Site Commentary

Site Information

M-10	
Pipe Dimensions (in.)	Elliptical (89.75 in H, 90.00 in W)
Silt (in.)	0.00

Overview

M-10 was situated on the combined sewer overflow main just upstream of the CSO-003 outfall on the Elizabeth River. M-10 accepts wet weather overflows from regulator R003B and bypass chamber-Solids/Floatables Control Facility 003A.

Flow was negligible during dry weather periods, with expected overflow activity in response to rainfall events.

Backwater conditions were evident during significant overflow events.

Observations

Average flow depth, velocity, and quantity data observed during Saturday, August 22, 2015 to Monday, December 21, 2015 , along with observed minimum and maximum data, are provided in the following table.

Observed Flow Conditions			
Item	Depth (in)	Velocity (ft/s)	Quantity (MGD)
Average	2.88	0.28	0.125
Minimum	2.62	0.06	0.031
Maximum	31.97	5.06	45.041
Time of Minimum	11/17/2015 4:30 AM	10/2/2015 11:55 AM	10/27/2015 8:20 AM
Time of Maximum	9/30/2015 2:40 AM	9/30/2015 2:45 AM	9/30/2015 2:40 AM

Based upon the quality and consistency of the observed flow depth and velocity data, the Continuity equation was used to calculate flow rate and quantities during the monitoring period. Graphical data reports are based on an hourly average.

Data Quality

Data uptime observed during the Saturday, August 22, 2015 to the Monday, December 21, 2015 monitoring period is provided in the table below.

Percent Uptime	
Depth (in)	100
Velocity (ft/s)	100
Quantity (MGD)	100

Site Commentary

Site Information

M-11	
Pipe Dimensions (in.)	M11 Special (74.88 in H, 48.12 in W)
Silt (in.)	5.50

Overview

M-11 was situated on the combined sewer gravity main upstream of regulator R022. Normal dry weather flow from R022 discharges to the Westerly Intercepting Sewer between M-37 and M-36; wet weather overflows discharge to CSO-022 on the Elizabeth River. Limit switch LS-13 was fitted to the tide gate at the Solids/Floatables Control Facility for CSO-022.

Typical combined sewer flow patterns were observed in reaction to the range of rainfall events during the study period.

Backwater conditions were evident during most rain events and the flow depth exceeded full pipe during the September 30, 2015 event.

Observations

Average flow depth, velocity, and quantity data observed during Saturday, August 22, 2015 to Monday, December 21, 2015 , along with observed minimum and maximum data, are provided in the following table.

Observed Flow Conditions			
Item	Depth (in)	Velocity (ft/s)	Quantity (MGD)
Average	15.26	1.16	1.375
Minimum	12.20	0.28	0.392
Maximum	95.11	3.15	36.236
Time of Minimum	12/17/2015 4:05 AM	11/20/2015 1:20 AM	12/17/2015 2:55 AM
Time of Maximum	9/30/2015 2:20 AM	9/30/2015 2:20 AM	9/30/2015 2:20 AM

Based upon the quality and consistency of the observed flow depth and velocity data, the Continuity equation was used to calculate flow rate and quantities during the monitoring period.

Graphical data reports are based on 15-minute averages.

Data Quality

Data uptime observed during the Saturday, August 22, 2015 to the Monday, December 21, 2015 monitoring period is provided in the table below.

Percent Uptime	
Depth (in)	100
Velocity (ft/s)	100
Quantity (MGD)	100

Investigation Information:				Manhole Information:				
Date/Time of Investigation:	August 4, 2015		3:38 PM	Manhole Depth:		8.6 Feet		
Site Hydraulics:	SMOOTH FLOW			Manhole Material / Condition:		Concrete	Brick	Fair
				Active Drop Connections?				
Upstream Input: (L/S, P/S)				Pipe Material / Condition:		Brick		Fair
Upstream Manhole:				Mini System Character:		RESIDENTIAL		
Downstream Manhole:				Telephone Information:				
Depth of Flow (Wet Dof):	10 +/-		0.38	Access Pole #:		N/A		
Range (Air Dof):	62.5 +/-		0.5	Distance From Manhole:		N/A Feet		
Peak Velocity:	1.03 fps			Road Cut Length:		N/A Feet		
Silt:	3 Inches		+/- .50"	Trench Length:		N/A Feet		

Other Information:
40°39'29.05"N 74°12'31.60"W

Installation Information		Backup	Yes	No	?	Distance
Installation Type:	SPECIAL - REVERSE INSTALL	Trunk				
Sensors / Devices:	CS4 & CS5 SENSORS	Lift/Pump Station				
Surcharge Height:		WWTP				
Rain Gauge Zone:		Other				

Additional Site Information / Comments:

CS4 SN 9458 PO 6" CS5 S/N 05001 PO 1.5"

Site Commentary

Site Information

M-12	
Pipe Dimensions (in.)	Elliptical (55.00 in H, 54.63 in W)
Silt (in.)	0.00

Overview

M-12 was situated on the combined sewer gravity main upstream of regulator R040. Normal dry weather flow from R040 discharges to the Westerly Intercepting Sewer between M-36 and M-35; wet weather overflows discharge to CSO-040 on the Elizabeth River. Limit switch LS-12 was fitted to the tide gate at the Solids/Floatables Control Facility for CSO-040.

