequate slopes.

The purpose of the program to rehabilitate the Sanitary Sewer System is to correct these problem areas and also to decrease the amount of infiltration into the system.

Project Description

The areas of the system requiring rehabilitation were selected based on the problems incurred as recorded in the Department of Public Works files and past field investigations.

The proposed scope of work will be carried out in four (4) phases over a 4-year period. The first phase will cover the southwest quadrant of the Borough where the system connects up with Bergen County Utilities Authority's System; the second phase will cover the northwest quandrant; the third phase, the southwest quadrant; and the fourth and final phase, the northeast quadrant.

Need for Project

The collection system has been studied to identify extraneous infiltration and inflow sources. These sources raise the flow to the Stony Brook STP, but cause no operational or transmission problems other than those associated with a weak influent.

Project Description

This project would provide cost-effective removal of I/I in the South Brunswick collection system. Sections would be repaired, replaced or relined. Also, manholes are to be grouted and manhole covers replaced with gasket covers.

The Warren County-Lopatcong Creek Sewerage Authority is retaining a spot on the Priority List for rehabilitation of the local collection systems within their 201 Facilities Planning Area. The planning area lies in the Delaware Watershed and includes Alpha Borough and Lopatcong, Pohatcong, Harmony and Greenwich Townships.

Need for Project

Sanitary collection systems currently serve Alpha, Lopatcong, and Pohatcong. The existing Phillipsburg plant (NJ0024716) presently treats domestic and industrial waste from the above municipalities. Constructed in 1950 - 1951 with a design capacity of 3.5 MGD, the plant provides secondary treatment by means of an activated sludge process. Present flows average slightly over 2.1 MGD, but peak conditions can result in flows over 6.0 MGD which lead to a by-pass of the plant and direct discharge of untreated effluent into the Lopatcong Creek, FW2-TM (tributary to Delaware River). There also are known cross connection between the storm and sanitary sewerage systems. These raw discharges result in frequent violations of fecal coliform standards, and marginal degradation from nutrient and toxic impacts. An I/I analysis included in the facilities plan concluded infiltration to be non-excessive, but recommended a Sewer System Evaluation Survey (SSES @ $26,000) to study the removal of excessive inflow and the elimination of the system by-passes.

Project Description

The proposed SSES will refine the conclusions of the I/I analysis and make recommendations for I/I correction. The project will allow for the construction and implementation of the cost effective rehabilitation measures. This will result in the abatement of the raw sewage by-pass problem presently experienced both in the collection systems and at the plant.

Need for Project

The Borough of Highland Park's gravity sewers suffer from infiltration/inflow due, in part, to faulty joints, cracked or collapsed pipes and leaky manholes. In addition, some of the Borough's sanitary sewers are located in high groundwater areas, further increasing infiltration.

Project Description

The proposed project includes evaluation of the existing sanitary sewer mains through TV inspection. Pipes found to be in good condition shall be cleaned and have the joints grouted. Pipes with minor cracks will be grouted. Deteriorated manholes will be rehabilitated and have watertight covers installed.

Need for Project

An Infiltration/Inflow (I/I) analysis has concluded that the Township's sewer system exhibits excessive I/I. Additional studies are underway to further define this excessive I/I and to propose a sewer rehabilitation program.

Project Description

This proposed project will consist of minor rehabilitation work to remove a portion of the excessive I/I. Construction of an equalization basin for storage of inflow may be recommended depending upon the conclusion of the additional on-going studies.

Need for Project

An infiltration/inflow (I/I) analysis has concluded that excessive I/I exists in the sewer system. Additional studies will define this excess quantity and propose an I/I correction program to eliminate a portion of the excessive I/I.

Project Description

This project is for the I/I correction of the Township's sewer system. The project involves grouting of manholes, raising and resetting manhole frames and covers, internal pressure grouting of sewer joints, excavation and removal of 2 storm sewer connections, repair of one service connection, and elimination of sump pumps, roof leaders and yard drains. This I/I correction project does not affect the treatment system.

Need for Project

To eliminate excessive inflow into the sewer system.

Project Description

The Ajax Terrace sewage treatment plant has a sewer configuration 50 miles in length with a dry weather flow of 0.94 mgd. The infiltration has been determined to be nonexcessive. However, excessive inflow does exist since the plant flow records indicated that the wet weather flows were as much as 4 times greater than the dry weather flows. Inflow investigation is presently underway to identify the locations, magnitudes, and causes of this inflow problem. It is expected that a sewer system evaluation survey and I/I correction program will follow.

Need for Project

Various water quality-based needs for the projects will be addressed, including the removal of several existing potential cross-connections (Tanner St), reducing I/I (Woodland Ave and Coles Mill Pump Station Phase I), an the elimination of potential pump station overflows that would drain to adjacent waterways (Elm Ave Pump Station).

Project Description

The 2009 Sanitary and Storm Sewer Replacement Project includes the following projects:
Tanner Street - Replace existing clay sanitary sewer and brick storm sewer to remove cross-connections;
Woodland Ave - Replace existing clay sanitary sewer and install new storm sewer/sump pump collector;
Coles Mill Pump Station Replacement Phase I - install new PVC sanitary sewer connection to regional sewer authority to eliminate one (1) existing sanitary sewer pump station;
Station Ave - Replace existing damaged clay sanitary sewer; and
Elm Ave Pump Station - Install an emergency by-pass pump to prevent sanitary sewer overflows.

Township of West Caldwell

Need for Project

While currently operating normally, with no support for the pumping controls and software, any failure will result in the manual operation of this station and the need for an emergency contract to bring this facility back on line. The installation of the grinder in the wet well headworks will reduce, if not eliminate the current matting problem and subsequent pump clogging, significantly extending the working life of the submersible pumps and extending the scheduled maintenance intervals of the pumps.

Project Description

The Kirkpatrick Sanitary pumps stations, located on Kirkpatrick Drive, near the intersection of Bloomfield Avenue and Passaic Avenue, initially constructed in 1958, was last rehabilitated in 1990 and conveys approximately 1.3 MGD. The station controls and software installed in 1990 are no longer supported by the company that installed them. The Township needs to upgrade these outdated controls and software. The existing submersible pumps are not as efficient as the newer pump designs, are now approaching the end of their design life at 20 years old and obtaining replacement parts is becoming more difficult and costly. The pumps have been rebuilt to various degrees several times since the 1990 rehabilitation work. Recently, there have been conditions in the wet wells where the solids have been matting and causing subsequent pump clogs. The Township seeks to install a 'Muffin Monster' grinder at the station headworks to address this matting problem.

Service Area

Township of Little Falls

Need for Project

The Little Falls Collection System consists of approximately 120,000 linear feet of pipe in size from six to eighteen inches diameter. Eighty-nine percent of pipe is clay tile, ten percent is asbestos cement, and one percent is cast iron pipe. Interviews with the plant operator indicate that sewers in the western section of Little Falls surcharge and overflow during periods of heavy rain and high Passaic River levels. Overflows also occur at the Hopson Street Pumping Station, which receives sewage flow from the easterly section of Little Falls.

Project Description

This proposed project consists of a sewer system evaluation study utilizing manhole inspection, rainfall simulation, and T.V. inspection and the minor rehabilitation of the Township's existing sewer system to eliminate the portion of the I/I that is excessive.

Service Area

Borough of Sayreville (Morgan and Melrose Sections)

Need for Project

The sewer systems in the Morgan and Melrose sections of Sayreville Borough constructed prior to the use of secondary treatment methods did not set strict limits on the volume of infiltration and inflow within sanitary sewers since treatment costs were not greatly affected by these extraneous flows. However, in recent years, the construction costs of conveyance facilities, coupled with rising treatment costs associated with secondary treatment methods, have resulted in efforts to eliminate infiltration and inflow in areas where it is proven to be cost-effective.

Project Description

The proposed project is to provide I/I correction for Sayreville's existing system.

Keansburg Borough

Need for Project

During Super Storm Sandy, the Borough was inundated with misplaced debris and sand as a result of a dune breach. The famous Keansburg Boardwalk was all but destroyed, and many homes in the low laying areas near the coast were left devastated. Because of this, much of the utility easement within the ROW needed to be televised and repaired.

Project Description

The Sanitary Sewer Improvements would generally consist of Cleaning and Televising of the Borough's sanitary sewer system, and rehabilitation, as necessary, of failing pipe segments. There are 29 totals miles of sewer lines. From this investigation the Borough will be able to identify, and group the town into critical areas, varying in degree of need from requiring immediate repair and/or replacement to in satisfactory condition.

Service Area

City of Brigantine

Need for Project

It is critical that stormwater, sewer and water services be maintained during natural hazards. By providing Emergency Generators for these services the systems will be operational during extended storm periods. Natural hazards can result in an emergency condition for many days due to lack of electricity and other factors, and these pumps must continue to operate. The proposed emergency generators will help the City to provide continued environmental services during and after future natural disasters and during power outages.

Project Description

The City of Brigantine is served by three sanitary sewer lift stations, three potable wells, and two stormwater pumps which all require Emergency Generators.

Need for Project

Pipe replacement and pipe lining will help reduce Infiltration/Inflow and minimize failure of the sanitary sewer system.

Project Description

During the design phase, the Borough will televise 103,000 linear feet of sanitary sewer and repair and rehabilitate the pipes as deemed necessary. The Borough anticipates having to repair approximately 20,000 linear feet of sewer.

County

PASSAIC

Existing Population

7,920

Service Area

Borough of North Haledon

Need for Project

The project is needed to continue to provide adequate pumpage of sanitary sewer effluent to the Passiac Valley Sewerage Authority treatment plant. The repairs to the concrete holding tank and walkways will help to ensure that leakage of sanitary sewerage is not permeated into the soil from existing cracks in the structure as well as ensure a safe working environment for sewer department personnel. The mechanical equipment replacement represents a move towards more efficient state-of-the-art equipment as well as replacement of current inoperable equipment. Finally the roof replacement represents an investment in protecting the existing and proposed replacement equipment within the existing pump station structure as well as providing a safe, comfortable work location for the sewer department personnel.

Project Description

The Molly Ann Pump Station rehabilitation project consists of both structural repairs to the pump station building and reinforced concrete holding tanks as well as mechanical replacement of outdated and inoperable equipment. Specifically the project includes structural concrete crack repair to Holding Tank # 3 and the catwalks and access landings to Holding Tank Nos 1-4 as well as the replacement of the original rubberized roof of the pump station building. In addition the project entails the replacement of the existing aerator units located in Holding Tank Nos 1-4 which have become inoperable and are in need of replacement. The project also includes the replacement of the three (3) existing vertical pumps with dry well submersible type due to advancements in technology and efficiency. All three new pump installations will be controlled by updated variable frequency drives (VFD).

Need for Project

Based on an infiltration/inflow analysis sponsored by the Somerset County Planning Board, the Upper Raritan Watershed Wastewater Facilities Plan recommends a Sewer System Evaluation Survey (SSES) be performed on the Bernardsville sewer system.

Project Description

The SSES will include a physical survey of the Bernardsville sewer system, including manhole inspections and flow inspection (measurement of sewage flows in isolated reaches of pipe), rainfall simulation and smoke testing, building inspection of units suspected of contributing inflow to the sanitary sewers, and television inspection. I/I correction in accordance with the recommendations of the SSES will follow.

Need for Project

The sanitary sewer replacement and rehabilitation is necessary to reduce infiltration and inflow and to minimize the chance of failure in the system.

Project Description

This project consists of the installation of 800± l.f. of 8” sanitary sewer main from the last manhole on Stryck Ave. to the restrooms at the Borough owned Hofstra Park. It also consists of purchasing a Jet/Vacuum Truck. The project also consists of televising and clearing of numerous sections of sanitary sewer piping of various diameter throughout that Borough limits and then identifying on the deficient areas for point repairs, in kind replacement and trenchless lining

Lopatcong Township

Need for Project

The southern portion of the Township's sewage system drains to two pump stations. The sewage is then pumped to the Township of Phillipsburg sewage system for treatment. These two pump stations are over 20 years old and require extensive maintenance to keep them operable. The Township is planning to either upgrade these facilities or possibly construct an interceptor sewer to replace them. Also several sanitary sewers throughout the Township are in need of replacement. This project will address these known problem areas and provide the Township with a reliable system.

Project Description

The proposed project includes the construction of gravity sewers and a force main in conjunction with the upgrade or replacement of the Baltimore Street Pump Station. The likely plan is to eliminate the Baltimore Street PS and intercept its flow with a gravity sewer that will lead to the Morris Heights PS. The Morris Heights PS will either be expanded or eliminated and replaced by an interceptor that will connect to the Phillipsburg system. Additionally, several pipes in the collection system will be replaced to improve problem areas.

Need for Project

The Joint Meeting has conducted an Infiltration/Inflow (I/I) analysis and concluded that excessive I/I exists in the sewer system. A sewer system evaluation survey has evaluated flow conditions and identified the sewer segments which are cost-effective to rehabilitate. Further sewer system evaluation work will propose an I/I correction program to reduce the excessive I/I flows.

Project Description

This proposed project will consist of an I/I correction program to remove a portion of the excessive I/I flows. This may include grouting of sewer joints, sealing manholes, repairs or replacement of defective manhole covers, and other major rehabilitation measures such as removal and replacement of defective sewer pipes and relining of sewer pipes.

Need for Project

The sewer main connecting the Township system to the Bergen County UA interceptor is forty years old and has been experiencing blockages due to deterioration. Two pump stations need to be upgraded to allow them to operate as originally intended.

Project Description

The proposed project includes the installation of a new trunk sewer main from the Township's main pump station to a Bergen County UA interceptor. The existing line will be abandoned in place. The Township's main pump station will have a second comminutor unit, a backup sanitary sewer pump, and a new pump control system installed. The Sprout Brook Pump Station will be upgraded by replacing the existing pumps, motors and control system with new ones.

Service Area

Borough of Roseland

Need for Project

The excessive inflow and infiltration condition results in surcharging of the collection system. In addition, the excess flow is being directed to the Caldwell STP and these additional volumes result in higher treatment costs to the Borough of Roseland.

Project Description

The Borough has conducted preliminary field investigations and determined that several residential neighborhoods are experiencing significant inflow/infiltration problems. These impacted areas represent approximately twenty (20) percent of the utility users. The Borough will embark upon final studies to determine the exact location and magnitude of the problems. The rehabilitation work will include air testing and chemical grouting of approximately 8,000 linear feet of sanitary sewer.

Service Area

Harrison Township

Need for Project

The sanitary sewer system is approximately 25 to 30 years old and was constructed of terra cotta pipe. A majority of these sewer mains are located in low lying areas adjacent to wetlands or streams. In addition, the 11 pump stations are also 25 to 30 years old and are in need of rehabilitation to bring them up to current operational standards. Several of the pump stations do not have back-up emergency generators or other alternate power source.

Project Description

The Township will repair and/or replace those sections of the sewer system which experience problems. Also included is the necessary work to upgrade the existing pump stations to current standards.

Service Area

Sayreville Borough

Need for Project

The southern and western portions of the Morgan Section of the Borough of Sayreville are presently served by a series of six municipal pump stations and one privately owned pump station which convey the wastewater flow to the Middlesex County Utilities Authority's secondary treatment facility. The gravity collection system downstream of the discharge of a major basin pumping station is subject to surcharge to the point of overflow during dry weather, peak flow periods. Anticipated growth in the area will additionally stress the already overloaded conveyance facilities.

Project Description

The proposed project calls for the construction of a gravity interceptor, regional pump station and force main, and the upgrading of four existing sub-regional pump stations. The wastewater flow will ultimately discharge directly to the Middlesex County Utilities Authority gravity sewer which runs parallel to the New York and Long Branch railroad.

Need for Project

The Borough's sanitary sewer system is subject to excessive amounts of inflow and infiltration causing sewage to overflow in the collection system and at the treatment plant site during wet weather periods. The Hickory Street Pump Station and the existing trunk sewer are not adequate to handle peak flows causing back-ups and overflows.

Project Description

The project includes replacement or relining of 8000 feet sewer lines, construction of 10 new manholes, sealing 110 existing manholes, and inspection of another 5100 feet 0of sewer line. The Hickory Street Pump Station will be rehabilitated and upgraded, and a new force main constructed to by-pass the existing trunk sewer.

Spring Lake Borough

Need for Project

In 2011, NJDEP developed the Wreck Pond Restoration Action Plan to identify specific tasks to be performed by various stakeholders in order to restore the health and vitality of Wreck Pond (from both water quality and hydraulic standpoints). In keeping with Action Item 3 of that Plan, the Borough of Spring Lake recently completed the Wreck Pond Infrastructure Assessment (as prepared by Leon S. Avakian, Inc., dated September 2013), which identified specific sanitary and storm sewer defects and recommendations to remedy those defects. The recommendations included the phasing of individual remedies. The Wreck Pond Infrastructure Assessment was prepared in anticipation of filing of this Letter of Intent for system rehabilitation on behalf of the Borough of Spring Lake, and purposely identified the most dramatic and pressing defects that could negatively impact water quality in Wreck Pond as Phase I projects.

Project Description

The project includes the rehabilitation of sanitary and storm sewers, ranging from spot repairs to complete replacements.

Need for Project

An economic study of flow level with sewer improvements versus Township of Neptune Sewerage Authority current charges for flow, indicates that flow levels may be in excess of contractual amounts. The excessive flow results in dilute flow into the treatment plant. This contributes to unwarranted costs and possible penalties for excessive flow. The original sewer system was constructed prior to 1920.

Project Description

The proposed project would reduce infiltration of groundwater into the existing sewer system and includes sleeving/lining of the sanitary sewers, grouting all connections to the trunk sewers, repairing and replacing manholes and the replacement of the deteriorated sewer on Lincoln Lane.

Need for Project

The investigate the presence of any cross connections and repair same to eliminate contamination of bay waters from leaking or improperly installed sanitary sewage systems.

Project Description

Hydraulically clean storm sewer pipes and inspect to locate and determine all cross connections. Once cross connections have been located, affect repairs of same to eliminate contamination and install pinch type check valves.

Service Area

Township of Wyckoff

Need for Project

The area is served by on-site septic systems. The majority of these systems do not function satisfactorily, primarily due to poor soil conditions and the age of the individual systems. Health records along with on-site inspections and surveys indicate failing septics are contributing to the degradation of HoHoKus Brook (FW2-NT), consequently impacting fishable non-trout and industrial uses. Water quality in the area does not meet standards for fecal coliform and toxics.

Project Description

Project is currently in the design stage and will involve construction of 71,600 linear feet of lateral sewer and interceptors to replace septic systems. This project, along with C340739-02 (collection system, P.S.) and C340482-02 (pump station, force main, and interceptor) provides an integrated collection system for the Township. Flows will be conveyed to the Northeast Bergen County Utilities Authority interceptor sewer.

Borough of Allentown

Need for Project

The Borough's sanitary sewer system is subject to excessive amounts of inflow and infiltration causing sewage to overflow in the collection system and at the treatment plant site during wet weather periods. Allentown's wastewater treatment plant needs upgrades and replacement of deteriorated, outdated equipment to improve removal efficancy and reduce the chance of surcharge or overflow.

Project Description

The purpose of the project is to reduce rainfall-induced surcharging of the collection system and sewage treatment plant. The project involves an infiltration/inflow correction program in conjunction with the replacement/rehabilitation of sections of the sewer system. Upgrade of the treatment plant would include electrical and control system replacement, installation of a comminutor, replacement of trickling filter media, chemical feed systems modifications, RBC reconstruction, and other miscellaneous improvements.

Need for Project

The Borough of Island Heights provides sewage collection throughout the Borough. The sewage collection system is comprised of numerous small pump stations. The West End Avenue Pump Station (No. 2) must be renovated to meet the existing wastewater flow demands.

Project Description

This project is a continuation of Island Heights ongoing pump station renovation projects. Pump Station #2 - the West End Avenue Pump Station - is experiencing pumping equipment, electrical and control failures, requiring extensive maintenance by Borough Public Works personnel to keep operational and to prevent sewage backups and overflows. The project consists of pump and control replacement and electrical upgrades. The Borough is built out and the pump station renovations are for existing conditions and not to expand the service area.

