

We're excited to share that CHANJ is featured in a new episode of the PBS show, EcoSense for Living! "Wild Crossings" tells the story of three major habitat connectivity projects, from North Carolina to New Jersey, that are helping wildlife navigate our increasingly developed world. See how planners in the Great Smoky Mountains are helping elk get across an interstate highway, and how a massive swath of preserved land is keeping the Central Appalachians intact.

CHANJ comes in at the 14-minute mark with salamander migrations, turtle tunnels, timber rattlesnakes, and various connectivity projects that the NJ Division of Fish and Wildlife and our colleagues are tackling in the most densely populated U.S. state. There's even some "action footage" of the Division's bobcat scat-sniffing dog, Fly.

Watch "Wild Crossings" (and our 12 minutes of fame!):
