Federal Consistency Activity: Certain federal permits, not limited to the U.S. Army Corps of Engineers Dredge and Fill Permits, require certification by the DEP prior to the issuance of the permit by the federal agency.

Freshwater Wetlands: A Permit (Letters of Exemption, Letters of Interpretation, Statewide General Permit, Open Water Fill, Individual, Transition Area Waiver, Water Quality Certificate) is needed prior to engaging in a regulated activity in or around freshwater wetlands and associated transition areas. A Stream Encroachment Permit, an U.S. Army Corps of Engineers Dredge and Fill Permit, and a Water Quality Certification may also be required.

General Groundwater Petroleum Products Cleanup: This general permit authorizes the surface water discharge of treated groundwater previously contaminated with petroleum products.

NJPDES permits: A permit is required for the discharge of pollutants to surface and groundwater, a discharge from an indirect user or the land application of municipal and/or industrial residuals. (A more comprehensive definition of activities, which require a permit, may be found at N.J.A.C. 7:14A-2.4)

Solid Waste Facility: A permit is required to conduct or operate any solid waste facility as defined under the Solid Waste Management Act, N.J.S.A. 13:1E-1 et seq., and N.J.A.C. 7:26-1 et seq.

Stream Encroachment: Under the Flood Control Act DEP is empowered to require a permit to control construction within and proximate to flood hazard areas to reduce flood damage to and from new development and to protect the flood storage capacity and ecology of flood plains.

Tidal Wetlands: A Coastal Wetlands Permit is needed to excavate, dredge, fill or erect structures on coastal wetlands.

Treatment Works Approval: A TWA permit is required for the construction, modification or operation of a treatment works, including sanitary/industrial sewage pretreatment or treatment systems, sewage conveyance systems, sewer extensions and subsurface sewage disposal systems.

Waterfront Development: A permit is required for any project involving the development of waterfront near or upon any tidal or navigable waterway in the State.

General Information

The DEP Bulletin is an information service provided by the New Jersey Department of Environmental Protection. In compliance with the Rules and Regulations Governing 90 Day Construction Permits (NJAC 7:1C-1.1 et seq.) this semi-monthly publication contains a list of construction permit applications recently filed or acted upon by the DEP. Using the Application Milestone Codes located on the inside front cover, interested persons can determine the status of Coastal Area Facility Review Act (CAFRA) permits, Federal Consistency Activity permits, Freshwater Wetlands Individual and Statewide General permits, General Groundwater Petroleum Products Cleanup permits, Open Water Fill permits, Solid Waste Facility permits (SWF), Stream Encroachment (SE) permits, Tidal Wetlands permits, Waterfront Development permits and Treatment Works Approvals (TWA).

In addition, a calendar of Events of Interest and a Schedule of Public Hearings is provided. The public hearings listed do not, however, constitute an official notice. Environmental Impact Statements acted upon during the period are also shown. Additional information concerning the permit applications can be obtained by calling the project manager at the appropriate office listed on the inside back cover.

Public Hearings are held for the purpose of obtaining input and reaction to a proposed rule, regulation, or new program. Some hearings may be mandated by law. Generally their scope of impact is statewide or of broad general interest and open to the public.

Contested Case Hearings are held between the State and a particular party involving an application, enforcement violation or an appeal. Interest in these hearings is generally limited to those directly involved.

DEP Events of Public Interest include public hearings, council meetings, workshops, public information meetings, and exams.

NEW JERSEY DEPARTMENT OF ENVIRONMENTAL PROTECTION
DEP BULLETIN NOTICE
APPROVAL OF CHESTER TOWNSHIP'S WELLHEAD PROTECTION
ORDINANCE §113-242.2
PURSUANT TO UNDERGROUND STORAGE OF HAZARDOUS SUBSTANCES ACT
(N.J.S.A. 58:10A-21. ET.SEQ) AND IMPLEMENTING REGULATIONS (N.J.A.C. 7:14B)

On December 6, 2004, the Department received Chester Township's application requesting approval of Well Head Protection Ordinance §113-242.2 (Ordinance) pursuant to the Underground Storage of Hazardous Substances Act (N.J.S.A. 58:10A-21. et.seq) and Implementing Regulations (N.J.A.C. 7:14B). By submitting this petition, Chester Township has requested the authority to enact and enforce an ordinance that is more environmentally protective than N.J.A.C. 7:14B.

