- 11.2.1.6 Provide educational resources, training programs, and on-the-ground guidance to resource agencies prior to project initiation to ensure wildlife and their habitats are protected to the highest degree possible during construction, and provisions are in place for post-construction habitat use.

100 Law and Policy

100. Legislation

100.1.3 Sub-national Level

- 100.1.3.1 Develop laws and policies to increase protection and biological buffers of wetlands.
- 100.1.3.2 Develop policies for wetland restoration plans that consider life history requirements and needs of wildlife occupying targeted habitats.
- 100.1.3.3 Initiate legislative action to establish an annual budgetary line item designating funds to support programs focused on long-term research and monitoring of wildlife diseases.

100.1.4 County and Local

- 100.1.4.2 Secure and increase the effective size of SGCN habitats and connect conserved SGCN habitats through local ordinances.
- 100.1.4.13 Encourage municipal laws regulating domestic pets that may predate on wildlife.
- 100.1.4.15 Incorporate habitat connectivity and the preservation of natural areas into state and local land-use policy and the environmental review process to minimize habitat fragmentation and related threats associated with development.

100.1.5 Scale Unspecified

- 100.1.5.1 Develop laws and policies to increase protection and biological buffers of wetlands.
- 100.1.5.2 Develop policies for wetland restoration plans that consider life history requirements and needs of wildlife occupying targeted habitats.
- 100.1.5.4 Incorporate habitat connectivity and preservation of natural areas into state and local land-use policy and the environmental review process to minimize the impacts of transportation and service corridors on fish and wildlife and their habitats.
- 100.1.5.5 Develop legislation to provide financial support for the New Jersey Invasive Species Strike Team.

100. State Regulations

100.3.0 Regulatory initiatives for species and habitat protection

- 100.3.0.1 Develop (and/or improve) policies and/or regulations that will promote the reduction of run-off and point and non-point source pollution into NJ's aquatic systems (streams, rivers, lakes/ponds, bays, ocean, wetlands, etc.).
- 100.3.0.2 Improve policies/regulations aimed at protecting and preserving critical coastal and marsh habitats and securing mitigation for losses that create an environmental benefit.
- 100.3.0.3 Develop policies that will promote the long term protection of critical migratory stopover habitats for songbirds, raptors, shorebirds, bats and invertebrates.
- 100.3.0.4 Promote policies and regulations that support marine conservation zone designations in suitable areas identified through research and literature.
- 100.3.0.6 Develop policies that will promote expanding acreages and enhancing the effective size of SGCN habitats by providing biologically appropriate buffers of native habitat surrounding SGCN habitats.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Marsh Birds

- 100.3.0.7 Amend current policies and/or regulations to increase the ability to protect and preserve coastal habitats (beach/dune, scrub-shrub, forest, wetland, marsh, and marine and estuarine habitats) that provide nesting, migrating, and wintering areas for SGCN birds, fish and other coastal and aquatic SGCN.
- 100.3.0.8 Develop policies and/or regulations with the objective of protecting significant natural and/or unique communities in perpetuity.
- 100.3.0.9 Secure mitigation that creates an environmental benefit for losses of SGCN and their habitats.
- 100.3.0.13 Develop policies that will promote protecting and restoring riparian areas.
- 100.3.0.14 Develop policies and/or regulations that increase the protective buffers of wetlands, riparian and floodplain areas, and aquatic habitats (including open waters) to biologically appropriate distances to benefit SGCN that rely upon these habitats and improve the function of the [associated] aquatic systems.
- 100.3.0.15 Develop policies that promote protecting and restoring scrub-shrub habitats to benefit shrub-dependent SGCN.
- 100.3.0.16 Create regulations that restrict human activity from staging areas for red knots and other migratory shorebirds.
- 100.3.0.18 Develop policies for conserved lands that prohibit planting and supports the control of non-native vegetation and invasive, native vegetation.
- 100.3.0.19 Develop regulations for lighting of/on tall structures that will minimize harm to and/or disorientation of wildlife, in particular but not limited to migratory birds, bats and invertebrates. Implement BMPs into state, county and local permitting processes.
- 100.3.0.20 Develop policies and/or regulations that prohibit the presence of managed cat colonies and trap, neuter and release programs in or near critical wildlife habitats.
- 100.3.0.23 Review existing CAFRA regulations and ensure that the Coastal Zone Management Rules (NJAC 7:7E) adequately address mitigation that creates an environmental benefit for losses of SGCN and their habitats.
- 100.3.0.36 Create legislation to limit the amount of plastic from shopping bags in circulation and re-instate incentives for citizens bringing their own shopping bag to grocery store.
- 100.3.0.41 Explore all State regulatory requirements for mitigation, restoration, habitat management, etc. to ensure they prohibit the use of specified invasive or other problematic plant species.
- 100.3.0.42 Fully adopt the former Storm water Management Rules' 300ft buffer requirements into the Flood Hazard Area Control Act Rules.
- 100.3.0.43 Identify and address (amend) regulatory impediments to beneficial habitat management.
- 100.3.0.44 Incorporate requirements for technical support and funding for mitigation or restoration efforts so as to be consistent with existing regulations.
- 100.3.0.46 Investigate and/or develop inter-agency Memorandum of Agreements to share common data stored or managed in program-specific databases.
- 100.3.0.47 Investigate regulatory options available to direct the location of aquaculture activities in Aquaculture Development Zone 4 (Delaware Bay area) in a manner which minimizes the loss of wildlife habitats and adverse impacts to the environment.
- 100.3.0.49 Review existing CAFRA regulations and ensure that the Coastal Zone Management Rules (NJAC 7:7E) adequately address the issue of disturbance to habitat or species as a result of human activities (e.g., construction, bridge maintenance, road work, etc.).

Marsh Birds

- 100.3.0.50 Retain endangered, threatened and special concern wildlife and habitat protection measures in the Water Quality Management Program Rules.
- 100.3.0.52 Revise existing and/or incorporate new State land use regulations that specifically address the impacts of new or expanded energy sitings and facilities.
- 100.3.0.56 Develop regulations that when implemented will protect critical migratory stopover habitats for songbirds, raptors, shorebirds, bats and invertebrates.
- 100.3.0.57 Develop regulations that when implemented will improve and secure habitat connections between conserved SGCN habitats.
- 100.3.0.58 Develop regulations that when implemented will promote the expansion of acreages and enhancement of the effective size of SGCN habitats by providing biologically appropriate buffers of native habitat surrounding SGCN habitats.
- 100.3.0.59 Develop regulations that when implemented will increase the ability to protect and preserve coastal habitats (beach/dune, scrub-shrub, forest, wetland, marsh, and marine and estuarine habitats) that provide nesting, migrating, and wintering areas for SGCN birds, fish and other coastal and aquatic SGCN.
- 100.3.0.60 Develop regulations that when implemented will protect significant natural and/or unique communities in perpetuity.
- 100.3.0.64 Develop regulations that when implemented will protect and restore riparian areas.
- 100.3.0.65 Develop regulations that when implemented will protect and restore scrub-shrub habitats to benefit shrub-dependent SGCN.
- 100.3.0.67 Develop regulations for lighting of/on tall structures that will minimize harm to and/or disorientation of wildlife, and enforce within state, county and local permitting processes.
- 100.3.0.68 Develop regulations that when implemented will prohibit the presence of managed cat colonies and trap, neuter and release programs in or near critical wildlife habitats.
- 100.3.0.72 Develop regulations that require permit applicants and/or review agencies to assess the cumulative and synergistic effects of a proposed project (i.e., "secondary effects"), both over time and over a larger spatial scale than the site itself.

100.3.2 State Land Acquisition Programs

- 100.3.2.1 Increase opportunities for habitat restoration by making any necessary policy changes to state, federal and local land acquisition programs (e.g., Green Acres, Blue Acres, etc.) to allow for acquisition within abandoned or failing bay shore communities, including mechanisms to relocate displaced people and infrastructure.

100. State Agency Policy Integration

100.4.0 Policy initiatives for species and habitat protection

- 100.4.0.1 Create any necessary policy changes (including those to incentive programs) to encourage the integration of SWAP actions associated with SGCN priority habitats as a deliberative factor in agencies' actions (e.g., environmental and land management review processes, land acquisition and management).
- 100.4.0.2 Create a policy that requires the NJ DEP to incorporate scientific information regarding climate change and sea level rise (e.g., predictions, habitat management/acquisition efforts to enhance resilience to inundation) on their websites and to work with other government entities, conservation organizations and other stakeholders to work together to collaboratively use social media campaigns to grow a constituency of NJ residents who have an elevated ecological and climate consciousness.

Marsh Birds

- 100.4.0.16 Develop policies to implement habitat management strategies that will increase the structural diversity surrounding areas used for energy, mining, and transportation and service corridors which include but are not limited to the presence of short and tall grasses, specific host plants, brush piles, water sources/wetlands, shrubby areas, nesting areas, and no-mow set-
- 100.4.0.17 Develop policies to implement habitat management strategies, including prescribed burns, that will increase the structural diversity on preserved farmlands, state-owned agricultural lands, forests, parks and wildlife management areas, and any conserved lands purchased with the assistance of Green Acres and Federal Land & Water Conservation Fund monies to control and reduce the impacts of invasive, non-native species in order to increase structural habitat diversity.
- 100.4.0.18 Develop policies to minimize the extent of infrastructure associated with energy and service corridors or areas (e.g., wind and solar farms, pipelines, utility lines) and that require the implementation of habitat management strategies that will increase the structural diversity in the area including (e.g., the presence of short and tall grasses, specific host plants, brush piles, water sources/wetlands, shrubby areas, nesting areas, and no-mow set-asides).
- 100.4.0.20 Develop state regulations that require energy developers and utility service companies to implement habitat management strategies that will increase the structural diversity of the habitat, minimize habitat fragmentation and commercial infrastructure, and minimize the loss, alteration and/or degradation of the habitat and adjacent lands when working on preserved farmlands, state-owned agricultural lands, forests, parks and wildlife management areas, and any conserved lands purchased with the assistance of Green Acres and Federal Land & Water Conservation Fund monies.
- 100.4.0.24 Develop policies to provide financial support for the New Jersey Invasive Species Strike Team.
- 100.4.0.25 Develop policies that require permit applicants and/or review agencies to assess the cumulative and synergistic effects of a proposed project (i.e., "secondary effects"), both over time and over a larger spatial scale than the site itself.

Migrant Shorebirds

Focal species that comprise this Conservation Target:

Red Knot

Ruddy Turnstone

Threats and Action Drivers associated with this Conservation Target:

1 Residential and Commercial Development

1.1 Housing and Urban Areas

- 1.1.1 Land conversion from natural habitat to urban and other residential areas (Avg. Score: 1.00)
(large and small scale)

NJ Specific Threats: 1.1.1.6 Impervious surfaces can cause an increased risk of floods, flash floods and storm damage that degrade terrestrial and aquatic habitats.

1.2 Commercial and Industrial Areas

- 1.2.2 Commercial development using materials that cause collision hazards (Avg. Score: 2.00)

NJ Specific Threats: 1.2.2.1 Collision risk to volant species (birds, bats and invertebrates).

2 Agriculture and Aquaculture

2.4 Marine and Freshwater Aquaculture

- 2.4.1 Subsistence/Artisinal Aquaculture (Avg. Score: 2.00)

NJ Specific Threats: 2.4.1.1 May degrade freshwater and intertidal habitat due to farming techniques and damage from associated structures.

2.4.1.3 Potential for increased nutrient and effluent loads.

2.4.1.4 Potential increased noise pollution.

2.4.1.5 Increased risk of persistent human disturbance from tending activities that hinder or preclude habitat use by SGCN.

2.4.1.6 Potential for aquaculture structures to create impingement/entanglement hazard and/or preclude benthic habitat use by SGCN.

- 2.4.2 Industrial Aquaculture (Avg. Score: 2.00)

NJ Specific Threats: 2.4.2.1 May degrade freshwater and intertidal habitat due to farming techniques and damage from associated structures.

2.4.2.3 Potential for increased nutrient and effluent loads.

2.4.2.4 Potential increased noise pollution.

2.4.2.5 Increased risk of persistent human disturbance from tending activities that hinder or preclude habitat use by SGCN.

2.4.2.6 Potential for aquaculture structures to create impingement/entanglement hazard and/or preclude benthic habitat use by SGCN.

3 Energy Production and Mining

3.1 Oil and Gas Facilities and Pipelines

- 3.1.1 Distribution processes of petroleum and other liquid hydrocarbons (Avg. Score: 1.00)

NJ Specific Threats: 3.1.1.2 Loss, alteration and/or degradation of habitat.

3.1.1.3 Increased risk of oil spills.

3.1.1.4 Increased noise pollution.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Migrant Shorebirds

3.2 Mining and Quarrying

3.2.4 Sand Dredging (outside shipping lanes) (Avg. Score: 1.00)

NJ Specific Threats: 3.2.4.3 Potential for direct mortality of benthic organisms.

3.3 Renewable Energy

3.3.1 Wind Power (Avg. Score: 2.00)

NJ Specific Threats: 3.3.1.1 Turbines, blades, and structure foundations create a collision risk to volant species (birds, bats and invertebrates) and marine animals.

3.3.1.3 Loss, alteration and/or degradation of habitat.

4 Transportation and Service Corridors

4.2 Utility and Service Lines

4.2.1 Land conversion from natural habitat to utility and other service lines (large and small scale) or communication towers and associated access roads (Avg. Score: 2.00)

NJ Specific Threats: 4.2.1.5 Tall radio and utility towers with guy lines pose a strike hazard for migrant bats and birds, especially in poor visibility conditions (e.g., fog, nighttime, poor weather conditions).

4.4 Flight Paths

4.4.1 Airplane flight paths (Avg. Score: 1.00)

NJ Specific Threats: 4.4.1.1 Increased noise disturbance to wildlife, disrupting their normal behaviors.

4.4.1.2 Increased risk of collision between airplanes and birds, bats and insects.

5 Biological Resource Use

5.4 Fishing and Harvesting of Aquatic Resources

5.4.1 Intentional Use (subsistence/small scale) (Avg. Score: 2.00)

NJ Specific Threats: 5.4.1.2 Overharvesting of one species may lead to detrimental impacts on another; e.g., the harvesting of horseshoe crabs reduces the food availability for migrating shorebirds dependent on crab eggs.

5.4.2 Intentional Use (large scale) (Avg. Score: 3.00)

NJ Specific Threats: 5.4.2.1 Overharvesting of one species may lead to detrimental impacts on another; e.g., overharvest of menhaden affecting piscivorous birds.

5.4.3 Unintentional effects (subsistence/small scale) (Avg. Score: 1.00)

NJ Specific Threats: 5.4.3.6 Fishing gear used by commercial fisheries results in bycatch or entanglement of non-targeted wildlife leading to injury and/or mortality.

5.4.3.9 Decreased survival rate of horseshoe crabs bled for medical uses results in a diminished food supply for migrating shorebirds.

5.4.4 Unintentional effects (large scale) (Avg. Score: 2.00)

NJ Specific Threats: 5.4.4.5 Fishing gear used by commercial fisheries results in bycatch or entanglement of non-targeted wildlife leading to injury and/or mortality.

5.4.4.8 Decreased survival rate of horseshoe crabs bled for medical uses results in a diminished food supply for migrating shorebirds.

6 Human Intrusions and Disturbance

6.1 Recreational Activities

6.1.1 Off-road vehicles (motorized and non-motorized) (Avg. Score: 1.50)

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Migrant Shorebirds

- NJ Specific Threats:** 6.1.1.2 Inappropriate use of off-road vehicles can degrade terrestrial and aquatic habitat and reduce the suitability of adjacent habitats for wildlife.
- 6.1.1.3 Increased risk of harassment that results in a change in wildlife behavior and/or direct mortality from vehicle strikes.
- 6.1.1.4 Increased noise pollution.
- 6.1.1.5 Vehicle use on beaches can cause disturbance, harms breeding and foraging habitats, and can cause direct mortality of beach-nesting birds.

6.1.2 Boating (Avg. Score: 2.00)

- NJ Specific Threats:** 6.1.2.1 Alteration and/or degradation of aquatic habitat.
- 6.1.2.2 Increased disturbance to marine animals and ocean-, bay- and marsh-associated birds which can alter their behavior decreasing the likelihood of their success and/or reproduction.

6.1.3 Use of beaches (Avg. Score: 3.00)

- NJ Specific Threats:** 6.1.3.1 Increases disturbance to beach nesting birds that reduces nesting success, and reduces foraging and resting opportunities for a wide range of nesting and migrating shorebirds.

6.1.5 Wildlife observation and photography (Avg. Score: 2.00)

- NJ Specific Threats:** 6.1.5.1 Improperly conducted recreational activities may disrupt normal wildlife behaviors which can result in reduced reproductive success or survival, abandonment of critical sites, etc.

6.1.7 Other (Avg. Score: 1.00)

- NJ Specific Threats:** 6.1.7.1 Use of recreational or commercial pyrotechnics may cause temporary disturbance to wildlife, in particular to nesting birds.
- 6.1.7.3 Drone use in areas with sensitive wildlife (e.g., nesting and foraging birds, migrating and foraging/feeding whales) can alter their behavior and can cause disturbance that impacts their reproductive and/or foraging success.

6.3 Work and Other Activities

6.3.1 Unauthorized research projects at significant habitats (Avg. Score: 1.00)

- NJ Specific Threats:** 6.3.1.2 Accidental trampling of nests, eggs/egg masses, and unseen individuals may impact reproductive success or cause direct mortality to SGCN.
- 6.3.1.3 Activities conducted without proper precautions may disturb and disrupt normal wildlife behaviors, which may impact reproductive success or survival, cause abandonment of critical sites, etc.

6.3.2 Authorized research projects at significant habitats (Avg. Score: 1.00)

- NJ Specific Threats:** 6.3.2.3 Accidental trampling of nests, eggs/egg masses, and unseen individuals may impact reproductive success or cause direct mortality to SGCN.
- 6.3.2.4 Activities conducted without proper precautions may disturb and disrupt normal wildlife behaviors, which may impact reproductive success or survival, cause abandonment of critical sites, etc.

6.3.3 Other "work" unrelated to research (Avg. Score: 1.00)

- NJ Specific Threats:** 6.3.3.2 Intensive dune and beach management (including overuse of dune fencing, sand mining, mechanical beach raking, storm clean up), reduces foraging habitat for beach nesting and migratory shorebirds, and poses risks of injury and mortality to unfledged chicks.

7 Natural Systems Modifications

7.2 Dams and Water Management/Use

7.2.14 Tidal Water Management (Avg. Score: 1.00)

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Migrant Shorebirds

NJ Specific Threats: 7.2.14.2 Tidal water management for the purpose of managing for select species may alter existing hydrologic or vegetative conditions to the detriment of other species.

7.3 Other Ecosystem Modifications

7.3.1 Shoreline Stabilization (Avg. Score: 3.00)

NJ Specific Threats: 7.3.1.1 Efforts to stabilize barrier islands and shorelines, including jetties, groins, bulkheads, interfere with the natural geological processes needed to create and maintain high quality habitat for beach strand species.

7.3.5 Poor habitat management (Avg. Score: 1.00)

NJ Specific Threats: 7.3.5.11 Salt marsh water management to control mosquitoes may result in negative effects on other species (e.g., changing hydrology of low and high marsh).

7.3.5.15 Lack of funding, incentives, or technical guidance resources to proactively manage land to benefit SGCN wildlife.

7.3.5.16 Lack of proactive management to preserve or maintain viable and functioning marshes for SGCN wildlife.

8 Invasive and Other Problematic Species, Genes and Diseases

8.1 Invasive Non-native/ Alien Species/ Diseases

8.1.4 Invasive non-native terrestrial/wetland animals (Avg. Score: 1.00)

NJ Specific Threats: 8.1.4.2 Free-roaming and feral domestic animals such as cats and dogs causes direct mortality of wildlife and disturbance to wildlife breeding and resting areas.

8.2 Problematic Native Species/Diseases

8.2.2 Named Species (Avg. Score: 2.00)

NJ Specific Threats: 8.2.2.1 Dogs on beaches create severe disturbance to beach nesting birds and reduce their nesting success.

8.5 Viral/Prion-induced Diseases

8.5.2 Named Species (Disease) (Avg. Score: 1.00)

NJ Specific Threats: 8.5.2.1 Diseases such as West Nile Virus, arenavirus, sudden oak death, Avian Influenza, and snake fungal disease cause morbidity or mortality to native populations.

8.6 Diseases of Unknown Cause

8.6.0 Unknown Diseases (Avg. Score: 1.00)

NJ Specific Threats: 8.6.0.1 Diseases yet to be identified by pathologists and virologists cause decreased fitness or mortality to native populations.

9 Pollution

9.1 Domestic and Urban Waste Water

9.1.1 Sewage (Avg. Score: 1.00)

NJ Specific Threats: 9.1.1.1 Degradation of aquatic and marine water quality and habitats by changing turbidity, flow and water chemistry.

9.1.1.2 Leads to increased eutrophication and algae blooms that result in oxygen depletion.

9.2 Industrial and Military Effluents

9.2.1 Oil Spills (Avg. Score: 3.00)

NJ Specific Threats: 9.2.1.1 Oil spills render resting, breeding and foraging habitats temporarily unavailable to wildlife, altering normal wildlife behavior.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Migrant Shorebirds

9.2.1.2 Oil spills have long term effects on habitats and damage ecological processes that can cause local wildlife population declines and impaired foraging or reproduction.

9.2.1.3 Oil spills cause external oiling of wildlife and ingestion of oil, both of which can injure or kill wildlife.

9.2.3 Other (Avg. Score: 1.00)

NJ Specific Threats: 9.2.3.2 Chemical spills have long term effects on habitats and damage ecological processes that can cause local wildlife population declines and impaired foraging or reproduction.

9.2.3.3 Chemical spills may render resting, breeding and foraging habitats temporarily unavailable to wildlife, altering normal wildlife behavior.

9.6 Excess Energy

9.6.1 Light Pollution (Avg. Score: 1.00)

NJ Specific Threats: 9.6.1.1 Artificial lighting can reduce suitability of adjacent habitat for species sensitive to artificial lights by disorienting wildlife, reducing foraging suitability or success, or increasing visibility to predators, resulting in reduced diversity and/or productivity of species in adjacent habitat.

9.6.3 Noise Pollution (Avg. Score: 1.00)

NJ Specific Threats: 9.6.3.1 Acute and chronic noise pollution in and adjacent to terrestrial and aquatic (marine and freshwater) environments could disrupt normal behaviors of wildlife such as migration, communication, feeding, eluding predators, resting and breeding, etc.

11 Climate Change and Severe Weather

11.1 Habitat Shifting or Alteration

11.1.0 Macro- and Micro-Climate Alterations (Avg. Score: 1.00)

NJ Specific Threats: 11.1.0.1 Alters native terrestrial and aquatic habitats at the macro- and micro-climate levels that can affect suitability for wildlife, in particular specialist species.

11.3 Temperature Extremes

11.3.1 Temperature extremes (Avg. Score: 1.00)

NJ Specific Threats: 11.3.1.3 Temperature extremes of surface water and air degrades marine habitats and ecosystems, threatening marine wildlife. Such extremes also disrupt offshore currents and migratory patterns, species' ranges, and/or impact communities/food chains, all of which further impact the ecosystem.

11.3.1.4 Extremely low temperatures and/or extensive periods of unseasonably low temperatures during critical life history stages (e.g., hibernation, gestation/nesting) can alter animals' behaviors and decrease survivorship.

11.4 Storms and Flooding

11.4.1 Storms and flooding (Avg. Score: 2.00)

NJ Specific Threats: 11.4.1.2 Potentially damage coastal habitats, including beach- and marsh-nesting bird habitats and interdunal wetlands, and can increase marsh erosion.

11.4.1.6 Increased storms and flooding reduce nesting success, especially for ground-nesting birds.

11.4.1.7 Potentially damage coastal habitats, including beach and marsh habitats used by spawning horseshoe crabs, nesting diamondback terrapins, and resting and foraging birds.

11.6 Phenology Shifting or Alteration

11.6.2 Phenology shifts related to predator-prey ecology (Avg. Score: 3.00)

NJ Specific Threats: 11.6.2.2 Shifts timing of species migration, breeding and hibernation, and available food resources, causes redistribution of species, or mortality for species that are unable to relocate due to their already isolated habitat or limited mobility.

11.6.3 Phenology shifts related to species redistribution (Avg. Score: 1.00)

- NJ Specific Threats:** 11.6.3.1 Shifts in timing of species migration, breeding and hibernation, and available food resources, as a result of wildlife range shifts driven by climate change.
- 11.6.3.2 Shifts in nesting times or egg incubation durations can limit nest success and longterm populations.

12 Resource Management Needs

12.1 Resource information collection needs

12.1.1 Lack of initial baseline inventory (Avg. Score: 2.00)

- NJ Specific Threats:** 12.1.1.4 Lack of information on the morphometrics and trends of coastal salt marshes and salt marsh islands.
- 12.1.1.5 Lack of information regarding the SGCN populations that use managed salt marshes and the best techniques for making improvements for marsh-dependent SGCN wildlife.
- 12.1.1.6 Lack of information regarding migratory pathways and response of wildlife to lights and noise associated with offshore wind turbines.

12.1.2 Lack of up-to-date existing information (Avg. Score: 1.50)

- NJ Specific Threats:** 12.1.2.1 Lack of (routine, regular, ongoing) surveys/assessments that provide up-to-date information regarding population trends or health, and/or status of fish, wildlife and/or their habitats.
- 12.1.2.2 Lack of wildlife monitoring at sites with structures that pose high risk of mortality to SGCN wildlife.

12.1.3 Need to answer research question (Avg. Score: 1.50)

- NJ Specific Threats:** 12.1.3.1 There are significant knowledge gaps regarding distribution, dispersal, diseases, population trends, etc. of SGCN.
- 12.1.3.3 Lack of studies specific to structural shellfish aquaculture (racks, bottom cages, bottom screens, etc.) and tending activities which may adversely impact horseshoe crabs, shorebirds and other benthic-dependent species.
- 12.1.3.4 Lack of information regarding the potential short- and long-term impacts of wind turbines and other tall coastal structures on migratory populations.

12.1.4 Need to develop new technique (Avg. Score: 2.00)

- NJ Specific Threats:** 12.1.4.3 Lack of techniques for high marsh preservation that includes impoundments and elevated islands.
- 12.1.4.4 Lack of consideration of habitat management opportunities in the course of salt marsh management for mosquito control.

12.3 Regulatory Reform

12.3.0 State Regulatory Reforms (Avg. Score: 3.00)

- NJ Specific Threats:** 12.3.0.7 Activities that threaten SGCN, their food sources, and/or habitats are often regulated separately and without consideration for the cumulative and synergistic effects over time or over a larger spatial scale. Therefore, regulations can fail to protect SGCN populations over time.
- 12.3.0.10 Land use regulatory processes pertaining to habitat creation, enhancement or restoration projects can be costly and/or burdensome, precluding or discouraging the development or implementation of conservation projects.

12.4 Internal Policy & Procedures Reform

12.4.0 State Policy and Procedure Reform (Avg. Score: 2.00)

- NJ Specific Threats:** 12.4.0.1 A species-by-species management focus as opposed to ecological systems and biodiversity generally has greater opportunity for unintended consequences for other species and may be less efficient in developing appropriate management actions.
- 12.4.0.2 Policies and procedures for lands management that lack consideration of the impacts of activity timing can result in unintended impacts to wildlife during vulnerable periods.

Migrant Shorebirds

- 12.4.0.3 Lack of internal understanding regarding beneficial habitat impacts of storm events leads to policies and practices that reverse or decrease such beneficial effects (e.g., beach-filling, shoreline hardening, “hazard” tree and log removal from forests, etc.
- 12.4.0.6 Techniques for ecological management or restoration of shorelines are not fully developed or evaluated for effectiveness for target and non-target SGCN in coastal areas.
- 12.4.0.7 Land preservation contracts, easements, etc. that do not contain prescriptive language or flexibility allowing for habitat management can result in unsuitable habitat conditions and biodiversity declines for SGCN.

14 **Education/ Outreach Needs**

14.1 Education needs

14.1.1 Need for improved knowledge of fish and wildlife and their habitats (Avg. Score: 1.00)

- NJ Specific Threats:** 14.1.1.1 Lack of understanding of the importance of various SGCN habitats, their connectivity to similar habitats, and how planning decisions impact their quality and the wildlife that depend upon them.
- 14.1.1.2 Lack of general knowledge of SGCN life histories and vulnerabilities as they relate to land management practices.
- 14.1.1.3 Lack of understanding of the need to manage both natural and anthropogenic (e.g., yards, lawns, hayfields, etc.) habitats to minimize impacts or increase benefits to SGCN and their habitats.

14.2 Outreach needs

14.2.1 Need to improve specific understanding of agency/organization goals, objectives and ongoing wildlife conservation actions (Avg. Score: 1.00)

- NJ Specific Threats:** 14.2.1.3 Need to develop greater understanding of and support for efforts implemented to enhance SGCN habitat and biodiversity through various coastal management practices.
- 14.2.1.4 Need to develop greater understanding of and support for efforts implemented to maintain disturbance-free habitats that allow coastal wildlife populations to thrive alongside human residential and recreational uses.

15 **Administrative Needs**

15.2 Organizational/program planning needs

15.2.3 Need for multi-state, regional and landscape scale planning (Avg. Score: 1.50)

- NJ Specific Threats:** 15.2.3.1 State governance and financial structures can sometimes inhibit conservation planning and implementation at the regional and landscape-scales that are often more effective at setting priorities and meeting species and habitat conservation goals and objectives.

Actions to address the Threats and Action Drivers associated with this Conservation Target:

1 Coordination and Administration

1.2 Incentives

1.2.1 Incentives

- 1.2.1.1 Enhance critical migratory stopover habitats for songbirds, raptors, shorebirds, bats and invertebrates through incentive programs with adjacent private landowners to increase the effective size of the habitat.

Migrant Shorebirds

- 1.2.1.2 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to private and public landowners and land managers to increase the effective size of SGCN habitats by protecting/restoring adjacent habitats that contribute to the overall size of the "core" area and/or provide a natural buffer, enhancing the suitability of the core area for SGCN, and/or connect conserved SGCN habitats.
- 1.2.1.3 Secure and promote the protection/restoration of critical coastal habitats (beach/dune, scrub-shrub, forest, wetland, marsh, and marine and estuarine habitats) that provide nesting, migrating and wintering areas for SGCN birds, fish and other coastal SGCN through incentive programs.
- 1.2.1.25 Create incentives (non-monetary and/or monetary) within State regulations to assist and programs to deliver those incentives to aquaculture growers to relocate, for example, from intertidal to subtidal lease areas through buyouts of leases or microloans, and/or promoting on-lease conservation measures used by aquaculture growers (such as the implementation of conservation easements, use of living shorelines, incorporation of BMPs for habitat protection, etc.) for maintaining and enhancing healthy, SGCN-associated terrestrial and aquatic habitats and associated riparian habitats, and to minimize (if not avoid) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity

2 Direct Management of Natural Resources

2.6 Hazard or infrastructure removal

2.6.6 Shoreline armoring removal

- 2.6.6.1 Remove shoreline armoring to reduce its impacts on aquatic habitats.

2.9 Living shorelines

2.9.1 Beach renourishment

- 2.9.1.1 Implement best management practices for using mined sand or dredged material to improve habitat for wildlife, particularly for spawning horseshoe crabs and migrating shorebirds.
- 2.9.1.3 Where beach renourishment projects are deemed necessary, implement such projects with a design to increase availability of nesting and foraging habitat for beach nesting birds.
- 2.9.1.4 Implement beach renourishment strategies that consider appropriate timing to avoid sensitive periods (e.g., nesting, denning, roosting) and minimizes harm to wildlife, particularly SGCN.
- 2.9.1.5 Expand the acreages and enhance the effective size of SGCN habitats by utilizing beach renourishment to restore adjacent, less optimal or unsuitable, habitats.
- 2.9.1.6 Reclaim degraded rare species habitats using beach renourishment, when appropriate, to restore habitat value for the documented/target SGCN.
- 2.9.1.7 Protect significant natural and/or unique communities by implementing best management practices for beach renourishment, when applicable.
- 2.9.1.8 Minimize habitat loss of critical coastal beach habitats that provide nesting, migrating, and wintering areas for birds and other coastal species by maintaining or enhancing these areas through beach renourishment.
- 2.9.1.9 Manage beaches to divert human activity away from staging areas for red knots and other migratory shorebirds during critical periods.
- 2.9.1.10 Repair beaches associated with marshes damaged by salt hay farm/dike abandonment and restore degraded sites for targeted SGCN species and their habitats.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Migrant Shorebirds

- 2.9.1.11 Enhance critical migratory stopover beach habitats for songbirds, raptors, shorebirds, bats and invertebrates through beach renourishment and expand management to adjacent private lands to increase the effective size of the habitat.
- 2.9.1.12 Implement beach habitat management on state and other conservation lands to enhance food availability for migratory species (birds, bats, invertebrates).
- 2.9.1.13 Conduct beach renourishment to maintain, enhance and/or create feeding and roosting habitats for migratory species (shorebirds, raptors, bats, songbirds and invertebrates) in appropriate areas along documented migratory corridors around the State.
- 2.9.1.14 Implement best management practices (BMPs), protective strategies, and guidelines for maintaining and enhancing healthy, SGCN-associated beach habitats while minimizing (if not avoiding) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
- 2.9.1.16 Prevent or ameliorate near-term impacts of climate change throughout the State but in particular within the coastal and Delaware Bay areas by implementing habitat management strategies that will establish/improve habitat resilience, such as beach renourishment, that benefits wildlife inhabiting these areas.

2.9.2 Erosion control structures

- 2.9.2.1 Install breakwaters in the form of living shorelines to reduce the impact of wave erosion while preserving the natural character of the site.

2.9.3 Sand dune restoration

- 2.9.3.1 Prevent or ameliorate near-term impacts of climate change throughout the State but in particular within the coastal and Delaware Bay areas by implementing habitat management strategies that will establish/improve habitat resilience, such as sand dune restoration, that benefits wildlife inhabiting these areas.
- 2.9.3.4 Reclaim degraded rare species habitats using sand dune restoration needed to restore habitat value for the documented/target SGCN.
- 2.9.3.6 Minimize habitat loss of critical coastal dune habitats that provide nesting, migrating, and wintering areas for birds and other coastal species by maintaining or enhancing these areas through sand dune restoration.
- 2.9.3.7 Manage sand dunes to divert human activity away from staging areas for red knots and other migratory shorebirds during critical periods.
- 2.9.3.10 Implement sand dune restoration strategies on state and other conservation lands to enhance food availability for migratory species (birds, bats, invertebrates).
- 2.9.3.11 Conduct sand dune restoration to maintain, enhance and/or create feeding and roosting habitats for migratory species (shorebirds, raptors, bats, songbirds and invertebrates) in appropriate areas along documented migratory corridors around the State and evaluate the effectiveness of such management.
- 2.9.3.12 Implement best management practices (BMPs), protective strategies, and guidelines for maintaining and enhancing healthy, SGCN-associated sand dune habitats while minimizing (if not avoiding) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.

2.10 Planting/seeding

2.10.0 Planting/seeding strategies for terrestrial or aquatic habitat creation or restoration

Migrant Shorebirds

- 2.10.0.11 Restore and/or enhance critical migratory terrestrial and aquatic habitats (e.g., beach, grasslands, forest, scrub-shrub, etc.) for songbirds, raptors, shorebirds, waterfowl, bats and invertebrates through habitat restoration efforts and expand habitat restoration to adjacent private lands to increase the effective size of the habitat.
- 2.10.0.23 Restore and/or enhance roosting habitats for migratory species (shorebirds, raptors, bats, songbirds and invertebrates) in appropriate areas along documented migratory corridors around the State.

2.11 Vegetation management

2.11.0 Vegetation management strategies for terrestrial or aquatic habitat creation or restoration

- 2.11.0.44 Manage phragmites adjacent to coastal marshes of interest, in particular those that are within underdeveloped areas and are unprotected, through herbicide application and water management to improve resiliency of the marshes to sea level rise.

2.12 Water management

2.12.1 Ditch plugs

- 2.12.1.1 Implement best management practices (BMPs), protective strategies, and guidelines for ditch plugging to maintain and enhance healthy, resident and migratory SGCN-associated habitats while minimizing (if not avoiding) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.

2.12.6 Tide gate

- 2.12.6.1 Prevent or ameliorate near-term impacts of climate change throughout the State but in particular within the coastal and Delaware Bay areas by implementing habitat management strategies that will establish/improve habitat resilience, such as tide gates, that benefits wildlife inhabiting these areas.

2.12.7 Waterfowl impoundment maintenance

- 2.12.7.1 Manage impoundments to benefit SGCN species inhabiting them (e.g., bitterns, rails, ducks, turtles and some invertebrates).
- 2.12.7.2 Use impoundment management to create feeding and roosting habitats for migratory species (shorebirds, raptors, bats, songbirds and invertebrates) in appropriate areas along documented migratory corridors around the State.
- 2.12.7.3 Implement best management practices (BMPs), protective strategies, and guidelines for impoundment management to maintain and enhance healthy, SGCN-associated habitats while minimizing (if not avoiding) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
- 2.12.7.4 Implement impoundment management strategies that consider appropriate timing to avoid sensitive periods (e.g., nesting, denning, roosting) and minimizes harm to wildlife, particularly SGCN.
- 2.12.7.5 Expand the acreages and enhance the effective size of SGCN habitats by restoring adjacent, less optimal or unsuitable, habitats through impoundment management.
- 2.12.7.6 Reclaim degraded rare species habitats through impoundment management needed to restore habitat value for the documented/target SGCN.
- 2.12.7.7 Protect significant natural and/or unique communities by implementing best management practices for impoundment management.

Migrant Shorebirds

- 2.12.7.9 Minimize habitat loss of critical coastal habitats in Delaware Bay that provide nesting, migrating, and wintering areas for birds and other coastal species by maintaining or enhancing these areas through impoundment management.
 - 2.12.7.10 Enhance critical migratory stopover beach habitats for songbirds, raptors, shorebirds, bats and invertebrates through impoundment management and expand management to adjacent private lands to increase the effective size of the habitat.
 - 2.12.7.14 Prevent or ameliorate near-term impacts of climate change throughout the State but in particular within the coastal and Delaware Bay areas by implementing habitat management strategies that will establish/improve habitat resilience, such as impoundment management, that benefits wildlife inhabiting these areas.
 - 2.12.7.15 Implement impoundment management on state and other conservation lands to enhance food availability for migratory species (birds, bats, invertebrates).
 - 2.12.8 Watering facilities
 - 2.12.8.2 Manage water levels in impoundments to improve coastal marsh habitat availability to wildlife and improve resiliency of the marshes to sea level rise.
- 2.13 Wildlife damage management
 - 2.13.0 Nuisance fish and wildlife damage
 - 2.13.0.3 Investigate alternative saltmarsh mosquito control methods that may produce benefits for coastal marsh dependent SGCN wildlife, including but not limited to high-marsh nesting birds and migrating shorebirds and landbirds.

3 Data Collection and Analysis

- 3.0 General fish and wildlife research, survey or monitoring
 - 3.0.0 Research, survey or monitoring - general fish and wildlife needs
 - 3.0.0.1 Conduct long-term monitoring of resident and migratory SGCN populations using standardized survey protocols to determine the variables that may impact their long-term persistence in the State (e.g., population viability, distribution, dispersal, home range and habitat use, travel corridors, food availability, vulnerability to pollutants and disease, etc.). Compile this information to determine the likely causes of population declines and to understand metapopulation dynamics. Provide data to NJ DEP for integration into the Biotics database, Landscape Project and permitting review processes.
 - 3.0.0.3 Gather baseline data on SGCN inhabiting permanently protected natural lands regarding their distribution and population (e.g., abundance, dispersal, demography including productivity and survival, etc.), and identify (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) critical and supporting habitats within those landscapes.
 - 3.0.0.4 Conduct long-term studies on SGCN inhabiting permanently protected natural lands to develop population trend data and changes in demography, and to determine if critical and/or supporting habitats are limited or changing; i.e., diminishing in value, acreage or connectivity.
 - 3.0.0.5 Gather baseline data on resident and migratory SGCN (in particular migratory species for which New Jersey habitats are significant), terrestrial, freshwater and marine species, regarding the location and condition of their critical and supporting habitats (e.g., foraging, roosting, nesting/breeding, stopover, migration paths, etc.), and population demography (e.g., productivity, survival, dispersal). Compile this information into a database that includes descriptions of the conditions of the habitats and species, and a GIS component of the locations of these important habitats. Provide data to NJ DEP for integration into the Biotics database, Landscape Project and permitting review processes.

Migrant Shorebirds

- 3.0.0.6 Conduct long-term studies on resident and migratory SGCN to determine if there are changes to the populations' demography (productivity, survival, dispersal) and/or to their critical and/or supporting habitats (i.e., diminishing in value, acreage or connectivity, etc.), in particular changes that would not maintain SGCN at viable levels for species populations. Update data and GIS maps; provide updated information to NJ DEP for integration into the Biotics database, Landscape Project and permitting review processes.
- 3.0.0.7 Collect baseline data to document species distributions, in particular SGCN, and current habitat for future analysis of possible distribution shifting as a result of habitat shifting or alteration associated with climate change impacts.
- 3.0.0.8 Conduct long-term studies and compare baseline metrics of documented species distributions and associated habitats to identify possible species and/or habitat shifting or alteration associated with climate change impacts.
- 3.0.0.9 Identify SGCN (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) whose populations are thought to be limited due wholly or in part to a lack of (or contaminated) food resources, and compile/collect and evaluate data/information regarding potential management strategies to improve the availability of such SGCN's food resources.
- 3.0.0.10 Conduct long-term studies to evaluate the effectiveness of management strategies implemented to enhance food/prey availability for SGCN [whose populations are thought to be limited due wholly or in part to a lack of (or contaminated) food resources] through studies that investigate the populations and health of the food resources as well as the target SGCN. Revise management strategies as needed and continue to monitor the effectiveness of the efforts.
- 3.0.0.11 Develop, implement and evaluate the effectiveness of town plans that avoid impacts to SGCN species and their habitats.
- 3.0.0.17 Conduct long-term monitoring of marsh- and beach-dependent SGCN (and their habitats) to evaluate the effectiveness of the management strategies implemented to repair degraded marshes and beaches damaged by salt hay farm/dike abandonment within all bay shore areas.
- 3.0.0.18 Develop, implement and evaluate the effectiveness (through research and long-term monitoring) of engineering standards that embrace both shore protection/resiliency and habitat creation for shorebirds, horseshoe crabs and other coastal species along the Atlantic and Delaware Bay coasts that minimize horseshoe crab impingement and damage to beach habitat from residential and commercial construction.
- 3.0.0.21 Conduct long-term monitoring to determine the impacts of the fish and shellfish aquaculture industries on focal and non-focal SGCN and their habitats (i.e., NJ bays, estuaries, ocean areas). Assess the success of management actions implemented to minimize these impacts and make specific recommendations to the NJ DEP regarding how such management efforts may be improved to minimize harm to wildlife and their habitats.
- 3.0.0.25 Identify pathways of migratory SGCN in the Atlantic Coastal and Marine Regions (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) and use the data to help evaluate the potential short- and long-term impacts of wind turbines, radio towers, utility guy lines, and other tall coastal structures on migratory populations.
- 3.0.0.26 Conduct studies to evaluate the effectiveness of proactive species recovery plans for all endangered and threatened species including objectives and guidance pertaining to and the condition/status of critical and supporting habitats.

