Site Commentary

Site Information

M-31	
Pipe Dimensions (in.)	Circular (18.00 in H)
Silt (in.)	1.50

Overview

M-31 was situated on a branch of the Easterly Intercepting Sewer downstream of regulator R034A.

Interceptor flow patterns show backwater conditions and significant surcharging in response to rainfall events.

Tidewater was observed leaking through the tide gates into the interceptor at regulator R034A during dry weather periods.

Observations

Average flow depth, velocity, and quantity data observed during Saturday, August 22, 2015 to Monday, December 21, 2015 , along with observed minimum and maximum data, are provided in the following table.

Observed Flow Conditions			
Item	Depth (in)	Velocity (ft/s)	Quantity (MGD)
Average	8.20	0.58	0.189
Minimum	4.70	0.00	0.000
Maximum	92.68	1.92	1.846
Time of Minimum	11/30/2015 5:50 AM	11/19/2015 5:40 PM	11/19/2015 5:40 PM
Time of Maximum	10/28/2015 10:45 PM	12/14/2015 7:55 PM	9/10/2015 3:20 PM

Based upon the quality and consistency of the observed flow depth and velocity data, the Continuity equation was used to calculate flow rate and quantities during the monitoring period.

Graphical data reports are based on 15-minute averages.

Data Quality

Data uptime observed during the Saturday, August 22, 2015 to the Monday, December 21, 2015 monitoring period is provided in the table below.

Percent Uptime	
Depth (in)	100
Velocity (ft/s)	100
Quantity (MGD)	100

Site Commentary

Site Information

M-32	
Pipe Dimensions (in.)	Elliptical (60.50 in H, 59.50 in W)
Silt (in.)	0.00

Overview

M-32 was situated on the Easterly Intercepting Sewer just upstream of the Trenton Avenue Pumping Station.

Dry weather flow into M-32 increased beginning November 1, 2015 resulting from a water main break in the basin upstream of M-16.

Interceptor flow patterns show backwater conditions and significant surcharging in response to rainfall events.

Daily dry weather flow patterns show cyclical backwater conditions due to Pump Station wet well levels.

Observations

Average flow depth, velocity, and quantity data observed during Saturday, August 22, 2015 to Monday, December 21, 2015 , along with observed minimum and maximum data, are provided in the following table.

Observed Flow Conditions			
Item	Depth (in)	Velocity (ft/s)	Quantity (MGD)
Average	27.24	1.54	6.149
Minimum	12.58	0.00	0.000
Maximum	186.21	2.42	22.354
Time of Minimum	12/13/2015 6:00 AM	11/7/2015 11:00 AM	11/7/2015 11:00 AM
Time of Maximum	10/3/2015 2:55 AM	11/22/2015 7:05 PM	12/17/2015 12:25 PM

Based upon the quality and consistency of the observed flow depth and velocity data, the Continuity equation was used to calculate flow rate and quantities during the monitoring period.

Graphical data reports are based on 15-minute averages.

Data Quality

Data uptime observed during the Saturday, August 22, 2015 to the Monday, December 21, 2015 monitoring period is provided in the table below.

Percent Uptime	
Depth (in)	100
Velocity (ft/s)	100
Quantity (MGD)	100

Site Commentary

Site Information

M-33	
Pipe Dimensions (in.)	Circular (60.00 in H)
Silt (in.)	0.00

Overview

M-33 was situated on the combined sewer overflow main from regulator R035 which discharges to CSO-035 on the Elizabeth River. M-33 is just upstream of the Solids/Floatables Control Facility for CSO-035.

Flow was negligible during dry weather periods, with expected overflow activity in response to rainfall events.

Backwater conditions were evident during all overflow events, and the flow level exceed full pipe during most overflow events.

Observations

Average flow depth, velocity, and quantity data observed during Saturday, August 22, 2015 to Monday, December 21, 2015 , along with observed minimum and maximum data, are provided in the following table.

Observed Flow Conditions			
Item	Depth (in)	Velocity (ft/s)	Quantity (MGD)
Average	22.18	0.01	0.109
Minimum	15.56	0.00	0.000
Maximum	110.52	3.66	46.465
Time of Minimum	11/14/2015 5:00 PM	8/22/2015 12:00 AM	8/22/2015 12:00 AM
Time of Maximum	10/3/2015 2:15 AM	9/30/2015 2:20 AM	9/30/2015 2:20 AM

Based upon the quality and consistency of the observed flow depth and velocity data, the Continuity equation was used to calculate flow rate and quantities during the monitoring period.

Graphical data reports are based on 15-minute averages.

Data Quality

Data uptime observed during the Saturday, August 22, 2015 to the Monday, December 21, 2015 monitoring period is provided in the table below.

Percent Uptime	
Depth (in)	100
Velocity (ft/s)	100
Quantity (MGD)	100

Site Commentary

Site Information

M-34	
Pipe Dimensions (in.)	Elliptical (56.00 in H, 57.00 in W)
Silt (in.)	0.00

Overview

M-34 was situated on the combined sewer gravity main upstream of regulator R034A. Normal dry weather flow from R034A discharges to a branch of the Easterly Intercepting Sewer upstream of M-31; wet weather overflows discharge to CSO-034 on Newark Bay. Limit switch LS-2 was fitted to the tide gate in regulator R034A and limit switch LS-3 was fitted to the tide gate at the Solids/Floatables Control Facility for CSO-034.

Typical combined sewer flow patterns were observed in reaction to the range of rainfall events during the study period.

Flow depth exceeded full pipe during several rain events with periods of backwater and surcharging.

M-34 was prone to debris deposition during dry weather periods.

Observations

Average flow depth, velocity, and quantity data observed during Saturday, August 22, 2015 to Monday, December 21, 2015, along with observed minimum and maximum data, are provided in the following table.

