Federal Consistency Activity: Certain federal permits, not limited to the U.S. Army Corps of Engineers Dredge and Fill Permits, require certification by the DEP prior to the issuance of the permit by the federal agency.

Freshwater Wetlands: A Permit (Letters of Exemption, Letters of Interpretation, Statewide General Permit, Open Water Fill, Individual, Transition Area Waiver, Water Quality Certificate) is needed prior to engaging in a regulated activity in or around freshwater wetlands and associated transition areas. A Stream Encroachment Permit, a U.S. Army Corps of Engineers Dredge and Fill Permit, and a Water Quality Certification may also be required.

General Groundwater Petroleum Products Cleanup: This general permit authorizes the surface water discharge of treated groundwater previously contaminated with petroleum products.

NJPDES permits: A permit is required for the discharge of pollutants to surface and groundwaters, a discharge from an indirect user or the land application of municipal and/or industrial residuals. (A more comprehensive definition of activities which require a permit may be found at N.J.A.C. 7:14A-2.4)

Solid Waste Facility: A permit is required to conduct or operate any solid waste facility as defined under the Solid Waste Management Act, N.J.S.A. 13:1E-1 et seq., and N.J.A.C. 7:26-1 et seq.

Stream Encroachment: Under the Flood Control Act DEP is empowered to require a permit to control construction within and proximate to flood hazard areas to reduce flood damage to and from new development and to protect the flood storage capacity and ecology of flood plains.

Tidal Wetlands: A Coastal Wetlands Permit is needed to excavate, dredge, fill or erect structures on coastal wetlands.

Treatment Works Approval: A TWA permit is required for the construction, modification or operation of a treatment works, including sanitary/industrial sewage pretreatment or treatment systems, sewage conveyance systems, sewer extensions and subsurface sewage disposal systems.

General Information

The DEP Bulletin is an information service provided by the New Jersey Department of Environmental Protection. In compliance with the Rules and Regulations Governing 90 Day Construction Permits (NJAC 7:1C-1.1 et seq.) this semi-monthly publication contains a list of construction permit applications recently filed or acted upon by the DEP. Using the Application Milestone Codes located on the inside front cover, interested persons can determine the status of Coastal Area Facility Review Act (CAFRA) permits, Federal Consistency Activity permits, Freshwater Wetlands Individual and Statewide General permits, General Groundwater Petroleum Products Cleanup permits, Open Water Fill permits, Solid Waste Facility permits (SWF), Stream Encroachment (SE) permits, Tidal Wetlands permits, Waterfront Development permits and Treatment Works Approvals (TWA).

In addition, a calendar of Events of Interest and a Schedule of Public Hearings is provided. The public hearings listed does not, however, constitute an official notice. Environmental Impact Statements acted upon during the period are also shown. Additional information concerning the permit applications can be obtained by calling the project manager at the appropriate office listed inside the back cover.

Public Hearings are held for the purpose of obtaining input and reaction to a proposed rule, regulation, or new program. Some hearings may be mandated by law. Generally their scope of impact is statewide or of broad general interest and open to the public.

Contested Case Hearings are held between the State and a particular party involving an application, enforcement violation or an appeal. Interest in these hearings is generally limited to those directly involved.

DEP Events of Public Interest include public hearings, council meetings, workshops, public information meetings, and exams.

NOTICE OF INTENT TO ISSUE A
COASTAL AREA FACILITY REVIEW ACT (CAFRA) PERMIT**

TAKE NOTICE THAT THE DEPARTMENT OF ENVIRONMENTAL PROTECTION intends to authorize the construction of a 43 unit single family residential development, including an access roadway, an internal roadway, all utilities, and a stormwater management system, under the Coastal Area Facility Review Act (N.J.S.A. 13:19-1 et seq.). This authorization is being made in response to two Appellate Division decisions. One decision reversed a Departmental permitting action regarding the access roadway and the second decision allowed the Department to ameliorate its actions, which were preliminarily found to have caused a regulatory taking of the applicant's property.