Migrant Shorebirds

- 3.0.0.27 Evaluate the effectiveness of strategies to restrict human activity (e.g., recreational, maintenance work, etc.) from sensitive habitats/areas such as avian nesting sites, reptile and amphibian breeding areas (nesting or gestation/birthing and breeding pools, respectively), and bat hibernacula, and federal buffers for marine mammals through research and monitoring. Develop and provide NJ DEP and other appropriate governing agencies/commissions a summary of findings and recommendations to improve such efforts.
- 3.0.0.28 Evaluate best management practices for using mined sand or dredged material to improve habitat for wildlife, particularly for spawning horseshoe crabs and migrating shorebirds.
- 3.0.0.29 Conduct long-term monitoring of sensitive marine species habitats and migration and/or spawning areas to determine their continued use or changes as a result of habitat shifts or alterations that may warrant further management actions.
- 3.0.0.30 Conduct research to investigate the feasibility of managing and/or creating roosting habitats for migratory species (shorebirds, raptors, bats, songbirds and invertebrates) in appropriate areas along documented migratory corridors around the State.

3.2 Research, survey or monitoring - fish and wildlife populations

3.2.0 Data deficiency

- 3.2.0.1 Division of Fish and Wildlife should maintain a robust, up-to-date database and mapping of species occurrences.
- 3.2.0.2 Conduct species status assessments using the Delphi Technique and review of available data and literature on fish and wildlife (including marine animals) to maintain accurate legal status categorization of native wildlife.
- 3.2.0.5 Prevent or ameliorate near-term impacts of climate change throughout the State by developing, implementing and monitoring/evaluating habitat management strategies that will establish/improve habitat resilience (e.g., shorelines of the coast and Delaware Bay, forested habitats of the Pinelands and Skylands) that benefits wildlife inhabiting these areas, in particular within the coastal and Delaware Bay areas.
- 3.2.0.8 Implement and conduct long-term monitoring of control measures aimed at minimizing the impacts of problematic species and/or diseases to evaluate the effectiveness of such efforts and to identify and incorporate additional strategies as appropriate.
- 3.2.0.17 Conduct monitoring at constructed wind farms (within or outside of NJ) to assess the impacts on migratory species (birds, bats, insects) and determine if NJ's land use planning efforts and/or smart-growth plans need to be revised.
- 3.2.0.19 Develop, implement and evaluate aquaculture practices in coastal areas that are compatible with the recovery of SGCNs and industry needs.
- 3.2.0.20 Evaluate the effectiveness of BMPs for mosquito control methods that may produce benefits for coastal marsh dependent SGCN wildlife, including but not limited to high-marsh nesting birds and migrating shorebirds and landbirds.
- 3.2.0.26 Develop, implement and evaluate efforts to remove horseshoe crab impingement hazards, and provide recommendations of potential improvements, if warranted.

3.2.1 Abundance determination

- 3.2.1.1 Identify (through literature searches, review of available data, enlistment of habitat and/or species experts, etc.) population abundance and trends for SGCN using standardized survey protocols. Provide data to NJ DEP for integration into the Biotics database, Landscape Project Map and permitting review processes.

Migrant Shorebirds

- 3.2.1.2 Conduct wildlife surveys on resident and migratory SGCN regarding their population abundance and trends.
 - 3.2.2 Age, size and sex structure
 - 3.2.2.1 Conduct wildlife surveys on resident and migratory SGCN regarding their survivorship.
 - 3.2.7 Population assessment
 - 3.2.7.1 Conduct species status assessments using the Delphi Technique and review of available data and literature on fish and wildlife (including marine animals) to maintain accurate legal status categorization of native wildlife.
 - 3.2.7.2 Conduct studies to evaluate the effectiveness of proactive species recovery plans for all endangered and threatened species to meet and maintain recovery goals.
- 3.3 Research, survey or monitoring - habitat
 - 3.3.1 Baseline inventory
 - 3.3.1.1 Conduct habitat assessments of significant natural and/or unique communities to identify threats to native terrestrial and aquatic habitats through systematic monitoring, review of available data, enlistment of habitat management and/or species experts, etc. Incorporate findings into a database that includes descriptions/qualifiers of the habitats, identifies and values/qualifies the threats, and includes a GIS component of the locations of the assessed areas. Share this information with landowners/managers (e.g., federal, state and local government agencies or non-government organization).
 - 3.3.1.2 Identify (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) resident and migratory SGCN habitats. Investigate their suitability for the various life history requirements of the species that dependent upon them to determine the ability for maintaining applicable SGCN populations in perpetuity.
 - 3.3.1.3 Identify (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) remaining high and low marsh habitats with natural buffers and stable water levels that provide suitable habitat for SGCN and marsh habitats that would benefit from restoration. Conduct research to assess their condition for nesting, migrating and wintering birds.
 - 3.3.1.5 Identify areas (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) where habitat restoration and/or enhancement would benefit wildlife SGCN.
 - 3.3.1.11 Identify (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) and investigate the quality and importance of areas with submerged aquatic vegetation to benefit waterfowl, finfish, and shellfish species.
 - 3.3.1.14 Compile information (obtained through literature reviews, communication with other States along the Atlantic coast, academia, etc.) regarding the impacts of above water operation of wind turbines on migratory marine birds and bats. Provide data to appropriate governing agencies and/or State commissions for integration into permitting review processes.
 - 3.3.1.16 Gather "best information" for spatial modeling and update/create a current model/depiction of anticipated habitat shifts from sea-level rise, flooding, etc.
 - 3.3.1.18 Conduct an assessment using available data regarding SGCN population numbers/trends and demography, on-going threats, habitat changes, etc. to determine if directed management efforts are needed to reach or maintain viable population levels.

Migrant Shorebirds

- 3.3.1.21 Conduct comprehensive baseline surveys of all marsh islands; surveys to include, but are not limited to, documented elevations, and assessments of the habitat's current condition and vulnerability of dependent SGCN species in relation to the increased inundation rate.
- 3.3.1.22 Identify, assess and prioritize marsh habitats for restoration where various management tools (such as increasing salinity through the management of water levels or chemical applications) may be effective in reducing the presence of phragmites.
- 3.3.1.23 Identify areas (through surveys/studies, predictive modeling, review of available data, enlistment of habitat management and/or species experts, etc.) where the State can allow coastal marsh migration due to sea level rise, and target these areas for land acquisition and/or land management to accommodate this transition. Targeted areas should include underdeveloped areas adjacent to unprotected coastal marshes.
- 3.3.1.25 Compile an inventory of all horseshoe crab impingement hazards and share with permitting agencies, and the fisheries organizations and industry.
- 3.3.1.27 Develop a matrix that lists every commercial and recreational fishery and aquaculture facility that operates in state waters and for each fishery listed, provide details regarding their fishing seasons, gear descriptions, locations and number of fishers. Add a GIS component to overlay species of concern and sensitive areas.
- 3.3.1.28 Identify key habitats for the potential allowance of natural coastal processes without interfering through shoreline stabilization, etc. and evaluate the risks and benefits if coastal migration was permitted to occur naturally. Create a GIS map of the identified areas; provide the assessment and mapping to local towns and other appropriate governing agencies.
- 3.3.1.29 Identify coastal wildlife habitats unimpacted by development and/or at greatest risk of habitat loss to help guide enlightened coastal stabilization efforts (i.e., use of soft stabilization) to reduce the impacts on wildlife and their habitats.
- 3.3.1.30 Using available data, model a comprehensive Marine Submerged Aquatic Vegetation Mapping project (similar to the Statewide freshwater wetlands mapping project) of sufficient quality and integrity that it could support the NJ DEP's coastal regulatory programs. Continue to conduct surveys to gather additional data to test and improve the model.

3.3.2 Monitoring

- 3.3.2.2 Conduct long-term monitoring of resident and migratory SGCN habitats using standardized survey protocols to determine changes in habitat quality/suitability and threats (e.g., habitat loss and degradation, increased edge habitat, water quality) and other variables that may impact their long-term persistence in the State and to provide information needed for determining causes of population declines and understanding metapopulation dynamics.
- 3.3.2.3 Continue to update wildlife and habitat databases and revise models of critical SGCN habitats using the most current data available and where lacking, develop new SGCN and/or habitat models as data on species habitat requirements and applicable GIS data layers become available.
- 3.3.2.7 Conduct studies on land use practices such as ditching, impounding, dredging, open marsh water management, burning, and marsh restoration to evaluate the effectiveness and potential impacts on marsh-dependent SGCN.
- 3.3.2.16 Evaluate the effectiveness of best management practices (BMPs), protective strategies, and guidelines for maintaining and enhancing healthy, SGCN-associated terrestrial and aquatic habitats and associated riparian habitats, and to minimize (if not avoid) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.

Migrant Shorebirds

- 3.3.2.19 Once baseline data on the marsh islands' and associated SGCN species' vulnerability to inundation is completed, continue to conduct long-term monitoring the islands to determine sustainability for wildlife dependent on these areas.
- 3.3.2.21 Develop, implement and evaluate the effectiveness of management strategies use to restore marsh habitat (e.g., phragmites reduction).
- 3.3.2.22 Conduct short- and long-term monitoring of the current natural processes affecting sediment transport along the coast. Share findings with organizations/agencies attempting to design beach nourishment projects in a manner that will be beneficial to wildlife.
- 3.3.2.23 Conduct long-term monitoring of marine submerged aquatic vegetation and update the Marine Submerged Aquatic Vegetation Mapping [to be developed under baseline activities] to provide the NJ DEP's coastal regulatory programs with the most current data.

3.5 Techniques development

3.5.1 Artificial propagation studies

- 3.5.1.1 Conduct studies to evaluate the impacts (beneficial and detrimental) of aquaculture on migratory shorebirds, waterfowl, finfish, shellfish and other SGCN and their habitats, including evaluation of the relative effects of location and aquaculture techniques.
- 3.5.1.2 Develop and conduct studies that evaluate relative efficacy and feasibility of management actions designed to minimize adverse impacts and enhance beneficial effects.

3.5.3 Habitat restoration methods

- 3.5.3.2 Develop management strategies to improve the availability of prey/food resources for SGCN whose populations are thought to be limited due wholly or in part to a lack of (or contaminated) food resources. Monitor and investigate the management strategies over time to determine success and/or the need to revise methods.
- 3.5.3.5 Develop best management practices for using mined sand or dredged material to improve habitat for wildlife, particularly for spawning horseshoe crabs and migrating shorebirds.
- 3.5.3.6 Develop/improve management strategies to repair marshes and associated beaches damaged by salt hay farm/dike abandonment for all bay shore areas currently degraded.
- 3.5.3.8 Develop best management practices (BMPs), protective strategies, and guidelines for maintaining and enhancing healthy, SGCN-associated terrestrial and aquatic habitats and associated riparian habitats, and to minimize (if not avoid) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
- 3.5.3.11 Develop strategies to protect native terrestrial and aquatic habitats and dependent SGCN species from the identified threats.
- 3.5.3.12 Develop management actions to minimize the documented adverse impacts and reduce risks of potential adverse impacts of aquaculture on migratory shorebirds and other SGCN, including waterfowl, finfish, and shellfish and their habitats.
- 3.5.3.13 Developing engineering standards that embrace both shore protection/resiliency and habitat creation for shorebirds, horseshoe crabs and other coastal species along the Atlantic and Delaware Bay coasts.
- 3.5.3.14 Develop aquaculture practices in the coastal areas that are compatible with the recovery of SGCN.

Migrant Shorebirds

- 3.5.3.16 Develop/improve strategies to restrict human activity (e.g., recreational, maintenance work, etc.) from sensitive habitats/areas such as avian nesting sites, reptile and amphibian breeding areas (nesting or gestation/birthing and breeding pools, respectively), and bat hibernacula, and federal buffers for marine mammals. Methods may include, but are not limited to, managing the landscape to deter access, diverting recreational and other activities from sensitive areas during critical periods through permit processes or blocking access (trails, roads, etc.), posting (if appropriate), increasing law enforcement presence, conducting management activities at appropriate times to avoid disturbance and/or harm to wildlife (e.g., habitat management, beach raking, etc.), and decreasing noise and light pollution.
- 3.5.3.18 Develop recommendations to improve methods on land use practices such as ditching, impounding, dredging, open marsh water management, burning, and marsh restoration based on potential impacts on marsh-dependent SGCN.
- 3.5.3.25 Use data regarding SGCN population numbers/trends and demography, on-going threats, habitat changes, etc. to develop the necessary management strategies to reach or maintain viable population levels.
- 3.5.3.27 Conduct an assessment and develop a location list of available equipment for boom deployment during oil spills.

3.5.4 Fish and wildlife research, survey and management techniques

- 3.5.4.1 Develop studies to evaluate management strategies to improve the availability of prey/food resources for SGCN whose populations are thought to be limited due wholly or in part to a lack of (or contaminated) food resources. Monitor and investigate the management strategies over time to determine success and/or the need to revise methods.
- 3.5.4.3 Investigate alternative saltmarsh mosquito control methods that may produce benefits for coastal marsh dependent SGCN wildlife, including but not limited to high-marsh nesting birds and migrating shorebirds and landbirds.
- 3.5.4.11 Develop aquaculture practices in the Delaware Bay that are compatible with the recovery of SGCN.
- 3.5.4.13 Develop/improve strategies to restrict human activity (e.g., recreational, maintenance work, etc.) from sensitive habitats/areas such as avian nesting sites, reptile and amphibian breeding areas (nesting or gestation/birthing and breeding pools, respectively), and bat hibernacula, and federal buffers for marine mammals. Methods may include, but are not limited to, managing the landscape to deter access, diverting recreational and other activities from sensitive areas during critical periods through permit processes or blocking access (trails, roads, etc.), posting (if appropriate), increasing law enforcement presence, conducting management activities at appropriate times to avoid disturbance and/or harm to wildlife (e.g., habitat management, beach raking, etc.), and decreasing noise and light pollution.
- 3.5.4.15 Investigate the success of management strategies used to protect and/or enhance SGCN populations and when appropriate, aid in identifying failures/resource problems and issues, and developing new strategies.
- 3.5.4.16 Use data regarding SGCN population numbers/trends and demography, on-going threats, habitat changes, etc. to determine if directed management efforts are needed to reach or maintain viable population levels and develop the necessary management strategies.
- 3.5.4.17 Investigate new, non-invasive techniques for SGCN population evaluation through literature review, expert opinion, trial studies (if low risk), etc.
- 3.5.4.18 Investigate the effectiveness of survey techniques through selected “ground truthing” and literature and peer review in order to increase efficacy of survey, minimize surveyor bias and error, and increase accuracy of trend data.

Migrant Shorebirds

- 3.5.4.19 Develop reliable, standardized survey and monitoring protocols for SGCN species, for which none currently exist, and their habitats.

5 Facilities and Areas

5.15 Wildlife Management Areas

5.15.6 Roads

- 5.15.6.2 Clearly post areas/trails where vehicle access is not permitted.

6 Land and Water Rights Acquisition and Protection

6.0 Acquisition and protection strategies

6.0.0 Combined acquisition and protection strategies

- 6.0.0.1 Enhance and increase the effective size of critical migratory stopover habitats for songbirds, raptors, shorebirds, bats and invertebrates by securing adjacent habitats through an appropriate combination of fee title, non-fee title and landowner agreements.
 - 6.0.0.2 Enhance and increase the effective size of SGCN habitats by protecting adjacent habitats that contribute to the overall size of the "core" area and/or provide a natural buffer, enhancing the suitability of the core area for SGCN, and/or connect conserved SGCN habitats through an appropriate combination of fee title, non-fee title and landowner agreements.
 - 6.0.0.3 Secure and protect riparian and floodplain habitats, inland wetland habitats (marsh, vernal pool, fen, emergent shrubland, forest), and other aquatic habitats (including open waters) and/or biologically appropriate buffers to minimize degradation through an appropriate combination of fee title, non-fee title and landowner agreements.
 - 6.0.0.5 Secure and protect critical coastal habitats (beach/dune, scrub-shrub, forest, wetland, marsh, and marine and estuarine habitats) that provide nesting, migrating and wintering areas for SGCN birds, fish and other coastal SGCN through an appropriate combination of fee title, non-fee title and landowner agreements.

6.1 Land acquisition

6.1.1 Fee title

- 6.1.1.1 Use state, federal, and local land acquisition programs (e.g., Green Acres, Blue Acres, etc.) to acquire abandoned or failing bay shore communities and to relocate displaced people and infrastructure.

6.3 Conservation area designation

6.3.0 Conservation area designation strategies

- 6.3.0.1 Promote the protection of critical migratory stopover habitats for songbirds, raptors, shorebirds, bats and invertebrates and enhance these lands by increasing the effective size through conservation area designations of stopover habitats and adjacent private lands.
 - 6.3.0.2 Enhance and increase the effective size of SGCN habitats by protecting adjacent habitats that contribute to the overall size of the "core" area and/or provide a natural buffer, enhancing the suitability of the core area for SGCN and/or connect conserved SGCN habitats through conservation area designations.
 - 6.3.0.5 Promote the protection of critical coastal habitats (beach/dune, scrub-shrub, forest, wetland, marsh, and marine and estuarine habitats) that provide nesting, migrating and wintering areas for SGCN birds, fish and other coastal SGCN through conservation area designations.

7 Law Enforcement

7.1 Law enforcement

Migrant Shorebirds

7.1.3 Sub-national Level

- 7.1.3.2** Increase the number of law enforcement officers tending to wildlife issues to a reasonable number to sufficiently cover the State and marine waters.

7.1.4 Scale Unspecified

- 7.1.4.2** Restrict human activity from staging areas for red knots and other migratory shorebirds through increasing law enforcement presence.
- 7.1.4.3** Increase law enforcement presence proximate to sensitive areas [e.g., avian nesting sites, in particular rookeries, and reptile and amphibian breeding areas (nesting or gestation/birthing and breeding pools, respectively)] to deter human activity and subsequent disturbance to SGCN.
- 7.1.4.4** Improve enforcement of policies/regulations aimed at protecting and preserving critical coastal and marsh habitats, and secure mitigation for losses that create an environmental benefit.
- 7.1.4.5** Enforce current policies and/or regulations to increase the ability to protect and preserve coastal habitats (beach/dune, scrub-shrub, forest, wetland, marsh, marine and estuarine habitats) that provide nesting, migrating, and wintering areas for SGCN birds, fish and other coastal SGCN, and implement and enforce amended policies/regulations.
- 7.1.4.8** Implement policies that protect critical migratory stopover habitats for songbirds, raptors, shorebirds, bats and invertebrates.
- 7.1.4.11** Implement and enforce policies/regulations that will increase the ability to protect and preserve coastal habitats (beach/dune, scrub-shrub, forest, wetland, marsh, and marine and estuarine habitats) that provide nesting, migrating, and wintering areas for SGCN birds, fish and other coastal and aquatic SGCN.
- 7.1.4.22** Implement policies and/or regulations that prohibit the presence of managed cat colonies and trap, neuter and release programs in or near critical wildlife habitats.
- 7.1.4.25** Encourage the enforcement of municipal laws regulating domestic pets that may predate on wildlife.

8 Outreach

8.1 Partner/stakeholder engagement

8.1.0 Partner/stakeholder engagement strategies

- 8.1.0.1** Coordinate research efforts among government agencies, non-government conservation partners and other stakeholders to investigate the impacts of aquaculture on migratory shorebirds, waterfowl, finfish, shellfish and other SGCN and their habitats, to determine relative effects of farming locations and aquaculture techniques, and to evaluate management actions to minimize such impacts.
- 8.1.0.2** Develop a team of personnel from government entities, conservation organizations and other stakeholders engaged in oil/gas spill response for marine and freshwater habitats to develop a feasible plan for oil spill response and/or to amend NJ's current oil spill response plan that clearly outlines each organizations responsibilities and an assessment and location list of available equipment for boom deployment during oil spills.
- 8.1.0.3** Develop an outreach team of personnel from government entities, conservation organizations and other stakeholders to work together to collaboratively use social media campaigns to grow a constituency of NJ residents who have an elevated ecological and climate consciousness.

Migrant Shorebirds

- 8.1.0.6 Engage government agencies, conservation partners and other stakeholders in discussions focused on sharing information regarding coastal and marine critical wildlife habitats, developing comprehensive mapping to assist in reducing impacts of energy production activities, and establishing a long-term monitoring program to update the data. Ensure this information is available to appropriate personnel for planning or response measures.
- 8.1.0.9 Review the marine fish code enforcement policies relative to SGCN or sensitive game species' populations and fecundity, and amend the harvest quota or "bag limits" as needed, and address enforcement of such quotas.
- 8.1.0.19 Engage government agencies, conservation partners and other stakeholders to collaboratively develop a list of important projects, targeting SGCN and/or their habitat, as a guide for graduate student research. Distribute the list and contact information to all State colleges and universities.
- 8.1.0.20 Organize a small focal group of government and non-government agencies/organizations responsible for decisions regarding beach/dune management to share and coordinate their goals so that comprehensive planning can attempt to meet all needs.
- 8.1.0.29 Encourage government agencies and conservation partners to engage science community in the study of interactions among aquaculture, SGCN, their habitats, and potential impacts on migratory shorebirds and horseshoe crabs.
- 8.1.0.30 Encourage government agencies and conservation partners to advise members of the relevant scientific community of the need for specific studies, reports or investigations targeting the data-deficiency regarding SGCN and/or their habitats.
- 8.1.0.31 Encourage government agencies, conservation partners and other stakeholders to work together to create GIS mapping for marine wildlife and habitat to assist in reducing impacts of energy production activities. Ensure this information is available to appropriate personnel for planning or response measures.
- 8.1.0.39 Deploy stewards at active nesting areas to work with and educate the public on how to reduce disturbance to birds.
- 8.1.0.40 Encourage researchers, land managers, naturalists and enthusiasts to follow proper procedures for the coordination and/or permitting of research/management activities involving wildlife and sensitive habitats, and discourage activities that alter vegetation or wetlands, or cause harm or disturbance to wildlife.
- 8.1.0.41 Engage beach-owning entities (e.g., government, non-government and non-profit organizations, and landowners) in a constructive dialogue to develop guidelines for management of beach/dune communities and to ensure that each group is educated and aware of the needs of the other groups.
- 8.1.0.42 Engage citizens, wildlife observers and photographers through discussions and distributable information regarding the importance of and encouraging implementing responsible and ethical behavior when observing wildlife by developing an alliance of wildlife photographers and widely circulating recommendations on how to reduce impact.
- 8.1.0.45 Form cooperative partnerships with airports and airline companies to facilitate habitat creation away from airports and outside of flight patterns, and to identify seasonal wildlife strike risks to determine if seasonal shifts in flight patterns will minimize this risk.
- 8.1.0.46 Form cooperative partnerships with dredging companies to facilitate habitat creation and enhancement within project areas, and to identify seasonal timing of activities that would minimize impacts to wildlife and their habitats.

8.2 Recruitment and retention activities

Migrant Shorebirds

8.2.3 For wildlife watching

- 8.2.3.1** Develop and implement nature-focused tourism opportunities including wildlife viewing sites, interpretive signage highlighting unique ecosystems/habitats, and wildlife-related recreational opportunities that do not negatively impact SGCN or their habitats.

8.3 WSFR program/subprogram outreach

8.3.0 WSFR program/subprogram outreach strategies

- 8.3.0.7** Develop and provide (or otherwise make publicly available) educational programs and/or materials that describe the negative impacts of off-road vehicles and watercraft use in and adjacent to critical SGCN habitats, and the importance of confining such activities to more appropriate locations and/or seasons.
- 8.3.0.12** Promote awareness of WSFR (Wildlife and Sportfish Restoration) Outreach/Awareness grants, an important funding source for conservation among hunters and anglers as well as the general public.
- 8.3.0.13** Conduct an educational campaign to encourage observer ethics and respect for wildlife and natural habitat.
- 8.3.0.22** Post signage in sensitive coastal habitats (e.g., bird and Diamondback Terrapin nesting areas) to educate the boating community on responsible use of these areas.
- 8.3.0.23** Develop an educational outreach program for coastal municipalities and residents to promote an understanding of the benefits of soft structures over hard structures for shoreline stabilization.

9 Planning

9.1 Land use planning

9.1.0 Land use planning strategies

- 9.1.0.2** Develop town plans that avoid impacts to SGCN species and their habitats.
- 9.1.0.17** Develop a plan to minimize nutrient and effluent loads from aquaculture practices.
- 9.1.0.29** Provide GIS or related data, maps, resource inventories, as well as related training, pertaining to the SWAP and its recommended conservation actions for use or consideration by State, County or municipal planning agencies.
- 9.1.0.33** Review the species, threats, action successes, and habitats, and work with partners to revise the 2017 State Wildlife Action Plan for the 2025 resubmittal.

9.3 Species and habitat management planning

9.3.1 Species management planning

- 9.3.1.2** Develop a management plan to improve the availability of prey/food resources for SGCN whose populations are thought to be limited due wholly or in part to a lack of (or contaminated) food resources.
- 9.3.1.3** Develop a management plan to restrict human activity (e.g., recreational, maintenance work, etc.) from sensitive habitats/areas such as avian nesting sites, reptile and amphibian breeding areas (nesting or gestation/birthing and breeding pools, respectively), and bat hibernacula, and federal buffers for marine mammals.
- 9.3.1.6** Amend NJ's current oil spill response plan to 1) expand the geographic area addressed, 2) expand the targeted species impacted and in need of recovery, and 3) revise current and integrate new actions into the plan as needed.

Migrant Shorebirds

- 9.3.1.13 Develop a management plan to ensure SGCN populations' persistence based on long-term monitoring of resident and migratory SGCN populations and their habitats.
 - 9.3.1.15 Develop a plan to minimize the impacts of oil spills on wildlife and their habitats.
 - 9.3.1.18 Using baseline and monitoring data, develop a plan and seek funding for the removal of horseshoe crab impingement hazards.
- 9.3.2 Listed species recovery planning
 - 9.3.2.1 Develop proactive species recovery plans for all endangered and threatened species including guidance and objectives pertaining to critical and supporting habitat to meet and maintain recovery goals.
- 9.3.3 Habitat management planning
 - 9.3.3.1 Develop a management plan to improve the availability of prey/food resources for SGCN whose populations are thought to be limited due wholly or in part to a lack of (or contaminated) food resources.
 - 9.3.3.2 Develop a management plan for using mined sand or dredged material to improve habitat for wildlife, particularly for spawning horseshoe crabs and migrating shorebirds.
 - 9.3.3.3 Integrate best management practices (BMPs) regarding dune and beach management into beach nesting bird management agreements with government agencies (and private landowners where necessary).
 - 9.3.3.4 Create habitat restoration plans to repair marshes and associated beaches damaged by salt hay farm/dike abandonment for all bay shore areas currently degraded.
 - 9.3.3.10 Develop a management plan to ensure SGCN populations' persistence based on long-term monitoring of resident and migratory SGCN populations and their habitats.
 - 9.3.3.12 Develop a management plan using engineering standards that embrace both shore protection/resiliency and habitat creation for shorebirds, horseshoe crabs and other coastal species along the Atlantic and Delaware Bay coasts.
 - 9.3.3.13 Develop a management plan that will establish/improve habitat resilience (e.g., shorelines of the coast and Delaware Bay, forested habitats of the Pinelands and Skylands) that benefits wildlife inhabiting these areas and prevents or ameliorates near-term impacts of climate change throughout the State, but in particular within the coastal and Delaware Bay areas.
 - 9.3.3.14 Develop a management plan using aquaculture practices in coastal areas that are compatible with the recovery of SGCN.
 - 9.3.3.16 Develop a management plan to restrict human activity (e.g., recreational, maintenance work, etc.) from sensitive habitats/areas such as avian nesting sites, reptile and amphibian breeding areas (nesting or gestation/birthing and breeding pools, respectively), and bat hibernacula, and federal buffers for marine mammals.
 - 9.3.3.18 In cooperation with species and habitat experts, develop management plans for significant natural and/or unique communities, in particular those supporting SGCN, and provide the information to the landowners/managers (federal, state and local government agencies or non-government organization) for review and implementation.
 - 9.3.3.19 Develop management plans for SGCN inhabiting permanently protected natural lands using available baseline and population trend data.
 - 9.3.3.20 Develop an action plan for immediate implementation should habitat levels fall below the minimum necessary size and/or structure within the Cape May Peninsula to sustain the avian migration.

Migrant Shorebirds

- 9.3.3.25 Develop a habitat management plan focused on areas important to near-shore, coastal species (e.g., herring, sturgeon, terrapin, nesting birds) that prioritizes these areas to direct resources to minimize the impacts of sea-level rise, flooding and storms (including extreme rain events) such as increased erosion of beach, mudflat and marsh habitats, and the increased risk of saltwater intrusion into freshwater habitats. Gather "best information" for spatial modeling of anticipated habitat shifts from sea-level rise, flooding, etc.
- 9.3.3.28 Develop a plan to minimize the impacts of oil spills on wildlife and their habitats.
- 9.3.3.29 Develop habitat management plans aimed at reducing or eliminating negative impacts of ORVs.
- 9.3.3.30 Using baseline and monitoring data, develop a plan and seek funding for the removal of horseshoe crab impingement hazards.
- 9.3.3.31 Using data from baseline inventory and monitoring of all current marsh islands and their vulnerability to inundation as a result of sea level rise, create a plan to delineate each island's ideal fit for habitat management (e.g., restoration, hasting, dredging). Planning will factor in criteria to designate which islands should be maintained or restored, and which will be passively allowed to submerge.

11 Technical Assistance

11.1 Environmental review

11.1.1 Review of proposed projects

- 11.1.1.1 Use Biotics database and Landscape Project Mapping in regulatory reviews to ensure protection by applicable laws and regulations.
- 11.1.1.2 Develop smart-growth plans and critical habitat designations that consider SGCN life history requirements and habitat needs, connectivity and health of those habitats, and minimize human-associated disturbances to those habitats and the SGCN inhabiting them.
- 11.1.1.4 Incorporate habitat connectivity and preservation of natural areas into state and local land-use policy and the environmental review process to minimize habitat fragmentation and related threats associated with development.
- 11.1.1.6 Review all projects to be conducted in or adjacent to coastal wetlands and marshes, and provide recommendations on how to best avoid or reduce human disturbance at nesting areas (for example, timing restrictions) and actions not permitted.
- 11.1.1.7 Review proposed construction or other work projects and permit applications, provide recommendations on how to best avoid disturbing sensitive species, and identify actions not permitted.
- 11.1.1.8 Review proposed research projects and permit applications, provide recommendations on how to best avoid disturbing sensitive species, and identify actions not permitted.
- 11.1.1.11 Use the best available science (species data, habitat present, site layout options, etc.) when conducting regulatory reviews of proposed offshore energy projects relating to drilling, extraction and distribution of petroleum and gas products to reduce habitat destruction and minimize impacts on wildlife.
- 11.1.1.13 Use the best available science (species data, habitat present, wind farm layout options, wind blade impacts on migratory species, location of migration routes, etc.) when conducting regulatory reviews of proposed wind farm projects to minimize impacts on migratory and resident wildlife and reduce habitat fragmentation.

11.1.2 Review of proposed policies and plans

Migrant Shorebirds

- 11.1.2.1 Develop smart-growth plans and critical habitat designations that consider SGCN life history requirements and habitat needs, connectivity and health of those habitats, and minimize human-associated disturbances to those habitats and the SGCN inhabiting them.
- 11.1.2.3 Incorporate aquatic habitat connectivity and water quality/effluent standards into the environmental review process to help establish policies and plans that minimize the impact of aquaculture on fish and wildlife.

11.2 Technical assistance

11.2.0 Assorted technical assistance strategies

- 11.2.0.3 Develop state, regional and local BMPs that focus on minimizing habitat fragmentation and human-wildlife conflicts associated with development. Make information available to land developers and private and public landowners for implementation.
- 11.2.0.6 Provide educational resources, training programs, and on-the-ground guidance to energy, mining, transportation, and utility service agencies/companies and their project and resource managers on habitat creation, enhancement and restoration within and adjacent to project areas, as well as away from and outside of project areas (depending on the target species), by managing vegetation for a variety of species and that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife. Wind farms should address both terrestrial bound and low-flying species. Examples of habitat management include, but are not limited to, integrating short and tall grasses, specific host plants, brush piles, water sources/wetlands, shrubby areas, nesting areas and no-mow set-asides.
- 11.2.0.8 Provide educational resources, training programs, and on-the-ground guidance to public and private landowners and land managers on habitat creation and enhancement strategies that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife.
- 11.2.0.10 Provide technical support to private landowners, consultants, and land managers to create customized management plans based on location and SGCN.
- 11.2.0.20 Provide educational resources and technical support to public and private landowners and land managers to promote the protection and/or enhancement of critical coastal habitats (beach/dune, scrub-shrub, forest, wetland, marsh, and marine and estuarine habitats) that provide nesting, migrating and wintering areas for SGCN birds, fish and other coastal SGCN.
- 11.2.0.21 Provide educational resources and technical support to public and private landowners and land managers of lands adjacent to critical migratory stopover habitats for songbirds, raptors, shorebirds, bats and invertebrates to promote the protection and/or enhancement of those adjacent habitats to increase the effective size of the migratory habitat.
- 11.2.0.23 Provide educational resources and technical support to public and private landowners and land managers of lands adjacent to SGCN habitats to promote the protection and/or enhancement of those adjacent habitats to increase the overall size of the "core" area and/or provide a natural buffer, enhancing the suitability of the core area for SGCN, and that connect conserved SGCN habitats.
- 11.2.0.26 Make educational resources available to the public that encourage researchers to seek out guidance prior to finalizing proposals and submitting State permit applications to reduce potential impacts on sensitive species.
- 11.2.0.27 Provide educational resources and presentations to coastal municipalities and residents to promote the understanding of the benefits of soft structures over hard structures for shoreline stabilization.

Migrant Shorebirds

11.2.1 With individuals and groups involved in resource management decision making

- 11.2.1.1** Engage partners and stakeholders in constructive dialogue regarding the importance of providing and methods to provide technical support for carrying out restoration and management practices aimed at increasing structural habitat diversity.
- 11.2.1.2** Provide professional training and technical assistance tools (e.g., mapping, guidance documents, justification, etc.) to agencies/divisions/programs within and outside of the NJ DEP regarding the SWAP, and the conservation actions recommended therein to help facilitate SWAP implementation.
- 11.2.1.5** Provide educational resources, training programs, and on-the-ground guidance to municipalities, state and federal agency resource managers on tasks such as writing and integrating Beach Management Plans into other management documents.

100 Law and Policy

100. Legislation

100.1.3 Sub-national Level

- 100.1.3.2** Develop policies for wetland restoration plans that consider life history requirements and needs of wildlife occupying targeted habitats.
- 100.1.3.3** Initiate legislative action to establish an annual budgetary line item designating funds to support programs focused on long-term research and monitoring of wildlife diseases.
- 100.1.3.4** Initiate legislative action to establish an annual budgetary line item designating funds to support programs and monitoring stations throughout Barnegat, Little Egg Harbor and Great Bay focused on long-term monitoring of submerged aquatic vegetation, both native and exotic species.

100.1.4 County and Local

- 100.1.4.1** Enhance critical migratory stopover habitats for songbirds, raptors, shorebirds, bats and invertebrates through the local ordinances of adjacent private lands to increase the effective size of the habitat.
- 100.1.4.2** Secure and increase the effective size of SGCN habitats and connect conserved SGCN habitats through local ordinances.
- 100.1.4.8** Secure critical coastal habitats (beach/dune, scrub-shrub, forest, wetland, marsh, and marine and estuarine habitats) that provide nesting, migrating and wintering areas for SGCN birds, fish and other coastal SGCN through local ordinances.
- 100.1.4.13** Encourage municipal laws regulating domestic pets that may predate on wildlife.
- 100.1.4.15** Incorporate habitat connectivity and the preservation of natural areas into state and local land-use policy and the environmental review process to minimize habitat fragmentation and related threats associated with development.

100.1.5 Scale Unspecified

- 100.1.5.2** Develop policies for wetland restoration plans that consider life history requirements and needs of wildlife occupying targeted habitats.
- 100.1.5.3** Incorporate aquatic habitat connectivity and water quality/effluent standards into state/local policy to minimize the impact of aquaculture on fish and wildlife.

100. State Regulations

100.3.0 Regulatory initiatives for species and habitat protection

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Migrant Shorebirds

- 100.3.0.2 Improve policies/regulations aimed at protecting and preserving critical coastal and marsh habitats and securing mitigation for losses that create an environmental benefit.
- 100.3.0.3 Develop policies that will promote the long term protection of critical migratory stopover habitats for songbirds, raptors, shorebirds, bats and invertebrates.
- 100.3.0.4 Promote policies and regulations that support marine conservation zone designations in suitable areas identified through research and literature.
- 100.3.0.5 Develop policies that will promote improved and secure habitat connections between conserved SGCN habitats.
- 100.3.0.7 Amend current policies and/or regulations to increase the ability to protect and preserve coastal habitats (beach/dune, scrub-shrub, forest, wetland, marsh, and marine and estuarine habitats) that provide nesting, migrating, and wintering areas for SGCN birds, fish and other coastal and aquatic SGCN.
- 100.3.0.8 Develop policies and/or regulations with the objective of protecting significant natural and/or unique communities in perpetuity.
- 100.3.0.9 Secure mitigation that creates an environmental benefit for losses of SGCN and their habitats.
- 100.3.0.16 Create regulations that restrict human activity from staging areas for red knots and other migratory shorebirds.
- 100.3.0.20 Develop policies and/or regulations that prohibit the presence of managed cat colonies and trap, neuter and release programs in or near critical wildlife habitats.
- 100.3.0.23 Review existing CAFRA regulations and ensure that the Coastal Zone Management Rules (NJAC 7:7E) adequately address mitigation that creates an environmental benefit for losses of SGCN and their habitats.
- 100.3.0.38 Develop laws and/or policies to ensure appropriate and obligated financial compensation to NJDEP's Office of Natural Resource Restoration (and similar groups) for the purpose of marine habitat enhancement and wildlife research, and mitigation efforts address the disturbance of subtidal shallows and/or impacts to habitat and water quality from pollution.
- 100.3.0.39 Develop laws and/or policies to ensure appropriate financial and obligated compensation to NJDEP's Office of Natural Resource Restoration (and similar groups) for the purpose of marine habitat enhancement and wildlife research, and mitigation efforts address the impacts of invasive, non-native aquatic plant species establishing themselves or thriving as a result of illegal actions.
- 100.3.0.43 Identify and address (amend) regulatory impediments to beneficial habitat management.
- 100.3.0.44 Incorporate requirements for technical support and funding for mitigation or restoration efforts so as to be consistent with existing regulations.
- 100.3.0.46 Investigate and/or develop inter-agency Memorandum of Agreements to share common data stored or managed in program-specific databases.
- 100.3.0.47 Investigate regulatory options available to direct the location of aquaculture activities in Aquaculture Development Zone 4 (Delaware Bay area) in a manner which minimizes the loss of wildlife habitats and adverse impacts to the environment.
- 100.3.0.48 Propose new State law or regulation mandating that a State-level "development impact fee" be assessed on all new development approved by municipalities (via the Municipal Land Use Law processes), and dedicate such monies to the development and implementation of regional Habitat Conservation Plans (or existing plans/programs serving the same regional function).

Migrant Shorebirds

- 100.3.0.49 Review existing CAFRA regulations and ensure that the Coastal Zone Management Rules (NJAC 7:7E) adequately address the issue of disturbance to habitat or species as a result of human activities (e.g., construction, bridge maintenance, road work, etc.).
- 100.3.0.50 Retain endangered, threatened and special concern wildlife and habitat protection measures in the Water Quality Management Program Rules.
- 100.3.0.55 Develop regulations to address potentially adverse effects of aquaculture on SGCN species and their habitats.
- 100.3.0.56 Develop regulations that when implemented will protect critical migratory stopover habitats for songbirds, raptors, shorebirds, bats and invertebrates.
- 100.3.0.59 Develop regulations that when implemented will increase the ability to protect and preserve coastal habitats (beach/dune, scrub-shrub, forest, wetland, marsh, and marine and estuarine habitats) that provide nesting, migrating, and wintering areas for SGCN birds, fish and other coastal and aquatic SGCN.
- 100.3.0.68 Develop regulations that when implemented will prohibit the presence of managed cat colonies and trap, neuter and release programs in or near critical wildlife habitats.
- 100.3.0.72 Develop regulations that require permit applicants and/or review agencies to assess the cumulative and synergistic effects of a proposed project (i.e., "secondary effects"), both over time and over a larger spatial scale than the site itself.

100.3.2 State Land Acquisition Programs

- 100.3.2.1 Increase opportunities for habitat restoration by making any necessary policy changes to state, federal and local land acquisition programs (e.g., Green Acres, Blue Acres, etc.) to allow for acquisition within abandoned or failing bay shore communities, including mechanisms to relocate displaced people and infrastructure.

100. State Agency Policy Integration

100.4.0 Policy initiatives for species and habitat protection

- 100.4.0.1 Create any necessary policy changes (including those to incentive programs) to encourage the integration of SWAP actions associated with SGCN priority habitats as a deliberative factor in agencies' actions (e.g., environmental and land management review processes, land acquisition and management).
- 100.4.0.10 Develop laws and/or policies to ensure appropriate and obligated financial compensation to NJDEP's Office of Natural Resource Restoration (and similar groups) for the purpose of marine habitat enhancement and wildlife research, and mitigation efforts address the disturbance of subtidal shallows and/or impacts to habitat and water quality from pollution.
- 100.4.0.11 Develop laws and/or policies to ensure appropriate financial and obligated compensation to NJDEP's Office of Natural Resource Restoration (and similar groups) for the purpose of marine habitat enhancement and wildlife research, and mitigation efforts address the impacts of invasive, non-native aquatic plant species establishing themselves or thriving as a result of illegal actions.
- 100.4.0.20 Develop state regulations that require energy developers and utility service companies to implement habitat management strategies that will increase the structural diversity of the habitat, minimize habitat fragmentation and commercial infrastructure, and minimize the loss, alteration and/or degradation of the habitat and adjacent lands when working on preserved farmlands, state-owned agricultural lands, forests, parks and wildlife management areas, and any conserved lands purchased with the assistance of Green Acres and Federal Land & Water Conservation Fund monies.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Migrant Shorebirds

- 100.4.0.25 Develop policies that require permit applicants and/or review agencies to assess the cumulative and synergistic effects of a proposed project (i.e., "secondary effects"), both over time and over a larger spatial scale than the site itself.