Observed Flow Conditions			
Item	Depth (in)	Velocity (ft/s)	Quantity (MGD)
Average	2.66	0.62	0.250
Minimum	0.81	0.00	0.000
Maximum	73.29	7.16	55.572
Time of Minimum	9/5/2015 5:25 AM	9/10/2015 8:15 PM	9/10/2015 8:15 PM
Time of Maximum	10/28/2015 11:00 PM	10/28/2015 4:45 PM	9/30/2015 2:30 AM

Based upon the quality and consistency of the observed flow depth and velocity data, the Continuity equation was used to calculate flow rate and quantities during the monitoring period.

Graphical data reports are based on 15-minute averages.

Data Quality

Data uptime observed during the Saturday, August 22, 2015 to the Monday, December 21, 2015 monitoring period is provided in the table below.

Percent Uptime	
Depth (in)	100
Velocity (ft/s)	99
Quantity (MGD)	99

Site Commentary

Site Information

M-35	
Pipe Dimensions (in.)	Circular (60.00 in H)
Silt (in.)	10.00

Overview

M-35 was situated on the Westerly Intercepting Sewer just upstream of the Trenton Avenue Pumping Station.

Interceptor flow patterns show backwater conditions and significant surcharging in response to rainfall events.

Daily dry weather flow patterns show cyclical backwater and surcharge conditions due to Pump Station wet well levels.

Observations

Average flow depth, velocity, and quantity data observed during Saturday, August 22, 2015 to Monday, December 21, 2015 , along with observed minimum and maximum data, are provided in the following table.

Observed Flow Conditions			
Item	Depth (in)	Velocity (ft/s)	Quantity (MGD)
Average	62.36	0.97	9.922
Minimum	32.04	0.21	2.396
Maximum	235.66	2.54	28.653
Time of Minimum	8/27/2015 5:50 AM	11/7/2015 11:15 AM	11/7/2015 11:15 AM
Time of Maximum	10/28/2015 11:00 PM	12/17/2015 12:20 PM	12/17/2015 12:20 PM

Based upon the quality and consistency of the observed flow depth and velocity data, the Continuity equation was used to calculate flow rate and quantities during the monitoring period.

Graphical data reports are based on 15-minute averages.

Data Quality

Data uptime observed during the Saturday, August 22, 2015 to the Monday, December 21, 2015 monitoring period is provided in the table below.

Percent Uptime	
Depth (in)	100
Velocity (ft/s)	99
Quantity (MGD)	99

Site Commentary

Site Information

M-36	
Pipe Dimensions (in.)	Elliptical (35.75 in H, 36.50 in W)
Silt (in.)	0.00

Overview

M-36 was situated on the Westerly Intercepting Sewer between M-37 and M-35.

Interceptor flow patterns show backwater conditions and significant surcharging in response to rainfall events.

Observations

Average flow depth, velocity, and quantity data observed during Saturday, August 22, 2015 to Monday, December 21, 2015 , along with observed minimum and maximum data, are provided in the following table.

Observed Flow Conditions			
Item	Depth (in)	Velocity (ft/s)	Quantity (MGD)
Average	26.59	2.14	6.450
Minimum	15.47	0.98	2.861
Maximum	175.04	3.84	17.653
Time of Minimum	9/10/2015 3:15 AM	11/7/2015 10:10 AM	9/10/2015 3:15 AM
Time of Maximum	9/30/2015 2:20 AM	12/17/2015 12:15 PM	12/17/2015 12:15 PM

Based upon the quality and consistency of the observed flow depth and velocity data, the Continuity equation was used to calculate flow rate and quantities during the monitoring period.

Graphical data reports are based on 15-minute averages.

Data Quality

Data uptime observed during the Saturday, August 22, 2015 to the Monday, December 21, 2015 monitoring period is provided in the table below.

Percent Uptime	
Depth (in)	100
Velocity (ft/s)	100
Quantity (MGD)	100

Site Commentary

Site Information

M-37	
Pipe Dimensions (in.)	Elliptical (31.00 in H, 32.00 in W)
Silt (in.)	0.00

Overview

M-37 was situated on the Westerly Intercepting Sewer between M-6 and M-36.

Interceptor flow patterns show backwater conditions and significant surcharging in response to rainfall events.

An apparent downstream obstruction was cleared during the September 12, 2015 rain event.

Observations

Average flow depth, velocity, and quantity data observed during Saturday, August 22, 2015 to Monday, December 21, 2015 , along with observed minimum and maximum data, are provided in the following table.

Observed Flow Conditions			
Item	Depth (in)	Velocity (ft/s)	Quantity (MGD)
Average	20.25	2.23	4.237
Minimum	10.35	0.96	2.101
Maximum	141.28	3.46	12.093
Time of Minimum	10/1/2015 4:30 AM	11/7/2015 10:15 AM	11/19/2015 4:15 AM
Time of Maximum	9/30/2015 2:30 AM	10/9/2015 5:45 PM	10/9/2015 5:45 PM

Based upon the quality and consistency of the observed flow depth and velocity data, the Continuity equation was used to calculate flow rate and quantities during the monitoring period.

Graphical data reports are based on 15-minute averages.

Data Quality

Data uptime observed during the Saturday, August 22, 2015 to the Monday, December 21, 2015 monitoring period is provided in the table below.

Percent Uptime	
Depth (in)	100
Velocity (ft/s)	100
Quantity (MGD)	100

Site Commentary

Site Information

M-38	
Pipe Dimensions (in.)	Circular (52.75 in H)
Silt (in.)	0.00

Overview

M-38 was situated on the storm runoff main upstream of M-18 and CSO-042.

Flow was negligible during dry weather periods except for short duration discharge events, usually several days apart, throughout the monitoring period.

Free flow conditions were present during all rain events.

Observations

Average flow depth, velocity, and quantity data observed during Saturday, August 22, 2015 to Monday, December 21, 2015 , along with observed minimum and maximum data, are provided in the following table.

