

National Disaster Resilience Regional Stormwater Infrastructure Toolkit

New Jersey Department of Environmental Protection Public Workshop

January 9, 2019

8:30 a.m. - 3:30 p.m.

Location: Port Authority of New York and New Jersey

90 Moonachie Avenue
Teterboro, NJ 07608

Please register for the workshop [here](#).

The New Jersey Department of Environmental Protection invites municipal planners, licensed site remediation professionals, public works officials and other stakeholders to participate in this professional development workshop for the National Disaster Resilience Toolkit.

The toolkit seeks to create a set of voluntary tools to aid New Jersey communities with regional stormwater management planning processes and will be piloted within the Meadowlands region of Bergen County. The toolkit focuses on developing best management practices for stormwater infrastructure operations and maintenance and associated job training methods, with an emphasis on green infrastructure. This workshop will review toolkit progress and the tools developed so far. Several stormwater and resilience guest speakers will present throughout the day.

Learn about stormwater operations and maintenance and job training best practices, talk to leaders in the field and share your professional experiences.

Technical continuing education credits are available.
Please see the registration link above for more information.
