

Subject	Meeting Minutes - Citizen Advisory Group (CAG) Meeting #5
Meeting Date	October 24, 2016
Scheduled Time	6:00 pm – 8:00 pm ET
Location	Learning Center Room, 4 th Floor, One Bergen County Plaza, Hackensack, NJ 07601
Attendees	Attendee list available, <i>for internal use only</i>

- The PowerPoint slide presentation utilized at the meeting is attached to the meeting minutes (see **Attachment 1**).
- A CAG meeting packet was provided to all attendees and is also attached to the meeting minutes (see **Attachment 2**).
- Introductions – Linda Fisher, NJDEP Rebuild by Design Meadowlands (RBDM) Project Team Manager, started the meeting and thanked Bergen County for the use of their facility for the meeting.
- Chris Benosky, AECOM’s Rebuild by Design (RBD) Program Manager, provided a brief overview of the meeting objectives, which included: (1) a Project status update; (2) a summary of the Project process and screening criteria; (3) an overview of what was learned from the CAG #4 meeting; (4) a report on biological data collected to date within the Project Area in support of the Environmental Impact Statement (EIS) and related regulatory agency reviews; and (5) information on drainage basin opportunity areas within the Project Area.
- The Draft Screening Criteria Matrix presented at the CAG #3 meeting was updated based on comments received from the CAG. This matrix is a decision-making tool that will be used to screen all Project opportunities, concepts, and alternatives. Further, it is a living document that will continue to be modified, as appropriate, during the alternative development process.
- Several Project drainage improvement opportunities were presented at the CAG #5 meeting; these opportunities are related to Alternative 2, the Storm Water Drainage Improvement alternative. Each of these opportunities will go through the screening process. While many of these opportunities will not make it through the screening process, they were shared to provide additional insight into the evaluation process for the CAG.
- The next CAG meeting will be on **December 6, 2016**; we will not have a meeting in November. The CAG #6 meeting will focus on Alternative 1, the Structural Flood Reduction alternative. The CAG #7 meeting will be held in January; it will focus on Alternative 3, the Hybrid alternative.
- Susan Bemis, AECOM Senior Planner, presented a summary of the input received during the CAG #4 meeting. The following overall key priorities were identified by the CAG during that meeting: (1) address frequent flooding from rain fall events; (2) implement the most immediate

and cost-efficient options; (3) identify a holistic solution; (4) address and identify long-term maintenance measures, requirements, and responsibilities; and (5) discuss and consider private land acquisitions. In addition, several key priorities for each of the Build Alternatives were also identified, as summarized below.

- **Alternative 1 (Structural Flood Reduction):** (1) waterfront access; (2) protection of wetlands; (3) maintenance and operation of deployables; and (4) prioritize flood protection.
- **Alternative 2 (Storm Water Drainage Improvements):** (1) improve current stormwater drainage systems and find ways to link new systems with existing ones; (2) consider grey and green infrastructure; (3) enhance existing open spaces; and (4) return developed areas to a more natural state.
- **Alternative 3 (Hybrid):** (1) improvements should not generate or promote more development; (2) contamination associated with Berry's Creek should be considered; and (3) consider a combination of grey and green infrastructure to achieve the greatest benefit.
- John Rollino, AECOM Senior Ecologist, presented a summary of the Project Area's ecology. The Project Team is studying all natural areas (i.e., approximately 1,800 acres of vegetative communities) within the Project Area, including the small, isolated natural areas and ditches within the urban/developed portions. The Project Team is reviewing existing surveys and data in conjunction with the current field work to characterize the ecology of the Project Area. There are numerous studies on the Hackensack River and adjacent wetlands, but studies are limited within the smaller, more interior portions of the Project Area that are surrounded by industrial/commercial uses.
- The biological resources field studies were initiated this summer, and will continue through the spring of 2017. Studies include: habitat mapping and evaluation, wetland delineations, botanical inventories, and fauna surveys (birds, benthic invertebrates, fish, amphibians, reptiles, and mammals).
- Habitat types and vegetation community structure were identified and mapped within the "natural areas" of the Project Area, along with their ecological value, to help facilitate the planning process and to minimize impacts to the extent possible. One way of determining ecological value is by using the US Army Corps of Engineers (USACE) Evaluation of Planned Wetlands (EPW) methodology, which provides mathematical scores that allow for habitat comparisons within the Project Area. These values can also provide context for post-construction mitigation purposes. There are some high value habitats in the Project Area (Teterboro Woods, Hackensack River wetlands, etc.), as well as some low-value habitats (drainage ditches and basins, etc.).

- Wildlife studies are being conducted seasonally, with some specialized studies (e.g., nesting, vernal pools, etc.) being conducted as well. Ten field study locations in the Project Area are being monitored for birds. Based on last summer's surveys, approximately 70 bird species have been identified to date, with the majority of the sightings being common species. Fish and benthic invertebrate studies are being conducted at nine locations. To date, documented species are typical of disturbed areas. Mammal surveys are being conducted in various locations using game cameras, presence observation (tracts, scat), nocturnal surveys, and (over this winter) snow tracking. To identify bat species in the area, echolocations are being recorded with ultrasonic microphones. To date, 14 mammals have been identified, all common to urban/suburban habitats.
- Based on preliminary data, the Project Area includes a number of invasive plant species, with some areas completely dominated by these species. Many small waterways are polluted and stressed. This Project presents an opportunity to not only reduce flooding, but to concurrently improve the ecological functions and values within Project Area habitats.
- Michael Vecchio, HDR Senior Engineer, presented a summary of the drainage basin opportunity areas in the Project Area. The Project Area has been divided into five distinct sub-basins to identify stormwater management strategies using both grey and green infrastructure. The five zones include: (1) Zone A: West Riser Ditch and Berry's Creek; (2) Zone B: East Riser Ditch; (3) Zone C: Losen Slote; (4) Zone D: DePeyster Creek and Main Street Ditch; and Zone E: Carol Place Ditch, Moonachie Creek, and Peach Island Creek.
- The opportunities identified within each of the five zones address flooding concerns associated with rainfall events under typical tidal conditions, and would not protect against coastal storm surge. A brief description of potential opportunities by zone (sub-basin) was provided. The Project Team is currently looking into opportunities in the northern portion of the Project Area to re-direct water from the Riser ditches to the Hackensack River (i.e., use the river as a storm water conveyance). In addition, it was noted that improvements (if deemed viable) along the East Riser would benefit a large portion of the Project Area because the East Riser traverses many of the Project Area communities. Further, it was noted that improvements along the upper portion of the Losen Slote could prove to be a challenge due to past activities (i.e., development and fill).
- To provide further context on how the potential storm water improvements may look in practice, Susan Bemis presented five examples illustrating the implementation of grey and green infrastructure within the Project Area:
 - Caesar Place: New wetlands and enhanced existing wetlands could become accessible to the public with a boardwalk.

- Fluvial Park: Bio-swales, bio-retention basins, and created wetlands could be surrounded by permeable paving for public access.
- East Riser: Widened bio-retention basins could be surrounded by vegetative filters and gravel trenches to provide infiltration of road runoff before flowing into an ecologically improved ditch.
- Main Street: Rain gardens could be surrounded by open space, permeable street paving, and underlined by a perforated pipe to drain storm water during larger rain events.
- Empire Boulevard: Bio-swales could be surrounded by open space, permeable street paving, and a “curb cut” that would allow infiltration of road runoff into the bio-swale, while still maintaining the safety of a raised curb.
- Chris Benosky closed the presentation. He requested the CAG provide comments via rbd-meadowlands@dep.nj.gov on the CAG #5 meeting format and content, and encouraged the CAG to continue to build interest in the Project. Prior to closing the meeting, Mr. Benosky asked the CAG members if they had any questions or comments about the material presented.
- A CAG Member questioned the proposed tide gate at Patterson Plank Road. Based on previous studies, it was found that a tide gate in this location could increase pollution. A CAG Member identified that an increase in freshwater could increase the suspension of mercury; salt water keeps mercury from being suspended. The Project Team provided further clarification that this would not be a typical “tide gate”, but rather a “sector gate” that would be left open during normal tidal fluctuations and only closed during a storm event. The Project Team is coordinating with the US Environmental Protection Agency (USEPA) on a regular basis (monthly meetings) to address potential pollution concerns associated with Berry’s Creek.
- A CAG Member identified that the salinity in the Hackensack River norther of Route 3 seems to be decreasing; another CAG Member identified that the salinity level fluctuates over time based on rainfall and season.
- A CAG Member questioned how water would be re-routed to the Hackensack River. This would occur via pipes (downgradient areas) and possibly pump stations.
- A CAG Member questioned if a breeding bird survey will be conducted. A breeding survey will be conducted in the spring.
- A CAG Member asked for additional information on the potential West Riser pump station opportunity, identified in the “Zone A” drainage sub-basin discussion. The Project Team responded that this would likely be a new, stand-alone pump station, assuming this opportunity passes the screening process. CAG Members identified that improvements to the East and West Risers would benefit multiple towns.