Typical combined sewer flow patterns were observed in reaction to the range of rainfall events during the study period.

Backwater conditions were evident during most rain events with flow depths approaching full pipe level.

Observations

Average flow depth, velocity, and quantity data observed during Saturday, August 22, 2015 to Monday, December 21, 2015, along with observed minimum and maximum data, are provided in the following table.

Observed Flow Conditions			
Item	Depth (in)	Velocity (ft/s)	Quantity (MGD)
Average	2.10	2.81	0.267
Minimum	0.67	0.00	0.000
Maximum	53.62	4.79	8.069
Time of Minimum	10/30/2015 2:35 AM	9/10/2015 6:00 PM	9/10/2015 6:00 PM
Time of Maximum	10/3/2015 1:55 AM	9/9/2015 3:55 PM	9/30/2015 2:20 AM

Based upon the quality and consistency of the observed flow depth and velocity data, the Continuity equation was used to calculate flow rate and quantities during the monitoring period.

Graphical data reports are based on 15-minute averages.

Data Quality

Data uptime observed during the Saturday, August 22, 2015 to the Monday, December 21, 2015 monitoring period is provided in the table below.

Percent Uptime	
Depth (in)	100
Velocity (ft/s)	100
Quantity (MGD)	100

Site Commentary

Site Information

M-13	
Pipe Dimensions (in.)	Elliptical (104.25 in H, 166.00 in W)
Silt (in.)	0.00

Overview

M-13 was situated on the combined sewer overflow main from regulator R036 which discharges to CSO-036 on the Elizabeth River.

Nominal flow was evident during dry weather periods, with expected overflow activity in response to the rainfall events.

Backwater conditions were evident during all overflow events.

Observations

Average flow depth, velocity, and quantity data observed during Saturday, August 22, 2015 to Monday, December 21, 2015 , along with observed minimum and maximum data, are provided in the following table.

Observed Flow Conditions			
Item	Depth (in)	Velocity (ft/s)	Quantity (MGD)
Average	4.24	0.25	0.309
Minimum	3.56	0.12	0.102
Maximum	51.91	5.06	81.394
Time of Minimum	11/13/2015 9:20 PM	9/13/2015 1:30 AM	11/23/2015 7:35 PM
Time of Maximum	9/30/2015 4:05 AM	9/30/2015 2:25 AM	9/30/2015 2:30 AM

Based upon the quality and consistency of the observed flow depth and velocity data, the Continuity equation was used to calculate flow rate and quantities during the monitoring period.

Graphical data reports are based on 15-minute averages.

Data Quality

Data uptime observed during the Saturday, August 22, 2015 to the Monday, December 21, 2015 monitoring period is provided in the table below.

Percent Uptime	
Depth (in)	100
Velocity (ft/s)	100
Quantity (MGD)	100

Site Commentary

Site Information

M-14	
Pipe Dimensions (in.)	Elliptical (37.50 in H, 36.50 in W)
Silt (in.)	2.50

Overview

M-14 was situated on the combined sewer overflow main from regulator R038 which discharges to CSO-038 on the Elizabeth River. M-14 was located at the influent pipe to the Solids/Floatables Control Facility for CSO-038.

Flow was negligible during dry weather periods, with expected overflow activity in response to the more significant rainfall events.

Backwater conditions were evident during all overflow events.

Daily tidal influence was apparent throughout the monitoring period, with depth levels exceeding full pipe on most days.

Observations

Average flow depth, velocity, and quantity data observed during Saturday, August 22, 2015 to Monday, December 21, 2015, along with observed minimum and maximum data, are provided in the following table.

Observed Flow Conditions			
Item	Depth (in)	Velocity (ft/s)	Quantity (MGD)
Average	24.44	0.01	0.023
Minimum	9.99	0.00	0.000
Maximum	78.81	1.14	5.362
Time of Minimum	9/15/2015 7:05 AM	8/22/2015 12:00 AM	8/22/2015 12:00 AM
Time of Maximum	10/3/2015 2:15 AM	12/17/2015 3:50 PM	12/17/2015 3:50 PM

Based upon the quality and consistency of the observed flow depth and velocity data, the Continuity equation was used to calculate flow rate and quantities during the monitoring period.

Graphical data reports are based on 15-minute averages.

Data Quality

Data uptime observed during the Saturday, August 22, 2015 to the Monday, December 21, 2015 monitoring period is provided in the table below.

Percent Uptime	
Depth (in)	100
Velocity (ft/s)	100
Quantity (MGD)	100

Site Commentary

Site Information

M-15	
Pipe Dimensions (in.)	Elliptical (33.50 in H, 32.50 in W)
Silt (in.)	10.00

Overview

M-15 was situated on the Easterly Intercepting Sewer just downstream of regulator R001.

Dry weather flow into M-15 increased beginning November 1, 2015 resulting from a water main break in the basin upstream of M-16.

Interceptor flow patterns show backwater conditions and significant surcharging in response to rainfall events.

