Leachate, a wastewater generated when stormwater seeps through solid waste, is presently collected and pumped to PRMUA Oxford STP under a separate permit, NJ0102598. However, the Oxford STP was unable to consistently treat the increasing ammonia concentrations in the leachate adequately. Both Belvidere STP and the Hackettstown Municipal Utilities Authority (HMUA) STP have treatment equipment specifically designed for removal of ammonia. Therefore an emergency permit was issued to allow leachate to be transported to two other sewage treatment plants plants for treatment during the time needed for design and construction of additional treatment equipment at WCDL and/or at the PRMUA Oxford STP. Design of the treatment equipment is underway. However, the Department has not yet issued a draft renewal of permit NJ0102598 to address the changed circumstances, and has issued another emergency permit under NJ0163333 to allow continuation of current activities until the effective date of a final renewal of permit NJ0102598. The comment period ends 30 days after publication in the Express newspaper.

Vineland, NJ 08360 Cumberland County	Nilesh Naik Bureau of Pretreatment and Residuals (609) 633-3823	Landis Sewerage Authority's wastewater treatment plant (LSA)	The applicant is a potable water provider. The applicant has installed a radium removal system to treat naturally occurring radium contamination in the public water supply. Approximately 16,560 gallons of wastewater is being generated in a typical regeneration cycle. The applicant has reduced the regeneration cycle from 32 hours to 24 hours. The applicant has installed a 20,000 gallon storage tank and a mixing system in the storage tank to equalize and homogenize the wastewater flow. The applicant has only been permitted to discharge if the upstream flow in the public sewer is sufficient such that after mixing with the discharge the concentration of radium-224, radium-226 and radium-228 does not exceed the standards established by the Radiation Protection Program.