Northern Harrier

Focal species that comprise this Conservation Target:

Northern Harrier

Threats and Action Drivers associated with this Conservation Target:

1 Residential and Commercial Development

1.1 Housing and Urban Areas

1.1.1 Land conversion from natural habitat to urban and other residential areas (large and small scale) (Avg. Score: 1.00)

NJ Specific Threats: 1.1.1.2 Loss, alteration and/or degradation of habitat.

1.1.2 Residential development using materials that cause collision hazards (Avg. Score: 1.00)

NJ Specific Threats: 1.1.2.1 Collision risk to volant species (birds, bats and invertebrates).

1.2 Commercial and Industrial Areas

1.2.1 Land conversion from natural habitat to commercial or industrial areas (large and small scale) (Avg. Score: 1.00)

NJ Specific Threats: 1.2.1.6 Impervious surfaces can cause an increased risk of floods, flash floods and storm damage that degrade terrestrial and aquatic habitats.

1.2.2 Commercial development using materials that cause collision hazards (Avg. Score: 1.00)

NJ Specific Threats: 1.2.2.1 Collision risk to volant species (birds, bats and invertebrates).

1.3 Tourism and Recreational Areas

1.3.1 Land conversion from natural habitat to recreation or tourism areas (large and small scale) (Avg. Score: 2.00)

NJ Specific Threats: 1.3.1.2 Loss, alteration and/or degradation of habitat.

2 Agriculture and Aquaculture

2.1 Annual and Perennial Crops (non-timber)

2.1.1 Shifting Agriculture (Avg. Score: 3.00)

NJ Specific Threats: 2.1.1.1 Conversion of low-intensity agriculture to intensive agriculture (e.g., tree nursery, row crop) degrades habitat, especially for early-successional species.

2.1.1.2 Conversion, and subsequent loss, of high salt marsh to low salt marsh threatens high-marsh dependent species and those dependent on the marsh-upland ecotone.

2.1.1.4 Salt hay farming on Delaware Bay marshes, and the subsequent conversion of those farms to fully tidal marshes, results in compressed sediments that are less resilient to coastal forces of erosion and sea level rise.

3 Energy Production and Mining

3.1 Oil and Gas Facilities and Pipelines

3.1.1 Distribution processes of petroleum and other liquid hydrocarbons (Avg. Score: 1.00)

NJ Specific Threats: 3.1.1.1 Fragments terrestrial and aquatic habitats.

3.1.1.2 Loss, alteration and/or degradation of habitat.

3.1.1.3 Increased risk of oil spills.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Northern Harrier

3.1.1.4 Increased noise pollution.

3.1.2 Natural gas distribution processes (Avg. Score: 1.00)

NJ Specific Threats: 3.1.2.1 Fragments terrestrial and aquatic habitats.

3.1.2.2 Loss, alteration and/or degradation of habitat.

3.3 Renewable Energy

3.3.1 Wind Power (Avg. Score: 2.00)

NJ Specific Threats: 3.3.1.1 Turbines, blades, and structure foundations create a collision risk to volant species (birds, bats and invertebrates) and marine animals.

3.3.1.3 Loss, alteration and/or degradation of habitat.

3.3.2 Solar Power (Avg. Score: 1.00)

NJ Specific Threats: 3.3.2.1 Fragments terrestrial habitats.

3.3.2.2 Loss, alteration and/or degradation of habitat.

4 Transportation and Service Corridors

4.1 Roads and Railroads

4.1.1 Land conversion from natural habitat to roads and railroads (large and small scale) (Avg. Score: 1.00)

NJ Specific Threats: 4.1.1.2 Loss, alteration and/or degradation of habitat associated with road and railroad construction and maintenance, and degradation of adjacent habitats.

4.1.2 Movement of cars and other vehicles on roads and railroads (large and small scale) (Avg. Score: 1.00)

NJ Specific Threats: 4.1.2.1 Increased vehicle traffic increases the risk of wildlife mortality from strikes.

4.2 Utility and Service Lines

4.2.1 Land conversion from natural habitat to utility and other service lines (large and small scale) or communication towers and associated access roads (Avg. Score: 2.00)

NJ Specific Threats: 4.2.1.1 Fragments terrestrial and aquatic habitats making the landscape unsuitable for area-sensitive species, inhibiting dispersal of non-volant animals, reducing gene flow, and creating barriers to fish when service line-associated roads cross streams (e.g., bridges, culverts, fords, etc.).

4.2.1.2 Loss, alteration and/or degradation of habitat associated with rights-of-way construction and maintenance, and degradation of adjacent habitats.

4.2.1.3 Powerline structures attract perching raptors, increasing the risk of raptor electrocution.

4.2.1.5 Tall radio and utility towers with guy lines pose a strike hazard for migrant bats and birds, especially in poor visibility conditions (e.g., fog, nighttime, poor weather conditions).

4.3 Shipping Lanes

4.3.2 Dredging impacts (Avg. Score: 1.00)

NJ Specific Threats: 4.3.2.2 Historic and current reuse of containment facilities over time may disrupt/displace nesting birds.

4.4 Flight Paths

4.4.1 Airplane flight paths (Avg. Score: 1.00)

NJ Specific Threats: 4.4.1.1 Increased noise disturbance to wildlife, disrupting their normal behaviors.

4.4.1.2 Increased risk of collision between airplanes and birds, bats and insects.

6 Human Intrusions and Disturbance

Northern Harrier

6.1 Recreational Activities

6.1.1 Off-road vehicles (motorized and non-motorized) (Avg. Score: 1.00)

- NJ Specific Threats:** 6.1.1.2 Inappropriate use of off-road vehicles can degrade terrestrial and aquatic habitat and reduce the suitability of adjacent habitats for wildlife.
- 6.1.1.3 Increased risk of harassment that results in a change in wildlife behavior and/or direct mortality from vehicle strikes.
- 6.1.1.4 Increased noise pollution.

6.1.2 Boating (Avg. Score: 2.00)

- NJ Specific Threats:** 6.1.2.2 Increased disturbance to marine animals and ocean-, bay- and marsh-associated birds which can alter their behavior decreasing the likelihood of their success and/or reproduction.

6.1.5 Wildlife observation and photography (Avg. Score: 2.00)

- NJ Specific Threats:** 6.1.5.1 Improperly conducted recreational activities may disrupt normal wildlife behaviors which can result in reduced reproductive success or survival, abandonment of critical sites, etc.
- 6.1.5.2 Participants may introduce wildlife diseases and invasive plant species when gear and apparel is not properly sanitized between sites.

6.1.7 Other (Avg. Score: 1.00)

- NJ Specific Threats:** 6.1.7.1 Use of recreational or commercial pyrotechnics may cause temporary disturbance to wildlife, in particular to nesting birds.
- 6.1.7.3 Drone use in areas with sensitive wildlife (e.g., nesting and foraging birds, migrating and foraging/feeding whales) can alter their behavior and can cause disturbance that impacts their reproductive and/or foraging success.

6.2 Military Exercises

6.2.1 Military exercises (Avg. Score: 1.00)

- NJ Specific Threats:** 6.2.1.1 Military testing and training exercises may inflict disturbance and potential physical harm to wildlife.

6.3 Work and Other Activities

6.3.1 Unauthorized research projects at significant habitats (Avg. Score: 1.00)

- NJ Specific Threats:** 6.3.1.2 Accidental trampling of nests, eggs/egg masses, and unseen individuals may impact reproductive success or cause direct mortality to SGCN.
- 6.3.1.3 Activities conducted without proper precautions may disturb and disrupt normal wildlife behaviors, which may impact reproductive success or survival, cause abandonment of critical sites, etc.

6.3.2 Authorized research projects at significant habitats (Avg. Score: 1.00)

- NJ Specific Threats:** 6.3.2.3 Accidental trampling of nests, eggs/egg masses, and unseen individuals may impact reproductive success or cause direct mortality to SGCN.
- 6.3.2.4 Activities conducted without proper precautions may disturb and disrupt normal wildlife behaviors, which may impact reproductive success or survival, cause abandonment of critical sites, etc.

7 Natural Systems Modifications

7.2 Dams and Water Management/Use

7.2.1 Abstraction of Surface Water (domestic use) (Avg. Score: 1.00)

- NJ Specific Threats:** 7.2.1.6 Impoundments may alter the water levels in high marshes and mudflats, impacting those foraging and nesting habitats.

7.2.3 Abstraction of Surface Water (agricultural use) (Avg. Score: 1.00)

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Northern Harrier

NJ Specific Threats: 7.2.3.7 Impoundments may alter the water levels in high marshes and mudflats, impacting those foraging and nesting habitats.

7.2.7 Abstraction of Ground Water (agricultural use) (Avg. Score: 1.00)

NJ Specific Threats: 7.2.7.1 Heavy withdrawal of ground water for agricultural use may lower water tables and alter the hydrology of freshwater wetlands and headwater streams, including tributaries, seepages and vernal pools.

7.2.14 Tidal Water Management (Avg. Score: 2.00)

NJ Specific Threats: 7.2.14.1 Freshwater tidal management for flood control alters water levels and salinity in tidal wetlands.

7.2.14.2 Tidal water management for the purpose of managing for select species may alter existing hydrologic or vegetative conditions to the detriment of other species.

7.2.14.3 Open marsh water management (and other techniques) to control mosquito populations may alter existing hydrologic or vegetative conditions to the detriment of other species.

7.2.14.4 Manipulation of marsh water levels may disturb nesting areas and flood nests.

7.3 Other Ecosystem Modifications

7.3.1 Shoreline Stabilization (Avg. Score: 1.00)

NJ Specific Threats: 7.3.1.1 Efforts to stabilize barrier islands and shorelines, including jetties, groins, bulkheads, interfere with the natural geological processes needed to create and maintain high quality habitat for beach strand species.

7.3.2 Inappropriate timing of mowing (Avg. Score: 2.00)

NJ Specific Threats: 7.3.2.1 Increased risk of direct mortality and/or reduced productivity of wildlife, as well as reduced use by migrating species.

7.3.5 Poor habitat management (Avg. Score: 3.00)

NJ Specific Threats: 7.3.5.5 Habitat management that alters or removes vegetation without implementing long-term management increases the risk of invasive and exotic plants establishing themselves, outcompeting native vegetation.

7.3.5.6 Habitat management, including that which occurs on public and private lands, that does not consider timing and species' behaviors can result in the direct mortality and/or alteration or loss of habitat.

7.3.5.10 Ditching, draining and filling of marshes and wetlands eliminates habitat and degrades the remaining surrounding areas for wildlife.

7.3.5.11 Salt marsh water management to control mosquitoes may result in negative effects on other species (e.g., changing hydrology of low and high marsh).

7.3.5.15 Lack of funding, incentives, or technical guidance resources to proactively manage land to benefit SGCN wildlife.

7.3.5.16 Lack of proactive management to preserve or maintain viable and functioning marshes for SGCN wildlife.

8 Invasive and Other Problematic Species, Genes and Diseases

8.1 Invasive Non-native/ Alien Species/ Diseases

8.1.1 Unspecified Species (Avg. Score: 2.00)

NJ Specific Threats: 8.1.1.4 Invasive, non-native animals increase the risk of predation on native animals and/or herbivory on native vegetation.

8.1.1.6 Invasive, non-native plants may create physical barriers for some species.

8.1.4 Invasive non-native terrestrial/wetland animals (Avg. Score: 2.00)

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Northern Harrier

NJ Specific Threats: 8.1.4.2 Free-roaming and feral domestic animals such as cats and dogs causes direct mortality of wildlife and disturbance to wildlife breeding and resting areas.

8.1.5 Invasive non-native terrestrial/wetland plants (Avg. Score: 2.00)

NJ Specific Threats: 8.1.5.1 Displace or out-compete native species for resources (food, light, shelter), alter the composition of the native landscapes/aquatic systems, diminish habitat suitability and reduce ecological integrity of natural communities, and may introduce disease into a population.

8.2 Problematic Native Species/Diseases

8.2.1 Unspecified Species (Avg. Score: 2.00)

NJ Specific Threats: 8.2.1.4 Human-subsidized native species can become overabundant, increasing predation on other native wildlife and/or altering the ecological community.

8.2.2 Named Species (Avg. Score: 3.00)

NJ Specific Threats: 8.2.2.2 Human-subsidized native species can become overabundant, increasing predation on other native wildlife and/or altering the ecological community.

8.5 Viral/Prion-induced Diseases

8.5.2 Named Species (Disease) (Avg. Score: 1.00)

NJ Specific Threats: 8.5.2.1 Diseases such as West Nile Virus, arenavirus, sudden oak death, Avian Influenza, and snake fungal disease cause morbidity or mortality to native populations.

8.6 Diseases of Unknown Cause

8.6.0 Unknown Diseases (Avg. Score: 1.00)

NJ Specific Threats: 8.6.0.1 Diseases yet to be identified by pathologists and virologists cause decreased fitness or mortality to native populations.

9 Pollution

9.1 Domestic and Urban Waste Water

9.1.1 Sewage (Avg. Score: 1.00)

NJ Specific Threats: 9.1.1.1 Degradation of aquatic and marine water quality and habitats by changing turbidity, flow and water chemistry.

9.1.1.3 Contaminants in sewage treatment effluents and Combined Sewer Overflows can cause developmental and behavioral abnormalities and reproductive failure in wildlife.

9.1.2 Run-off (Avg. Score: 1.00)

NJ Specific Threats: 9.1.2.2 Contaminants degrade aquatic and marine water quality and can bioaccumulate in benthic organisms, threatening wildlife by causing developmental and behavioral abnormalities and reproductive failure.

9.1.2.3 Contaminants from road runoff (oil, sediment, salt, etc.) impact native vegetation and the species that rely upon them, degrade water quality in aquatic systems, and can injure or kill the aquatic and semi-aquatic species that rely upon them.

9.2 Industrial and Military Effluents

9.2.1 Oil Spills (Avg. Score: 1.00)

NJ Specific Threats: 9.2.1.1 Oil spills render resting, breeding and foraging habitats temporarily unavailable to wildlife, altering normal wildlife behavior.

9.2.1.2 Oil spills have long term effects on habitats and damage ecological processes that can cause local wildlife population declines and impaired foraging or reproduction.

9.2.1.3 Oil spills cause external oiling of wildlife and ingestion of oil, both of which can injure or kill wildlife.

Northern Harrier

9.2.3 Other

(Avg. Score: 1.00)

NJ Specific Threats: 9.2.3.1 Point and nonpoint source pollution such as polychlorinated biphenyls (PCBs), pesticides, heavy metals, and endocrine disrupting compounds (EDC's) into freshwater and marine systems pose threats to wildlife through direct contact and/or ingestion, and to aquatic species and their predators through bioaccumulation, impacting the reproductive success and neurological function of many avian and fish species.

9.2.3.2 Chemical spills have long term effects on habitats and damage ecological processes that can cause local wildlife population declines and impaired foraging or reproduction.

9.2.3.3 Chemical spills may render resting, breeding and foraging habitats temporarily unavailable to wildlife, altering normal wildlife behavior.

9.2.4 Other: Hydrofracturing

(Avg. Score: 1.00)

NJ Specific Threats: 9.2.4.1 Contaminants from hydrofracturing degrade water quality in aquatic systems, and can injure or kill the aquatic and semi-aquatic species that rely upon them.

9.2.4.2 Uncontrolled effluents escaping from hydrofracturing facilities can cause injury to wildlife and alter normal behaviors.

9.2.5 Other: Industrial toxic settling ponds

(Avg. Score: 1.00)

NJ Specific Threats: 9.2.5.1 Surficial or open industrial effluent ponds can cause injury or death to wildlife that become exposed through ingestion or submersion.

9.3 Agricultural and Forestry Effluents

9.3.3 Herbicides and Pesticides

(Avg. Score: 2.00)

NJ Specific Threats: 9.3.3.1 Pesticides degrade terrestrial and aquatic habitats, especially streams, ponds and wetlands. Aquatic wildlife are particularly sensitive to these contaminants, which can cause developmental and behavioral abnormalities and reproductive failure. Some contaminants may bioaccumulate in predatory fish and birds and disrupt reproduction.

9.3.3.2 Use of rodenticides can cause secondary actions of injury and death to animals in the course of scavenging.

9.5 Air-Bourne Pollutants

9.5.6 Herbicides and Pesticides

(Avg. Score: 1.00)

NJ Specific Threats: 9.5.6.1 May result in injury or direct mortality of non-target species.

9.6 Excess Energy

9.6.1 Light Pollution

(Avg. Score: 1.00)

NJ Specific Threats: 9.6.1.1 Artificial lighting can reduce suitability of adjacent habitat for species sensitive to artificial lights by disorienting wildlife, reducing foraging suitability or success, or increasing visibility to predators, resulting in reduced diversity and/or productivity of species in adjacent habitat.

9.6.3 Noise Pollution

(Avg. Score: 2.00)

NJ Specific Threats: 9.6.3.1 Acute and chronic noise pollution in and adjacent to terrestrial and aquatic (marine and freshwater) environments could disrupt normal behaviors of wildlife such as migration, communication, feeding, eluding predators, resting and breeding, etc.

11 Climate Change and Severe Weather

11.1 Habitat Shifting or Alteration

11.1.0 Macro- and Micro-Climate Alterations

(Avg. Score: 1.00)

NJ Specific Threats: 11.1.0.1 Alters native terrestrial and aquatic habitats at the macro- and micro-climate levels that can affect suitability for wildlife, in particular specialist species.

Northern Harrier

11.2 Droughts

11.2.1 Droughts (Avg. Score: 1.00)

NJ Specific Threats: 11.2.1.3 Loss, alteration and/or degradation of terrestrial and aquatic habitats.

11.3 Temperature Extremes

11.3.1 Temperature extremes (Avg. Score: 2.00)

NJ Specific Threats: 11.3.1.1 Increasing temperatures may cause habitat loss and degradation by desiccating and/or raising the temperatures of small wetlands and streams leading to the loss of freshwater mussels and other aquatic species and species reliant upon these habitats.

11.3.1.2 Increased temperatures can negatively impact wetland, riverine, lacustrine and vernal pool-associated or -dependent wildlife by reducing flows, increasing water temperatures, lowering water levels and causing premature drying of vernal habitats.

11.3.1.3 Temperature extremes of surface water and air degrades marine habitats and ecosystems, threatening marine wildlife. Such extremes also disrupt offshore currents and migratory patterns, species' ranges, and/or impact communities/food chains, all of which further impact the ecosystem.

11.4 Storms and Flooding

11.4.1 Storms and flooding (Avg. Score: 3.00)

NJ Specific Threats: 11.4.1.2 Potentially damage coastal habitats, including beach- and marsh-nesting bird habitats and interdunal wetlands, and can increase marsh erosion.

11.4.1.7 Potentially damage coastal habitats, including beach and marsh habitats used by spawning horseshoe crabs, nesting diamondback terrapins, and resting and foraging birds.

11.4.2 Increased rainfall (Avg. Score: 2.00)

NJ Specific Threats: 11.4.2.2 Extreme rain events can damage wildlife nesting and resting habitats, including impacts to avian eggs and chick and small mammal survivorship.

11.4.2.3 More frequent rain events can alter terrestrial and wetland vegetation communities as well as wetland hydrology, shifting wildlife community use.

11.6 Phenology Shifting or Alteration

11.6.2 Phenology shifts related to predator-prey ecology (Avg. Score: 2.00)

NJ Specific Threats: 11.6.2.1 Alters inter-specific relationships (e.g., competition, parasitism, predation) of wildlife, ultimately leads to detrimental impacts on the ecological system.

11.6.2.2 Shifts timing of species migration, breeding and hibernation, and available food resources, causes redistribution of species, or mortality for species that are unable to relocate due to their already isolated habitat or limited mobility.

11.6.3 Phenology shifts related to species redistribution (Avg. Score: 1.00)

NJ Specific Threats: 11.6.3.1 Shifts in timing of species migration, breeding and hibernation, and available food resources, as a result of wildlife range shifts driven by climate change.

11.6.3.2 Shifts in nesting times or egg incubation durations can limit nest success and longterm populations.

12 Resource Management Needs

12.1 Resource information collection needs

12.1.1 Lack of initial baseline inventory (Avg. Score: 2.00)

NJ Specific Threats: 12.1.1.1 Lack of information regarding the distribution, connectivity and quality of SGCN habitats throughout the State, and where habitat enhancement/restoration will benefit SGCN and other wildlife.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Northern Harrier

- 12.1.1.2 Lack of information regarding the population dynamics and trends, habitat requirements and dispersal distances of the various age classes, and survivorship of SGCN throughout the State.
- 12.1.1.4 Lack of information on the morphometrics and trends of coastal salt marshes and salt marsh islands.
- 12.1.1.5 Lack of information regarding the SGCN populations that use managed salt marshes and the best techniques for making improvements for marsh-dependent SGCN wildlife.
- 12.1.1.6 Lack of information regarding migratory pathways and response of wildlife to lights and noise associated with offshore wind turbines.

12.1.2 Lack of up-to-date existing information (Avg. Score: 3.00)

- NJ Specific Threats:** 12.1.2.1 Lack of (routine, regular, ongoing) surveys/assessments that provide up-to-date information regarding population trends or health, and/or status of fish, wildlife and/or their habitats.
- 12.1.2.2 Lack of wildlife monitoring at sites with structures that pose high risk of mortality to SGCN wildlife.

12.1.3 Need to answer research question (Avg. Score: 3.00)

- NJ Specific Threats:** 12.1.3.1 There are significant knowledge gaps regarding distribution, dispersal, diseases, population trends, etc. of SGCN.
- 12.1.3.4 Lack of information regarding the potential short- and long-term impacts of wind turbines and other tall coastal structures on migratory populations.

12.1.4 Need to develop new technique (Avg. Score: 3.00)

- NJ Specific Threats:** 12.1.4.1 Improve and evaluate survey methods for SGCN and their habitats; alter as needed.
- 12.1.4.2 Improve and evaluate survey methods for species not easily detected through standard survey methods.
- 12.1.4.3 Lack of techniques for high marsh preservation that includes impoundments and elevated islands.
- 12.1.4.4 Lack of consideration of habitat management opportunities in the course of salt marsh management for mosquito control.

12.3 Regulatory Reform

12.3.0 State Regulatory Reforms (Avg. Score: 2.00)

- NJ Specific Threats:** 12.3.0.1 Regulatory habitat protections within state land use regulations are spatially limited to specific geographic areas (e.g., Pinelands, Coastal Area) or geographic features (e.g., wetlands, streams) and so fail to protect critical habitats that exist outside of these regulated areas.
- 12.3.0.7 Activities that threaten SGCN, their food sources, and/or habitats are often regulated separately and without consideration for the cumulative and synergistic effects over time or over a larger spatial scale. Therefore, regulations can fail to protect SGCN populations over time.
- 12.3.0.10 Land use regulatory processes pertaining to habitat creation, enhancement or restoration projects can be costly and/or burdensome, precluding or discouraging the development or implementation of conservation projects.

12.4 Internal Policy & Procedures Reform

12.4.0 State Policy and Procedure Reform (Avg. Score: 1.00)

- NJ Specific Threats:** 12.4.0.1 A species-by-species management focus as opposed to ecological systems and biodiversity generally has greater opportunity for unintended consequences for other species and may be less efficient in developing appropriate management actions.
- 12.4.0.2 Policies and procedures for lands management that lack consideration of the impacts of activity timing can result in unintended impacts to wildlife during vulnerable periods.
- 12.4.0.7 Land preservation contracts, easements, etc. that do not contain prescriptive language or flexibility allowing for habitat management can result in unsuitable habitat conditions and biodiversity declines for SGCN.

14 Education/ Outreach Needs

14.1 Education needs

14.1.1 Need for improved knowledge of fish and wildlife and their habitats (Avg. Score: 3.00)

- NJ Specific Threats:**
- 14.1.1.1 Lack of understanding of the importance of various SGCN habitats, their connectivity to similar habitats, and how planning decisions impact their quality and the wildlife that depend upon them.
 - 14.1.1.2 Lack of general knowledge of SGCN life histories and vulnerabilities as they relate to land management practices.
 - 14.1.1.3 Lack of understanding of the need to manage both natural and anthropogenic (e.g., yards, lawns, hayfields, etc.) habitats to minimize impacts or increase benefits to SGCN and their habitats.

14.2 Outreach needs

14.2.1 Need to improve specific understanding of agency/organization goals, objectives and ongoing wildlife conservation actions (Avg. Score: 1.00)

- NJ Specific Threats:**
- 14.2.1.3 Need to develop greater understanding of and support for efforts implemented to enhance SGCN habitat and biodiversity through various coastal management practices.
 - 14.2.1.4 Need to develop greater understanding of and support for efforts implemented to maintain disturbance-free habitats that allow coastal wildlife populations to thrive alongside human residential and recreational uses.
 - 14.2.1.5 Need to develop greater understanding of and support for efforts implemented to enhance SGCN habitat and biodiversity through various wetland management practices.

15 Administrative Needs

15.2 Organizational/program planning needs

15.2.3 Need for multi-state, regional and landscape scale planning (Avg. Score: 1.00)

- NJ Specific Threats:**
- 15.2.3.1 State governance and financial structures can sometimes inhibit conservation planning and implementation at the regional and landscape-scales that are often more effective at setting priorities and meeting species and habitat conservation goals and objectives.

Actions to address the Threats and Action Drivers associated with this Conservation Target:

1 Coordination and Administration

1.2 Incentives

1.2.1 Incentives

- 1.2.1.1 Enhance critical migratory stopover habitats for songbirds, raptors, shorebirds, bats and invertebrates through incentive programs with adjacent private landowners to increase the effective size of the habitat.
- 1.2.1.2 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to private and public landowners and land managers to increase the effective size of SGCN habitats by protecting/restoring adjacent habitats that contribute to the overall size of the "core" area and/or provide a natural buffer, enhancing the suitability of the core area for SGCN, and/or connect conserved SGCN habitats.
- 1.2.1.3 Secure and promote the protection/restoration of critical coastal habitats (beach/dune, scrub-shrub, forest, wetland, marsh, and marine and estuarine habitats) that provide nesting, migrating and wintering areas for SGCN birds, fish and other coastal SGCN through incentive programs.

Northern Harrier

- 1.2.1.6 Secure and promote the protection/restoration of riparian and floodplain habitats, inland wetland habitats (marsh, vernal pool, fen, emergent shrubland, forest), and other aquatic habitats (including open waters) and/or biologically appropriate buffers through incentive programs.
- 1.2.1.8 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to municipalities, land developers, and other land managers to retain and/or enhance native vegetation adjacent to aquatic habitats, and along riparian areas and wildlife movement corridors.
- 1.2.1.10 Coordinate across government agencies and non-government organizations to maximize the availability of and enrollment in existing landowner incentive programs (e.g., "farm bill," partners, etc.) to maintain and/or improve habitat.
- 1.2.1.11 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to public and private landowners and managers, including but not limited to government and non-government agencies/organizations, energy, mining, and transportation and utility service companies/agencies, to minimize commercial infrastructure and impervious surfaces, and to improve wildlife habitats, limit fragmentation, reduce elements which would exacerbate mortality, and/or implement activities/restoration that would create new or improved corridor habitat and/or increase connectivity, and to increase structural habitat diversity through the implementation of a variety of vegetation management practices that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting), and to minimize (if not avoid) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
- 1.2.1.13 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to land developers to minimize the impacts of new residential and commercial developments on SGCN and their habitats.
- 1.2.1.14 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to NJ landowners and land managers (including farmers, foresters and developers) for reducing or eliminating the use of herbicides and pesticides, and implementing more ecologically safe strategies when using such products.
- 1.2.1.15 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to NJ landowners and land managers (including farmers, foresters and developers) for reducing or eliminating the use of rodenticides, and implementing more ecologically safe strategies when using such products.
- 1.2.1.18 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to public and private landowners and land managers to control and reduce the impacts of invasive, native and non-native species in order to increase structural habitat diversity.
- 1.2.1.19 Create incentives for federal, state and local agencies and approved consulting foresters that provide financial, logistical or planning assistance to farmers, woodland landowners, and private landowners to adopt and/or endorse consistent BMPs concerning controlled burns to maintain and/or improve wildlife habitat.
- 1.2.1.20 Coordinate across government agencies and non-government organizations to create or expand upon tax-based incentive programs available to private, agricultural, commercial, industrial or governmental landowners and land managers to include or provide for incentives for the maintenance and/or improvement to existing habitat via the endorsement of wildlife-related BMP's.

Northern Harrier

- 1.2.1.21 Create and/or support market-based programs that subsidize or create branding for products derived sustainably from managed wildlife habitats.
- 1.2.1.22 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to horse/livestock farm owners and managers to increase structural habitat diversity in and around the farms by managing vegetation for a variety of species, in particular, farms that have fragmented forests, and by implementing ecologically best practices (e.g., do not permit overgrazing, do not allow livestock to wade in waterbodies).
- 1.2.1.23 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to private and public landowners and land managers to provide cost shares and/or plan approvals for management based on management approaches and prescriptions.
- 1.2.1.24 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to public and private landowners, with habitat of suitable patch size to support breeding grassland-dependent species, to alter the timing of vegetation management to benefit grassland and pollinator species.
- 1.2.1.25 Create incentives (non-monetary and/or monetary) within State regulations to assist and programs to deliver those incentives to aquaculture growers to relocate, for example, from intertidal to subtidal lease areas through buyouts of leases or microloans, and/or promoting on-lease conservation measures used by aquaculture growers (such as the implementation of conservation easements, use of living shorelines, incorporation of BMPs for habitat protection, etc.) for maintaining and enhancing healthy, SGCN-associated terrestrial and aquatic habitats and associated riparian habitats, and to minimize (if not avoid) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity

2 Direct Management of Natural Resources

2.1 Create new habitat or natural processes

2.1.1 Habitat conversion

- 2.1.1.1 Create high marsh habitat through impoundments and diking of low marsh areas that are less susceptible to breaching by storms and sea-level rise.
- 2.1.1.2 Utilize dredged materials to create marsh islands to provide nesting habitat for birds and marine turtles.

2.9 Living shorelines

2.9.1 Beach renourishment

- 2.9.1.2 Coordinate the beneficial placement of dredge materials to create, enhance, and/or maintain colonial waterbird nesting, in particular along the Intra-Coastal Waterway.

2.9.3 Sand dune restoration

- 2.9.3.1 Prevent or ameliorate near-term impacts of climate change throughout the State but in particular within the coastal and Delaware Bay areas by implementing habitat management strategies that will establish/improve habitat resilience, such as sand dune restoration, that benefits wildlife inhabiting these areas.
- 2.9.3.2 Implement sand dune restoration strategies that consider appropriate timing to avoid sensitive periods (e.g., nesting, denning, roosting) and minimizes harm to wildlife, particularly SGCN.
- 2.9.3.6 Minimize habitat loss of critical coastal dune habitats that provide nesting, migrating, and wintering areas for birds and other coastal species by maintaining or enhancing these areas through sand dune restoration.

Northern Harrier

- 2.9.3.9 Enhance critical migratory stopover sand dune habitats for songbirds, raptors, shorebirds, bats and invertebrates through sand dune restoration and expand management to adjacent private lands to increase the effective size of the habitat.
- 2.9.3.10 Implement sand dune restoration strategies on state and other conservation lands to enhance food availability for migratory species (birds, bats, invertebrates).
- 2.9.3.11 Conduct sand dune restoration to maintain, enhance and/or create feeding and roosting habitats for migratory species (shorebirds, raptors, bats, songbirds and invertebrates) in appropriate areas along documented migratory corridors around the State and evaluate the effectiveness of such management.
- 2.9.3.12 Implement best management practices (BMPs), protective strategies, and guidelines for maintaining and enhancing healthy, SGCN-associated sand dune habitats while minimizing (if not avoiding) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.

2.10 Planting/seeding

2.10.0 Planting/seeding strategies for terrestrial or aquatic habitat creation or restoration

- 2.10.0.1 Prevent or ameliorate near-term impacts of climate change throughout the State by developing, implementing and monitoring/evaluating habitat management strategies that will establish/improve habitat resilience (e.g., shorelines of the coast and Delaware Bay, forested habitats of the Pinelands and Skylands) that benefits wildlife inhabiting these areas, in particular within the coastal and Delaware Bay areas.
- 2.10.0.2 Improve the availability of prey/food resources through terrestrial and aquatic plantings and habitat restoration for SGCN populations, in particular for those populations thought to be limited due wholly or in part to a lack of (or contaminated) food resources, and for migratory species (birds, bats, invertebrates).
- 2.10.0.3 Restore and/or enhance habitats to benefit urban-associated SGCN.
- 2.10.0.5 Implement habitat restoration and/or enhancement activities that include the creation of vegetative buffers between sensitive habitats (e.g., aquatic systems) and human-inhabited areas (e.g., residences, parks, etc.) and that is conducted during appropriate timing to avoid sensitive periods (e.g., nesting, denning, roosting) while minimizing (if not avoiding) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
- 2.10.0.6 Expand the acreages and enhance the effective size of SGCN habitats by restoring adjacent, less optimal or unsuitable, habitats.
- 2.10.0.7 Restore/reclaim and enhance degraded rare species habitats through strategic revegetation and management efforts for documented/target SGCN.
- 2.10.0.8 Protect significant natural and/or unique communities by implementing best management practices when conducting habitat restoration strategies.
- 2.10.0.9 Restore and/or enhance riparian and floodplain habitats, inland wetland habitats (marsh, vernal pool, fen, emergent shrubland, forest), and other aquatic habitats (including open waters) and/or biologically appropriate buffers to minimize degradation, alteration and/or changes in hydrology and subsequent disturbances to and behavioral changes of wildlife (e.g., restoring biologically appropriate buffers, revegetation or restoration efforts, etc.).
- 2.10.0.10 Minimize the loss of important habitats (e.g., coastal scrub-shrub and grassy habitats, high and low marsh habitats, etc.) that provide nesting, migrating, and wintering areas for SGCN birds and other coastal and marsh-dependent species through habitat restoration efforts.

Northern Harrier

- 2.10.0.11 Restore and/or enhance critical migratory terrestrial and aquatic habitats (e.g., beach, grasslands, forest, scrub-shrub, etc.) for songbirds, raptors, shorebirds, waterfowl, bats and invertebrates through habitat restoration efforts and expand habitat restoration to adjacent private lands to increase the effective size of the habitat.
- 2.10.0.13 Restore and/or enhance impoundments to provide suitable foraging and nesting habitat for SGCN species inhabiting them (e.g., bitterns, rails, ducks, turtles and some invertebrates).
- 2.10.0.21 Restore and/or enhance understory habitats that suppress invasive species and provide critical resources and enhance sheltering, foraging, and nesting cover for wildlife.
- 2.10.0.22 Restore and/or enhance terrestrial and aquatic habitats to promote the regeneration of native vegetation and enhance structural diversity to benefit SGCN (e.g., vegetative buffers of aquatic systems, allow coarse, woody debris to remain in terrestrial, aquatic and riparian habitats to provide shelter, riparian stabilization and necessary microclimates, plant native trees, shrubs and grasses, etc.).
- 2.10.0.23 Restore and/or enhance roosting habitats for migratory species (shorebirds, raptors, bats, songbirds and invertebrates) in appropriate areas along documented migratory corridors around the State.

2.11 Vegetation management

2.11.0 Vegetation management strategies for terrestrial or aquatic habitat creation or restoration

- 2.11.0.1 Conduct vegetation management in native terrestrial and aquatic habitats to provide suitable and appropriately sized areas to improve ecological diversity.
- 2.11.0.2 Conduct vegetation management in native terrestrial and aquatic habitats to provide suitable and appropriately sized areas for target SGCN and/or species groups; management should complement rare species needs in a targeted area.
- 2.11.0.4 Implement vegetation management strategies that consider appropriate timing to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife, particularly SGCN.
- 2.11.0.5 Expand the acreages and enhance the effective size of SGCN habitats by restoring adjacent, less optimal or unsuitable, habitats through vegetation management.
- 2.11.0.6 Reclaim degraded rare species habitats by conducting vegetation management needed to restore habitat value for the documented/target SGCN.
- 2.11.0.7 Protect significant natural and/or unique communities by implementing best management practices through vegetation management.
- 2.11.0.8 Maintain, enhance and/or restore biologically appropriate buffers for SGCN-inhabited/used freshwater wetlands through vegetation management.
- 2.11.0.9 Minimize habitat loss of critical coastal habitats that provide nesting, migrating, and wintering areas for birds and other coastal species by maintaining or enhancing these areas through vegetation management.
- 2.11.0.10 Enhance critical migratory stopover beach habitats for songbirds, raptors, shorebirds, bats and invertebrates through vegetation management and expand management to adjacent private lands to increase the effective size of the habitat.
- 2.11.0.11 Implement vegetation management on state and other conservation lands to enhance food availability for migratory species (birds, bats, invertebrates).
- 2.11.0.12 Conduct vegetation management to create feeding and roosting habitats for migratory species (shorebirds, raptors, bats, songbirds and invertebrates) in appropriate areas along documented migratory corridors around the State.

Northern Harrier

- 2.11.0.13 Implement best management practices (BMPs), protective strategies, and guidelines for vegetation management to maintain and enhance healthy, SGCN-associated habitats while minimizing (if not avoiding) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
- 2.11.0.15 Implement vegetation management to benefit urban-associated SGCN.
- 2.11.0.16 Prevent or ameliorate near-term impacts of climate change throughout the State by developing, implementing and monitoring/evaluating habitat management strategies that will establish/improve habitat resilience (e.g., shorelines of the coast and Delaware Bay, forested habitats of the Pinelands and Skylands) that benefits wildlife inhabiting these areas, in particular within the coastal and Delaware Bay areas.
- 2.11.0.22 Minimize habitat loss of high and low marsh habitats that provide nesting, migrating and wintering areas for SGCN birds and other marsh-dependent SGCN by maintaining or enhancing these areas through habitat management and/or revegetation or restoration efforts.
- 2.11.0.30 Identify and prioritize areas where various management tools (such as increasing salinity through the management of water levels or chemical applications) may be effective in reducing phragmites within and restoring marsh habitat.
- 2.11.0.32 Increase structural habitat diversity around and when feasible, within agricultural landscapes by managing vegetation for a variety of species, in particular, those farms that have removed scrub-shrub habitat and/or fragmented forests, and by implementing ecologically best practices (e.g., no-till farming, maintaining hedgerows, buffer set-asides, etc.).
- 2.11.0.33 Increase structural habitat diversity by implementing long-term vegetation management to minimize the potential for the establishment of invasive and/or non-native plants that may outcompete native vegetation.
- 2.11.0.39 Increase structural habitat diversity in and around solar farms by managing vegetation for a variety of species and that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife. For example, integrate short and tall grasses, specific host plants, brush piles, water sources/wetlands, shrubby areas, nesting areas and no-mow set-asides.
- 2.11.0.40 Increase structural habitat diversity surrounding areas used for energy, mining, and transportation and service corridors by managing vegetation for a variety of species and that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife. For example, integrate short and tall grasses, specific host plants, brush piles, water sources/wetlands, shrubby areas, nesting areas and no-mow set-asides, and avoid managing habitat during the breeding seasons for ground-nesting birds, reptiles, amphibians and small mammals.
- 2.11.0.44 Manage phragmites adjacent to coastal marshes of interest, in particular those that are within underdeveloped areas and are unprotected, through herbicide application and water management to improve resiliency of the marshes to sea level rise.

2.12 Water management

2.12.1 Ditch plugs

- 2.12.1.1 Implement best management practices (BMPs), protective strategies, and guidelines for ditch plugging to maintain and enhance healthy, resident and migratory SGCN-associated habitats while minimizing (if not avoiding) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.

Northern Harrier

2.12.2 Diversion/headgate

- 2.12.2.1** Prevent or ameliorate near-term impacts of climate change throughout the State but in particular within the coastal and Delaware Bay areas by implementing habitat management strategies that will establish/improve habitat resilience, such as using diversions, that benefits wildlife inhabiting these areas.

2.12.6 Tide gate

- 2.12.6.1** Prevent or ameliorate near-term impacts of climate change throughout the State but in particular within the coastal and Delaware Bay areas by implementing habitat management strategies that will establish/improve habitat resilience, such as tide gates, that benefits wildlife inhabiting these areas.

2.12.7 Waterfowl impoundment maintenance

- 2.12.7.4** Implement impoundment management strategies that consider appropriate timing to avoid sensitive periods (e.g., nesting, denning, roosting) and minimizes harm to wildlife, particularly SGCN.
- 2.12.7.8** Repair impoundments damaged by salt hay farm/dike abandonment and conduct restoration of degraded sites for targeted SGCN species and their habitats.
- 2.12.7.11** Restore existing salt hay farm areas by repairing breaches in impoundments to create habitat for high marsh nesting species and waterfowl.

2.13 Wildlife damage management

2.13.0 Nuisance fish and wildlife damage

- 2.13.0.1** Investigate the impacts of mosquito control methods on predator SGCN (bats, insectivorous birds). Develop, implement and evaluate the effectiveness of mosquito control-BMPs designed to avoid depletion or contamination of SGCN's insect prey base and drinking sources with pyrethroids, organophosphates, or other chemicals.
- 2.13.0.3** Investigate alternative saltmarsh mosquito control methods that may produce benefits for coastal marsh dependent SGCN wildlife, including but not limited to high-marsh nesting birds and migrating shorebirds and landbirds.
- 2.13.0.5** Investigate the impacts of human-subsidized and/or naturally occurring predator species on SGCN to assess the need for integrated wildlife damage management techniques (e.g., predator exclosures, fish blockages, electric fence, culls) and/or policy changes on state land management that minimize the impacts of human-subsidized predators.

3 Data Collection and Analysis

3.0 General fish and wildlife research, survey or monitoring

3.0.0 Research, survey or monitoring - general fish and wildlife needs

- 3.0.0.1** Conduct long-term monitoring of resident and migratory SGCN populations using standardized survey protocols to determine the variables that may impact their long-term persistence in the State (e.g., population viability, distribution, dispersal, home range and habitat use, travel corridors, food availability, vulnerability to pollutants and disease, etc.). Compile this information to determine the likely causes of population declines and to understand metapopulation dynamics. Provide data to NJ DEP for integration into the Biotics database, Landscape Project and permitting review processes.