Observed Flow Conditions			
Item	Depth (in)	Velocity (ft/s)	Quantity (MGD)
Average	0.81	0.05	0.013
Minimum	0.21	0.00	0.000
Maximum	16.03	4.49	11.309
Time of Minimum	9/5/2015 10:15 AM	8/22/2015 12:00 AM	8/22/2015 12:00 AM
Time of Maximum	9/30/2015 2:20 AM	9/30/2015 2:20 AM	9/30/2015 2:20 AM

Based upon the quality and consistency of the observed flow depth and velocity data, the Continuity equation was used to calculate flow rate and quantities during the monitoring period.

Graphical data reports are based on 15-minute averages.

Data Quality

Data uptime observed during the Saturday, August 22, 2015 to the Monday, December 21, 2015 monitoring period is provided in the table below.

Percent Uptime	
Depth (in)	100
Velocity (ft/s)	100
Quantity (MGD)	100

Site Commentary

Site Information

M-39	
Pipe Dimensions (in.)	Circular (60.00 in H)
Silt (in.)	0.00

Overview

M-39 was situated on the storm runoff main conveying stormwater out of the City at the northern boundary.

Flow was negligible during dry weather periods, with expected flow discharge during rainfall events.

Free flow conditions were present during all rain events.

Observations

Average flow depth, velocity, and quantity data observed during Saturday, August 22, 2015 to Monday, December 21, 2015 , along with observed minimum and maximum data, are provided in the following table.

Observed Flow Conditions			
Item	Depth (in)	Velocity (ft/s)	Quantity (MGD)
Average	0.90	0.07	0.043
Minimum	0.30	0.00	0.000
Maximum	35.03	4.81	36.981
Time of Minimum	10/7/2015 9:20 PM	8/22/2015 12:00 AM	8/22/2015 12:00 AM
Time of Maximum	9/30/2015 2:20 AM	9/30/2015 2:20 AM	9/30/2015 2:20 AM

Based upon the quality and consistency of the observed flow depth and velocity data, the Continuity equation was used to calculate flow rate and quantities during the monitoring period.

Graphical data reports are based on 15-minute averages.

Data Quality

Data uptime observed during the Saturday, August 22, 2015 to the Monday, December 21, 2015 monitoring period is provided in the table below.

Percent Uptime	
Depth (in)	100
Velocity (ft/s)	100
Quantity (MGD)	100

Site Commentary

Site Information

M-40	
Pipe Dimensions (in.)	Elliptical (54.75 in H, 55.00 in W)
Silt (in.)	0.00

Overview

M-40 was situated on the combined sewer gravity main upstream of bypass chamber-Solids/Floatables Control Facility 003A.

Typical combined sewer flow patterns were observed in reaction to the range of rainfall events during the study period.

Free flow conditions existed except for backwater and surcharge during the September 30, 2015 rain event, and backwater during the October 28, 2015 event.

Observations

Average flow depth, velocity, and quantity data observed during Saturday, August 22, 2015 to Monday, December 21, 2015 , along with observed minimum and maximum data, are provided in the following table.

Observed Flow Conditions			
Item	Depth (in)	Velocity (ft/s)	Quantity (MGD)
Average	4.04	1.27	0.549
Minimum	2.54	0.31	0.121
Maximum	73.84	9.90	56.139
Time of Minimum	9/6/2015 5:40 AM	9/18/2015 6:15 PM	12/14/2015 4:00 PM
Time of Maximum	9/30/2015 2:30 AM	9/30/2015 3:00 AM	9/30/2015 2:35 AM

Based upon the quality and consistency of the observed flow depth and velocity data, the Continuity equation was used to calculate flow rate and quantities during the monitoring period.

Graphical data reports are based on 15-minute averages.

Data Quality

Data uptime observed during the Saturday, August 22, 2015 to the Monday, December 21, 2015 monitoring period is provided in the table below.

Percent Uptime	
Depth (in)	100
Velocity (ft/s)	100
Quantity (MGD)	100

Site Commentary

Site Information

RG1

Overview

Rain gauge RG1 was installed on the roof of the Trenton Avenue Pumping Station. The rain gauge operated reliably throughout the study period.

The total rainfall measured at RG1 from August 22, 2015 to December 21, 2015 is 9.83 inches. The maximum 5-minute rain intensity occurred as follows:

<u>Date / Time</u>	<u>Maximum Rainfall (in.)</u>
9/30/2015 2:15 AM	0.21

Site Name:	ELIZABETH_RG-1	Meter Type:	6000 Rain Alert	Monitor S/N:	7793	Manhole #

Site Commentary

Site Information

RG2

Overview

Rain gauge RG2 was installed on the roof of the O'Donnell Dempsey Senior Center, 618 Salem Avenue. The rain gauge operated reliably throughout the study period.

The total rainfall measured at RG2 from August 22, 2015 to December 21, 2015 is 10.91 inches. The maximum 5-minute rain intensity occurred as follows:

<u>Date / Time</u>	<u>Maximum Rainfall (in.)</u>
9/30/2015 2:15 AM	0.30

Site Commentary

Site Information

RG3

Overview

Rain gauge RG3 was installed on the roof of the Sampson Senior Center at Anna and Division Streets. The rain gauge operated reliably throughout the study period.

The total rainfall measured at RG3 from August 22, 2015 to December 21, 2015 is 10.07 inches. The maximum 5-minute rain intensity occurred as follows:

<u>Date / Time</u>	<u>Maximum Rainfall (in.)</u>
9/30/2015 2:15 AM	0.29

Site Name:	ELIZABETH_RG-3	Meter Type:	5000	Monitor S/N:	26173	Manhole #

Site Commentary

Site Information

GW-1

Overview

Groundwater gauge GW-1 was installed on the CSO side of the R031 regulator chamber. The gauge was installed at the lowest penetration point possible in the structure, 47 inches above the pipe invert and 5 inches below the pipe crown. No groundwater was ever evident in the gauge during the study period. To ensure the gauge was operational, water was back-fed through the gauge tube into the surrounding soil while the level sensor was tested.