- A CAG Member cautioned the Project Team about making high-quality and low-quality habitat judgements. For example, typically *Phragmites* spp. are considered a characteristic of low-quality habitats, but this is not necessarily true in the Meadowlands.
- Further, from a biodiversity standpoint, a CAG Member noted that it's important to know the specific species within a potential impact area. CAG Members encouraged the use of more precise biological surveys if these surveys are being used as a decision-making tool during alternative development and evaluation. For example, eastern and western mosquitofish species look similar, but the eastern species is native to the area and considered rare, while the western species is common with low ecological value.
- CAG Members discussed the draining of Merhoff Pond (approximately 40' deep with steep sides) that occurred in the 1950's; the pond was dry for a period. A pump house near the pond was used to drain the pond. There is a road bed that divides the pond at the bottom of the pond. At that time (1950's), Bergen County Utilities Authority (BCUA) began using one side of the drained pond as a sludge lagoon ("a black putrid mess"), which ultimately led to the other side of the pond becoming polluted. The bottom of the pond is likely layered with this sludge today. This pond used to have clear water that was fed by a cold water spring with abundant wildlife, including numerous frogs and toads. The CAG Member had not heard frogs and toads in the area for 40-50 years, including in the woods by Redneck Avenue (potential jet fuel contamination?). The pond is still a good waterfowl habitat (ruddy ducks) and bird-watching area (bald eagles), but, in general, wildlife habitat has declined greatly. CAG Members recommended this pond be restored, possibly incorporating this restoration with the potential improvements to the Losen Slote. The Project Team has a meeting scheduled with BCUA on October 26, 2016, and this is good information that will be discussed at that meeting. CAG Members also mentioned that an observation deck and other public amenities (non-contact with water) will be opened for public use at this pond in the spring.
- CAG Members indicated that they would be interested in getting another update on the biological resources surveys at the next CAG meeting and would like to see more specific and quantitative data. CAG Members would also be very interested in seeing ecological improvements and re-introduction of native species in the Project Area.

Meeting adjourned at 7:50 pm ET.

Attachment 1.

Power Point Slide Presentation (as delivered)

REBUILD BY DESIGN MEADOWLANDS

FLOOD PROTECTION PROJECT

Boroughs of Little Ferry, Moonachie, Carlstadt, and Teterboro, and the Township of South Hackensack in Bergen County, New Jersey

CITIZEN ADVISORY GROUP (CAG) MEETING #5

ECOLOGY AND DRAINAGE BASIN OPPORTUNITY AREAS

Citizen Advisory Group (CAG) Meeting #5 // October 24, 2016 **AECOM**

AGENDA

Linda Fisher, NJDEP

2

- Welcome and Agenda
- Project Status Update & Schedule
- Project Process & Screening Criteria
- What We Learned from CAG #4 Meeting
- Project Area Ecology
- Drainage Basin Opportunity Areas

REBUILD BY DESIGN MEADOWLANDS

Citizen Advisory Group (CAG) Meeting #5 // October 24, 2016 **AECOM**

PROJECT STATUS UPDATE

Chris Benosky, AECOM

3

- Developed working draft Concept Screening Criteria
 - Updated based on CAG #3 meeting
- Completed and published to the project website
 - CAG #4 meeting minutes
 - September 2016 Newsletter
- Received additional input from CAG #4 meeting
- Developing the Preliminary Draft EIS
 - Conducting field work to support EIS and Feasibility Study
- Further developing the alternative conceptual ideas and locations

REBUILD BY DESIGN MEADOWLANDS

Citizen Advisory Group (CAG) Meeting #5 // October 24, 2016

AECOM

CAG SCHEDULE

Chris Benosky, AECOM

4

MOVING FORWARD

CAG #5
TONIGHT

Focus on Alternative 2: Storm Water Drainage Improvements

CAG #6
DECEMBER

Focus on Alternative 1: Structural Flood Reduction

CAG #7
JANUARY

Focus on Alternative 3: Hybrid

SCREENING CRITERIA

Chris Benosky, AECOM

6

PROCESS COMPONENT	SCREENING CRITERION	COMPARATIVE CONCEPT SCREENING METRICS		
		GOOD	FAIR	POOR
FLOOD REDUCTION	Enhance Flood Storage Capacity (CAG)	Provide a greater relative reduction in flood risk, as measured by area affected, compared to other conceptual designs.	Provide a moderate relative reduction in flood risk, as measured by area affected, compared to other conceptual designs.	Provide a less relative reduction in flood risk, as measured by area affected, compared to other conceptual designs.
	Enhance Flood Storage Capacity (CAG)	Provide a greater relative reduction in flood risk, as measured by area affected, compared to other conceptual designs.	Provide a moderate relative reduction in flood risk, as measured by area affected, compared to other conceptual designs.	Provide a less relative reduction in flood risk, as measured by area affected, compared to other conceptual designs.
	Enhance Flood Storage Capacity (CAG)	Provide a greater relative reduction in flood risk, as measured by area affected, compared to other conceptual designs.	Provide a moderate relative reduction in flood risk, as measured by area affected, compared to other conceptual designs.	Provide a less relative reduction in flood risk, as measured by area affected, compared to other conceptual designs.
FLOOD REDUCTION	Enhance Flood Storage Capacity (CAG)	Provide a greater relative reduction in flood risk, as measured by area affected, compared to other conceptual designs.	Provide a moderate relative reduction in flood risk, as measured by area affected, compared to other conceptual designs.	Provide a less relative reduction in flood risk, as measured by area affected, compared to other conceptual designs.
	Enhance Flood Storage Capacity (CAG)	Provide a greater relative reduction in flood risk, as measured by area affected, compared to other conceptual designs.	Provide a moderate relative reduction in flood risk, as measured by area affected, compared to other conceptual designs.	Provide a less relative reduction in flood risk, as measured by area affected, compared to other conceptual designs.
	Enhance Flood Storage Capacity (CAG)	Provide a greater relative reduction in flood risk, as measured by area affected, compared to other conceptual designs.	Provide a moderate relative reduction in flood risk, as measured by area affected, compared to other conceptual designs.	Provide a less relative reduction in flood risk, as measured by area affected, compared to other conceptual designs.
FLOOD REDUCTION	Enhance Flood Storage Capacity (CAG)	Provide a greater relative reduction in flood risk, as measured by area affected, compared to other conceptual designs.	Provide a moderate relative reduction in flood risk, as measured by area affected, compared to other conceptual designs.	Provide a less relative reduction in flood risk, as measured by area affected, compared to other conceptual designs.
	Enhance Flood Storage Capacity (CAG)	Provide a greater relative reduction in flood risk, as measured by area affected, compared to other conceptual designs.	Provide a moderate relative reduction in flood risk, as measured by area affected, compared to other conceptual designs.	Provide a less relative reduction in flood risk, as measured by area affected, compared to other conceptual designs.
	Enhance Flood Storage Capacity (CAG)	Provide a greater relative reduction in flood risk, as measured by area affected, compared to other conceptual designs.	Provide a moderate relative reduction in flood risk, as measured by area affected, compared to other conceptual designs.	Provide a less relative reduction in flood risk, as measured by area affected, compared to other conceptual designs.

- How do we use the screening criteria to consolidate potential opportunity areas?
- Identify potential opportunities and develop into concepts
- Screen concepts using screening criteria
- Not all opportunities/concepts will pass screening process

Sample of the screening criteria matrix

REBUILD BY DESIGN MEADOWLANDS

Citizen Advisory Group (CAG) Meeting #5 // October 24, 2016

WHAT WE LEARNED FROM CAG #4 MEETING

Susan Bemis, AECOM

REBUILD BY DESIGN MEADOWLANDS

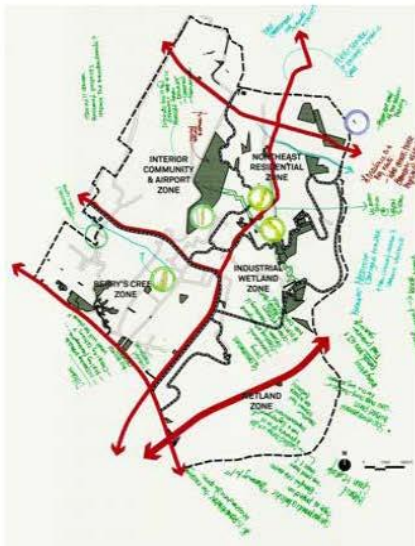

Citizen Advisory Group (CAG) Meeting #5 // October 24, 2016

AECOM

GENERAL - CAG #4 COMMENTS

Susan Bemis, AECOM

8

INVEST

- Address frequent flooding from rain fall events.
- Utilize the most immediate and cost efficient option(s) for protection from storm surges.