Tidewater was observed leaking through the tide gate into the interceptor at regulator R001 during dry weather periods.

Observations

Average flow depth, velocity, and quantity data observed during Saturday, August 22, 2015 to Monday, December 21, 2015 , along with observed minimum and maximum data, are provided in the following table.

Observed Flow Conditions			
Item	Depth (in)	Velocity (ft/s)	Quantity (MGD)
Average	23.55	0.92	1.681
Minimum	13.88	0.00	0.000
Maximum	113.13	1.71	4.889
Time of Minimum	12/21/2015 1:20 PM	11/19/2015 7:10 PM	11/19/2015 7:10 PM
Time of Maximum	9/30/2015 2:25 AM	11/28/2015 10:40 AM	11/28/2015 7:15 PM

Based upon the quality and consistency of the observed flow depth and velocity data, the Continuity equation was used to calculate flow rate and quantities during the monitoring period.

Graphical data reports are based on 15-minute averages.

Data Quality

Data uptime observed during the Saturday, August 22, 2015 to the Monday, December 21, 2015 monitoring period is provided in the table below.

Percent Uptime	
Depth (in)	100
Velocity (ft/s)	100
Quantity (MGD)	100

Site Commentary

Site Information

M-16	
Pipe Dimensions (in.)	Elliptical (48.75 in H, 48.00 in W)
Silt (in.)	0.00 - 2.00

Overview

M-16 was situated on the combined sewer gravity main upstream of regulator R001. Normal dry weather flow from R001 discharges to the Easterly Intercepting Sewer upstream of M-15; wet weather overflows discharge to CSO-001 on the Peripheral Ditch. The tide gate was fitted with limit switch LS-1 at the Solids/Floatables Control Facility for CSO-001.

Dry weather flow into M-16 increased beginning November 1, 2015 resulting from a water main break in the upstream basin. Data shows evidence of continuous overflow at CSO-001 beginning November 11, 2015 until the water main repair was completed on December 3-5, 2015.

Typical combined sewer flow patterns were observed in reaction to the range of rainfall events during the study period.

Backwater conditions were evident during several rain events with flow depths approaching full pipe level.

Observations

Average flow depth, velocity, and quantity data observed during Saturday, August 22, 2015 to Monday, December 21, 2015, along with observed minimum and maximum data, are provided in the following table.

Observed Flow Conditions			
Item	Depth (in)	Velocity (ft/s)	Quantity (MGD)
Average	9.17	2.76	2.517
Minimum	1.08	0.08	0.000
Maximum	63.61	4.62	38.130
Time of Minimum	12/21/2015 6:55 PM	12/21/2015 9:35 AM	12/6/2015 12:05 AM
Time of Maximum	9/30/2015 2:25 AM	9/30/2015 2:30 AM	9/30/2015 2:30 AM

Based upon the quality and consistency of the observed flow depth and velocity data, the Continuity equation was used to calculate flow rate and quantities during the monitoring period.

Graphical data reports are based on 15-minute averages.

Data Quality

Data uptime observed during the Saturday, August 22, 2015 to the Monday, December 21, 2015 monitoring period is provided in the table below.

Percent Uptime	
Depth (in)	100
Velocity (ft/s)	100
Quantity (MGD)	100

Site Commentary

Site Information

M-17	
Pipe Dimensions (in.)	Circular (90.00 in H)
Silt (in.)	0.00

Overview

M-17 was situated on the combined sewer overflow main from regulator R041 which discharges to CSO-041 on the Elizabeth River. M-17 was located at the influent pipe to the Solids/Floatables Control Facility for CSO-041.

Flow was negligible during dry weather periods, with expected overflow activity in response to rainfall events.

Conditions reflected relative free flow during some overflow events, while others exhibit a greater degree of backwater.

Observations

Average flow depth, velocity, and quantity data observed during Saturday, August 22, 2015 to Monday, December 21, 2015 , along with observed minimum and maximum data, are provided in the following table.

Observed Flow Conditions			
Item	Depth (in)	Velocity (ft/s)	Quantity (MGD)
Average	1.03	0.05	0.268
Minimum	0.00	0.00	0.000
Maximum	76.74	2.69	59.123
Time of Minimum	8/26/2015 8:10 AM	8/22/2015 12:00 AM	8/22/2015 12:00 AM
Time of Maximum	9/30/2015 2:35 AM	12/17/2015 3:10 PM	9/30/2015 2:25 AM

Based upon the quality and consistency of the observed flow depth and velocity data, the Continuity equation was used to calculate flow rate and quantities during the monitoring period.

Graphical data reports are based on 15-minute averages.

Data Quality

Data uptime observed during the Saturday, August 22, 2015 to the Monday, December 21, 2015 monitoring period is provided in the table below.

Percent Uptime	
Depth (in)	100
Velocity (ft/s)	100
Quantity (MGD)	100

Site Commentary

Site Information

M-18	
Pipe Dimensions (in.)	Elliptical (71.00 in H, 114.00 in W)
Silt (in.)	4.00

Overview

M-18 was situated on the combined sewer overflow main at the CSO-042 outfall to the Elizabeth River, downstream of regulators R042A, R042B and R042C. The tide gate at the CSO-042 outfall was fitted with limit switch LS-10.