Northern Harrier

- 3.0.0.3 Gather baseline data on SGCN inhabiting permanently protected natural lands regarding their distribution and population (e.g., abundance, dispersal, demography including productivity and survival, etc.), and identify (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) critical and supporting habitats within those landscapes.
- 3.0.0.4 Conduct long-term studies on SGCN inhabiting permanently protected natural lands to develop population trend data and changes in demography, and to determine if critical and/or supporting habitats are limited or changing; i.e., diminishing in value, acreage or connectivity.
- 3.0.0.5 Gather baseline data on resident and migratory SGCN (in particular migratory species for which New Jersey habitats are significant), terrestrial, freshwater and marine species, regarding the location and condition of their critical and supporting habitats (e.g., foraging, roosting, nesting/breeding, stopover, migration paths, etc.), and population demography (e.g., productivity, survival, dispersal). Compile this information into a database that includes descriptions of the conditions of the habitats and species, and a GIS component of the locations of these important habitats. Provide data to NJ DEP for integration into the Biotics database, Landscape Project and permitting review processes.
- 3.0.0.6 Conduct long-term studies on resident and migratory SGCN to determine if there are changes to the populations' demography (productivity, survival, dispersal) and/or to their critical and/or supporting habitats (i.e., diminishing in value, acreage or connectivity, etc.), in particular changes that would not maintain SGCN at viable levels for species populations. Update data and GIS maps; provide updated information to NJ DEP for integration into the Biotics database, Landscape Project and permitting review processes.
- 3.0.0.16 Develop a baseline status (through studies and assessments, review of available data, enlistment of species experts, etc.) of marsh- and beach-dependent SGCN (and their habitats) whose populations may be impaired due to habitat degradation as a result of salt hay farm/dike abandonment.
- 3.0.0.17 Conduct long-term monitoring of marsh- and beach-dependent SGCN (and their habitats) to evaluate the effectiveness of the management strategies implemented to repair degraded marshes and beaches damaged by salt hay farm/dike abandonment within all bay shore areas.
- 3.0.0.25 Identify pathways of migratory SGCN in the Atlantic Coastal and Marine Regions (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) and use the data to help evaluate the potential short- and long-term impacts of wind turbines, radio towers, utility guy lines, and other tall coastal structures on migratory populations.
- 3.0.0.30 Conduct research to investigate the feasibility of managing and/or creating roosting habitats for migratory species (shorebirds, raptors, bats, songbirds and invertebrates) in appropriate areas along documented migratory corridors around the State.
- 3.0.0.31 Conduct short- and long-term studies (e.g., wildlife surveys and habitat assessments) to evaluate the effectiveness of vegetation management efforts to maintain, enhance and/or create roosting habitats for migratory species (shorebirds, raptors, bats, songbirds and invertebrates) in appropriate areas along documented migratory corridors around the State.

3.2 Research, survey or monitoring - fish and wildlife populations

3.2.0 Data deficiency

- 3.2.0.2 Conduct species status assessments using the Delphi Technique and review of available data and literature on fish and wildlife (including marine animals) to maintain accurate legal status categorization of native wildlife.

Northern Harrier

- 3.2.0.5 Prevent or ameliorate near-term impacts of climate change throughout the State by developing, implementing and monitoring/evaluating habitat management strategies that will establish/improve habitat resilience (e.g., shorelines of the coast and Delaware Bay, forested habitats of the Pinelands and Skylands) that benefits wildlife inhabiting these areas, in particular within the coastal and Delaware Bay areas.
 - 3.2.0.17 Conduct monitoring at constructed wind farms (within or outside of NJ) to assess the impacts on migratory species (birds, bats, insects) and determine if NJ's land use planning efforts and/or smart-growth plans need to be revised.
 - 3.2.0.20 Evaluate the effectiveness of BMPs for mosquito control methods that may produce benefits for coastal marsh dependent SGCN wildlife, including but not limited to high-marsh nesting birds and migrating shorebirds and landbirds.
 - 3.2.1 Abundance determination
 - 3.2.1.1 Identify (through literature searches, review of available data, enlistment of habitat and/or species experts, etc.) population abundance and trends for SGCN using standardized survey protocols. Provide data to NJ DEP for integration into the Biotics database, Landscape Project Map and permitting review processes.
 - 3.2.1.2 Conduct wildlife surveys on resident and migratory SGCN regarding their population abundance and trends.
 - 3.2.2 Age, size and sex structure
 - 3.2.2.1 Conduct wildlife surveys on resident and migratory SGCN regarding their survivorship.
 - 3.2.7 Population assessment
 - 3.2.7.1 Conduct species status assessments using the Delphi Technique and review of available data and literature on fish and wildlife (including marine animals) to maintain accurate legal status categorization of native wildlife.
- 3.3 Research, survey or monitoring - habitat
 - 3.3.1 Baseline inventory
 - 3.3.1.1 Conduct habitat assessments of significant natural and/or unique communities to identify threats to native terrestrial and aquatic habitats through systematic monitoring, review of available data, enlistment of habitat management and/or species experts, etc. Incorporate findings into a database that includes descriptions/qualifiers of the habitats, identifies and values/qualifies the threats, and includes a GIS component of the locations of the assessed areas. Share this information with landowners/managers (e.g., federal, state and local government agencies or non-government organization).
 - 3.3.1.2 Identify (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) resident and migratory SGCN habitats. Investigate their suitability for the various life history requirements of the species that dependent upon them to determine the ability for maintaining applicable SGCN populations in perpetuity.
 - 3.3.1.3 Identify (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) remaining high and low marsh habitats with natural buffers and stable water levels that provide suitable habitat for SGCN and marsh habitats that would benefit from restoration. Conduct research to assess their condition for nesting, migrating and wintering birds.
 - 3.3.1.5 Identify areas (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) where habitat restoration and/or enhancement would benefit wildlife SGCN.

Northern Harrier

- 3.3.1.14 Compile information (obtained through literature reviews, communication with other States along the Atlantic coast, academia, etc.) regarding the impacts of above water operation of wind turbines on migratory marine birds and bats. Provide data to appropriate governing agencies and/or State commissions for integration into permitting review processes.
- 3.3.1.16 Gather "best information" for spatial modeling and update/create a current model/depiction of anticipated habitat shifts from sea-level rise, flooding, etc.
- 3.3.1.21 Conduct comprehensive baseline surveys of all marsh islands; surveys to include, but are not limited to, documented elevations, and assessments of the habitat's current condition and vulnerability of dependent SGCN species in relation to the increased inundation rate.
- 3.3.1.22 Identify, assess and prioritize marsh habitats for restoration where various management tools (such as increasing salinity through the management of water levels or chemical applications) may be effective in reducing the presence of phragmites.
- 3.3.1.23 Identify areas (through surveys/studies, predictive modeling, review of available data, enlistment of habitat management and/or species experts, etc.) where the State can allow coastal marsh migration due to sea level rise, and target these areas for land acquisition and/or land management to accommodate this transition. Targeted areas should include underdeveloped areas adjacent to unprotected coastal marshes.
- 3.3.1.24 Conduct regular investigations of SGCN habitat health and biodiversity on public and private lands to identify locations in need of revegetation, reduction of over-abundant, native wildlife and/or exotic species, conservation focal areas requiring limitations on human activity, etc.
- 3.3.1.28 Identify key habitats for the potential allowance of natural coastal processes without interfering through shoreline stabilization, etc. and evaluate the risks and benefits if coastal migration was permitted to occur naturally. Create a GIS map of the identified areas; provide the assessment and mapping to local towns and other appropriate governing agencies.
- 3.3.1.29 Identify coastal wildlife habitats unimpacted by development and/or at greatest risk of habitat loss to help guide enlightened coastal stabilization efforts (i.e., use of soft stabilization) to reduce the impacts on wildlife and their habitats.

3.3.2 Monitoring

- 3.3.2.2 Conduct long-term monitoring of resident and migratory SGCN habitats using standardized survey protocols to determine changes in habitat quality/suitability and threats (e.g., habitat loss and degradation, increased edge habitat, water quality) and other variables that may impact their long-term persistence in the State and to provide information needed for determining causes of population declines and understanding metapopulation dynamics.
- 3.3.2.3 Continue to update wildlife and habitat databases and revise models of critical SGCN habitats using the most current data available and where lacking, develop new SGCN and/or habitat models as data on species habitat requirements and applicable GIS data layers become available.
- 3.3.2.6 Investigate the effectiveness and potential impacts of marsh management techniques by studying the effects of Open Marsh Water Management on wildlife species, in particular high marsh nesting birds and waterfowl. Evaluate best management practices as appropriate.
- 3.3.2.7 Conduct studies on land use practices such as ditching, impounding, dredging, open marsh water management, burning, and marsh restoration to evaluate the effectiveness and potential impacts on marsh-dependent SGCN.
- 3.3.2.11 Evaluate and compare the effectiveness of delayed mowing of warm season grass fields versus cool season hay fields to benefit grassland-dependent species.

Northern Harrier

- 3.3.2.12 Evaluate and compare the effectiveness of different management techniques (e.g., prescribed burning, mowing, brush-hogging, etc.) for maintaining suitable habitat for grassland-dependent species and species dependent upon early successional habitats.
- 3.3.2.13 Evaluate the effectiveness of management strategies (e.g., timing restrictions for mowing, cooperative agreements with utility companies for maintenance of rights-of-ways) that maintain and enhance large existing areas of grassland in perpetuity. Focus on habitat patches that can be managed to enhance the total size of suitable grassland habitat and create interspersed early-successional habitat.
- 3.3.2.16 Evaluate the effectiveness of best management practices (BMPs), protective strategies, and guidelines for maintaining and enhancing healthy, SGCN-associated terrestrial and aquatic habitats and associated riparian habitats, and to minimize (if not avoid) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
- 3.3.2.19 Once baseline data on the marsh islands' and associated SGCN species' vulnerability to inundation is completed, continue to conduct long-term monitoring the islands to determine sustainability for wildlife dependent on these areas.
- 3.3.2.21 Develop, implement and evaluate the effectiveness of management strategies use to restore marsh habitat (e.g., phragmites reduction).

3.5 Techniques development

3.5.3 Habitat restoration methods

- 3.5.3.1 Work with land management agencies to determine the appropriate actions needed to restore/reclaim degraded habitat for the documented/target SGCN.
- 3.5.3.4 Modify best management practices of Open Marsh Water Management based on evaluation of the effectiveness and potential impacts of marsh management techniques on wildlife species, in particular high marsh nesting birds and waterfowl.
- 3.5.3.6 Develop/improve management strategies to repair marshes and associated beaches damaged by salt hay farm/dike abandonment for all bay shore areas currently degraded.
- 3.5.3.8 Develop best management practices (BMPs), protective strategies, and guidelines for maintaining and enhancing healthy, SGCN-associated terrestrial and aquatic habitats and associated riparian habitats, and to minimize (if not avoid) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
- 3.5.3.14 Develop aquaculture practices in the coastal areas that are compatible with the recovery of SGCN.
- 3.5.3.15 Modify management practices based on the effects of pesticides, herbicides and other biological controls on critical and supporting SGCN habitats.
- 3.5.3.17 Investigate and improve marsh management techniques to benefit critical wildlife species, in particular high marsh nesting birds and waterfowl.
- 3.5.3.18 Develop recommendations to improve methods on land use practices such as ditching, impounding, dredging, open marsh water management, burning, and marsh restoration based on potential impacts on marsh-dependent SGCN.
- 3.5.3.22 Identify (through surveys/studies, literature searches, review of available data, enlistment of habitat management and/or species experts, etc.) and modify management strategies (e.g., timing restrictions for mowing, cooperative agreements with utility companies for maintenance of rights-of-ways), based on research, that maintain and enhance large existing areas of grassland in perpetuity.

Northern Harrier

- 3.5.3.25 Use data regarding SGCN population numbers/trends and demography, on-going threats, habitat changes, etc. to develop the necessary management strategies to reach or maintain viable population levels.

3.5.4 Fish and wildlife research, survey and management techniques

- 3.5.4.3 Investigate alternative saltmarsh mosquito control methods that may produce benefits for coastal marsh dependent SGCN wildlife, including but not limited to high-marsh nesting birds and migrating shorebirds and landbirds.
- 3.5.4.10 Develop BMPs for lighting of/on tall structures that minimize harm to and/or disorientation of wildlife, in particular but not limited to migratory birds, bats and invertebrates.
- 3.5.4.15 Investigate the success of management strategies used to protect and/or enhance SGCN populations and when appropriate, aid in identifying failures/resource problems and issues, and developing new strategies.
- 3.5.4.16 Use data regarding SGCN population numbers/trends and demography, on-going threats, habitat changes, etc. to determine if directed management efforts are needed to reach or maintain viable population levels and develop the necessary management strategies.
- 3.5.4.17 Investigate new, non-invasive techniques for SGCN population evaluation through literature review, expert opinion, trial studies (if low risk), etc.
- 3.5.4.18 Investigate the effectiveness of survey techniques through selected "ground truthing" and literature and peer review in order to increase efficacy of survey, minimize surveyor bias and error, and increase accuracy of trend data.
- 3.5.4.19 Develop reliable, standardized survey and monitoring protocols for SGCN species, for which none currently exist, and their habitats.

6 Land and Water Rights Acquisition and Protection

6.0 Acquisition and protection strategies

6.0.0 Combined acquisition and protection strategies

- 6.0.0.1 Enhance and increase the effective size of critical migratory stopover habitats for songbirds, raptors, shorebirds, bats and invertebrates by securing adjacent habitats through an appropriate combination of fee title, non-fee title and landowner agreements.
- 6.0.0.2 Enhance and increase the effective size of SGCN habitats by protecting adjacent habitats that contribute to the overall size of the "core" area and/or provide a natural buffer, enhancing the suitability of the core area for SGCN, and/or connect conserved SGCN habitats through an appropriate combination of fee title, non-fee title and landowner agreements.
- 6.0.0.3 Secure and protect riparian and floodplain habitats, inland wetland habitats (marsh, vernal pool, fen, emergent shrubland, forest), and other aquatic habitats (including open waters) and/or biologically appropriate buffers to minimize degradation through an appropriate combination of fee title, non-fee title and landowner agreements.
- 6.0.0.5 Secure and protect critical coastal habitats (beach/dune, scrub-shrub, forest, wetland, marsh, and marine and estuarine habitats) that provide nesting, migrating and wintering areas for SGCN birds, fish and other coastal SGCN through an appropriate combination of fee title, non-fee title and landowner agreements.

6.3 Conservation area designation

6.3.0 Conservation area designation strategies

Northern Harrier

- 6.3.0.1 Promote the protection of critical migratory stopover habitats for songbirds, raptors, shorebirds, bats and invertebrates and enhance these lands by increasing the effective size through conservation area designations of stopover habitats and adjacent private lands.
- 6.3.0.2 Enhance and increase the effective size of SGCN habitats by protecting adjacent habitats that contribute to the overall size of the "core" area and/or provide a natural buffer, enhancing the suitability of the core area for SGCN and/or connect conserved SGCN habitats through conservation area designations.
- 6.3.0.5 Promote the protection of critical coastal habitats (beach/dune, scrub-shrub, forest, wetland, marsh, and marine and estuarine habitats) that provide nesting, migrating and wintering areas for SGCN birds, fish and other coastal SGCN through conservation area designations.

7 Law Enforcement

7.1 Law enforcement

7.1.4 Scale Unspecified

- 7.1.4.4 Improve enforcement of policies/regulations aimed at protecting and preserving critical coastal and marsh habitats, and secure mitigation for losses that create an environmental benefit.
- 7.1.4.5 Enforce current policies and/or regulations to increase the ability to protect and preserve coastal habitats (beach/dune, scrub-shrub, forest, wetland, marsh, marine and estuarine habitats) that provide nesting, migrating, and wintering areas for SGCN birds, fish and other coastal SGCN, and implement and enforce amended policies/regulations.
- 7.1.4.8 Implement policies that protect critical migratory stopover habitats for songbirds, raptors, shorebirds, bats and invertebrates.
- 7.1.4.10 Implement policies that promotes expanding acreages and enhances the effective size of SGCN habitats by providing biologically appropriate buffers of native habitat surrounding SGCN habitats.
- 7.1.4.11 Implement and enforce policies/regulations that will increase the ability to protect and preserve coastal habitats (beach/dune, scrub-shrub, forest, wetland, marsh, and marine and estuarine habitats) that provide nesting, migrating, and wintering areas for SGCN birds, fish and other coastal and aquatic SGCN.
- 7.1.4.12 Implement policies and/or regulations that protect significant natural and/or unique communities in perpetuity.
- 7.1.4.21 Implement regulations for lighting of/on tall structures that will minimize harm to and/or disorientation of wildlife, and enforce within state, county and local permitting processes.
- 7.1.4.22 Implement policies and/or regulations that prohibit the presence of managed cat colonies and trap, neuter and release programs in or near critical wildlife habitats.

8 Outreach

8.1 Partner/stakeholder engagement

8.1.0 Partner/stakeholder engagement strategies

- 8.1.0.2 Develop a team of personnel from government entities, conservation organizations and other stakeholders engaged in oil/gas spill response for marine and freshwater habitats to develop a feasible plan for oil spill response and/or to amend NJ's current oil spill response plan that clearly outlines each organizations responsibilities and an assessment and location list of available equipment for boom deployment during oil spills.

Northern Harrier

- 8.1.0.3 Develop an outreach team of personnel from government entities, conservation organizations and other stakeholders to work together to collaboratively use social media campaigns to grow a constituency of NJ residents who have an elevated ecological and climate consciousness.
- 8.1.0.15 Engage government agencies, conservation partners and other stakeholders in discussions encouraging and supporting the creation of laws and policies requiring vegetative buffers of native plants on preserved farmland and state lands with agricultural leases or agreements.
- 8.1.0.19 Engage government agencies, conservation partners and other stakeholders to collaboratively develop a list of important projects, targeting SGCN and/or their habitat, as a guide for graduate student research. Distribute the list and contact information to all State colleges and universities.
- 8.1.0.30 Encourage government agencies and conservation partners to advise members of the relevant scientific community of the need for specific studies, reports or investigations targeting the data-deficiency regarding SGCN and/or their habitats.
- 8.1.0.42 Engage citizens, wildlife observers and photographers through discussions and distributable information regarding the importance of and encouraging implementing responsible and ethical behavior when observing wildlife by developing an alliance of wildlife photographers and widely circulating recommendations on how to reduce impact.
- 8.1.0.45 Form cooperative partnerships with airports and airline companies to facilitate habitat creation away from airports and outside of flight patterns, and to identify seasonal wildlife strike risks to determine if seasonal shifts in flight patterns will minimize this risk.

8.3 WSFR program/subprogram outreach

8.3.0 WSFR program/subprogram outreach strategies

- 8.3.0.6 Develop and provide (or otherwise make publicly available) educational programs and/or materials to enlist landowners, land managers and local communities to discourage the presence of managed cat colonies and trap, neuter and release programs in wildlife habitats.
- 8.3.0.10 Develop and provide (or otherwise make publicly available) educational programs and/or materials to educate landowners and NJ citizens on threats to fish and wildlife (including marine animals).
- 8.3.0.12 Promote awareness of WSFR (Wildlife and Sportfish Restoration) Outreach/Awareness grants, an important funding source for conservation among hunters and anglers as well as the general public.
- 8.3.0.13 Conduct an educational campaign to encourage observer ethics and respect for wildlife and natural habitat.
- 8.3.0.21 Develop an educational outreach program for the general public, in particular those within and adjacent to coastal and riparian areas on the realities of sea-level rise to help citizens living in these areas understand how this will affect them, how coastal stabilization negatively impacts wildlife by preventing natural processes, and how their decisions impact species.
- 8.3.0.28 Develop educational outreach programs for public and private landowners and land managers regarding the importance of managing grasslands for grassland-dependent species, methods of management, and/or incentive programs available.
- 8.3.0.31 Develop an educational outreach program for landowners and citizens on the secondary impacts of rodenticides on predators and scavengers.
- 8.3.0.32 Develop an educational outreach program for landowners and citizens on the threats that herbicides and pesticides pose to aquatic systems and wildlife, and to promote safer usage of such products.

9 Planning

9.1 Land use planning

9.1.0 Land use planning strategies

- 9.1.0.1** Develop smart-growth plans and critical habitat designations that consider SGCN life history requirements and habitat needs, connectivity and health of those habitats, and minimizes human-associated disturbances to those habitats and SGCN inhabiting them.
- 9.1.0.22** Incorporate habitat connectivity and preservation of natural areas into state and local land-use policy and the environmental review process to minimize the impacts of transportation and service corridors on fish and wildlife and their habitats.
- 9.1.0.28** Develop and coordinate state, regional and local plans for suitable lot layout and landscaping to minimize human-wildlife conflicts that also incorporates habitat connectivity and preservation of natural areas.
- 9.1.0.29** Provide GIS or related data, maps, resource inventories, as well as related training, pertaining to the SWAP and it's recommended conservation actions for use or consideration by State, County or municipal planning agencies.
- 9.1.0.30** Incorporate habitat connectivity and preservation of natural areas into state and local land-use policy and the environmental review process to minimize habitat fragmentation and other related threats associated with development.
- 9.1.0.33** Review the species, threats, action successes, and habitats, and work with partners to revise the 2017 State Wildlife Action Plan for the 2025 resubmittal.

9.3 Species and habitat management planning

9.3.1 Species management planning

- 9.3.1.6** Amend NJ's current oil spill response plan to 1) expand the geographic area addressed, 2) expand the targeted species impacted and in need of recovery, and 3) revise current and integrate new actions into the plan as needed.
- 9.3.1.9** Develop a management plan incorporating the effects of pesticides, herbicides and other biological controls on SGCN and their critical and supporting habitats.
- 9.3.1.13** Develop a management plan to ensure SGCN populations' persistence based on long-term monitoring of resident and migratory SGCN populations and their habitats.
- 9.3.1.15** Develop a plan to minimize the impacts of oil spills on wildlife and their habitats.
- 9.3.1.17** Evaluate the potential benefits to high marsh species (such as Black Rail and Northern Harrier) by restoring salt hay farms along Delaware Bay.

9.3.2 Listed species recovery planning

- 9.3.2.1** Develop proactive species recovery plans for all endangered and threatened species including guidance and objectives pertaining to critical and supporting habitat to meet and maintain recovery goals.

9.3.3 Habitat management planning

- 9.3.3.4** Create habitat restoration plans to repair marshes and associated beaches damaged by salt hay farm/dike abandonment for all bay shore areas currently degraded.
- 9.3.3.10** Develop a management plan to ensure SGCN populations' persistence based on long-term monitoring of resident and migratory SGCN populations and their habitats.

Northern Harrier

- 9.3.3.13 Develop a management plan that will establish/improve habitat resilience (e.g., shorelines of the coast and Delaware Bay, forested habitats of the Pinelands and Skylands) that benefits wildlife inhabiting these areas and prevents or ameliorates near-term impacts of climate change throughout the State, but in particular within the coastal and Delaware Bay areas.
- 9.3.3.18 In cooperation with species and habitat experts, develop management plans for significant natural and/or unique communities, in particular those supporting SGCN, and provide the information to the landowners/managers (federal, state and local government agencies or non-government organization) for review and implementation.
- 9.3.3.19 Develop management plans for SGCN inhabiting permanently protected natural lands using available baseline and population trend data.
- 9.3.3.20 Develop an action plan for immediate implementation should habitat levels fall below the minimum necessary size and/or structure within the Cape May Peninsula to sustain the avian migration.
- 9.3.3.25 Develop a habitat management plan focused on areas important to near-shore, coastal species (e.g., herring, sturgeon, terrapin, nesting birds) that prioritizes these areas to direct resources to minimize the impacts of sea-level rise, flooding and storms (including extreme rain events) such as increased erosion of beach, mudflat and marsh habitats, and the increased risk of saltwater intrusion into freshwater habitats. Gather "best information" for spatial modeling of anticipated habitat shifts from sea-level rise, flooding, etc.
- 9.3.3.26 Develop a management plan for parcels of suitable size to be managed for native herbaceous plant species that support breeding grassland dependent species.
- 9.3.3.31 Using data from baseline inventory and monitoring of all current marsh islands and their vulnerability to inundation as a result of sea level rise, create a plan to delineate each island's ideal fit for habitat management (e.g., restoration, hasting, dredging). Planning will factor in criteria to designate which islands should be maintained or restored, and which will be passively allowed to submerge.
- 9.3.3.33 Evaluate the potential benefits to increasing high marsh habitat by restoring salt hay farms along Delaware Bay.
- 9.3.3.35 Incorporate habitat connectivity, preservation of natural areas, and the implementation of BMPs into state and local land-use policy environmental review process and energy development plans to minimize habitat fragmentation and related threats associated with solar farms and altered habitats.

11 Technical Assistance

11.1 Environmental review

11.1.1 Review of proposed projects

- 11.1.1.1 Use Biotics database and Landscape Project Mapping in regulatory reviews to ensure protection by applicable laws and regulations.
- 11.1.1.2 Develop smart-growth plans and critical habitat designations that consider SGCN life history requirements and habitat needs, connectivity and health of those habitats, and minimize human-associated disturbances to those habitats and the SGCN inhabiting them.
- 11.1.1.3 Government organizations to thoroughly review wetland restoration plans, applying the most current science for wildlife, habitats and aquatic systems, to assess the impacts to resident and migratory wildlife occupying the targeted habitats.
- 11.1.1.4 Incorporate habitat connectivity and preservation of natural areas into state and local land-use policy and the environmental review process to minimize habitat fragmentation and related threats associated with development.

Northern Harrier

- 11.1.1.5 Incorporate habitat connectivity and preservation of natural areas into state and local land-use policy and the environmental review process to minimize the impacts of transportation and service corridors on fish and wildlife and their habitats.
- 11.1.1.6 Review all projects to be conducted in or adjacent to coastal wetlands and marshes, and provide recommendations on how to best avoid or reduce human disturbance at nesting areas (for example, timing restrictions) and actions not permitted.
- 11.1.1.7 Review proposed construction or other work projects and permit applications, provide recommendations on how to best avoid disturbing sensitive species, and identify actions not permitted.
- 11.1.1.8 Review proposed research projects and permit applications, provide recommendations on how to best avoid disturbing sensitive species, and identify actions not permitted.
- 11.1.1.11 Use the best available science (species data, habitat present, site layout options, etc.) when conducting regulatory reviews of proposed offshore energy projects relating to drilling, extraction and distribution of petroleum and gas products to reduce habitat destruction and minimize impacts on wildlife.
- 11.1.1.12 Use the best available science (species data, habitat present, site layout options, etc.) when conducting regulatory reviews of proposed solar farm projects to reduce habitat fragmentation and minimize impacts on wildlife.
- 11.1.1.13 Use the best available science (species data, habitat present, wind farm layout options, wind blade impacts on migratory species, location of migration routes, etc.) when conducting regulatory reviews of proposed wind farm projects to minimize impacts on migratory and resident wildlife and reduce habitat fragmentation.

11.1.2 Review of proposed policies and plans

- 11.1.2.1 Develop smart-growth plans and critical habitat designations that consider SGCN life history requirements and habitat needs, connectivity and health of those habitats, and minimize human-associated disturbances to those habitats and the SGCN inhabiting them.

11.2 Technical assistance

11.2.0 Assorted technical assistance strategies

- 11.2.0.3 Develop state, regional and local BMPs that focus on minimizing habitat fragmentation and human-wildlife conflicts associated with development. Make information available to land developers and private and public landowners for implementation.
- 11.2.0.4 Provide educational resources, training programs, and expert guidance to private and public landowners and land managers on the secondary impacts of rodenticides on predators and scavengers.
- 11.2.0.6 Provide educational resources, training programs, and on-the-ground guidance to energy, mining, transportation, and utility service agencies/companies and their project and resource managers on habitat creation, enhancement and restoration within and adjacent to project areas, as well as away from and outside of project areas (depending on the target species), by managing vegetation for a variety of species and that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife. Wind farms should address both terrestrial bound and low-flying species. Examples of habitat management include, but are not limited to, integrating short and tall grasses, specific host plants, brush piles, water sources/wetlands, shrubby areas, nesting areas and no-mow set-asides.

Northern Harrier

- 11.2.0.8 Provide educational resources, training programs, and on-the-ground guidance to public and private landowners and land managers on habitat creation and enhancement strategies that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife.
- 11.2.0.10 Provide technical support to private landowners, consultants, and land managers to create customized management plans based on location and SGCN.
- 11.2.0.12 Provide educational resources and technical support to public landowners and land managers for managing grasslands for grassland-dependent species.
- 11.2.0.20 Provide educational resources and technical support to public and private landowners and land managers to promote the protection and/or enhancement of critical coastal habitats (beach/dune, scrub-shrub, forest, wetland, marsh, and marine and estuarine habitats) that provide nesting, migrating and wintering areas for SGCN birds, fish and other coastal SGCN.
- 11.2.0.21 Provide educational resources and technical support to public and private landowners and land managers of lands adjacent to critical migratory stopover habitats for songbirds, raptors, shorebirds, bats and invertebrates to promote the protection and/or enhancement of those adjacent habitats to increase the effective size of the migratory habitat.
- 11.2.0.23 Provide educational resources and technical support to public and private landowners and land managers of lands adjacent to SGCN habitats to promote the protection and/or enhancement of those adjacent habitats to increase the overall size of the "core" area and/or provide a natural buffer, enhancing the suitability of the core area for SGCN, and that connect conserved SGCN habitats.
- 11.2.0.24 Provide educational resources, training programs, and expert guidance to public and private landowners and land managers on how to manage vegetated roadside areas (e.g., mowing, brush-hogging, etc.) on a schedule that avoids peak activity periods for wildlife and therefore, minimizes harm.
- 11.2.0.26 Make educational resources available to the public that encourage researchers to seek out guidance prior to finalizing proposals and submitting State permit applications to reduce potential impacts on sensitive species.
- 11.2.1 With individuals and groups involved in resource management decision making
 - 11.2.1.2 Provide professional training and technical assistance tools (e.g., mapping, guidance documents, justification, etc.) to agencies/divisions/programs within and outside of the NJ DEP regarding the SWAP, and the conservation actions recommended therein to help facilitate SWAP implementation.
- 11.2.2 With private landowners
 - 11.2.2.1 Provide technical support to farming operations and woodland landowners on ways to decrease clean farming (edge-to-edge) practices and create ecotones to benefit bobwhite and other species dependent on early successional habitat.

100 Law and Policy

100. Legislation

100.1.2 National Level

- 100.1.2.1 Create legislation to establish markets for warm-season grasses to increase the permanency of this crop on the landscape.

100.1.3 Sub-national Level

- 100.1.3.3 Initiate legislative action to establish an annual budgetary line item designating funds to support programs focused on long-term research and monitoring of wildlife diseases.

Northern Harrier

100.1.4 County and Local

- 100.1.4.1** Enhance critical migratory stopover habitats for songbirds, raptors, shorebirds, bats and invertebrates through the local ordinances of adjacent private lands to increase the effective size of the habitat.
- 100.1.4.2** Secure and increase the effective size of SGCN habitats and connect conserved SGCN habitats through local ordinances.
- 100.1.4.8** Secure critical coastal habitats (beach/dune, scrub-shrub, forest, wetland, marsh, and marine and estuarine habitats) that provide nesting, migrating and wintering areas for SGCN birds, fish and other coastal SGCN through local ordinances.
- 100.1.4.13** Encourage municipal laws regulating domestic pets that may predate on wildlife.
- 100.1.4.15** Incorporate habitat connectivity and the preservation of natural areas into state and local land-use policy and the environmental review process to minimize habitat fragmentation and related threats associated with development.

100. State Regulations

100.3.0 Regulatory initiatives for species and habitat protection

- 100.3.0.2** Improve policies/regulations aimed at protecting and preserving critical coastal and marsh habitats and securing mitigation for losses that create an environmental benefit.
- 100.3.0.3** Develop policies that will promote the long term protection of critical migratory stopover habitats for songbirds, raptors, shorebirds, bats and invertebrates.
- 100.3.0.7** Amend current policies and/or regulations to increase the ability to protect and preserve coastal habitats (beach/dune, scrub-shrub, forest, wetland, marsh, and marine and estuarine habitats) that provide nesting, migrating, and wintering areas for SGCN birds, fish and other coastal and aquatic SGCN.
- 100.3.0.8** Develop policies and/or regulations with the objective of protecting significant natural and/or unique communities in perpetuity.
- 100.3.0.9** Secure mitigation that creates an environmental benefit for losses of SGCN and their habitats.
- 100.3.0.18** Develop policies for conserved lands that prohibit planting and supports the control of non-native vegetation and invasive, native vegetation.
- 100.3.0.19** Develop regulations for lighting of/on tall structures that will minimize harm to and/or disorientation of wildlife, in particular but not limited to migratory birds, bats and invertebrates. Implement BMPs into state, county and local permitting processes.
- 100.3.0.20** Develop policies and/or regulations that prohibit the presence of managed cat colonies and trap, neuter and release programs in or near critical wildlife habitats.
- 100.3.0.23** Review existing CAFRA regulations and ensure that the Coastal Zone Management Rules (NJAC 7:7E) adequately address mitigation that creates an environmental benefit for losses of SGCN and their habitats.
- 100.3.0.24** Create legislation to establish markets for warm-season grasses to increase the permanency of this crop on the landscape.
- 100.3.0.40** Develop laws and/or policies to require vegetative buffers of native plants on preserved farmland and state lands with agricultural leases or agreements.
- 100.3.0.41** Explore all State regulatory requirements for mitigation, restoration, habitat management, etc. to ensure they prohibit the use of specified invasive or other problematic plant species.
- 100.3.0.43** Identify and address (amend) regulatory impediments to beneficial habitat management.

Northern Harrier

- 100.3.0.44 Incorporate requirements for technical support and funding for mitigation or restoration efforts so as to be consistent with existing regulations.
- 100.3.0.48 Propose new State law or regulation mandating that a State-level "development impact fee" be assessed on all new development approved by municipalities (via the Municipal Land Use Law processes), and dedicate such monies to the development and implementation of regional Habitat Conservation Plans (or existing plans/programs serving the same regional function).
- 100.3.0.49 Review existing CAFRA regulations and ensure that the Coastal Zone Management Rules (NJAC 7:7E) adequately address the issue of disturbance to habitat or species as a result of human activities (e.g., construction, bridge maintenance, road work, etc.).
- 100.3.0.50 Retain endangered, threatened and special concern wildlife and habitat protection measures in the Water Quality Management Program Rules.
- 100.3.0.56 Develop regulations that when implemented will protect critical migratory stopover habitats for songbirds, raptors, shorebirds, bats and invertebrates.
- 100.3.0.58 Develop regulations that when implemented will promote the expansion of acreages and enhancement of the effective size of SGCN habitats by providing biologically appropriate buffers of native habitat surrounding SGCN habitats.
- 100.3.0.59 Develop regulations that when implemented will increase the ability to protect and preserve coastal habitats (beach/dune, scrub-shrub, forest, wetland, marsh, and marine and estuarine habitats) that provide nesting, migrating, and wintering areas for SGCN birds, fish and other coastal and aquatic SGCN.
- 100.3.0.60 Develop regulations that when implemented will protect significant natural and/or unique communities in perpetuity.
- 100.3.0.67 Develop regulations for lighting of/on tall structures that will minimize harm to and/or disorientation of wildlife, and enforce within state, county and local permitting processes.
- 100.3.0.68 Develop regulations that when implemented will prohibit the presence of managed cat colonies and trap, neuter and release programs in or near critical wildlife habitats.
- 100.3.0.72 Develop regulations that require permit applicants and/or review agencies to assess the cumulative and synergistic effects of a proposed project (i.e., "secondary effects"), both over time and over a larger spatial scale than the site itself.

100. State Agency Policy Integration

100.4.0 Policy initiatives for species and habitat protection

- 100.4.0.1 Create any necessary policy changes (including those to incentive programs) to encourage the integration of SWAP actions associated with SGCN priority habitats as a deliberative factor in agencies' actions (e.g., environmental and land management review processes, land acquisition and management).
- 100.4.0.2 Create a policy that requires the NJ DEP to incorporate scientific information regarding climate change and sea level rise (e.g., predictions, habitat management/acquisition efforts to enhance resilience to inundation) on their websites and to work with other government entities, conservation organizations and other stakeholders to work together to collaboratively use social media campaigns to grow a constituency of NJ residents who have an elevated ecological and climate consciousness.
- 100.4.0.3 Develop policies for mandatory buffer strips on preserved farmlands and state-owned agricultural lands.
- 100.4.0.12 Develop laws and/or policies to require vegetative buffers of native plants on preserved farmland and state lands with agricultural leases or agreements.

Northern Harrier

- 100.4.0.14 Develop policies to facilitate agreements between eligible entities to manage appropriate conserved lands for grassland-dependent species, and to have access to/obtain restoration funds.
- 100.4.0.17 Develop policies to implement habitat management strategies, including prescribed burns, that will increase the structural diversity on preserved farmlands, state-owned agricultural lands, forests, parks and wildlife management areas, and any conserved lands purchased with the assistance of Green Acres and Federal Land & Water Conservation Fund monies to control and reduce the impacts of invasive, non-native species in order to increase structural habitat diversity.
- 100.4.0.20 Develop state regulations that require energy developers and utility service companies to implement habitat management strategies that will increase the structural diversity of the habitat, minimize habitat fragmentation and commercial infrastructure, and minimize the loss, alteration and/or degradation of the habitat and adjacent lands when working on preserved farmlands, state-owned agricultural lands, forests, parks and wildlife management areas, and any conserved lands purchased with the assistance of Green Acres and Federal Land & Water Conservation Fund monies.
- 100.4.0.25 Develop policies that require permit applicants and/or review agencies to assess the cumulative and synergistic effects of a proposed project (i.e., "secondary effects"), both over time and over a larger spatial scale than the site itself.

Peregrine Falcon

Focal species that comprise this Conservation Target:

Peregrine Falcon

Threats and Action Drivers associated with this Conservation Target:

1 Residential and Commercial Development

1.1 Housing and Urban Areas

1.1.2 Residential development using materials that cause collision hazards (Avg. Score: 1.00)

NJ Specific Threats: 1.1.2.1 Collision risk to volant species (birds, bats and invertebrates).

1.2 Commercial and Industrial Areas

1.2.2 Commercial development using materials that cause collision hazards (Avg. Score: 2.00)

NJ Specific Threats: 1.2.2.1 Collision risk to volant species (birds, bats and invertebrates).

3 Energy Production and Mining

3.1 Oil and Gas Facilities and Pipelines

3.1.1 Distribution processes of petroleum and other liquid hydrocarbons (Avg. Score: 1.00)

NJ Specific Threats: 3.1.1.1 Fragments terrestrial and aquatic habitats.

3.1.1.2 Loss, alteration and/or degradation of habitat.

3.1.1.3 Increased risk of oil spills.

3.1.1.4 Increased noise pollution.

3.1.2 Natural gas distribution processes (Avg. Score: 1.00)

NJ Specific Threats: 3.1.2.1 Fragments terrestrial and aquatic habitats.

3.1.2.2 Loss, alteration and/or degradation of habitat.

3.2 Mining and Quarrying

3.2.2 Surface Mining - Rock Quarry (and sand quarries) (Avg. Score: 1.00)

NJ Specific Threats: 3.2.2.1 Fragments terrestrial and aquatic habitats.

3.2.2.2 Loss, alteration and/or degradation of terrestrial and aquatic habitats.

3.3 Renewable Energy

3.3.1 Wind Power (Avg. Score: 2.00)

NJ Specific Threats: 3.3.1.1 Turbines, blades, and structure foundations create a collision risk to volant species (birds, bats and invertebrates) and marine animals.

3.3.1.3 Loss, alteration and/or degradation of habitat.

3.3.2 Solar Power (Avg. Score: 1.00)

NJ Specific Threats: 3.3.2.1 Fragments terrestrial habitats.

3.3.2.2 Loss, alteration and/or degradation of habitat.

3.4 Conventional Power Plants

3.4.0 Conventional Power Plants (Avg. Score: 1.00)

NJ Specific Threats: 3.4.0.1 Methane flares cause injuries and mortality to birds perching on stacks.

4 **Transportation and Service Corridors**

4.1 Roads and Railroads

4.1.1 Land conversion from natural habitat to roads and railroads (large and small scale) (Avg. Score: 1.00)

NJ Specific Threats: 4.1.1.2 Loss, alteration and/or degradation of habitat associated with road and railroad construction and maintenance, and degradation of adjacent habitats.

4.1.2 Movement of cars and other vehicles on roads and railroads (large and small scale) (Avg. Score: 1.00)

NJ Specific Threats: 4.1.2.1 Increased vehicle traffic increases the risk of wildlife mortality from strikes.

4.2 Utility and Service Lines

4.2.1 Land conversion from natural habitat to utility and other service lines (large and small scale) or communication towers and associated access roads (Avg. Score: 1.00)

NJ Specific Threats: 4.2.1.3 Powerline structures attract perching raptors, increasing the risk of raptor electrocution.

4.2.1.5 Tall radio and utility towers with guy lines pose a strike hazard for migrant bats and birds, especially in poor visibility conditions (e.g., fog, nighttime, poor weather conditions).

4.4 Flight Paths

4.4.1 Airplane flight paths (Avg. Score: 2.00)

NJ Specific Threats: 4.4.1.2 Increased risk of collision between airplanes and birds, bats and insects.

6 **Human Intrusions and Disturbance**

6.1 Recreational Activities

6.1.2 Boating (Avg. Score: 2.00)

NJ Specific Threats: 6.1.2.2 Increased disturbance to marine animals and ocean-, bay- and marsh-associated birds which can alter their behavior decreasing the likelihood of their success and/or reproduction.

6.1.5 Wildlife observation and photography (Avg. Score: 2.00)

NJ Specific Threats: 6.1.5.1 Improperly conducted recreational activities may disrupt normal wildlife behaviors which can result in reduced reproductive success or survival, abandonment of critical sites, etc.

6.1.5.2 Participants may introduce wildlife diseases and invasive plant species when gear and apparel is not properly sanitized between sites.

6.1.6 Recreational use of cliffs, rocks and ridgelines (Avg. Score: 2.00)

NJ Specific Threats: 6.1.6.1 Recreational rock-climbing and rock-scrambling can cause reduced reproductive success or reproductive failure for wildlife by disrupting normal reproductive behaviors and/or reduce breeding success by forcing them into suboptimal habitats.

6.1.7 Other (Avg. Score: 1.00)

NJ Specific Threats: 6.1.7.1 Use of recreational or commercial pyrotechnics may cause temporary disturbance to wildlife, in particular to nesting birds.

6.1.7.3 Drone use in areas with sensitive wildlife (e.g., nesting and foraging birds, migrating and foraging/feeding whales) can alter their behavior and can cause disturbance that impacts their reproductive and/or foraging success.

6.2 Military Exercises

6.2.1 Military exercises (Avg. Score: 1.00)

NJ Specific Threats: 6.2.1.1 Military testing and training exercises may inflict disturbance and potential physical harm to wildlife.

