General Information

The DEP Bulletin is an information service provided by the New Jersey Department of Environmental Protection. In compliance with the Rules and Regulations Governing 90 Day Construction Permits (NJAC 7:1C-1.1 et seq.) this semi-monthly publication contains a list of construction permit applications recently filed or acted upon by the DEP. Using the Application Milestone Codes located on the inside front cover, interested persons can determine the status of Coastal Area Facility Review Act (CAFRA) permits, Federal Consistency Activity permits, Freshwater Wetlands Individual and Statewide General permits, General Groundwater Petroleum Products Cleanup permits, Open Water Fill permits, Solid Waste Facility permits (SWF), Stream Encroachment (SE) permits, Tidal Wetlands permits, Waterfront Development permits and Treatment Works Approvals (TWA).

In addition, a calendar of Events of Interest and a Schedule of Public Hearings is provided. The public hearings listed do not, however, constitute an official notice. Environmental Impact Statements acted upon during the period are also shown. Additional information concerning the permit applications can be obtained by calling the project manager at the appropriate office listed on the inside back cover.

Public Hearings are held for the purpose of obtaining input and reaction to a proposed rule, regulation, or new program. Some hearings may be mandated by law. Generally their scope of impact is statewide or of broad general interest and open to the public.

Contested Case Hearings are held between the State and a particular party involving an application, enforcement violation or an appeal. Interest in these hearings is generally limited to those directly involved.

DEP Events of Public Interest include public hearings, council meetings, workshops, public information meetings, and exams.

Historically, the facility had produced ceramic dinnerware and giftware, but china manufacturing operations ceased as of December 19, 2005 and the associated manufacturing equipment has been removed. Non-contact cooling water from air compressors and atmospheric generators, as well as stormwater runoff, is discharged to an on-site surface impoundment. Discharges enter the impoundment through two pipes, and overflow from the impoundment is released into a culvert discharging into the Jack Pudding Branch of the Babcock Swamp. The overflow from the impoundment is regulated separately as a surface water discharge under NJPDES-DSW permit NJ0005177. All process wastewater and boiler blow down is sent to the ACUA Sewerage Plant, which is regulated separately under the facility's NPDES-SIU permit NJ0133841.

Two potable wells supply water and are located approximately 390 feet from the spray irrigation field and the subsurface disposal system. Sanitary wastewater is collected and undergoes flow equalization, primary settling, biological treatment utilizing RBCs, denitrification and UV disinfection prior to spray irrigation or subsurface disposal. The method of wastewater disposal alternates seasonally between subsurface disposal and spray irrigation. All residuals generated at the facility will be managed off-site at an approved residuals management operation.
Toms River ASR Well No. 46 NJ0150711 Ground Water	Dover Township Dover Twp. Ocean County	Lisa Hoare Bureau of Nonpoint Pollution Control (609) 633-7021	II-A	This is a new NJPDES-DGW permit application. United Water Toms River (UWTR) supplies potable water to customers in Berkeley Township, South Toms River Borough and Dover Township, Ocean County, New Jersey. Due to increasing residential and commercial development in the townships, water demands on United Water's system increased at a rapid rate. Untied Water Toms River's ASR Well 46 is located on Whitesville Road in northern Dover Township. The present configuration consists of a Middle Potomac Raritan Magothy ASR well (Well 46), a fully penetrating Middle PRM monitor well (OB-1), and an existing production well screened in the Cohansey Aquifer (Well 31). Recharge water will either be obtained from Well No. 31 or acquired from system water as outlined in their current approved water allocation permit. Specifically the water allocation permit allows withdrawal from the Parkwell Well Field, Wells No. 24, 26, 28, 29, 39, 41 and 42, as well as Parkway Well Field South Wells No. 44, 45. The major modification is needed to clarify a typographical error in the sampling interval as referenced in Part III, Limits and Monitoring Requirements as well as identify an alternate monitoring well serving in place of the downgradient compliance monitoring well as required in the existing permit. The aquifer storage and recovery (ASR) system involves the conversion of LTMUA Englishtown Well 2 into an ASR well. Well 2 has been limited in use the last few years due to the implementation of Critical Area I regulations. Well 2 is completed into the Englishtown Aquifer at a total depth of 762 feet. The ASR system will withdraw water from the shallow Kirkwood-Cohansey (KC) Aquifer during the fall, winter and spring, placing water into storage within the Englishtown Aquifer for summer usage. The water is chlorinated before injection into the ASR well. Short term testing was performed over the course of three cycles. The cycles were conducted during August and September 2000. The testing showed that the recovery water showed low levels of trihalomethanes (THM's), lower than the injection water contained. Further testing showed no other problem parameters with the recovered water. The first long-term cycle went into effect the second week of April 2004 and the injectate will be recovered during May and June 2004. After this phase data will be compiled with the results as well as a mathematical model detailing the effects of advection and dispersion, amending the original

