

**New Jersey Department of Environmental Protection  
Reason for Application**

**Permit Being Modified**

**Permit Class:** PCP      **Number:** 200001

**Description of Modifications:** Benjamin Moore is submitting this Compliance Plan Change in response to PEA240001 which was issued to the facility on May 28, 2024.

OS Summary Reference #8 states that pursuant to N.J.A.C. 7:27-8.13(a) and N.J.A.C. 7:27-8.3(e), the pressure/vacuum relief valve on the atmospheric vent of all tanks shall remain closed during transfer of tank contents into/from tanker trucks or delivery vessels except when the positive cracking pressure is exceeded.

Violation "d" in the Notice of Violation stated the facility failed to comply with PCP200001, OS Summary, Ref#8 which is to monitor the presence, and opening and/or closing of a pressure/vacuum relief valve on the Resin Tanks during transfer of contents into/from tanker trucks.

The resin tanks that are being referenced do not have pressure/vacuum relief valves, so this requirement cannot be applicable. We are therefore requesting the removal of this reference from the OS Summary.

We would also like to take this opportunity to remove all contact information from the permit other than Air Permit Information Contact, Fees/Billing Contact, and Responsible Official. All other contacts are outdated and should be removed.