Peregrine Falcon

6.3 Work and Other Activities

6.3.3 Other "work" unrelated to research (Avg. Score: 2.00)

NJ Specific Threats: 6.3.3.1 Construction projects may disrupt normal wildlife behavior which can result in reduced reproductive success or survival, abandonment of critical sites, etc. (e.g., bridge-nesting birds).

8 Invasive and Other Problematic Species, Genes and Diseases

8.1 Invasive Non-native/ Alien Species/ Diseases

8.1.4 Invasive non-native terrestrial/wetland animals (Avg. Score: 1.00)

NJ Specific Threats: 8.1.4.2 Free-roaming and feral domestic animals such as cats and dogs causes direct mortality of wildlife and disturbance to wildlife breeding and resting areas.

8.2 Problematic Native Species/Diseases

8.2.1 Unspecified Species (Avg. Score: 1.00)

NJ Specific Threats: 8.2.1.2 Invasive pathogens and insects may increase in range and abundance as limiting factors (such as temperature) are altered as a result of climate change.

8.2.1.4 Human-subsidized native species can become overabundant, increasing predation on other native wildlife and/or altering the ecological community.

8.2.2 Named Species (Avg. Score: 1.00)

NJ Specific Threats: 8.2.2.2 Human-subsidized native species can become overabundant, increasing predation on other native wildlife and/or altering the ecological community.

8.5 Viral/Prion-induced Diseases

8.5.2 Named Species (Disease) (Avg. Score: 2.00)

NJ Specific Threats: 8.5.2.1 Diseases such as West Nile Virus, arenavirus, sudden oak death, Avian Influenza, and snake fungal disease cause morbidity or mortality to native populations.

8.6 Diseases of Unknown Cause

8.6.0 Unknown Diseases (Avg. Score: 1.00)

NJ Specific Threats: 8.6.0.1 Diseases yet to be identified by pathologists and virologists cause decreased fitness or mortality to native populations.

9 Pollution

9.1 Domestic and Urban Waste Water

9.1.1 Sewage (Avg. Score: 1.00)

NJ Specific Threats: 9.1.1.1 Degradation of aquatic and marine water quality and habitats by changing turbidity, flow and water chemistry.

9.1.1.3 Contaminants in sewage treatment effluents and Combined Sewer Overflows can cause developmental and behavioral abnormalities and reproductive failure in wildlife.

9.1.2 Run-off (Avg. Score: 1.00)

NJ Specific Threats: 9.1.2.2 Contaminants degrade aquatic and marine water quality and can bioaccumulate in benthic organisms, threatening wildlife by causing developmental and behavioral abnormalities and reproductive failure.

9.2 Industrial and Military Effluents

9.2.1 Oil Spills (Avg. Score: 1.00)

NJ Specific Threats: 9.2.1.2 Oil spills have long term effects on habitats and damage ecological processes that can cause local wildlife population declines and impaired foraging or reproduction.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Peregrine Falcon

9.2.1.3 Oil spills cause external oiling of wildlife and ingestion of oil, both of which can injure or kill wildlife.

9.2.3 Other (Avg. Score: 2.00)

NJ Specific Threats: 9.2.3.1 Point and nonpoint source pollution such as polychlorinated biphenyls (PCBs), pesticides, heavy metals, and endocrine disrupting compounds (EDC's) into freshwater and marine systems pose threats to wildlife through direct contact and/or ingestion, and to aquatic species and their predators through bioaccumulation, impacting the reproductive success and neurological function of many avian and fish species.

9.2.4 Other: Hydrofracturing (Avg. Score: 1.00)

NJ Specific Threats: 9.2.4.1 Contaminants from hydrofracturing degrade water quality in aquatic systems, and can injure or kill the aquatic and semi-aquatic species that rely upon them.

9.2.4.2 Uncontrolled effluents escaping from hydrofracturing facilities can cause injury to wildlife and alter normal behaviors.

9.2.5 Other: Industrial toxic settling ponds (Avg. Score: 1.00)

NJ Specific Threats: 9.2.5.1 Surficial or open industrial effluent ponds can cause injury or death to wildlife that become exposed through ingestion or submersion.

9.3 Agricultural and Forestry Effluents

9.3.3 Herbicides and Pesticides (Avg. Score: 2.00)

NJ Specific Threats: 9.3.3.1 Pesticides degrade terrestrial and aquatic habitats, especially streams, ponds and wetlands. Aquatic wildlife are particularly sensitive to these contaminants, which can cause developmental and behavioral abnormalities and reproductive failure. Some contaminants may bioaccumulate in predatory fish and birds and disrupt reproduction.

9.3.3.2 Use of rodenticides can cause secondary actions of injury and death to animals in the course of scavenging.

9.5 Air-Bourne Pollutants

9.5.5 Methane (Avg. Score: 1.00)

NJ Specific Threats: 9.5.5.1 Emission contributes to global warming and climate change.

9.5.6 Herbicides and Pesticides (Avg. Score: 1.00)

NJ Specific Threats: 9.5.6.1 May result in injury or direct mortality of non-target species.

9.6 Excess Energy

9.6.1 Light Pollution (Avg. Score: 1.00)

NJ Specific Threats: 9.6.1.1 Artificial lighting can reduce suitability of adjacent habitat for species sensitive to artificial lights by disorienting wildlife, reducing foraging suitability or success, or increasing visibility to predators, resulting in reduced diversity and/or productivity of species in adjacent habitat.

9.6.3 Noise Pollution (Avg. Score: 1.00)

NJ Specific Threats: 9.6.3.1 Acute and chronic noise pollution in and adjacent to terrestrial and aquatic (marine and freshwater) environments could disrupt normal behaviors of wildlife such as migration, communication, feeding, eluding predators, resting and breeding, etc.

11 Climate Change and Severe Weather

11.1 Habitat Shifting or Alteration

11.1.0 Macro- and Micro-Climate Alterations (Avg. Score: 1.00)

NJ Specific Threats: 11.1.0.1 Alters native terrestrial and aquatic habitats at the macro- and micro-climate levels that can affect suitability for wildlife, in particular specialist species.

Peregrine Falcon

11.2 Droughts

11.2.1 Droughts

(Avg. Score: 1.00)

NJ Specific Threats: 11.2.1.1 Contribute to hardened soils, decreasing water recharge during rains and increasing the likelihood of flash floods during storms.

11.2.1.2 Lead to lower groundwater levels and therefore, less available water for people and habitats.

11.2.1.3 Loss, alteration and/or degradation of terrestrial and aquatic habitats.

11.3 Temperature Extremes

11.3.1 Temperature extremes

(Avg. Score: 1.00)

NJ Specific Threats: 11.3.1.3 Temperature extremes of surface water and air degrades marine habitats and ecosystems, threatening marine wildlife. Such extremes also disrupt offshore currents and migratory patterns, species' ranges, and/or impact communities/food chains, all of which further impact the ecosystem.

11.4 Storms and Flooding

11.4.1 Storms and flooding

(Avg. Score: 3.00)

NJ Specific Threats: 11.4.1.2 Potentially damage coastal habitats, including beach- and marsh-nesting bird habitats and interdunal wetlands, and can increase marsh erosion.

11.4.1.7 Potentially damage coastal habitats, including beach and marsh habitats used by spawning horseshoe crabs, nesting diamondback terrapins, and resting and foraging birds.

11.4.2 Increased rainfall

(Avg. Score: 1.00)

NJ Specific Threats: 11.4.2.2 Extreme rain events can damage wildlife nesting and resting habitats, including impacts to avian eggs and chick and small mammal survivorship.

11.6 Phenology Shifting or Alteration

11.6.2 Phenology shifts related to predator-prey ecology

(Avg. Score: 1.00)

NJ Specific Threats: 11.6.2.1 Alters inter-specific relationships (e.g., competition, parasitism, predation) of wildlife, ultimately leads to detrimental impacts on the ecological system.

11.6.2.2 Shifts timing of species migration, breeding and hibernation, and available food resources, causes redistribution of species, or mortality for species that are unable to relocate due to their already isolated habitat or limited mobility.

12 Resource Management Needs

12.1 Resource information collection needs

12.1.2 Lack of up-to-date existing information

(Avg. Score: 2.00)

NJ Specific Threats: 12.1.2.1 Lack of (routine, regular, ongoing) surveys/assessments that provide up-to-date information regarding population trends or health, and/or status of fish, wildlife and/or their habitats.

12.1.2.2 Lack of wildlife monitoring at sites with structures that pose high risk of mortality to SGCN wildlife.

12.1.3 Need to answer research question

(Avg. Score: 1.00)

NJ Specific Threats: 12.1.3.1 There are significant knowledge gaps regarding distribution, dispersal, diseases, population trends, etc. of SGCN.

12.1.3.4 Lack of information regarding the potential short- and long-term impacts of wind turbines and other tall coastal structures on migratory populations.

12.3 Regulatory Reform

12.3.0 State Regulatory Reforms

(Avg. Score: 1.00)

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Peregrine Falcon

- NJ Specific Threats:** 12.3.0.1 Regulatory habitat protections within state land use regulations are spatially limited to specific geographic areas (e.g., Pinelands, Coastal Area) or geographic features (e.g., wetlands, streams) and so fail to protect critical habitats that exist outside of these regulated areas.
- 12.3.0.7 Activities that threaten SGCN, their food sources, and/or habitats are often regulated separately and without consideration for the cumulative and synergistic effects over time or over a larger spatial scale. Therefore, regulations can fail to protect SGCN populations over time.
- 12.3.0.10 Land use regulatory processes pertaining to habitat creation, enhancement or restoration projects can be costly and/or burdensome, precluding or discouraging the development or implementation of conservation projects.

12.4 Internal Policy & Procedures Reform

12.4.0 State Policy and Procedure Reform (Avg. Score: 1.00)

- NJ Specific Threats:** 12.4.0.2 Policies and procedures for lands management that lack consideration of the impacts of activity timing can result in unintended impacts to wildlife during vulnerable periods.
- 12.4.0.7 Land preservation contracts, easements, etc. that do not contain prescriptive language or flexibility allowing for habitat management can result in unsuitable habitat conditions and biodiversity declines for SGCN.

14 Education/ Outreach Needs

14.1 Education needs

14.1.1 Need for improved knowledge of fish and wildlife and their habitats (Avg. Score: 1.00)

- NJ Specific Threats:** 14.1.1.1 Lack of understanding of the importance of various SGCN habitats, their connectivity to similar habitats, and how planning decisions impact their quality and the wildlife that depend upon them.
- 14.1.1.3 Lack of understanding of the need to manage both natural and anthropogenic (e.g., yards, lawns, hayfields, etc.) habitats to minimize impacts or increase benefits to SGCN and their habitats.

14.2 Outreach needs

14.2.1 Need to improve specific understanding of agency/organization goals, objectives and ongoing wildlife conservation actions (Avg. Score: 1.00)

- NJ Specific Threats:** 14.2.1.3 Need to develop greater understanding of and support for efforts implemented to enhance SGCN habitat and biodiversity through various coastal management practices.
- 14.2.1.4 Need to develop greater understanding of and support for efforts implemented to maintain disturbance-free habitats that allow coastal wildlife populations to thrive alongside human residential and recreational uses.
- 14.2.1.5 Need to develop greater understanding of and support for efforts implemented to enhance SGCN habitat and biodiversity through various wetland management practices.

15 Administrative Needs

15.2 Organizational/program planning needs

15.2.3 Need for multi-state, regional and landscape scale planning (Avg. Score: 1.00)

- NJ Specific Threats:** 15.2.3.1 State governance and financial structures can sometimes inhibit conservation planning and implementation at the regional and landscape-scales that are often more effective at setting priorities and meeting species and habitat conservation goals and objectives.

Actions to address the Threats and Action Drivers associated with this Conservation Target:

1 Coordination and Administration

1.2 Incentives

1.2.1 Incentives

- 1.2.1.6** Secure and promote the protection/restoration of riparian and floodplain habitats, inland wetland habitats (marsh, vernal pool, fen, emergent shrubland, forest), and other aquatic habitats (including open waters) and/or biologically appropriate buffers through incentive programs.
- 1.2.1.13** Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to land developers to minimize the impacts of new residential and commercial developments on SGCN and their habitats.
- 1.2.1.15** Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to NJ landowners and land managers (including farmers, foresters and developers) for reducing or eliminating the use of rodenticides, and implementing more ecologically safe strategies when using such products.

2 Direct Management of Natural Resources

2.1 Create new habitat or natural processes

2.1.1 Habitat conversion

- 2.1.1.1** Create high marsh habitat through impoundments and diking of low marsh areas that are less susceptible to breaching by storms and sea-level rise.

2.8 Invasive species control

2.8.0 Invasive species control strategies and implementation

- 2.8.0.5** Implement biologically safe and appropriate control/management strategies, and where appropriate, eradication strategies to reduce the impacts and/or limit the distribution of invasive and/or non-native plant species within or near aquatic systems using methods that will provide the most protection to the aquatic and riparian ecological system, and minimize disturbance to the soil and wildlife. Encourage the implementation of biological and mechanical removal/control. When chemical control is used, encourage low-volume, targeted application using NJDEP-approved chemicals in accordance with the specific instructions for that chemical.

2.9 Living shorelines

2.9.3 Sand dune restoration

- 2.9.3.1** Prevent or ameliorate near-term impacts of climate change throughout the State but in particular within the coastal and Delaware Bay areas by implementing habitat management strategies that will establish/improve habitat resilience, such as sand dune restoration, that benefits wildlife inhabiting these areas.
- 2.9.3.6** Minimize habitat loss of critical coastal dune habitats that provide nesting, migrating, and wintering areas for birds and other coastal species by maintaining or enhancing these areas through sand dune restoration.
- 2.9.3.9** Enhance critical migratory stopover sand dune habitats for songbirds, raptors, shorebirds, bats and invertebrates through sand dune restoration and expand management to adjacent private lands to increase the effective size of the habitat.
- 2.9.3.10** Implement sand dune restoration strategies on state and other conservation lands to enhance food availability for migratory species (birds, bats, invertebrates).

Peregrine Falcon

- 2.9.3.11 Conduct sand dune restoration to maintain, enhance and/or create feeding and roosting habitats for migratory species (shorebirds, raptors, bats, songbirds and invertebrates) in appropriate areas along documented migratory corridors around the State and evaluate the effectiveness of such management.
- 2.9.3.12 Implement best management practices (BMPs), protective strategies, and guidelines for maintaining and enhancing healthy, SGCN-associated sand dune habitats while minimizing (if not avoiding) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.

2.10 Planting/seeding

2.10.0 Planting/seeding strategies for terrestrial or aquatic habitat creation or restoration

- 2.10.0.1 Prevent or ameliorate near-term impacts of climate change throughout the State by developing, implementing and monitoring/evaluating habitat management strategies that will establish/improve habitat resilience (e.g., shorelines of the coast and Delaware Bay, forested habitats of the Pinelands and Skylands) that benefits wildlife inhabiting these areas, in particular within the coastal and Delaware Bay areas.
- 2.10.0.2 Improve the availability of prey/food resources through terrestrial and aquatic plantings and habitat restoration for SGCN populations, in particular for those populations thought to be limited due wholly or in part to a lack of (or contaminated) food resources, and for migratory species (birds, bats, invertebrates).
- 2.10.0.3 Restore and/or enhance habitats to benefit urban-associated SGCN.
- 2.10.0.7 Restore/reclaim and enhance degraded rare species habitats through strategic revegetation and management efforts for documented/target SGCN.
- 2.10.0.10 Minimize the loss of important habitats (e.g., coastal scrub-shrub and grassy habitats, high and low marsh habitats, etc.) that provide nesting, migrating, and wintering areas for SGCN birds and other coastal and marsh-dependent species through habitat restoration efforts.
- 2.10.0.11 Restore and/or enhance critical migratory terrestrial and aquatic habitats (e.g., beach, grasslands, forest, scrub-shrub, etc.) for songbirds, raptors, shorebirds, waterfowl, bats and invertebrates through habitat restoration efforts and expand habitat restoration to adjacent private lands to increase the effective size of the habitat.
- 2.10.0.14 Implement best management practices (BMPs), protective strategies and guidelines for restoring and enhancing healthy, SGCN-associated habitats while minimizing (if not avoiding) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
- 2.10.0.23 Restore and/or enhance roosting habitats for migratory species (shorebirds, raptors, bats, songbirds and invertebrates) in appropriate areas along documented migratory corridors around the State.

2.11 Vegetation management

2.11.0 Vegetation management strategies for terrestrial or aquatic habitat creation or restoration

- 2.11.0.4 Implement vegetation management strategies that consider appropriate timing to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife, particularly SGCN.
- 2.11.0.6 Reclaim degraded rare species habitats by conducting vegetation management needed to restore habitat value for the documented/target SGCN.

Peregrine Falcon

- 2.11.0.7 Protect significant natural and/or unique communities by implementing best management practices through vegetation management.
- 2.11.0.10 Enhance critical migratory stopover beach habitats for songbirds, raptors, shorebirds, bats and invertebrates through vegetation management and expand management to adjacent private lands to increase the effective size of the habitat.
- 2.11.0.11 Implement vegetation management on state and other conservation lands to enhance food availability for migratory species (birds, bats, invertebrates).
- 2.11.0.13 Implement best management practices (BMPs), protective strategies, and guidelines for vegetation management to maintain and enhance healthy, SGCN-associated habitats while minimizing (if not avoiding) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
- 2.11.0.15 Implement vegetation management to benefit urban-associated SGCN.
- 2.11.0.16 Prevent or ameliorate near-term impacts of climate change throughout the State by developing, implementing and monitoring/evaluating habitat management strategies that will establish/improve habitat resilience (e.g., shorelines of the coast and Delaware Bay, forested habitats of the Pinelands and Skylands) that benefits wildlife inhabiting these areas, in particular within the coastal and Delaware Bay areas.
- 2.11.0.22 Minimize habitat loss of high and low marsh habitats that provide nesting, migrating and wintering areas for SGCN birds and other marsh-dependent SGCN by maintaining or enhancing these areas through habitat management and/or revegetation or restoration efforts.

2.12 Water management

2.12.6 Tide gate

- 2.12.6.1 Prevent or ameliorate near-term impacts of climate change throughout the State but in particular within the coastal and Delaware Bay areas by implementing habitat management strategies that will establish/improve habitat resilience, such as tide gates, that benefits wildlife inhabiting these areas.

2.14 Wildlife disease management

2.14.0 Wildlife disease strategy development and investigation

- 2.14.0.4 Conduct long-term monitoring of diseases in vulnerable wildlife to determine the magnitude of exposure within populations and around the State, the impacts to those species, in particular SGCN, and investigate the feasibility of mitigating for such impacts.

3 Data Collection and Analysis

3.0 General fish and wildlife research, survey or monitoring

3.0.0 Research, survey or monitoring - general fish and wildlife needs

- 3.0.0.1 Conduct long-term monitoring of resident and migratory SGCN populations using standardized survey protocols to determine the variables that may impact their long-term persistence in the State (e.g., population viability, distribution, dispersal, home range and habitat use, travel corridors, food availability, vulnerability to pollutants and disease, etc.). Compile this information to determine the likely causes of population declines and to understand metapopulation dynamics. Provide data to NJ DEP for integration into the Biotics database, Landscape Project and permitting review processes.

Peregrine Falcon

- 3.0.0.5 Gather baseline data on resident and migratory SGCN (in particular migratory species for which New Jersey habitats are significant), terrestrial, freshwater and marine species, regarding the location and condition of their critical and supporting habitats (e.g., foraging, roosting, nesting/breeding, stopover, migration paths, etc.), and population demography (e.g., productivity, survival, dispersal). Compile this information into a database that includes descriptions of the conditions of the habitats and species, and a GIS component of the locations of these important habitats. Provide data to NJ DEP for integration into the Biotics database, Landscape Project and permitting review processes.
- 3.0.0.6 Conduct long-term studies on resident and migratory SGCN to determine if there are changes to the populations' demography (productivity, survival, dispersal) and/or to their critical and/or supporting habitats (i.e., diminishing in value, acreage or connectivity, etc.), in particular changes that would not maintain SGCN at viable levels for species populations. Update data and GIS maps; provide updated information to NJ DEP for integration into the Biotics database, Landscape Project and permitting review processes.
- 3.0.0.12 Compile available life history information on urban-associated SGCN (e.g., predators, levels of nest/young depredation, breeding longevity and reproductive effort over time, preferred nesting/reproductive requirements, fidelity to breeding and wintering sites, comprehensive assessment of migration routes and destinations) for future development of management strategies to benefit such species.
- 3.0.0.13 Investigate the effects of pesticides, herbicides and other biological controls on SGCN and their critical and supporting habitats. Evaluate and modify management practices as appropriate.
- 3.0.0.25 Identify pathways of migratory SGCN in the Atlantic Coastal and Marine Regions (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) and use the data to help evaluate the potential short- and long-term impacts of wind turbines, radio towers, utility guy lines, and other tall coastal structures on migratory populations.

3.2 Research, survey or monitoring - fish and wildlife populations

3.2.0 Data deficiency

- 3.2.0.2 Conduct species status assessments using the Delphi Technique and review of available data and literature on fish and wildlife (including marine animals) to maintain accurate legal status categorization of native wildlife.
- 3.2.0.4 Conduct long-term monitoring of the impacts of contaminants to vulnerable wildlife to determine the magnitude of exposure within populations and around the State, the impacts to those species, in particular SGCN, and investigate the feasibility of mitigating for such impacts. Maintain records on exposure of vulnerable wildlife to environmental toxins (such as flame retardants and endocrine disruptors), so that sources may be identified and controlled or eliminated.
- 3.2.0.17 Conduct monitoring at constructed wind farms (within or outside of NJ) to assess the impacts on migratory species (birds, bats, insects) and determine if NJ's land use planning efforts and/or smart-growth plans need to be revised.

3.2.1 Abundance determination

- 3.2.1.1 Identify (through literature searches, review of available data, enlistment of habitat and/or species experts, etc.) population abundance and trends for SGCN using standardized survey protocols. Provide data to NJ DEP for integration into the Biotics database, Landscape Project Map and permitting review processes.

Peregrine Falcon

- 3.2.1.2 Conduct wildlife surveys on resident and migratory SGCN regarding their population abundance and trends.
 - 3.2.7 Population assessment
 - 3.2.7.1 Conduct species status assessments using the Delphi Technique and review of available data and literature on fish and wildlife (including marine animals) to maintain accurate legal status categorization of native wildlife.
- 3.3 Research, survey or monitoring - habitat
 - 3.3.1 Baseline inventory
 - 3.3.1.2 Identify (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) resident and migratory SGCN habitats. Investigate their suitability for the various life history requirements of the species that dependent upon them to determine the ability for maintaining applicable SGCN populations in perpetuity.
 - 3.3.1.14 Compile information (obtained through literature reviews, communication with other States along the Atlantic coast, academia, etc.) regarding the impacts of above water operation of wind turbines on migratory marine birds and bats. Provide data to appropriate governing agencies and/or State commissions for integration into permitting review processes.
 - 3.3.1.16 Gather "best information" for spatial modeling and update/create a current model/depiction of anticipated habitat shifts from sea-level rise, flooding, etc.
 - 3.3.1.21 Conduct comprehensive baseline surveys of all marsh islands; surveys to include, but are not limited to, documented elevations, and assessments of the habitat's current condition and vulnerability of dependent SGCN species in relation to the increased inundation rate.
 - 3.3.2 Monitoring
 - 3.3.2.3 Continue to update wildlife and habitat databases and revise models of critical SGCN habitats using the most current data available and where lacking, develop new SGCN and/or habitat models as data on species habitat requirements and applicable GIS data layers become available.
- 3.5 Techniques development
 - 3.5.3 Habitat restoration methods
 - 3.5.3.16 Develop/improve strategies to restrict human activity (e.g., recreational, maintenance work, etc.) from sensitive habitats/areas such as avian nesting sites, reptile and amphibian breeding areas (nesting or gestation/birthing and breeding pools, respectively), and bat hibernacula, and federal buffers for marine mammals. Methods may include, but are not limited to, managing the landscape to deter access, diverting recreational and other activities from sensitive areas during critical periods through permit processes or blocking access (trails, roads, etc.), posting (if appropriate), increasing law enforcement presence, conducting management activities at appropriate times to avoid disturbance and/or harm to wildlife (e.g., habitat management, beach raking, etc.), and decreasing noise and light pollution.
 - 3.5.3.25 Use data regarding SGCN population numbers/trends and demography, on-going threats, habitat changes, etc. to develop the necessary management strategies to reach or maintain viable population levels.
 - 3.5.4 Fish and wildlife research, survey and management techniques
 - 3.5.4.6 Investigate the feasibility of mitigating for the impacts of contaminants to vulnerable wildlife, particularly SGCN. Maintain records on exposure of vulnerable wildlife to environmental toxins (such as flame retardants and endocrine disruptors), so that sources may be identified and controlled or eliminated.

Peregrine Falcon

- 3.5.4.13 Develop/improve strategies to restrict human activity (e.g., recreational, maintenance work, etc.) from sensitive habitats/areas such as avian nesting sites, reptile and amphibian breeding areas (nesting or gestation/birthing and breeding pools, respectively), and bat hibernacula, and federal buffers for marine mammals. Methods may include, but are not limited to, managing the landscape to deter access, diverting recreational and other activities from sensitive areas during critical periods through permit processes or blocking access (trails, roads, etc.), posting (if appropriate), increasing law enforcement presence, conducting management activities at appropriate times to avoid disturbance and/or harm to wildlife (e.g., habitat management, beach raking, etc.), and decreasing noise and light pollution.
- 3.5.4.16 Use data regarding SGCN population numbers/trends and demography, on-going threats, habitat changes, etc. to determine if directed management efforts are needed to reach or maintain viable population levels and develop the necessary management strategies.

6 Land and Water Rights Acquisition and Protection

6.0 Acquisition and protection strategies

6.0.0 Combined acquisition and protection strategies

- 6.0.0.2 Enhance and increase the effective size of SGCN habitats by protecting adjacent habitats that contribute to the overall size of the "core" area and/or provide a natural buffer, enhancing the suitability of the core area for SGCN, and/or connect conserved SGCN habitats through an appropriate combination of fee title, non-fee title and landowner agreements.
- 6.0.0.5 Secure and protect critical coastal habitats (beach/dune, scrub-shrub, forest, wetland, marsh, and marine and estuarine habitats) that provide nesting, migrating and wintering areas for SGCN birds, fish and other coastal SGCN through an appropriate combination of fee title, non-fee title and landowner agreements.

7 Law Enforcement

7.1 Law enforcement

7.1.4 Scale Unspecified

- 7.1.4.3 Increase law enforcement presence proximate to sensitive areas [e.g., avian nesting sites, in particular rookeries, and reptile and amphibian breeding areas (nesting or gestation/birthing and breeding pools, respectively)] to deter human activity and subsequent disturbance to SGCN.
- 7.1.4.7 Increase law enforcement presence to enforce regulations governing recreational activities (e.g., the use of personal watercraft and off road vehicles, caving, rock climbing, etc.) on conserved lands and within other sensitive habitats, and discourage activities that cause harm or disturbance to vegetation, wetlands, fish and wildlife.
- 7.1.4.24 Implement protective measures to benefit urban-associated SGCN such as restricting human access, buffering sensitive areas with postings, noise and/or light restrictions in sensitive areas and/or during sensitive periods such as breeding, etc.

8 Outreach

8.1 Partner/stakeholder engagement

8.1.0 Partner/stakeholder engagement strategies

- 8.1.0.28 Engage government agencies, conservation partners and other stakeholders to collaboratively develop and implement an extensive educational/outreach program targeting sportsmen's organizations, as well as public constituents, addressing the unintended hazard of lead-shot on wildlife, in particular scavengers.

Peregrine Falcon

8.1.0.30 Encourage government agencies and conservation partners to advise members of the relevant scientific community of the need for specific studies, reports or investigations targeting the data-deficiency regarding SGCN and/or their habitats.

8.1.0.42 Engage citizens, wildlife observers and photographers through discussions and distributable information regarding the importance of and encouraging implementing responsible and ethical behavior when observing wildlife by developing an alliance of wildlife photographers and widely circulating recommendations on how to reduce impact.

8.2 Recruitment and retention activities

8.2.3 For wildlife watching

8.2.3.1 Develop and implement nature-focused tourism opportunities including wildlife viewing sites, interpretive signage highlighting unique ecosystems/habitats, and wildlife-related recreational opportunities that do not negatively impact SGCN or their habitats.

8.3 WSFR program/subprogram outreach

8.3.0 WSFR program/subprogram outreach strategies

8.3.0.12 Promote awareness of WSFR (Wildlife and Sportfish Restoration) Outreach/Awareness grants, an important funding source for conservation among hunters and anglers as well as the general public.

8.3.0.13 Conduct an educational campaign to encourage observer ethics and respect for wildlife and natural habitat.

9 Planning

9.1 Land use planning

9.1.0 Land use planning strategies

9.1.0.33 Review the species, threats, action successes, and habitats, and work with partners to revise the 2017 State Wildlife Action Plan for the 2025 resubmittal.

9.3 Species and habitat management planning

9.3.1 Species management planning

9.3.1.3 Develop a management plan to restrict human activity (e.g., recreational, maintenance work, etc.) from sensitive habitats/areas such as avian nesting sites, reptile and amphibian breeding areas (nesting or gestation/birthing and breeding pools, respectively), and bat hibernacula, and federal buffers for marine mammals.

9.3.1.20 Use compiled life history information on urban-associated SGCN regarding threats, breeding, fecundity, survival, habitat needs, wintering sites/roosts, migration routes and destinations, etc. to develop wildlife management strategies to benefit such species.

9.3.2 Listed species recovery planning

9.3.2.1 Develop proactive species recovery plans for all endangered and threatened species including guidance and objectives pertaining to critical and supporting habitat to meet and maintain recovery goals.

9.3.3 Habitat management planning

9.3.3.10 Develop a management plan to ensure SGCN populations' persistence based on long-term monitoring of resident and migratory SGCN populations and their habitats.

Peregrine Falcon

- 9.3.3.13 Develop a management plan that will establish/improve habitat resilience (e.g., shorelines of the coast and Delaware Bay, forested habitats of the Pinelands and Skylands) that benefits wildlife inhabiting these areas and prevents or ameliorates near-term impacts of climate change throughout the State, but in particular within the coastal and Delaware Bay areas.
- 9.3.3.15 Develop a management plan incorporating the effects of pesticides, herbicides and other biological controls on SGCN and their critical and supporting habitats.
- 9.3.3.16 Develop a management plan to restrict human activity (e.g., recreational, maintenance work, etc.) from sensitive habitats/areas such as avian nesting sites, reptile and amphibian breeding areas (nesting or gestation/birthing and breeding pools, respectively), and bat hibernacula, and federal buffers for marine mammals.
- 9.3.3.20 Develop an action plan for immediate implementation should habitat levels fall below the minimum necessary size and/or structure within the Cape May Peninsula to sustain the avian migration.
- 9.3.3.38 Use compiled life history information on urban-associated SGCN regarding threats, breeding, fecundity, survival, habitat needs, wintering sites/roosts, migration routes and destinations, etc. to develop habitat management strategies to benefit such species.

11 Technical Assistance

11.1 Environmental review

11.1.1 Review of proposed projects

- 11.1.1.1 Use Biotics database and Landscape Project Mapping in regulatory reviews to ensure protection by applicable laws and regulations.
- 11.1.1.2 Develop smart-growth plans and critical habitat designations that consider SGCN life history requirements and habitat needs, connectivity and health of those habitats, and minimize human-associated disturbances to those habitats and the SGCN inhabiting them.
- 11.1.1.3 Government organizations to thoroughly review wetland restoration plans, applying the most current science for wildlife, habitats and aquatic systems, to assess the impacts to resident and migratory wildlife occupying the targeted habitats.
- 11.1.1.4 Incorporate habitat connectivity and preservation of natural areas into state and local land-use policy and the environmental review process to minimize habitat fragmentation and related threats associated with development.
- 11.1.1.6 Review all projects to be conducted in or adjacent to coastal wetlands and marshes, and provide recommendations on how to best avoid or reduce human disturbance at nesting areas (for example, timing restrictions) and actions not permitted.
- 11.1.1.7 Review proposed construction or other work projects and permit applications, provide recommendations on how to best avoid disturbing sensitive species, and identify actions not permitted.
- 11.1.1.8 Review proposed research projects and permit applications, provide recommendations on how to best avoid disturbing sensitive species, and identify actions not permitted.
- 11.1.1.13 Use the best available science (species data, habitat present, wind farm layout options, wind blade impacts on migratory species, location of migration routes, etc.) when conducting regulatory reviews of proposed wind farm projects to minimize impacts on migratory and resident wildlife and reduce habitat fragmentation.

11.2 Technical assistance

11.2.0 Assorted technical assistance strategies

Peregrine Falcon

- 11.2.0.4 Provide educational resources, training programs, and expert guidance to private and public landowners and land managers on the secondary impacts of rodenticides on predators and scavengers.
 - 11.2.0.8 Provide educational resources, training programs, and on-the-ground guidance to public and private landowners and land managers on habitat creation and enhancement strategies that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife.
 - 11.2.0.10 Provide technical support to private landowners, consultants, and land managers to create customized management plans based on location and SGCN.
 - 11.2.0.26 Make educational resources available to the public that encourage researchers to seek out guidance prior to finalizing proposals and submitting State permit applications to reduce potential impacts on sensitive species.
 - 11.2.1 With individuals and groups involved in resource management decision making
 - 11.2.1.2 Provide professional training and technical assistance tools (e.g., mapping, guidance documents, justification, etc.) to agencies/divisions/programs within and outside of the NJ DEP regarding the SWAP, and the conservation actions recommended therein to help facilitate SWAP implementation.

100 Law and Policy

100. Legislation

100.1.3 Sub-national Level

- 100.1.3.3 Initiate legislative action to establish an annual budgetary line item designating funds to support programs focused on long-term research and monitoring of wildlife diseases.

100.1.4 County and Local

- 100.1.4.15 Incorporate habitat connectivity and the preservation of natural areas into state and local land-use policy and the environmental review process to minimize habitat fragmentation and related threats associated with development.

100. State Regulations

100.3.0 Regulatory initiatives for species and habitat protection

- 100.3.0.3 Develop policies that will promote the long term protection of critical migratory stopover habitats for songbirds, raptors, shorebirds, bats and invertebrates.
- 100.3.0.9 Secure mitigation that creates an environmental benefit for losses of SGCN and their habitats.
- 100.3.0.18 Develop policies for conserved lands that prohibit planting and supports the control of non-native vegetation and invasive, native vegetation.
- 100.3.0.23 Review existing CAFRA regulations and ensure that the Coastal Zone Management Rules (NJAC 7:7E) adequately address mitigation that creates an environmental benefit for losses of SGCN and their habitats.
- 100.3.0.43 Identify and address (amend) regulatory impediments to beneficial habitat management.
- 100.3.0.48 Propose new State law or regulation mandating that a State-level "development impact fee" be assessed on all new development approved by municipalities (via the Municipal Land Use Law processes), and dedicate such monies to the development and implementation of regional Habitat Conservation Plans (or existing plans/programs serving the same regional function).

Peregrine Falcon

100.3.0.49 Review existing CAFRA regulations and ensure that the Coastal Zone Management Rules (NJAC 7:7E) adequately address the issue of disturbance to habitat or species as a result of human activities (e.g., construction, bridge maintenance, road work, etc.).

100.3.0.72 Develop regulations that require permit applicants and/or review agencies to assess the cumulative and synergistic effects of a proposed project (i.e., "secondary effects"), both over time and over a larger spatial scale than the site itself.

100. State Agency Policy Integration

100.4.0 Policy initiatives for species and habitat protection

100.4.0.20 Develop state regulations that require energy developers and utility service companies to implement habitat management strategies that will increase the structural diversity of the habitat, minimize habitat fragmentation and commercial infrastructure, and minimize the loss, alteration and/or degradation of the habitat and adjacent lands when working on preserved farmlands, state-owned agricultural lands, forests, parks and wildlife management areas, and any conserved lands purchased with the assistance of Green Acres and Federal Land & Water Conservation Fund monies.

100.4.0.25 Develop policies that require permit applicants and/or review agencies to assess the cumulative and synergistic effects of a proposed project (i.e., "secondary effects"), both over time and over a larger spatial scale than the site itself.

Pied-billed Grebe

Focal species that comprise this Conservation Target:

Pied-billed Grebe

Threats and Action Drivers associated with this Conservation Target:

1 Residential and Commercial Development

1.1 Housing and Urban Areas

- 1.1.1 Land conversion from natural habitat to urban and other residential areas (large and small scale) (Avg. Score: 1.00)

NJ Specific Threats: 1.1.1.2 Loss, alteration and/or degradation of habitat.

1.1.1.6 Impervious surfaces can cause an increased risk of floods, flash floods and storm damage that degrade terrestrial and aquatic habitats.

- 1.1.2 Residential development using materials that cause collision hazards (Avg. Score: 1.00)

NJ Specific Threats: 1.1.2.1 Collision risk to volant species (birds, bats and invertebrates).

1.2 Commercial and Industrial Areas

- 1.2.1 Land conversion from natural habitat to commercial or industrial areas (large and small scale) (Avg. Score: 1.00)

NJ Specific Threats: 1.2.1.2 Loss, alteration and/or degradation of habitat.

1.2.1.3 Lot layout, design and/or landscaping may create conditions that increase wildlife-human conflict.

1.2.1.6 Impervious surfaces can cause an increased risk of floods, flash floods and storm damage that degrade terrestrial and aquatic habitats.

- 1.2.2 Commercial development using materials that cause collision hazards (Avg. Score: 2.00)

NJ Specific Threats: 1.2.2.1 Collision risk to volant species (birds, bats and invertebrates).

1.3 Tourism and Recreational Areas

- 1.3.1 Land conversion from natural habitat to recreation or tourism areas (large and small scale) (Avg. Score: 1.00)

NJ Specific Threats: 1.3.1.5 Impervious surfaces can cause an increased risk of floods, flash floods and storm damage that degrade terrestrial and aquatic habitats.

3 Energy Production and Mining

3.1 Oil and Gas Facilities and Pipelines

- 3.1.1 Distribution processes of petroleum and other liquid hydrocarbons (Avg. Score: 1.00)

NJ Specific Threats: 3.1.1.1 Fragments terrestrial and aquatic habitats.

3.1.1.2 Loss, alteration and/or degradation of habitat.

3.1.1.3 Increased risk of oil spills.

3.1.1.4 Increased noise pollution.

3.1.1.5 Increased vehicular and ship traffic associated with construction and operations, and therefore an increased risk of wildlife mortality from strikes.

- 3.1.2 Natural gas distribution processes (Avg. Score: 1.00)

NJ Specific Threats: 3.1.2.2 Loss, alteration and/or degradation of habitat.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Pied-billed Grebe

3.1.2.3 Increased risk of gas leaks and explosions.

3.1.2.5 Increased vehicular and ship traffic associated with construction and operations, and therefore an increased risk of wildlife mortality from strikes.

3.2 Mining and Quarrying

3.2.2 Surface Mining - Rock Quarry (and sand quarries) (Avg. Score: 1.00)

NJ Specific Threats: 3.2.2.1 Fragments terrestrial and aquatic habitats.

3.2.2.2 Loss, alteration and/or degradation of terrestrial and aquatic habitats.

3.3 Renewable Energy

3.3.1 Wind Power (Avg. Score: 1.00)

NJ Specific Threats: 3.3.1.1 Turbines, blades, and structure foundations create a collision risk to volant species (birds, bats and invertebrates) and marine animals.

3.3.1.2 Fragments terrestrial habitats.

3.3.1.3 Loss, alteration and/or degradation of habitat.

3.3.1.4 Increased commercial infrastructure.

3.3.2 Solar Power (Avg. Score: 1.00)

NJ Specific Threats: 3.3.2.1 Fragments terrestrial habitats.

3.3.2.2 Loss, alteration and/or degradation of habitat.

4 **Transportation and Service Corridors**

4.1 Roads and Railroads

4.1.1 Land conversion from natural habitat to roads and railroads (large and small scale) (Avg. Score: 1.00)

NJ Specific Threats: 4.1.1.2 Loss, alteration and/or degradation of habitat associated with road and railroad construction and maintenance, and degradation of adjacent habitats.

4.1.2 Movement of cars and other vehicles on roads and railroads (large and small scale) (Avg. Score: 1.00)

NJ Specific Threats: 4.1.2.1 Increased vehicle traffic increases the risk of wildlife mortality from strikes.

4.2 Utility and Service Lines

4.2.1 Land conversion from natural habitat to utility and other service lines (large and small scale) or communication towers and associated access roads (Avg. Score: 1.00)

NJ Specific Threats: 4.2.1.2 Loss, alteration and/or degradation of habitat associated with rights-of-way construction and maintenance, and degradation of adjacent habitats.

4.2.1.5 Tall radio and utility towers with guy lines pose a strike hazard for migrant bats and birds, especially in poor visibility conditions (e.g., fog, nighttime, poor weather conditions).

4.3 Shipping Lanes

4.3.2 Dredging impacts (Avg. Score: 2.00)

NJ Specific Threats: 4.3.2.2 Historic and current reuse of containment facilities over time may disrupt/displace nesting birds.

4.3.2.3 Transportation of materials to and from disposal facilities may pose temporary disturbance to wildlife impacting foraging and nesting success.

4.4 Flight Paths

4.4.1 Airplane flight paths (Avg. Score: 1.00)

Pied-billed Grebe

- NJ Specific Threats:** 4.4.1.1 Increased noise disturbance to wildlife, disrupting their normal behaviors.
4.4.1.2 Increased risk of collision between airplanes and birds, bats and insects.

5 Biological Resource Use

5.4 Fishing and Harvesting of Aquatic Resources

5.4.2 Intentional Use (large scale) (Avg. Score: 1.00)

- NJ Specific Threats:** 5.4.2.1 Overharvesting of one species may lead to detrimental impacts on another; e.g., overharvest of menhaden affecting piscivorous birds.

5.4.3 Unintentional effects (subsistence/small scale) (Avg. Score: 1.00)

- NJ Specific Threats:** 5.4.3.1 Abandoned fishing tackle and gear, crab pots without excluders and ghost crab pots increase the risk of injury and death to marine mammals, sea turtles, sea birds, pinnipeds and fish species as well as terrestrial and semi-aquatic species as a result of consuming tackle or gear, entrapment and entanglement in gear.

- 5.4.3.3 Heavy fishing pressure in localized areas can prevent foraging birds from hunting prime areas decreasing their likelihood of success and reproduction.

5.4.4 Unintentional effects (large scale) (Avg. Score: 1.00)

- NJ Specific Threats:** 5.4.4.1 Fish introduced for sport fishing can negatively impact native species by competing for resources and/or altering the habitat (e.g., disrupting benthic communities and/or severely impacting aquatic vegetation).

- 5.4.4.3 Heavy fishing pressure in localized areas can prevent foraging birds from hunting prime areas decreasing their likelihood of success and reproduction.