Flow was negligible during dry weather periods, with expected overflow activity in response to the more significant rainfall events.

Backwater conditions were evident during all overflow events.

The flow level exceed full pipe during the October 3, 2015 overflow event.

Nominal dry weather tidal influence was apparent daily throughout the monitoring period due to leakage through the tide gate.

A dry weather overflow occurred on November 7, 2015 presumably due to backup at the Trenton Avenue Pumping Station.

The velocity sensor at M-18 was compromised during the December 17, 2015 overflow event due to silt deposition, and overflow rates could not be calculated. Silt deposition was also noted after the November 19, 2015 event.

Observations

Average flow depth, velocity, and quantity data observed during Saturday, August 22, 2015 to Monday, December 21, 2015, along with observed minimum and maximum data, are provided in the following table.

Observed Flow Conditions			
Item	Depth (in)	Velocity (ft/s)	Quantity (MGD)
Average	5.46	0.01	0.093
Minimum	1.08	0.00	0.000
Maximum	74.23	3.44	75.174
Time of Minimum	11/23/2015 1:05 PM	8/22/2015 12:00 AM	8/22/2015 12:00 AM
Time of Maximum	10/3/2015 1:40 AM	9/30/2015 2:20 AM	9/30/2015 2:20 AM

Based upon the quality and consistency of the observed flow depth and velocity data, the Continuity equation was used to calculate flow rate and quantities during the monitoring period.

Graphical data reports are based on 15-minute averages.

Data Quality

Data uptime observed during the Saturday, August 22, 2015 to the Monday, December 21, 2015 monitoring period is provided in the table below.

Percent Uptime	
Depth (in)	100
Velocity (ft/s)	100
Quantity (MGD)	100

Site Commentary

Site Information

M-19	
Pipe Dimensions (in.)	Elliptical (46.00 in H, 50.00 in W)
Silt (in.)	5.00

Overview

M-19 was situated on the combined sewer gravity main upstream of regulator R002. Normal dry weather flow from R002 discharges to the Easterly Intercepting Sewer between M-15 and M-23; wet weather overflows discharge to CSO-002 on the Great Ditch.

Typical combined sewer flow patterns were observed in reaction to the range of rainfall events during the study period.

Flow depth exceeded full pipe during several rain events with periods of backwater and surcharging.

Observations

Average flow depth, velocity, and quantity data observed during Saturday, August 22, 2015 to Monday, December 21, 2015 , along with observed minimum and maximum data, are provided in the following table.

Observed Flow Conditions			
Item	Depth (in)	Velocity (ft/s)	Quantity (MGD)
Average	9.09	0.45	0.334
Minimum	7.21	0.20	0.070
Maximum	76.04	3.02	23.048
Time of Minimum	12/20/2015 5:50 AM	12/19/2015 6:05 AM	12/21/2015 3:45 AM
Time of Maximum	12/17/2015 1:00 PM	9/30/2015 2:20 AM	9/30/2015 2:20 AM

Based upon the quality and consistency of the observed flow depth and velocity data, the Continuity equation was used to calculate flow rate and quantities during the monitoring period.

Graphical data reports are based on 15-minute averages.

Data Quality

Data uptime observed during the Saturday, August 22, 2015 to the Monday, December 21, 2015 monitoring period is provided in the table below.

Percent Uptime	
Depth (in)	100
Velocity (ft/s)	100
Quantity (MGD)	100

Address / Location:		FAIRMOUNT AVENUE WEST OF DIVISION STREET		Map Page #:			
				Pipe Height:		46 Inches	
Access:	DRIVE	Type of System:	Combined Gravity Main	Pipe Width:		50 Inches	
				Phone Number:		I.P. 107.80.17.100	

Investigation Information:			Manhole Information:		
Date/Time of Investigation:	August 13, 2015	11:00 AM	Manhole Depth:	7 Feet	
Site Hydraulics:	SMOOTH FLOW		Manhole Material / Condition:	Brick	Fair
			Active Drop Connections?		
Upstream Input: (L/S, P/S)			Pipe Material / Condition:	Brick	Fair
Upstream Manhole:			Mini System Character:	INDUSTRIAL	
Downstream Manhole:			Telephone Information:		
Depth of Flow (Wet Dof):	8.75 +/-	0.5	Access Pole #:	N/A	
Range (Air Dof):	36 +/-	0.5	Distance From Manhole:	N/A Feet	
Peak Velocity:	0.62 fps		Road Cut Length:	N/A Feet	
Silt:	2 Inches		Trench Length:	N/A Feet	

Other Information:
40°40'15.90"N 74°11'37.45"W

Installation Information		Backup	Yes	No	?	Distance
Installation Type:	Doppler Special Installation	Trunk				
Sensors / Devices:	CS4 & CS5 SENSORS	Lift/Pump Station				
Surcharge Height:		WWTP				
Rain Gauge Zone:		Other				

Additional Site Information / Comments:

CS4 SN 09483 CS5 SN 05029 PO1.5"

Site Commentary

Site Information

M-20	
Pipe Dimensions (in.)	82
Silt (in.)	1.50

Overview

M-20 was situated on a storm runoff main that discharges stormwater from the northeast area of the City to the Peripheral Ditch.