EXAMINE

- Potential water displacement towards neighboring communities.
- Holistic solution.

MAINTAIN

- Long-term maintenance of proposed project infrastructure is a concern: Who maintains and for how long?

DISCUSS AND CONSIDER

- Opportunities for private land acquisition during the concept development process.

REBUILD BY DESIGN MEADOWLANDS

Citizen Advisory Group (CAG) Meeting #5 // October 24, 2016

AECOM

ALTERNATIVE 1 - CAG #4 COMMENTS

Susan Bemis, AECOM

9

STRUCTURAL FLOOD REDUCTION

Berry's Creek

WATERFRONT ACCESS

- Access to the Hackensack River needs to remain a priority.

PROTECTION OF WETLANDS

- Emphasize wetland and biological resources protection + enhancement.

MINIMIZE ENVIRONMENTAL IMPACTS

- Consider minimal footprints.

DEPLOYABLES

- Maintenance and operations of deployables are a concern.

PRIORITIZE FLOOD PROTECTION

- General interest in flood protection incorporated with public benefit, but flood protection is the main objective.

REBUILD BY DESIGN MEADOWLANDS

Citizen Advisory Group (CAG) Meeting #5 // October 24, 2016

AECOM

ALTERNATIVE 2 - CAG #4 COMMENTS

Susan Bemis, AECOM

10

STORM WATER DRAINAGE IMPROVEMENTS

Green street example

CURRENT SYSTEMS

- Improve current systems, including ditches and pipes.
- Potential to install backflow preventers.

CONSIDER VARIOUS ENGINEERING IMPROVEMENTS

- Green - rain gardens, permeable paving, bioswales, among other green infrastructure elements.
- Grey - pump stations, increase flow capacity of drainage basins, and detention basins.

OPEN SPACES

- Enhance the performance of existing open spaces.

NATURAL CONDITIONS

- Return developed areas to natural conditions and find opportunities for enhancement.

REBUILD BY DESIGN MEADOWLANDS

Citizen Advisory Group (CAG) Meeting #5 // October 24, 2016

AECOM

ALTERNATIVE 3 - CAG #4 COMMENTS

Susan Bemis, AECOM

11

HYBRID SOLUTION

Hackensack River

NO ADDITIONAL DEVELOPMENT

- Development has displaced natural habitat and systems.
- Improvements should not be used to generate or promote new development.

POLLUTION + CONTAMINATION

- Understand and consider pollution issues associated with Berry's Creek.
- Consider a tide gate at Paterson Plank Road.

GREEN + GREY INFRASTRUCTURE

- Utilize a combination of both to get the most benefit.

REBUILD BY DESIGN MEADOWLANDS

Citizen Advisory Group (CAG) Meeting #5 // October 24, 2016

AECOM

SITE-SPECIFIC - CAG #4 COMMENTS

Susan Bemis, AECOM

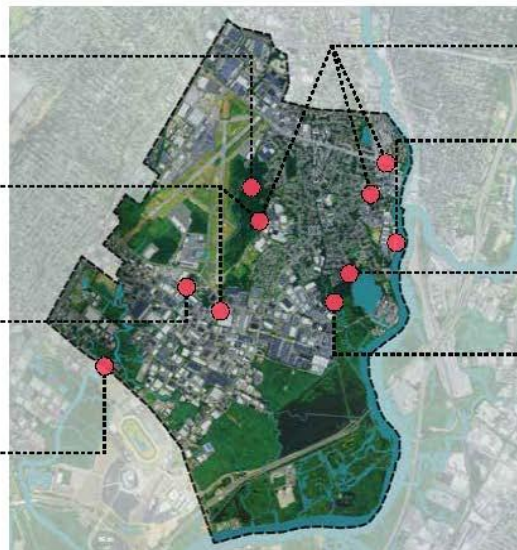

12

TETERBORO AIRPORT
Opportunity for green infrastructure at Teterboro Airport (upgrade of disturbed environments).

TETERBORO AIRPORT, WEST COMMERCIAL AVENUE
Bioswales and green infrastructure (south/east of the Teterboro Airport, West Commercial Avenue, southern end of the Project Area).

EAST AND WEST RISER
Prioritize the East and West Riser ditches for Berry's Creek area, especially in consideration of the nearby mobile home communities.

PATERSON PLANK ROAD
Consider addition of a tide gate along Paterson Plank Road in the Berry's Creek Zone.

TETERBORO FOREST, LOSEN SLOTE, WILLOW LAKE, VACANT LOTS
Utilize existing open spaces.

HACKENSACK RIVER EDGE
Potential for additional habitat creation, water storage, and water access.

MEHRHOF WETLAND ZONE
Area immediately north of Mehrhof pond wetland zone could be a good location for recreational paths.

LOSEN SLOTE
Large migratory bird area would benefit from enhancements such as widening.

REBUILD BY DESIGN MEADOWLANDS

Citizen Advisory Group (CAG) Meeting #5 // October 24, 2016

AECOM

PROJECT AREA ECOLOGY

John Rollino, AECOM

REBUILD BY DESIGN MEADOWLANDS

Citizen Advisory Group (CAG) Meeting #5 // October 24, 2016

AECOM

PROJECT AREA ECOLOGY

John Rollino, AECOM

14

PRELIMINARY DATA

Existing habitat near development

- The Project Area contains natural areas surrounded by suburban, industrial, and commercial development. Several of these natural areas have not been intensively studied to date by others.
- The ecological studies being conducted by AECOM will be used to support the NEPA analysis, regulatory agency consultations, and associated permitting.

REBUILD BY DESIGN MEADOWLANDS

Citizen Advisory Group (CAG) Meeting #5 // October 24, 2016

AECOM

PROJECT AREA ECOLOGY

John Rollino, AECOM

15

PRELIMINARY DATA

(Foreground) Birds and marshes along the Hackensack River
(Background) NJ Turnpike Bridge

- As part of the EIS, the field data collection will be supplemented with previous and ongoing studies (e.g., Fisheries Inventory of the Hackensack River, FAA Wildlife, etc.)
- Members of the project team have past experience conducting studies for the NJSEA (formerly HMDC) (e.g., Secaucus High School Site) and/or other multi-year studies (Empire Tract)

REBUILD BY DESIGN MEADOWLANDS

Citizen Advisory Group (CAG) Meeting #5 // October 24, 2016

AECOM

BIOLOGICAL RESOURCES

John Rollino, AECOM

16

PRELIMINARY DATA

East Riser Ditch, looking north from Amor Ave, Carlstadt, NJ

- Biological resource studies (ongoing) include:
 - Habitat mapping and evaluation
 - Wetland delineation
 - Botanical inventories
 - Wildlife studies:
 - Avifauna (birds)
 - Benthic Invertebrates
 - Fish
 - Herptofauna (Reptiles and Amphibians)
 - Mammals

REBUILD BY DESIGN MEADOWLANDS

Citizen Advisory Group (CAG) Meeting #5 // October 24, 2016

AECOM

BIOLOGICAL RESOURCES: GOALS

John Rollino, AECOM

17

PRELIMINARY DATA

Scientists evaluate soil conditions in Little Ferry

- Categorize habitats, flora, and fauna, and conduct ecological evaluations in support of a NEPA-level analysis.
- Identify high-value ecological resources and provide input into planning process in order to minimize impacts to greatest extent possible.
- Identify and develop opportunities to increase ecologic value of the Project Area post project construction.

REBUILD BY DESIGN MEADOWLANDS

Citizen Advisory Group (CAG) Meeting #5 // October 24, 2016

AECOM

HABITAT MAPPING

John Rollino, AECOM

18

PRELIMINARY DATA

Mowed lawn detention basin, Moonachie, NJ

Hardwood Swamp, Teterboro, NJ

- Project Area ~5,800 acres.
- ~4,000 acres are commercial, industrial, and residential.
- ~1,800 acres are “natural areas” – parcels with vegetated communities.