Bay Head Borough

Need for Project

The Borough of Bay Head has an old sewerage collection system consisting of clay pipes and lead joints. Cracked pipes and weak joints lead to excessive infiltration/inflow to the existing sanitary sewers. During wet weather, the infiltration/inflow to the system peaks at 0.8 mgd. It is cost effective to perform I/I correction as compared to transporting and treating these extraneous flows at the Ocean County Utilities Authority Wastewater Treatment Facility.

Project Description

At present the project is in Phase II of SSES. This consists of preparatory cleaning and internal TV inspection of 15,281 linear feet and smoke testing of 29,005 linear feet of sewer line. Dye water flooding and dye tracing will be done at the conclusion of smoke testing. In addition, a pilot grouting program of the worst 10 lines will also be undertaken during this phase and the results so obtained will be used in the subsequent work in Phase 3, which will consist of the I/I correction of the remaining lines with excessive infiltration/inflow, grouting of 17 leaking manholes and utilizing manhole inserts to eliminate inflow in 47 manholes. The I/I correction program will remove extraneous flow from this sewer system.

Need for Project

Reduction in inflow and infiltration during precipitation events larger than a 2-year frequency and or during seasonal high groundwater elevations experienced from January to April each year. Reduced flows to Readington Lebanon Sewerage Authority Treatment plant.

Project Description

Over a 3 to 5 year period work on the entire LBSA sewer system to reduce infiltration and inflow issues that currently average about 35,000 gpd in a system limited to 240,000 gpd flow. Similar work in 1997 to 2000 provided for a recapture of over 30,000 gpd. Work first to identify the sources of inflow and infiltration and then program a series of bids to respond to the most critical areas first and then to areas with lesser impact.

Need for Project

The treatment plant is inundated during heavy rainfall.

Project Description

Work under this project will include, but not necessarily be limited to, minor cleaning and TV inspection of sewer lines, joint pressure testing to determine if sealing is required to eliminate infiltration, manhole sealing if required, and root removal.

Borough of Roosevelt

Need for Project

The existing collection system serving the Borough of Roosevelt is very old, and is subject to an extreme amount of I/I. Replacement of the existing sewers will eliminate a portion of excessive I/I in approximately 22,000 LF of collection system serving the Borough.

Project Description

The proposed project will consist of removal and replacement of the existing VTP sanitary lines with new PVC lines to provide for watertight joints and eliminate dips. Aged manholes and portions of house connections will be replaced. Certain manholes will be treated with a bonding agent to seal the internal walls.

Point Pleasant Borough

Need for Project

The upgrades are required to increase the reliability of the pump stations and reduce maintenance costs to the Borough and the rate payers. The Meadow Point Road Pump Station and Bradley Road Pump Station have reached the end of their useful lives due to age, the inability to obtain replacement parts and the deterioration of the buried steel can. In addition, buried stations are classified as confined spaces requiring Borough personnel to adhere to the burdensome confined space requirements when entering the dry well and wet well.

Project Description

At the Meadow Point Road Pump Station the existing dry well "can" will be emptied of its contents, partially removed and the remaining section abandoned in place. The existing wet well will be retained. A duplex submersible pump system and grinder will be installed in the wet well. Additional appurtenances including a valve chamber with bypass connection, new control and alarm systems and emergency generator will be provided. At the Bradley Road Pump Station the existing buried steel pneumatic ejector type pump station and its associated equipment will be removed. A new concrete wet well will be constructed on the existing site and a duplex submersible grinder pump system will be installed in the new wet well. Additional appurtenances including a valve chamber with bypass connection, new control and alarm systems and emergency generator will be provided.

Need for Project

PVSC operates a 230 mgd secondary sewage treatment plant which produces 945,000 dry pounds/day of sludge which is currently dewatered and shipped to Texas. This interim sludge disposal alternative was implemented by the PVSC in order to enable the PVSC to cease the ocean dumping of sewage sludge as mandated by federal and state legislation. However, this practice is costly and its future availability is uncertain.

Project Description

The proposed project would provide a long-term method for the disposal of sewage sludge. A Step 1 grant was awarded in January 1977 for a land-based sludge management study which recommended the implementation of a sludge disposal scheme consisting of a belt filter press for dewatering and incineration. The Sludge Management Plan dated June 1989 recommended a fluidized bed incinerator be constructed as a long-term plan. The PVSC will be required to appropriately update the Sludge Management Plan to ensure that adequate consideration of beneficial reuse alternatives has been included, as required by the Department's White Paper on Beneficial Use of Sewage Sludge, issued in November 1990.

Need for Project

The Passaic Valley Sewerage Commissioners are investigating improvements to their STP, NJPDES No. NJ0021016. The high strength Zimpro sidestream is returned to the activated sludge treatment plant which leads to instability in the activated sludge process. Other improvements are needed to the the sludge processing equipment.

Project Description

The proposed project includes an anaerobic treatment system for the high strength Zimpro sidestream, methane gas recovery and electrical generation facility and various improvements to the sludge processing equipment.

Service Area

The OCUA complete service area includes all of Ocean County and a portion of southern Monmouth County. Southern Monmouth County communities served include Howell Township, Freehold Township, Freehold Borough, Farmingdale Borough, and a portion of Wall Township.

Need for Project

The proposed improvements will improve system reliability and maintain the ability to achieve continued discharge permit compliance.

Project Description

This work involves the replacement of approximately 1,059 linear feet of 10-inch diameter ductile iron pipe (DIP) force main. Static pipe-bursting technology will be utilized for this project. The interceptor to be replaced was installed over 30 years ago and shows severe signs of deterioration. Rehabilitation is required to avoid structural failure and extend the useful life of the interceptor. OCUA will own and operate the proposed improvements.

Need for Project

Long Branch Sewerage Authority is presently disposing of sludge by incineration, however, this is on a short term basis only. This project is necessary to identify a long term disposal alternative for disposal of the 1235 lbs. of sludge (dry weight basis) produced at the plant each day.

Project Description

The project report for this project is essentially complete and has recommended a long term sludge management plan which calls for in-vessel composting with distribution. After resolution of several minor issues, the project report may be approved.

Need for Project

This project is being undertaken to improve sludge handling practices, reduce sludge dispsoal costs and reduce potential plant odors. Specific Water Quality Objectives were not a specific influential factor on the project, though improving sludge handling operations will ultimately improve overall plant effluent water quality.

Project Description

The proposed Sludge Thickening and Odor Control Project includes installation of a gravity thickener and related appurtenances for sludge removal, upgrades to the existing onsite pump station, new equalization tank cover and odor control system.

BCUA operates a 94 mgd secondary sewage treatment plant which produces 35 dry tons/day of anaerobically digested liquid sludge which is currently dewatered by Spectroserv, Inc. in the Town of Kearny and shipped to Pennslyvania to be landfilled. This interim sludge disposal alternative was implemented by the BCUA in order to enable the Authority to cease the ocean dumping of sewage sludge as mandated by federal and state legislation. However, this practice is costly and its future availability is uncertain.

Project Description

The BCUA has modified its Sludge Management Plan to include beneficial reuse of the sludge.

The modified plan calls for the chemical stabilization of the sludge and use of the product as final cover of the landfills in the Meadowlands area.

As required by the Judicial Consent Decree, the BCUA is required to pursue its original plan of incineration until such time as the beneficial use plan is approved.

Need for Project

JMEUC operates a 75 mgd secondary sewage treatment plant which produces 35 dry tons per day of anaerobically digested sludge which is currently dewatered and shipped to Pennsylvania to be landfilled. This interim sludge disposal alternative was implemented by the JMEUC in order to enable the Authority to cease the ocean dumping of sewage sludge as mandated by federal and state legislation. However, this practice is costly and its future availability is uncertain.

Project Description

The proposed project would provide a long-term method for the disposal of sewage sludge. A Step 1 grant was awarded in 1977 for a land-based sludge management study. The "Land-Based Sludge Management Facilities Plan Update" dated March 1989 recommended construction of a multiple hearth incinerator with a hot water generator, Venturi scrubber, impingement plate after cooler, wet electrostatic precipitator, induced draft fan, regenerative after burner and a pneumatic dry ash system as the most cost-effective alternative. The JMEUC present plans are to abandon the original idea of sludge incineration and to pursue a beneficial reuse alternative utilizing a sludge drying process.

Burlington County

Need for Project

The Leachate Treatment Plant (LTP) expansion and upgrade is necessary to provide treatment and capacity for the wastewater to be generated through operation of the county co-composting facility. The existing LTP currently treats leachate and sanitary wastewater from the county landfill and associated support facilities at the county Resource Recovery Facilities Complex. In accordance with NJPDES Permit No. NJ0055395 issued October 23, 1991 which provides the discharge requirements for the LTP, expansion of the hydraulic design capacity of the plant from 50,000 gpd to 130,000 gpd average daily flow (ADF) on a monthly basis will allow for the treatment of wastewater to be generated from the previously funded co-composting facility operations (approximately 56,000 gpd - monthly ADF, Project No. S340818-03). Permitted capacity was increased from 28,000 gpd to 130,000 gpd (monthly ADF) under NJPDES No. NJ0055395.

Project Description

Expansion of the facility includes physical-chemical treatment units, biological and physiochemical treatment units, rapid sand filtration, ultraviolet disinfection and a wastewater heating system.

Need for Project

Landfilling of sludge in Pennsylvania is the primary means of sludge disposal for the Hudson County treatment plants. However, this is a short term solution only.

Project Description

This project is the third segment of the Hudson County Utilities Authority's segmented sludge management plan. The proposed project is the construction of a fluidized bed incinerator that is to accept municipal sludge generated within the county.

Need for Project

The construction of sewers are necessary to replace failing and malfunctioning septic systems in the unsewered areas of the City of Jersey City. These systems are old, inadequate, and are known to cause a public nuisance.

Project Description

This project proposes the construction of a new collection system to service that portion of the City of Jersey City that is unsewered. It will convey the wastewater of this unsewered area of the City to PVSC for wastewater treatment.

Deptford Twp., Woodbury City, Woodbury Hgts. Borough, Parts of E. Greenwich Twp., Elk Twp., and Monroe Twp.

Need for Project

The GCUA WWTP is currently permitted to treat 24.10 mgd. The average flow is 19.4 mgd and the maximum value is 25 mgd. This project will not affect the water quality, however is necessary to meet the air quality permit limits for the incinerator.

Project Description

The Authority is proposing to construct an adsorber immediately adjacent to Sewage Sludge Incinerator #2. These upgrades are proposed in order to meet new federal air emission limits. The improvements will provide removal of acid gases (HCl and SO2), and the removal of mercury, dioxins and furans.

Service Area

Several Municipalities in Atlantic County and Mercer County

Need for Project

The Authority has several goals for this project. First, to diversify the Authority's method (by providing a back-up for the existing sludge incinerators) and increase capacity for the disposal of municipal wastewater sludge. The second goal relates to the Interdistrict Agreement by which the ACUA is required to accept up to 19,000 tons per year of compostable material from Mercer County. Finally, to meet the Authority's recycling goals, large source separated generations of food waste within the county will be directed to the proposed facility.

Project Description

The Authority is planning to construct an Enclosed Composting Facility at the Environmental Park Site in Egg Harbor Township. The facility will process the following selective waste streams: food waste, municipal wastewater sludge, vegetative waste and clean wood waste. These selective waste streams will produce a compost which can be used as a soil amendment. The proposed facility has an array of unique features to avoid the pitfalls of other composting facilities which have been forced to close due to mechanical and odor control problems. An integrated building ventilation system, including a biofilter for odor control will be constructed. The facility will be totally enclosed and designed to handle 159 wet tons per day.

Service Area

Wildwood/Lower Region and Seven Mile/Middle Region

Need for Project

The project is required to provide sludge/septage treatment and disposal for the Cape May County MUA - Wildwood/Lower Regional and Seven Mile/Middle Regional Wastewater Systems.

Project Description

The project is the second phase of the Cape May County MUA - County-wide enclosed vessel mechanical composting system. This component is planned to service combined primary and secondary belt filter press dewatered sludge from the 14.18 mgd Wildwood/Lower Regional WWTF and the 7.67 mgd Seven Mile/Middle Region WWTF. The septage treatment facilities will be incorporated into the CMCMUA Seven Mile/Middle Regional WWTF.

Service Area

Allendale Borough, Franklin Lakes Borough, HoHoKus Borough, Mahwah Township, Midland Park Borough, Ramsey Borough, Saddle River Borough, Upper Saddle River Borough, Waldwick Borough, Wyckoff Township

Need for Project

Proposed improvements and upgrades to the incinerators are required to maintain both incinerators in operation in the event of failure of one of the units. The upgrades to the emission system are required to comply with current codes and standards. Failure of the units would result in the NBCUA hauling the waste sludge offsite increasing the potential of a sewage spill that may enter into the NBCUA's adjacent stormwater system or the Ho-Ho-Kus Brook, which is located immediately downstream of the service building that houses the existing incinerators.

Project Description

The NBCUA proposes to repair and upgrade its existing incinerators to improve reliability and enable the NBCUA to continue to meet current permit requirements.

BURLINGTON

Existing Population

26,590

Service Area

Mount Holly, Eastampton, Lumberton, Hainesport, part of Westampton

Need for Project

This is a sludge management project. The Mount Holly Sewerage Authority Wastewater Treatment Plant has been expanded and upgraded from 2.0 mgd to 5.0 mgd flow under USEPA/State project no. C340251 grant. The (201) Facilities Plan recommended that ultimate sludge disposal would be to a licensed landfill.

Subsequent to the completion of this original facilities plan and the initiation of construction of the plant expansion, the State of New Jersey enacted new laws relative to the treatment and disposal of sludge. Accordingly, the Mount Holly Sewerage Authority was required to prepare a sludge management plan in accordance with the current state guidelines for the preparation of sludge management plans.

Project Description

The project consists of construction of sludge management facilities at the existing Mount Holly SA Sewage Treatment Plant site. This is a short term solution only.

The ultimate sludge disposal will be incorporated into the on-going county-wide sludge and septage management plan recommendations. Mt. Holly will subsequently become a contingency back-up facility for sludge/septage treatment.

Service Area

Milford Borough, Holland Township

Need for Project

There is serious I/I existing in the sanitary sewer lines in Holland Township, which is causing noncompliance with the suspended solids limitations of the NJPDES permit during periods of excessive rain. In addition, the Milford Borough Sewer Utility, which is classified as a Category D facility, does not have the capability of handling septage and must plan for accepting the septage generated in its service area. Furthermore, alternatives to the treatment plant's current method of disposing of liquid sludge at a Pennsylvania landfill must be evaluated since it is on a short term basis.

Project Description

This project will be classified as a complete wastewater treatment system which includes Holland Township and Milford Borough. The Facilities Plan will develop alternatives for sludge disposal, and evaluate a septic management district. Also, an I/I and cost effectiveness analysis will be performed to determine the extent of excessive I/I in the system.

Service Area

West Milford Township

Need for Project

The Township of West Milford utilizes individual subsurface sewage disposal systems and individual wells (95% on wells and septics) for their wastewater disposal and potable water supply. There is approximately 8,517 (85.2% of residences) subsurface sewage disposal systems within the Township of West Milford. Taking a very conservative approach, not counting commercial establishments, each of these 8,517 systems generate approximately 500 gallons of contaminated waste water per day, that’s a total of 4,258,500 gallons of contaminated water that enters into the water shed of West Milford. There is 4,647 residences in LR zone (4,663 w/ Class 15), 6,463 residences in Highlands Open Water Protection Zone (300â€™ open water buffer) and 3,319 residences within 300ft of water (2002lulc) (does not include wetlands, streams). Many of these existing systems have malfunctioned even when the systems have been designed, constructed, and sited in accordance with applicable NJDEP standards, largely due to lack of proper system management or improper operation, poor soil conditions and maintenance. These malfunctions have been shown to adversely affect public health and welfare and the environment.

Project Description

The proposed project includes helping provide loans to families who are not able to pay for repair of there failing septics.

Service Area

Sections of both Alloway and Quinton Townships

Need for Project

The on-site septic systems in the proposed service area are malfunctioning and causing groundwater degradation. The area borders Elkington Lake and Laurel Lake as well as Alloway Lake and Alloway Creek. The existing systems are impacting fishable (non-trout), recreational, industrial and agricultural uses of these waterbodies.

Project Description

The proposed project consists of the construction of force mains, gravity sewers and pumping stations. The collected wastewater either will be conveyed to the Salem treatment plant or to a newly erected treatment plant within the service area which will be a part of this project.

Service Area

Bridgewater Township (various portions)

Need for Project

Poor soil conditions and shallow depth to bedrock are causing a significant number of septic systems in the service area to malfunction and cause a public nuisance.

Project Description

This project involves construction of collector and interceptor sewers in eight sections of Bridgewater Township. These collectors will tie into existing trunk sewers which lead to the Somerset-Raritan Valley Sewerage Authority treatment plant.

West Wildwood Borough

Need for Project

The sanitary sewer extension in West Wildwood will allow for the elimination of existing on-site wastewater disposal systems, which are located within 100 feet of tidal water, in an area with depth to groundwater of less than three feet and subject to periodic tidal flooding.

Project Description

The proposed project includes the purchase and installation of pumps and controls to complete the Twenty Sixth Street Sanitary Sewer Extension in West Wildwood.

Service Area

Southwest/Southeast portions of Hammonton

Need for Project

Residents in the area have expressed problems with failing septic systems and individual potable water supply well contamination. This project will also assist residents who have lost the use of their land due to the septic nitrate regulations of the Pinelands Commission. The increased amount of customers will assist the sewer user base and help to reduce the overall user cost for everyone on line.

Project Description

The project consists of replacement of existing sewer interceptors and the construction of new interceptors, pump station, force mains and sewer collection mains. Although the projects are not contiguous, the type of work and benefits derived will be similar.

The Southeast Hammonton area will consist of the placement of a 12" sanitary sewer trunk line within the rights-of-way of Thirteenth Street, Egg Harbor Road and Fourteenth Street. Eight (8) inch collector sewer lines will be installed within the remaining roadways of this project area.

The Southeast Hammonton area will consist of the placement of a 12 inch sanitary sewer trunk line within Park Avenue, easement areas, Grand Street and through a portion of the Fox Chase Development. A 10" line will be installed along Ninth Street and a portion of Tenth Street. The remaining streets in this area will be serviced with an 8 inch sanitary sewer. It is also anticipated that an upgrade of the existing pump station located on Park Avenue will have to be completed or a new station installed on Grand Street at the low point to service this area.

Need for Projec

The Project will be a distribution system for the reuse of treated wastewater to end users within the MCUA Service Area. All treated wastewater conveyed to end user locations, which following its intended use requires disposal, will be redirected to the sanitary sewer for ultimate treatment by the MCUA. The Project will divert treated wastewater from being conveyed to receiving waters.

Project Description

The Project will involve the construction of a 15 MGD Pumping Station and appurtenances to convey treated wastewater from the Edward J. Patten Water Reclamation Center in Sayreville, NJ, to end user locations. The pumping station will be located at the wastewater treatment facility site. End users will construct and connect their conveyance piping to the pumping station's discharge pipe for transmission of the treated effluent to end use sites. Two electric power generation facilities have approached the MCUA for the use of treated wastewater for cooling purposes at their facilities.

Service Area

South Egg Harbor City

Need for Project

The present disposal system for the area is a septic system, which is failing and may pose a threat to health and may also contaminate surface and groundwaters.

The Pinelands Commission has recently adopted a new ordinance that affects this area. The zoning of the South Egg Harbor City Section of the Township reflects this change and conforms to the Pinelands comprehensive management plan.

Project Description

The proposed sanitary sewer extension project consists of approximately 60,000 linear feet of 8-inch, 10-inch, or 12-inch diameter gravity sanitary sewer lines to service the existing population of the area. The system is designed to consist of 231 unsewered dwelling units (@ 3.5 persons per dwelling unit).

Two pumping stations will also be necessary. One is planned to be located along Pittsburg Avenue, the other along Bella Donna Street.

The wastewater flow from this area will be conveyed via the ACUA Pomona Pump Station to the ACUA Coastal Plant for secondary treatment, with effluent discharge to the Atlantic Ocean.

Winslow Township

Need for Project

A portion of Winslow Township is presently served by on-site systems. Many of these systems are malfunctioning; consequently, there is potential for groundwater contamination.

Project Description

The project consists of the construction of gravity sewer lines, pumping stations and force mains. The areas to be served are a portion a residential area, a church and two schools in Winslow Township. The collection system will be proposed to convey 73,000 gallons of wastewater per day initially. The proposed system will discharge to the Route 73 corridor project which is under construction and it will ultimately be conveyed to the CCMUA Delaware No. 1 Water Pollution Control Facility (WPCF) at Camden.