Site Information

GW-2

Overview

Groundwater gauge GW-2 was installed on the combined sewer influent side of the R029 regulator chamber. The gauge was installed at the lowest penetration point possible in the structure, 59 inches above the pipe invert and 10 inches below the pipe crown. No groundwater was ever evident in the gauge during the study period. To ensure the gauge was operational, water was back-fed through the gauge tube into the surrounding soil while the level sensor was tested.

Site Information

TG1

Overview

Tide gauge TG1 was located in the northeast corner of the Elizabeth Marina on the Arthur Kill. Normal tidal patterns were recorded throughout the study period.

The [hydrograph](#) for tide gauge location TG1 shows water elevations recorded during the monitoring period of Saturday, August 22, 2015 to Monday, December 21, 2015 .

[Daily longtables](#) displaying the elevations are also provided.

Data Quality

Data uptime observed during the Saturday, August 22, 2015 to the Monday, December 21, 2015 monitoring period is provided in the table below.

Site Commentary

Site Information

TG2

Overview

Tide gauge TG2 was located just west of Bridge Street on the Elizabeth River. Normal tidal patterns were recorded throughout the study period, with localized level increases noted during significant rain events.

The [hydrograph](#) for tide gauge location TG2 shows water elevations recorded during the monitoring period of Saturday, August 22, 2015 to Monday, December 21, 2015 .

[Daily longtables](#) displaying the elevations are also provided.

Data Quality

Data uptime observed during the Saturday, August 22, 2015 to the Monday, December 21, 2015 monitoring period is provided in the table below.

Site Commentary

Site Information

LS-1

Overview

Limit switch LS-1 was fitted to the tide gate at the Solids/Floatables Control Facility for CSO-001 downstream of regulator R001. Data shows the tide gate operated as expected during significant rain events throughout the study period.

Dry weather flow into regulator R001 increased beginning November 1, 2015 resulting from a water main break in the upstream basin. LS-1 data shows evidence of continuous overflow at CSO-001 beginning November 11, 2015 until the water main repair was completed on December 5, 2015.

Tidewater was observed leaking by the tide gate into regulator R001 during dry weather periods.

Site Name:	ELIZABETH_LS-1	Meter Type:	TELOG	Monitor S/N:	291311	Manhole #	
Address / Location:		BASILANE ROAD AT US 1 & 9N GOING TOWARD NEWARK AIRPORT ***SEE BELOW***		Map Page #:			
				Pipe Height:		60 Inches	
Access:	DRIVE	Type of System:	CSO	Pipe Width:		60 Inches	
				Phone Number:		603-391-5438	

Investigation Information:			Manhole Information:		
Date/Time of Investigation:	August 18, 2015		Manhole Depth:	14.1 Feet	
Site Hydraulics:			Manhole Material / Condition	Concrete	Vault
			Active Drop Connections?		Good
Upstream Input: (L/S, P/S)			Pipe Material / Condition:		
Upstream Manhole:			Mini System Character:	COMMERCIAL	RESIDENTIAL
Downstream Manhole:			Telephone Information:		
Depth of Flow (Wet Dof):	+/-		Access Pole #:	N/A	
Range (Air Dof):	+/-		Distance From Manhole:	N/A Feet	
Peak Velocity:	fps		Road Cut Length:	N/A Feet	
Silt:	Inches		Trench Length:	N/A Feet	

Other Information:
40°40'50.79"N 74°11'30.90"W

Installation Information		Backup	Yes	No	?	Distance
Installation Type:		Trunk				
Sensors / Devices:	LIMIT SWITCH	Lift/Pump Station				
Surcharge Height:		WWTP				
Rain Gauge Zone:		Other

Site Commentary

Site Information

LS-2

Overview

Limit switch LS-2 was fitted to the tide gate in regulator R034A upstream of CSO-034. Data shows the tide gate operated as expected during significant rain events throughout the study period, except as noted below:

10/2/2015 rain event – gate remained blocked open until cleared of debris on 10/8/2015.

10/28/2015 rain event - gate remained blocked open until cleared of bottles on 10/29/2015.

Another limit switch (LS-3) was fitted to the tide gate downstream of LS-2 at the Solids/Floatables Control Facility for CSO-034. Data showed that both gates operated in concert during significant rain events.

Tidewater was observed leaking by the tide gates into regulator R034A during dry weather periods.

Installation Information		Backup	Yes	No	?	Distance
Installation Type:		Trunk				
Sensors / Devices:	LIMIT SWITCH	Lift/Pump Station				
Surcharge Height:		WWTP				
Rain Gauge Zone:		Other				

Additional Site Information / Comments:

Flow observed leaking through bottom of gate into low flow line leaving regulator.

Site Commentary

Site Information

LS-3

Overview

Limit switch LS-3 was fitted to the tide gate at the Solids/Floatables Control Facility for CSO-034. Data shows the tide gate operated as expected during significant rain events throughout the study period

Another limit switch (LS-2) was fitted to the tide gate upstream of LS-3 in regulator R034A. Data showed that both gates operated in concert during significant rain events.

Tidewater was observed leaking by the tide gates into regulator R034A during dry weather periods.

Site Name:	ELIZABETH_LS-3	Meter Type:	TELOG	Monitor S/N:	291854	Manhole #	
Address / Location:		PULEO PLAZA (IN REAR AT REGULATOR 34A)		Map Page #:			
				Pipe Height:		60 Inches	
Access:	DRIVE	Type of System:	CSO	Pipe Width:		60 Inches	
				Phone Number:		859-609-0609	

Investigation Information:			Manhole Information:		
Date/Time of Investigation:	August 19, 2015		Manhole Depth:	10.5 Feet	
Site Hydraulics:			Manhole Material / Condition	Concrete	Vault
			Active Drop Connections?		Good
Upstream Input: (L/S, P/S)			Pipe Material / Condition:		
Upstream Manhole:			Mini System Character:	INDUSTRIAL	
Downstream Manhole:			Telephone Information:		
Depth of Flow (Wet Dof):	+/-		Access Pole #:	N/A	
Range (Air Dof):	+/-		Distance From Manhole:	N/A Feet	
Peak Velocity:	fps		Road Cut Length:	N/A Feet	
Silt:	Inches		Trench Length:	N/A Feet	

