General Information

The DEP Bulletin is an information service provided by the New Jersey Department of Environmental Protection. In compliance with the Rules and Regulations Governing 90 Day Construction Permits (NJAC 7:1C-1.1 et seq.) this semi-monthly publication contains a list of construction permit applications recently filed or acted upon by the DEP. Using the Application Milestone Codes located on the inside front cover, interested persons can determine the status of Coastal Area Facility Review Act (CAFRA) permits, Federal Consistency Activity permits, Freshwater Wetlands Individual and Statewide General permits, General Groundwater Petroleum Products Cleanup permits, Open Water Fill permits, Solid Waste Facility permits (SWF), Flood Hazard Area (FHA) permits, Tidal Wetlands permits, Waterfront Development permits and Treatment Works Approvals (TWA).

In addition, a calendar of Events of Interest and a Schedule of Public Hearings is provided. The public hearings listed do not, however, constitute an official notice. Environmental Impact Statements acted upon during the period are also shown. Additional information concerning the permit applications can be obtained by calling the project manager at the appropriate office listed on the inside back cover.

Public Hearings are held for the purpose of obtaining input and reaction to a proposed rule, regulation, or new program. Some hearings may be mandated by law. Generally their scope of impact is statewide or of broad general interest and open to the public.

Contested Case Hearings are held between the State and a particular party involving an application, enforcement violation or an appeal. Interest in these hearings is generally limited to those directly involved.

DEP Events of Public Interest include public hearings, council meetings, workshops, public information meetings, and exams.

Although secondary treatment will be provided, the permittee has proposed to meet ground water quality standards for all parameters at down gradient ground water monitor wells. Discharge to ground waters of the State will occur via a mounded soil replacement subsurface disposal system. Flow from the facility shall be limited to 6,500 gallons per day (gpd). There is one discharge monitoring point and four (4) monitoring wells.</p> <p>All residuals generated at this facility will be managed off-site at an approved residuals management operation.</p> <p>The Department is granting a reduction in the number of parameters that must be reported on the annual residuals "production" WCR at monitoring location SL1A, pursuant to N.J.A.C. 7:14C-1.13(c). The new annual residuals WCR with reduced reporting parameters will replace the existing annual residuals WCR beginning the calendar year that the permit becomes effective.</p> <p>Consistent with N.J.A.C. 7:14C-1.8(c)1, the Department has added a requirement that this wastewater treatment plant submit a residuals Discharge Monitoring Report (DMR) one time per calendar year, only in years when sludge is removed for use or disposal. The new annual residuals DMR will be required to be submitted beginning with calendar year 2010.</p>

However, the Oxford STP was unable to consistently treat the increasing ammonia concentrations in the leachate adequately. Both Belvidere STP and the Hackettstown Municipal Utilities Authority (HMUA) STP have treatment equipment specifically designed for removal of ammonia. Therefore an emergency permit was issued to allow leachate to be transported to two other sewage treatment plants for treatment during the time needed to complete construction of additional treatment equipment at WCDL and design and construct additional treatment equipment at the PRMUA Oxford STP.</p> <p>The additional treatment equipment at WCDL is/was expected to be completed and tested during the week of October 4, 2009.</p> <p>The comment period ends 30 days after publication in the Express newspaper.</p>