Need for Project

This project is proposed for the elimination of malfunctioning septic systems. Existing water quality in the area does not meet standards for dissolved oxygen and fecal coliform and marginally meets standards for nutrient and toxics.

Project Description

According to the 201 Facilities Plan for the Middle South Branch of the Raritan River, collection systems were proposed for Sand Hill Road, Sunny Hills Estates, Old Craton Road, Raritan Gardens, Broad Acres and Ridge Road areas, individual & mound systems for the Deerpath Village and Southridge areas, and a STEP system for Bridgeview Estates. The septic tank effluent from the effluent collectors and STEP System will be treated at the Raritan Township MUA.

Service Area

This project will serve existing and new development along the Major Road area of the Township.

Need for Project

Approximately 36 homes are served by on-site systems, a significant portion of which have exhibited problems and/or malfunctions, thus causing a public nuisance. The Soil Conservation Service has determined that the Major Road area corresponds to soils with severe limitations for on-site disposal systems. South Brunswick Township will apply under the Public Health Hazard Bypass provisions of the priority system.

Project Description

The proposed project is for the construction of approximately 4,500 feet of ten inch sewer line and 1,450 feet of eight inch sewer line. The project also calls for the reconstruction of approximately 834 feet of the existing "Town Center Sewer". Approximately 31 of the existing properties could make gravity connection to the sewer line and the other 5 homes would have to utilize small grinder pumps to tie into the proposed project.

Need for Project

An expansion of the collection system is needed to replace inadequate on-site systems which are malfunctioning and pose a potential health hazard to local residents by adversely impacting well waters.

Project Description

The proposed project involves the construction of lateral sewers and a pumping station to relieve malfunctioning septic systems. This project will provide a collection system for the remaining areas of the Township. These areas include areas 7, 8, 9, 14 and 15-5 as identified in the amendment to the 1981 facilities plan (dated June 1, 1990). Wastewater will be conveyed to the Parsippany-Troy Hills STP for treatment.

Parts of Manchester Township

Need for Project

The tremendous rate of growth in the planning area, coupled with an increasing number of septic tanks, has placed a severe strain on the very permeable sandy soils to adequately treat the domestic wastes. Because of a generally high groundwater table and the high percentage of septic system failures, pollution of the groundwater is suspected. The pollution to surface water in the planning area has already been documented in the Ocean County Areawide Water Quality Management Plan. The continuation of current septic tank problems poses a potential threat to the groundwater in the region. Therefore, a proper sewage disposal system is necessary.

Project Description

Based upon economic, environmental and engineering aspects, the construction of the following collection system has been recommended: Summit Park, 13,282 feet of gravity sewers; Savannah Acres, Low pressure/grinder pump system with 17,085 feet of 2" PVC low-pressure piping; Cedar Glen Homes, 16,000 feet of gravity sewers; Richard and Whitney Estates, 1½" and 2" low-pressure sewers; Cedar Glen West, 3,900 feet of 8" and 15" gravity sewers; a pumping station; and 8,700 feet of 6" force main. The flow from the area will be conveyed to the Ocean County Utilities Authority's Central Plant for treatment and disposal.

Need for Project

Some of the septic systems of the Township are malfunctioning and thus causing potential environmental or health hazard situations and creating a public nuisance.

Project Description

This project involves construction of a new sewerage system to serve twenty-two (22) homes in the Rocky Lane/Columbia Road area of Basking Ridge. The system will consist of all gravity sewers with the exception of two properties which will require pumping to a pressure sewer. The wastewater will be conveyed to the 1.2 MGD capacity treatment plant.

Franklin Township

Need for Project

The project area in Franklin Township consists of Franklinville, Malaga, and Newfield, which are existing developments served by individual on-lot systems. There is public nuisance associated with these on-site disposal systems in the area.

Project Description

The selected plan of the GCUA Facilities Plan calls for the complete regionalization of the proposed sewer collection systems for Franklin Township and the Borough of Newfield with an interceptor system to convey wastewater to the Landis Sewerage Authority Plant for treatment and ultimate disposal. The selected plan basically involves the construction of three pump stations, interceptors, and force mains to convey the wastewater to the Landis SA plant.

Borough of Oakland

Need for Project

The area is currently served by septic systems and some small package treatment plants. Existing disposal facilities result in a public nuisance as a result of high groundwater and impervious soils.

Project Description

The facilities plan recommends the design and construction of a gravity collection system for the majority of the developed areas of the Borough and interceptor sewers. This project involves the collection and interceptor sewers.

County

SUSSEX

Existing Population

11,080

Service Area

The service area consists of the portion (62%) of Vernon Township which lies in the Pochuck Basin.

Need for Project

Vernon Township is comprised of clusters of lakeside communities (including Barry Lakes) that have developed from seasonal vacation homes to year-round dwellings. This fact, coupled with the restrictions of small, undersized lots located on soils with severe limitations for on-site systems, has resulted in an overburdening of the soil stratum. This has led to an increasing number of septic system failures which previously had functioned satisfactorily. In addition, a number of existing systems are known to be inadequate through design and/or installation deficiencies. This situation poses public health as well as nuisance problems to the Township. The needs of Vernon Township as identified under the Sussex County Step I Study (C340503-01) are to be resolved on a local level through this project.

Project Description

This project would implement the wastewater management recommendations of the Sussex County-Pochuck Facilities Plan on a local level. Collection, low pressure, and/or cluster systems may be involved in this project. On-site rehabilitation in conjunction with the establishment of a septic management district(s) may also be a viable alternative. The construction of this project should satisfy the wastewater needs of Vernon Township, as well as maintaining water quality and safeguarding the public health.

Wanaque Borough

Need for Project

This project is necessary for the construction of a sewer extension. This is the second phase of the Borough's collection system project. The first phase (75,130 l.f.) has already been constructed. In several instances, septic systems have been malfunctioning, creating potential health hazard situations and a public nuisance.

Project Description

This project involves the construction of 4251 linear feet of collector and interceptor sewer and a pump station, which will convey wastewater to the proposed Wanaque Valley Regional Sewerage Authority treatment plant (0.68 MGD capacity). The planning work for the collection system needs to be addressed.

Service Area

Township of Mahwah (Portion)

Need for Project

The area is currently served by septic systems; failures appear to be contributing to the pollution of groundwater, a potable water source. This could result in health problems in the community. The project would also convey wastewater from package plants in the Township. The water quality in the area marginally meets standards for fecal coliform and nutrients.

Project Description

The project involves construction of a collection system and interceptor to serve the Fardale Section of Mahwah Township. The wastewater will be conveyed through the Northwest Bergen County Utilities Authority interceptors and then to the treatment plant in Waldwick. The project report has not been submitted by the Township.

Wantage Township

Need for Project

The entire Township of Wantage is currently using on-site wastewater disposal. However, in several areas there are failing systems which qualify as a public nuisance.

Project Description

The Sussex County Municipal Utilities Authority is developing a complete wastewater treatment system which includes upgrading of the Sussex Borough STP. The Sussex Borough STP may be available to serve new systems within Wantage Township. This project includes the design and construction of a local collection system and possible upgrading of existing on-site systems for the Wantage Township area, pending submittal and approval of the Sussex County Municipal Utilities Authority-Lower Wallkill 201 Facilities Plan (No. C340573-01).

Service Area

Southwest portion of Upper Saddle River

Need for Project

Sanitary sewers from the commercial buildings in the southwest portion of Upper Saddle River drain into the Ramsey Brook Interceptor. The Ramsey Brook Interceptor was not originally designed to handle flow from the southwest portion of Upper Saddle River. As a result, the line runs near capacity with some surcharging. Continuing commercial development in this area necessitates an alternate drainage source. Construction of a sanitary sewer collection system, which would drain into the northwest Bergen Interceptor, to serve both the expanding commercial and residential (currently served by septic system) communities in the southwest portion of Upper Saddle River has been proposed.

Project Description

Construction of a sanitary sewer collection system and interceptor. The sewer system would contain 9800 linear feet of 8-inch and 1000 linear feet of 10-inch diameter sanitary sewers.

Pine Lake Park area of Manchester Township

Need for Project

The tremendous rate of growth in the area, coupled with an increasing number of septic tanks, has placed a severe strain on the very permeable sandy soils to adequately treat the domestic wastewater. Because of a generally high groundwater table and the high percentage of septic system failures, pollution of the groundwater and surface water is suspected. Also, the current septic tank problems pose a potential threat to the health of local residents. Therefore, a proper sewage disposal system is necessary.

Project Description

The project is for the construction of three pump stations and approximately 35 miles of force mains and gravity sewers with diameters ranging from 8 inches to 24 inches. The wastewater will be conveyed to the existing 42-inch diameter Union Branch Interceptor owned and operated by the Ocean County Utilities Authority (OCUA). The wastewater will be treated at the OCUA's Central Plant located in Bayville for secondary treatment with effluent disposal to the Atlantic Ocean.

Need for Project

The Gould town center area to be serviced relies on the discharge to groundwater through individual onsite septic systems that are close to 30 years old. As a result of aging and failing septic systems the project will provide a sanitary sewer extension to address groundwater quality standards.

Project Description

The proposed project includes the installation of 18,000 linear feet of gravity sewer ranging in size from 8 to 12 inches and the upgrade or replacement of an existing pump station to eliminate the onsite systems.

6,120

Service Area

Borough of Carlstadt

Need for Project

There are malfunctioning and inadequate on-site systems which cause a public nuisance in unsewered areas of Carlstadt. Additionally, a portion of Carlstadt's sewered flows are currently conveyed to the Rutherford/Carlstadt's Joint Meeting STP for treatment prior to dis- charge to Berry's Creek (FW2-NT/SE-2). This plant has been under a court order on consent to be abandoned in favor of regional treatment by the Bergen County Utilities Authority (BCUA). Existing water quality violates standards for dissolved oxygen, fecal coliform, and toxics.

Project Description

The facilities plan has evaluated alternative methods for the diversion of all or part of the flow from the Joint Meeting plant to the BCUA regional treatment facilities. The plan also identifies additional sanitary facilities needed to collect sewage in developed and developing areas of Carlstadt.

Service Area

Plumsted Township (includes New Egypt, Archers Corner, Archertown, Brindletown and Colliers Mill areas)

Need for Project

A study performed for the service area has determined that overflowing and malfunctioning septic systems, poor soils and high density housing conditions exist in the planning area. A septic system survey found 81 percent of the residents in Plumsted Township are affected by malfunctioning on-site systems. The project is designed to eliminate antiquated septic systems and cesspools on small lots, to improve water quality of Oakford Lake and the Crosswicks Creek, reduce the threat of contamination to private drinking water wells, to promote the revitalization and economic development of the Main Street area of New Egypt and Town Center.

Project Description

The proposed project is to construct a new sewer collection system, pump station and treatment plant. Currently, there is no public sewer system in New Egypt. The scope of the project is as follows: a. to install approximately 3800 LF of 8" and 10" gravity sewer; b. construction of a pump station and 8" force main of approximately 5,000 LF to the sewage treatment plant c. construction of a sewage treatment plant d. disposal of the treated wastewater.

Service Area

Mahwah Township (unsewered portion)

Need for Project

Facilities planning in Mahwah Township has identified areas of low density development which will remain unsewered for the planning period. However, areas of soils with limitations to on-site disposal exist, and on-site systems continue to fail in these areas. These malfunctions are considered to be public nuisances and must be addressed. It is, therefore, necessary to create a management program to address the correction of malfunctioning systems in unsewered areas.

Project Description

This project is still in the planning stages and the specifics of the septic management program to be adopted by the Township have not yet been determined. However, at a minimum, the program must provide for inspections of systems every three years.

Service Area

Branchville Borough and sections of Frankford Township.

Need for Project

The service area is a clustered community which currently relies on on-site septic disposal systems for the treatment of wastewater. Many of these systems appear inadequate and are a public nuisance to the community. An on-going planning study was conducted under the Sussex County-Paulinskill planning grant (C340449-01), to determine the nature, severity, and extent of the wastewater disposal problems for the impacted areas.

Project Description

The proposed project includes the construction of a pump station and force main to convey flow to the wastewater treatment plant site, construction of a treatment plant with the ability to treat effluent to Class II A grounwater standards, with subsurface disposal of the treated effluent.

Service Area

Berlin Township

Need for Project

At present there is no sewer service to the residents of Berlin Township. Well-drained, sandy soils and a shallow groundwater table increase the possibility of contamination to ground waters by individual septic tank disposal systems. In addition, contamination of the head waters of the Great Egg Harbor River (PL and FW2-NT) and nitrogen contamination of wells has been attributed to septic tank sources in Berlin Township. The systems are also creating a public nuisance.

Project Description

The proposed project consists of the construction of a new collection system of approximately 138,774 linear feet and four pumping stations. The collection system will connect to the regional CCMUA pumping station.

RIVERDALE BOROUGH
340473-01
INTERCEPTOR

Priority List Rank

509

County

MORRIS

Existing Population

2,410

Service Area

The service area consists of the Borough of Riverdale.

Need for Project

The area is served entirely by individual septic systems discharging to the groundwater table. Failures appear to be contributing to surface and subsurface pollution of the ground and groundwater, posing a potential health problem and public nuisance.

Project Description

The project consists of construction of an interceptor sewer to provide a complete collection system for the major part of the Borough. This will significantly reduce the potential for water pollution from malfunctioning septic systems and reduce the public health hazard. The project report work has not yet been initiated.

Service Area

Portion of the Township of Mahwah

Need for Project

The area is currently served by septic systems; failures appear to be contributing to the pollution of groundwater, a potable water source, however this has yet to be documented. This could result in health problems in the community. The project would also convey wastewater from package plants in the Township.

Project Description

The project involves construction of collection system to serve Craigmere and Oak Hills sections of Mahwah Township. The wastewater will be conveyed through the Northwest Bergen County Sewer Authority interceptors and then to the treatment plant in Waldwick. The facilities plan work has not been submitted by the Township.

Service Area

Highly dispersed areas of Evesham Township including the Marlton Lakes area.

Need for Project

The Marlton Lakes area of Evesham Township has experienced on-site disposal problems for the past seven years. Monitoring of potable water wells has shown high nitrate readings and the lake has shown indications of eutrophication from elevated nitrate levels. Approximately 850 developed properties exist in the southern two thirds of the Township, with about 40% concentrated in the Marlton Lakes area. A review of the more concentrated areas of development shows that on-site systems are located on Lakewood and Evesboro soils that have severe limitations for septic systems due to high permeability. Many homes in the highly dispersed areas of the Township have also experienced on-site disposal problems. In the northern portions of the Township, outside of the existing sewer service areas, many homes experiencing problems are located on Kresson and Marlton soils, having severe limitation for on-site disposal due to poor permeability.

Project Description

The recommended plan for wastewater management for southern Evesham Township has been divided into two regions based primarily on the need for wastewater management and population density:

- Marlton Lakes Community: Small Diameter/STEP sewer system with centralized wastewater treatment utilizing the Carrousel process followed by effluent disposal in a series of Rapid Infiltration basins.

- Remainder of Southern Evesham Township: Privately owned publicly managed septic system management district entailing periodic septic tank pump-out and septic system inspection. Pump-out and maintenance/repair costs would be the responsibility of the owner.

Service Area

A portion of the Borough of Kinnelon

Need for Project

The Borough has proposed the construction of a collection system for a small area of the Borough where on-site disposal systems have been experiencing problems and have malfunctioned. Water quality standards are currently marginally meeting fecal coliform and nutrients.

Project Description

It is anticipated that this project will be for the construction of one pump station, force main, and approximately 48,000 L.F. of gravity sewer. The Borough of Kinnelon has become a member of the Pequannock River Basin Regional Sewerage Authority (PRBRSA) (January 1, 1991). The project would connect to a PRBRSA interceptor at the Butler/Kinnelon boundary and all wastewater would be discharged to the Pequannock-Lincoln Park-Fairfield Sewerage Authority for treatment.

Service Area

The study area for this project consists of Hope Township within the Pequest Basin.

Need for Project

The majority of the township is currently using cesspools as a means of on-site wastewater disposal. Failures of these systems have created potential health hazards. In the Silver Lake area, the water table is high and wells are shallow. Cesspools and septic systems have been a public nuisance through surface failures and groundwater pollution. The septic malfunctions have been threatening the health and welfare of the local residents. Because of the existing small lot size, soil limitations and lack of adequate planning for runoff management, there is significant potential for future environmental and health problems within the community as well as problems of the degradation of water quality in Silver Lake.

Project Description

This project is still in early stage of planning and proposes small diameter gravity system connected to a community-based leaching field as an alternative solution to malfunctioning septic systems. Also included is a sub-surface drainage system to be installed to collect and divert high, seasonal groundwater and run-off to protect the disposal bed from flooding.

Service Area

Pequannock Township

Need for Project

The project is needed to improve existing wastewater treatment practices through the elimination of approximately 490 on-site disposal systems in a residential/commercial area and replacing them with a sanitary sewer system. The soils in this service area are classified by the Soil Conservation Service as severely limiting for on-site disposal. The average housing stock in this area is in excess of 35 years and health surveys have indicated an incidence of septic system malfunctions and shallow aquifer contamination. The proposed sewer system will provide the transmission facilities to convey the wastewater to the Pequannock, Lincoln Park and Fairfield Park Sewerage Authority (TBSA) facilities for ultimate treatment.

Project Description

This Phase IV project will be an extension of the Phase III sanitary sewer system and will include the residential area known as the "Village" and the commercial areas on Route 23.

Service Area

Washington Township

Need for Project

Failure of on-site sewage disposal systems within the Gardendale and Grenlock areas of Washington Township have created a public nuisance. Project is necessary to eliminate failing septic systems and to construct a sanitary sewer collection system to service several of the older developments within Washington Township.

Project Description

Construction of extensions to the existing sanitary sewer collection system. The extension to the Grenloch area collection system will consist of approximately 9,895 linear feet (L.F.) of gravity main, 1,750 LF of 4" force main, 1 pump station and all appurtenances along Park Avenue, Lake Avenue, Central Avenue, Edgewater Avenue, Milburn Avenue, Arbutus Avenue and Woodbury-Turnersville Road.

The extension to the East Gardendale area collection system will consist of approximately 10,940 LF of 8" gravity main and all other appurtenances. The extension will include McKinley Avenue, Garfield Avenue, Myrtle Avenue, Spruce Street, Chestnut Street, Lucust Street, Pine Street, Copper Street, Hilbert Drive and Forrest Street.

The extension to the Wilson Road area collection system will consist of approximately 2,890 LF of 8" gravity main and all appurtenances. The Wilson Road area extension will include West End Avenue, Salem Avenue, Glen Avenue, Wilson Road and Woodbury-Turnersville Road.

All new flows are to be conveyed to and treated at the Gloucester County Utilities Treatment Plant.

Service Area

Holly Oaks/Knollwoods area of the Manchester Township

Need for Project

The tremendous rate of growth in the area, coupled with an increasing number of septic tanks, has placed a severe strain on the very permeable sandy soils to adequately treat the domestic wastewater. Because of a generally high groundwater table and the high percentage of septic system failures, pollution of the groundwater and surface water is suspected. Also, the current septic tank problems pose a potential threat to the health oflocal residents. Therefore, a proper sewage disposal system is necessary.

Project Description

The project is for the construction of two pump stations and approximately 8 miles of force mains and gravity sewers with diameters ranging from 6 inches to 12 inches. The wastewater will be conveyed to the existing 42-inch diameter Union Branch Interceptor owned and operated by the Ocean County Utilities Authority (OCUA). The wastewater will be treated at the OCUA's Central Plant located in Bayville for secondary treatment with effluent disposal to the Atlantic Ocean.

Service Area

Strathmere Section of Upper Township

Need for Project

This project is proposed for the elimination of public nuisance associated with ground and surface water pollution possibly resulting from malfunctioning individual on-site wastewater treatment systems. The Strathmere section of Upper Township is a recreational island community characterized by high summer population densities and high groundwater levels.

Project Description

Upper Township proposes the planning, design and construction of a new sanitary sewage collection and interceptor system for the elimination of the existing improperly operating on-site systems. Wastes collected in this system will be pumped into the Avalon system for transmission to the proposed 7.67 mgd Seven Mile/Middle regional treatment facility. The collection and treatment of wastes generated by the Strathmere section of Upper Township were included in the Seven Mile/Middle regional plans.

