In compliance with the Rules and Regulations Governing 90 Day Construction Permits (NJAC 7:1C-1.1 et seq.) this semi-monthly publication contains a list of construction permit applications recently filed or acted upon by the DEP. Using the Application Milestone Codes located on the inside front cover, interested persons can determine the status of Coastal Area Facility Review Act (CAFRA) permits, Federal Consistency Activity permits, Freshwater Wetlands Individual and Statewide General permits, General Groundwater Petroleum Products Cleanup permits, Open Water Fill permits, Solid Waste Facility permits (SWF), Stream Encroachment (SE) permits, Tidal Wetlands permits, Waterfront Development permits and Treatment Works Approvals (TWA).

In addition, a calendar of Events of Interest and a Schedule of Public Hearings is provided. The public hearings listed do not, however, constitute an official notice. Environmental Impact Statements acted upon during the period are also shown. Additional information concerning the permit applications can be obtained by calling the project manager at the appropriate office listed on the inside back cover.

NEW JERSEY DEPARTMENT OF ENVIRONMENTAL PROTECTION

DIVISION OF SOLID AND HAZARDOUS WASTE

NOTICE OF PUBLIC MEETING

Notice is hereby given that the New Jersey Department of Environmental Protection, Division of Solid and Hazardous Waste has renewed the existing solid waste permit for Ciba Specialty Chemicals Corporation for continued operation of Cell 3 only of Ciba-Geigy's sanitary landfill and has approved the transfer of ownership from Ciba-Geigy Corporation to Ciba Specialty Chemicals Corporation.

The landfill is located on Lot 6, Block 411 in Dover Township, New Jersey. The landfill is owned and operated by Ciba Specialty Chemicals Corporation at Oak Ridge Parkway, P.O. Box 71, Dover Township, Ocean County.

Ciba Specialty Chemicals Corporation operates the landfill for the disposal of the sludge from its on-site groundwater treatment plant. The Plant's groundwater treatment facility purifies landfill leachate and contaminated groundwater as part of the Plant's environmental remediation program. The on-site groundwater treatment process yields a non-hazardous sludge that requires disposal at the landfill. The facility is authorized to accept solid waste type 27, dry industrial waste. Cell 3 is the only active cell at the above landfill. Cell 3 currently receives sludge from the on-site Groundwater Treatment Plant. During the summer of 1994, a temporary cover, as approved by the Department, was installed over approximately 85 percent of Cell 3 to reduce the leachate generation within the cell.

The originally authorized landfill area comprised Cells 1, 2, 3 and 4. Cell 1 was capped in 1984. However, in accordance with the Administrative Consent Order (ACO) that Ciba Specialty entered into with the Department on February 27, 1992, a new capping system was installed on the top portion of Cell 1 in 1994. The permittee has advised the Department that it does not intend to construct Cells 2 and 4 in the future. In light of this and the comments received during the public participation process, the

Department has renewed the permit only for Cell 3 of the landfill. Therefore, Cells 1, 2 and 4 have not been incorporated into the permit.

The engineering design for Cell 3 incorporates measures for ground and surface water protection, including a double composite liner system, a double leachate collection and removal system and ground water monitoring. Leachate is collected and transported to the on-site groundwater treatment plant as mentioned above. An impermeable cap will be placed on Cell 3 when it attains final elevation. In accordance with the departmental rules, the permit has granted an additional five (5) years for the continued operation of Cell 3 of the subject landfill.

Notice is further given that a Public Meeting on this operating landfill has been scheduled for Wednesday, December 5, 2001. The Meeting will begin at 7:00 P.M. and continue until the conclusion of testimony. The Meeting will be held in Council Chambers at:

Dover Township Municipal Building

Emerson Electric Co. requests authorization to inject hydrogen peroxide and iron sulfate catalyst into an area of affected soil and free product via Class V injection wells. Two previous episodes of in-situ chemical oxidation treatment were performed under a NJPDES Permit-By-rule authorization issued on July 11, 2000. Evaluation of the results of the initial injections indicated that additional treatments would be needed to break down the remaining petroleum product on the water table and in the vadose zone. It is anticipated that an additional 5,200 to 10,200 pounds of hydrogen peroxide may be required to complete the remediation activities. The remaining injections will be conducted under this permit. |

The treated effluent will be discharged to a new 3,500 square foot subsurface disposal bed to be located southeast of the school. A maximum daily discharge volume of 3,500 gallons per day was used for sizing and design of the subsurface bed, accounting for the fact 7,375 gallons per day of treated effluent will be recycled back to the facility for use as water for toilet flushing.</p> <p>There are three existing separate septic systems for the older sections of the Conover Road School K-6.