As part of their application Chester Township provided a copy of the Ordinance, Resolution of the Township Council, a "*Planning Report – Proposed Amendments to the 2000 Reexamination and Comprehensive Revision of the Chester Township Master Plan, Township of Chester Master Plan Amendments, Environmental Plan Element and Utility Plan Element*", Legal Notice and Resolution of the Chester Township Planning Board adopting "*2000 Reexamination and Comprehensive Revision of the Chester Township Master Plan*", a "*Planning Report – Proposed Well Head Protection Regulations and B-Business Zone Districts Amendments, Township of Chester, Land Development Ordinance, Chapter 113, Amendments*", and the Township's brief in the case of Consult Realty Corporation v. Planning Board of the Township of Chester, et al. in support of their application. The Ordinance regulates the use of land, physical facilities and other activities within the three tiers of Well Head Protection Areas (WHPAs) delineated by the NJ Geological Survey based on time of travel. This Ordinance prohibits the installation of new underground storage tanks (USTs) within WHPA tiers one and two and imposes best management practices requirements on USTs in all three WHPA tiers when triggered by the application for a change in land use or activity.

Based on the information provided, Chester Township has initiated the Ordinance as a preventative measure to reduce the probability of accidental spills or leaks which can be associated with hazardous substance storage and

handling in environmentally critical WHPAs (as defined by N.J.A.C. 7:8-1.2). Chester Township adopted its Ordinance on April 24, 2004, with the following stated purposes:

[T]o protect the public health, safety and welfare through the protection of the ground water resources underlying the Township to ensure a supply of safe and healthful drinking water for present and future generations of local residents, employees and the general public in the Township, as well as users of these water supplies outside the Township. ... Through the regulation of land use, physical facilities and other activities within [delineated WHPAs], the potential for ground water contamination can be reduced. ...[and] to prevent the migration of potential pollutants from areas within a WHPA into ground water that is withdrawn from a public community well or school well. [WHP Ordinance §113-242.1B].

Chester enacted the Ordinance based upon findings that (1) Chester “is heavily dependent on groundwater for its water supply,”; (2) “spills or discharges... have the potential to contaminate or pollute ... these groundwater supplies”, and (3) the sole source aquifer underlying the Township is particularly vulnerable to contamination and the spread of contamination due to the “thinness of the soils, the high permeability of the stratified glacial deposits, and the fractured nature of the bedrock.” 3/15/04 Planning Report, pp. 3-6 to 3-7 and 4-4.

The New Jersey Geological Survey (NJGS) established WHPA delineation as part of a requirement of the 1986 Federal Safe Drinking Water Act (FSDWA) to develop and implement a State program to protect wellhead areas within New Jersey from contaminants that may have any adverse effect on the health of persons. 42 U.S.C. § 300h 7. In response to this mandate, New Jersey drafted a Wellhead Protection Program Plan (“WHPP”), which was approved by EPA Region II by letter dated 6/19/1991. The WHPP stated that the most critical of its key concepts is the development of municipal and county controls of sources which remain unregulated by the Department and prevention of the development of new sources. 1991 WHPP, p v. The WHPP further stated that “municipal governments will be encouraged to make full use of these authorities to further the WHPP.” 1991 WHPP, p. 15. By prohibiting and regulating new and enlarged pollutant sources within WHPAs, Chester Township has taken steps to reduce the potential for contaminants to enter the Sole Source Aquifer System surrounding Public Community Wells and school wells (Public Non-Community Wells) which are consistent with the 1991 WHPP.

Subsequently, 1996 amendments to the FSDWA required states to implement a Source Water Assessment Program to predict potential threats to the quality of the drinking water sources in the State. As part of this program, states are required to define wellhead protection areas and identify all potential anthropogenic (caused by humans) sources of contaminants, which may have any adverse effect on the health of persons. Once these areas and contaminants have been identified, the state program is encouraged to provide “implementation of control measures” “to protect the water supply within wellhead protection areas from such contaminants.” New Jersey’s Source Water Assessment Program conducted an inventory of potential contaminant sources and a determination of the source waters’ susceptibility to regulated contaminants including volatile organics. Using past studies, water sample data and statistical models, the State determined vulnerability ratings and the environmental factors that have the potential to affect the source waters’ vulnerability. Point sources of contamination have been determined to be a significant factor for determining the vulnerability to contamination from volatile organic compounds. The density of underground storage tanks, when combined with the density of solid waste landfills and Known Contaminated Sites is a significant factor contributing to this class of contaminants. Sixty-one percent of unconfined community water systems wells were rated as highly vulnerable to volatile organic compounds.