Service Area

Pequannock Township

Need for Project

The project is needed to improve existing wastewater treatment practices through the elimination of on-site disposal systems in a residential/commercial area and replacing them with a sanitary sewer system as well as for future growth. The soils in this service area are classified by the Soil Conservation Service as severely limiting for on-site disposal. The average housing stock in this area is in excess of 35 years and health surveys have indicated an incidence of septic system malfunctions and shallow aquifer contamination.

Project Description

This Phase III project will be an extension of the Phase I sanitary sewer system and will include the residential area between Greenwood Avenue and Pequannock Avenue and the commercial properties along the southern portion of Route 23. The proposed sewer system will provide the transmission facilities to convey the wastewater to the Pequannock, Lincoln Park and Fairfield Park Sewerage Authority (TBSA) facilities for ultimate treatment.

Branchville

Need for Project

The Branchville area is currently relying on on-site septic disposal systems for the treatment of wastewater. Many of these existing systems appear inadequate and are becoming a public nuisance.

Project Description

This project is part of a wastewater treatment system to be developed by the Sussex County Municipal Utilities Authority and consists of a proposed regional sewage treatment plant which will serve Frankford Township along with Branchville Borough. It includes the construction of a collection and interceptor system for the Branchville Borough area.

Village of Vincentown

Need for Project

The Village of Vincentown is primarily a residential area currently using individual on-site wastewater treatment disposal systems. A survey report was made by the Burlington County Health Department, which showed that many of the systems are having serious problems.

Project Description

The topography of the area to be served (Village of Vincentown) is not steep sloped, but with gently sloping grades. The major obstacles are three small streams, which will be crossed by hanging insulated pipes on the existing bridges. 11,200 L.F. 8 inch san. sewer pipe and 3800 L.F. force main will be installed. The project also entails 230 laterals, 44 manholes, and pavement restoration.

Barton's Lake and Fawn Lake Villages in Shamong Township

Need for Project

The Fawn Lake and Barton's Lake areas of Shamong Township have been experiencing on-site disposal problems for the past ten years. Barton's Lake Village is a development of 77 homes adjacent to Indian Mills Lake. This development is experiencing failures due to high groundwater and soil constraints.

The Fawn Lake Village is a mobile home park with approximately 114 units, served by combined septic systems. Problems experienced in the development appear to be associated with undersized systems and soil constraints. The Fawn Lake Village is adjacent to Springers Brook, a tributary of the Mullica River.

Project Description

The facilities plan indicates that two septic tank effluent collection systems, which will convey partially treated wastewater to two community leachfields, will be the most cost-effective solutions for the two problem areas.

Service Area

Pequannock Township - Pequannock Avenue from Newark-Pompton Turnpike to Route 23 and a portion of Madison Street

Need for Project

The project is needed to improve existing wastewater treatment practices through the elimination of on-site disposal systems which serve a residential area of 61 units and replacing them with a sanitary sewer system. The soils in this service area are classified by the Soil Conservation Service as severely limiting for on-site disposal. The average housing stock in this area is in excess of 50 years and health surveys have indicated an incidence of septic system malfunctions and shallow aquifer contamination.

Project Description

The proposed project includes the construction of approximately 320 linear feet of 8-inch diameter PVC sewer main and 2,825 linear feet of 10-inch diameter sewer main and all necessary appurtenances to serve 61 properties. Also included in the project is a culvert crossing and the crossing of the City of Newark's twin water supply aqueducts. The proposed sewer system will provide the transmission facilities to convey the wastewater to the Pequannock, Lincoln Park and Fairfield Park Sewerage Authority (TBSA) facilities for treatment.

Service Area

Borough of Lincoln Park (portion)

Need for Project

There are approximately 67 homes within the proposed service area (Jacksonville Road) which have experienced problems and/or failures with their individual disposal systems. This has created a public nuisance.

Project Description

This project is for the construction of a pump station, force main, interceptor and collector sewers for this service area. These facilities will convey the Borough's wastewater to an existing interceptor of the Pequannock, Fairfield and Lincoln Park Sewerage Authority (TBSA) for ultimate disposal at the existing TBSA's treatment plant. This project is presently in the facilities planning stage.

Need for Project

This system is designed to protect public infrastructure and private investments from impacts caused by stormwater flooding and mitigate against future damage to streets, homes, sewer systems, water systems, and other utilities.

Project Description

The proposed project involves repair and installation of floodwalls and floodgates. The project also includes reconstruction and elevation of roadway. These improvements will reduce flood damage to the City's infrastructure. This system is designed to improve and protect groundwater, by providing well-designed stormwater systems. Hence, this project will provide adequate environmental infrastructure to improve resiliency of Sandy damaged systems in future natural disasters.

Bernards Township

Need for Project

This project seeks to correct the ecological imbalances of the site through ecologically designed water management practices resulting in increased infiltration into the ground of clean water, cleaner water throughout the site that is naturally cleansed through plant processes without the use of chemicals, and a healthier, minimized and controlled return of water to the Dead River. This project also seeks to create clean water from waste water through the use of constructed wetlands. Water exiting the system is recreational quality water before it is returned to the ecosystem therefore reducing site pollution. This project is in the planning area of the Highlands and as such seeks to contribute clean water to the eco-system.

Project Description

Mine Brook Road is an ecologically designed and agriculturally integrated residential development with 12 homes on Minebrook Road in Bernards Township in the Highlands Planning Area. The property is bounded by RT 287 to the north and west and the Dead River to the east. The entire property was design to be sustainable and water was a primary focus. The current conditions include high levels of runoff and low water infiltration to the soil. This is being addressed through a site-wide ecologically driven stormwater system that includes new constructed wetlands, a habitat pond, and vegetated swails throughout that cleanse water as it travels through the site so that all water returned to the ecosystem is clean water. We are also working with DEP to permit a new constructed wetland for the treatment of wastewater on the site. This system is similar to a constructed wetland wastewater treatment system that we built for the Willow School in Gladstone and we believe it will be the first one to serve a residential community in the state of NJ. Aside from water, agriculture, energy and other sustainability concerns are also featured very heavily in this project. Organic berries and fruits will be grown on site. Because this project is so forward thinking it helps to create green jobs that will push the green economy forward - these jobs are green design, green construction, organic farming (there will be farmers employed) and peripheral jobs for material creation.

Asbury Park City

Need for Project

The project is needed to re-direct certain storm infrastructure towards 7 previously installed water quality chambers throughout the City to improve runoff into lakes and ocean.

Project Description

The project involves replacement of storm sewer infrastructure on Main Street and Memorial Drive entire lengths including connections between both running under railroad ROW along side streets.

NEW COLLECTION SYSTEM & TREATMENT

Priority List Rank

544

County

GLOUCESTER

Existing Population

3,032

Service Area

Woolwich Township

Need for Project

Water quality is the main concern for this project. The treatment facility upgrades will be in compliance with N.J.A.C. 7:9B (New Jersey Surface Water Quality Standards). A centralized wastewater system will provide an environmentally effective way to satisfy the significant quantity of wastewater to be generated by the growth area. The advantages of the use of centralized wastewater system provides reliable protection to surface and groundwater (drinking water) resources and prevents toxic substances from entering groundwater through the on-site wastewater stream and compliance with regulated laws through NPJPDES. This proposed system will not rely primarily on individual owner/users' actions to provide proper conveyance and treatment.

Project Description

Woolwich Township is developing areas in specific growth areas within the State Development and Redevelopment Plan. This project consist of the Woolwich Regional Center along the US 322 corridor. This project will consist of the installation of a comprehensive wastewater collection, treatment and disposal system within the planned growth area. Aqua New Jersey currently holds the wastewater disposal franchise in Woolwich. A portion of Woolwich Township is partially served by the Logan Township Municipal Utilities Authority which operates a wastewater treatment facility with a discharge to the Delaware River. Based on current development projections, it is anticipated that 750,000 gpd of wastewater treatment and disposal capacity will be required. The proposed project will consist of installation of a new conveyance systems that will consist of gravity sewer and pressurized force mains along with upgrades to Logan Township conveyance and disposal system.

Service Area

The service area includes the City of Pleasantville. This is a bayfront community located approximately ten miles west of the Atlantic County coastal wastewater treatment plant.

Need for Project

The proposed project will collect the sanitary discharge from 40 proposed residential units adjacent to environmentally sensitive wetlands and convey the discharge to the existing sanitary sewer system and ultimately to the treatment facility downstream. In addition, the existing sanitary sewer main extending through the adjacent wetlands and wetlands transition area is proposed to be taken out of service, thereby reducing the potential for accidental sewage leaks into this environmentally sensitive area.

Project Description

The proposed project includes the construction of a +/- 601 linear foot sanitary sewer main extension within the Narcissus Ave right-of-way including replacement of existing manholes and lateral stub connections to service the future 40-unit townhouse development adjacent to the project location. In addition, the existing sanitary sewer within the environmentally sensitive wetlands and wetlands transition area is proposed to be removed from service. Other proposed improvements include the replacement of +/- 299 linear feet of sanitary sewer main within the E Park Ave right-of-way, drainage improvements, restoration work to include roadway repair, curb repair and sidewalk construction, and other minor appurtenant work.

Portions of Cranbury Township

Need for Project

Cranbury Township Planning Board recently changed their zoning on the east of Route 130 to permit 100% warehouse development. This has caused a dramatic increase in growth on the east side of Route 130 during the past year. The installation of the proposed sanitary system would benefit future development in the area east of 130. By diverting all flows presently directed to the Village Area Pump Station from the east side of Route 130, the Village Area Pump Station and force mains will have sufficient capacity for all projected flows west 130.

Project Description

The proposed project includes installation two new pump stations, one at 1.75 MGD with 1700 LF of 12” force main, the second at 3.75 MGD with 4000 LF of 16” force main.

SEPTAGE TREATMENT & DISPOSAL

Priority List Rank

551

County

BURLINGTON

Existing Population

358,290

Service Area

Several Municipalities in New Jersey

Need for Project

The State of New Jersey has mandated that all septic tank wastes (septage) be banned from disposal in unlined landfills as of March 15, 1985. Subsequently, as there are no adequate landfills in the County, an agreement has been reached between Burlington County and the Mount Holly Sewerage Authority in which the latter would act as the lead agency to dispose of the County's septage on an interim basis. However, the Authority's facility is not designed to accept septage and the septage management plan concluded that treatment plant modifications are necessary.

Since there are no adequate means of septage disposal in the County, initial investigations indicate that septage is being dumped illegally and, in all likelihood, is resulting in localized surface and ground water degradation.

Project Description

The proposed project will treat and dispose of all the septage generated in the County on a short term basis at relatively minor costs. The county-wide sludge/septage study (C340818-01) will plan for septage disposal on a long-term basis. The latter study may conclude that the Authority should dispose of septage also for the long-term. The plans and specifications recently submitted will provide for the following:

1. Screening and Grit Removal Equipment
2. Comminutor
3. Aerated Holding Tanks
4. Chlorination Equipment
5. Pumps
6. Odor Control
7. Prefabricated Structure

Need for Project

The Gloucester County Utilities Authority (GCUA) is presently disposing of sludge by incineration. The design capacity of the GCUA incinerator is inadequate to handle the 15 tons of sludge (dry weight basis) produced at the GCUA Regional Plant. As a result, the Authority proposes to add another fluidized bed to the existing incinerator in order to increase its design capacity.

The approved (201) Facilities Plan for the GCUA consolidated region calls for static pile composing as a long term sludge management alternative. Therefore, the Authority may be required to amend the facilities plan, should they intend to employ incineration as the most cost effective, environmentally sound and implementable long term sludge management alternative.

Project Description

The project will consist of the addition of a fluidized bed to the existing incinerator of the GCUA Regional Plant for disposal of all the sludges produced in the GCUA-consolidated region.

Need for Project

Disposing of septage in unlined landfills was banned on March 15, 1985 pursuant to amendments of the Solid Waste Management Act to prevent the danger of groundwater contamination. An alternative disposal method is the utilization of existing treatment facilities. Therefore, the municipalities indicated above have been assigned to the Somerset-Raritan Valley SA treatment plant as designated in Appendix A of the Statewide Septage Management Plan. The present facilities at SRVSA for handling septage wastes are inadequate to handle the quantity and quality of wastes proposed to be accepted. This project is necessary to ensure that septage disposal for existing and future development is in conformance with said plan.

Project Description

This project is for the construction of septage facilities at the SRVSA plant so that it may dispose of the septage generated in Somerset County. The septage management plan recommends that the design capacity of the septage receiving station at the SRVSA plant be 28,000 gallons per day. In addition, the plan is addressing management and implementation considerations. The septage plan will provide SRVSA with a septage treatment and disposal method that will enable the Authority to accept all the wastes from its designated areas while also meeting its discharge requirements.

Need for Project

Construction of a new 18" PVC sanitary sewer pipe will greatly reduce the amount of infiltration/inflow from this area, will increase the flow capacity, and will remove an environmental concern that presently exists within the nature preserve.

Project Description

Project consists of the construction of a new 18" PVC sanitary sewer by relocating it along the northerly boundary of the Bonsal Nature Preserve. The existing pipe is undercapacity due to excess I&I and root intrusion; and it presently within the Township of Montclair which traverses along the center of the nature preserve. The existing pipe would be abandoned with flowable fill, and eliminates a potential environmental liability.

Service Area

Allowlay Township, Carney's Point Township, Elmer Borough, Elsinboro Township, Lower Alloways Creek Township, Mannington Township, Oldmans Township, Pennsville Township, Pilesgrove Township, Pittsgrove Township, Quinton Township, Salem City, Upper Pittsgrove Township

Need for Project

Approximately 30 percent of County residents employ on-lot individual septic systems to treat their wastewater. Currently, numerous problems exist with these systems as a result of their installation in inappropriate soils and due to inadequate design. This situation leads to nuisance conditions, possibility of public health problems, and localized groundwater quality degradation.

The problems in Salem County are further aggravated by the lack of adequate facilities to accept and properly dispose of septage pumpouts. The State of New Jersey mandated that septage be banned from all but lined landfills with leachate control effective March 15, 1985. There are no such facilities in the planning area. It is presumed that a good deal of illegal septage dumping is occurring in the County and that surface and groundwater quality degradation may result.

Project Description

The planning for this project is to provide two basic responses to the problem outlined above. The first response is to plan for the adequate treatment and disposal for all the septage generated within the County. The second is to develop an overall management system of the County where on-lot systems currently exist. These solutions would involve the application and innovation of advanced technologies to resolve these problems. The facilities plan will consist of the following components:

1. County-wide Septage Disposal Plan
2. On-lot Septic Tank Management Plan
3. Environmental Analysis
4. Full-scale Public Participation Program.

Implementation of the selected plan will resolve the problem indicated above in a cost-effective, environmentally sound manner.

Service Area

Denville Township, East Hanover Township, Montville Township, Mountain Lakes Borough, Parsippany-Troy Hills Township

Need for Project

Disposal of septage in unlined landfills was prohibited effective March 15, 1985 to prevent the danger of groundwater contamination. An alternative disposal method is to use existing treatment facilities. Therefore, the municipalities indicated above have been assigned to the Parsippany-Troy Hills treatment plant as designated in Appendix A of the Statewide Septage Management Plan. The project is necessary to insure that septage disposal for existing and future development is in conformance with said plan.

The Township of Parsippany-Troy Hills is in the last stages of completing the construction of a 16 mgd advanced wastewater treatment facility. The present septage handling facilities were adequate to handle the flows from just the immediate service area but they are not adequate to handle the quantity and quality of wastes directed to this facility by the Department.

It is the intent of this project to develop and implement a comprehensive plan to evaluate the capability of the treatment facility to accept additional septage wastes and to recommend necessary modifications be constructed.

Project Description

Parsippany-Troy Hills Wastewater Treatment Plant will have responsibility of treating an estimated 54,000 GPD of septage. In order to handle these wastes, Parsippany-Troy Hills has completed an NJDEP approved septage management plan which recommends construction of facilities that include the truck receiving area, gravel trap, coarse bar screens, holding tank, and associated appurtenances.

Need for Project

Although the unsewered areas are included in the Planning Area for Northwest Bergen County Utilities Authority, there is presently no formal provision to treat septage from these areas. Septage from NWBCUA is presently being taken by informal agreement to Bergen County Utilities Authority treatment plant. The distance to this facility creates a climate for illegal dumping. The lack of a long term formal arrangement with Bergen County is unacceptable, and the lack of quality assurance is unacceptable.

Project Description

This project will provide for the construction of septage handling facilities to receive all septage generated within the planning area for treatment at the Northwest Bergen treatment plant. The septage facilities will provide for quality assurance to prevent treatment plant upset, and will provide odor control. The construction of septage facilities in conjunction with the initiation of a voucher system for tracking septage from "cradle to grave" will assure control, collection, disposal, and treatment of septage wastes from approximately 50,000 people in the planning area, thereby eliminating present unacceptable trucking and disposal of septage.

Need for Project

The existing septic systems serving the single family dwellings and commercial businesses in the project area are failing.

Project Description

The EHTMUA proposes to extend a gravity collection system to service twenty-seven (27) existing homes and four (4) commercial establishments located on Doughty Road, Oak Avenue, Blue Spruce Road, Woodland Avenue and Marlborough Road in the Farmington section of Egg Harbor Township. The flow will be conveyed via gravity mains to the Washington Avenue trunk line. The flow then is coneyed by gravity to the ACUA Pleasantville pump station which is then pumped to the ACUA City Island Treatment Plant. The project also proposes the removal and replacement of an existing manhole and removal and replacement of 359 linear feet of PVC sanitary sewer main within the municipality of Pleasantville City in order to connect to the existing trunk line in Washington Avenue.

Service Area

West Orange Township

Need for Project

The existing sewerage system in West Orange has inadequate capacity to allow for future growth potential. New interceptors and appurtenances are required to provide the needed reserve capacity for both planned and proposed sewer connections. The Township of West Orange is included within the sewer service area of the Essex/Union Joint Meeting. Since this project will have no direct impact upon existing water quality, only discharge category points for new systems can be justified.

Project Description

Proposed is the construction of new interceptors consisting of both gravity sewers and pump station/force main and appurtenances to provide additional capacity for the First and Second Mountain areas of West Orange and Livingston. An old interceptor line (PS/FM and Gravity) is also proposed for replacement as part of a major sewer system rehabilitation effort.

Service Area

The service area is bounded by Lawrenceville-Pennington Road and Washington Crossing Road to the north, the Township boundary to the south, Brandon Farms development to the east and the rear of the lots which front on Jacobs Creek Road. Also included is the municipal facility and the Indian Village development.

Need for Project

The project is needed to provide public sewer service to small residential lots currently served by individual on-site disposal systems underlain by rock and shallow seasonal high groundwater tables.

Project Description

The proposed project involves the construction of gravity collection sewers, trunk mains, force mains and pump stations to service the southeast sector of Hopewell Township. The sewage will be conveyed to the Ewing-Lawrence SA's treatment facility.

Service Area

Hillsborough Township

Need for Project

Hillsborough is proposing to provide sewer service for existing homes, many with failing septic systems.

Project Description

The Township is proposing to install sanitary sewers to serve approximately 40 homes with failing septic systems, on 4 streets. The project includes construction of approximately 3,700 linear feet of 8-inch gravity sewer pipes and approximately 720 linear feet of 1.5-inch force main laterals. Approximately 6 homes will connect to a new 1.5-inch force main with ejector pumps. An (approximately) 12,000 gpd of flow will be conveyed from the area to the Hillsborough MUA, once construction has been done.

Need for Project

The intent of the State Plan for Suburban Planning Areas is to promote growth in Centers and other compact forms, to protect the character of existing stable communities, to protect natural resources, redesign areas of sprawl, to reverse the current trend towards further sprawl and to revitalize cities and towns. The State Plan indicates that these goals can be met by upgrading or replacing aging infrastructure systems to eliminate deficiencies and provide capacity for sustainable development and redevelopment in the region. This project would eliminate aging systems and redirect flow to upgraded more environmentally sound infrastructure.