REBUILD BY DESIGN MEADOWLANDS

Citizen Advisory Group (CAG) Meeting #5 // October 24, 2016

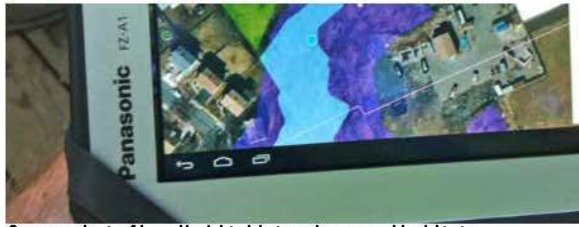

AECOM

MAPPED DATA COLLECTION

John Rollino, AECOM

19

PRELIMINARY DATA

Screen shot of handheld tablet and mapped habitats

Scientists mapping habitats

- Scientists traversed the Project Area on foot and identified “natural areas.”
- Aerial images of the Project Area were used as a background on hand-held tablets.
- Natural areas were sketched in tablets and inputted as a GIS file.
- ~ 400 habitat polygons and shoreline developments (~ 1,800 ac).
- Each natural area was given an alpha-numeric code, based on its geographic location.

REBUILD BY DESIGN MEADOWLANDS

Citizen Advisory Group (CAG) Meeting #5 // October 24, 2016

AECOM

MAPPED DATA COLLECTION

John Rollino, AECOM

20

PRELIMINARY DATA

Wetland /Herbaceous/emergent/Drainage (Y)/Disturbed (Y)/
Phragmites australis, *Persicaria perfoliata*/Common Reed Marsh

- Other data collected for each natural area polygon included:
- Dominant Habitat Type - wetland/ upland/waterbody/etc.
 - Coertype – herbaceous, forested, deciduous, etc.
 - Ditch/drainage present/adjacent – Y/N
 - Disturbed – Y/N
 - Dominant species – species identified
 - Habitat Community – floodplain forest, urban woodlot, common reed marsh.

REBUILD BY DESIGN MEADOWLANDS

Citizen Advisory Group (CAG) Meeting #5 // October 24, 2016

AECOM

ECOLOGICAL EVALUATION

John Rollino, AECOM

21

PRELIMINARY DATA

High value wetland

Low value wetland

- Using US Army Corps of Engineers “Evaluation of Planned Wetlands (EPW)” methodology.
- EPW mathematically scores wetlands on a number of functions (sediment stabilization, wildlife habitat, water quality, etc).
- Through computation, scientists assess “health” of existing wetlands and calculate the “Functions and values” of mitigated wetlands.
- Using site-specific information gathered from studies, habitats are being coded based on ecological value and function.

REBUILD BY DESIGN MEADOWLANDS

Citizen Advisory Group (CAG) Meeting #5 // October 24, 2016

AECOM

WETLANDS

John Rollino, AECOM

22

PRELIMINARY DATA

(Foreground) Created/enhanced marsh, Secaucus, NJ
(Background) Project Area

- Section 404 of the Federal Clean Water Act: Wetlands are “*areas that are inundated or saturated by surface or ground water at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions. Wetlands generally include swamps, marshes, bogs, and similar areas.*”
- Freshwater Wetlands: The “three parameter approach.” Wetlands under normal conditions have hydric soils; dominance of hydric vegetation; and presence of hydrology.
- Tidal Wetlands: Use elevation data too (e.g., Spring high tide line).

REBUILD BY DESIGN MEADOWLANDS

Citizen Advisory Group (CAG) Meeting #5 // October 24, 2016

AECOM

SOILS: UPLAND AND WETLAND

John Rollino, AECOM

23

PRELIMINARY DATA

- Upland soils

Note brown color, loose friable texture. Soils are dry.

- Wetland soils

Note dark black color, mucky appearance, obvious saturation. Changes in soil are a result of anoxic conditions.

- Bog Iron

Soils cores taken less than 5 feet from each other at a site near Bellman's Creek.

REBUILD BY DESIGN MEADOWLANDS

Citizen Advisory Group (CAG) Meeting #5 // October 24, 2016

AECOM

DELINEATED LINE

John Rollino, AECOM

24

PRELIMINARY DATA

Wetland site, Durham, Ct

- During a wetland delineation, scientists note soil characteristics, hydrology, and vegetation. These observations allow for the delineation (i.e., delineated line) between uplands and wetlands.

REBUILD BY DESIGN MEADOWLANDS

Citizen Advisory Group (CAG) Meeting #5 // October 24, 2016

AECOM

WILDLIFE STUDIES

John Rollino, AECOM

25

PRELIMINARY DATA

Indian Lake, Little Ferry, NJ

- Birds, reptiles/amphibians, fish, benthic invertebrates, and mammal studies occur seasonally (summer completed).
- Additional studies for birds – weekly during summer, fall, and spring. Specialized nesting study in spring.
- Other specialized studies – vernal pools, nocturnal species/activity, game cameras.

REBUILD BY DESIGN MEADOWLANDS

Citizen Advisory Group (CAG) Meeting #5 // October 24, 2016

AECOM

BIRDS

John Rollino, AECOM

26

PRELIMINARY DATA

Caption: Northern Mockingbird resting on branch along Commerce, Blvd.

- At 10 locations throughout the Project Area, scientists conduct morning and/or evening studies.
- All birds sighted are counted. Activity is noted, as well as direction and distance from scientist.
- Data allows for the creation of a spherical histogram to be overlaid on habitat mapping data to determine site usage.

REBUILD BY DESIGN MEADOWLANDS

Citizen Advisory Group (CAG) Meeting #5 // October 24, 2016

AECOM

BIRDS

John Rollino, AECOM

27

PRELIMINARY DATA

Double-crested cormorant flying above Hackensack River

- To date, over 70 bird species identified.
- Majority of sightings were very common species: European starlings, mourning dove, ring-billed gull.
- Habitats in which birds sighted:
 - 7.07% Open Water
 - 19.87% Structure
 - 21.80% Upland
 - 51.33% Wetland

REBUILD BY DESIGN MEADOWLANDS

Citizen Advisory Group (CAG) Meeting #5 // October 24, 2016

AECOM

BIRDS

John Rollino, AECOM

28

PRELIMINARY DATA

American Crow	Carolina Wren	Great Blue Heron	Northern Flicker	Sharp-shinned hawk
American Goldfinch	Cedar Waxwing	Great Egret	Northern Harrier	Snowy Egret
American Kestrel	Chimney Swift	Herring Gull	Northern Mockingbird	Song Sparrow
American Redstart	Common Grackle	House Finch	Osprey	Sparrow sp.
American Robin	Common Yellowthroat	House Sparrow	Ovenbird	Spotted Sandpiper
American Tree Sparrow	Domestic Goose	Killdeer	Palm Warbler	Swallow sp.
Bald Eagle	Double-crested Cormorant	King Bird	Peregrine Falcon	Tree Swallow
Barn Swallow	Downey Woodpecker	Kinglet sp.	Red Tail Hawk	Water Thrush
Belted Kingfisher	Eastern Pheobe	Lesser Yellow Legs	Red Winged Blackbird	White-breasted Nuthatch
Blue Jay	European Starling	Little Blue Heron	Red-bellied Woodpecker	Wood Duck
Brown-headed Cowbird	Field Sparrow	Mallard	Ring-billed Gull	Yellow Rumped Warbler
Bufflehead	Fish Crow	Marsh Wren	Rock Dove	Yellow Warbler
Canada Goose	Gray Catbird	Mourning Dove	Rufous-sided Towhee	Yellow Throated Warbler
Carolina Chickadee	Great Black-backed Gull	Northern Cardinal	Sandpiper sp.	

REBUILD BY DESIGN MEADOWLANDS

AECOM

FISH AND BENTHIC INVERTEBRATES

John Rollino, AECOM

29

PRELIMINARY DATA

Minnow traps in Losen Slote headwater

Mummichog

- Sampled from 9 different locations in the Project Area using fish traps.
- Fish identified to date include: bluegill, pumpkinseed, catfish, carp, goldfish, mummichogs, and mosquitofish.
- Species common to disturbed environments.

REBUILD BY DESIGN MEADOWLANDS

Citizen Advisory Group (CAG) Meeting #5 // October 24, 2016

AECOM

MAMMALS

John Rollino, AECOM

30

PRELIMINARY DATA

Skunk captured on infrared game camera near River Barge Park in the southern portion of the study area.