Other Information:
40°39'06.8"N 74°10'17.3"W

Installation Information		Backup	Yes	No	?	Distance
Installation Type:		Trunk				
Sensors / Devices:	LIMIT SWITCH	Lift/Pump Station				
Surcharge Height:		WWTP				
Rain Gauge Zone:		Other

Site Commentary

Site Information

LS-4

Overview

Limit switch LS-4 was fitted to the tide gate at the Solids/Floatables Control Facility for CSO-032. Data shows the tide gate operated as expected during significant rain events throughout the study period, except as noted below:

10/2/2015 rain event â€“ gate did not open

10/19/2015 rain event â€“ gate did not open

Site Name:	ELIZABETH_LS-4	Meter Type:	TELOG	Monitor S/N:	291907	Manhole #:	
Address / Location:	FRONT STREET ACROSS FROM MAGNOLIA AVENUE			Map Page #:		Pipe Height:	48 in
Access:	DRIVE	Type of System:	CSO	Pipe Width:			48 in
				Phone Number:			859-512-8941

Investigation Information:			Manhole Information:		
Date/Time of Investigation:	August 18, 2015		Manhole Depth:	14.3 Feet	
Site Hydraulics:			Manhole Material / Condition:	Concrete	Vault
			Active Drop Connections?		Good
Upstream Input: (L/S, P/S)			Pipe Material / Condition:		
Upstream Manhole:			Mini System Character:	RESIDENTIAL	
Downstream Manhole:			Telephone Information:		
Depth of Flow (Wet Dof):	+/-		Access Pole #:	N/A	
Range (Air Dof):	+/-		Distance From Manhole:	N/A Feet	
Peak Velocity:	fps		Road Cut Length:	N/A Feet	
Silt:	Inches		Trench Length:	N/A Feet	

Other Information:
40°38'56.7"N 74°10'57.9"W

Installation Information		Backup	Yes	No	?	Distance
Installation Type:		Trunk				
Sensors / Devices:	LIMIT SWITCH	Lift/Pump Station				
Surcharge Height:		WWTP				
Rain Gauge Zone:		Other

Site Commentary

Site Information

LS-5

Overview

Limit switch LS-5 was fitted to the tide gate at the Solids/Floatables Control Facility for CSO-030. Data shows that throughout the study period the tide gate only opened during one significant rain event (9/30/2015).

Site Name:	ELIZABETH_LS-5	Meter Type:	TELOG	Monitor S/N:	291848	Manhole #	
Address / Location:	PARKING LOT OFF FRONT STREET ACROSS FROM EAST JERSEY STREET			Map Page #:			
				Pipe Height:		48 in	
Access:	DRIVE	Type of System:	CSO	Pipe Width:		48 in	
				Phone Number:		859-609-0624	

Investigation Information:			Manhole Information:		
Date/Time of Investigation:	August 18, 2015		Manhole Depth:	11.6 Feet	
Site Hydraulics:			Manhole Material / Condition	Concrete	Vault
			Active Drop Connections?		Good
Upstream Input: (L/S, P/S)			Pipe Material / Condition:		
Upstream Manhole:			Mini System Character:	COMMERCIAL	RESIDENTIAL
Downstream Manhole:			Telephone Information:		
Depth of Flow (Wet Dof):	+/-		Access Pole #:	N/A	
Range (Air Dof):	+/-		Distance From Manhole:	N/A Feet	
Peak Velocity:	fps		Road Cut Length:	N/A Feet	
Silt:	Inches		Trench Length:	N/A Feet	

Other Information:
40°38'48.5"N 74°11'10.9"W

Installation Information		Backup	Yes	No	?	Distance
Installation Type:		Trunk				
Sensors / Devices:	LIMIT SWITCH	Lift/Pump Station				
Surcharge Height:		WWTP				
Rain Gauge Zone:		Other				

Additional Site Information / Comments:
103" X 84" VAULT

Site Commentary

Site Information

LS-6

Overview

Limit switch LS-6 was fitted to the tide gate at the Solids/Floatables Control Facility for CSO-027. Data shows the tide gate operated as expected during significant rain events throughout the study period, except as noted below:

On 9/16/2015 the limit switch span was readjusted to properly register gate closure following the 9/10/2016 rain event.

10/28/2015 rain event “ gate remained blocked open until cleared of debris on 11/5/2015.

11/19/2015 rain event “ gate did not open.

Site Commentary

Site Information

LS-7

Overview

Limit switch LS-7 was fitted to the tide gate at the Solids/Floatables Control Facility for CSO-028. Data shows the tide gate operated as expected during significant rain events throughout the study period, except as noted below:

10/28/2015 rain event “ gate remained blocked open until cleared of debris on 10/29/2015.

11/19/2015 rain event “ gate remained blocked open until cleared of debris on 11/23/2015.

12/17/2015 rain event “ gate remained blocked open until cleared of debris on 1/7/2016.

Site Name:	ELIZABETH_LS-7	Meter Type:	TELOG	Monitor S/N:	291310	Manhole #:	
Address / Location:	CORNER OF SUMMER STREET AT ARNETT STREET			Map Page #:			
Access:	DRIVE	Type of System:	CSO	Pipe Height:	65.5 Inches		
				Pipe Width:	65.5 Inches		
				Phone Number:	603-391-5437		

Investigation Information:			Manhole Information:			
Date/Time of Investigation:	August 20, 2015		Manhole Depth:	15 Feet		
Site Hydraulics:			Manhole Material / Condition:	Concrete	Vault	Good

Site Commentary

Site Information

LS-9

Overview

Limit switch LS-9 was fitted to the tide gate at the Solids/Floatables Control Facility for CSO-016. Data shows the tide gate operated as expected during significant rain events throughout the study period. On 9/14/2015 the limit switch span was readjusted to properly register gate closure following the 9/10/2016 rain event.

