## General Information

---

The DEP Bulletin is an information service provided by the New Jersey Department of Environmental Protection. In compliance with the Rules and Regulations Governing 90 Day Construction Permits (NJAC 7:1C-1.1 et seq.) this semi-monthly publication contains a list of construction permit applications recently filed or acted upon by the DEP. Using the Application Milestone Codes located on the inside front cover, interested persons can determine the status of Coastal Area Facility Review Act (CAFRA) permits, Federal Consistency Activity permits, Freshwater Wetlands Individual and Statewide General permits, General Groundwater Petroleum Products Cleanup permits, Open Water Fill permits, Solid Waste Facility permits (SWF), Flood Hazard Area (FHA) permits, Tidal Wetlands permits, Waterfront Development permits and Treatment Works Approvals (TWA).

In addition, a calendar of Events of Interest and a Schedule of Public Hearings is provided. The public hearings listed do not, however, constitute an official notice. Environmental Impact Statements acted upon during the period are also shown. Additional information concerning the permit applications can be obtained by calling the project manager at the appropriate office listed on the inside back cover.

Public Hearings are held for the purpose of obtaining input and reaction to a proposed rule, regulation, or new program. Some hearings may be mandated by law. Generally their scope of impact is statewide or of broad general interest and open to the public.

Contested Case Hearings are held between the State and a particular party involving an application, enforcement violation or an appeal. Interest in these hearings is generally limited to those directly involved.

DEP Events of Public Interest include public hearings, council meetings, workshops, public information meetings, and exams.

Sanitary wastewater is treated via primary clarifier, trickling filter, secondary clarifier, sand polishing filter, chlorination and dechlorination. The tenant list includes: a Chinese restaurant, a gymnasium, a veterinary hospital, a French restaurant, a pizza shop, a dry-cleaning establishment, a pharmacy, a nail salon, and a convenience store. An onsite wastewater treatment plant treats sanitary wastewater, which has a design capacity of 6,500 gallons per day (gpd). The treated wastewater will be discharged to three (3) existing subsurface disposal beds and a proposed fourth disposal bed. Disposal bed B-1 has an area of 877.5 sq. ft. The second disposal bed (W-2) encompasses an area of 600 sq. ft., while the third disposal bed, designated W-3, encompasses an area of 287.5 sq. ft. The fourth disposal bed will have an area of 1,080 square feet. The combined subsurface disposal area encompasses 2,845 sq. ft. The wastewater treatment process meets a discharge limitation for total nitrogen at the discharge point prior to subsurface disposal. Groundwater monitoring wells located down-gradient of the disposal areas are the compliance point where the groundwater standard for fecal coliform bacteria must be achieved. The three piezometer wells located within the disposal beds monitor their hydraulic performance.</p> <p>The Department is granting a reduction in the number of parameters that must be reported on the annual residuals "production" Waste Characterization Report (WCR) at monitoring location SL1A, pursuant to N.J.A.C. 7:14C-1.13(c). This reduction will occur during the same calendar year as the effective date of the permit renewal. At that time, please discard the old annual production WCR and replace it with the new one.</p>

Runyon WTP NJ0085472 Ground Water	2 Old Water Works Rd Old Bridge Twp., NJ Middlesex County	Greg Chin Bureau of Nonpoint Pollution Control (609) 633-7021	II-A	<p>This renewal permit action is for the Runyon Water Treatment Plant which treats water high in iron and manganese drawn from wells in the Old Bridge Aquifer for potability purposes. Aeration, clarification, disinfection, pH adjustment, and pressure filters remove the excess iron and manganese from the well water. Sludge generated from the four (4) clarifiers and filter backwashed water are sent to two (2) settling basins, classified as surface lagoons (JO2 - A &amp; B). In addition, the facilities lime operation floor drains discharge into these surface lagoons and may contain lime solids and the slurry from when the lime tanks are flushed during maintenance. The partially dewatered sludge is pumped to the permanently constructed impermeable sludge drying beds (infiltration – percolation lagoons). These drying beds consisting of an under drain filtrate collection system remove the excess water through gravity filtration and is dried further naturally. The dried sludge is trucked off site for disposal. The filtrate goes to another surface lagoon. From there it is pumped back to the beginning of the treatment process.</p> <p>The sludge from the clarifiers and filter backwash water from the filters is discharged to three surface impoundments where the iron and manganese is allowed to settle. The solids dredged from the surface impoundments will be removed to temporary bermed drying beds for further dewatering, after which it will be removed to a temporary stockpile area where it will mixed with sand and disposed of off site. The City of Perth Amboy will be constructing hypalon-lined sludge drying basins with an underdrain system piped to the head of the plant to replace the temporary unlined drying beds. Occasionally, the facility rinses down the trucks used in the sludge handling operation. This rinsewater flows overland towards the surface impoundments and may contain small amounts of petroleum hydrocarbons.</p>

This permit action is a major modification to add monitoring and reporting for Radium-226 and Radium-228 on the discharge monitoring report (DMR) since well monitoring shows the presence of these two parameters. Residuals monitoring is being added to the permit and Radium-226 and Radium-228 will be included on the Residuals DMR.</p>
