Optional Equipment To Assist The Program

This equipment can be purchased locally or through That Pet Place.

Eye droppers (multiples) for daily removal of non-viable eggs by students.

Sheets of styrofoam to cover the tank on all sides except the front. This keeps the tank cool and protects the fish when they cannot be exposed to UV light.

Two 5-gallon buckets to age water before putting it in the tank. Buckets will also double as your fish transportation to the release site.

Battery operated aerator to give the trout oxygen during transportation or in emergencies (available at local sporting goods stores or online)

Long handled scrub brush to loosen grime and growth in the tank during cleaning.

Clean ice packs to use in transportation and during emergencies.