- Mammals surveyed through game cameras, presence identification (tracks and scat), nocturnal surveys, and (soon) snow tracking.
- Mammal survey locations occur throughout Project Area in a variety of representative habitats.
- Bats studied with night vision scopes, meters, and ultrasonic microphones that capture bat echolocations.
- Game cameras stationed throughout the Project Area in a variety of habitats.

REBUILD BY DESIGN MEADOWLANDS

Citizen Advisory Group (CAG) Meeting #5 // October 24, 2016

AECOM

MAMMALS

John Rollino, AECOM

31

PRELIMINARY DATA

Big Brown Bat (<i>Eptesicus fuscus</i>)	Opossum (<i>Didelphis virginiana</i>)
Cat (<i>Felis silvestris catus</i>)	Rabbit (<i>Sylvilagus floridanus</i>)
Chipmunk, unknown species	Raccoon (<i>Procyon lotor</i>)
Grey Squirrel (<i>Sciurus carolinensis</i>)	Rat (unknown species)
Groundhog (<i>Marmota monax</i>)	Red Fox (<i>Vulpes vulpes</i>)

Citizen Advisory Group (CAG) Meeting #5 // October 24, 2016

AECOM

MAMMALS

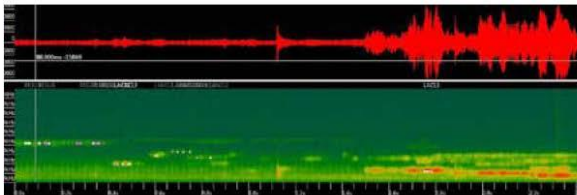

John Rollino, AECOM

32

PRELIMINARY DATA

Bat meter with ultrasonic microphone at Losen Slote

Screen shot of bat echolocation using acoustical software

- Using a meter with ultrasonic microphone, scientists record bat echolocations.
- Analyzing timing, kHz, and other factors, scientists can identify what species are present in an area.

REBUILD BY DESIGN MEADOWLANDS

Citizen Advisory Group (CAG) Meeting #5 // October 24, 2016

AECOM

ECOLOGICAL ENHANCEMENT

John Rollino, AECOM

33

PRELIMINARY DATA

Forested Mitigation Area, Duke Farms, Hillsborough, NJ

- Using existing data collected to identify potential areas to avoid and enhance.
- Using ecological value calculation methods (e.g., EPW, IVA, etc.) and other metrics, it is possible to quantify impacts and ensure that enhancement would provide a net ecological benefit.

REBUILD BY DESIGN MEADOWLANDS

Citizen Advisory Group (CAG) Meeting #5 // October 24, 2016

AECOM

PRELIMINARY CONCLUSIONS

John Rollino, AECOM

34

View of Hackensack River, looking south from Rt 46 Bridge

- Many Project Area habitats are home to invasive species and other stressors.
- Studies to date have shown aquatic fauna affected by contamination south of Moonachie Ave.
- Many small waterways are polluted and stressed, often due to previous engineering projects and efforts.
- To date, data has shown that developed industrial / commercial areas have limited ecological value to fauna.

REBUILD BY DESIGN MEADOWLANDS

Citizen Advisory Group (CAG) Meeting #5 // October 24, 2016

AECOM

PRELIMINARY CONCLUSIONS

John Rollino, AECOM

35

Tidal Gate along Berry's Creek

- The Proposed Project presents a unique opportunity to reduce flooding and simultaneously improve habitat values and functions.
- Improvements could include, but are not limited to:
 - New marshes along the Hackensack
 - Upgrades of streams – daylighting, select plantings, fish habitat improvements.
 - Invasive species removal.

Glossary

Bioretention - is the process in which contaminants and sedimentation are removed from storm water runoff. Storm water is collected in treatment areas which often include landscape vegetation

Bioswale - a vegetated landscape swale that removes silt and pollution from surface runoff water, usually with gently sloped sides

Easement - the right to use and/or enter onto the property of another without possessing it

Encumbrance - an encumbrance is property which may be owned by one entity but other entities may have a right to or legal liability on the property

Filter strip - a flat vegetated area that removes pollutants from storm water as the storm water moves across as sheet flow. Filter strips are between 25 and 100 feet long

Fluvial Park - a public park with various ecosystems, especially related to wetlands and river ecosystems, with varying elevations and habitats. During a flood event the park can handle water inundation

Permeable Paving - a type of paving that allows rainwater to filter through the surface into a water catchment base, often created with interlocking paver tiles or a porous material surface

Public Realm - publicly owned streets, pathways, right of ways, parks, publicly accessible open spaces and any public and civic building and facilities

Rain Garden - a planted depression in a garden that absorbs rainwater runoff from impervious areas such as roofs, driveways, walkways, parking lots, and lawn areas

Runnel - a designed and landscaped channel that directs and assists the flow of rainwater

Widening Ditch – (3) Main ways to improve the ditches; daylighting and increasing habitat and vegetation, extending the ditch to connect to riparian corridor, and filling the ditch with aggregate, but expanding habitat above

REBUILD BY DESIGN MEADOWLANDS

AGENDA Linda Fisher, NJDEP 2

- Welcome and Agenda
- Project Status Update & Schedule
- Project Process & Screening Criteria
- What We Learned from CAG #4 Meeting
- Project Area Ecology
- Drainage Basin Opportunity Areas

PROJECT STATUS UPDATE Chris Benosky, AECOM 3

- Developed working draft Concept Screening Criteria
 - Updated based on CAG #3 meeting
- Completed and published to the project website
 - CAG #4 meeting minutes
 - September 2016 Newsletter
- Received additional input from CAG #4 meeting
- Developing the Preliminary Draft EIS
 - Conducting field work to support EIS and Feasibility Study
- Further developing the alternative conceptual ideas and locations

CAG SCHEDULE Chris Benosky, AECOM 4

MOVING FORWARD

CAG #5

TONIGHT

Focus on Alternative 2: Storm Water Drainage Improvements

CAG #6

DECEMBER

Focus on Alternative 1: Structural Flood Reduction

CAG #7

JANUARY

Focus on Alternative 3: Hybrid

SCREENING AND FEASIBILITY

SCREENING CRITERIA Chris Benosky, AECOM 6

SCREENING CRITERIA	CONCEPT SCREENING RESULTS
1. How do we use the screening criteria to consolidate potential opportunity areas?	Identify potential opportunities and develop into concepts
2. How do we use the screening criteria to screen concepts?	Screen concepts using screening criteria
3. How do we use the screening criteria to screen concepts?	Not all opportunities/concepts will pass screening process

Sample of the screening criteria matrix

REBUILD BY DESIGN MEADOWLANDS

REBUILD BY DESIGN MEADOWLANDS

WHAT WE LEARNED FROM CAG #4 MEETING

Susan Bemis, AECOM

REBUILD BY DESIGN MEADOWLANDS

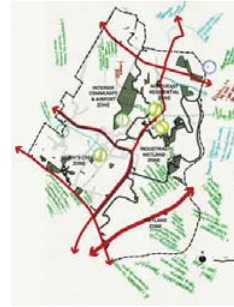

Citizen Advisory Group (CAG) Meeting #5 // October 24, 2016

AECOM

GENERAL - CAG #4 COMMENTS

Susan Bemis, AECOM

8

INVEST

- Address frequent flooding from rain fall events.
- Utilize the most immediate and cost efficient option(s) for protection from storm surges.

EXAMINE

- Potential water displacement towards neighboring communities.
- Holistic solution.

MAINTAIN

- Long-term maintenance of proposed project infrastructure is a concern: Who maintains and for how long?

DISCUSS AND CONSIDER

- Opportunities for private land acquisition during the concept development process.

REBUILD BY DESIGN MEADOWLANDS

Citizen Advisory Group (CAG) Meeting #5 // October 24, 2016

AECOM

ALTERNATIVE 1 - CAG #4 COMMENTS

Susan Bemis, AECOM

9

STRUCTURAL FLOOD REDUCTION

Berry's Creek

WATERFRONT ACCESS

- Access to the Hackensack River needs to remain a priority.

PROTECTION OF WETLANDS

- Emphasize wetland and biological resources protection + enhancement.

MINIMIZE ENVIRONMENTAL IMPACTS

- Consider minimal footprints.

DEPLOYABLES

- Maintenance and operations of deployables are a concern.

PRIORITIZE FLOOD PROTECTION

- General interest in flood protection incorporated with public benefit, but flood protection is the main objective.

REBUILD BY DESIGN MEADOWLANDS

Citizen Advisory Group (CAG) Meeting #5 // October 24, 2016

AECOM

ALTERNATIVE 2 - CAG #4 COMMENTS

Susan Bemis, AECOM

10

STORM WATER DRAINAGE IMPROVEMENTS

Green street example

CURRENT SYSTEMS

- Improve current systems, including ditches and pipes.
- Potential to install backflow preventers.

