"FCH2"= fuel cell consuming on-board stored hydrogen										
LiP= Lithium polymer battery										
Li+ =Lithium ion battery										
Type V ZEV has a range of equal to or greater than 300 miles, must be capable of replacing 95% maximum rated energy capacity in <= 15 minutes.										
Type IV ZEV has a range of equal to or greater than 200 miles, must be capable of replacing 95% maximum rated energy capacity in <= 15 minutes.										
Type III ZEV has a range of equal to or greater than 100 miles, must be capable of replacing 95% maximum rated energy capacity in <= 10 minutes, or range of equal to or greater than 200 miles with no fast refueling requirements.										
Type II ZEV has a range of equal to or greater than 100 miles.										
Type Ix means range extended 100 mile or greater all electric range battery electric vehicle.										
Type I.5 ZEV has a range of equal to or greater than 75 miles.										
Type I ZEV has a range of equal to or greater than 50 miles.										
Type 0 ZEV has a range of less than 50 miles.										
NEV = Neighborhood Electric Vehicle										
NEV+= Neighborhood Electric Vehicle meeting CCR 1962.1(d)(5)(F) specifications and requirements										
TZE= Transitional Zero Emission Vehicle										
PZEV= Partial ZEV Allowance Vehicle, a vehicle that cannot be identified as a ZEV but qualifies for a PZEV allowance of at least 0.2.										
LEVIII SULEV30= A vehicle certified under LEVIII program and able to generate a partial zero emission allocation.										
EPA Air Pollution Score:										
EPA Air Pollution Score: This score reflects the tailpipe emissions for which the vehicle was certified to comply with that contribute to local and regional air pollution, creating problems such as haze, and health issues. The pollutants include Oxides of Nitrogen (NOx), Hydrocarbon (NMOG etc), Carbon Monoxide (CO), Particulate Matter (PM) and Formaldehyde (HCHO). This score can range from 0 to 10, with the higher the better.										
EPA Greenhouse Gas Score:										
EPA Greenhouse Gas Score: This score reflects emissions of carbon dioxide (CO2) and other greenhouse gases. This score is based on the vehicle's fuel economy, emissions of methane (CH4) and nitrous oxide (N2O), which are largely dependent on a vehicle's emission control technology, with adjusted global warming potential. Each fuel creates different scores due to different carbon content and [can] varies from a range from 0 to 10, with higher fuel economy receiving a higher Greenhouse Gas Score.										
EPA SmartWay/SmartWay Elite:										
EPA SmartWay/SmartWay Elite: The SmartWay designation is earned by those vehicles that have combined Air Pollution and Greenhouse Gas Scores that place them in the top tier (approximately the top 20%) of environmental performers. If a vehicle a combined score of ≥ 12 (minimum GHG score = 6; minimum air pollution score = 5), it gets a SmartWay designation. SmartWay Elite is designated if a vehicle gets a combined score of ≥ 17 (minimum GHG score = 9), or the best of the best.										
EPA's Carline Class is used here.