Project Description

This project involves the construction of a new pump station on Lot 1.03 in Block 1173.02 and the construction of approximately 850 linear feet gravity main and 800 linear feet force main. The proposed gravity main will redirect existing flow to the proposed pump station. The project also consists of the lining of 1,000 linear feet of 14" main. The other improvements proposed as part of the pump station construction include wet wells, duplex submersible pumps, a control building, standby generator for power and a cellular based alarm system.

Cherry Hill Township

Need for Project

To remove aging septic systems and replace them with sanitary sewer extensions and to rehabilitate aging pump stations.

Project Description

The Township of Cherry Hill plans to extend their sanitary sewers to reach several remaining unsewered sections of the Township. The various extensions are spread throughout the Township. The project will consist of gravity sewer mains, several force mains, house connections, all restorations and appurtenances. Also, the Peppermill Pump Station and Batesville Pump Station will be rehabilitated. The project may include the elimination of the School Lane Pump Station and connection by gravity sewer to an existing Camden County MUA interceptor. The Peppermill Pump Station has an existing peak flow rate of 0.13 mgd, and the Batesville Pump Station has an existing flow rate of 0.52 mgd. Each pump station will have their wetwells and pumps replaced along with related electrical services.

Service Area

Portions of Pemberton Township including areas designated as regional growth within the Pinelands

Need for Project

The implementation of the upgrading of the Pemberton Township Municipal Utilities Authority Wastewater Treatment System will serve to enhance the groundwater quality in those area which are presently serviced by on-site septic systems. The properly planned expansion of the system will protect the environment from improper discharges to the groundwater and surface water. The upgrading of the existing facilities at the Authority's STP will be necessary to maintain the high level of treatment required for discharge into the North Branch of the Rancocas Creek in accordance with NJPDES permit No. NJ0024821. The existing plant is over twenty (20) years old is in need of rehabilitation and replacement of equipment. In the event that the collection system is enlarged the treatment plant capacity will have to expand to meet the demand.

Project Description

The proposed project includes the construction of a regional collection system and repair/replacement of various treatment units to improve treatment capabilities at the Pemberton Township MUA's STP.

PUMP STATION

Priority List Rank

573

County

GLOUCESTER

Existing Population

26,763

Service Area

Deptford Township

Need for Project

The RCA sewer-pumping station is a 35-year-old “Can” station. Failure of the station may cause contamination of the Alomonesson Creek and the Delaware River. The station conveys wastewater from the busiest section of the Township to a Gloucester County UA pump station and ultimately to GCUA for treatment. Upgrades and expansion will assure proper operation.

Project Description

The proposed project includes construction of a new, larger wet well with 3 submersible variable speed pumps. The controls for the new facility will be above ground in a secure building to do away with the “Can” station. New instrumentation, pumps, alarm system and a natural gas generator for emergency supply will be installed. Upon completion of the project the existing pump station shall be abandoned, the property graded and a new fence installed to secure the area.

ATLANTIC

Existing Population

26,503

Service Area

The service area is bounded by the Atlantic City Expressway to the North, the Egg Harbor Township boundary to the East, West Jersey Avenue to the South and the Hamilton Mall area to the West.

Need for Project

The project is necessary to provide sewer service to the areas of the Township which are not presently sewered in order to prevent future contamination of the ground water quality.

Project Description

The proposed project consists of the construction of a collection system within Hamilton Township. The flow will be conveyed through two pump stations and gravity sewers of PVC design ranging from 8-inch to 24-inch. The estimated design flow is 1.2 MGD. The wastewater will be treated at the Atlantic County Utilities Authority (ACUA) City Island Treatment Plant.

Montclair State University

Need for Project

The project is required to upgrade the sanitary sewer infrastructure for the University in order to meet the sewer demands of the proposed University expansion. The project will involve construction of 8,200 ft of new sanitary sewer infrastructure and upgrades to existing sewage pump stations, force mains and gravity mains. The project intended to reduce the downstream capacity problems that the Montclair Township sanitary sewer infrastructure is facing and allowing the University to expand in the next few years.

Project Description

The project area is located with the Montclair State University (Montclair and Little Falls Townships) and within Montclair Township and involves construction of approximately 8,200 ft of new sanitary sewer that will convey sanitary sewer flows from the Montclair University campus to the Montclair Township sewer. The project also involves upgrading the existing sanitary sewer infrastructure within the Montclair State University Campus, including upgrading pump stations and force mains, upsizing gravity mains and lining gravity mains within to handle the additional sewer flows that will be generated by the proposed University Expansion and construction of new campus buildings.

Freneau section of Aberdeen Township

Need for Project

The Freneau section of Aberdeen Township is serviced by individual subsurface sewage disposal systems. Due to the soil characteristics and high-groundwater table, many of the systems are failing and discharging into Birch Swamp Brook and Matawan Creek.

Project Description

Install sanitary sewerage facilities (gravity sewer, pump station, force main) to eliminate failing septic systems for 81 residents within the Freneau/Woodfield Area of the Township. The new sanitary and storm systems will aid in the improvement of storm water quality by eliminating septic overflows to storm systems and discharges into Lake Lefferts, thus improving health and safety for residents and improving water quality and improving the neighborhood's quality of life. The system will consist of 7,865 LF of 8" gravity sewer main , domestic sewer laterals, a pumping station, and 13,500 LF of DIP force main.

Township of Franklin

Need for Project

The proposed project will replace existing on-site sewage disposal systems, some of which reportedly are failing, or do not meet current standards.

Project Description

The proposed project includes installation of a new collection system.

Service Area

Hackettstown Town, Independence Township

Need for Project

Disposing of septage in unlined landfills was prohibited as of March 15, 1985 to prevent degradation of groundwater quality. An alterna- tive disposal method is the utilization of existing treatment facili- ties. Therefore, the municipalities indicated above have been assigned to the Hackettstown Municipal Utilities Authority treatment plant as designated in Appendix A of the Statewide Septage Management Plan. This project is necessary to ensure that septage disposal for existing and future development is in conformance with said plan.

It should also be noted that the present facilities for handling septage wastes generated within the above service area are inadequate to handle the quantity and quality of wastes proposed to be accepted.

Project Description

A septage management plan has already been approved by the NJDEP. The facility plan recommends the construction of additional septage handling facilities at the HMUA wastewater treatment plant. The proposed facilities consist of a receiving station, receiving chamber, holding tank, pumping station, piping, valves and miscellaneous equipment to provide the capability of diverting septage at a controlled rate to the primary digester or the division box upstream of the primary clarifier.

RICHWOOD WATER RECLAMATION FACILITY

Priority List Rank

593

County

GLOUCESTER

Existing Population

8,788

Service Area

Harrison Township

Need for Project

Although the Township has an existing wastewater treatment facility, it does not service the area of the proposed development, requiring construction of the entirely new Richard WRF. The proposed Richwood WRF will still utilize a membrane bioreactor (MBR) for biochemical oxygen demand)BOD) and total suspended solids (TSS) removal and nitrification/denitrification. Influent will be screened prior to entering the MBR system via two (2) parallel rotary drum screens. MBR permeate will be treated by UV disinfection and disposed of sub-surface via groundwater recharge. The new wastewater facility will be designed for a maximum month flow of 0.98 MGD, although the first phase will be for a maximum month flow of 0.375 MGD.

Project Description

The Richwood Sewer Service Area is approved for a wastewater treatment and disposal facility of 980,000 gallons per day. (Currently, there are no such facilities in the Richwood Sewer Service Area.) A new treatment plant will be constructed on Township-owned property and will be owned, operated and maintained by the Township once completed. The facilities as designed will have a total capacity of 690,000 gallons per day (gpd) and will be built in two phases. Phase 1 of the facility is projected to cost approximately $15,250,000 ($14,000,000 for treatment and disposal, $1,250,000 for conveyance systems). Phase 2 is projected to cost approximately $4,000,000 for treatment and disposal.

Service Area

City of Cape May, Borough of West Cape May, Borough of Cape May Point, portion of Lower Township and Coast Guard Base

Need for Project

The Cohansey Aquifer from which the Cape May Water Utility draws its potable water is experiencing salt water intrusion. To prolong the life of the Cohansey Aquifer and to meet summer water needs, the City is proposing to derive 1.4 MGD of brackish water from the Atlantic City 800-feet deep sand aquifer and build a desalination facility employing a reverse osmosis process.

Project Description

The desalination facility will generate 1.0 MGD of potable water, 0.4 MGD of concentrate and 1,000 gpd of sanitary wastewater. The conveyance facilities is included in this project and involves the construction of two force mains. One force main will be 2-inch diameter, 2,300 feet long and will carry sanitary waste, membrane wash water and water from floor drains to the West Cape May Borough’s sewer system where it will flow to the Cape May County MUA’s STP for treatment and disposal in the Atlantic Ocean. The second force main will be 6-inch diameter, 2,700 feet long and will be designed to carry 0.4 MGD of desalination concentrate to the Cape Island Creek.

Service Area

The service area includes from Route 31 north of Woodsville Road to Dublin Road and east to an existing railroad right-of-way.

Need for Project

The Route 31 service area is severely constrained for individual subsurface disposal systems because of high groundwater tables and rock. The Pennytown site currently discharges all of its waste to a holding tank due to septic system failure.

Project Description

The proposed project includes the construction of gravity collection sewers, force mains and pump stations. The sewage will be conveyed to the Stony Brook Regional Sewerage Authority for treatment.

Need for Project

The expansion of the LTMUA Water Reclamation Facility is intended to provide additional capacity for planned residentual development in the service area, consistent with the Wastewater Management Plan and to insure that the facility continues to meet established NJPDES permit limits.

Project Description

The proposed improvements to the treatment facility include construction of a membrane bioreactor, a new headworks facility, a new UV disinfection system, and an additional rotary drum thickener. The effluent pumping station will be upgraded and instrumentation and electrical upgrades including a new emergency generator will be installed.

Service Area

Township of East Greenwich

Need for Project

Currently, sewage disposal is through individual on-site systems. A few properties located within the redevelopment area are serviced by sanitary force mains and a failing pump station. The intent is to replace the pump station and connect all other properties.

Project Description

Construction of a new Regional Pump Station located within the Township's Redevelopment Zone. The current lack of a pump station is inhibiting potential developer interest in the area. The construction of infrastructure within this region will bring developers to the area. Resulting in increased jobs and economic growth of the region. The project has been designed and permits submitted to the DEP. The Township is currently lacking funding to proceed to the construction phase.

Service Area

Cresse Avenue to 26th Street Beaches, City of Wildwood

Need for Project

The sand on the Wildwood beach has accreted approximately 1,700 feet since 1950, creating a beach front that is over a quarter mile from the Boardwalk to the water's edge. The existing outfall lines no longer extend far enough out into the ocean. Storm drain runoff, containing animal and bird excrement, washes back onto our bathing beaches. High fecal coliform counts, detected in the weekly sampling conducted by the Cape May County Health Department each summer, has confirmed unsafe condition and has resulted in beach closing. Ponding of this contaminated water occurs at the terminus of the outfall lines after each rain and the area must be plowed and leveled. The health and safety of the beach bathers have been imperiled and the beach closings produce a tremendous negative impact on tourism for many weeks thereafter.

Project Description

The ten (10) outfall lines will be retrenched, and pilings and cross-beams will be installed to support and contain the lines with 1,400 foot extensions. Trenches for the extensions will be dug during the low tide and the entire line will be re-covered with the accumulated sand.

Woodbine Borough

Need for Project

The existing residences are served by individual on-site septic systems which are suspected to contribute to groundwater pollution. The State Department of Human Services owns and operates the only treatment facility in the Borough and it is located at and serves only the Woodbine Development Center.

Project Description

The proposed project involves the acquisition of the Woodbine Development Center's STP and the upgrade and expansion of the treatment facility from 0.16 MGD to 0.5 MGD. The upgrade will employ the sequential batch reactor process and denitrification. In addition, the project includes pump stations, force mains and approximately 60,000 linear feet of gravity sewers to collect and transport wastewater to the upgraded STP.

Southerly Sewer Service Area in Greenwich Township

Need for Project

This project will provide a necessary economic base for Greenwich Township and Warren County. The State of New Jersey will also benefit from the commercial development which will be created in the Industrial Zone of the Southerly Sewer District. It will specifically service the existing KOH-I-NOOR RAPIDOGRAPH, INC. facilities which presently have septic disposal only and the Cross Jersey Executive Park which will be constructed when the wastewater treatment plant becomes operational.

Project Description

The proposed project includes the construction of a wastewater treatment plant and collection system to serve the areas.

Need for Project

This is a de-silting project at a 180 degree bend of the Rahway River. This project will reduce the river bank soil erosion along the westerly banks that abut the residential homes. Approximately 250 cubic yards of silt along a 500 linear foot stretch of the river will be tested and removed. This program will also help in cleaning the Rahway River of sediment and potential toxins. The Rahway River is a potable water source for the downstream community of Rahway , and a very active recreational river for Cranford, other adjoining communities.

Project Description

This is a de-silting project at a 180 degree bend of the Rahway River, located between the two Eastman Street bridges. The project is located along the Rahway River in McConnell Park, which is located along Eastman street between Hampton and Holly Streets. This project will reduce the river bank soil erosion along the westerly banks that abut the residential homes. Approximately 250 cubic yards of silt along a 500 linear foot stretch of the river will be tested and removed. This program will help in cleaning the Rahway River of sediment and potential toxins.

Borough of Matawan

Need for Project

The Borough of Matawan is located in a relatvely low lying area surrounding Lake Lefferts and Matawan Lake. Periodically, the Borough's storm sewers collect debris and contaminants which eventually pass through the storm sewer system and into the lakes and surrounding waterways. The Borough is concerned with the non-point source pollution problem and believes this problem can be reduced through better maitenance which will be enhanced by the use of "Jet Vac" equipment and certain specific improvements to the existing stormwater facilities.

Project Description

The proposed project involves the purchase of a Jet-Vac Truck to clean debris from the storm sewers and minimze adverse impacts on Lake Lefferts.

Need for Project

Sediment build up in many of the lakes and ponds in the County has lead to poor water quality, algae growth, mosquito breeding, odors and low oxygen levels. Many beach closings are attributable to stormwater runoff from coastal lakes. Deepening the lakes will improve habitat and increase assimilative capacity for nutrients and other pollutants.

Project Description

The proposed project includes establishment of a silt removal program including purchase of dredging equipment and implementation of other measures to restore lakes and ponds to their original storage capacity.

Hero’s Island in Pennsuaken/Cherry Hill

Need for Project

Veteran’s Island in the Cooper River is suffering serious erosion with its banks being washed away at a rapid rate causing silt build-up elsewhere in the river and effecting the overall quality of the river. The Island also acts as a natural barrier to erosion along a sensitive area of Cooper River Park. The Island’s banks need to be restored and stabilized to stem erosion and reduce solids transportation.

Project Description

The proposed project includes a bank restoration and stabilization through the use of crib walls and vegetative plantings to provide for safe embankments and prevent further soil erosion.

Need for Project

Existing water quality of Haddon Lake has been degraded by undetained stormwater runoff from urbanized upstream drainage and runoff of nonpoint organic pollutants from the shoreline. Bank stabilization will create an in-line sedimentation basin for filtration of stormwater runoff and banks planted with wetland vegetation will filter nonpoint pollutant sources around the lake perimeter.

Project Description

The proposed project includes dredging of sediment from the lakebed coupled with rip rap stabilization of existing stormpipe outfalls and stabilization of eroded banks using a combination of bioengineering and structural improvements.

Trotters Lane Branch Drainage Area

Need for Project

The project is needed to relieve flooding in Morris Avenue and in the Kean College Dormatory area and to screen out debris from the stormwater prior to discharge in the Trotters Lane Branch of the Elizabeth River. The existing brick storm drain from the west side of Morris Avenue to the Elizabeth River is too small and needs to be replaced.

Project Description

The proposed project involves the replacement of the storm drain with an adequately sized concrete box culvert. The upstream end of the culvert will be equipped with a screen to collect debris.

Need for Project

Rehabilitate existing deteriorated stormwater sewer pipe system(s) and inlets/catch basins so as to: reduce/eliminate infiltration of nonpoint source pollution into the adjacent ground and ground water; improve water quality by the installation of water quality type inlet/catch basin castings and grates that reduce the amount of debris (solids and floatables) from entering the stormwater sewer system; and reduce flooding potential by restoring the stormwater system's efficiency through the rehabilitation of the deteriorated pipe. Purchase of a Vactor truck and two Street Sweeper trucks to provide the capability to clean and remove sediment, nonpoint source pollution, trash and debris from stormwater sewer pipes, inlets/catch basins, and streets; thereby improving the water quality of stormwater runoff entering/exiting the system to/from local watersheds. Also reduce flooding potential by restoring the stormwater system's efficiency through the removal of sediment, trash, debris, etc

Project Description

Rehabilitation of existing deteriorated stormwater sewer pipe system(s) by the installation of a Cured-in-Place Pipe Lining (CIPP) to existing deteriorating pipes and/or the replacement in-kind (if CIPP cannot be completed) of deteriorated and/or failed pipe sections (as required). Rehabilitation of existing stormwater sewer inlets/catch basins by repairing deteriorated/failed portions of the structure and the installation of water quality type inlet/catch basin castings and grates. Purchase of a Vactor truck and two Street Sweeper trucks. The Vactor truck, through the use of high-pressured water jetting and suction/vacuum collection operations, and the Street Sweepers, through the use of pressured water sprayers, mechanical brooms, and suction/vacuum collection operations, will provide the capability to clean and remove sediment, nonpoint source pollution, trash and debris from the existing stormwater sewer pipes, inlets/catch basins, and streets (County Routes).

Need for Project

The project is being undertaken to:
1. Improve storm water conveyance and stream morphology
2. Generally reduce local bank erosion around obstructions
3. Lessen the risk of damage to bridges
4. Improve recreation amenity
5. Reduce flooding impacts locally, specifically for lower flow events.

Project Description

The Rancocas Creek Obstruction Removal/Desnagging project includes the removal of obstruction fields and sediment dams along 8 Rancocas Creek miles extending from Landing Street in Southampton Township to Main Street in Lumberton Township and from the Flying W Airport to Bridge Road in Lumberton Township. Overall it includes the removal of 126 obstruction fields and sediment dams. The project is being undertaken to:
1. Improve water conveyance and stream morphology
2. Generally reduce local bank erosion around obstructions
3. Lessen the risk of damage to bridges
4. Improve recreation amenity
5. Reduce flooding impacts locally, specifically for lower flow events.

Need for Project

A former chemical site requires remedial measures to support brownfield development and provide significant environmental benefits. Placement of an impermeable cap along with installation of stormwater controls will ensure that rain water will not mobilize contaminates and pollute groundwater or the adjacent waterways.

Project Description

The proposed project includes demolition of existing buildings, installation of an impermeable cap and cover system, installation of stormwater controls. The project also includes installation of sanitary sewerage collection infrastructure to collect sewage generated from the proposed redevelopment.

Township of Toms River

Need for Project

The proposed improvements will remove accumulated sediment and vegetation overgrowth and minimize ponding onto existing residential roadways reducing potential health and safety concerns via eroded roadways and standing water (mosquito breeding). The purchase of the equipment will reduce the amount of solids and floatables entering the Township's waterways.

Project Description

Drainage improvements to 5 existing areas throughout the Township to address accumulated sediment, vegetation overgrowth and substandard drainage infrastructure. Locations include the Blue Sea cul-de-sac, Parkside and Coolidge Avenues intersection, Heritage Way, Yvonne Drive and Shasta Drive intersection and the Parkside Ave and Gilford Place. The project will include drainage pipe replacement, installation of additional catch basins and cleaning of existing pipes and structures in order to address pavement deterioration, road hazards and health concerns associated with standing waters. The Township proposes to purchase equipment (i.e. street sweepers, brush hogs, jet vac truck and new ECO inlet heads) to assist in the removal of floatables and solids from the Township streets and infrastructure.

Service Area

Middletown Township

Need for Project

Shadow Lake is a significant natural and recreational resource and is designated for trout production and maintenance. Middletown Township proposes to dredge Shadow Lake to improve water quality, reopen areas to light watercraft, remove excessive aquatic plant growth, and reestablish fish populations. Since Shadow Lake discharges into the upper reaches of the Navesink River, dredging the lake will inherently improve water quality in the Navesink River. Dredging will also reduce or eliminate the need to use chemical herbicides to curb excessive aquatic plant growth.

Project Description

The proposed project includes dredging to remove approximately 150,000 cubic yards of sediment from the upper portion of Shadow Lake. This will restore the lake to its original depth, eliminate the swamp like conditions, and lower the phosphorous concentration.