CONSIDER VARIOUS ENGINEERING IMPROVEMENTS

- Green - rain gardens, permeable paving, bioswales, among other green infrastructure elements.
- Grey - pump stations, increase flow capacity of drainage basins, and detention basins.

OPEN SPACES

- Enhance the performance of existing open spaces.

NATURAL CONDITIONS

- Return developed areas to natural conditions and find opportunities for enhancement.

REBUILD BY DESIGN MEADOWLANDS

Citizen Advisory Group (CAG) Meeting #5 // October 24, 2016

AECOM

ALTERNATIVE 3 - CAG #4 COMMENTS

Susan Bemis, AECOM

11

HYBRID SOLUTION

Hackensack River

NO ADDITIONAL DEVELOPMENT

- Development has displaced natural habitat and systems.
- Improvements should not be used to generate or promote new development.

POLLUTION + CONTAMINATION

- Understand and consider pollution issues associated with Berry's Creek.
- Consider a tide gate at Paterson Plank Road.

GREEN + GREY INFRASTRUCTURE

- Utilize a combination of both to get the most benefit.

REBUILD BY DESIGN MEADOWLANDS

Citizen Advisory Group (CAG) Meeting #5 // October 24, 2016

AECOM

SITE-SPECIFIC - CAG #4 COMMENTS

Susan Bemis, AECOM

12

TETERBORO AIRPORT
Opportunity for green infrastructure at Teterboro Airport (upgrade of disturbed environments).

TETERBORO AIRPORT, WEST COMMERCIAL AVENUE
Bioswales and green infrastructure (south-east of the Teterboro Airport, West Commercial Avenue, southern end of the Project Area).

EAST AND WEST RISER
Prioritize the East and West Riser ditches for Berry's Creek area, especially in consideration of the nearby mobile home communities.

PATERSON PLANK ROAD
Consider addition of a tide gate along Paterson Plank Road in the Berry's Creek Zone.

TETERBORO FOREST, LOSEN SLOTE, WILLOW LAKE, VACANT LOTS
Utilize existing open spaces.

HACKENSACK RIVER EDGE
Potential for additional habitat creation, water storage, and water access.

MEHRHOF WETLAND ZONE
Area immediately north of Mehrhof pond wetland zone could be a good location for recreational paths.

LOSEN SLOTE
Large migratory bird area would benefit from enhancements such as widening.

REBUILD BY DESIGN MEADOWLANDS

Citizen Advisory Group (CAG) Meeting #5 // October 24, 2016

AECOM

PROJECT AREA ECOLOGY

John Rollino, AECOM

REBUILD BY DESIGN MEADOWLANDS

Citizen Advisory Group (CAG) Meeting #5 // October 24, 2016

AECOM

PROJECT AREA ECOLOGY

John Rollino, AECOM

14

PRELIMINARY DATA

Existing habitat near development

- The Project Area contains natural areas surrounded by suburban, industrial, and commercial development. Several of these natural areas have not been intensively studied to date by others.
- The ecological studies being conducted by AECOM will be used to support the NEPA analysis, regulatory agency consultations, and associated permitting.

REBUILD BY DESIGN MEADOWLANDS

Citizen Advisory Group (CAG) Meeting #5 // October 24, 2016

AECOM

PROJECT AREA ECOLOGY

John Rollino, AECOM

15

PRELIMINARY DATA

(Foreground) Birds and marshes along the Hackensack
(Background) NJ Turnpike Bridge

- As part of the EIS, the field data collection will be supplemented with previous and ongoing studies (e.g., Fisheries Inventory of the Hackensack River, FAA Wildlife, etc.)
- Members of the project team have past experience conducting studies for the NJSEA (formerly HMDC) (e.g., Secaucus High School Site) and/or other multi-year studies (Empire Tract)

REBUILD BY DESIGN MEADOWLANDS

Citizen Advisory Group (CAG) Meeting #5 // October 24, 2016

AECOM

BIOLOGICAL RESOURCES

John Rollino, AECOM

16

PRELIMINARY DATA

East Riser Ditch, looking north from Amor Ave, Carlstadt, NJ

- Biological resource studies (ongoing) include:
 - Habitat mapping and evaluation
 - Wetland delineation
 - Botanical inventories
 - Wildlife studies:
 - Avifauna (birds)
 - Benthic Invertebrates
 - Fish
 - Herpetofauna (Reptiles and Amphibians)
 - Mammals

REBUILD BY DESIGN MEADOWLANDS

Citizen Advisory Group (CAG) Meeting #5 // October 24, 2016

AECOM

BIOLOGICAL RESOURCES: GOALS

John Rollino, AECOM

17

PRELIMINARY DATA

Scientists evaluate soil conditions in Little Ferry

- Categorize habitats, flora, and fauna, and conduct ecological evaluations in support of a NEPA-level analysis.
- Identify high-value ecological resources and provide input into planning process in order to minimize impacts to greatest extent possible.
- Identify and develop opportunities to increase ecologic value of the Project Area post project construction.

REBUILD BY DESIGN MEADOWLANDS

Citizen Advisory Group (CAG) Meeting #5 // October 24, 2016

AECOM

HABITAT MAPPING

John Rollino, AECOM

18

PRELIMINARY DATA

Mowed lawn detention basin, Moonachie, NJ

Hardwood Swamp, Teterboro, NJ

- Project Area ~5,800 acres.
- ~4,000 acres are commercial, industrial, and residential.
- ~1,800 acres are "natural areas" – parcels with vegetated communities.

REBUILD BY DESIGN MEADOWLANDS

Citizen Advisory Group (CAG) Meeting #5 // October 24, 2016

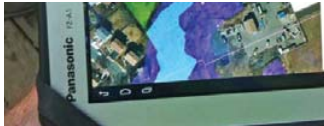

AECOM

MAPPED DATA COLLECTION

John Rollino, AECOM

19

PRELIMINARY DATA

Screen shot of handheld tablet and mapped habitats

Scientists mapping habitats

- Scientists traversed the Project Area on foot and identified "natural areas."
- Aerial images of the Project Area were used as a background on hand-held tablets.
- Natural areas were sketched in tablets and inputted as a GIS file.
- ~ 400 habitat polygons and shoreline developments (~1,800 ac).
- Each natural area was given an alpha-numeric code, based on its geographic location.

REBUILD BY DESIGN MEADOWLANDS

Citizen Advisory Group (CAG) Meeting #5 // October 24, 2016

MAPPED DATA COLLECTION

John Rollino, AECOM

20

PRELIMINARY DATA

Wetland / Herbaceous/emergent/Drainage (Y)/Disturbed (Y)/*Phragmites australis*, *Persicaria perfoliata*/Common Reed Marsh

- Other data collected for each natural area polygon included:
- Dominant Habitat Type - wetland/upland/waterbody/etc.
 - Covertypes - herbaceous, forested, deciduous, etc.
 - Ditch/drainage present/adjacent - Y/N
 - Disturbed - Y/N
 - Dominant species - species identified
 - Habitat Community - floodplain forest, urban woodlot, common reed marsh.

REBUILD BY DESIGN MEADOWLANDS

Citizen Advisory Group (CAG) Meeting #5 // October 24, 2016

ECOLOGICAL EVALUATION

John Rollino, AECOM

21

PRELIMINARY DATA

High value wetland

Low value wetland

- Using US Army Corps of Engineers "Evaluation of Planned Wetlands (EPW)" methodology.
- EPW mathematically scores wetlands on a number of functions (sediment stabilization, wildlife habitat, water quality, etc).
- Through computation, scientists assess "health" of existing wetlands and calculate the "Functions and values" of mitigated wetlands.
- Using site-specific information gathered from studies, habitats are being coded based on ecological value and function.

REBUILD BY DESIGN MEADOWLANDS

Citizen Advisory Group (CAG) Meeting #5 // October 24, 2016

WETLANDS

John Rollino, AECOM

22

PRELIMINARY DATA

(Foreground) Created/enhanced marsh, Secaucus, NJ
(Background) Project Area

- Section 404 of the Federal Clean Water Act: Wetlands are "areas that are inundated or saturated by surface or ground water at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions. Wetlands generally include swamps, marshes, bogs, and similar areas."
- Freshwater Wetlands: The "three parameter approach." Wetlands under normal conditions have hydric soils; dominance of hydric vegetation; and presence of hydrology.
- Tidal Wetlands: Use elevation data too (e.g., Spring high tide line).