EPEC Polymers, Inc. (Former) NJ0081850 SIU	45 River Rd. Raritan Twp, NJ 08822 Hunterdon County	Gary Torres Bureau of Pretreatment and Residuals (609) 633-3823	Raritan Township Municipal Utilities Authority Sewage Treatment Plant (RTMUA)	This application is for a renewal NJPDES permit. The facility was used to manufacture polyvinyl chloride from vinyl monomer (SIC Code 2821), until closing about twenty years ago. Groundwater decontamination operations were begun in January, 1987, primarily to remove vinyl chloride and trichloroethylene. An average of about 37,000 gallons of groundwater daily is discharged to RTMUA after pretreatment with an activated carbon pretreatment system. Comment period ends 30 days after publication in the Democrat newspaper.
CMCMUA Secure Sanitary Landfill NJ0085952 SIU	2050 Route 610 Woodbine, NJ 08270 Cape May County	Gary Torres Bureau of Pretreatment and Residuals (609) 633-3823	Cape May County Municipal Utilities Authority Seven Mile Beach and Ocean City Sewage Treatment Plants	This application is for a renewal NJPDES permit. Discharge originates from a roughly 93 acre sanitary landfill on a 454 acre site. Approximately 22,500 gallons daily of leachate, formed by stormwater percolating through the solid waste in the landfill, is accumulated in two above-ground storage tanks, each of 0.75 million gallon capacity. Two or three days per week, stored leachate is trucked to sewage treatment facilities, where further treatment occurs. Under normal circumstances, all leachate goes to the Seven Mile Beach plant, but the other plant may be used if Seven Mile Beach temporarily has insufficient capacity. In actuality, all leachate discharged from July 1, 2000 through October 31, 2006 was taken to Seven Mile Beach. Because there have been no substantial changes in relevant operations, discharges or performance at the landfill or receiving sewage treatment plants, the Department is proposing to renew this permit without any change. Comment period ends 30 days after publication in the Atlantic City Press newspaper.

Shorelands Water Co. Water Treatment Plant #2 NJ0166766 RES. Cat. E	Shorelands Water Co.–Water Treatment Plant #2 Hunters Lane Holmdel Township, Monmouth County	Patrick R. Brown Bureau of Pretreatment and Residuals (609) 633-3823	NA	This application is for a new NJPDES permit. Water treatment residuals (WTR) generated during the production of potable water at the Shorelands Water Co.–Water Treatment Plant #2 located in Holmdel Township, Monmouth County are directly land applied to lands with suitable soils and mixed with soil and other aggregates to produce topsoil blends. Water treatment residuals quality analyses presented to the NJDEP indicate that the water treatment residuals are suitable for land application. Comment period ends 30 days after publication in the Asbury Park Press newspaper.

Additionally, the permittee has authority to reuse its effluent under an authorization (NJG0165964) of the reuse general permit (NJ0142581). This renewal permit proposes to revoke that authorization and authorize effluent reuse under this individual permit.

This facility is proposed to be authorized to reuse treated effluent wastewater for sanitary sewer jetting which is under the category of Restricted Access-Industrial Systems. All other reuse requirements are proposed in this permit action, however they are not activated. When the Department receives notice from the permittee, the reuse requirements will be activated and a monthly WCR form for reuse will be created.