- 5.4.4.6 Overexploitation of riparian, estuarine, and marine fisheries may deplete food resources required by marine mammals, sea turtles, marine fish and piscivorous birds, in turn resulting lower reproduction and survival.

6 Human Intrusions and Disturbance

6.1 Recreational Activities

6.1.1 Off-road vehicles (motorized and non-motorized) (Avg. Score: 2.00)

- NJ Specific Threats:** 6.1.1.2 Inappropriate use of off-road vehicles can degrade terrestrial and aquatic habitat and reduce the suitability of adjacent habitats for wildlife.

- 6.1.1.3 Increased risk of harassment that results in a change in wildlife behavior and/or direct mortality from vehicle strikes.

- 6.1.1.4 Increased noise pollution.

- 6.1.1.6 Off-road vehicles can be a mechanism of transference of wildlife diseases and invasive plant species if gear and apparel are not properly sanitized between sites.

6.1.2 Boating (Avg. Score: 3.00)

- NJ Specific Threats:** 6.1.2.1 Alteration and/or degradation of aquatic habitat.

- 6.1.2.2 Increased disturbance to marine animals and ocean-, bay- and marsh-associated birds which can alter their behavior decreasing the likelihood of their success and/or reproduction.

6.1.5 Wildlife observation and photography (Avg. Score: 2.00)

- NJ Specific Threats:** 6.1.5.1 Improperly conducted recreational activities may disrupt normal wildlife behaviors which can result in reduced reproductive success or survival, abandonment of critical sites, etc.

6.1.7 Other (Avg. Score: 3.00)

- NJ Specific Threats:** 6.1.7.1 Use of recreational or commercial pyrotechnics may cause temporary disturbance to wildlife, in particular to nesting birds.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Pied-billed Grebe

- 6.1.7.3 Drone use in areas with sensitive wildlife (e.g., nesting and foraging birds, migrating and foraging/feeding whales) can alter their behavior and can cause disturbance that impacts their reproductive and/or foraging success.

6.2 Military Exercises

- 6.2.1 Military exercises (Avg. Score: 1.00)

NJ Specific Threats: 6.2.1.1 Military testing and training exercises may inflict disturbance and potential physical harm to wildlife.

6.3 Work and Other Activities

- 6.3.1 Unauthorized research projects at significant habitats (Avg. Score: 1.00)

NJ Specific Threats: 6.3.1.2 Accidental trampling of nests, eggs/egg masses, and unseen individuals may impact reproductive success or cause direct mortality to SGCN.

- 6.3.1.3 Activities conducted without proper precautions may disturb and disrupt normal wildlife behaviors, which may impact reproductive success or survival, cause abandonment of critical sites, etc.

- 6.3.2 Authorized research projects at significant habitats (Avg. Score: 1.00)

NJ Specific Threats: 6.3.2.3 Accidental trampling of nests, eggs/egg masses, and unseen individuals may impact reproductive success or cause direct mortality to SGCN.

- 6.3.2.4 Activities conducted without proper precautions may disturb and disrupt normal wildlife behaviors, which may impact reproductive success or survival, cause abandonment of critical sites, etc.

- 6.3.3 Other "work" unrelated to research (Avg. Score: 1.00)

NJ Specific Threats: 6.3.3.1 Construction projects may disrupt normal wildlife behavior which can result in reduced reproductive success or survival, abandonment of critical sites, etc. (e.g., bridge-nesting birds).

7 Natural Systems Modifications

7.2 Dams and Water Management/Use

- 7.2.1 Abstraction of Surface Water (domestic use) (Avg. Score: 1.00)

NJ Specific Threats: 7.2.1.1 Changing water levels due to water body drawdowns (legal and illegal) may lower dissolved oxygen levels, increase water temperatures, expose wildlife to predation, and increase exposure to winter temperatures, altering wildlife behavior and survival.

- 7.2.1.2 Controlled water releases and/or improper water level management of water bodies may alter downstream dissolved oxygen levels, water temperatures, sediment deposition, and flow rates, altering wildlife behavior and survival.

- 7.2.2 Abstraction of Surface Water (commercial use) (Avg. Score: 2.00)

NJ Specific Threats: 7.2.2.2 Changing water levels due to water body drawdowns (legal and illegal) may lower dissolved oxygen levels, increase water temperatures, expose wildlife to predation, and increase exposure to winter temperatures, altering wildlife behavior and survival.

- 7.2.2.3 Controlled water releases and/or improper water level management of water bodies may alter downstream dissolved oxygen levels, water temperatures, sediment deposition, and flow rates, altering wildlife behavior and survival.

- 7.2.3 Abstraction of Surface Water (agricultural use) (Avg. Score: 1.00)

NJ Specific Threats: 7.2.3.1 Controlled water releases and/or improper water level management of water bodies may alter downstream dissolved oxygen levels, water temperatures, sediment deposition, and flow rates, altering wildlife behavior and survival.

- 7.2.3.5 Changing water levels due to water body drawdowns (legal and illegal) may lower dissolved oxygen levels, increase water temperatures, expose wildlife to predation, and increase exposure to winter temperatures, altering wildlife behavior and survival.

Pied-billed Grebe

7.2.5 Abstraction of Ground Water (domestic use) (Avg. Score: 2.00)

NJ Specific Threats: 7.2.5.1 Heavy withdrawal of ground water for domestic use may lower water tables and alter the hydrology of freshwater wetlands and headwater streams, including tributaries, seepages and vernal pools.

7.2.6 Abstraction of Ground Water (commercial use) (Avg. Score: 2.00)

NJ Specific Threats: 7.2.6.1 Heavy withdrawal of ground water for industrial and commercial use may lower water tables and alter the hydrology of freshwater wetlands and headwater streams, including tributaries, seepages and vernal pools.

7.2.7 Abstraction of Ground Water (agricultural use) (Avg. Score: 2.00)

NJ Specific Threats: 7.2.7.1 Heavy withdrawal of ground water for agricultural use may lower water tables and alter the hydrology of freshwater wetlands and headwater streams, including tributaries, seepages and vernal pools.

7.2.13 Stream Burial (Avg. Score: 1.00)

NJ Specific Threats: 7.2.13.1 Eliminates riparian habitats.

7.2.13.2 Eliminates in-stream habitat and water resources for wildlife.

7.2.14 Tidal Water Management (Avg. Score: 2.00)

NJ Specific Threats: 7.2.14.1 Freshwater tidal management for flood control alters water levels and salinity in tidal wetlands.

7.2.14.2 Tidal water management for the purpose of managing for select species may alter existing hydrologic or vegetative conditions to the detriment of other species.

7.2.14.3 Open marsh water management (and other techniques) to control mosquito populations may alter existing hydrologic or vegetative conditions to the detriment of other species.

7.2.14.4 Manipulation of marsh water levels may disturb nesting areas and flood nests.

7.3 Other Ecosystem Modifications

7.3.3 Removal of coarse woody debris (streams, forests, scrub-shrub habitats) (Avg. Score: 1.00)

NJ Specific Threats: 7.3.3.2 Decreases habitat and/or corridor suitability due to limited or absent shelter and foraging habitat.

7.3.4 Lack of natural disturbance patterns or ecosystem functions due to species loss (Avg. Score: 1.00)

NJ Specific Threats: 7.3.4.4 Human interference in natural processes such as clean up (e.g., beach-filling, shoreline hardening, tree/log removal from forests) after storms, in particular those causing post-hurricane washover and/or barrier island westward movement, and tree felling limits the disturbance needed to maintain appropriate habitats for wildlife.

7.3.5 Poor habitat management (Avg. Score: 1.00)

NJ Specific Threats: 7.3.5.2 Shifting from natural vegetation to lawns can cause increased temperatures of local aquatic systems making them unsuitable (or less suitable) for aquatic species' reproduction and survival.

7.3.5.6 Habitat management, including that which occurs on public and private lands, that does not consider timing and species' behaviors can result in the direct mortality and/or alteration or loss of habitat.

7.3.5.10 Ditching, draining and filling of marshes and wetlands eliminates habitat and degrades the remaining surrounding areas for wildlife.

7.3.5.13 Private landowners with rare species on their properties are not always cooperative in the protection and management of the species' habitats. Landowners may be held accountable for their actions when they cause harm to the species or destroy the habitat, but it is often too late for the species' population.

8 Invasive and Other Problematic Species, Genes and Diseases

8.1 Invasive Non-native/ Alien Species/ Diseases

Pied-billed Grebe

8.1.1 Unspecified Species (Avg. Score: 1.00)

NJ Specific Threats: 8.1.1.2 Alters, degrades and/or reduces the structural diversity of the natural composition of the landscape, including aquatic systems.

8.1.1.4 Invasive, non-native animals increase the risk of predation on native animals and/or herbivory on native vegetation.

8.1.3 Invasive non-native aquatic plants (Avg. Score: 1.00)

NJ Specific Threats: 8.1.3.1 Displace or out-compete native species for resources (food, light, shelter), alter the composition of the native landscapes/aquatic systems, diminish habitat suitability and reduce ecological integrity of natural communities, and may introduce disease into a population.

8.1.4 Invasive non-native terrestrial/wetland animals (Avg. Score: 1.00)

NJ Specific Threats: 8.1.4.2 Free-roaming and feral domestic animals such as cats and dogs causes direct mortality of wildlife and disturbance to wildlife breeding and resting areas.

8.1.5 Invasive non-native terrestrial/wetland plants (Avg. Score: 1.00)

NJ Specific Threats: 8.1.5.1 Displace or out-compete native species for resources (food, light, shelter), alter the composition of the native landscapes/aquatic systems, diminish habitat suitability and reduce ecological integrity of natural communities, and may introduce disease into a population.

8.2 Problematic Native Species/Diseases

8.2.1 Unspecified Species (Avg. Score: 1.00)

NJ Specific Threats: 8.2.1.4 Human-subsidized native species can become overabundant, increasing predation on other native wildlife and/or altering the ecological community.

8.2.2 Named Species (Avg. Score: 1.00)

NJ Specific Threats: 8.2.2.2 Human-subsidized native species can become overabundant, increasing predation on other native wildlife and/or altering the ecological community.

8.5 Viral/Prion-induced Diseases

8.5.2 Named Species (Disease) (Avg. Score: 1.00)

NJ Specific Threats: 8.5.2.1 Diseases such as West Nile Virus, arenavirus, sudden oak death, Avian Influenza, and snake fungal disease cause morbidity or mortality to native populations.

8.6 Diseases of Unknown Cause

8.6.0 Unknown Diseases (Avg. Score: 1.00)

NJ Specific Threats: 8.6.0.1 Diseases yet to be identified by pathologists and virologists cause decreased fitness or mortality to native populations.

9 Pollution

9.1 Domestic and Urban Waste Water

9.1.1 Sewage (Avg. Score: 1.00)

NJ Specific Threats: 9.1.1.1 Degradation of aquatic and marine water quality and habitats by changing turbidity, flow and water chemistry.

9.1.1.2 Leads to increased eutrophication and algae blooms that result in oxygen depletion.

9.1.2 Run-off (Avg. Score: 1.00)

NJ Specific Threats: 9.1.2.1 Chemical fertilizers and nutrient run-off changes the pH in streams and ponds and causes eutrophication in inland waters and estuaries, which can make habitat unsuitable for specialist species and increase the risk of invasive and generalist species.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Pied-billed Grebe

- 9.1.2.2 Contaminants degrade aquatic and marine water quality and can bioaccumulate in benthic organisms, threatening wildlife by causing developmental and behavioral abnormalities and reproductive failure.
- 9.1.2.3 Contaminants from road runoff (oil, sediment, salt, etc.) impact native vegetation and the species that rely upon them, degrade water quality in aquatic systems, and can injure or kill the aquatic and semi-aquatic species that rely upon them.

9.2 Industrial and Military Effluents

9.2.1 Oil Spills (Avg. Score: 1.00)

- NJ Specific Threats:** 9.2.1.1 Oil spills render resting, breeding and foraging habitats temporarily unavailable to wildlife, altering normal wildlife behavior.
- 9.2.1.2 Oil spills have long term effects on habitats and damage ecological processes that can cause local wildlife population declines and impaired foraging or reproduction.
- 9.2.1.3 Oil spills cause external oiling of wildlife and ingestion of oil, both of which can injure or kill wildlife.

9.2.3 Other (Avg. Score: 1.00)

- NJ Specific Threats:** 9.2.3.1 Point and nonpoint source pollution such as polychlorinated biphenyls (PCBs), pesticides, heavy metals, and endocrine disrupting compounds (EDC's) into freshwater and marine systems pose threats to wildlife through direct contact and/or ingestion, and to aquatic species and their predators through bioaccumulation, impacting the reproductive success and neurological function of many avian and fish species.
- 9.2.3.2 Chemical spills have long term effects on habitats and damage ecological processes that can cause local wildlife population declines and impaired foraging or reproduction.
- 9.2.3.3 Chemical spills may render resting, breeding and foraging habitats temporarily unavailable to wildlife, altering normal wildlife behavior.

9.2.4 Other: Hydrofracturing (Avg. Score: 1.00)

- NJ Specific Threats:** 9.2.4.1 Contaminants from hydrofracturing degrade water quality in aquatic systems, and can injure or kill the aquatic and semi-aquatic species that rely upon them.
- 9.2.4.2 Uncontrolled effluents escaping from hydrofracturing facilities can cause injury to wildlife and alter normal behaviors.

9.3 Agricultural and Forestry Effluents

9.3.1 Nutrient Loads (Avg. Score: 1.00)

- NJ Specific Threats:** 9.3.1.1 Chemical fertilizers and nutrient run-off changes the pH in streams, ponds and wetlands and causes eutrophication in inland waters and estuaries, which can make habitat unsuitable for specialist species and increase the risk of invasive and generalist species.
- 9.3.1.2 Animal waste degrades terrestrial and aquatic habitats, especially streams, ponds and wetlands, resulting in eutrophication, which disrupts oxygen and nutrient balances, and causes injury and mortality to aquatic organisms.

9.3.3 Herbicides and Pesticides (Avg. Score: 1.00)

- NJ Specific Threats:** 9.3.3.1 Pesticides degrade terrestrial and aquatic habitats, especially streams, ponds and wetlands. Aquatic wildlife are particularly sensitive to these contaminants, which can cause developmental and behavioral abnormalities and reproductive failure. Some contaminants may bioaccumulate in predatory fish and birds and disrupt reproduction.
- 9.3.3.3 Use of pesticides can directly harm non-target species through direct contact and/or by reducing and/or contaminating their food supply.

9.3.5 Control of insect pests and plants leading to mortality of non-target species not associated with agriculture (Avg. Score: 1.00)

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Pied-billed Grebe

NJ Specific Threats: 9.3.5.5 Use of pesticides and herbicides can minimize the abundance of food sources for native wildlife populations.

9.4 Garbage and Solid Waste

9.4.1 Direct hazards to wildlife (Avg. Score: 2.00)

NJ Specific Threats: 9.4.1.1 Wildlife may ingest garbage causing choking or impingement in the digestive system, or they may become physically entangled in it (e.g., plastic or abandoned fish nets); conditions that make them unable to feed or drink, cause them to suffocate or drown, or otherwise restrict the animal's movement making them more susceptible to predators, starvation or injury.

9.5 Air-Bourne Pollutants

9.5.1 Acid Rain (Avg. Score: 1.00)

NJ Specific Threats: 9.5.1.1 Causes acidification of water bodies, resulting in changes to aquatic and marine communities and reducing biodiversity, and creating conditions that are unsuitable for some aquatic (freshwater and marine) and semi-aquatic species that are sensitive to pH shifts.

9.5.6 Herbicides and Pesticides (Avg. Score: 1.00)

NJ Specific Threats: 9.5.6.1 May result in injury or direct mortality of non-target species.

9.6 Excess Energy

9.6.1 Light Pollution (Avg. Score: 1.00)

NJ Specific Threats: 9.6.1.1 Artificial lighting can reduce suitability of adjacent habitat for species sensitive to artificial lights by disorienting wildlife, reducing foraging suitability or success, or increasing visibility to predators, resulting in reduced diversity and/or productivity of species in adjacent habitat.

9.6.3 Noise Pollution (Avg. Score: 2.00)

NJ Specific Threats: 9.6.3.1 Acute and chronic noise pollution in and adjacent to terrestrial and aquatic (marine and freshwater) environments could disrupt normal behaviors of wildlife such as migration, communication, feeding, eluding predators, resting and breeding, etc.

11 Climate Change and Severe Weather

11.1 Habitat Shifting or Alteration

11.1.0 Macro- and Micro-Climate Alterations (Avg. Score: 1.00)

NJ Specific Threats: 11.1.0.1 Alters native terrestrial and aquatic habitats at the macro- and micro-climate levels that can affect suitability for wildlife, in particular specialist species.

11.2 Droughts

11.2.1 Droughts (Avg. Score: 2.00)

NJ Specific Threats: 11.2.1.1 Contribute to hardened soils, decreasing water recharge during rains and increasing the likelihood of flash floods during storms.

11.2.1.2 Lead to lower groundwater levels and therefore, less available water for people and habitats.

11.2.1.3 Loss, alteration and/or degradation of terrestrial and aquatic habitats.

11.3 Temperature Extremes

11.3.1 Temperature extremes (Avg. Score: 1.00)

NJ Specific Threats: 11.3.1.1 Increasing temperatures may cause habitat loss and degradation by desiccating and/or raising the temperatures of small wetlands and streams leading to the loss of freshwater mussels and other aquatic species and species reliant upon these habitats.

11.3.1.2 Increased temperatures can negatively impact wetland, riverine, lacustrine and vernal pool-associated or -dependent wildlife by reducing flows, increasing water temperatures, lowering water levels and causing premature drying of vernal habitats.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Pied-billed Grebe

11.3.1.3 Temperature extremes of surface water and air degrades marine habitats and ecosystems, threatening marine wildlife. Such extremes also disrupt offshore currents and migratory patterns, species' ranges, and/or impact communities/food chains, all of which further impact the ecosystem.

11.3.1.4 Extremely low temperatures and/or extensive periods of unseasonably low temperatures during critical life history stages (e.g., hibernation, gestation/nesting) can alter animals' behaviors and decrease survivorship.

11.4 Storms and Flooding

11.4.1 Storms and flooding

(Avg. Score: 2.00)

NJ Specific Threats: 11.4.1.1 Extreme storms and flooding events threaten aquatic and marine wildlife through habitat degradation and alteration, including alterations to off-shore or back-bay benthic conditions, damage to submerged aquatic vegetation (SAV), increased turbidity, altered water chemistry, and potentially displacement of aquatic and marine wildlife.

11.4.1.2 Potentially damage coastal habitats, including beach- and marsh-nesting bird habitats and interdunal wetlands, and can increase marsh erosion.

11.4.1.3 Increase risk of saltwater intrusion to freshwater habitats altering the water chemistry and potentially altering aquatic wildlife community.

11.4.1.4 Flood events alter river or stream morphology, benthic conditions and habitat availability for wildlife, cause bank erosion, and deposit sediments in floodplain wetlands altering wildlife habitat.

11.4.1.6 Increased storms and flooding reduce nesting success, especially for ground-nesting birds.

11.4.2 Increased rainfall

(Avg. Score: 1.00)

NJ Specific Threats: 11.4.2.1 Extreme rain events threaten aquatic wildlife through habitat degradation and alteration, including alterations to benthic conditions, damage to submerged aquatic vegetation (SAV), increased turbidity, altered water chemistry, and potentially displacement of aquatic wildlife.

11.4.2.2 Extreme rain events can damage wildlife nesting and resting habitats, including impacts to avian eggs and chick and small mammal survivorship.

11.4.2.3 More frequent rain events can alter terrestrial and wetland vegetation communities as well as wetland hydrology, shifting wildlife community use.

11.6 Phenology Shifting or Alteration

11.6.2 Phenology shifts related to predator-prey ecology

(Avg. Score: 1.00)

NJ Specific Threats: 11.6.2.1 Alters inter-specific relationships (e.g., competition, parasitism, predation) of wildlife, ultimately leads to detrimental impacts on the ecological system.

11.6.2.2 Shifts timing of species migration, breeding and hibernation, and available food resources, causes redistribution of species, or mortality for species that are unable to relocate due to their already isolated habitat or limited mobility.

11.6.3 Phenology shifts related to species redistribution

(Avg. Score: 1.00)

NJ Specific Threats: 11.6.3.1 Shifts in timing of species migration, breeding and hibernation, and available food resources, as a result of wildlife range shifts driven by climate change.

11.6.3.2 Shifts in nesting times or egg incubation durations can limit nest success and longterm populations.

12 Resource Management Needs

12.1 Resource information collection needs

12.1.1 Lack of initial baseline inventory

(Avg. Score: 2.00)

NJ Specific Threats: 12.1.1.1 Lack of information regarding the distribution, connectivity and quality of SGCN habitats throughout the State, and where habitat enhancement/restoration will benefit SGCN and other wildlife.

Pied-billed Grebe

- 12.1.1.2 Lack of information regarding the population dynamics and trends, habitat requirements and dispersal distances of the various age classes, and survivorship of SGCN throughout the State.

12.1.2 Lack of up-to-date existing information (Avg. Score: 2.00)

NJ Specific Threats: 12.1.2.1 Lack of (routine, regular, ongoing) surveys/assessments that provide up-to-date information regarding population trends or health, and/or status of fish, wildlife and/or their habitats.

12.1.3 Need to answer research question (Avg. Score: 2.00)

NJ Specific Threats: 12.1.3.1 There are significant knowledge gaps regarding distribution, dispersal, diseases, population trends, etc. of SGCN.

- 12.1.3.4 Lack of information regarding the potential short- and long-term impacts of wind turbines and other tall coastal structures on migratory populations.

12.1.4 Need to develop new technique (Avg. Score: 2.00)

NJ Specific Threats: 12.1.4.1 Improve and evaluate survey methods for SGCN and their habitats; alter as needed.

- 12.1.4.2 Improve and evaluate survey methods for species not easily detected through standard survey methods.

12.3 Regulatory Reform

12.3.0 State Regulatory Reforms (Avg. Score: 1.00)

NJ Specific Threats: 12.3.0.7 Activities that threaten SGCN, their food sources, and/or habitats are often regulated separately and without consideration for the cumulative and synergistic effects over time or over a larger spatial scale. Therefore, regulations can fail to protect SGCN populations over time.

- 12.3.0.10 Land use regulatory processes pertaining to habitat creation, enhancement or restoration projects can be costly and/or burdensome, precluding or discouraging the development or implementation of conservation projects.

12.4 Internal Policy & Procedures Reform

12.4.0 State Policy and Procedure Reform (Avg. Score: 1.00)

NJ Specific Threats: 12.4.0.1 A species-by-species management focus as opposed to ecological systems and biodiversity generally has greater opportunity for unintended consequences for other species and may be less efficient in developing appropriate management actions.

- 12.4.0.2 Policies and procedures for lands management that lack consideration of the impacts of activity timing can result in unintended impacts to wildlife during vulnerable periods.

- 12.4.0.7 Land preservation contracts, easements, etc. that do not contain prescriptive language or flexibility allowing for habitat management can result in unsuitable habitat conditions and biodiversity declines for SGCN.

14 Education/ Outreach Needs

14.1 Education needs

14.1.1 Need for improved knowledge of fish and wildlife and their habitats (Avg. Score: 3.00)

NJ Specific Threats: 14.1.1.1 Lack of understanding of the importance of various SGCN habitats, their connectivity to similar habitats, and how planning decisions impact their quality and the wildlife that depend upon them.

- 14.1.1.2 Lack of general knowledge of SGCN life histories and vulnerabilities as they relate to land management practices.

- 14.1.1.3 Lack of understanding of the need to manage both natural and anthropogenic (e.g., yards, lawns, hayfields, etc.) habitats to minimize impacts or increase benefits to SGCN and their habitats.

14.2 Outreach needs

Pied-billed Grebe

14.2.1 Need to improve specific understanding of agency/organization goals, objectives and ongoing wildlife conservation actions (Avg. Score: 3.00)

NJ Specific Threats: 14.2.1.5 Need to develop greater understanding of and support for efforts implemented to enhance SGCN habitat and biodiversity through various wetland management practices.

15 Administrative Needs

15.2 Organizational/program planning needs

15.2.3 Need for multi-state, regional and landscape scale planning (Avg. Score: 2.00)

NJ Specific Threats: 15.2.3.1 State governance and financial structures can sometimes inhibit conservation planning and implementation at the regional and landscape-scales that are often more effective at setting priorities and meeting species and habitat conservation goals and objectives.

Actions to address the Threats and Action Drivers associated with this Conservation Target:

1 Coordination and Administration

1.2 Incentives

1.2.1 Incentives

- 1.2.1.6 Secure and promote the protection/restoration of riparian and floodplain habitats, inland wetland habitats (marsh, vernal pool, fen, emergent shrubland, forest), and other aquatic habitats (including open waters) and/or biologically appropriate buffers through incentive programs.
- 1.2.1.8 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to municipalities, land developers, and other land managers to retain and/or enhance native vegetation adjacent to aquatic habitats, and along riparian areas and wildlife movement corridors.
- 1.2.1.10 Coordinate across government agencies and non-government organizations to maximize the availability of and enrollment in existing landowner incentive programs (e.g., "farm bill," partners, etc.) to maintain and/or improve habitat.
- 1.2.1.13 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to land developers to minimize the impacts of new residential and commercial developments on SGCN and their habitats.
- 1.2.1.17 Develop a public-relations oriented certification program for private retailers who refrain from selling specified invasive or other problematic plant species.
- 1.2.1.26 Develop a new funding source, targeting natural resource damages monies, mitigation monies or other available sources, to fund new or existing landowner incentive programs.

2 Direct Management of Natural Resources

2.8 Invasive species control

2.8.0 Invasive species control strategies and implementation

- 2.8.0.1 Control invasive insect infestations by implementing BMP strategies through biological, chemical and/or mechanical means that will depress, or when appropriate, eradicate populations in a manner that avoids excessive harm to non-target species using BMPs to control infestations and limit their spread based on an inventory of invasive insect distribution and response to outbreaks.

Pied-billed Grebe

- 2.8.0.2 Develop, implement, monitor and evaluate pest control/management strategies to reduce the impacts of over-abundant wildlife species (native and/or native, invasive species) on native vegetation and the degradation of habitats supporting SGCN. Over-abundant wildlife species include but are not limited to mute swans, Canada geese, beaver and white-tailed deer.
- 2.8.0.4 Implement control/management strategies to reduce the impacts and/or limit the distribution of invasive, native and non-native species (wildlife and plants) that pose threats to native wildlife or communities. Encourage the implementation of biological and mechanical removal/control. When chemical control is used, encourage low-volume, targeted application using NJDEP-approved chemicals in accordance with the specific instructions for that chemical. Follow BMPs to maximize the effectiveness of the strategies while avoiding excessive harm to non-target species.
- 2.8.0.5 Implement biologically safe and appropriate control/management strategies, and where appropriate, eradication strategies to reduce the impacts and/or limit the distribution of invasive and/or non-native plant species within or near aquatic systems using methods that will provide the most protection to the aquatic and riparian ecological system, and minimize disturbance to the soil and wildlife. Encourage the implementation of biological and mechanical removal/control. When chemical control is used, encourage low-volume, targeted application using NJDEP-approved chemicals in accordance with the specific instructions for that chemical.
- 2.8.0.6 Implement long-term management of invasive and/or non-native plants to help maintain functioning ecological systems and biological diversity, and to enhance travel corridors. Encourage the implementation of biological and mechanical removal/control. When chemical control is used, encourage low-volume, targeted application using NJDEP-approved chemicals in accordance with the specific instructions for that chemical.

2.10 Planting/seeding

2.10.0 Planting/seeding strategies for terrestrial or aquatic habitat creation or restoration

- 2.10.0.1 Prevent or ameliorate near-term impacts of climate change throughout the State by developing, implementing and monitoring/evaluating habitat management strategies that will establish/improve habitat resilience (e.g., shorelines of the coast and Delaware Bay, forested habitats of the Pinelands and Skylands) that benefits wildlife inhabiting these areas, in particular within the coastal and Delaware Bay areas.
- 2.10.0.5 Implement habitat restoration and/or enhancement activities that include the creation of vegetative buffers between sensitive habitats (e.g., aquatic systems) and human-inhabited areas (e.g., residences, parks, etc.) and that is conducted during appropriate timing to avoid sensitive periods (e.g., nesting, denning, roosting) while minimizing (if not avoiding) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity
- 2.10.0.6 Expand the acreages and enhance the effective size of SGCN habitats by restoring adjacent, less optimal or unsuitable, habitats.
- 2.10.0.9 Restore and/or enhance riparian and floodplain habitats, inland wetland habitats (marsh, vernal pool, fen, emergent shrubland, forest), and other aquatic habitats (including open waters) and/or biologically appropriate buffers to minimize degradation, alteration and/or changes in hydrology and subsequent disturbances to and behavioral changes of wildlife (e.g., restoring biologically appropriate buffers, revegetation or restoration efforts, etc.).
- 2.10.0.10 Minimize the loss of important habitats (e.g., coastal scrub-shrub and grassy habitats, high and low marsh habitats, etc.) that provide nesting, migrating, and wintering areas for SGCN birds and other coastal and marsh-dependent species through habitat restoration efforts.

Pied-billed Grebe

- 2.10.0.11 Restore and/or enhance critical migratory terrestrial and aquatic habitats (e.g., beach, grasslands, forest, scrub-shrub, etc.) for songbirds, raptors, shorebirds, waterfowl, bats and invertebrates through habitat restoration efforts and expand habitat restoration to adjacent private lands to increase the effective size of the habitat.
- 2.10.0.13 Restore and/or enhance impoundments to provide suitable foraging and nesting habitat for SGCN species inhabiting them (e.g., bitterns, rails, ducks, turtles and some invertebrates).
- 2.10.0.14 Implement best management practices (BMPs), protective strategies and guidelines for restoring and enhancing healthy, SGCN-associated habitats while minimizing (if not avoiding) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
- 2.10.0.17 Maintain, enhance and/or restore SGCN-inhabited/used freshwater wetlands through restoring submerged aquatic vegetation.
- 2.10.0.26 Reestablish/restore historically important submerged aquatic vegetation beds in Delaware Bay tributaries to benefit SGCN waterfowl, waterbirds, terrapins, sea turtles and finfish.

2.11 Vegetation management

2.11.0 Vegetation management strategies for terrestrial or aquatic habitat creation or restoration

- 2.11.0.2 Conduct vegetation management in native terrestrial and aquatic habitats to provide suitable and appropriately sized areas for target SGCN and/or species groups; management should complement rare species needs in a targeted area.
- 2.11.0.4 Implement vegetation management strategies that consider appropriate timing to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife, particularly SGCN.
- 2.11.0.6 Reclaim degraded rare species habitats by conducting vegetation management needed to restore habitat value for the documented/target SGCN.
- 2.11.0.7 Protect significant natural and/or unique communities by implementing best management practices through vegetation management.
- 2.11.0.8 Maintain, enhance and/or restore biologically appropriate buffers for SGCN-inhabited/used freshwater wetlands through vegetation management.
- 2.11.0.13 Implement best management practices (BMPs), protective strategies, and guidelines for vegetation management to maintain and enhance healthy, SGCN-associated habitats while minimizing (if not avoiding) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
- 2.11.0.16 Prevent or ameliorate near-term impacts of climate change throughout the State by developing, implementing and monitoring/evaluating habitat management strategies that will establish/improve habitat resilience (e.g., shorelines of the coast and Delaware Bay, forested habitats of the Pinelands and Skylands) that benefits wildlife inhabiting these areas, in particular within the coastal and Delaware Bay areas.
- 2.11.0.22 Minimize habitat loss of high and low marsh habitats that provide nesting, migrating and wintering areas for SGCN birds and other marsh-dependent SGCN by maintaining or enhancing these areas through habitat management and/or revegetation or restoration efforts.
- 2.11.0.30 Identify and prioritize areas where various management tools (such as increasing salinity through the management of water levels or chemical applications) may be effective in reducing phragmites within and restoring marsh habitat.

Pied-billed Grebe

- 2.11.0.35 Increase structural habitat diversity by managing vegetation adjacent to aquatic habitats in a manner that provides a buffer from runoff and erosion and a microclimate to stabilize seasonal temperatures to benefit a variety of aquatic and semi-aquatic species.
- 2.11.0.36 Increase structural habitat diversity by managing vegetation for a variety of species and considering their life history requirements (e.g., travel corridors, shelter, resting and breeding areas) to minimize the risk of harm.
- 2.11.0.41 Increase structural habitat diversity through the implementation of a variety of vegetation management practices such as prescribed burns (either increasing or decreasing their frequency depending on the site and objective), plantings, etc. that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife.
- 2.11.0.44 Manage phragmites adjacent to coastal marshes of interest, in particular those that are within underdeveloped areas and are unprotected, through herbicide application and water management to improve resiliency of the marshes to sea level rise.

2.12 Water management

2.12.3 Drainage

- 2.12.3.2 Prevent or ameliorate near-term impacts of climate change throughout the State by developing, implementing and monitoring/evaluating habitat management strategies that will establish/improve habitat resilience (e.g., shorelines of the coast and Delaware Bay, forested habitats of the Pinelands and Skylands) such as removing drainage ditches to restore natural stream flows and wetlands, that benefit wildlife inhabiting these areas.
- 2.12.3.3 Remove tile drains and drainage ditches to improve wetland hydrology and restore natural stream flows during appropriate times to avoid sensitive periods (e.g., nesting, denning, roosting) and minimizes harm to wildlife, particularly SGCN.
- 2.12.3.4 Expand the acreages and enhance the effective size of SGCN habitats by reclaiming/restoring adjacent, degraded habitats by removing tile drains and drainage ditches.
- 2.12.3.6 Protect significant natural and/or unique communities by and when removing tile drains and drainage ditches.
- 2.12.3.11 Implement best management practices (BMPs), protective strategies, and guidelines when removing tile drains and drainage ditches to maintain and enhance healthy, SGCN-associated habitats while minimizing (if not avoiding) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.

2.12.6 Tide gate

- 2.12.6.1 Prevent or ameliorate near-term impacts of climate change throughout the State but in particular within the coastal and Delaware Bay areas by implementing habitat management strategies that will establish/improve habitat resilience, such as tide gates, that benefits wildlife inhabiting these areas.

2.12.7 Waterfowl impoundment maintenance

- 2.12.7.1 Manage impoundments to benefit SGCN species inhabiting them (e.g., bitterns, rails, ducks, turtles and some invertebrates).
- 2.12.7.2 Use impoundment management to create feeding and roosting habitats for migratory species (shorebirds, raptors, bats, songbirds and invertebrates) in appropriate areas along documented migratory corridors around the State.

Pied-billed Grebe

- 2.12.7.3 Implement best management practices (BMPs), protective strategies, and guidelines for impoundment management to maintain and enhance healthy, SGCN-associated habitats while minimizing (if not avoiding) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
 - 2.12.7.4 Implement impoundment management strategies that consider appropriate timing to avoid sensitive periods (e.g., nesting, denning, roosting) and minimizes harm to wildlife, particularly SGCN.
 - 2.12.7.5 Expand the acreages and enhance the effective size of SGCN habitats by restoring adjacent, less optimal or unsuitable, habitats through impoundment management.
 - 2.12.7.6 Reclaim degraded rare species habitats through impoundment management needed to restore habitat value for the documented/target SGCN.
 - 2.12.7.7 Protect significant natural and/or unique communities by implementing best management practices for impoundment management.
 - 2.12.7.9 Minimize habitat loss of critical coastal habitats in Delaware Bay that provide nesting, migrating, and wintering areas for birds and other coastal species by maintaining or enhancing these areas through impoundment management.
 - 2.12.7.14 Prevent or ameliorate near-term impacts of climate change throughout the State but in particular within the coastal and Delaware Bay areas by implementing habitat management strategies that will establish/improve habitat resilience, such as impoundment management, that benefits wildlife inhabiting these areas.
- 2.12.8 Watering facilities
- 2.12.8.1 Install water control structures to reduce the impact of excessive salt water flooding to particularly vulnerable high marsh habitats.
 - 2.12.8.2 Manage water levels in impoundments to improve coastal marsh habitat availability to wildlife and improve resiliency of the marshes to sea level rise.

3 Data Collection and Analysis

3.0 General fish and wildlife research, survey or monitoring

3.0.0 Research, survey or monitoring - general fish and wildlife needs

- 3.0.0.1 Conduct long-term monitoring of resident and migratory SGCN populations using standardized survey protocols to determine the variables that may impact their long-term persistence in the State (e.g., population viability, distribution, dispersal, home range and habitat use, travel corridors, food availability, vulnerability to pollutants and disease, etc.). Compile this information to determine the likely causes of population declines and to understand metapopulation dynamics. Provide data to NJ DEP for integration into the Biotics database, Landscape Project and permitting review processes.
- 3.0.0.2 Identify (through literature searches, review of available data, enlistment of habitat and/or species experts, etc.) where data gaps exist regarding SGCN distribution, and their critical and supportive habitats. Conduct surveys using standardized survey protocols to acquire baseline data, and provide the data to NJ DEP for integration into the Biotics database, Landscape Project Map and permitting review processes.
- 3.0.0.3 Gather baseline data on SGCN inhabiting permanently protected natural lands regarding their distribution and population (e.g., abundance, dispersal, demography including productivity and survival, etc.), and identify (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) critical and supporting habitats within those landscapes.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Pied-billed Grebe

- 3.0.0.4 Conduct long-term studies on SGCN inhabiting permanently protected natural lands to develop population trend data and changes in demography, and to determine if critical and/or supporting habitats are limited or changing; i.e., diminishing in value, acreage or connectivity.
- 3.0.0.5 Gather baseline data on resident and migratory SGCN (in particular migratory species for which New Jersey habitats are significant), terrestrial, freshwater and marine species, regarding the location and condition of their critical and supporting habitats (e.g., foraging, roosting, nesting/breeding, stopover, migration paths, etc.), and population demography (e.g., productivity, survival, dispersal). Compile this information into a database that includes descriptions of the conditions of the habitats and species, and a GIS component of the locations of these important habitats. Provide data to NJ DEP for integration into the Biotics database, Landscape Project and permitting review processes.
- 3.0.0.6 Conduct long-term studies on resident and migratory SGCN to determine if there are changes to the populations' demography (productivity, survival, dispersal) and/or to their critical and/or supporting habitats (i.e., diminishing in value, acreage or connectivity, etc.), in particular changes that would not maintain SGCN at viable levels for species populations. Update data and GIS maps; provide updated information to NJ DEP for integration into the Biotics database, Landscape Project and permitting review processes.
- 3.0.0.7 Collect baseline data to document species distributions, in particular SGCN, and current habitat for future analysis of possible distribution shifting as a result of habitat shifting or alteration associated with climate change impacts.
- 3.0.0.8 Conduct long-term studies and compare baseline metrics of documented species distributions and associated habitats to identify possible species and/or habitat shifting or alteration associated with climate change impacts.
- 3.0.0.12 Compile available life history information on urban-associated SGCN (e.g., predators, levels of nest/young depredation, breeding longevity and reproductive effort over time, preferred nesting/reproductive requirements, fidelity to breeding and wintering sites, comprehensive assessment of migration routes and destinations) for future development of management strategies to benefit such species.
- 3.0.0.13 Investigate the effects of pesticides, herbicides and other biological controls on SGCN and their critical and supporting habitats. Evaluate and modify management practices as appropriate.
- 3.0.0.25 Identify pathways of migratory SGCN in the Atlantic Coastal and Marine Regions (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) and use the data to help evaluate the potential short- and long-term impacts of wind turbines, radio towers, utility guy lines, and other tall coastal structures on migratory populations.
- 3.0.0.26 Conduct studies to evaluate the effectiveness of proactive species recovery plans for all endangered and threatened species including objectives and guidance pertaining to and the condition/status of critical and supporting habitats.
- 3.0.0.27 Evaluate the effectiveness of strategies to restrict human activity (e.g., recreational, maintenance work, etc.) from sensitive habitats/areas such as avian nesting sites, reptile and amphibian breeding areas (nesting or gestation/birthing and breeding pools, respectively), and bat hibernacula, and federal buffers for marine mammals through research and monitoring. Develop and provide NJ DEP and other appropriate governing agencies/commissions a summary of findings and recommendations to improve such efforts.

3.2 Research, survey or monitoring - fish and wildlife populations

3.2.0 Data deficiency

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Pied-billed Grebe

- 3.2.0.1 Division of Fish and Wildlife should maintain a robust, up-to-date database and mapping of species occurrences.
 - 3.2.0.2 Conduct species status assessments using the Delphi Technique and review of available data and literature on fish and wildlife (including marine animals) to maintain accurate legal status categorization of native wildlife.
 - 3.2.0.4 Conduct long-term monitoring of the impacts of contaminants to vulnerable wildlife to determine the magnitude of exposure within populations and around the State, the impacts to those species, in particular SGCN, and investigate the feasibility of mitigating for such impacts. Maintain records on exposure of vulnerable wildlife to environmental toxins (such as flame retardants and endocrine disruptors), so that sources may be identified and controlled or eliminated.
 - 3.2.1 Abundance determination
 - 3.2.1.1 Identify (through literature searches, review of available data, enlistment of habitat and/or species experts, etc.) population abundance and trends for SGCN using standardized survey protocols. Provide data to NJ DEP for integration into the Biotics database, Landscape Project Map and permitting review processes.
 - 3.2.1.2 Conduct wildlife surveys on resident and migratory SGCN regarding their population abundance and trends.
 - 3.2.2 Age, size and sex structure
 - 3.2.2.1 Conduct wildlife surveys on resident and migratory SGCN regarding their survivorship.
 - 3.2.7 Population assessment
 - 3.2.7.1 Conduct species status assessments using the Delphi Technique and review of available data and literature on fish and wildlife (including marine animals) to maintain accurate legal status categorization of native wildlife.
 - 3.2.7.2 Conduct studies to evaluate the effectiveness of proactive species recovery plans for all endangered and threatened species to meet and maintain recovery goals.
- 3.3 Research, survey or monitoring - habitat
 - 3.3.1 Baseline inventory
 - 3.3.1.1 Conduct habitat assessments of significant natural and/or unique communities to identify threats to native terrestrial and aquatic habitats through systematic monitoring, review of available data, enlistment of habitat management and/or species experts, etc. Incorporate findings into a database that includes descriptions/qualifiers of the habitats, identifies and values/qualifies the threats, and includes a GIS component of the locations of the assessed areas. Share this information with landowners/managers (e.g., federal, state and local government agencies or non-government organization).
 - 3.3.1.2 Identify (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) resident and migratory SGCN habitats. Investigate their suitability for the various life history requirements of the species that dependent upon them to determine the ability for maintaining applicable SGCN populations in perpetuity.
 - 3.3.1.5 Identify areas (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) where habitat restoration and/or enhancement would benefit wildlife SGCN.