Site Name:	ELIZABETH_LS-9	Meter Type:	TELOG	Monitor S/N:	271906	Manhole #	
Address / Location:		BEHIND ELIZABETH CENTER CO-OP OFF PEARL STREET		Map Page #:			
				Pipe Height:		36 Inches	
Access:	DRIVE	Type of System:	CSO	Pipe Width:		36 Inches	
				Phone Number:		859-512-8495	

Investigation Information:			Manhole Information:			
Date/Time of Investigation:	August 19, 2015		Manhole Depth:	12 Feet		
Site Hydraulics:			Manhole Material / Condition:	Concrete	Vault	Good
			Active Drop Connections?			
Upstream Input: (L/S, P/S)			Pipe Material / Condition:			
Upstream Manhole:			Mini System Character:	COMMERCIAL		
Downstream Manhole:			Telephone Information:			
Depth of Flow (Wet Dof):		+/-	Access Pole #:	N/A		
Range (Air Dof):		+/-	Distance From Manhole:	N/A Feet		
Peak Velocity:		fps	Road Cut Length:	N/A Feet		
Silt:		Inches	Trench Length:	N/A Feet		

Other Information:
40°39'39"N 74°12'59.9"W

Installation Information		Backup	Yes	No	?	Distance
Installation Type:		Trunk				
Sensors / Devices:	LIMIT SWITCH	Lift/Pump Station				
Surcharge Height:		WWTP				
Rain Gauge Zone:		Other				

Additional Site Information / Comments:

Site Commentary

Site Information

LS-10

Overview

Limit switch LS-10 was fitted to the tide gate at the CSO-042 storage module and outfall. Data shows the tide gate operated as expected during significant rain events throughout the study period.

Tidewater was observed leaking into the structure at the bottom of the gate during dry weather periods.

Site Name:	ELIZABETH_LS-10	Meter Type:	TELOG	Monitor S/N:	298852	Manhole #	
Address / Location:	GATE STRUCTURE OFF BRIDGE STREET			Map Page #:			
				Pipe Height:		71 Inches	
Access:	DRIVE	Type of System:	CSO	Pipe Width:		114 Inches	
				Phone Number:		859-609-0616	

Investigation Information:			Manhole Information:		
Date/Time of Investigation:	August 12, 2015	1:00 PM	Manhole Depth:	13.3 Feet	
Site Hydraulics:			Manhole Material / Condition	Concrete	Good
			Active Drop Connections?		
Upstream Input: (L/S, P/S)			Pipe Material / Condition:		
Upstream Manhole:			Mini System Character:	COMMERCIAL	
Downstream Manhole:			Telephone Information:		
Depth of Flow (Wet Dof):		+/-	Access Pole #:	N/A	
Range (Air Dof):		+/-	Distance From Manhole:	N/A Feet	
Peak Velocity:		fps	Road Cut Length:	N/A Feet	
Silt:		Inches	Trench Length:	N/A Feet	

Other Information:

Site Commentary

Site Information

LS-11

Overview

Limit switch LS-11 was fitted to the tide gate at the Solids/Floatables Control Facility for CSO-031. Data shows the tide gate operated as expected during significant rain events throughout the study period, except as noted below:

11/19/2015 rain event – gate did not open.

Site Name:	ELIZABETH_LS-11	Meter Type:	TELOG	Monitor S/N:	291858	Manhole #:	
Address / Location:	SOUTH OF FRONT STREET ACROSS FROM LIVINGSTON STREET			Map Page #:			
				Pipe Height:		48 Inches	
Access:	DRIVE	Type of System:	CSO	Pipe Width:		48 Inches	
				Phone Number:		859-609-0604	

Investigation Information:			Manhole Information:		
Date/Time of Investigation:	August 20, 2015		Manhole Depth:	15.7 Feet	
Site Hydraulics:			Manhole Material / Condition	Concrete	Vault
			Active Drop Connections?		Good
Upstream Input: (L/S, P/S)			Pipe Material / Condition:		
Upstream Manhole:			Mini System Character:	COMMERCIAL	
Downstream Manhole:			Telephone Information:		
Depth of Flow (Wet Dof):	+/-		Access Pole #:	N/A	
Range (Air Dof):	+/-		Distance From Manhole:	N/A Feet	
Peak Velocity:	fps		Road Cut Length:	N/A Feet	
Silt:	Inches		Trench Length:	N/A Feet	

Other Information:
40°38'50.1"N 74°11'09.1"W

Installation Information		Backup	Yes	No	?	Distance
Installation Type:		Trunk				
Sensors / Devices:	LIMIT SWITCH	Lift/Pump Station				
Surcharge Height:		WWTP				
Rain Gauge Zone:		Other				

Additional Site Information / Comments:
103" x 85" VAULT **GATE IS OPEN ABOUT 6" ON BOTTOM UNDER WATER- SWITCH IS SET FOR GATE TO OPEN MORE FOR IT TO REGISTER**

Site Commentary

Site Information

LS-12

Overview

Limit switch LS-12 was fitted to the tide gate at the Solids/Floatables Control Facility for CSO-040. Data shows the tide gate operated as expected during significant rain events throughout the study period, except as noted below:

9/10/2015 rain event â€“ gate did not open.
11/19/2015 rain event â€“ gate did not open.
12/17/2015 rain event â€“ gate did not open.

