Charge@Work Program

Overview

We are excited to announce the national Charge@Work program!

Our vision: Shift 50% of vehicle sales to electric by 2030, promoting healthier air and reduced pollution. We're crafting guides for employers and employees on workplace charging, organizing training, and measuring project outcomes through surveys. Charge@Work aims to engage over 50,000 workplaces, influencing hundreds of thousands of employees, and promoting the installation of 100,000+ EV charging stations. We're committed to ensuring 40% of outreach targets priority communities often overlooked in transportation policy. By leveraging our e-mobility expertise and commitment to diversity, we aim to build an equitable e-mobility infrastructure. This isn't just a transition, it's a transformation towards a sustainable future.

Join us as we share insights and explore the future of workplace charging. Together, let's power a more sustainable, inclusive future.

Webinar with EVNoire

January 23, 2024

1:00 PM - 2:00 PM Eastern Time

[EVNoire Webinar Registration](#)

Join the New Jersey Department of Environmental Protection and EVNoire for an enlightening webinar about the future of workplace electric vehicle (EV) charging.

Presenters!

Brittany Pfeiffer
Environmental Specialist
at the NJDEP, Bureau of
Mobile Sources

Jennifer VanIstendal
Research Scientist at the