Pied-billed Grebe

- 3.3.1.14 Compile information (obtained through literature reviews, communication with other States along the Atlantic coast, academia, etc.) regarding the impacts of above water operation of wind turbines on migratory marine birds and bats. Provide data to appropriate governing agencies and/or State commissions for integration into permitting review processes.
- 3.3.1.16 Gather "best information" for spatial modeling and update/create a current model/depiction of anticipated habitat shifts from sea-level rise, flooding, etc.
- 3.3.1.23 Identify areas (through surveys/studies, predictive modeling, review of available data, enlistment of habitat management and/or species experts, etc.) where the State can allow coastal marsh migration due to sea level rise, and target these areas for land acquisition and/or land management to accommodate this transition. Targeted areas should include underdeveloped areas adjacent to unprotected coastal marshes.

3.3.2 Monitoring

- 3.3.2.2 Conduct long-term monitoring of resident and migratory SGCN habitats using standardized survey protocols to determine changes in habitat quality/suitability and threats (e.g., habitat loss and degradation, increased edge habitat, water quality) and other variables that may impact their long-term persistence in the State and to provide information needed for determining causes of population declines and understanding metapopulation dynamics.
- 3.3.2.3 Continue to update wildlife and habitat databases and revise models of critical SGCN habitats using the most current data available and where lacking, develop new SGCN and/or habitat models as data on species habitat requirements and applicable GIS data layers become available.
- 3.3.2.5 Conduct long-term monitoring of water quality of SGCN aquatic habitats (and aquatic systems feeding into those habitats) to evaluate protection and management efforts to reduce, if not eliminate, chemical contamination, siltation, eutrophication, and other forms of pollution/contamination of aquatic systems.
- 3.3.2.14 Research and evaluate the effectiveness of water quality management practices on water-dependent and semi-dependent SGCN, particularly those practices associated with permitting or mitigation actions.
- 3.3.2.15 Investigate the effectiveness of management techniques implemented to eliminate invasive terrestrial and aquatic plant species on private and public lands, and/or within sensitive and/or important habitats for SGCN.
- 3.3.2.16 Evaluate the effectiveness of best management practices (BMPs), protective strategies, and guidelines for maintaining and enhancing healthy, SGCN-associated terrestrial and aquatic habitats and associated riparian habitats, and to minimize (if not avoid) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
- 3.3.2.20 Once a system is developed for reporting and qualifying new locations of invasive species, develop, implement and monitor/evaluate invasive species removal strategies at identified locations. Priority should be given to those areas critical to SGCN and/or contain unique and/or rare plant communities supporting SGCN and/or other fish/wildlife species.
- 3.3.2.21 Develop, implement and evaluate the effectiveness of management strategies use to restore marsh habitat (e.g., phragmites reduction).

3.5 Techniques development

3.5.3 Habitat restoration methods

- 3.5.3.1 Work with land management agencies to determine the appropriate actions needed to restore/reclaim degraded habitat for the documented/target SGCN.

Pied-billed Grebe

- 3.5.3.8 Develop best management practices (BMPs), protective strategies, and guidelines for maintaining and enhancing healthy, SGCN-associated terrestrial and aquatic habitats and associated riparian habitats, and to minimize (if not avoid) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
 - 3.5.3.14 Develop aquaculture practices in the coastal areas that are compatible with the recovery of SGCN.
 - 3.5.3.15 Modify management practices based on the effects of pesticides, herbicides and other biological controls on critical and supporting SGCN habitats.
 - 3.5.3.16 Develop/improve strategies to restrict human activity (e.g., recreational, maintenance work, etc.) from sensitive habitats/areas such as avian nesting sites, reptile and amphibian breeding areas (nesting or gestation/birthing and breeding pools, respectively), and bat hibernacula, and federal buffers for marine mammals. Methods may include, but are not limited to, managing the landscape to deter access, diverting recreational and other activities from sensitive areas during critical periods through permit processes or blocking access (trails, roads, etc.), posting (if appropriate), increasing law enforcement presence, conducting management activities at appropriate times to avoid disturbance and/or harm to wildlife (e.g., habitat management, beach raking, etc.), and decreasing noise and light pollution.
 - 3.5.3.18 Develop recommendations to improve methods on land use practices such as ditching, impounding, dredging, open marsh water management, burning, and marsh restoration based on potential impacts on marsh-dependent SGCN.
 - 3.5.3.23 Revise water quality management practices based on research on water-dependent and semi-dependent SGCN, particularly when associated with permitting or mitigation actions.
 - 3.5.3.24 Based on research, modify management techniques implemented to eliminate invasive terrestrial and aquatic plant species on private and public lands, and/or within sensitive and/or important habitats for SGCN.
 - 3.5.3.25 Use data regarding SGCN population numbers/trends and demography, on-going threats, habitat changes, etc. to develop the necessary management strategies to reach or maintain viable population levels.
 - 3.5.3.27 Conduct an assessment and develop a location list of available equipment for boom deployment during oil spills.
- 3.5.4 Fish and wildlife research, survey and management techniques
 - 3.5.4.13 Develop/improve strategies to restrict human activity (e.g., recreational, maintenance work, etc.) from sensitive habitats/areas such as avian nesting sites, reptile and amphibian breeding areas (nesting or gestation/birthing and breeding pools, respectively), and bat hibernacula, and federal buffers for marine mammals. Methods may include, but are not limited to, managing the landscape to deter access, diverting recreational and other activities from sensitive areas during critical periods through permit processes or blocking access (trails, roads, etc.), posting (if appropriate), increasing law enforcement presence, conducting management activities at appropriate times to avoid disturbance and/or harm to wildlife (e.g., habitat management, beach raking, etc.), and decreasing noise and light pollution.
 - 3.5.4.14 Develop and implement agreements, and update existing agreements, with government agencies regarding the protection of critical SGCN habitats (e.g., significant breeding populations of beach nesting birds, colonial waterbird nesting areas, bat colonies, etc.).
 - 3.5.4.16 Use data regarding SGCN population numbers/trends and demography, on-going threats, habitat changes, etc. to determine if directed management efforts are needed to reach or maintain viable population levels and develop the necessary management strategies.

Pied-billed Grebe

- 3.5.4.17 Investigate new, non-invasive techniques for SGCN population evaluation through literature review, expert opinion, trial studies (if low risk), etc.
- 3.5.4.18 Investigate the effectiveness of survey techniques through selected “ground truthing” and literature and peer review in order to increase efficacy of survey, minimize surveyor bias and error, and increase accuracy of trend data.
- 3.5.4.19 Develop reliable, standardized survey and monitoring protocols for SGCN species, for which none currently exist, and their habitats.
- 3.5.4.22 Investigate the efficacy of implementing strategies to minimize or eliminate disturbances to all SGCN (i.e., beyond their federal requirements) during military activities.

6 Land and Water Rights Acquisition and Protection

6.0 Acquisition and protection strategies

6.0.0 Combined acquisition and protection strategies

- 6.0.0.1 Enhance and increase the effective size of critical migratory stopover habitats for songbirds, raptors, shorebirds, bats and invertebrates by securing adjacent habitats through an appropriate combination of fee title, non-fee title and landowner agreements.
- 6.0.0.2 Enhance and increase the effective size of SGCN habitats by protecting adjacent habitats that contribute to the overall size of the "core" area and/or provide a natural buffer, enhancing the suitability of the core area for SGCN, and/or connect conserved SGCN habitats through an appropriate combination of fee title, non-fee title and landowner agreements.
- 6.0.0.3 Secure and protect riparian and floodplain habitats, inland wetland habitats (marsh, vernal pool, fen, emergent shrubland, forest), and other aquatic habitats (including open waters) and/or biologically appropriate buffers to minimize degradation through an appropriate combination of fee title, non-fee title and landowner agreements.
- 6.0.0.5 Secure and protect critical coastal habitats (beach/dune, scrub-shrub, forest, wetland, marsh, and marine and estuarine habitats) that provide nesting, migrating and wintering areas for SGCN birds, fish and other coastal SGCN through an appropriate combination of fee title, non-fee title and landowner agreements.

6.1 Land acquisition

6.1.1 Fee title

- 6.1.1.1 Use state, federal, and local land acquisition programs (e.g., Green Acres, Blue Acres, etc.) to acquire abandoned or failing bay shore communities and to relocate displaced people and infrastructure.

6.3 Conservation area designation

6.3.0 Conservation area designation strategies

- 6.3.0.3 Increase the protection of riparian and floodplain habitats, inland wetland habitats (marsh, vernal pool, fen, emergent shrubland, forest), and other aquatic habitats (including open waters) and/or biologically appropriate buffers to minimize degradation through conservation area designations.
- 6.3.0.9 Promote the protection of critical marine habitats for SGCN through conservation area designations.

7 Law Enforcement

7.1 Law enforcement

7.1.4 Scale Unspecified

Pied-billed Grebe

- 7.1.4.7 Increase law enforcement presence to enforce regulations governing recreational activities (e.g., the use of personal watercraft and off road vehicles, caving, rock climbing, etc.) on conserved lands and within other sensitive habitats, and discourage activities that cause harm or disturbance to vegetation, wetlands, fish and wildlife.
- 7.1.4.16 Implement policies that protect and restore riparian areas.
- 7.1.4.17 Improve the enforcement of policies and/or regulations that protect wetlands, riparian and floodplain areas, and aquatic habitats (including open waters).
- 7.1.4.22 Implement policies and/or regulations that prohibit the presence of managed cat colonies and trap, neuter and release programs in or near critical wildlife habitats.

8 Outreach

8.1 Partner/stakeholder engagement

8.1.0 Partner/stakeholder engagement strategies

- 8.1.0.2 Develop a team of personnel from government entities, conservation organizations and other stakeholders engaged in oil/gas spill response for marine and freshwater habitats to develop a feasible plan for oil spill response and/or to amend NJ's current oil spill response plan that clearly outlines each organizations responsibilities and an assessment and location list of available equipment for boom deployment during oil spills.
- 8.1.0.4 Engage government agencies, conservation partners and other stakeholders in constructive dialogues encouraging them to influence policy change and the creation of incentives through a habitat bill and/or municipal ordinances for backyard habitat.
- 8.1.0.6 Engage government agencies, conservation partners and other stakeholders in discussions focused on sharing information regarding coastal and marine critical wildlife habitats, developing comprehensive mapping to assist in reducing impacts of energy production activities, and establishing a long-term monitoring program to update the data. Ensure this information is available to appropriate personnel for planning or response measures.
- 8.1.0.11 Engage government agencies, conservation partners and other stakeholders to collaboratively develop and implement an extensive educational/outreach program targeting sportsmen's organizations and fisheries, as well as public constituents, addressing the unintended effects abandoned fishing gear, tackle and crab pots can have on wildlife, and promote the collection and/or reporting of abandoned items and their locations.
- 8.1.0.12 Engage government agencies, conservation partners and other stakeholders to collaboratively develop and implement an extensive educational/outreach program targeting sportsmen's organizations and fisheries, as well as public constituents, addressing the unintended effects fishing gear and tackle can have on wildlife.
- 8.1.0.13 Engage DOD in a constructive dialogue regarding strategies to minimize disturbances to all SGCN (i.e., beyond their federal requirements) from forest management and other practices on their lands.
- 8.1.0.14 Engage DOD in a constructive dialogue regarding strategies to minimize or eliminate disturbances to all SGCN (i.e., beyond their federal requirements) during military activities.
- 8.1.0.19 Engage government agencies, conservation partners and other stakeholders to collaboratively develop a list of important projects, targeting SGCN and/or their habitat, as a guide for graduate student research. Distribute the list and contact information to all State colleges and universities.
- 8.1.0.30 Encourage government agencies and conservation partners to advise members of the relevant scientific community of the need for specific studies, reports or investigations targeting the data-deficiency regarding SGCN and/or their habitats.

Pied-billed Grebe

- 8.1.0.33 Engage government agencies, conservation partners and other land managers, communities, landowners, and commercial and industrial stakeholders in discussions regarding the importance of protecting and methods to protect priority wetlands beyond the levels afforded through regulation by maintaining and/or restoring optimal biological buffers around wetlands.
- 8.1.0.42 Engage citizens, wildlife observers and photographers through discussions and distributable information regarding the importance of and encouraging implementing responsible and ethical behavior when observing wildlife by developing an alliance of wildlife photographers and widely circulating recommendations on how to reduce impact.

8.3 WSFR program/subprogram outreach

8.3.0 WSFR program/subprogram outreach strategies

- 8.3.0.2 Utilize WSFR grant funds, in combination with alternate funding sources as needed, to implement an extensive educational/outreach program consisting of displays, fliers, list-serve mailings, Facebook posts and speaking engagements with sportsmen's organizations and fisheries, as well as public constituents, addressing the unintended effects fishing gear and tackle can have on non-target species.
- 8.3.0.4 Utilize WSFR grant funds, in combination with alternate funding sources as needed, to implement an extensive educational/outreach program consisting of displays, fliers, list-serve mailings, Facebook posts and speaking engagements with sportsmen's organizations and fisheries addressing the unintended effects abandoned fishing gear, tackle and crab pots can have on wildlife.
- 8.3.0.6 Develop and provide (or otherwise make publicly available) educational programs and/or materials to enlist landowners, land managers and local communities to discourage the presence of managed cat colonies and trap, neuter and release programs in wildlife habitats.
- 8.3.0.7 Develop and provide (or otherwise make publicly available) educational programs and/or materials that describe the negative impacts of off-road vehicles and watercraft use in and adjacent to critical SGCN habitats, and the importance of confining such activities to more appropriate locations and/or seasons.
- 8.3.0.8 Develop and provide (or otherwise make publicly available) educational programs and/or materials to educate recreationists and encourage landowners to eliminate garbage in the vicinity of suitable wildlife habitat, in particular SGCN habitat. Information should include the detrimental impacts garbage may have on various wildlife species.
- 8.3.0.13 Conduct an educational campaign to encourage observer ethics and respect for wildlife and natural habitat.
- 8.3.0.14 Develop an educational outreach program using a variety of media to ensure maximizing the distribution of information, in particular targeting sportsmen's organizations and fisheries, regarding the unintended effects abandoned fishing gear, tackle and crab pots can have on wildlife, including non-target species.
- 8.3.0.32 Develop an educational outreach program for landowners and citizens on the threats that herbicides and pesticides pose to aquatic systems and wildlife, and to promote safer usage of such products.

9 Planning

9.1 Land use planning

9.1.0 Land use planning strategies

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Pied-billed Grebe

- 9.1.0.1 Develop smart-growth plans and critical habitat designations that consider SGCN life history requirements and habitat needs, connectivity and health of those habitats, and minimizes human-associated disturbances to those habitats and SGCN inhabiting them.
- 9.1.0.3 Develop a plan that directs the creation of impervious surfaces away from and to minimize impacts on aquatic systems and critical terrestrial habitats. The plan should also include strategies to increase the resiliency of aquatic and critical terrestrial habitats to threats and stressors that would impact the reproduction and survival of wildlife.
- 9.1.0.8 Develop a plan that focuses on strategies for oil pipelines to avoid sensitive habitats that would be highly impacted by oil spills.
- 9.1.0.12 Develop a plan to avoid freshwater tidal management.
- 9.1.0.18 Develop a plan to minimize the effects of road widening and traffic volume increases within critical wildlife habitat areas using CHANJ products.
- 9.1.0.19 Develop a plan to minimize the extent of impervious surfaces as part of new construction to increase water recharge in those areas.
- 9.1.0.22 Incorporate habitat connectivity and preservation of natural areas into state and local land-use policy and the environmental review process to minimize the impacts of transportation and service corridors on fish and wildlife and their habitats.
- 9.1.0.29 Provide GIS or related data, maps, resource inventories, as well as related training, pertaining to the SWAP and it's recommended conservation actions for use or consideration by State, County or municipal planning agencies.
- 9.1.0.30 Incorporate habitat connectivity and preservation of natural areas into state and local land-use policy and the environmental review process to minimize habitat fragmentation and other related threats associated with development.
- 9.1.0.31 Develop wetland restoration plans that consider the life history and needs of wildlife occupying targeted habitats.
- 9.1.0.33 Review the species, threats, action successes, and habitats, and work with partners to revise the 2017 State Wildlife Action Plan for the 2025 resubmittal.

9.2 Organizational strategic and CMS planning

9.2.1 Organizational strategic and operational planning

- 9.2.1.1 Identify and codify legal ORV access areas on state lands.

9.3 Species and habitat management planning

9.3.1 Species management planning

- 9.3.1.3 Develop a management plan to restrict human activity (e.g., recreational, maintenance work, etc.) from sensitive habitats/areas such as avian nesting sites, reptile and amphibian breeding areas (nesting or gestation/birthing and breeding pools, respectively), and bat hibernacula, and federal buffers for marine mammals.
- 9.3.1.6 Amend NJ's current oil spill response plan to 1) expand the geographic area addressed, 2) expand the targeted species impacted and in need of recovery, and 3) revise current and integrate new actions into the plan as needed.
- 9.3.1.9 Develop a management plan incorporating the effects of pesticides, herbicides and other biological controls on SGCN and their critical and supporting habitats.
- 9.3.1.13 Develop a management plan to ensure SGCN populations' persistence based on long-term monitoring of resident and migratory SGCN populations and their habitats.

Pied-billed Grebe

- 9.3.1.16 DOD and appropriate state agencies work together to improve DOD Integrated Natural Resource Management Plans (INRMP) to develop strategies to minimize or eliminate disturbances to all SGCN (i.e., beyond their federal requirements) during military activities and to improve SGCN habitat and presence.
 - 9.3.1.20 Use compiled life history information on urban-associated SGCN regarding threats, breeding, fecundity, survival, habitat needs, wintering sites/roosts, migration routes and destinations, etc. to develop wildlife management strategies to benefit such species.
 - 9.3.2 Listed species recovery planning
 - 9.3.2.1 Develop proactive species recovery plans for all endangered and threatened species including guidance and objectives pertaining to critical and supporting habitat to meet and maintain recovery goals.
 - 9.3.3 Habitat management planning
 - 9.3.3.10 Develop a management plan to ensure SGCN populations' persistence based on long-term monitoring of resident and migratory SGCN populations and their habitats.
 - 9.3.3.15 Develop a management plan incorporating the effects of pesticides, herbicides and other biological controls on SGCN and their critical and supporting habitats.
 - 9.3.3.16 Develop a management plan to restrict human activity (e.g., recreational, maintenance work, etc.) from sensitive habitats/areas such as avian nesting sites, reptile and amphibian breeding areas (nesting or gestation/birthing and breeding pools, respectively), and bat hibernacula, and federal buffers for marine mammals.
 - 9.3.3.18 In cooperation with species and habitat experts, develop management plans for significant natural and/or unique communities, in particular those supporting SGCN, and provide the information to the landowners/managers (federal, state and local government agencies or non-government organization) for review and implementation.
 - 9.3.3.19 Develop management plans for SGCN inhabiting permanently protected natural lands using available baseline and population trend data.
 - 9.3.3.24 Develop a plan to improve the enforcement of policies and/or regulations that protect wetlands, riparian and floodplain areas, and aquatic habitats (including open waters).
 - 9.3.3.25 Develop a habitat management plan focused on areas important to near-shore, coastal species (e.g., herring, sturgeon, terrapin, nesting birds) that prioritizes these areas to direct resources to minimize the impacts of sea-level rise, flooding and storms (including extreme rain events) such as increased erosion of beach, mudflat and marsh habitats, and the increased risk of saltwater intrusion into freshwater habitats. Gather "best information" for spatial modeling of anticipated habitat shifts from sea-level rise, flooding, etc.
 - 9.3.3.29 Develop habitat management plans aimed at reducing or eliminating negative impacts of ORVs.
 - 9.3.3.32 DOD and appropriate state agencies work together to improve DOD Integrated Natural Resource Management Plans (INRMP) to develop strategies to minimize or eliminate disturbances to all SGCN (i.e., beyond their federal requirements) during military activities and to improve SGCN habitat and presence.
 - 9.3.3.38 Use compiled life history information on urban-associated SGCN regarding threats, breeding, fecundity, survival, habitat needs, wintering sites/roosts, migration routes and destinations, etc. to develop habitat management strategies to benefit such species.

11 Technical Assistance

11.1 Environmental review

11.1.1 Review of proposed projects

- 11.1.1.1 Use Biotics database and Landscape Project Mapping in regulatory reviews to ensure protection by applicable laws and regulations.
- 11.1.1.2 Develop smart-growth plans and critical habitat designations that consider SGCN life history requirements and habitat needs, connectivity and health of those habitats, and minimize human-associated disturbances to those habitats and the SGCN inhabiting them.
- 11.1.1.3 Government organizations to thoroughly review wetland restoration plans, applying the most current science for wildlife, habitats and aquatic systems, to assess the impacts to resident and migratory wildlife occupying the targeted habitats.
- 11.1.1.4 Incorporate habitat connectivity and preservation of natural areas into state and local land-use policy and the environmental review process to minimize habitat fragmentation and related threats associated with development.
- 11.1.1.5 Incorporate habitat connectivity and preservation of natural areas into state and local land-use policy and the environmental review process to minimize the impacts of transportation and service corridors on fish and wildlife and their habitats.
- 11.1.1.6 Review all projects to be conducted in or adjacent to coastal wetlands and marshes, and provide recommendations on how to best avoid or reduce human disturbance at nesting areas (for example, timing restrictions) and actions not permitted.
- 11.1.1.7 Review proposed construction or other work projects and permit applications, provide recommendations on how to best avoid disturbing sensitive species, and identify actions not permitted.
- 11.1.1.8 Review proposed research projects and permit applications, provide recommendations on how to best avoid disturbing sensitive species, and identify actions not permitted.
- 11.1.1.9 Review strategies for creating or enhancing connectivity (e.g., installing appropriately-sized wildlife passages) between wetlands to allow wildlife to disperse naturally and safely.
- 11.1.1.10 Use CHANJ mapping in reviews of proposed energy, mining, transportation and utility service companies/agencies' projects to attempt to maintain habitat connectivity and reduce fragmentation, and identify potential impacts of the projects.
- 11.1.1.13 Use the best available science (species data, habitat present, wind farm layout options, wind blade impacts on migratory species, location of migration routes, etc.) when conducting regulatory reviews of proposed wind farm projects to minimize impacts on migratory and resident wildlife and reduce habitat fragmentation.

11.1.2 Review of proposed policies and plans

- 11.1.2.2 Government organizations to thoroughly review wetland restoration plans, applying the most current science for wildlife, habitats and aquatic systems, to assess the impacts to resident and migratory wildlife occupying the targeted habitats.

11.2 Technical assistance

11.2.0 Assorted technical assistance strategies

- 11.2.0.5 Provide educational resources, training programs, and expert guidance to private and public landowners and land managers on the threats that herbicides and pesticides pose to aquatic systems and wildlife, and to promote safer usage of such products.

Pied-billed Grebe

- 11.2.0.8 Provide educational resources, training programs, and on-the-ground guidance to public and private landowners and land managers on habitat creation and enhancement strategies that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife.
 - 11.2.0.9 Provide educational resources, training programs, and on-the-ground guidance to municipalities, land developers, and other land managers and private landowners about the importance of leaving vegetation in place, especially along riparian areas and wildlife movement corridors.
 - 11.2.0.10 Provide technical support to private landowners, consultants, and land managers to create customized management plans based on location and SGCN.
 - 11.2.0.14 Provide educational resources and technical support to public and private landowners and land managers to promote the protection of wetlands, riparian and floodplain areas, and aquatic habitats (including open waters), and to enhance or restore biologically appropriate buffers.
 - 11.2.0.26 Make educational resources available to the public that encourage researchers to seek out guidance prior to finalizing proposals and submitting State permit applications to reduce potential impacts on sensitive species.
- 11.2.1 With individuals and groups involved in resource management decision making
 - 11.2.1.2 Provide professional training and technical assistance tools (e.g., mapping, guidance documents, justification, etc.) to agencies/divisions/programs within and outside of the NJ DEP regarding the SWAP, and the conservation actions recommended therein to help facilitate SWAP implementation.
 - 11.2.1.6 Provide educational resources, training programs, and on-the-ground guidance to resource agencies prior to project initiation to ensure wildlife and their habitats are protected to the highest degree possible during construction, and provisions are in place for post-construction habitat use.

100 Law and Policy

100. Legislation

100.1.3 Sub-national Level

- 100.1.3.1 Develop laws and policies to increase protection and biological buffers of wetlands.
- 100.1.3.2 Develop policies for wetland restoration plans that consider life history requirements and needs of wildlife occupying targeted habitats.
- 100.1.3.3 Initiate legislative action to establish an annual budgetary line item designating funds to support programs focused on long-term research and monitoring of wildlife diseases.

100.1.4 County and Local

- 100.1.4.13 Encourage municipal laws regulating domestic pets that may predate on wildlife.
- 100.1.4.15 Incorporate habitat connectivity and the preservation of natural areas into state and local land-use policy and the environmental review process to minimize habitat fragmentation and related threats associated with development.

100.1.5 Scale Unspecified

- 100.1.5.1 Develop laws and policies to increase protection and biological buffers of wetlands.
- 100.1.5.2 Develop policies for wetland restoration plans that consider life history requirements and needs of wildlife occupying targeted habitats.

Pied-billed Grebe

- 100.1.5.4 Incorporate habitat connectivity and preservation of natural areas into state and local land-use policy and the environmental review process to minimize the impacts of transportation and service corridors on fish and wildlife and their habitats.

100. State Regulations

100.3.0 Regulatory initiatives for species and habitat protection

- 100.3.0.1 Develop (and/or improve) policies and/or regulations that will promote the reduction of run-off and point and non-point source pollution into NJ's aquatic systems (streams, rivers, lakes/ponds, bays, ocean, wetlands, etc.).
- 100.3.0.2 Improve policies/regulations aimed at protecting and preserving critical coastal and marsh habitats and securing mitigation for losses that create an environmental benefit.
- 100.3.0.3 Develop policies that will promote the long term protection of critical migratory stopover habitats for songbirds, raptors, shorebirds, bats and invertebrates.
- 100.3.0.4 Promote policies and regulations that support marine conservation zone designations in suitable areas identified through research and literature.
- 100.3.0.9 Secure mitigation that creates an environmental benefit for losses of SGCN and their habitats.
- 100.3.0.13 Develop policies that will promote protecting and restoring riparian areas.
- 100.3.0.14 Develop policies and/or regulations that increase the protective buffers of wetlands, riparian and floodplain areas, and aquatic habitats (including open waters) to biologically appropriate distances to benefit SGCN that rely upon these habitats and improve the function of the [associated] aquatic systems.
- 100.3.0.18 Develop policies for conserved lands that prohibit planting and supports the control of non-native vegetation and invasive, native vegetation.
- 100.3.0.20 Develop policies and/or regulations that prohibit the presence of managed cat colonies and trap, neuter and release programs in or near critical wildlife habitats.
- 100.3.0.23 Review existing CAFRA regulations and ensure that the Coastal Zone Management Rules (NJAC 7:7E) adequately address mitigation that creates an environmental benefit for losses of SGCN and their habitats.
- 100.3.0.26 Adopt regulations requiring the combined sewer overflow alternative analyses required by regulation address potential impacts to wildlife in watercourses or receiving water bodies.
- 100.3.0.27 Amend harvest, license and/or permit requirements to incorporate guidance regarding the use of gear and/or tackle and current best practices to minimize bycatch or entanglement of non-target species.
- 100.3.0.38 Develop laws and/or policies to ensure appropriate and obligated financial compensation to NJDEP's Office of Natural Resource Restoration (and similar groups) for the purpose of marine habitat enhancement and wildlife research, and mitigation efforts address the disturbance of subtidal shallows and/or impacts to habitat and water quality from pollution.
- 100.3.0.39 Develop laws and/or policies to ensure appropriate financial and obligated compensation to NJDEP's Office of Natural Resource Restoration (and similar groups) for the purpose of marine habitat enhancement and wildlife research, and mitigation efforts address the impacts of invasive, non-native aquatic plant species establishing themselves or thriving as a result of illegal actions.
- 100.3.0.42 Fully adopt the former Storm water Management Rules' 300ft buffer requirements into the Flood Hazard Area Control Act Rules.
- 100.3.0.43 Identify and address (amend) regulatory impediments to beneficial habitat management.

Pied-billed Grebe

- 100.3.0.48 Propose new State law or regulation mandating that a State-level "development impact fee" be assessed on all new development approved by municipalities (via the Municipal Land Use Law processes), and dedicate such monies to the development and implementation of regional Habitat Conservation Plans (or existing plans/programs serving the same regional function).
- 100.3.0.49 Review existing CAFRA regulations and ensure that the Coastal Zone Management Rules (NJAC 7:7E) adequately address the issue of disturbance to habitat or species as a result of human activities (e.g., construction, bridge maintenance, road work, etc.).
- 100.3.0.50 Retain endangered, threatened and special concern wildlife and habitat protection measures in the Water Quality Management Program Rules.
- 100.3.0.64 Develop regulations that when implemented will protect and restore riparian areas.
- 100.3.0.72 Develop regulations that require permit applicants and/or review agencies to assess the cumulative and synergistic effects of a proposed project (i.e., "secondary effects"), both over time and over a larger spatial scale than the site itself.

100. State Agency Policy Integration

100.4.0 Policy initiatives for species and habitat protection

- 100.4.0.2 Create a policy that requires the NJ DEP to incorporate scientific information regarding climate change and sea level rise (e.g., predictions, habitat management/acquisition efforts to enhance resilience to inundation) on their websites and to work with other government entities, conservation organizations and other stakeholders to work together to collaboratively use social media campaigns to grow a constituency of NJ residents who have an elevated ecological and climate consciousness.
- 100.4.0.20 Develop state regulations that require energy developers and utility service companies to implement habitat management strategies that will increase the structural diversity of the habitat, minimize habitat fragmentation and commercial infrastructure, and minimize the loss, alteration and/or degradation of the habitat and adjacent lands when working on preserved farmlands, state-owned agricultural lands, forests, parks and wildlife management areas, and any conserved lands purchased with the assistance of Green Acres and Federal Land & Water Conservation Fund monies.
- 100.4.0.25 Develop policies that require permit applicants and/or review agencies to assess the cumulative and synergistic effects of a proposed project (i.e., "secondary effects"), both over time and over a larger spatial scale than the site itself.

Red-headed Woodpecker

Focal species that comprise this Conservation Target:

Red-headed Woodpecker

Threats and Action Drivers associated with this Conservation Target:

1 Residential and Commercial Development

1.1 Housing and Urban Areas

1.1.1 Land conversion from natural habitat to urban and other residential areas (large and small scale) (Avg. Score: 1.00)

NJ Specific Threats: 1.1.1.2 Loss, alteration and/or degradation of habitat.

1.1.2 Residential development using materials that cause collision hazards (Avg. Score: 1.00)

NJ Specific Threats: 1.1.2.1 Collision risk to volant species (birds, bats and invertebrates).

1.2 Commercial and Industrial Areas

1.2.1 Land conversion from natural habitat to commercial or industrial areas (large and small scale) (Avg. Score: 1.00)

NJ Specific Threats: 1.2.1.2 Loss, alteration and/or degradation of habitat.

1.2.2 Commercial development using materials that cause collision hazards (Avg. Score: 1.00)

NJ Specific Threats: 1.2.2.1 Collision risk to volant species (birds, bats and invertebrates).

1.3 Tourism and Recreational Areas

1.3.1 Land conversion from natural habitat to recreation or tourism areas (large and small scale) (Avg. Score: 1.00)

NJ Specific Threats: 1.3.1.2 Loss, alteration and/or degradation of habitat.

2 Agriculture and Aquaculture

2.2 Wood and Pulp Plantations

2.2.1 Small Holder (Avg. Score: 1.00)

NJ Specific Threats: 2.2.1.1 Conversion of native forests to plantations decreases the habitat quality for forest-dependent species.

2.2.1.2 Tree harvesting can cause direct mortality to wildlife, especially if done during peak activity periods or vulnerable life stages (e.g., denning, nesting, gestation/birthing, basking, roosting, pre-volancy, etc.).

2.2.2 Agro-industry Plantations (Avg. Score: 2.00)

NJ Specific Threats: 2.2.2.1 Conversion of native forests to plantations decreases the habitat quality for forest-dependent species.

2.2.2.2 Tree harvesting can cause direct mortality to wildlife, especially if done during peak activity periods or vulnerable life stages (e.g., denning, nesting, gestation/birthing, basking, roosting, pre-volancy, etc.).

3 Energy Production and Mining

3.1 Oil and Gas Facilities and Pipelines

3.1.1 Distribution processes of petroleum and other liquid hydrocarbons (Avg. Score: 1.00)

NJ Specific Threats: 3.1.1.1 Fragments terrestrial and aquatic habitats.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Red-headed Woodpecker

- 3.1.1.2 Loss, alteration and/or degradation of habitat.
- 3.1.1.3 Increased risk of oil spills.
- 3.1.1.4 Increased noise pollution.
- 3.1.1.5 Increased vehicular and ship traffic associated with construction and operations, and therefore an increased risk of wildlife mortality from strikes.

3.1.2 Natural gas distribution processes (Avg. Score: 1.00)

- NJ Specific Threats:**
- 3.1.2.1 Fragments terrestrial and aquatic habitats.
 - 3.1.2.2 Loss, alteration and/or degradation of habitat.
 - 3.1.2.4 Increased noise pollution.

3.2 Mining and Quarrying

3.2.2 Surface Mining - Rock Quarry (and sand quarries) (Avg. Score: 1.00)

- NJ Specific Threats:**
- 3.2.2.1 Fragments terrestrial and aquatic habitats.
 - 3.2.2.2 Loss, alteration and/or degradation of terrestrial and aquatic habitats.

3.3 Renewable Energy

3.3.1 Wind Power (Avg. Score: 1.00)

- NJ Specific Threats:**
- 3.3.1.1 Turbines, blades, and structure foundations create a collision risk to volant species (birds, bats and invertebrates) and marine animals.
 - 3.3.1.3 Loss, alteration and/or degradation of habitat.

3.3.2 Solar Power (Avg. Score: 1.00)

- NJ Specific Threats:**
- 3.3.2.1 Fragments terrestrial habitats.
 - 3.3.2.2 Loss, alteration and/or degradation of habitat.

3.4 Conventional Power Plants

3.4.0 Conventional Power Plants (Avg. Score: 1.00)

- NJ Specific Threats:**
- 3.4.0.2 Loss, alteration and/or degradation of habitat due to new or the expansion of current facilities.

4 Transportation and Service Corridors

4.1 Roads and Railroads

4.1.1 Land conversion from natural habitat to roads and railroads (large and small scale) (Avg. Score: 1.00)

- NJ Specific Threats:**
- 4.1.1.2 Loss, alteration and/or degradation of habitat associated with road and railroad construction and maintenance, and degradation of adjacent habitats.

4.1.2 Movement of cars and other vehicles on roads and railroads (large and small scale) (Avg. Score: 1.00)

- NJ Specific Threats:**
- 4.1.2.1 Increased vehicle traffic increases the risk of wildlife mortality from strikes.

4.2 Utility and Service Lines

4.2.1 Land conversion from natural habitat to utility and other service lines (large and small scale) or communication towers and associated access roads (Avg. Score: 1.00)

- NJ Specific Threats:**
- 4.2.1.1 Fragments terrestrial and aquatic habitats making the landscape unsuitable for area-sensitive species, inhibiting dispersal of non-volant animals, reducing gene flow, and creating barriers to fish when service line-associated roads cross streams (e.g., bridges, culverts, fords, etc.).

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Red-headed Woodpecker

4.2.1.2 Loss, alteration and/or degradation of habitat associated with rights-of-way construction and maintenance, and degradation of adjacent habitats.

4.2.1.5 Tall radio and utility towers with guy lines pose a strike hazard for migrant bats and birds, especially in poor visibility conditions (e.g., fog, nighttime, poor weather conditions).

4.2.2 Management of rights-of-way or communication tower facilities and/or their associated access roads (Avg. Score: 1.00)

NJ Specific Threats: 4.2.2.1 Improper or poorly scheduled vegetation management can cause direct mortality to and may reduce productivity of wildlife.

4.4 Flight Paths

4.4.1 Airplane flight paths (Avg. Score: 1.00)

NJ Specific Threats: 4.4.1.2 Increased risk of collision between airplanes and birds, bats and insects.

5 Biological Resource Use

5.2 Gathering Terrestrial Plants

5.2.3 Control (Avg. Score: 1.00)

NJ Specific Threats: 5.2.3.2 Clearing of scrub-shrub vegetation [and snags] diminishes cover and nesting habitat.

5.3 Logging and Wood Harvesting

5.3.1 Intentional Use (subsistence/small scale) (Avg. Score: 1.00)

NJ Specific Threats: 5.3.1.1 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN may fragment their terrestrial habitats.

5.3.1.2 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN may cause the loss, alteration and/or degradation of wildlife habitat.

5.3.1.5 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN and unsustainable forestry practices may decrease structural diversity and biomass leading to reduced biodiversity and ecological integrity.

5.3.2 Intentional Use (large scale) (Avg. Score: 2.00)

NJ Specific Threats: 5.3.2.1 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN may fragment their terrestrial habitats.

5.3.2.2 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN may cause the loss, alteration and/or degradation of wildlife habitat.

5.3.2.5 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN and unsustainable forestry practices may decrease structural diversity and biomass leading to reduced biodiversity and ecological integrity.

5.3.3 Unintentional effects (subsistence/small scale) (Avg. Score: 1.00)

NJ Specific Threats: 5.3.3.1 Direct mortality of wildlife, direct loss of suitable habitats (roost, foraging, shelter, etc.), and can disrupt sensitive species, decreasing the likelihood of success and/or reproduction.

5.3.4 Unintentional effects (large scale) (Avg. Score: 2.00)

NJ Specific Threats: 5.3.4.1 Direct mortality of wildlife, direct loss of suitable habitats (roost, foraging, shelter, etc.), and can disrupt sensitive species, decreasing the likelihood of success and/or reproduction.

5.3.4.5 Lack of appropriate, sustainable forest management can lead to a decrease in forest habitat diversity, degraded habitat for many forest species, the loss of habitat for early-successional species, and/or the loss of unique habitats for species that need canopy breaks and multi-aged tree composition to fulfill various life history requirements.

6 Human Intrusions and Disturbance

Red-headed Woodpecker

6.1 Recreational Activities

6.1.1 Off-road vehicles (motorized and non-motorized) (Avg. Score: 1.00)

NJ Specific Threats: 6.1.1.2 Inappropriate use of off-road vehicles can degrade terrestrial and aquatic habitat and reduce the suitability of adjacent habitats for wildlife.

6.1.1.4 Increased noise pollution.

6.1.1.6 Off-road vehicles can be a mechanism of transference of wildlife diseases and invasive plant species if gear and apparel are not properly sanitized between sites.

6.1.5 Wildlife observation and photography (Avg. Score: 1.00)

NJ Specific Threats: 6.1.5.1 Improperly conducted recreational activities may disrupt normal wildlife behaviors which can result in reduced reproductive success or survival, abandonment of critical sites, etc.

6.1.5.2 Participants may introduce wildlife diseases and invasive plant species when gear and apparel is not properly sanitized between sites.

6.1.7 Other (Avg. Score: 1.00)

NJ Specific Threats: 6.1.7.1 Use of recreational or commercial pyrotechnics may cause temporary disturbance to wildlife, in particular to nesting birds.

6.1.7.3 Drone use in areas with sensitive wildlife (e.g., nesting and foraging birds, migrating and foraging/feeding whales) can alter their behavior and can cause disturbance that impacts their reproductive and/or foraging success.

6.2 Military Exercises

6.2.1 Military exercises (Avg. Score: 1.00)

NJ Specific Threats: 6.2.1.1 Military testing and training exercises may inflict disturbance and potential physical harm to wildlife.

6.3 Work and Other Activities

6.3.1 Unauthorized research projects at significant habitats (Avg. Score: 1.00)

NJ Specific Threats: 6.3.1.1 Participants may introduce wildlife diseases and invasive plant species when gear and apparel is not properly sanitized between sites.

6.3.2 Authorized research projects at significant habitats (Avg. Score: 1.00)

NJ Specific Threats: 6.3.2.2 Participants may introduce wildlife diseases and invasive plant species when gear and apparel is not properly sanitized between sites.

7 Natural Systems Modifications

7.1 Fire and Fire Suppression

7.1.1 Increase in Fire Frequency/Intensity (Avg. Score: 1.00)

NJ Specific Threats: 7.1.1.1 Increase in frequency and intensity of wild fires as a result of droughts and heat waves drying out vegetation and litter.

7.1.1.2 Increase in frequency of wild fires as a result of illegal activities.

7.1.1.3 Unnatural fire regimes occurring as a result of military exercises.

7.1.1.4 Lack of diversity in age structure and composition of vegetation due to expansive, frequent fires.

7.1.2 Suppression of Fire Frequency/Intensity (Avg. Score: 3.00)

NJ Specific Threats: 7.1.2.1 Shift in vegetative communities as a result of suppression of natural fires.

7.1.2.2 Lack of diversity in age structure and composition of vegetation due to the suppression of fire.

7.3 Other Ecosystem Modifications

Red-headed Woodpecker

7.3.3 Removal of coarse woody debris (streams, forests, scrub-shrub habitats) (Avg. Score: 3.00)

- NJ Specific Threats:** 7.3.3.2 Decreases habitat and/or corridor suitability due to limited or absent shelter and foraging habitat.
- 7.3.3.3 Removal of dead trees (snags), large felled logs (i.e., those > 12" dbh), and other downed woody material diminishes nesting, roosting, and sheltering options for wildlife, and increases the ease at which deer can browse regenerating vegetation.

7.3.4 Lack of natural disturbance patterns or ecosystem functions due to species loss (Avg. Score: 2.00)

- NJ Specific Threats:** 7.3.4.1 The management and/or loss of beavers decreases natural disturbance patterns.
- 7.3.4.5 The lack of forest disturbance minimizes the diversity of herbaceous vegetation and other shrubs and trees that need a lot of sunlight to grow.

7.3.5 Poor habitat management (Avg. Score: 3.00)

- NJ Specific Threats:** 7.3.5.1 Improper or poorly scheduled maintenance of man-made corridors (e.g., roadsides and medians) can cause direct mortality to and may reduce productivity of wildlife.
- 7.3.5.3 Vegetation clearing removes terrestrial and riparian corridors for animal movement, shelter, and resting areas.
- 7.3.5.5 Habitat management that alters or removes vegetation without implementing long-term management increases the risk of invasive and exotic plants establishing themselves, outcompeting native vegetation.
- 7.3.5.6 Habitat management, including that which occurs on public and private lands, that does not consider timing and species' behaviors can result in the direct mortality and/or alteration or loss of habitat.
- 7.3.5.12 Lack of diversity in age structure and composition of vegetation due to lack of natural disturbances and/or vegetation management.
- 7.3.5.14 Intentional felling and removal of dead standing trees or snags eliminates resting, nesting or feeding habitat, and precludes the snags eventual contribution to coarse woody debris and forest floor structure and habitat.
- 7.3.5.15 Lack of funding, incentives, or technical guidance resources to proactively manage land to benefit SGCN wildlife.
- 7.3.5.17 Decreased diversity in height and species of herbaceous vegetation resulting in reduced cover and food for nesting and foraging wildlife.