Site Name:	ELIZABETH_LS-12	Meter Type:	TELOG	Monitor S/N:	291916	Manhole #:	CSO-040
Address / Location:		PULASKI STREET AT CLIFTON STREET (IN GRASS)		Map Page #:			
				Pipe Height:		54 Inches	
Access:	DRIVE	Type of System:	CSO	Pipe Width:		54 Inches	
				Phone Number:		859-609-0843	

Investigation Information:			Manhole Information:		
Date/Time of Investigation:	August 10, 2015		Manhole Depth:	11.6 Feet	
Site Hydraulics:			Manhole Material / Condition	Concrete	Good
			Active Drop Connections?		
Upstream Input: (L/S, P/S)			Pipe Material / Condition:		
Upstream Manhole:			Mini System Character:	COMMERCIAL	RESIDENTIAL
Downstream Manhole:			Telephone Information:		
Depth of Flow (Wet Dof):		+/-	Access Pole #:	N/A	
Range (Air Dof):		+/-	Distance From Manhole:	N/A Feet	
Peak Velocity:		fps	Road Cut Length:	N/A Feet	
Silt:		Inches	Trench Length:	N/A Feet	

Other Information:
40°38'46.23"N 74°12'31.85"W

Installation Information		Backup	Yes	No	?	Distance
Installation Type:		Trunk				
Sensors / Devices:	LIMIT SWITCH	Lift/Pump Station				
Surcharge Height:		WWTP				
Rain Gauge Zone:		Other				

Additional Site Information / Comments:

84" X 72"

Site Commentary

Site Information

LS-13

Overview

Limit switch LS-13 was fitted to the tide gate at the Solids/Floatables Control Facility for CSO-022. Data shows the tide gate operated as expected during significant rain events throughout the study period, except as noted below:

11/19/2015 rain event – gate remained blocked open until cleared of debris on 12/1/2015.

Site Name:	ELIZABETH_LS-13	Meter Type:	TELOG	Monitor S/N:	291850	Manhole #:	CSO-022
Address / Location:	SOUTH STREET EAST OF ELIZABETH RIVER			Map Page #:			
				Pipe Height:	60 Inches		
Access:	DRIVE	Type of System:	CSO	Pipe Width:	60 Inches		
				Phone Number:	859-609-0618		

Investigation Information:			Manhole Information:		
Date/Time of Investigation:	August 20, 2015		Manhole Depth:	14.1 Feet	
Site Hydraulics:			Manhole Material / Condition	Concrete	Vault
			Active Drop Connections?		Good
Upstream Input: (L/S, P/S)			Pipe Material / Condition:		
Upstream Manhole:			Mini System Character:	COMMERCIAL	RESIDENTIAL
Downstream Manhole:			Telephone Information:		
Depth of Flow (Wet Dof):		+/-	Access Pole #:	N/A	
Range (Air Dof):		+/-	Distance From Manhole:	N/A Feet	
Peak Velocity:		fps	Road Cut Length:	N/A Feet	
Silt:		Inches	Trench Length:	N/A Feet	

Other Information:
40°39'28.6"N 74°12'36.5"W

Installation Information		Backup	Yes	No	?	Distance
Installation Type:		Trunk				
Sensors / Devices:	LIMIT SWITCH	Lift/Pump Station				
Surcharge Height:		WWTP				
Rain Gauge Zone:		Other

Site Commentary

Site Information

LS-14

Overview

Limit switch LS-14 was fitted to the tide gate at the Solids/Floatables Control Facility for CSO-029. Data shows the tide gate operated as expected during significant rain events throughout the study period.

Site Name:	ELIZABETH_LS-14	Meter Type:	TELOG	Monitor S/N:	291392	Manhole #:	
Address / Location:		VETERANS PARK OFF FRONT STREET (SIDEWALK)		Map Page #:			
				Pipe Height:		48 Inches	
Access:	DRIVE	Type of System:	CSO	Pipe Width:		48 Inches	
				Phone Number:		603-540-4222	

Investigation Information:			Manhole Information:		
Date/Time of Investigation:	August 20, 2015		Manhole Depth:	13.1 Feet	
Site Hydraulics:			Manhole Material / Condition:	Concrete	Vault
			Active Drop Connections?		Good
Upstream Input: (L/S, P/S)			Pipe Material / Condition:		
Upstream Manhole:			Mini System Character:	COMMERCIAL	
Downstream Manhole:			Telephone Information:		
Depth of Flow (Wet Dof):		+/-	Access Pole #:	N/A	
Range (Air Dof):		+/-	Distance From Manhole:	N/A Feet	
Peak Velocity:		fps	Road Cut Length:	N/A Feet	
Silt:		Inches	Trench Length:	N/A Feet	

Other Information:
40°38'40.4"N 74°11'23.7"W

Installation Information		Backup	Yes	No	?	Distance
Installation Type:		Trunk				
Sensors / Devices:	LIMIT SWITCH	Lift/Pump Station				
Surcharge Height:		WWTP				
Rain Gauge Zone:		Other				

Additional Site Information / Comments:
72" X 86" 8" FROM WALL

FIELD SERVICE SUMMARY

Service History Report

Customer *City of Elizabeth*

Site Name	Date	Field Service Performed
M-1	8/6/2015	Monitoring equipment installed. Confirmed monitor readings.
	8/28/2015	Scrubbed/cleaned sensors. Rotated/adjusted sensor mounting band. Confirmed monitor readings.
	9/25/2015	Scrubbed/cleaned sensors. Confirmed monitor readings.
	9/29/2015	Scrubbed/cleaned sensors. Changed pressure desiccant.
	10/7/2015	Confirmed monitor readings.
	10/16/2015	Scrubbed/cleaned sensors.
	10/26/2015	Scrubbed/cleaned sensors.
	11/2/2015	Rotated/adjusted sensor mounting band. Confirmed monitor readings.
	12/21/2015	Confirmed monitor readings.
	1/6/2016	Confirmed monitor readings. Monitoring equipment removed.
M-2	8/3/2015	Monitoring equipment installed. Confirmed monitor readings.
	10/14/2015	Adjusted peak combo sensor. Scrubbed/cleaned sensors. Confirmed monitor readings.
	10/16/2015	Obtained pipe measurements.
	11/4/2015	Scrubbed/cleaned sensors. Confirmed monitor readings.
	12/21/2015	Confirmed monitor readings.
M-3	1/6/2016	Confirmed monitor readings. Monitoring equipment removed.
	8/4/2015	Monitoring equipment installed. Confirmed monitor readings.
	9/1/2015	Re-located meter from combined sewer main to CSO. Monitoring equipment installed. Confirmed monitor readings.
	9/15/2015	Confirmed monitor readings.