North Jersey District Water Commission NJPDES Permit No. NJ0127990 Ground Water	One FA Orechio Drive Wanaque Borough, NJ Passaic County	Greg Chin Bureau of Nonpoint Pollution Control (609) 633-7021	II-A	The North Jersey District Water Supply Commission (NJDWSC) treats water from the Wanaque Reservoir to potable standards (SIC code 4941). The wastewater is filter backwash water. The North Jersey District Water Supply Commission (NJDWSC) operates a 140 MGD water treatment facility which treats water from the Wanaque Reservoir to potable standards (SIC code 4941). The basic treatment consists of coagulation, alum flocculation, basin settling and filtration. The Wanaque Water Treatment Facility generates residuals through the use of alum to coagulate, settle, and subsequently remove turbidity in the water. Discharges from this facility include residual removed from the sedimentation basins drained to a twelve acre lagoon located near the plant, where the residual is allowed to settle. In addition, the lagoon receives storm water runoff from an estimated twenty-eight acres of NJDWSC property including the lagoon area itself and filtrate from mechanical presses used to dewater the residual. The decanted water is discharged via Discharge Serial Number (DSN) 002 into the Wanaque Reservoir at an average flow rate of 0.164 million gallons per day and is regulated by existing NJPDES/DSW permit number NJ0062111. The NJDWSC was approved to add a 1.2 million gallon (4 compartment total) equalization basin to homogenize the residual, a residual treatment facility consisting of residual thickeners, polymer addition and plate and frame filter presses to dewater the residual, and an air drying facility, located about one mile from the basin and residual treatment facility, to further dewater the sludge. The residual treatment facility is designed to process new residuals (thereby eliminating the direct discharge to the lagoon) and accumulated wet residual. Residual cake is expected to be between 25-30% solids. A portion of the existing lagoon will remain active to receive filtrate from the mechanical presses. The drying facility is a roofed area that covers about two-thirds of an acre. The drying facility also has been provided with a concrete floor. The building will have two open sides to permit vehicles to place, disk-harrow, and reload the sludge as easily as possible. The open wall plan will also promote air drying. As a safeguard against water from the sludge or wind aided precipitation from creating a water problem, design features include walls sloped to contain water. Two 2,000 gallon tanks are provided to collect water. The water will be collected and returned to the residual treatment facility and discharged via an accessible grate that flows directly to the residual treatment facility equalization basin. Air dried residuals will be sampled per the requirements of the sampling plan revised and dated August 1995 and included as part of the permit as Appendix A. Upon receipt of the analytical results that confirm that the chemical quality of the residuals is acceptable, the air dried material will be beneficially used on site. The residual management plan calls for dewatering all residual to a minimum 41% solids content and beneficial use of this material in two on-site projects as follows: 1. Use as a soil substitute for the construction of a thermal blanket to protect the concrete of Green Swamp Dam No. 2 upon receipt of all Departmental approvals; and 2. Use as a soil substitute for partial closure and land reclamation of the sludge lagoon. It is anticipated that approximately 4500 cubic yards of air dried residuals will be produced annually. In addition, the lagoon is intended to be desludged over the course of the next two years. This material, once processed at the new air drying building, will have a volume of about 12,000 cubic yards at 41% solids. It is expected that a minimum two year period will be required to process all of the older lagoon sludge and keep up with continuing residual flows. The reclamation of the existing water treatment residual lagoon entails filling the lagoon from its edges with the air dried residual.

Beacon Hill WTF NJPDES Permit No. NJ0105228 Ground Water	Ellisdale Road Upper Freehold Twp., NJ Monmouth County	Ron Bannister Bureau of Nonpoint Pollution Control (609) 633-7021	II-A	The proposed Beacon Hill Wastewater Treatment Facility will serve the proposed Beacon Hill residential development. The Beacon Hill development will consist of 473 total units, 174 three bedroom age-restricted units, 213 two bedroom age-restricted units, 86 four bedroom single family units and a recreation complex. The sanitary wastewater generated by the proposed development will be managed by the Beacon Hill Wastewater Treatment Facility and will be treated to Ground Water Quality Standards (N.J.A.C. 7:9-6) for all parameters, except fecal coliform bacteria, prior to discharge. The wastewater treatment system will provide ultraviolet disinfection, however, Ground Water Quality Standards for fecal coliform bacteria will be met at down gradient ground water monitoring wells. The wastewater will be discharge to four subsurface disposal beds, each providing 13,110 ft2 of infiltrative surface for a total infiltrative area of 52,440 ft2. The flow from the facility shall be limited to 103,660 gpd. Because there is significant public interest in this draft permit, a Public Hearing has been scheduled for December 7, 1999. The hearing will be held at 44 South Clinton Avenue, Trenton, New Jersey from 5:00pm to 8:00 pm.
Pine Barrens Golf Club NJPDES Permit No. NJ0132225 Ground Water	Jackson Twp. Ocean County	Fritz Wise Bureau of Nonpoint Pollution Control (609) 633-7021	I-PL (Preservation Area)	Pine Barrens Golf Club is a proposed 18 hole golf course on a 430 acre site. A clubhouse with a wastewater design flow of 6100 gallons per day is also proposed. In addition, much smaller flows of wastewater will come from a maintenance building, 2 comfort stations, and a manager's residence. Septic systems will treat and dispose of the wastewater.
Warren County (Pequest River) MUA - Belvidere W.T.P. NJPDES Permit No. NJ0035114 DSW - Minor	100 Foul Rift Rd P.O. Notice is hereby given that the New Jersey Department of Environmental Protection (NJDEP) proposes to issue the New Jersey Pollutant Discharge Elimination System (NJPDES) Discharge to Surface Water (DSW) Permit NJ0035114 in accordance with N.J.A.C. 7:14A-1 <u>et seq.</u>, and by authority of N.J.S.A. 58:10A-1 <u>et seq.</u> This new facility will be a non-delegated pretreatment facility. The proposed treatment facility will discharge treated, disinfected, domestic wastewater into the Delaware River, classified as DRBC Zone 1D waters. The Delaware River is located within the Delaware River Basin. The facility plans to discharge 0.5 million gallons per day (MGD). This action proposes effluent limitations based on a flow of 0.5 MGD.