Middletown Township

Need for Project

The proposed project will address health and safety concerns associated with the frequent backup of the drainage systems, as well as potential hazards associated with standing waters. The addition of new inlets will also minimize erosion via the conveyance of stormwater away from the landward limits of the beach.

Project Description

The Township proposes improvements to its existing stormwater system located within the rights-of-way along North Leonard Avenue, Burlington Avenue, and Roop Avenue and between residential properties located on Burlington Avenue and within an earthen berm located along the landward limit of the beach adjacent to Sandy Hook Bay. Presently, stormwater drains to an existing outfall pipe that is situated perpendicular to the shoreline of Sandy Hook Bay. A section of the existing 36-inch RCP pipe was destroyed during storm events in early 1990. A temporary repair to the outfall was made in 1991 by replacing the damaged section with a 24-inch diameter plastic pipe. The proposed project will permanently repair and improve the overall function of the entire system. The existing pipe will be replaced with a 48-inch RCCP outfall and timber pile bent. The outfall pipe will extend below the Mean High Water line of Sandy Hook Bay. The pipes within the rights-of-way and properties noted above will also be replaced and new manholes and inlets will be installed.

Township of Gloucester

Need for Project

No significant adverse impacts on water quality or hydrology are expected as a result of the proposed projects. It is anticipated that water quality and hydrology will be improved since the projects propose to restore stormwater basin function, and repair/reconstruct failing stormwater outfall structures. The reconstruction of the failing stormwater outfalls is anticipated to reduce the current erosion concerns, thereby improving surface water quality. The restoration of the stormwater basins is expected to enhance stormwater recharge, thereby improving the local hydrology.

Project Description

This project component consists of rehabilitation existing basins, headwall and pipe replacement and stormwater piping relining/replacement. The basin rehabilitation projects are proposed to provide adequate storage and better infiltration to provide TSS removal of the stormwater runoff. The projects proposed to rehabilitate old, undersized and deteriorated storm pipes and headwalls is to prevent nonpoint source pollution to reach local rivers, creeks and other water ways and to eliminate sinkhole problems, and erosion. The age of the Gloucester Township stormwater system being considered for rehabilitation range from 30 to 50 years and are located in the older sections of the Township. The piping material of the lines under consideration typically consists of asbestos cement vitrified clay/terra cotta, cast iron, and reinforced concrete with the material of the manholes being cast concrete, brick or masonry block.

Service Area

Township of Gloucester

Need for Project

Project is a flood control project. Control of flooding will reduce the amount of sediment entering nearby waterways. During significant storm events flooding from the North Branch Timber Creek overtops the roadway, erodes sediment into the creek, prevents traffic flow and blocks the ability of the emergency and fire squads on the west side of the creek from responding to residents east of the creek.

Project Description

The purpose is to eliminate flooding of Redwood Street, Somerdale Road and Berlin-Cross Keys. Project will entail extensive stormwater and hydrologic analysis, likely increase in the size of the culvert under Redwood Avenue, revisions to the street profile and any required improvements to the stream channel. Extensive permitting is expected. The project will raise the roadway and adjacent bridge approximately two feet to be above the experienced flood levels. Substantial permitting is expected.

Need for Project

No significant adverse impacts on water quality or hydrology are expected as a result of the proposed projects. It is anticipated that water quality and hydrology will be improved since the projects propose to restore stormwater basin function, and repair/reconstruct failing stormwater outfall structures. The reconstruction of the failing stormwater outfalls is anticipated to reduce the current erosion concerns, thereby improving surface water quality. The restoration of the stormwater basins is expected to enhance stormwater recharge, thereby improving the local hydrology.

Project Description

This project component consists of rehabilitation existing basins, headwall and pipe replacement and stormwater piping relining/replacement. The basin rehabilitation projects are proposed to provide adequate storage and better infiltration to provide TSS removal of the stormwater runoff. The projects proposed to rehabilitate old, undersized and deteriorated storm pipes and headwalls is to prevent nonpoint source pollution to reach local rivers, creeks and other water ways and to eliminate sinkhole problems, and erosion. The age of the Gloucester Township stormwater system being considered for rehabilitation range from 30 to 50 years and are located in the older sections of the Township. The piping material of the lines under consideration typically consists of asbestos cement vitrified clay/terra cotta, cast iron, and reinforced concrete with the material of the manholes being cast concrete, brick or masonry block.

D&R CANAL DREDGING

Priority List Rank

641

County

SOMERSET

Existing Population

62,300

Service Area

The D&R Canal extends from the Delaware River at Bulls Island to the Raritan River in New Brunswick for a distance of approximately 60 miles. The 10.5 mile segment of the Canal to be dredged is located in the Delaware and Raritan Canal State Park and the project area extends from Lincoln Highway - Route 27 (Station 1862+00) to Amwell Road (Station 2418+00) in Franklin Township, Somerset County, New Jersey

Need for Project

Since the canal functions as a reservoir, the purpose of this project is to improve water quality and maintain hydraulic capacity by removing accumulated sediment, aquatic vegetation growth and debris. With dredging the velocity in the canal will be reduced thereby reducing sediment resuspension and raw water turbidity. The reduced solids loading will allow for lower coagulant dosage at the water treatment plants. The in situ sediments also contain organics and their removal would help to control the total organic carbon concentration of the raw water. Removal of the submerged aquatic vegetation (SAV) will reduce disinfection by product precursors in the finished water of downstream users. Additionally, decaying SAV could result in anaerobic conditions with resulting taste and odors and possible dissolved metals (iron and manganese) releases into the water column..

Project Description

The New Jersey Water Supply Authority (NJWSA) proposes to remove approximately 270,000 cubic yards of sediment from a 10.5 mile segment of the Delaware and Raritan Canal (D&R Canal) between Kingston at Lincoln Highway - Route 27 (Station 1862+00) to Amwell Road (Station 2418+00) in Franklin Township, Somerset County, New Jersey.

Need for Project

Stormwater runoff is the most common way that nonpoint source pollution reaches local rivers, creeks and lakes. Rainwater carries chemicals, nutrients, sediments and other forms of nonpoint source pollution into local streams if the water is not absorbed by soil and vegetation. The Township's goal with its stormwater management plan is to increase absorption of rainwater by soil and vegetation using mechanisms that reduce the velocity of flow and retain the water in natural areas. This will reduce the amount of pollutants being carried off to nearby watercourses and reduce flooding.

Project Description

The proposed project includes replacement of existing compacted gravel roads that currently have no stormwater management controls with pavement and specific stormwater controls, both structural and nonstructural, to properly control stormwater runoff and reduce nonpoint source pollution. Nonstructural management will include practices such as allowing stormwater to runoff roadways into vegetated areas as sheet flow where feasible, directing runoff into vegetated swales where feasible, and allowing stormwater that must be collected to bubble up through outlets and spread out as sheet flow runoff through vegetated filter strips and forested riparian buffers. Where it is not practical to utilize those nonstrucural practices, stormwater will be collected and directed into an underground stormwater recharge system.

Need for Project

The proposed improvements will address existing roadway flooding and potential pavement deterioration, soil erosion and also improve water quality in the Pine Lake via reduction in TSS and phosphorus removal.

Project Description

The project involves installation of six (6) subsurface recharge systems, approximately 1,600 linear feet of 36" perforated HDPE pipe within the Pine Lake Park area of the Town. The project also includes installation of 50 new inlet structures. The Town will also collect runoff from four dead end areas and redirect them into proposed treatment units prior to discharging into Pine Lake.

Need for Project

The water quality of Patriot Lake is deteriorating due to an inflow of excessive untreated stormwater. The project will help decrease sedimentation and pollution in the Lake. A new stormwater basin will provide treatment and groundwater recharge measures to overflows from the Lake.

Project Description

The proposed project includes construction of an infiltration and water treatment basin adjacent to Patriot Lake.

SALT DOME

Priority List Rank

652

County

MONMOUTH

Existing Population

34,727

Service Area

Neptune Township

Need for Project

The existing salt storage on the Public Works site is only encapsulated on three (3) sides. As part of our Stormwater Management Permit from the State a contained Salt Storage facility is required. The proposed facility will reduce runoff and siltation to the on-site stormwater system and also reduce siltation and non point source runoff to Wesley Lake. Wesley Lake is in need of maintenance dredging and construction of the salt dome will help to alleviate the ongoing need of dredging the lake by minimizing the siltation in the runoff to the lake.

Project Description

The project consists of the construction of a prefabricated salt dome at our Public Works Garage located on Heck Avenue. The proposed structure is to be sixty-one(61) feet in diameter on a ten (10) foot tall concrete base wall.

Neptune Township

Need for Project

The existing bulkhead is severely compromised. In certain areas it is to the point that it is no longer stabilizing in some areas. Due to the current state of the bulkhead, sand and soil are entering the Shark River through the bulkhead. The storm drain pipes behind the bulkhead are compromised and broken in some areas. These pipes need to be replaced and retrofitted with stormwater devices. By limiting the siltation and the runoff, the nonpoint source pollution of the Shark River will be greatly decreased.

Project Description

The Shark River Marina is located adjacent to South Riverside Drive in the Shark River Hills Section of Neptune. The proposed project includes replacement of the bulkhead, dredging of the channel, rehabilitation of storm drainage, and installation of tide flex valves and cofferdam around the existing underground storage tank.

Service Area

Neptune Township

Need for Project

Three lakes within the Township suffer from excessive sediment deposits. Water quality will improve from removing sediment. The lakes do not settle out as they used to based on the limited volume to allow this to happen prior to discharge. There is limited if any water quality from the outfall from these lakes due to the nature of it's capacity and material.

Project Description

This project consists of the dredging of all three (3) lakes within the Township. Lake Alberta which is located along Neptune Boulevard east of Highway 33 at the border with Neptune City, Fletcher Lake, which is located at the south end of Ocean Grove along the border of Bradley Beach and Wesley Lake which is located at the north end of Ocean Grove on the border of Asbury Park.

Service Area

Ewing Township

Need for Project

The Township needs to reduce flooding and reduce solids transportation. The project would reduce the sediment load to prevent creation of sediment islands and minimize the scour effect on stream banks.

Project Description

The proposed project will address the degradation of the water quality in a tributary to the Gold Run by stabilizing its banks and restoring the bed to its original configuration. The stream has many areas of severe erosion that are causing significant property damage. The stabilization is approximately 1300 feet in length and will restore the conveyance area to reduce erosive velocities.

Borough of Carteret

Need for Project

Currently, the open ditch stormwater conveyances are overgrown with vegetation and silt buildup, and have not been adequatly maintained. The removal of vegetation and silt build up will result in higher quantity storms being conveyed downstream to ultimate discharge point, reduce stagnant water conditions, prevent upstream flooding, and provide overall better aesthetics in residential and commercial area.

Project Description

The project includes storm sewer rehabilitation in commercial/industrial area of Milik Street, including new regional basin, rehabilitation of open ditch stormwater conveyance and tv inspection and repair of existing storm sewer piping.

Need for Project

The proposed improvements are needed to reduce non-point source pollution resulting in an overtaxed infrastructure system adjacent to Noes Creek and the Arthur Kill areas, as well as, providing resiliency against future storm events in an area that was impacted by Superstorm Sandy.

Project Description

The project consists of construction of a new stormwater pump station and detention basin in the Noe Street drainage area. The project includes replacement of stormwater collection piping and inlets, a force main, an outfall and tide gates.

Need for Project

The Birchwood Lakes and Blue Lake are essential to Medford’s storm drainage system and flood control. Sediment needs to be removed to restore proper storm drainage. The bulkhead reduces the amount of sediment that builds up in the lakes and without it sediment and debris is flowing into the lakes and downstream.

Project Description

The proposed project includes removal of sediment and debris from the lakes and replacement/repair of bulkheads to reduce erosion and control solids/floatables.

Various flood control improvements within the White Beeches, Berkeley Place and Roosevelt Avenue sections of the Borough that discharge into the Oradell Reservoir and Hirschfeld Brook drainage basins. Proposed improvements include replacement of undersized piping and inlets, cleaning of existing piping and structures, cleaning and re-profiling of existing ponds and culverts at an existing Golf Course and installation of additional piping and inlets.

Project Description

The existing drainage systems are severely undersized and silted causing frequent flooding resulting in an eroding drainage system and stormwater pollution that discharges into the Oradell Reservoir and Hirschfeld Brook.

The Borough plans to inspect and map the storm sewer system to identify sensitive areas affected by the discharge of storm sewer flows and to locate any existing cross connections. This will enable the Borough to respond better to potential future hazardous material spills. In addition, storm sewer system cleaning and rehabilitation will improve water quality and reduce localized flooding.

Project Description

This project proposes to clean, TV inspect, and map the existing storm sewer system. Deteriorated catch basins and manholes will be rehabilitated, broken pipes replaced or repaired and any cross connections eliminated.

Need for Project

The need for the new vac truck is to clean all storm inlets, pipes, easements, etc. This is required so the drainage facilities are in proper working condition. It is also required by the new stormwater regulations. The need for the new street sweeper is to sweep all municipal streets of winter road grits and materials, leaves and other miscellaneous debris. This will help prevent sediment build up in our lakes and streams.

Project Description

The proposed project includes the purchase a new vac truck to assist in cleaning storm inlets, piping, easements, etc. Also included is purchase a new street sweeper to sweep winter products, leaves, debris, etc from all municipal streets.

Borough of Hasbrouck Heights

Need for Project

The storm sewer system in the Borough does not function properly because of problems with the riser ditch resulting in flooding. Flooding also results in more grease/oil, pesticides, fertilizers, etc. being introduced into the storm system and discharging into local waters.

Project Description

The proposed project includes improvements to existing detention and retention facilities, improvements to existing stormwater drainage piping systems, and construction of new stormwater pump station.

Need for Project

This project will provide collection, pumping and discharge of stormwater that currently floods local streets and contributes to basement flooding. The project will prevent flood waters from seeping into sanitary sewer manholes and potential impacts on downstream pump stations and combined sanitary overflows.

Project Description

The proposed project improvements to the stormwater system include new collection system pipe work, a new 5,000 gpm pump station, and a force main with outfall to the Passaic river.

Need for Project

The Fairfield Avenue Stormwater Pump Station suffers from inadequate pumping capacity, the existing elevation of the pump station operating floor is below flood level and modifications to the collection system immediately adjacent to the pump station are required. The proposed project will assist in the prevention of street flooding, will protect the Fairfield Avenue Stormwater Pump Station and its equipment from flooding, reduce station maintenance and provide for increased capacity and redundancy and adequate emergency power.

Project Description

The Township intends to complete improvements to the Fairfield Avenue Stormwater Pump Station including elevating the pump room floor, adding additional pumping capacity with standby power, modifications to the collection system immediately adjacent to the stormwater pump station, and the addition of an automatic trash rack for debris.

Need for Project

This system is designed to protect public infrastructure and private investments from impacts caused by stormwater flooding and mitigate against future damage to streets, homes, sewer systems, water systems, and other utilities. The project site is a well-established neighborhood that has witnessed frequent flooding and significant impacts from Superstorm Sandy.

Project Description

This project includes installing a pump station and stormwater infrastructure in the Ventnor Heights section of the City. This project is designed to make the stormwater system more resilient and to protect public infrastructure and private investments in the area.

This project includes installing a pump station and stormwater infrastructure in the Gardens section of the City. This project is being pursued jointly by the Cities of Ventnor and Margate, Atlantic County Government and the Atlantic County Utilities Authority. This project is designed to make the stormwater system more resilient and to protect public infrastructure and private investments in the area.

This project includes installation of thirty-six check valves on various locations along the back-bay section of the City. This project is designed to make the stormwater system more resilient and to protect public infrastructure and private investments in the area. Without properly functioning check valves tide water can back up into the City, complicating the impacts of a high tide, storm event.

Keansburg Borough

Need for Project

The Borough will install a grit/sediment chamber in conjunction with each pumping station to improve the quality of storm water that is currently being discharged into the Raritan Bay.

Project Description

The Borough is requesting funds to install mechanical pumping stations at two (2) of the six (6) existing outfalls: The Bayview Avenue Pumping Station and the Twilight Avenue Pumping Station.

Service Area

Township of River Vale

Need for Project

The Township of River Vale is situated within an area which is critical to public drinking water supply. The Township borders on two reservoirs - Lake Tappan and Oradell Reservoir, and has several class one rivers and tributaries within its boundaries (Hackensack River, Pascack Brook). The Township's storm sewer system discharges directly into these critical waterbodies. The installation of these compliant castings will greatly reduce the volume of trash and floatables entering the public drinking water systems.

Project Description

The proposed project includes the replacement of the existing salt storage facility with a new upgraded facility sized to store 300 to 350 ton capacity. The project also includes minor site restoration as needed around the new facility and replacement of storm water inlet head pieces non-compliant Phase II Stormwater regulation.

Service Area

City of Brigantine

Need for Project

This system is designed to protect public infrastructure and private investments from impacts caused by stormwater flooding and mitigate against future damage to streets, homes, sewer systems, water systems, and other utilities. These project sites are well-established neighborhoods that have witnessed frequent flooding and significant impacts from Superstorm Sandy.

Project Description

Three additional stormwater management projects are proposed in this application. Each of the pump stations described below will include an Emergency Generator to insure operation during electric power outages: 1. New Lighthouse Circle Stormwater Pump Station – 34th Street and Bayshore Avenue. This pump will serve a drainage area that includes portions of Brigantine Boulevard, the only access route off of the island. 2. New Hackney Place Stormwater Pump Station – to be located off of West Shore Drive in the Golf Course Section of the City. 3. New Pump Station at Jenkins Parkway, 12th Street North. This project is designed to improve and protect groundwater, as well as providing for a functional stormwater systems.

The project includes a pump station and emergency generator to service the stormwater needs of this area along with water proofing the boat ramp which is at elevation 7 ft. Flood gates will provide this protection. Also planned is the elevation of the boat ramp apron and Bayshore Avenue to reduce flooding.

Currently the outlet structure that serves the Ocean Drive and Lagoon Boulevard section of the Inlet area of the City is totally clogged and non-functional. The current 60” outfall pipe is buried and the system no longer functions as designed. It is estimated that the current system operates at or near 25% capacity, resulting in localized flooding. This project calls for a new outlet system to be designed that will reroute stormwater within the Seaport Area Drainage Basin to a new outfall.

This project includes: 1. 12th Street North Stormwater Project – Located on the far northern section of the City. The plan includes raise 12th Street North. The elevation of 12th Street North is specifically included in the County AHMP. 2. Evans Boulevard Stormwater Project – E Evans Boulevard intersects 12th Street North at a 90 degree angle. The improvements on this street include installing 1,800 LF of piping along E Evans Boulevard to 12 Street North. The planned pipe system is specifically included in the County AHMP.

Need for Project

This system is designed to improve flood and stormwater control throughout the northern section of Brigantine. By having a properly functioning stormwater system, the silt traps within the catch basins will capture materials that should not be discharged from the system resulting in water quality improvements.

Project Description

This project will provide for the removal of accumulated sand from municipal drainage basins in the Golf Course Section of the City of Brigantine. The Golf Course Section of the City was significantly flooded by Superstorm Sandy and silts and sand washed into the underground drainage system. This project is designed to improve and protect groundwater, as well as providing for a functional stormwater systems.

Township of Byram

Need for Project

The Township of Byram is pursuing the construction of this wash facility to allow for the washing of municipal trucks, police vehicles, and equipment in a manner that will eliminate runoff into environmentally sensitive areas (wetlands and a Category 1 stream) located in close proximity to the municipal complex. This facility will also provide measures that will ensure that highly corrosive salt materials do not enter into the existing sanitary sewer system during winter months when de-icing activities occur. When completed, this facility will provide the Township with a project which truly promotes water quality and meets the requirements of the Township's Tier A Municipal Stormwater General Permit.

Project Description

The project will consist of the construction of a vehicle washing facility at the Byram Township municipal complex. The facility will include the construction of an enclosed wash structure, a concrete floor with floor drains, an underground oil/grit/water separator, and piping to connect into existing water and sewer systems. Valve controls will also be an integral part of the project to eliminate flows into the existing sewer system during the winter months when highly corrosive salt material is present.