Flow depth was primarily influenced by levels in the Peripheral Ditch and periodic step-downs in depth corresponded to low tide minimums.

Flow discharges during significant rain events were pronounced, but were affected by backwater resulting from flow levels in the Peripheral Ditch.

Observations

Average flow depth, velocity, and quantity data observed during Saturday, August 22, 2015 to Monday, December 21, 2015 , along with observed minimum and maximum data, are provided in the following table.

Observed Flow Conditions			
Item	Depth (in)	Velocity (ft/s)	Quantity (MGD)
Average	23.81	0.25	1.449
Minimum	10.20	-0.21	-3.114
Maximum	63.25	3.81	72.478
Time of Minimum	11/27/2015 6:50 PM	11/20/2015 6:00 AM	11/20/2015 6:00 AM
Time of Maximum	9/30/2015 2:25 AM	9/30/2015 2:30 AM	9/30/2015 2:30 AM

Based upon the quality and consistency of the observed flow depth and velocity data, the Continuity equation was used to calculate flow rate and quantities during the monitoring period.

Graphical data reports are based on 15-minute averages.

Data Quality

Data uptime observed during the Saturday, August 22, 2015 to the Monday, December 21, 2015 monitoring period is provided in the table below.

Percent Uptime	
Depth (in)	100
Velocity (ft/s)	100
Quantity (MGD)	100

Site Commentary

Site Information

M-21	
Pipe Dimensions (in.)	Circular (42.00 in H)
Silt (in.)	0.00

Overview

M-21 was situated on the combined sewer overflow main from regulator R042C upstream of M-18 which discharges to CSO-042 on the Elizabeth River.

Flow was negligible during dry weather periods, with expected overflow activity in response to rainfall events.

Free flow conditions were present during all overflow events.

Observations

Average flow depth, velocity, and quantity data observed during Saturday, August 22, 2015 to Monday, December 21, 2015 , along with observed minimum and maximum data, are provided in the following table.

Observed Flow Conditions			
Item	Depth (in)	Velocity (ft/s)	Quantity (MGD)
Average	0.97	0.08	0.040
Minimum	0.45	0.00	0.000
Maximum	34.64	9.17	48.628
Time of Minimum	10/30/2015 1:30 PM	8/22/2015 12:00 AM	8/22/2015 12:00 AM
Time of Maximum	9/30/2015 2:20 AM	9/30/2015 2:30 AM	9/30/2015 2:20 AM

Based upon the quality and consistency of the observed flow depth and velocity data, the Continuity equation was used to calculate flow rate and quantities during the monitoring period.

Graphical data reports are based on 15-minute averages.

Data Quality

Data uptime observed during the Saturday, August 22, 2015 to the Monday, December 21, 2015 monitoring period is provided in the table below.

Percent Uptime	
Depth (in)	100
Velocity (ft/s)	100
Quantity (MGD)	100

Site Commentary

Site Information

M-22	
Pipe Dimensions (in.)	M-22 Special (54.88 in H, 37.26 in W)
Silt (in.)	0.00

Overview

M-22 was situated on the combined sewer gravity main upstream of regulator R029. Normal dry weather flow from R031 discharges to the Easterly Intercepting Sewer between M-29 and M-32; wet weather overflows discharge to CSO-029 on the Elizabeth River. Limit switch LS-14 was fitted to the tide gate at the Solids/Floatables Control Facility for CSO-029.

Typical combined sewer flow patterns were observed in reaction to the range of rainfall events during the study period.

Backwater conditions were evident during most rain events and the flow depth exceeded full pipe during several events.

Observations

Average flow depth, velocity, and quantity data observed during Saturday, August 22, 2015 to Monday, December 21, 2015 , along with observed minimum and maximum data, are provided in the following table.

Observed Flow Conditions			
Item	Depth (in)	Velocity (ft/s)	Quantity (MGD)
Average	4.65	2.49	0.719
Minimum	1.37	0.31	0.275
Maximum	71.85	8.72	41.756
Time of Minimum	11/19/2015 4:05 PM	10/28/2015 9:25 PM	9/17/2015 4:00 AM
Time of Maximum	10/3/2015 2:00 AM	9/10/2015 2:50 PM	9/30/2015 2:20 AM

Based upon the quality and consistency of the observed flow depth and velocity data, the Continuity equation was used to calculate flow rate and quantities during the monitoring period.

Graphical data reports are based on 15-minute averages.

Data Quality

Data uptime observed during the Saturday, August 22, 2015 to the Monday, December 21, 2015 monitoring period is provided in the table below.