Service History Report

Customer *City of Elizabeth*

<i>Site Name</i>	<i>Date</i>	<i>Field Service Performed</i>
M-3	10/1/2015	Scrubbed/cleaned sensors.
	10/23/2015	Debris covering sensor. Confirmed monitor readings.
	11/4/2015	Checked peak combo sensor operation.
	2/9/2016	Confirmed ultrasonic depth sensor operation. Confirmed monitor readings. Monitoring equipment removed.
M-4	8/13/2015	Monitoring equipment installed. Confirmed monitor readings.
	8/25/2015	Scrubbed/cleaned sensors. Confirmed monitor readings.
	9/2/2015	Rotated/adjusted sensor mounting band. Confirmed monitor readings.
	9/25/2015	Scrubbed/cleaned sensors. Confirmed monitor readings.
	10/15/2015	Confirmed monitor readings.
	12/3/2015	Confirmed monitor readings.

**CSO QUANTIFICATION
TIDAL-INFLUENCED OUTFALLS**

CSO Quantification

CSO-022 is located in a tidal area and overflow volumes were influenced by tide levels and tide gate operation. Estimated overflow volumes have been calculated using the Scattergraph method with data from monitoring site M-11. The storm scattergraphs that follow have been evaluated to estimate the capacity of the underflow sewer to the interceptor during overflow events (shown as the iso-Q line on the scattergraph). The limit switch on tide gate LS-13 provided the relative start and end times of each event. Overflows were quantified as follows: *Overflow Rate = (Incoming Flow Rate – Underflow Rate) if gate is open.*

For each significant storm event hydrographs are also provided that show the total flow to the regulator (QFINAL), the on/off (open/close) tide gate status (LIMIT_SWITCH1) and the calculated overflow rate (Q_OVERFLOW).

In addition to the six significant storm events, an overflow was recorded for the minor rain event on 10/9/2015.

Daily Summary:

Date	Max Discharge		Total Volume (MG)
	Time	Rate (MGD)	
9/10/2015	17:55	11.77	0.946
9/29/2015	23:25	3.177	0.074
9/30/2015	2:20	34.24	1.560

CSO Quantification

CSO-040 is located in a tidal area and overflow volumes were influenced by tide levels and tide gate operation. Estimated overflow volumes have been calculated using the Scattergraph method with data from monitoring site M-12. The storm scattergraphs that follow have been evaluated to estimate the capacity of the underflow sewer to the interceptor during overflow events (shown as the iso-Q line on the scattergraph). The limit switch on tide gate LS-12 provided the relative start and end times of each event. Overflows were quantified as follows: *Overflow Rate = (Incoming Flow Rate – Underflow Rate) if gate is open.*

For each significant storm event hydrographs are also provided that show the total flow to the regulator (QFINAL), the on/off (open/close) tide gate status (LIMIT_SWITCH1) and the calculated overflow rate (Q_OVERFLOW).

Data shows the CSO operated as expected during significant rain events throughout the study period, except as noted below:

9/10/2015 rain event – gate did not open

11/19/2015 rain event – gate did not open

12/17/2015 rain event – gate did not open

Daily Summary:

Date	Max Discharge		Total Volume (MG)
	Time	Rate (MGD)	
9/30/2015	2:20	6.069	0.108
10/2/2015	19:15	2.186	0.058
10/28/2015	16:40	2.586	0.044

CSO Quantification

CSO-001 is located in a tidal area and overflow volumes were influenced by tide levels and tide gate operation. Due to backwater influences from the Easterly Intercepting Sewer during rain events, the capacity of the underflow line from the regulator was not a consistent value, and overflow volumes could not be estimated precisely using the Scattergraph method and data from monitoring site M-16 alone. However, the underflow wastewater was monitored directly in the interceptor just downstream of the regulator at site M-15. The limit switch on tide gate LS-1 provided the relative start and end times of each event, so overflows rates were quantified as follows: *Overflow Rate = (Incoming Flow Rate at M-16 – Underflow Rate at M-15) if gate is open.*

For each significant storm event hydrographs are provided that show the total flow to the regulator (QFINAL), the on/off (open/close) tide gate status (LIMIT_SWITCH1) and the calculated overflow rate (Q_OVERFLOW).

Dry weather flow into M-16 increased beginning November 1, 2015 resulting from a water main break in the upstream basin. Data shows evidence of continuous overflow at CSO-001 beginning November 11, 2015 until the water main repair was completed on December 3-5, 2015.

In addition to the six significant storm events, an overflow was recorded for the minor rain event on 10/9/2015.

Daily Summary:

Date	Max Discharge		Total Volume (MG)
	Time	Rate (MGD)	
9/10/2015	4:55	8.1	1.063
9/30/2015	2:30	36.4	2.215

CSO Quantification

CSO-031 is located in a tidal area and overflow volumes were influenced by tide levels and tide gate operation. Estimated overflow volumes have been calculated using the Scattergraph method with data from monitoring site M-27. The storm scattergraphs that follow have been evaluated to estimate the capacity of the underflow sewer to the interceptor during overflow events (shown as the iso-Q line on the scattergraph). The limit switch on tide gate LS-11 provided the relative start and end times of each event. Overflows were quantified as follows: *Overflow Rate = (Incoming Flow Rate – Underflow Rate) if gate is open.*

For each significant storm event hydrographs are also provided that show the total flow to the regulator (QFINAL), the on/off (open/close) tide gate status (LIMIT_SWITCH1) and the calculated overflow rate (Q_OVERFLOW).

Data shows the CSO operated as expected during significant rain events throughout the study period, except as noted below:

11/19/2015 rain event – gate did not open

Daily Summary:

Date	Max Discharge		Total Volume (MG)
	Time	Rate (MGD)