Borough of Bogota

Need for Project

The existing drainage system is silted and undersized causing frequent flooding resulting in stormwater pollution. The Hackensack River is adjacent to the area of concern and receives all drainage and sediment pollution caused by the ineffective drainage system.

Project Description

Construction of a stormwater pump station on a property located off of River Road to alleviate flooding and soil erosion problems. Other improvements also include installation of a force main discharging into the Hackensack River, cleaning and stabilization of an existing ditch, cleaning of drainage piping and inlets, repair of the River Road culvert and installation of additional piping and inlets.

Need for Project

The existing spillways control the water levels in Upper Lake and Cedick Run Lake located upstream of Lake Fred. These lakes provide habitat for threatened and endangered species. The loss of spillways will degrade the delicate ecosystem and possibly the necessary habitat for many species of plants, animals and aquatic life.

Project Description

The proposed project includes reconstruction of three concrete spillways, two timber overflow structures, and one corrugated metal culvert.

Wood-Ridge Borough

Need for Project

Water quality is improved by the project by efficiently directing storm water (gutter flow) to the existing storm drainage system. Under existing conditions, the isolated catch basins are subject to fetid conditions that promote mosquito breeding. The Borough routinely vacuums the isolated catch basins. On-Street water pooling will be addressed by installing catch basins at points that have chronic standing water.

Project Description

The Borough of Wood-Ridge seeks to install and/or attach catch basins to the existing storm drainage system at various locations. The six (6) locations have been identified by the Borough as poorly drained.

Borough of Keyport

Need for Project

The Borough needs to remediate certain areas which experience flooding and properly maintain its stormwater sewers. The existing facilities adversely impact water quality in the Raritan Bay.

Project Description

The proposed project involves the construction of approximately 200 feet of reinforced concrete pipe (RCP) and two doghouse drainage structures to create a bypass system to divert stormwater runoff to a separate outfall on Broad Street. Also included in the project is the construction of approximately 800 feet of RCP to replace an existing storm system on Second Street, Waverly Street and Third Street and the purchase of a "Scavenge-Vac" to properly maintain the system.

City of Linwood

Need for Project

Over time sediment and suspended solids discharge into water bodies lead to the water body becoming shallow. When this occurs it has negative affects on the health of the water body by leaving it susceptible to algae growth which effects other species of the plant and animal life in the water body. The proposed project is essential to the long term future health of three ponds, which in turn has a positive net impact on the health and well being of the general public, specifically to those residents and business in the immediate vicinity of the ponds, one of which is located partially on a school site.

Project Description

This water quality project includes the construction and installation of storm water sediment removal devices upstream of six outfall structures at the three different ponds in the City of Linwood. The filters will remove sediment and suspended solids from stormwater runoff prior to it entering the water bodies. The project is designed and will be built in accordance with current New Jersey Storm water Regulations. The intent of the project is to eliminate sediment and suspended solids from entering the ponds from the City streets. The project will also include the retrofitting and or reconstruction of all storm water catch basins/inlets (which ultimately discharge to the ponds) to meet current NJ stormwater regulations.

Need for Project

The existing drainage system is undersized causing frequent flooding resulting in an eroding drainage system and potential stormwater pollution that ultimately discharges into the Raritan and Rahway River Drainage Basins.

Project Description

The Borough proposes construction of various improvements to its existing drainage system in the Glenwood Avenue area of the Borough. Proposed improvements will increase capacity both in and downstream of the areas of concern and provide stormwater management to control the rate and volume of runoff. Improvements include installation of new inlets and drainage pipes, replacement of the existing open ditch with new below grade drainage pipes, and construction of an underground storage system.

Need for Project

The existing substandard stormwater systems are subject to failure during storm events causing flooding. The stormwater and sanitary flows co-mingle during flooding and are discharged to Mantua Creek.

Project Description

The proposed project includes construction of a new storm sewer system with uniform slopes between manholes and inlets to maintain an unobstructed flow, mininmize trapping of debris, eliminate flooding, and improve water quality. This will include construction of new inlets to replace existing undersized inlets for more efficient flow and improved ease of maintence.

Need for Project

The outfall structure will be constructed to provide relief from flooding conditions in Lake Como. Excessive nutrients from a major storm event will be removed from the lake.

Project Description

This project consists of the construction of a forcemain outfall connection from Lake Como to the Atlantic Ocean to provide relief from potential for flooding into the neighboring residential properties. The outfall structure will be located at the east end of Lake Como and cross under Ocean Avenue to terminate in the ocean. This forcemain will be connected to a portable hydraulic pump during major storm events. Currently the Lake and surrounding properties flood during a major rain event coupled with a high tide situation.

Need for Project

Extreme stormwater runoff in the Borough cannot be handled by existing ditches resulting in soil erosion and loss of trees. Soil erosion contributes to silt deposits in Otter Brook and degrades local wetlands and streams.

Project Description

The proposed project involves creating a stormwater detention basin by modifying an existing culvert to restrict flow. Improvements to existing ditches will also be made.

Borough of Englewood Cliffs

Need for Project

The purpose of this project is to alleviate flooding and restore the pond volume for water retention. The purpose of the purchase of the Jet/vacuum truck is to assist the DPW in maintaining the integrity of the sewer system. The Pershing Road Pond is subject to storm water runoff from nearby collector streets, which creates an overwhelming accumulation of silt and debris. As a result, the pond has formed large shoals and is heavily silted in certain areas. This sediment accumulation reduces the drainage capacity of the watercourse, raising the pond's water level with each season storm event. The purpose of this project is to alleviate flooding and restore the pond volume for water retention.

Project Description

The proposed project includes the equipment purchase of a Jet/Vacuum Sewer Truck to assist the DPW to maintain the integrity of the sewer system.

Highlands Borough

Need for Project

The existing drainage system, which drains into the Shrewsbury River, a C1 waterway, is undersized to handle the contributing drainage flow and runoff sediment from the upland areas. Existing drainage facilities in the low lying areas are regularly inundated by floodwaters originating from the New Jersey Route 36 corridor and adjacent upgradient areas of the Borough of Highlands, Township of Middletown and Borough of Atlantic Highlands. High intensity rainfall events, coupled with high tides, high stormwater velocities and head conditions result in the system backing up and extensive flooding of the low lying areas from Bay Avenue northward.

Project Description

The Borough proposes to construct various stormwater system improvements to its three drainage sub-basins, Waterwitch Avenue, Valley Avenue and North Street to redirect flow from high elevation upland areas away from the low-lying areas of the Borough and to increase drainage system capacity to alleviate flooding and sediment pollution concerns. Proposed improvements include construction a new stormwater pump station, replacement of an existing outfall and replacement of existing and installation of new drainage piping throughout the Borough

County

ATLANTIC

Existing Population

4,545

Service Area

West Atlantic City section of Egg Harbor Township

Need for Project

The existing stormwater collection system in West Atlantic City is physically deteriorating and is inadequate to collect and discharge runoff to Lakes Bay. Under normal conditions, tidal flooding often surcharges the system and discharges tidal water back through stormwater inlets due to a lack of back flow prevention devices. This increased flooding increases the amount of sediment and other pollutants that enter the collection system and are discharged to Lakes Bay. A new stormwater system will reduce the amount and frequency of flooding, which will decrease the concentration of solids, nutrients, and fecal coliform in the Bay.

Project Description

The proposed project includes construction of a stormwater management system that will handle runoff from a 100-year storm event. This will include replacing all existing inlets and piping, eliminating numerous bay discharge points, and installing new outfalls.

Need for Project

Currently several DPW vehicles and pieces of equipment are stored outside in the maintenance yard. Storing the vehicles and equipment within the rehabilitated building will eliminate contamination of the storm water runoff and extend the useful life of the equipment.

Project Description

Rehabilitation of an existing equipment storage building that is currently in disrepair and inefficiently sectioned for proper storage of DPW maintenance vehicles. The layout of the building will be changed to provide additional storage bays so equipment can be housed within the structure which is located on the DPW property at 405 Mine Road within the Township. Proper drainage and water quality treatment devices will be installed within the building.

Service Area

Bethlehem Township

Need for Project

The NJDEP has mandated that all discharges of equipment and vehicle wash wastewater from maintenance yard operations be eliminated by 02/29/09. Under the current procedures, the wastewater is discharged to the ground surface and enters nearby streams/groundwater. The facility will capture all water used in the cleaning of equipment and vehicles for proper disposal, which will greatly improve the water quality in the area.

Project Description

Construction of a facility designed to collect equipment and vehicle wash wastewater from maintenance yard operations. Bethlehem Township is coordinating construction of the facility with the local New Jersey Department of Transportation maintenance yard located on State Highway Route 173 in order to share services and reduce costs.

Need for Project

A segment of the Morris Canal has filled with sediment and other debris resulting in shallow water depths which encourage weed and invasive plant growth. The piped aqueduct also has deposited silt and sediment covering the bottom 1/3 of the pipe and it is believed that many of the pipe joints are failing, allowing exfiltration of water into the surrounding soils (a sinkhole developed in 2007 which required emergency repairs).

Project Description

The proposed project includes cleaning and restoring the Morris Canal. This project will also include measures to improve the water quality of these discharges by installing water quality device(s) on the discharge pipes into the canal. The project also includes rehabilitation of sanitary manholes and individual sanitary laterals for Musconetcong Avenue, Spring Lane and Lake Street; and relining of a portion of a 16-inch transite sewer main along the lake.

Need for Project

Periodically, the Borough's storm sewers collect debris and contaminants which eventually pass through the storm sewer system and into the lakes and surrounding waterways. The Borough is concerned with the non-point source pollution problem and believes this problem can be reduced through better maitenance which will be enhanced by the use of "Jet Vac" equipment and certain specific improvements to the existing stormwater facilities.

Project Description

The proposed project involves the purchase of a Jet-Vac Truck to clean debris from the storm sewers and minimze adverse impacts on local waterways.

Borough of Sea Bright

Need for Project

Sea Bright is a barrier island surrounded by the Shrewsbury River on the west and the Atlantic Ocean on the East. Both the River and the Ocean must be protected from the possible leak of sanitary sewage from an old antiquated system (sanitary sewer rehabilitation and further the land must be protected from flooding both for the protection of life and property and the mixing and discharging of sewage during flood events. The storm water system and pumps will keep storm and sewage separate by removing the threat of floods on minor and intermediate storms.

Project Description

Construction of Sanitary Sewer Piping on Badmitton Court; Construction of Stormwater Pump stations and Stormwater Piping in Osborne, Church, River and Peninsula Streets and upgrades to River street and Middle Pump Stations.

Need for Project

When the free flow of tidal waters in and among the multiple tidal creeks and salt marsh is hindered by shoaling, the natural flushing and cleansing effect of the tides is hindered. This results in the trapping or slowing of waters within certain areas, and accompanying loss of water quality. When shoaling is left unaddressed, the problem is compounded and water quality continues to decrease. Detrimental effects of the poor water quality in the back bays includes increased risk of bacteriological contamination and the concentration of other contaminants (metals, etc.) in shoaled areas where water velocity is slowed and the contaminants drop to the bay floor rather than continue to disperse throughout the system.

Project Description

The project includes dredging of several back bays and water ways impacted by Sandy.

Need for Project

Current stormwater system is in structural failure and is adversely affecting various septic systems and causing undo runoff into South Branch of the Raritan River.

Project Description

Insufficient stormwater management at Railroad Avenue and Main Street is primarily attributed to rapidly peaking storm flows from two primary watercourses, one, the unnamed tributary extending from the firehouse at Main Street across the northerly portion of a large unimporved property (Block 20, lot 4) following a wooded stream corridor to the County culvert on Academy Street, and one (1) which extends along behind the residences on Main Street and along the easterly boundary of the undeveloped Winters Tract. It is proposed that improvements consist of three major components 1) replacement of the existing antiquated stormwater piping and open channel system extending from Main St. to the natural stream channel on the recently acquiared mitigation tract; 2)construction of a stormwater conveyance relief pipe along Main Street parallel to the existing system of culverts to provide additional capacity to the discharge point at Maill Street, and 3) construction of mini-diversions from existing tributarie

Need for Project

The existing pump station was built in 1950 to assist two smaller pump houses which date back to 1917. Currently all three pumps are in operation and the system is in need of repair.

Project Description

The proposed project is to extend the two existing 60-inch diameter storm trunk mains to a new pump house constructed with an emergency generator and a variable speed pumping system. Also included is the abandonment and demolition of the two 1917 pump houses and alterations associated with the riser ditch and bulkhead.

Need for Project

A former industrial facility requires remedial measures to support brownfield development and provide significant environmental benefits. Placement of an impermeable cap along with installation of stormwater controls will ensure that rain water will not mobilize contaminates and pollute groundwater or the adjacent waterways.

Project Description

This is a proposed redevelopment of a brownfield site located in the City of Newark in Essex County in the Third Industrial District and the Industrial River Urban Renewal Plan Area adjacent to the Route 1&9 Interchange on Delancy Street. The project will consists of remediation requirements included in an approved Remedial Action Work Plan as well as additional environmental and clean water improvements necessary as part of the overall redevelopment. The project consists of a warehouse/industrial facility that includes two (2) buildings of 705,000 square feet and 105,775 square feet, with 20,000 square feet of office space and 5,000 square feet of office space, respectively. The project site is currently a vacant former industrial site from which the structures have been removed. Piersons Creek bisects the project site which is to be enhanced and improved. It is anticipated the project will be occupied by a combination of warehouse distribution and industrial uses.

County

HUDSON

Existing Population

38,577

Service Area

City of Hoboken

Need for Project

The project will acquire and develop passive recreational open space for the enjoyment of Hoboken residents and visitors, but will also help retain stormwater runoff and reduce flooding. Situated along the Hudson River, the City of Hoboken is prone to severe flooding when heavy rains combine with high tide. This is particularly an issue in Hoboken's southwest, which is one of the more densely populated areas of the City and currently has no open space or parkland. As a result of the creation and preservation of open space, stormwater will be retained naturally, which will help to alleviate flooding, reduce volume flowing into the City's combined stormwater/sewer system and prevent sewage discharges into the Hudson River as a result of overflow to the combined sewer system.

Project Description

The City of Hoboken will acquire and develop parkland in the Southwest portion of the City. The new park will provide open space access in a congested neighborhood of town, will help retain stormwater runoff and will reduce overflows to the combined sewer/stormwater management system.

Service Area

Borough of Wildwood Crest

Need for Project

The Borough plans to purchase land for water quality protection. The preservation and conservation of land is important to help protect and maintain water quality in the project area. In general, the loss of open space is known to have adverse water quality impacts that result from increases in impervious cover, loss of recharge areas or buffer zones and undesirable changes in historic stormwater drainage patterns.

Project Description

The proposed project includes the purchase of a 2.5-acre parcel adjacent to the beachfront in the southern portion of the island to prevent ponding of stormwater runoff and to maintain or improve existing drainage patterns.

Service Area

Township of Brick

Need for Project

The uncapped landfill is the source for groundwater contamination documented at the site. A contamination plume emanates from the landfill, encompassing approximately 470 acres. As a result of contamination (volatile organic compounds) a Groundwater Use Restriction Area and Classification Exception Area were established and a maintained; private water and irrigation wells were closed, and residents within the affected area were required to connect to water service. Although, the impacted Kirkwood-Cohansey aquifer system is hydraulically connected to Barnegat Bay it is not expected that elevated contamination levels can be traced to the landfill site.

Project Description

The remedial action consists of the re-grading of the landfill, installation of a cap including gas vents, and construction of a stormwater management system.

Need for Project

Sussex County needs to cap the remaining uncapped 8.5 acres of the County's landfill in order to control and manage leachate generation, gas production, and stormwater runoff.

Project Description

The project will include the installation of a final cap consisting of the final grading of the solid waste, a 12 inch sand layer (for methane gas venting), an impermeable membrane, a 12 inch sand drainage layer, a 12 inch final cover, a stormwater diversion and drainage system, and a landfill gas extraction system.

Warren County

Need for Project

The County plans to purchase land throughout the county for water quality protection. Preservation and conservation of land is important to help protect and maintain water quality in the project area. In general, the loss of open space is known to have adverse water quality impacts that result from increases in impervious cover, loss of recharge areas or buffer zones and undesirable changes in historic stormwater drainage patterns.

Project Description

The proposed project includes the purchase of land throughout Warren County to preserve open space and to protect water quality.

Need for Project

The Edison Landfill Closure Project will eliminate subsurface leachate migration into the adjacent Raritan River and contiguous properties. This will be achieved primarily through the capping of the Edison Landfill and an engineered leachate containment and pumping system for proper leachate conveyance to the MCUA.

Project Description

The closure of the Edison Landfill will include the following activities: Landfill plateau capped with geomembrane/geosynthetic clay liner, reinforcement textile, soil cover and vegetative layer. Sides capped with ordinary soil cover and vegetative layer. Landfill plateau and sides capping shall also utilize waste-derived material, such as stabilized sludge. Stormwater channels shall utilize waste-derived materials such as glass cullet or crushed concrete in cover materials. Leachate collection, pumping and disposal systems to MCUA via a siphon crossing the Raritan River shall be designed, fabricated, installed, commissioned and operated on a continuing basis. A methane gas extraction system shall also be designed, fabricated, installed, commissioned and operated on a continuing basis. A surface-mounted, ballasted, 100kWh PVSE system shall be installed, as well as an extension of an existing walkway adjacent to the Raritan River under a disruption/restoration component.

Township of Hamilton

Need for Project

The Township plans to purchase of property to protect water quality by preserving land that encompasses an unnamed tributary of Pond Run located in the Delaware River Watershed. Since water drains from the parcel into Veteran's Park, preservation of the parcel also prevents nonpoint source pollution from entering Martin's Lake. The preservation and conservation of land is important to help protect and maintain water quality in the project area. In general, the loss of open space is known to have adverse water quality impacts that result from increases in impervious cover, loss of recharge areas or buffer zones and undesirable changes in historic stormwater drainage patterns.

Project Description

The proposed project includes the acquisition of Klockner Woods property to preserve open space and to protect water quality.

Need for Project

The Township plans to purchase land for water quality protection. The preservation and conservation of land is important to help protect and maintain water quality in the project area including the Kettle Creek drainage area, Beaver Dam watershed, and unnamed tributaries of the Metedecank River. In general, the loss of open space is known to have adverse water quality impacts that result from increases in impervious cover, loss of recharge areas or buffer zones and undesirable changes in historic stormwater drainage patterns.

Project Description

The proposed project includes the purchase eight parcels of land to preserve open space and to protect water quality. The purchase of the parcels will expand the Cedar Bridge Branch Greenway, Midstreams Greenway, and Metedecank Greenway.

The Township plans to purchase land for water quality protection. The preservation and conservation of the land is important to help protect and maintain the natural ability of the wetlands to filter nonpoint source contaminants and absorb stormwater runoff in the project area. In general, the loss of open space is known to have adverse water quality impacts that result from increases in impervious cover, loss of recharge areas or buffer zones and undesirable changes in historic stormwater drainage patterns.

Project Description

The proposed project includes the purchase of the Rio Grande Tract and the Goodwin Tract to preserve open space and to protect water quality.

Service Area

Borough of Sayreville

Need for Project

The owner/developer of a currently vacant property has proposed building 207 single-family homes as well as some warehousing. Development of this tract would have adverse impacts on the stormwater management in the Borough and on the Raritan River and Raritan Bay. Preservation and conservation of land is important to help protect and maintain water quality in the project area. In general, the loss of open space is known to have adverse water quality impacts that result from increases in impervious cover, loss of recharge areas or buffer zones and undesirable changes in historic stormwater drainage patterns.

Project Description

The proposed project is for the purchase of a parcel of land within the Borough to preserve open space and to protect water quality.

Evesham Township

Need for Project

The Township's former landfill is generating leachate, which is causing surface and groundwater impacts in an area containing the headwaters of two drainage basins. A capping system is needed to reduce infiltration, which will subsequently minimize further leachate generation and migration.

Project Description

The proposed project will include the construction of a capping system consisting of an impervious clay cap, a sand drainage layer, a vegetative layer, a ground/surface water monitoring system, and drainage improvements. The entire landfill will be re-contoured to remove waste around the perimeter and to establish appropriate cross slope grades.

In general, the loss of open space is known to have adverse water quality impacts that result from increases in impervious cover, loss of recharge areas or buffer zones and undesirable changes in historic stormwater drainage patterns.