REBUILD BY DESIGN MEADOWLANDS

Citizen Advisory Group (CAG) Meeting #5 // October 24, 2016

SOILS: UPLAND AND WETLAND

John Rollino, AECOM

23

PRELIMINARY DATA

- Upland soils
Note brown color, loose friable texture. Soils are dry.

Soils cores taken less than 5 feet from each other at a site near Bellman's Creek.

- Wetland soils
Note dark black color, mucky appearance, obvious saturation. Changes in soil are a result of anoxic conditions.

- Bog Iron

REBUILD BY DESIGN MEADOWLANDS

Citizen Advisory Group (CAG) Meeting #5 // October 24, 2016

DELINEATED LINE

John Rollino, AECOM

24

PRELIMINARY DATA

Wetland site, Durham, Ct

- During a wetland delineation, scientists note soil characteristics, hydrology, and vegetation. These observations allow for the delineation (i.e., delineated line) between uplands and wetlands.

REBUILD BY DESIGN MEADOWLANDS

Citizen Advisory Group (CAG) Meeting #5 // October 24, 2016

WILDLIFE STUDIES

John Rollino, AECOM

25

PRELIMINARY DATA

Indian Lake, Little Ferry, NJ

- Birds, reptiles/amphibians, fish, benthic invertebrates, and mammal studies occur seasonally (summer completed).
- Additional studies for birds – weekly during summer, fall, and spring. Specialized nesting study in spring.
- Other specialized studies – vernal pools, nocturnal species/activity, game cameras.

REBUILD BY DESIGN MEADOWLANDS

Citizen Advisory Group (CAG) Meeting #5 // October 24, 2016

AECOM

BIRDS

John Rollino, AECOM

26

PRELIMINARY DATA

Caption: Northern Mockingbird resting on branch along Commerce, Blvd.

- At 10 locations throughout the Project Area, scientists conduct morning and/or evening studies.
- All birds sighted are counted. Activity is noted, as well as direction and distance from scientist.
- Data allows for the creation of a spherical histogram to be overlaid on habitat mapping data to determine site usage.

REBUILD BY DESIGN MEADOWLANDS

BIRDS

John Rollino, AECOM

27

PRELIMINARY DATA

Double-crested cormorant flying above Hackensack River

- To date, over 70 bird species identified.
- Majority of sightings were very common species: European starlings, mourning dove, ring-billed gull.
- Habitats in which birds sighted:
 - 7.07% Open Water
 - 19.87% Structure
 - 21.80% Upland
 - 51.33% Wetland

Citizen Advisory Group (CAG) Meeting #5 // October 24, 2016

AECOM

BIRDS

John Rollino, AECOM

28

PRELIMINARY DATA

American Crow	Carolina Wren	Great Blue Heron	Northern Flicker	Sharp-shinned hawk
American Goldfinch	Cedar Waxwing	Great Egret	Northern Harrier	Snowy Egret
American Kestrel	Chimney Swift	Herring Gull	Northern Mockingbird	Song Sparrow
American Redstart	Common Grackle	House Finch	Osprey	Sparrow sp.
American Robin	Common Yellowthroat	House Sparrow	Ovenbird	Spotted Sandpiper
American Tree Sparrow	Domestic Goose	Killdeer	Palm Warbler	Swallow sp.
Bald Eagle	Double-crested Cormorant	King Bird	Peregrine Falcon	Tree Swallow
Barn Swallow	Downy Woodpecker	Kinglet sp.	Red Tail Hawk	Water Thrush
Belted Kingfisher	Eastern Phoebe	Lesser Yellow Legs	Red Winged Blackbird	White-breasted Nuthatch
Blue Jay	European Starling	Little Blue Heron	Red-bellied Woodpecker	Wood Duck
Brown-headed Cowbird	Field Sparrow	Mallard	Ring-billed Gull	Yellow Rumped Warbler
Bufflehead	Fish Crow	Marsh Wren	Rock Dove	Yellow Warbler
Canada Goose	Gray Catbird	Mourning Dove	Rufous-sided Towhee	Yellow Throated Warbler
Carolina Chickadee	Great Black-backed Gull	Northern Cardinal	Sandpiper sp.

AECOM

FISH AND BENTHIC INVERTEBRATES

John Rollino, AECOM

29

PRELIMINARY DATA

Minnow traps in Losen Slote headwater

Mummichog

- Sampled from 9 different locations in the Project Area using fish traps.
- Fish identified to date include: bluegill, pumpkinseed, catfish, carp, goldfish, mummichogs, and mosquitofish.
- Species common to disturbed environments.

REBUILD BY DESIGN MEADOWLANDS

Citizen Advisory Group (CAG) Meeting #5 // October 24, 2016

AECOM

MAMMALS

John Rollino, AECOM

30

PRELIMINARY DATA

Skunk captured on infrared game camera near River Barge Park in the southern portion of the study area.

- Mammals surveyed through game cameras, presence identification (tracks and scat), nocturnal surveys, and (soon) snow tracking.
- Mammal survey locations occur throughout Project Area in a variety of representative habitats.
- Bats studied with night vision scopes, meters, and ultrasonic microphones that capture bat echolocations.
- Game cameras stationed throughout the Project Area in a variety of habitats.

REBUILD BY DESIGN MEADOWLANDS

Citizen Advisory Group (CAG) Meeting #5 // October 24, 2016

AECOM

MAMMALS

John Rollino, AECOM

31

PRELIMINARY DATA

Big Brown Bat (<i>Eptesicus fuscus</i>)	Opossum (<i>Didelphis virginiana</i>)
Cat (<i>Felis silvestris catus</i>)	Rabbit (<i>Sylvilagus floridanus</i>)
Chipmunk, unknown species	Raccoon (<i>Procyon lotor</i>)
Grey Squirrel (<i>Sciurus carolinensis</i>)	Rat (unknown species)
Groundhog (<i>Marmota monax</i>)	Red Fox (<i>Vulpes vulpes</i>)
Little Brown Bat (<i>Myotis lucifugus</i>)	Skunk (<i>Mephitis mephitis</i>)
Muskrat (<i>Ondatra zibethicus</i>)	White-tailed Deer (<i>Odocoileus virginianus</i>)

REBUILD BY DESIGN MEADOWLANDS

Citizen Advisory Group (CAG) Meeting #5 // October 24, 2016

AECOM

MAMMALS

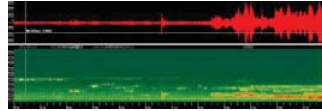

John Rollino, AECOM

32

PRELIMINARY DATA

Bat meter with ultrasonic microphone at Losen Slote

Screen shot of bat echolocation using acoustical software

- Using a meter with ultrasonic microphone, scientists record bat echolocations.
- Analyzing timing, kHz, and other factors, scientists can identify what species are present in an area.

REBUILD BY DESIGN MEADOWLANDS

Citizen Advisory Group (CAG) Meeting #5 // October 24, 2016

AECOM

ECOLOGICAL ENHANCEMENT

John Rollino, AECOM

33

PRELIMINARY DATA

BEFORE

AFTER

Forested Mitigation Area, Duke Farms, Hillsborough, NJ

- Using existing data collected to identify potential areas to avoid and enhance.
- Using ecological value calculation methods (e.g., EPW, IVA, etc.) and other metrics, it is possible to quantify impacts and ensure that enhancement would provide a net ecological benefit.

REBUILD BY DESIGN MEADOWLANDS

Citizen Advisory Group (CAG) Meeting #5 // October 24, 2016

AECOM

PRELIMINARY CONCLUSIONS

John Rollino, AECOM

34

View of Hackensack River, looking south from Rt 46 Bridge

- Many Project Area habitats are home to invasive species and other stressors.
- Studies to date have shown aquatic fauna affected by contamination south of Moonachie Ave.
- Many small waterways are polluted and stressed, often due to previous engineering projects and efforts.
- To date, data has shown that developed industrial / commercial areas have limited ecological value to fauna.

REBUILD BY DESIGN MEADOWLANDS

Citizen Advisory Group (CAG) Meeting #5 // October 24, 2016

AECOM

PRELIMINARY CONCLUSIONS

John Rollino, AECOM

35

Tidal Gate along Berry's Creek

- The Proposed Project presents a unique opportunity to reduce flooding and simultaneously improve habitat values and functions.
- Improvements could include, but are not limited to:
 - New marshes along the Hackensack
 - Upgrades of streams – daylighting, select plantings, fish habitat improvements.
 - Invasive species removal.

