General Information

The DEP Bulletin is an information service provided by the New Jersey Department of Environmental Protection. In compliance with the Rules and Regulations Governing 90 Day Construction Permits (NJAC 7:1C-1.1 et seq.) this semi-monthly publication contains a list of construction permit applications recently filed or acted upon by the DEP. Using the Application Milestone Codes located on the inside front cover, interested persons can determine the status of Coastal Area Facility Review Act (CAFRA) permits, Federal Consistency Activity permits, Freshwater Wetlands Individual and Statewide General permits, General Groundwater Petroleum Products Cleanup permits, Open Water Fill permits, Solid Waste Facility permits (SWF), Stream Encroachment (SE) permits, Tidal Wetlands permits, Waterfront Development permits and Treatment Works Approvals (TWA).

In addition, a calendar of Events of Interest and a Schedule of Public Hearings is provided. The public hearings listed do not, however, constitute an official notice. Environmental Impact Statements acted upon during the period are also shown. Additional information concerning the permit applications can be obtained by calling the project manager at the appropriate office listed on the inside back cover.

Public Hearings are held for the purpose of obtaining input and reaction to a proposed rule, regulation, or new program. Some hearings may be mandated by law. Generally their scope of impact is statewide or of broad general interest and open to the public.

Contested Case Hearings are held between the State and a particular party involving an application, enforcement violation or an appeal. Interest in these hearings is generally limited to those directly involved.

DEP Events of Public Interest include public hearings, council meetings, workshops, public information meetings, and exams.

The prepared MRP is intended to conform to a Program 1 residual (N.J.A.C. 7:14A-20.7(h)1) based on the pollutant concentrations, pathogen reduction and vector attraction reduction achieved. ACUA Howard F Haneman NJPDES Permit No. NJ0131911 Ground Water	6700 Delilah Road Egg Harbor Twp., NJ Atlantic County	Dwayne Kobesky Bureau of Nonpoint Pollution Control (609) 633-7021		The Atlantic County Utilities Authority has applied for the renewal of the New Jersey Pollutant Discharge Elimination System (NJPDES) Discharge to Ground Water permit NJ0131911, which regulates the monitoring wells of the landfill cells. The Atlantic County Utilities Authority (ACUA) landfill was constructed in 1992 and has been operational since November 1992 as a bulky waste, industrial waste, construction waste, waste material consisting of asbestos or asbestos containing waste landfill. In October 1997, ACUA received approval from the NJDEP for a Research, Demonstration and Development (RD&D) project allowing the acceptance 100 tons of municipal waste per evening. In July 2000, ACUA received approval from the NJDEP for the inclusion of municipal solid waste as an accepted waste type at the landfill. The landfill, when complete, will occupy 77 acres of a 360 acre Environmental Park owned and operated by the ACUA. The original design of ACUA included a leachate containment sytem consisting of a double composite (geomembrane/clay) liner for Cells 1 through 10 with leachate collection and detection capabilities. This dual geomembrane/clay liner system was constructed for Cells 1 and 2. In October 1996, ACUA requested a modification of the liner system in which the primary liner system would consist of a HDPE liner only (no compacted clay). This design was utilized for Cell 4, which was constructed before Cell 3. The liner systems for Cells 3, 5 & 6 is a double composite system that utilizes a minimum of 18 inches of select granular material, 16 oz non-woven geotextile liner, 60 mil HDPE primary geomembrane liner, geosynthetic clay liner, and geocomposite drainage net. As of September 2003, ACUA is currently constructing Cell 7. The liner systems for Cells 7, 8 & 9 will also be a double composite system that utilizes a minimum of 18 inches of select granular material, 16 oz non-woven geotextile liner, 60 mil HDPE primary geomembrane liner, geosynthetic clay liner, and geocomposite drainage net. The original design called for the construction of 10 Cells, however, ACUA has been redesigned so the area that would have been Cells 7, 8, 9 & 10 is now encompassed by Cells 7, 8 & 9. The leachate collection and removal system consists of pumps and two 50,000-gallon equalization tanks. The stored leachate is aerated and pumped to the ACUA Regional Collection System. ACUA expects to cease operations between the years 2020 and 2040, depending on the amount of waste that is disposed in the landfill. Conditions of this permit include the regulation of composting activities present in two (2) designated areas. These areas are to maintain hydraulic control of areas of activity related to composting operations and will discharge all wastewater to the appropriate infiltration/percolation lagoons (I03I, I04I, and I05I).

Jockey Hollow Girl Scout Camp	Tempe wick and Laddell Road Mendham Twp., NJ	Greg Chin	II-A	The facility is an existing Girl Scout camp on 195.2 acres. A proposed building expansion includes the construction of a 26'x82' troop cabin, six 26'x32' log cabins, six 18'x18' activity shelters, a 40'x60' activity shelter, a 20'x25' log style garage, a new pool, and a new pool house. The proposed expansion will allow the camp population to increase from 108 to 172 people per day in the winter and an increase of 265 people per day in the summer to 358. Overnight camping will only take place on the weekends during the winter and will be limited to a maximum of 40 girls for six nights one week during the summer. The focus of the facility will remain as a day camp during the summer. Based on actual flow data plus a safety factor, the projected wastewater design flow will be 1772 gallons per day. The proposed expansion will remove the blackwater component of wastewater from the groundwater discharge by the use of composting toilets. The gray water from sinks and showers will be collected and gravity drained to a media filter and tanks prior to onsite disposal via subsurface drip irrigation or removal to an offsite wastewater treatment plant. Gray water from an educational center and lodge will be discharged to ground water via separate upgraded subsurface disposal systems. A 25,000 square foot disposal area will be constructed to allow the discharge of filtered gray water to ground water. Monitoring wells will be utilized to assess compliance with the Ground Water Quality Standards.