Project Description

The proposed project is for the purchase of land in the Duck Pond Run Basin Area and other areas to preserve open space and to protect water quality. The preservation of the parcels in this area should prevent further degradation of Duck Pond Run, which is listed as being 'severely impaired' according to the Department's Office of Monitoring Management.

Township OF River Vale

Need for Project

The Township plans to purchase land to preserve the water quality. The preservation and conservation of land is important to help protect and maintain water quality in the project area. In general, the loss of open space is known to have adverse water quality impacts that result from increases in impervious cover, loss of recharge areas or buffer zones and undesirable changes in historic stormwater drainage patterns.

Project Description

The proposed project includes purchase of a wooded, leased portion of the Bergen Hills Country Club to preserve open space and to protect water quality.

Service Area

Township of Byram

Need for Project

The Township plans to purchase land for water quality protection. Preservation of the Lubbers Run Greenway will preserve and protect the stream corridor, wetlands, and watershed of Lubbers Run, a trout maintenance stream and the largest tributary to the Musconetcong River. Byram is under extreme development pressure and the geological resources conducive to groundwater supplies are limited. Areas of high recharge like Lubbers Run Greenway need to be protected to maintain groundwater supplies in the Township.

Project Description

The proposed project is for the purchase of an easement on land adjacent to Lubbers Run Greenway. Purchase of this land will limit development and sprawl and will preserve open space and protect water quality.

Township of Fairfield

Need for Project

The municipal landfill in Fairfield is generating leachate, which is impacting surface and ground water. The site adjoins a waterway known as Rattlesnake Gut, which flows directly into the Cohansey River. A capping system is needed to prevent further leachate impacts.

Project Description

The proposed project includes construction of fill and an impervious cap to prevent infiltration. Since the site adjoins an intermittent waterway, it may be necessary to remove some of the landfill adjacent to the stream for wetlands reclamation and buffering.

Service Area

Borough of Point Pleasant

Need for Project

The Borough plans to purchase land to preserve, protect and maintain the native dune vegetation, saltwater wetlands along the beach front, and certain wildlife habitats. Acquisition of the properties will also assist the Borough in controlling development, which result in the reduction of stormwater runoff that could have adverse impacts on the area. The preservation and conservation of land is important to help protect and maintain water quality in the project area. In general, the loss of open space is known to have adverse water quality impacts that result from increases in impervious cover, loss of recharge areas or buffer zones and undesirable changes in historic stormwater drainage patterns.

Project Description

The proposed project includes the purchase of land to preserve open space and to protect water quality.

City of Cape May

Need for Project

The City plans to purchase land for water quality protection. The preservation and conservation of land is important to help protect and maintain water quality in the project area. This project is less than 2000 feet from the Atlantic Ocean and 1000 feet from a Green Acres conservation area, which protects the southern shoreline of Cape May Harbor. In general, the loss of open space is known to have adverse water quality impacts that result from increases in impervious cover, loss of recharge areas or buffer zones and undesirable changes in historic stormwater drainage patterns.

Project Description

The proposed project includes the purchase of Sewell Point Tract, which consists of approximately 90% palustrine wetlands that are stated to be of "exceptional resource value". The parcel currently exists as a wildlife sanctuary with the threat of residential development on 10% of the parcel. The proposed project will not only preserve open space and protect water quality, but will also protect several species of threatened and endangered birds that have been identified on the parcel.

National Park Borough

Need for Project

The Borough of National Park is required by the State Regulations to implement the closure of the landfill site in accordance with the applicable Solid Waste Rules. The implementation of the closure and preparing the site for development is a priority for the Borough of National Park. This sizable contaminated property is situated in the center of the Borough with no prospects for development. The Borough is very much interested in getting the property to be put to a productive use. The Borough has two alternatives: implementation of closure only, or implementation of closure and development of the site for the installation of PV Solar system. Therefore, the implementation of the landfill closure is needed for both alternatives.

Project Description

It is the intent of the Borough of National Park to implement an NJDEP approved environmentally sound closure of the landfill, and prepare the site for future use. The Borough has solicited bids for the installation of a Photo Voltaic solar system on the site, and has faced a difficulty in getting the site closed and developed due to the high cost of implementing proper closure.

Need for Project

Clean-up of the contaminated industrial sites along Assunpink Creek will remove the potential of polluting the Creek and groundwater. The clean-up will allow Trenton to convert the area into a recreational greenway, which will increase the permeable surface within the watershed.

Project Description

The proposed project includes the remediation of soil contamination on several parcels along the Assunpink Creek. These parcels are contaminated with petroleum, heavy metals, and PCBs from previous years of industrial use.

Need for Project

The Harrison Avenue Landfill is no longer in operation. The landfill has not been properly closed in accordance with applicable regulations. The runoff and leachate from this landfill discharges to surrounding water bodies and groundwater and adversely impacts water quality in the project area.

Project Description

The proposed project includes the remediation the Harrison Avenue Landfill, capping 260 acres to reduce leachate generation, excavation and disposal of contaminated soils, in-situ groundwater treatment, sheet piling of certain sections along the Delaware and Cooper Rivers, and sanitary and storm sewer improvements.

Service Area

Penninsula at Bayonne Harbor

Need for Project

Existing conditions on the site allow for stormwater to collect within the exposed basement of the former industrial building, and stagnate/mix with the demolition debris. These conditions contribute to water stagnation, and unknown water quality consequences of standing water in demolition debris. The proposed project will 1) result in removal fo the debris, 2) bring the site to grade so that basement water collection cannot occur, and 3) facilitate the collection of stormwater into the existing on-site system. The project will also serve to prepare the site for DEP-approved redevelopment of the site, which includes substantial water quality and flood control measures.

Project Description

The project is located on the Peninsula at Bayonne Harbor, which is the site of the former Military Ocean Terminal - Bayonne (MOTBY). The proposed work consists of completing the US Army's unfinished demolition of a former warehouse structure, and preparing the demolished footprint for collection of stormwater into the existing system. Under existing conditions, the unfinished demolition has created a hole in the ground, which collects stormwater that stagnates and mixes with the debris. The proposed work will complete the demolition and removal of concrete from the basement hole, fill in the hole with material, and prepare the surface for routing of stormwater to the existing system that surrounds the former building. The project is fully permitted, with the exception of soil erosion and sediment control permit application that is currently being prepared.

Service Area

Penninsula at Bayonne Harbor

Need for Project

Existing conditions on the site allow for stormwater to fall on 90 acres of unstabilized soil that has been placed on the Peninsula to raise the site out of the floodplain. These conditions contribute suspended sediment into the stormwater via both 1) sheetflow, and 2) wind-blown sand that deposits on the street system. The proposed project will substantially reduce soil erosion and the introduction of suspended sediment into the adjoining New York Harbor.

Project Description

The project is located on the Peninsula at Bayonne Harbor, site of the former Military Ocean Terminal - Bayonne (MOTBY). The proposed work consists of stabilizing approximately 90 acres of unstabilized soil that has been deposited on the site to raise it out of the floodplain. Specifically, the work consists of final grading and the placement of topsoil & hydroseed to stabilize the 90 acre area. Upon completion, stormwater across the stabilized area will be collected in a stormwater collection and treatment system that is currently under construction (using NJEIT funding). The project is fully permitted and shovel ready.

Service Area

Penninsula at Bayonne Harbor

Need for Project

Existing conditions on the site allow for stormwater to sheetflow across the site and directly over the collapsed bulkhead and into New York Harbor. These conditions contribute to poor water quality and sedimentation of the Harbor. The proposed project will 1) prevent additional erosion and associated Harbor siltation from occurring, 2) facilitate stormwater collection and discharge, and 3) serve as the basis for the DEP-approved redevelopment of the site, which includes substantial water quality and flood control measures.

Project Description

The project is located on the Peninsula at Bayonne Harbor, site of the former Military Ocean Terminal - Bayonne (MOTBY). The proposed work consists of reconstructing a shoreline area where approximately 1,800 feet of bulkhead has completely collapsed, and the associated upland stormwater collection system is no longer functional. The existing conditions allow unfettered stormwater sheetflow to enter directly into New York Harbor. The proposed project would reconstruct the 1,800 foot section of failed bulkhead, stormwater outfalls, and associated upland stormwater collection infrastructure for purposes of remedying the existing uncontrolled condition. The project is fully permitted (NJDEP and Army Corps), with the exception of a soil erosion and sediment control permit, for which a permit application is presently being prepared.

Need for Project

The former Borne Chemical Site in Elizabeth needs remedial measures to support brownfield development and provide significant environmental benefits. Placement of an impermeable cap along with installation of stormwater controls and construction of a bulkhead will ensure that rain water will not mobilize contaminates and pollute groundwater or the adjacent Arthur Kill River.

Project Description

The proposed project includes demolition of existing buildings, installation of an impermeable cap and cover system, installation of stormwater controls, and construction of a bulkhead.

Need for Project

This project is for the construction of a new dual composite lined landfill cell at the Gloucester County Solid Waste Complex that will protect the ground water resources of the State.

Project Description

The proposed project includes the construction of an approximately 10 acre landfill cell at the Gloucester County Solid Waste Complex in South Harrison Township. The approved cell design includes a dual containment liner system and leachate collection. Completion of this project will allow for the uninterrupted disposal of solid waste in an environmentally sound manner that is protective of the regions ground water resources.

Need for Project

This project will reduce green house gas emissions in several manners: This project, fueled by scrubbed landfill gas, will destroy methane produced by the landfill. The generator fuel will be scrubbed of sulfur compounds, siloxane compounds, particulate matter and moisture, thereby reducing these constituents to de minimis amounts. By generating two (2) megawatts of electricity, the CMCMUA is supplying the need for two (2) megawatts of electricity that would otherwise be generated by fossil fueled plants. This project will result in benefits other than direct reductions of greenhouse gas emissions: The engines will reduce atmospheric discharge by over 61,000 metric tons of CO2 equivalents. Two (2) less megawatts of power will be necessary for other plants to generate. Sulfur compounds, siloxane compounds, and particulate matter will be also reduced from landfill emissions. Jobs are always maintained or created by construction expenditures.
This project also provides added benefits: As this project will not be eligible for net metering and/or net metering criteria projects, no other funding is currently available. This project can be easily replicated. We have had many visitors to our site to see how we have constructed our first electrical generating plant for their own plans for construction. All gas is metered and tested which will result in measurable data. The project is not only ready to proceed, but has already completed the required feasibility studies by PJM and ACE. The CMCMUA has the experience and the capacity to complete this project as we have already constructed a three (3) engine, 450 kw electrical generating plant which has been in operation since March 2007.

Project Description

This project will be to construct a two (2) megawatt generating plant at the Cape May County Municipal Utilities Authority's (CMCMUA) Landfill and Recycling Complex. Landfill gas, a renewable energy, will be used as fuel for the engines. Since the landfill site is already generating enough electricity to be self sufficient, there is no need for net metering and this additional generation will be sold back to the grid.

The CMCMUA services the county of Cape May.

Need for Project

This project is needed not just for the continued secure disposal locations for solid waste generated by the entire County, but will incorporate two (2) improvements necessary at this facility. Stormwater drainage will be reconfigured to be compliant with New Jersey Pinelands rules and regulations. Additionally, it will allow for the exhumation of an existing landfill cell of inferior design so that the liner system protecting the groundwater can be upgraded.

Project Description

The project will include the construction of a double lined landfill Cell 2G comprising 19 acres, the reconfiguration of drainage into a Pinelands approved stormwater management system, and the filling of a current sedimentation basin to serve as the structural basis for the liner. This will then facilitate the exhumation of an 18 acre cell that is non-compliant with subtitle D regs. This project incorporates several environmental improvements for protection of the groundwater and improved stormwater management practices. Stormwater for approximately one half of the current lined landfill empties into a 10 acre sedimentation basin, the bottom elevation of which extends into the groundwater table. As part of this project, this stormwater will now be directed into a Pinelands approved sedimentation basin whose bottom will be above groundwater levels before being allowed to flow into a newly constructed deep basin. A reconfigured access road is incorporated into the design of this cell. This configured entrance roadway will incorporate into its design a stormwater infiltration trench for the entire length of this entrance road. Secondly, this new cell will be comprised of a double composite liner with leak detection zones to insure the protection of the underlying groundwater. Additionally, the design incorporates the maximizing of vertical expansion by use of a perimeter wall, thus minimizing the footprint over which this cell will reside. Lastly, the construction of this cell is purposely focused to facilitate the exhumation of an old adjacent 18 acre cell. This cell was the first cell constructed at this facility in 1984 and is not compliant with Subtitle D requirements for bottom liners. The waste from this Cell B will be exhumed, screened for recyclables and dirt, then residuals are placed in the newly constructed Cell 2G. This will allow reconstruction of this old cell to bring it into compliance with all regulation requirements, including Subtitle D.

Need for Project

A 105.4-acre site in Perth Amboy is contaminated as a result of widespread distribution of slag fill. The contaminants of concern are primarily arsenic, antimony and lead.

Project Description

The proposed project includes soil and groundwater remediation of a 105.4-acre site. Remediation will consist of excavation and removal of select areas of slag materials in direct contact with groundwater, targeted soil remediation for select areas with petroleum-related and PCB contamintants, a reduction in groundwater flow through the site, treatment of groundwater to reduce contaminant loading to Crane’s Creek, and implementation of site-wide engineering controls to minimize stormwater infiltration as well as direct contact with contaminated material.

Township of Lawrence

Need for Project

The removal of silt from Colonial Lake improved the water quality of the lake, provided rehabilitation of the overall stormwater management capability, re-established fish habitation in the lake and enhanced the dissolved oxygen levels and increased the amount of aquatic biota. The silt was stockpiled on a 28.3 acre site. Environmental investigations of the stockpiled material have revealed the presence of polynuclear aromatic hydrocarbons at concentrations above the soil cleanup criteria requiring either removal or capping.

Project Description

The proposed project includes either the removal and off-site disposal of contaminated spoils or the capping of the spoils on-site or a combination of remedial activities.

Need for Project

The Carteret Marina is located on the Arthur Kill. The Arthur Kill is classified as a saline estuarine (SE3) waterway. Waters with this classification have designated uses that include secondary contact recreation; maintenance and migration of fish population; migration of diadromous fish; maintenance of wildlife and any other reasonable uses.

Project Description

The project consists of the dredging of approximately 100,000 cubic yards of contaminated sediment from the Carteret Marina. The sediment contains a number of contaminants including arsenic and semi-volatile organic compounds. Contaminated sediment will be dredged and disposed of in accordance with all applicable NJDEP requirements.

Need for Project

Clean-up of the contaminated industrial site will remove the potential of polluting the adjacent Mill Pond and other nearby waterways as well as groundwater.

Project Description

This project proposes a mixed use of the old Michelin Tire Company site along Ford Avenue. The project will consist of 350 residential midrise apartments and townhouse units, a restaurant, 2000 square feet of retail space, a residential club facility and leasing office, including a town square and waterside pathways. The existing 12-inch sewer system on-site will be abandoned in-place and replaced with a new 12-inch PVC sanitary sewer main, which will provide service to the buildings.

Need for Project

Petroleum discharges at the Eval Oil Terminal on the Hackensack River have resulted in saturated soil that is a continuing source of adverse impacts to groundwater including the accumulation of free-phase petroleum product on the shallow water table and that pose an ongoing threat to the surface water and sediment quality of the River.

Project Description

The proposed project includes soil and groundwater remediation of petroleum impacts that threaten the surface and sediment quality of the adjacent Hackensack River; restoration of the bulkhead to stabilize the shoreline and diminish the potential for contamination seepage; and stormwater management improvements to comply with regulations.

Need for Project

The redevelopment of the former GM Linden plant will result in significant improvement to the State's water quality by both infrastructure improvements and site re-mediation activities. Infrastructure improvements will include creation of new and replacement of old storm water conveyances, ensuring proper handling and transportation of storm water away from impervious surfaces and into the existing municipal system; the installation of catch basins that will reduce TSS and sediment transport to surface water; and complete replacement of the sanitary system that served the GM plant with new systems that will prevent infiltration of wastewater to groundwater. Site remediation activities will include re-mediation of groundwater contamination originating from the GM site, excavation of contaminated soil and other sources of groundwater contamination and installation of engineering and institutional controls to protect water quality. Linden Development anticipates use of sustainable building components including solar panels and low TSS roofing to mitigate sediment runoff.

Project Description

Demolition, environmental re-mediation, new infrastructure, and redevelopment of a shuttered General Motors Plant at 1016 W. Edgar Rd. (US Rte. 1 & 9) in Linden, New Jersey. It is about 13 miles from Manhattan adjacent to a major thoroughfare. The site is approximately 102 contiguous acres in size and will be re-developed into mixed-commercial uses. This revitalization project will bring a significant number of sorely needed jobs to the area and will dramatically increase tax income for the City and the State. This project is fully supported by the City of Linden Mayor's office and administrative office.

Need for Project

A former chemical site requires remedial measures to support brownfield development and provide significant environmental benefits. Placement of an impermeable cap along with installation of stormwater controls will ensure that rain water will not mobilize contaminates and pollute groundwater or the adjacent waterways.

Project Description

The proposed project includes clean-up of soils and groundwater, installation of an impermeable cap and cover system, installation of stormwater controls.

Need for Project

The Shackamaxon Lake has not been dredged since 1997. Since the sediment has accumulated in amny areas to the point where it is above the surface elevation of the Lake. The Lake is no longer able to serve the purpose of sedimentation of pollutants prior to flowing downstream. Cleaning the Lake and restoring its storage capacity will increase the quality of the water flowing into the Middlesex Water Company Reservoir that is less than one mile downstream of the dam and will limit rainfall induced floooding downstream. Removing and replacing the inadequately sized bridges with properly engineered bridges will eliminate bank erosion around the bridges and will reduce the amount of silt accumulation in the storage volume from these areas.

Project Description

The proposed project includes dredging accumulated sediment that comes from upstream roads, lawns, and stream banks; stabilization of eroded bank areas; and removal and replacement of inadequately sized RCP pipe vehicand pedestrian bridges.

Need for Project

The Riverview at Delaware Station development project will reinvigorate Phillipsburg. The area is contaminated. It has a Contaminated Historic Fill, Chlorinated Solvent Impacted Soil and Ground Water, TPHC Impacted Soil, Impacted Subsurface Soil Gas Vapor, Suspected Gasoline UST, Abandoned Seepage Pit and Asbestos impacts.

Project Description

The project involves the remediation of an old railway train station and the building of 449 town house residential units on the site. The project seeks funding to embark on the remediation of the site as well as construction of storm water remediation systems and drinking water and waste water systems. The developers have done a storm water plan according to NJDEP storm water regulations. Storm water management will be achieved on the site through the use of a conventional storm water collection system of 8230 linear feet of reinforced concrete pipe and 66 storm water inlets. The collected storm water is routed through two detention/infiltration basins and one retention basin before being discharged into the Delaware River. Through the review of local, county and state regulatory agencies the system as designed meets the required regulatory design standards. This project has received all state, county and municipal and DEP approvals based on current plans. The project involves a land remediation process. Areas needing remedial action include: the Contaminated Historic Fill, Chlorinated Solvent Impacted Soil and Ground Water, TPHC Impacted Soil, Impacted Subsurface Soil Gas Vapor, Suspected Gasoline UST, Abandoned Seepage Pit Closure, Railroad Tie removal and disposal and Asbestos Removal. This involves a number of processes including: Strip Topsoil - 1' depth, General Excavation, Fill compaction, Rough Grade R.O.W., Landscape Berm Grading, Detention Basin Grading, Basin Topsoil Return, Subgrade after utilities, Fine grade / topsoil return, Rough Grade Open Space, Truck in fill, Excavation of loose material and Re-Install & Compact Material

Borough of Somerville

Need for Project

Landfill leachate contains pollutants that can contaminate water sources and make it unsafe. The Borough intends to remediate contamination and close the landfill. The Borough has also proposed a plan to set aside approximately 41 acres for rehabilitation as passive stormwater mitigation and nonpoint source pollution management.

Project Description

The proposed project includes remediation and closure of a municipal landfill and installation of stormwater management measures.

Need for Project

A redevelopment project in Teterboro will elimnate contaminated runoff and leachate from discharges to surrounding water bodies and groundwater that could adversely impact water quality in the project area. New sewer and stormwater infrastructure will elimanate an existing combined system.

Project Description

The proposed project includes construction of stormwater management controls and a sanitary sewer conveyance system.