Percent Uptime	
Depth (in)	100
Velocity (ft/s)	100
Quantity (MGD)	100

Date/Time of Investigation:	August 18, 2015	3:54 PM	Manhole Depth:	11 Feet	
Site Hydraulics:	SOME RIPPLES		Manhole Material / Condition	Concrete	Fair
Upstream Input: (L/S, P/S)			Active Drop Connections?		
Upstream Manhole:			Pipe Material / Condition:	Coated	Fair
Downstream Manhole:			Mini System Character:	RESIDENTIAL	COMMERCIAL
Depth of Flow (Wet Dof):	4 +/-	0.5	Access Pole #:	N/A	
Range (Air Dof):	+/-		Distance From Manhole:	N/A Feet	
Peak Velocity:	2.75 fps		Road Cut Length:	N/A Feet	
Silt:	0 Inches		Trench Length:	N/A Feet	

Other Information:
40°38'41.95"N 74°11'22.25"W

Installation Information		Backup	Yes	No	?	Distance
Installation Type:	Doppler Standard Ring and Crank Installation	Trunk				
Sensors / Devices:	CS4 & CS5 SENSORS	Lift/Pump Station				
Surcharge Height:		WWTP				
Rain Gauge Zone:		Other				

Additional Site Information / Comments:
CS4 SN 09700 CS5 SN 05030 PO 1.38" VAULT MEASUREMENT W 75.5 L 95.5

Site Commentary

Site Information

M-23	
Pipe Dimensions (in.)	Elliptical (41.63 in H, 42.50 in W)
Silt (in.)	2.00

Overview

M-23 was situated on the Easterly Intercepting Sewer between M-15 and M-30

Dry weather flow into M-23 increased beginning November 1, 2015 resulting from a water main break in the basin upstream of M-16.

Interceptor flow patterns show backwater conditions and significant surcharging in response to rainfall events.

Observations

Average flow depth, velocity, and quantity data observed during Saturday, August 22, 2015 to Monday, December 21, 2015 , along with observed minimum and maximum data, are provided in the following table.

Observed Flow Conditions			
Item	Depth (in)	Velocity (ft/s)	Quantity (MGD)
Average	19.55	1.13	2.831
Minimum	10.38	0.13	0.319
Maximum	143.88	2.04	8.085
Time of Minimum	12/9/2015 4:50 AM	11/7/2015 11:05 AM	12/15/2015 2:25 AM
Time of Maximum	9/30/2015 2:25 AM	9/10/2015 4:10 AM	9/10/2015 4:45 AM

Based upon the quality and consistency of the observed flow depth and velocity data, the Continuity equation was used to calculate flow rate and quantities during the monitoring period.

Graphical data reports are based on 15-minute averages.

Data Quality

Data uptime observed during the Saturday, August 22, 2015 to the Monday, December 21, 2015 monitoring period is provided in the table below.

Percent Uptime	
Depth (in)	100
Velocity (ft/s)	100
Quantity (MGD)	100

Site Commentary

Site Information

M-24	
Pipe Dimensions (in.)	Elliptical (30.00 in H, 29.88 in W)
Silt (in.)	0.00

Overview

M-24 was situated on the combined sewer overflow main from regulator R039 which discharges to CSO-030 on the Great Ditch.

Flow was negligible during dry weather periods, with expected overflow activity in response to the more significant rainfall events.

Free flow conditions were present during all overflow events.

The flow level exceed full pipe during the September 30, 2015 overflow event.

Observations

Average flow depth, velocity, and quantity data observed during Saturday, August 22, 2015 to Monday, December 21, 2015 , along with observed minimum and maximum data, are provided in the following table.

Observed Flow Conditions			
Item	Depth (in)	Velocity (ft/s)	Quantity (MGD)
Average	1.83	0.01	0.006
Minimum	1.12	0.00	0.000
Maximum	43.12	4.14	13.090
Time of Minimum	10/25/2015 12:00 AM	12/18/2015 11:45 AM	12/18/2015 11:45 AM
Time of Maximum	9/30/2015 2:20 AM	9/30/2015 2:20 AM	9/30/2015 2:20 AM

Based upon the quality and consistency of the observed flow depth and velocity data, the Continuity equation was used to calculate flow rate and quantities during the monitoring period.

Graphical data reports are based on 15-minute averages.

Data Quality

Data uptime observed during the Saturday, August 22, 2015 to the Monday, December 21, 2015 monitoring period is provided in the table below.

Percent Uptime	
Depth (in)	100
Velocity (ft/s)	100
Quantity (MGD)	100

Site Commentary

Site Information

M-25	
Pipe Dimensions (in.)	M-25 Special (60.50 in H, 42.75 in W)
Silt (in.)	0.00

Overview

M-25 was situated on the combined sewer gravity main upstream of regulator R039. Normal dry weather flow from R039 discharges to the combined sewer gravity main upstream of M-28 and regulator R034B; wet weather overflows discharge through M-24 to CSO-039 on the Great Ditch.

Typical combined sewer flow patterns were observed in reaction to the range of rainfall events during the study period.

The flow depth exceeded full pipe during the September 30, 2015 rain event.

Observations

Average flow depth, velocity, and quantity data observed during Saturday, August 22, 2015 to Monday, December 21, 2015, along with observed minimum and maximum data, are provided in the following table.