AECOM

STORM WATER IMPROVEMENTS

Michael Vecchio, HDR

38

EXISTING STORM WATER

ISSUE
Impervious paving, insufficient pipe and pump capacity leads to flooding

STORM WATER

SOLUTION

capture, slow down, infiltrate, re-use and store storm water before discharging to the river

- 1 CAPTURE
- 2 ABSORB
- 3 RELEASE

REBUILD BY DESIGN MEADOWLANDS

Citizen Advisory Group (CAG) Meeting #5 // October 24, 2016

AECOM

DRAINAGE SUB-BASIN ZONE A POTENTIAL OPPORTUNITIES

Michael Vecchio, HDR

43

- West Riser dredging
- West Riser Tide Gate and Pump Station
- Access for O&M
- Green streets

WILLIAMS AVE STATION
Length: 13,800 ft
Type: Pumped
Drainage Area: 2.02 sq mi

REBUILD BY DESIGN MEADOWLANDS

Citizen Advisory Group (CAG) Meeting #5 // October 24, 2016

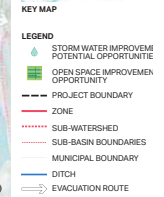

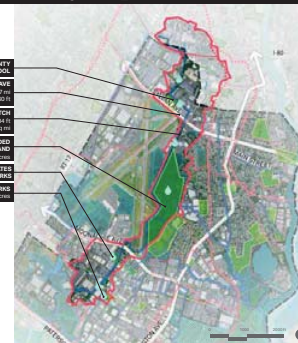

DRAINAGE SUB-BASIN ZONE B POTENTIAL OPPORTUNITIES

Michael Vecchio, HDR

44

- East Riser dredging
- East Riser Tide Gate
- Pump Station
- East Riser Tide Gate upgrade
- Off-channel storage

BERGEN COUNTY TECHNICAL SCHOOL
Length: 1.7 mi
Right of Way: 40 ft
EAST RISER DITCH
Length: 15,300 ft
Drainage Area: 1.14 sq mi
TETERBROOK WOODS WETLAND
Area: 19.3 acres
MOBILE ESTATES POCKET PARKS
Area: 0.8 sq mi

REBUILD BY DESIGN MEADOWLANDS

Citizen Advisory Group (CAG) Meeting #5 // October 24, 2016

DRAINAGE SUB-BASIN ZONE C POTENTIAL OPPORTUNITIES

Michael Vecchio, HDR

45

- Losen Slote outfall backflow prevention
- Losen Slote dredging
- Storm sewer capacity upgrades

LOSEN SLOTE DITCH
Length: 13,300 ft
Type: Pumped
Drainage Area: 1.17 sq mi
MUNICIPAL ELEMENTARY SCHOOL
Length: 1.8 mi
Right of Way: 40 ft
MOONACHE SPECIAL ELEMENTARY SCHOOL
Length: 1.8 mi
Right of Way: 40 ft
MEADOW POINT
Length: 1.8 mi
Right of Way: 40 ft
GALBERT DITCH
Length: 1.8 mi
Right of Way: 40 ft
Drainage Area: 0.25 sq mi

REBUILD BY DESIGN MEADOWLANDS

Citizen Advisory Group (CAG) Meeting #5 // October 24, 2016

DRAINAGE SUB-BASIN ZONE D POTENTIAL OPPORTUNITIES

Michael Vecchio, HDR

46

- Depeyster Creek Pump Station upgrade and Willow Lake
- Storm sewer capacity upgrades
- Main Street conveyance
- Backflow protection on Hackensack

INDIAN LAKE
Area: 1.8 acres
HACKENSACK RIVER FRONT
Area: 1.21 acres
MAIN STREET
Length: 2.2 mi
Right of Way: 40 ft
WILLOW LAKE
Area: 1.4 acres
LOUIS STREET DITCH
Length: 2,375 ft
Type: Pumped
Drainage Area: 0.17 sq mi
DAVER RD INDUSTRIAL PARK
Area: 1.08 acres

REBUILD BY DESIGN MEADOWLANDS

Citizen Advisory Group (CAG) Meeting #5 // October 24, 2016

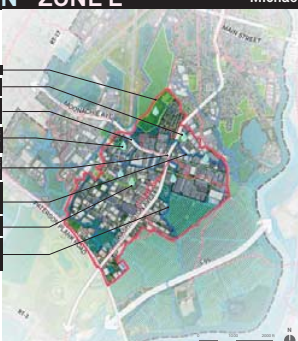

DRAINAGE SUB-BASIN ZONE E POTENTIAL OPPORTUNITIES

Michael Vecchio, HDR

47

- Storm sewer capacity upgrades
- Interior pump stations
- Pump station upstream of Peach Island Creek Tide Gate
- Upgrade of Peach Island Creek Tide Gate

JOHN STEVENS FIELD
Area: 1.0 acres
MOONACHE POCKET PARK
Area: 1.0 acres
MOONACHE AVENUE
Length: 1.8 mi
Right of Way: 40 ft
MOBILE ESTATES POCKET PARKS
Area: 0.8 sq mi
WASHINGTON AVE
Length: 1.8 mi
Right of Way: 40 ft
CARLE PLACE DITCH
Length: 1.8 mi
Right of Way: 40 ft
CARLE PLACE DITCH
Length: 1.8 mi
Right of Way: 40 ft
MOONACHE CREEK DITCH
Length: 1.8 mi
Right of Way: 40 ft
Drainage Area: 0.25 sq mi

WHAT COULD THESE LOOK LIKE?

Susan Bemis, AECOM

REBUILD BY DESIGN MEADOWLANDS

Citizen Advisory Group (CAG) Meeting #5 // October 24, 2016

OPEN SPACE + HABITAT IMPROVEMENTS CAESAR PLACE ILLUSTRATIVE EXAMPLE

Susan Bemis, AECOM

49

WETLAND CREATION
Through grading and wetland planting, existing upland is transformed into wetland.

WETLAND ENHANCEMENT
Wetlands created to grading and native plantings, existing wetland and low-quality wetlands are improved to filter and store more storm water.

BOARDWALK
Bioswale roadway allows for contiguous wetland and storm water capture beneath.

REBUILD BY DESIGN MEADOWLANDS

Citizen Advisory Group (CAG) Meeting #5 // October 24, 2016

AECOM

OPEN SPACE IMPROVEMENTS FLUVIAL PARK ILLUSTRATIVE EXAMPLE

Susan Bemis, AECOM

50

PERMEABLE PAVING
Permeable paving absorbs storm water.

BIOSWALES
Filters 80-90% of suspended solids and prevents water from overflowing sewer systems.

BIORETENTION
Filters 80-90% of suspended solids and stores 10% of storm water into sewer systems.

WETLAND CREATION
Wetland creation and native plantings absorb water infiltration.

REBUILD BY DESIGN MEADOWLANDS

Citizen Advisory Group (CAG) Meeting #5 // October 24, 2016

AECOM

DITCH IMPROVEMENTS EAST RISER ILLUSTRATIVE EXAMPLE

Susan Bemis, AECOM

51

FILTER STRIP
Native plantings capture pollutants before entry into water systems.

BIORETENTION
Filters 80-90% of suspended solids and slows flow of storm water into combined sewer systems.

DITCH WIDENING
Maximize ecological opportunity and storm water conveyance to larger watershed.

GRAVEL TRENCH
Provides initial infiltration of road runoff before overflow into ecologically improved ditch.

REBUILD BY DESIGN MEADOWLANDS

Citizen Advisory Group (CAG) Meeting #5 // October 24, 2016

AECOM

STREET IMPROVEMENTS MAIN STREET ILLUSTRATIVE EXAMPLE

Susan Bemis, AECOM

52

OPEN SPACE
Absorbs more storm water.

NATIVE PLANTS
Low-maintenance options that contribute to native ecological systems.

RAIN GARDENS
Filters 80-90% of suspended solids and prevents water from overflowing sewer systems.

PERFORATED PIPE
Drains storm water overflow during larger rain events.

PERMEABLE PAVING
Absorbs storm water and serves as place-making for Main Street.

REBUILD BY DESIGN MEADOWLANDS

Citizen Advisory Group (CAG) Meeting #5 // October 24, 2016

AECOM

STREET IMPROVEMENTS EMPIRE BLVD ILLUSTRATIVE EXAMPLE

Susan Bemis, AECOM

53

BIOSWALES
Filters 80-90% of suspended solids and prevents water from overflowing sewer systems.

CURB CUT
Allows infiltration of road runoff into adjacent bioswales while maintaining the safety of road cuts.

OPEN SPACE
Absorbs more storm water.