New Jersey’s Safe Drinking Water Act (NJSDWA) sets forth a legislative determination that “it is a paramount policy of the State to protect the purity of the water we drink” and “that the maintenance of high-quality potable water is essential in order to safeguard the health and welfare of the people of the State.” N.J.S.A. 58:12A-2. Regarding contaminants, and the authority to address a potential threat to drinking water, such as that identified in the Source Water Assessments, the NJSDWA provides:

“The commissioner, upon receipt of information that a contaminant which is present in or is likely to enter a water system may present an imminent and substantial endangerment to the health of persons, may take such actions as he may deem necessary in order to protect the health of such persons. Such actions may include, but shall not be limited to: a. issuing such orders as may be necessary to protect the health of persons who are or may be users of such system, including travelers; and b. commencing a civil action for appropriate relief, including a restraining order or permanent or temporary injunction.” N.J.S.A. 58:12A-6.

Documentation provided substantiates the geologic conditions, including but not limited to the bedrock aquifer warranting Chester Township’s implementation of this Ordinance. The Township of Chester is located in an area with a high water table (typically less than 3.5 feet to ground water), and very little, if any soil or overburden (typically less than 4 feet to bedrock). In areas where the overburden may be present, the glacial drift is found to be highly permeable, porous sands and gravels with some interbedded clays. This situation is not an effective barrier or deterrent to ground water pollution migration. The Department recognizes that once ground water is impacted by hazardous substances (especially volatile organic compounds) in this type of hydrologic structure, it is difficult to investigate, contain and remediate the contamination given the inherent complexities of ground water flow along and within bedrock features. The common high capacity yields of Public Community and Public Non-Community Wells further influence and complicate contaminant transport and remediation. Under these conditions, accidental spills or leaks of hazardous substances are likely to enter the water system and will present an imminent and substantial endangerment to the health of persons upon entry into the water system.

In addition, the Township of Chester is located in a designated sole source aquifer, specifically the Northwest New Jersey Fifteen Basin Sole Source Aquifer. A Sole Source Aquifer is defined as those aquifers that contribute more than 50% of the drinking water to a specific area and the water would be impossible to replace if the aquifer were contaminated. Recharge is almost entirely from the precipitation that falls within the basin. Local flow systems typically recharge at topographic high areas and discharge at the streams found in the valleys. Any pollutant discharges within this recharge area are a threat to the drinking water supply. The US Environmental Protection Agency states,

“The Fifteen Basin Aquifer System of Northwest New Jersey is vulnerable to contamination from many sources. The thinness of the soils, the high permeability of the stratified glacial deposits and the fractured nature of the bedrock contribute to the vulnerability and spread of contamination.”

The Department regulates underground storage tanks (USTs) pursuant to the Water Pollution Control Act, N.J.S.A. 58:10A-21 through 37. The State’s regulation of USTs is intended to “provide for the registration and the systematic testing and monitoring of underground storage tanks to detect leaks and discharges as early as possible and thus minimize further degradation of potable water supplies.” N.J.S.A. 58:10A-21. The Department is authorized to review and approve municipal ordinances which are more stringent (i.e. more environmentally protective) than the state program. N.J.S.A. 58:10A-35(b), N.J.A.C. 7:14B-11.2. Pursuant to 7:14B-11.3(b), a municipal ordinance is approvable if it meets one of the following criteria:

1. The municipal ordinance provides greater environmental protection for unique hydrologic conditions;
2. The municipal ordinance provides greater protection against imminent threats to human health; or
3. The municipal ordinance provides greater environmental protection for wetlands or flood plains.

The Ordinance has been drafted and submitted with the intent of providing “greater protection against imminent threats to human health.”

The Department has evaluated the application pursuant to N.J.A.C. 7:14B-11.3 and finds that the Ordinance is

more stringent than and not in conflict with N.J.A.C. 7:14B and warrants approval. Specifically, the Department has determined that the Ordinance meets the criteria specified at N.J.A.C. 7:14B-11.3(b)2 by providing “greater protection against imminent threats to human health”. The Ordinance is deemed to meet the conditions required pursuant to N.J.S.A. 58:10A-35(b), has been deemed to be effective and not preempted and Chester Township has been given approval to enforce and administer its provisions.

The Department finds that the Ordinance also furthers the goals of the Source Water Assessment Program, the 1986 Federal Safe Drinking Water Act and its amendments of 1996 and New Jersey’s federally approved Well Head Protection Plan. The Department also finds that the Ordinance is consistent with State policy contained in the Safe Drinking Water Act (N.J.S.A. 58:12A-2) to protect water purity and safeguard the health and welfare of the people of the State.

Chester Township has been advised that with the authority granted to implement the Ordinance, Chester Township is also obligated to insure that its provisions are carried out in a manner which is not inconsistent with N.J.A.C. 7:14B.

Since Chester Township enacted the Ordinance ahead of Department approval, the Department has recommended that Chester Township readopt the Ordinance and provide the Department a final copy as required pursuant to N.J.A.C. 7:14B-11.3(d).