Observed Flow Conditions			
Item	Depth (in)	Velocity (ft/s)	Quantity (MGD)
Average	7.90	1.13	0.889
Minimum	4.84	0.54	0.253
Maximum	97.95	4.93	44.245
Time of Minimum	10/19/2015 4:25 AM	9/20/2015 4:15 AM	9/26/2015 2:50 AM
Time of Maximum	9/30/2015 2:20 AM	9/30/2015 2:15 AM	9/30/2015 2:15 AM

Based upon the quality and consistency of the observed flow depth and velocity data, the Continuity equation was used to calculate flow rate and quantities during the monitoring period.

Graphical data reports are based on 15-minute averages.

Data Quality

Data uptime observed during the Saturday, August 22, 2015 to the Monday, December 21, 2015 monitoring period is provided in the table below.

Percent Uptime	
Depth (in)	100
Velocity (ft/s)	100
Quantity (MGD)	100

Site Commentary

Site Information

M-26	
Pipe Dimensions (in.)	Circular (42.00 in H)
Silt (in.)	0.00

Overview

M-26 was situated on the storm runoff main conveying stormwater into the City at its western boundary. M-26 is located upstream of M-40.

Flow was negligible during dry weather periods, with expected flow discharge during rainfall events.

Free flow conditions were present during all rain events.

Observations

Average flow depth, velocity, and quantity data observed during Saturday, August 22, 2015 to Monday, December 21, 2015, along with observed minimum and maximum data, are provided in the following table.

Observed Flow Conditions			
Item	Depth (in)	Velocity (ft/s)	Quantity (MGD)
Average	1.32	0.22	0.058
Minimum	0.78	0.00	0.000
Maximum	13.56	13.52	23.464
Time of Minimum	11/22/2015 7:30 AM	8/22/2015 12:00 AM	8/22/2015 12:00 AM
Time of Maximum	9/30/2015 2:30 AM	9/30/2015 2:30 AM	9/30/2015 2:30 AM

Based upon the quality and consistency of the observed flow depth and velocity data, the Continuity equation was used to calculate flow rate and quantities during the monitoring period.

Graphical data reports are based on 15-minute averages.

Data Quality

Data uptime observed during the Saturday, August 22, 2015 to the Monday, December 21, 2015 monitoring period is provided in the table below.

Percent Uptime	
Depth (in)	100
Velocity (ft/s)	100
Quantity (MGD)	100

Site Commentary

Site Information

M-27	
Pipe Dimensions (in.)	M-27 Special (47.38 in H, 34.26 in W)
Silt (in.)	0.00

Overview

M-27 was situated on the combined sewer gravity main upstream of regulator R031 (the flow monitor was re-located to this location from the combined sewer overflow on September 1, 2015). Normal dry weather flow from R031 discharges to the Easterly Intercepting Sewer between M-29 and M-32; wet weather overflows discharge to CSO-031 on the Arthur Kill. Limit switch LS-11 was fitted to the tide gate at the Solids/Floatables Control Facility for CSO-031.

Typical combined sewer flow patterns were observed in reaction to the range of rainfall events during the study period.

Backwater conditions were evident during most rain events and the flow depth exceeded full pipe during the September 30, 2015 event.

Observations

Average flow depth, velocity, and quantity data observed during Tuesday September 1, 2015 to Monday, December 21, 2015 , along with observed minimum and maximum data, are provided in the following table.

Observed Flow Conditions			
Item	Depth (in)	Velocity (ft/s)	Quantity (MGD)
Average	2.97	1.77	0.308
Minimum	1.40	0.43	0.068
Maximum	87.35	5.13	29.510
Time of Minimum	10/24/2015 4:05 AM	10/3/2015 2:50 AM	10/24/2015 4:00 AM
Time of Maximum	9/30/2015 2:20 AM	9/30/2015 2:20 AM	9/30/2015 2:20 AM

Based upon the quality and consistency of the observed flow depth and velocity data, the Continuity equation was used to calculate flow rate and quantities during the monitoring period.

Graphical data reports are based on 15-minute averages.

Data Quality

Data uptime observed during the Tuesday, September 1, 2015 to the Monday, December 21, 2015 monitoring period is provided in the table below.

Percent Uptime	
Depth (in)	99
Velocity (ft/s)	99

Investigation Information:				Manhole Information:			
Date/Time of Investigation:	September 1, 2015			Manhole Depth:	11.7 Feet		
Site Hydraulics:	SMOOTH, FAST MOVING FLOW			Manhole Material / Condition	Brick		Fair
				Active Drop Connections?			
Upstream Input: (L/S, P/S)				Pipe Material / Condition:	Brick		Poor
Upstream Manhole:				Mini System Character:	RESIDENTIAL		
Downstream Manhole:				Telephone Information:			
Depth of Flow (Wet Dof):	2.88 +/-	0.38		Access Pole #:	N/A		
Range (Air Dof):	42.75 +/-	0.38		Distance From Manhole:	N/A Feet		
Peak Velocity:	3 fps			Road Cut Length:	N/A Feet		
Silt:	0 Inches			Trench Length:	N/A Feet		

Other Information:
40°38'51"N 74°11'09.95"W

Installation Information		Backup	Yes	No	?	Distance
Installation Type:	Doppler Special Installation	Trunk				
Sensors / Devices:	CS4 & CS5 SENSORS	Lift/Pump Station				
Surcharge Height:	5 Feet	WWTP				
Rain Gauge Zone:		Other				

Additional Site Information / Comments:
CS4 SN 11867 PO 0.0" CS5 PO 1.75"

Site Commentary

Site Information

M-28	
Pipe Dimensions (in.)	M-28 Special (62.38 in H, 44.75 in W)
Silt (in.)	0.00

Overview

M-28 was situated on the combined sewer gravity main upstream of regulator R034B. Normal dry weather flow from R034B discharges to the Easterly Intercepting Sewer upstream of M-29; wet weather overflows discharge to the combined sewer gravity main upstream of M-34 and regulator R034A.

Typical combined sewer flow patterns were observed in reaction to the range of rainfall events during the study period.

Backwater conditions were evident during several rain events and the flow depth exceeded full pipe during the September 30, 2015 event.

Observations

Average flow depth, velocity, and quantity data observed during Saturday, August 22, 2015 to Monday, December 21, 2015 , along with observed minimum and maximum data, are provided in the following table.

Observed Flow Conditions			
Item	Depth (in)	Velocity (ft/s)	Quantity (MGD)
Average	5.58	2.50	1.360
Minimum	2.98	0.96	0.281
Maximum	89.96	6.17	40.642
Time of Minimum	9/18/2015 5:10 AM	10/28/2015 10:10 PM	9/18/2015 5:10 AM
Time of Maximum	9/30/2015 2:20 AM	9/10/2015 3:10 PM	9/30/2015 2:20 AM

Based upon the quality and consistency of the observed flow depth and velocity data, the Continuity equation was used to calculate flow rate and quantities during the monitoring period.

Graphical data reports are based on 15-minute averages.

Data Quality

Data uptime observed during the Saturday, August 22, 2015 to the Monday, December 21, 2015 monitoring period is provided in the table below.

Percent Uptime	
Depth (in)	100
Velocity (ft/s)	100
Quantity (MGD)	100

Site Commentary

Site Information

M-29	
Pipe Dimensions (in.)	Elliptical (53.50 in H, 52.50 in W)
Silt (in.)	18.00

Overview

M-29 was situated on the Easterly Intercepting Sewer between M-30 and M-32.

Dry weather flow into M-29 increased beginning November 1, 2015 resulting from a water main break in the basin upstream of M-16.

Interceptor flow patterns show backwater conditions and significant surcharging in response to rainfall events.

Observations

Average flow depth, velocity, and quantity data observed during Saturday, August 22, 2015 to Monday, December 21, 2015 , along with observed minimum and maximum data, are provided in the following table.

Observed Flow Conditions			
Item	Depth (in)	Velocity (ft/s)	Quantity (MGD)
Average	37.46	1.23	5.013
Minimum	29.86	0.28	1.529
Maximum	172.05	2.29	14.472
Time of Minimum	12/13/2015 6:10 AM	12/15/2015 2:20 AM	12/14/2015 4:55 AM
Time of Maximum	9/30/2015 2:25 AM	12/1/2015 12:15 PM	9/10/2015 5:20 AM

Based upon the quality and consistency of the observed flow depth and velocity data, the Continuity equation was used to calculate flow rate and quantities during the monitoring period.

Graphical data reports are based on 15-minute averages.

Data Quality

Data uptime observed during the Saturday, August 22, 2015 to the Monday, December 21, 2015 monitoring period is provided in the table below.

Percent Uptime	
Depth (in)	100
Velocity (ft/s)	100
Quantity (MGD)	100

Site Commentary

Site Information

M-30	
Pipe Dimensions (in.)	Elliptical (43.00 in H, 42.00 in W)
Silt (in.)	8.00

Overview

M-30 was situated on the Easterly Intercepting Sewer between M-23 and M-29.

Dry weather flow into M-30 increased beginning November 1, 2015 resulting from a water main break in the basin upstream of M-16.

Interceptor flow patterns show backwater conditions and significant surcharging in response to rainfall events.

Observations

Average flow depth, velocity, and quantity data observed during Saturday, August 22, 2015 to Monday, December 21, 2015 , along with observed minimum and maximum data, are provided in the following table.

Observed Flow Conditions			
Item	Depth (in)	Velocity (ft/s)	Quantity (MGD)
Average	28.97	0.93	3.240
Minimum	19.03	0.18	0.679
Maximum	159.24	1.69	9.197
Time of Minimum	12/13/2015 6:25 AM	9/10/2015 5:45 PM	12/14/2015 4:30 AM
Time of Maximum	9/30/2015 2:25 AM	11/7/2015 12:10 PM	9/10/2015 5:55 PM

Based upon the quality and consistency of the observed flow depth and velocity data, the Continuity equation was used to calculate flow rate and quantities during the monitoring period.

Graphical data reports are based on 15-minute averages.

Data Quality

Data uptime observed during the Saturday, August 22, 2015 to the Monday, December 21, 2015 monitoring period is provided in the table below.

Percent Uptime	
Depth (in)	100
Velocity (ft/s)	100
Quantity (MGD)	100