8 Invasive and Other Problematic Species, Genes and Diseases

8.1 Invasive Non-native/ Alien Species/ Diseases

8.1.4 Invasive non-native terrestrial/wetland animals (Avg. Score: 1.00)

- NJ Specific Threats:** 8.1.4.1 Displace or out-compete native species for resources (food, shelter), alter the composition of the native landscapes/aquatic systems, diminish habitat suitability and reduce ecological integrity of natural communities, and may introduce disease into a population.
- 8.1.4.2 Free-roaming and feral domestic animals such as cats and dogs causes direct mortality of wildlife and disturbance to wildlife breeding and resting areas.

8.2 Problematic Native Species/Diseases

8.2.1 Unspecified Species (Avg. Score: 1.00)

- NJ Specific Threats:** 8.2.1.2 Invasive pathogens and insects may increase in range and abundance as limiting factors (such as temperature) are altered as a result of climate change.
- 8.2.1.4 Human-subsidized native species can become overabundant, increasing predation on other native wildlife and/or altering the ecological community.

Red-headed Woodpecker

8.2.2 Named Species (Avg. Score: 1.00)

NJ Specific Threats: 8.2.2.2 Human-subsidized native species can become overabundant, increasing predation on other native wildlife and/or altering the ecological community.

8.5 Viral/Prion-induced Diseases

8.5.2 Named Species (Disease) (Avg. Score: 1.00)

NJ Specific Threats: 8.5.2.1 Diseases such as West Nile Virus, arenavirus, sudden oak death, Avian Influenza, and snake fungal disease cause morbidity or mortality to native populations.

8.6 Diseases of Unknown Cause

8.6.0 Unknown Diseases (Avg. Score: 1.00)

NJ Specific Threats: 8.6.0.1 Diseases yet to be identified by pathologists and virologists cause decreased fitness or mortality to native populations.

9 Pollution

9.1 Domestic and Urban Waste Water

9.1.1 Sewage (Avg. Score: 1.00)

NJ Specific Threats: 9.1.1.3 Contaminants in sewage treatment effluents and Combined Sewer Overflows can cause developmental and behavioral abnormalities and reproductive failure in wildlife.

9.1.2 Run-off (Avg. Score: 1.00)

NJ Specific Threats: 9.1.2.3 Contaminants from road runoff (oil, sediment, salt, etc.) impact native vegetation and the species that rely upon them, degrade water quality in aquatic systems, and can injure or kill the aquatic and semi-aquatic species that rely upon them.

9.2 Industrial and Military Effluents

9.2.1 Oil Spills (Avg. Score: 1.00)

NJ Specific Threats: 9.2.1.1 Oil spills render resting, breeding and foraging habitats temporarily unavailable to wildlife, altering normal wildlife behavior.

9.2.1.2 Oil spills have long term effects on habitats and damage ecological processes that can cause local wildlife population declines and impaired foraging or reproduction.

9.2.3 Other (Avg. Score: 1.00)

NJ Specific Threats: 9.2.3.1 Point and nonpoint source pollution such as polychlorinated biphenyls (PCBs), pesticides, heavy metals, and endocrine disrupting compounds (EDC's) into freshwater and marine systems pose threats to wildlife through direct contact and/or ingestion, and to aquatic species and their predators through bioaccumulation, impacting the reproductive success and neurological function of many avian and fish species.

9.2.3.2 Chemical spills have long term effects on habitats and damage ecological processes that can cause local wildlife population declines and impaired foraging or reproduction.

9.2.3.3 Chemical spills may render resting, breeding and foraging habitats temporarily unavailable to wildlife, altering normal wildlife behavior.

9.2.4 Other: Hydrofracturing (Avg. Score: 1.00)

NJ Specific Threats: 9.2.4.1 Contaminants from hydrofracturing degrade water quality in aquatic systems, and can injure or kill the aquatic and semi-aquatic species that rely upon them.

9.2.4.2 Uncontrolled effluents escaping from hydrofracturing facilities can cause injury to wildlife and alter normal behaviors.

9.3 Agricultural and Forestry Effluents

Red-headed Woodpecker

9.3.3 Herbicides and Pesticides

(Avg. Score: 1.00)

NJ Specific Threats: 9.3.3.3 Use of pesticides can directly harm non-target species through direct contact and/or by reducing and/or contaminating their food supply.

9.3.5 Control of insect pests and plants leading to mortality of non-target species (Avg. Score: 1.00)
not associated with agriculture

NJ Specific Threats: 9.3.5.1 Use of pesticides, insecticides, and/or herbicides can directly harm non-target species, such as amphibians and beneficial invertebrates through direct contact and/or by reducing and/or contaminating their food supply.

9.3.5.3 Use of pesticides and herbicides can minimize the abundance of invertebrates needed as a food source for many birds.

9.3.5.4 Improper use of current insecticides, such as those containing esfenvalerate, prallethrin, or piperonyl butoxide, or past use of pesticides containing chlordane still present in the soils, are toxic to various wildlife species, and can cause injury, mortality, or other effects that impair population viability.

9.3.5.5 Use of pesticides and herbicides can minimize the abundance of food sources for native wildlife populations.

9.5 Air-Bourne Pollutants

9.5.1 Acid Rain

(Avg. Score: 2.00)

NJ Specific Threats: 9.5.1.1 Causes acidification of water bodies, resulting in changes to aquatic and marine communities and reducing biodiversity, and creating conditions that are unsuitable for some aquatic (freshwater and marine) and semi-aquatic species that are sensitive to pH shifts.

9.5.1.2 Leaches calcium from the soils which in turn reduces the availability of prey, particularly calcium-rich prey such as snails.

9.5.6 Herbicides and Pesticides

(Avg. Score: 1.00)

NJ Specific Threats: 9.5.6.1 May result in injury or direct mortality of non-target species.

9.6 Excess Energy

9.6.1 Light Pollution

(Avg. Score: 1.00)

NJ Specific Threats: 9.6.1.1 Artificial lighting can reduce suitability of adjacent habitat for species sensitive to artificial lights by disorienting wildlife, reducing foraging suitability or success, or increasing visibility to predators, resulting in reduced diversity and/or productivity of species in adjacent habitat.

9.6.3 Noise Pollution

(Avg. Score: 1.00)

NJ Specific Threats: 9.6.3.1 Acute and chronic noise pollution in and adjacent to terrestrial and aquatic (marine and freshwater) environments could disrupt normal behaviors of wildlife such as migration, communication, feeding, eluding predators, resting and breeding, etc.

11 Climate Change and Severe Weather

11.1 Habitat Shifting or Alteration

11.1.0 Macro- and Micro-Climate Alterations

(Avg. Score: 1.00)

NJ Specific Threats: 11.1.0.1 Alters native terrestrial and aquatic habitats at the macro- and micro-climate levels that can affect suitability for wildlife, in particular specialist species.

11.2 Droughts

11.2.1 Droughts

(Avg. Score: 1.00)

NJ Specific Threats: 11.2.1.3 Loss, alteration and/or degradation of terrestrial and aquatic habitats.

11.3 Temperature Extremes

Red-headed Woodpecker

11.3.1 Temperature extremes (Avg. Score: 1.00)

NJ Specific Threats: 11.3.1.3 Temperature extremes of surface water and air degrades marine habitats and ecosystems, threatening marine wildlife. Such extremes also disrupt offshore currents and migratory patterns, species' ranges, and/or impact communities/food chains, all of which further impact the ecosystem.

11.4 Storms and Flooding

11.4.1 Storms and flooding (Avg. Score: 1.00)

NJ Specific Threats: 11.4.1.5 Storm damage can alter forest structure via blow-downs or micro-bursts, and can destroy bird nesting in the locales where the storms occur.

11.4.2 Increased rainfall (Avg. Score: 1.00)

NJ Specific Threats: 11.4.2.2 Extreme rain events can damage wildlife nesting and resting habitats, including impacts to avian eggs and chick and small mammal survivorship.

11.4.2.3 More frequent rain events can alter terrestrial and wetland vegetation communities as well as wetland hydrology, shifting wildlife community use.

11.6 Phenology Shifting or Alteration

11.6.2 Phenology shifts related to predator-prey ecology (Avg. Score: 1.00)

NJ Specific Threats: 11.6.2.1 Alters inter-specific relationships (e.g., competition, parasitism, predation) of wildlife, ultimately leads to detrimental impacts on the ecological system.

11.6.2.2 Shifts timing of species migration, breeding and hibernation, and available food resources, causes redistribution of species, or mortality for species that are unable to relocate due to their already isolated habitat or limited mobility.

11.6.3 Phenology shifts related to species redistribution (Avg. Score: 1.00)

NJ Specific Threats: 11.6.3.1 Shifts in timing of species migration, breeding and hibernation, and available food resources, as a result of wildlife range shifts driven by climate change.

11.6.3.2 Shifts in nesting times or egg incubation durations can limit nest success and longterm populations.

12 Resource Management Needs

12.1 Resource information collection needs

12.1.1 Lack of initial baseline inventory (Avg. Score: 1.00)

NJ Specific Threats: 12.1.1.1 Lack of information regarding the distribution, connectivity and quality of SGCN habitats throughout the State, and where habitat enhancement/restoration will benefit SGCN and other wildlife.

12.1.2 Lack of up-to-date existing information (Avg. Score: 1.00)

NJ Specific Threats: 12.1.2.1 Lack of (routine, regular, ongoing) surveys/assessments that provide up-to-date information regarding population trends or health, and/or status of fish, wildlife and/or their habitats.

12.1.3 Need to answer research question (Avg. Score: 2.00)

NJ Specific Threats: 12.1.3.1 There are significant knowledge gaps regarding distribution, dispersal, diseases, population trends, etc. of SGCN.

12.1.3.4 Lack of information regarding the potential short- and long-term impacts of wind turbines and other tall coastal structures on migratory populations.

12.1.4 Need to develop new technique (Avg. Score: 1.00)

NJ Specific Threats: 12.1.4.2 Improve and evaluate survey methods for species not easily detected through standard survey methods.

12.3 Regulatory Reform

Red-headed Woodpecker

12.3.0 State Regulatory Reforms

(Avg. Score: 1.00)

NJ Specific Threats: 12.3.0.1

Regulatory habitat protections within state land use regulations are spatially limited to specific geographic areas (e.g., Pinelands, Coastal Area) or geographic features (e.g., wetlands, streams) and so fail to protect critical habitats that exist outside of these regulated areas.

12.3.0.7

Activities that threaten SGCN, their food sources, and/or habitats are often regulated separately and without consideration for the cumulative and synergistic effects over time or over a larger spatial scale. Therefore, regulations can fail to protect SGCN populations over time.

12.3.0.9

Prescribed burns implemented by the NJ Forest Fire Service are constrained by State air quality regulations to a timeframe where seasonal weather conditions are less than ideal for effective burning. As a result, the Forest Fire Service is limited in the number of overall prescribed burns it can implement to restore habitat for wildlife.

12.3.0.10

Land use regulatory processes pertaining to habitat creation, enhancement or restoration projects can be costly and/or burdensome, precluding or discouraging the development or implementation of conservation projects.

12.4 Internal Policy & Procedures Reform

12.4.0 State Policy and Procedure Reform

(Avg. Score: 1.00)

NJ Specific Threats: 12.4.0.1

A species-by-species management focus as opposed to ecological systems and biodiversity generally has greater opportunity for unintended consequences for other species and may be less efficient in developing appropriate management actions.

12.4.0.2

Policies and procedures for lands management that lack consideration of the impacts of activity timing can result in unintended impacts to wildlife during vulnerable periods.

12.4.0.5

Bureau of Forest Fire Management policy has traditionally implemented prescribed burns on State lands for the sole purpose of public safety (i.e., addressing hazard fuel reduction), missing opportunities to burn in a manner that would additionally manage habitat for ecological diversity.

12.4.0.7

Land preservation contracts, easements, etc. that do not contain prescriptive language or flexibility allowing for habitat management can result in unsuitable habitat conditions and biodiversity declines for SGCN.

14 Education/ Outreach Needs

14.1 Education needs

14.1.1 Need for improved knowledge of fish and wildlife and their habitats

(Avg. Score: 1.00)

NJ Specific Threats: 14.1.1.1

Lack of understanding of the importance of various SGCN habitats, their connectivity to similar habitats, and how planning decisions impact their quality and the wildlife that depend upon them.

14.1.1.2

Lack of general knowledge of SGCN life histories and vulnerabilities as they relate to land management practices.

14.1.1.3

Lack of understanding of the need to manage both natural and anthropogenic (e.g., yards, lawns, hayfields, etc.) habitats to minimize impacts or increase benefits to SGCN and their habitats.

14.2 Outreach needs

14.2.1 Need to improve specific understanding of agency/organization goals, objectives and ongoing wildlife conservation actions

(Avg. Score: 2.00)

NJ Specific Threats: 14.2.1.1

Need to develop greater understanding of and support for efforts implemented to enhance SGCN habitat and biodiversity through various forest management practices.

14.2.1.5

Need to develop greater understanding of and support for efforts implemented to enhance SGCN habitat and biodiversity through various wetland management practices.

15 Administrative Needs

15.2 Organizational/program planning needs

15.2.3 Need for multi-state, regional and landscape scale planning

(Avg. Score: 2.00)

NJ Specific Threats: 15.2.3.1

State governance and financial structures can sometimes inhibit conservation planning and implementation at the regional and landscape-scales that are often more effective at setting priorities and meeting species and habitat conservation goals and objectives.

Actions to address the Threats and Action Drivers associated with this Conservation Target:

1 Coordination and Administration

1.2 Incentives

1.2.1 Incentives

- 1.2.1.1** Enhance critical migratory stopover habitats for songbirds, raptors, shorebirds, bats and invertebrates through incentive programs with adjacent private landowners to increase the effective size of the habitat.
- 1.2.1.2** Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to private and public landowners and land managers to increase the effective size of SGCN habitats by protecting/restoring adjacent habitats that contribute to the overall size of the "core" area and/or provide a natural buffer, enhancing the suitability of the core area for SGCN, and/or connect conserved SGCN habitats.
- 1.2.1.3** Secure and promote the protection/restoration of critical coastal habitats (beach/dune, scrub-shrub, forest, wetland, marsh, and marine and estuarine habitats) that provide nesting, migrating and wintering areas for SGCN birds, fish and other coastal SGCN through incentive programs.
- 1.2.1.6** Secure and promote the protection/restoration of riparian and floodplain habitats, inland wetland habitats (marsh, vernal pool, fen, emergent shrubland, forest), and other aquatic habitats (including open waters) and/or biologically appropriate buffers through incentive programs.
- 1.2.1.8** Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to municipalities, land developers, and other land managers to retain and/or enhance native vegetation adjacent to aquatic habitats, and along riparian areas and wildlife movement corridors.
- 1.2.1.9** Develop a new funding source, targeting natural resource damages monies, mitigation monies or other available sources, to fund new or existing Forestry Stewardship Programs.
- 1.2.1.10** Coordinate across government agencies and non-government organizations to maximize the availability of and enrollment in existing landowner incentive programs (e.g., "farm bill," partners, etc.) to maintain and/or improve habitat.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Red-headed Woodpecker

- 1.2.1.11 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to public and private landowners and managers, including but not limited to government and non-government agencies/organizations, energy, mining, and transportation and utility service companies/agencies, to minimize commercial infrastructure and impervious surfaces, and to improve wildlife habitats, limit fragmentation, reduce elements which would exacerbate mortality, and/or implement activities/restoration that would create new or improved corridor habitat and/or increase connectivity, and to increase structural habitat diversity through the implementation of a variety of vegetation management practices that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting), and to minimize (if not avoid) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
- 1.2.1.12 Create incentives (non-monetary and/or monetary) for land developers to redevelop abandoned areas (e.g., shopping centers, office complexes) to minimize the loss of natural habitats and reduce the extent of impervious surfaces as part of new construction to increase water recharge in those areas.
- 1.2.1.13 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to land developers to minimize the impacts of new residential and commercial developments on SGCN and their habitats.
- 1.2.1.14 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to NJ landowners and land managers (including farmers, foresters and developers) for reducing or eliminating the use of herbicides and pesticides, and implementing more ecologically safe strategies when using such products.
- 1.2.1.16 Create incentives (non-monetary and/or monetary) within State regulations (mitigations requirements or credit, BMP satisfaction, etc.) to promote the use of retailers who refrain from selling specified invasive or other problematic plant species.
- 1.2.1.17 Develop a public-relations oriented certification program for private retailers who refrain from selling specified invasive or other problematic plant species.
- 1.2.1.18 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to public and private landowners and land managers to control and reduce the impacts of invasive, native and non-native species in order to increase structural habitat diversity.
- 1.2.1.19 Create incentives for federal, state and local agencies and approved consulting foresters that provide financial, logistical or planning assistance to farmers, woodland landowners, and private landowners to adopt and/or endorse consistent BMPs concerning controlled burns to maintain and/or improve wildlife habitat.
- 1.2.1.20 Coordinate across government agencies and non-government organizations to create or expand upon tax-based incentive programs available to private, agricultural, commercial, industrial or governmental landowners and land managers to include or provide for incentives for the maintenance and/or improvement to existing habitat via the endorsement of wildlife-related BMP's.
- 1.2.1.21 Create and/or support market-based programs that subsidize or create branding for products derived sustainably from managed wildlife habitats.
- 1.2.1.22 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to horse/livestock farm owners and managers to increase structural habitat diversity in and around the farms by managing vegetation for a variety of species, in particular, farms that have fragmented forests, and by implementing ecologically best practices (e.g., do not permit overgrazing, do not allow livestock to wade in waterbodies).

Red-headed Woodpecker

- 1.2.1.23 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to private and public landowners and land managers to provide cost shares and/or plan approvals for management based on management approaches and prescriptions.
- 1.2.1.26 Develop a new funding source, targeting natural resource damages monies, mitigation monies or other available sources, to fund new or existing landowner incentive programs.
- 1.2.1.28 Create incentives to implement dynamic forest disturbance patterns, using tools such as fire, flooding, and silviculture, to support the full life cycle requirements of forest and early successional wildlife species.

2 Direct Management of Natural Resources

2.3 Fire management

2.3.3 Prescribed burning

- 2.3.3.1 Evaluate different management techniques of prescribed burns that might be used to mimic the historic role of fire and other natural disturbances in shaping an ecosystem.
- 2.3.3.2 Conduct prescribed burning in Northern New Jersey forests to maintain and regenerate a mosaic of upland forest habitats.
- 2.3.3.3 Conduct prescribed burning to improve wildlife habitat.

2.8 Invasive species control

2.8.0 Invasive species control strategies and implementation

- 2.8.0.1 Control invasive insect infestations by implementing BMP strategies through biological, chemical and/or mechanical means that will depress, or when appropriate, eradicate populations in a manner that avoids excessive harm to non-target species using BMPs to control infestations and limit their spread based on an inventory of invasive insect distribution and response to outbreaks.
- 2.8.0.2 Develop, implement, monitor and evaluate pest control/management strategies to reduce the impacts of over-abundant wildlife species (native and/or native, invasive species) on native vegetation and the degradation of habitats supporting SGCN. Over-abundant wildlife species include but are not limited to mute swans, Canada geese, beaver and white-tailed deer.
- 2.8.0.4 Implement control/management strategies to reduce the impacts and/or limit the distribution of invasive, native and non-native species (wildlife and plants) that pose threats to native wildlife or communities. Encourage the implementation of biological and mechanical removal/control. When chemical control is used, encourage low-volume, targeted application using NJDEP-approved chemicals in accordance with the specific instructions for that chemical. Follow BMPs to maximize the effectiveness of the strategies while avoiding excessive harm to non-target species.
- 2.8.0.6 Implement long-term management of invasive and/or non-native plants to help maintain functioning ecological systems and biological diversity, and to enhance travel corridors. Encourage the implementation of biological and mechanical removal/control. When chemical control is used, encourage low-volume, targeted application using NJDEP-approved chemicals in accordance with the specific instructions for that chemical.

2.10 Planting/seeding

2.10.0 Planting/seeding strategies for terrestrial or aquatic habitat creation or restoration

Red-headed Woodpecker

- 2.10.0.1 Prevent or ameliorate near-term impacts of climate change throughout the State by developing, implementing and monitoring/evaluating habitat management strategies that will establish/improve habitat resilience (e.g., shorelines of the coast and Delaware Bay, forested habitats of the Pinelands and Skylands) that benefits wildlife inhabiting these areas, in particular within the coastal and Delaware Bay areas.
- 2.10.0.5 Implement habitat restoration and/or enhancement activities that include the creation of vegetative buffers between sensitive habitats (e.g., aquatic systems) and human-inhabited areas (e.g., residences, parks, etc.) and that is conducted during appropriate timing to avoid sensitive periods (e.g., nesting, denning, roosting) while minimizing (if not avoiding) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity
- 2.10.0.6 Expand the acreages and enhance the effective size of SGCN habitats by restoring adjacent, less optimal or unsuitable, habitats.
- 2.10.0.7 Restore/reclaim and enhance degraded rare species habitats through strategic revegetation and management efforts for documented/target SGCN.
- 2.10.0.8 Protect significant natural and/or unique communities by implementing best management practices when conducting habitat restoration strategies.
- 2.10.0.9 Restore and/or enhance riparian and floodplain habitats, inland wetland habitats (marsh, vernal pool, fen, emergent shrubland, forest), and other aquatic habitats (including open waters) and/or biologically appropriate buffers to minimize degradation, alteration and/or changes in hydrology and subsequent disturbances to and behavioral changes of wildlife (e.g., restoring biologically appropriate buffers, revegetation or restoration efforts, etc.).
- 2.10.0.10 Minimize the loss of important habitats (e.g., coastal scrub-shrub and grassy habitats, high and low marsh habitats, etc.) that provide nesting, migrating, and wintering areas for SGCN birds and other coastal and marsh-dependent species through habitat restoration efforts.
- 2.10.0.11 Restore and/or enhance critical migratory terrestrial and aquatic habitats (e.g., beach, grasslands, forest, scrub-shrub, etc.) for songbirds, raptors, shorebirds, waterfowl, bats and invertebrates through habitat restoration efforts and expand habitat restoration to adjacent private lands to increase the effective size of the habitat.
- 2.10.0.14 Implement best management practices (BMPs), protective strategies and guidelines for restoring and enhancing healthy, SGCN-associated habitats while minimizing (if not avoiding) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
- 2.10.0.21 Restore and/or enhance understory habitats that suppress invasive species and provide critical resources and enhance sheltering, foraging, and nesting cover for wildlife.
- 2.10.0.22 Restore and/or enhance terrestrial and aquatic habitats to promote the regeneration of native vegetation and enhance structural diversity to benefit SGCN (e.g., vegetative buffers of aquatic systems, allow coarse, woody debris to remain in terrestrial, aquatic and riparian habitats to provide shelter, riparian stabilization and necessary microclimates, plant native trees, shrubs and grasses, etc.).
- 2.10.0.23 Restore and/or enhance roosting habitats for migratory species (shorebirds, raptors, bats, songbirds and invertebrates) in appropriate areas along documented migratory corridors around the State.

2.11 Vegetation management

- 2.11.0 Vegetation management strategies for terrestrial or aquatic habitat creation or restoration

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Red-headed Woodpecker

- 2.11.0.1 Conduct vegetation management in native terrestrial and aquatic habitats to provide suitable and appropriately sized areas to improve ecological diversity.
- 2.11.0.2 Conduct vegetation management in native terrestrial and aquatic habitats to provide suitable and appropriately sized areas for target SGCN and/or species groups; management should complement rare species needs in a targeted area.
- 2.11.0.3 Create suitable travel corridors connecting and increasing the effective size of conserved habitats for SGCN by restoring unsuitable (or less optimal) habitats through vegetation management.
- 2.11.0.4 Implement vegetation management strategies that consider appropriate timing to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife, particularly SGCN.
- 2.11.0.5 Expand the acreages and enhance the effective size of SGCN habitats by restoring adjacent, less optimal or unsuitable, habitats through vegetation management.
- 2.11.0.6 Reclaim degraded rare species habitats by conducting vegetation management needed to restore habitat value for the documented/target SGCN.
- 2.11.0.7 Protect significant natural and/or unique communities by implementing best management practices through vegetation management.
- 2.11.0.8 Maintain, enhance and/or restore biologically appropriate buffers for SGCN-inhabited/used freshwater wetlands through vegetation management.
- 2.11.0.9 Minimize habitat loss of critical coastal habitats that provide nesting, migrating, and wintering areas for birds and other coastal species by maintaining or enhancing these areas through vegetation management.
- 2.11.0.12 Conduct vegetation management to create feeding and roosting habitats for migratory species (shorebirds, raptors, bats, songbirds and invertebrates) in appropriate areas along documented migratory corridors around the State.
- 2.11.0.13 Implement best management practices (BMPs), protective strategies, and guidelines for vegetation management to maintain and enhance healthy, SGCN-associated habitats while minimizing (if not avoiding) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
- 2.11.0.16 Prevent or ameliorate near-term impacts of climate change throughout the State by developing, implementing and monitoring/evaluating habitat management strategies that will establish/improve habitat resilience (e.g., shorelines of the coast and Delaware Bay, forested habitats of the Pinelands and Skylands) that benefits wildlife inhabiting these areas, in particular within the coastal and Delaware Bay areas.
- 2.11.0.20 Create and/or maintain scrub-shrub habitats through management efforts with little to no impact on forested, wetland and grassland habitats to maintain populations of shrub-dependent SGCN.
- 2.11.0.21 Minimize the degradation, alteration and/or changes in hydrology of wetlands, riparian and floodplain areas, and aquatic habitats (including open waters) and subsequent disturbances to and behavioral changes of wildlife by maintaining or enhancing these areas and biologically appropriate buffers through habitat management and/or revegetation or restoration efforts.
- 2.11.0.23 Implement appropriate habitat management actions in areas where natural disturbances, such as wildfire, have been precluded.
- 2.11.0.31 In areas where vegetative communities are shifting due to fire suppression and controlled burns are not feasible, manage vegetation to improve wildlife habitat.

Red-headed Woodpecker

- 2.11.0.32 Increase structural habitat diversity around and when feasible, within agricultural landscapes by managing vegetation for a variety of species, in particular, those farms that have removed scrub-shrub habitat and/or fragmented forests, and by implementing ecologically best practices (e.g., no-till farming, maintaining hedgerows, buffer set-asides, etc.).
- 2.11.0.33 Increase structural habitat diversity by implementing long-term vegetation management to minimize the potential for the establishment of invasive and/or non-native plants that may outcompete native vegetation.
- 2.11.0.34 Increase structural habitat diversity by managing residential, commercial and recreational areas' landscapes for a variety of species. For example, integrate short and tall grasses, specific host plants, brush piles, water sources/wetlands, shrubby areas, nesting areas and no-mow set-asides.
- 2.11.0.36 Increase structural habitat diversity by managing vegetation for a variety of species and considering their life history requirements (e.g., travel corridors, shelter, resting and breeding areas) to minimize the risk of harm.
- 2.11.0.37 Increase structural habitat diversity by minimizing the removal of coarse, woody debris in terrestrial, aquatic and riparian habitats which benefits wildlife.
- 2.11.0.38 Increase structural habitat diversity in and around horse/livestock farms by managing vegetation for a variety of species, in particular, in and around farms that have fragmented forests, and by implementing ecologically best practices (e.g., do not permit overgrazing, do not allow livestock to wade in waterbodies).
- 2.11.0.39 Increase structural habitat diversity in and around solar farms by managing vegetation for a variety of species and that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife. For example, integrate short and tall grasses, specific host plants, brush piles, water sources/wetlands, shrubby areas, nesting areas and no-mow set-asides.
- 2.11.0.40 Increase structural habitat diversity surrounding areas used for energy, mining, and transportation and service corridors by managing vegetation for a variety of species and that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife. For example, integrate short and tall grasses, specific host plants, brush piles, water sources/wetlands, shrubby areas, nesting areas and no-mow set-asides, and avoid managing habitat during the breeding seasons for ground-nesting birds, reptiles, amphibians and small mammals.
- 2.11.0.41 Increase structural habitat diversity through the implementation of a variety of vegetation management practices such as prescribed burns (either increasing or decreasing their frequency depending on the site and objective), plantings, etc. that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife.
- 2.11.0.42 Increase structural habitat diversity within wind farms for terrestrial bound and low-flying species and around wind farms for other wildlife by managing vegetation for a variety of species and that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife.
- 2.11.0.43 Manage forests to increase variation in age structure and composition using BMPs that promote and maintain functioning ecological forest-based systems and biological diversity.

2.13 Wildlife damage management

2.13.0 Nuisance fish and wildlife damage

Red-headed Woodpecker

- 2.13.0.5 Investigate the impacts of human-subsidized and/or naturally occurring predator species on SGCN to assess the need for integrated wildlife damage management techniques (e.g., predator exclosures, fish blockages, electric fence, culls) and/or policy changes on state land management that minimize the impacts of human-subsidized predators.
- 2.13.0.7 Develop, implement, monitor and evaluate management strategies to reduce the impacts of herbivory on native vegetation and the degradation of habitats supporting SGCN by invasive and/or native, over-abundant wildlife species including but not limited to mute swans, Canada geese, beaver and white-tailed deer.
- 2.13.0.8 Implement and assess management strategies to control and reduce the impacts of detrimental species and diseases that pose threats to native wildlife or communities.

2.14 Wildlife disease management

2.14.0 Wildlife disease strategy development and investigation

- 2.14.0.1 Investigate diseases/pathogens impacting SGCN and/or their habitats.
- 2.14.0.2 Develop and implement strategies to combat the impacts of diseases/pathogens impacting SGCN and/or their habitats, track disease occurrences and monitor/research impacts to SGCN populations and their habitats.

3 Data Collection and Analysis

3.0 General fish and wildlife research, survey or monitoring

3.0.0 Research, survey or monitoring - general fish and wildlife needs

- 3.0.0.1 Conduct long-term monitoring of resident and migratory SGCN populations using standardized survey protocols to determine the variables that may impact their long-term persistence in the State (e.g., population viability, distribution, dispersal, home range and habitat use, travel corridors, food availability, vulnerability to pollutants and disease, etc.). Compile this information to determine the likely causes of population declines and to understand metapopulation dynamics. Provide data to NJ DEP for integration into the Biotics database, Landscape Project and permitting review processes.
- 3.0.0.2 Identify (through literature searches, review of available data, enlistment of habitat and/or species experts, etc.) where data gaps exist regarding SGCN distribution, and their critical and supportive habitats. Conduct surveys using standardized survey protocols to acquire baseline data, and provide the data to NJ DEP for integration into the Biotics database, Landscape Project Map and permitting review processes.
- 3.0.0.3 Gather baseline data on SGCN inhabiting permanently protected natural lands regarding their distribution and population (e.g., abundance, dispersal, demography including productivity and survival, etc.), and identify (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) critical and supporting habitats within those landscapes.
- 3.0.0.4 Conduct long-term studies on SGCN inhabiting permanently protected natural lands to develop population trend data and changes in demography, and to determine if critical and/or supporting habitats are limited or changing; i.e., diminishing in value, acreage or connectivity.

Red-headed Woodpecker

- 3.0.0.5 Gather baseline data on resident and migratory SGCN (in particular migratory species for which New Jersey habitats are significant), terrestrial, freshwater and marine species, regarding the location and condition of their critical and supporting habitats (e.g., foraging, roosting, nesting/breeding, stopover, migration paths, etc.), and population demography (e.g., productivity, survival, dispersal). Compile this information into a database that includes descriptions of the conditions of the habitats and species, and a GIS component of the locations of these important habitats. Provide data to NJ DEP for integration into the Biotics database, Landscape Project and permitting review processes.
- 3.0.0.6 Conduct long-term studies on resident and migratory SGCN to determine if there are changes to the populations' demography (productivity, survival, dispersal) and/or to their critical and/or supporting habitats (i.e., diminishing in value, acreage or connectivity, etc.), in particular changes that would not maintain SGCN at viable levels for species populations. Update data and GIS maps; provide updated information to NJ DEP for integration into the Biotics database, Landscape Project and permitting review processes.
- 3.0.0.7 Collect baseline data to document species distributions, in particular SGCN, and current habitat for future analysis of possible distribution shifting as a result of habitat shifting or alteration associated with climate change impacts.
- 3.0.0.8 Conduct long-term studies and compare baseline metrics of documented species distributions and associated habitats to identify possible species and/or habitat shifting or alteration associated with climate change impacts.
- 3.0.0.9 Identify SGCN (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) whose populations are thought to be limited due wholly or in part to a lack of (or contaminated) food resources, and compile/collect and evaluate data/information regarding potential management strategies to improve the availability of such SGCN's food resources.
- 3.0.0.10 Conduct long-term studies to evaluate the effectiveness of management strategies implemented to enhance food/prey availability for SGCN [whose populations are thought to be limited due wholly or in part to a lack of (or contaminated) food resources] through studies that investigate the populations and health of the food resources as well as the target SGCN. Revise management strategies as needed and continue to monitor the effectiveness of the efforts.
- 3.0.0.11 Develop, implement and evaluate the effectiveness of town plans that avoid impacts to SGCN species and their habitats.
- 3.0.0.13 Investigate the effects of pesticides, herbicides and other biological controls on SGCN and their critical and supporting habitats. Evaluate and modify management practices as appropriate.
- 3.0.0.25 Identify pathways of migratory SGCN in the Atlantic Coastal and Marine Regions (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) and use the data to help evaluate the potential short- and long-term impacts of wind turbines, radio towers, utility guy lines, and other tall coastal structures on migratory populations.
- 3.0.0.26 Conduct studies to evaluate the effectiveness of proactive species recovery plans for all endangered and threatened species including objectives and guidance pertaining to and the condition/status of critical and supporting habitats.
- 3.0.0.30 Conduct research to investigate the feasibility of managing and/or creating roosting habitats for migratory species (shorebirds, raptors, bats, songbirds and invertebrates) in appropriate areas along documented migratory corridors around the State.

Red-headed Woodpecker

- 3.0.0.31 Conduct short- and long-term studies (e.g., wildlife surveys and habitat assessments) to evaluate the effectiveness of vegetation management efforts to maintain, enhance and/or create roosting habitats for migratory species (shorebirds, raptors, bats, songbirds and invertebrates) in appropriate areas along documented migratory corridors around the State.

3.2 Research, survey or monitoring - fish and wildlife populations

3.2.0 Data deficiency

- 3.2.0.1 Division of Fish and Wildlife should maintain a robust, up-to-date database and mapping of species occurrences.
- 3.2.0.2 Conduct species status assessments using the Delphi Technique and review of available data and literature on fish and wildlife (including marine animals) to maintain accurate legal status categorization of native wildlife.
- 3.2.0.5 Prevent or ameliorate near-term impacts of climate change throughout the State by developing, implementing and monitoring/evaluating habitat management strategies that will establish/improve habitat resilience (e.g., shorelines of the coast and Delaware Bay, forested habitats of the Pinelands and Skylands) that benefits wildlife inhabiting these areas, in particular within the coastal and Delaware Bay areas.
- 3.2.0.10 Evaluate the effectiveness of sanitation/decontamination protocols in minimizing the transference of wildlife diseases and invasive plant species.
- 3.2.0.11 Investigate the impacts of ORV use as a mechanism to spread wildlife diseases and invasive plant species to native wildlife and habitats. Integrate this information when mapping undeveloped roads and trails to identify potentially sensitive areas in northern NJ forests.
- 3.2.0.17 Conduct monitoring at constructed wind farms (within or outside of NJ) to assess the impacts on migratory species (birds, bats, insects) and determine if NJ's land use planning efforts and/or smart-growth plans need to be revised.
- 3.2.0.24 Develop, implement and evaluate the effectiveness of BMPs for lighting of/on tall structures that minimize harm to and/or disorient wildlife, in particular but not limited to migratory birds, bats and invertebrates. Implement BMPs into state, county and local permitting processes.

3.2.1 Abundance determination

- 3.2.1.1 Identify (through literature searches, review of available data, enlistment of habitat and/or species experts, etc.) population abundance and trends for SGCN using standardized survey protocols. Provide data to NJ DEP for integration into the Biotics database, Landscape Project Map and permitting review processes.
- 3.2.1.2 Conduct wildlife surveys on resident and migratory SGCN regarding their population abundance and trends.

3.2.7 Population assessment

- 3.2.7.1 Conduct species status assessments using the Delphi Technique and review of available data and literature on fish and wildlife (including marine animals) to maintain accurate legal status categorization of native wildlife.
- 3.2.7.2 Conduct studies to evaluate the effectiveness of proactive species recovery plans for all endangered and threatened species to meet and maintain recovery goals.

3.3 Research, survey or monitoring - habitat

3.3.1 Baseline inventory

Red-headed Woodpecker

- 3.3.1.1 Conduct habitat assessments of significant natural and/or unique communities to identify threats to native terrestrial and aquatic habitats through systematic monitoring, review of available data, enlistment of habitat management and/or species experts, etc. Incorporate findings into a database that includes descriptions/qualifiers of the habitats, identifies and values/qualifies the threats, and includes a GIS component of the locations of the assessed areas. Share this information with landowners/managers (e.g., federal, state and local government agencies or non-government organization).
- 3.3.1.2 Identify (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) resident and migratory SGCN habitats. Investigate their suitability for the various life history requirements of the species that dependent upon them to determine the ability for maintaining applicable SGCN populations in perpetuity.
- 3.3.1.4 Identify (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) and investigate the suitability of corridors that connect large, contiguous tracts of similar habitats to increase their effective size (i.e., forest with forest, grassland with grassland, wetlands with wetlands, etc.) for dependent SGCN.
- 3.3.1.5 Identify areas (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) where habitat restoration and/or enhancement would benefit wildlife SGCN.
- 3.3.1.8 Assess the availability and suitability of forest habitats for SGCN species (particularly reptiles and amphibians, birds, pollinators, and tiger beetles) in southern forests since Superstorm Sandy.
- 3.3.1.9 Inventory forests throughout northern New Jersey to develop a baseline characterization of the structure and composition of habitats and identify deficient forest habitat types.
- 3.3.1.20 Identify areas (through surveys/studies, literature searches, review of available data, enlistment of habitat management and/or species experts, etc.) where invasive, non-indigenous plants and animals are either already established or are becoming established. Create a system for reporting and qualifying new locations of invasive species and for prioritizing areas for control measures according to the potential level of impact on the ecosystem and SGCN and the likelihood of success. Researchers and contractors encountering invasive plant species while performing plant and/or forest inventories on state or other conserved lands and/or private lands should report invasive plant species through the New Jersey Invasive Species Strike Team phone application.
- 3.3.1.24 Conduct regular investigations of SGCN habitat health and biodiversity on public and private lands to identify locations in need of revegetation, reduction of over-abundant, native wildlife and/or exotic species, conservation focal areas requiring limitations on human activity, etc.
- 3.3.2 **Monitoring**
 - 3.3.2.2 Conduct long-term monitoring of resident and migratory SGCN habitats using standardized survey protocols to determine changes in habitat quality/suitability and threats (e.g., habitat loss and degradation, increased edge habitat, water quality) and other variables that may impact their long-term persistence in the State and to provide information needed for determining causes of population declines and understanding metapopulation dynamics.
 - 3.3.2.3 Continue to update wildlife and habitat databases and revise models of critical SGCN habitats using the most current data available and where lacking, develop new SGCN and/or habitat models as data on species habitat requirements and applicable GIS data layers become available.
 - 3.3.2.8 Evaluate the effectiveness of current prescribed burning practices on Pinelands dependent species.

Red-headed Woodpecker

- 3.3.2.9 Investigate the effectiveness of various silviculture techniques for enhancing forests for forest-dependent SGCN.
- 3.3.2.10 Evaluate the efficacy and success of different management techniques (e.g., ecologically-based forestry activities, prescribed burns) that might be used to mimic the historic role of fire and other natural disturbances in shaping an ecosystem.
- 3.3.2.15 Investigate the effectiveness of management techniques implemented to eliminate invasive terrestrial and aquatic plant species on private and public lands, and/or within sensitive and/or important habitats for SGCN.
- 3.3.2.16 Evaluate the effectiveness of best management practices (BMPs), protective strategies, and guidelines for maintaining and enhancing healthy, SGCN-associated terrestrial and aquatic habitats and associated riparian habitats, and to minimize (if not avoid) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
- 3.3.2.20 Once a system is developed for reporting and qualifying new locations of invasive species, develop, implement and monitor/evaluate invasive species removal strategies at identified locations. Priority should be given to those areas critical to SGCN and/or contain unique and/or rare plant communities supporting SGCN and/or other fish/wildlife species.
- 3.3.2.24 Conduct regular inventories of forests throughout northern New Jersey to characterize the changing structure and composition of habitats and monitor forest conditions.

3.5 Techniques development

3.5.3 Habitat restoration methods

- 3.5.3.1 Work with land management agencies to determine the appropriate actions needed to restore/reclaim degraded habitat for the documented/target SGCN.
- 3.5.3.3 Develop/improve management techniques that might be used to mimic the historic role of fire and other natural disturbances in shaping an ecosystem.
- 3.5.3.8 Develop best management practices (BMPs), protective strategies, and guidelines for maintaining and enhancing healthy, SGCN-associated terrestrial and aquatic habitats and associated riparian habitats, and to minimize (if not avoid) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
- 3.5.3.9 Develop strategies to combat the impacts of diseases/pathogens impacting SGCN and/or their habitats.
- 3.5.3.11 Develop strategies to protect native terrestrial and aquatic habitats and dependent SGCN species from the identified threats.
- 3.5.3.15 Modify management practices based on the effects of pesticides, herbicides and other biological controls on critical and supporting SGCN habitats.
- 3.5.3.19 Work with foresters to develop prescribed burning practices for Pinelands dependent species that increase or maintain habitat quality for these species in the Pinelands.
- 3.5.3.20 Develop guidance on various silviculture techniques for enhancing forests for forest-dependent SGCN.
- 3.5.3.21 Develop management techniques (e.g., ecologically-based forestry activities, prescribed burns) that might be used to mimic the historic role of fire and other natural disturbances in shaping an ecosystem.

Red-headed Woodpecker

- 3.5.3.24 Based on research, modify management techniques implemented to eliminate invasive terrestrial and aquatic plant species on private and public lands, and/or within sensitive and/or important habitats for SGCN.
- 3.5.3.25 Use data regarding SGCN population numbers/trends and demography, on-going threats, habitat changes, etc. to develop the necessary management strategies to reach or maintain viable population levels.

3.5.4 Fish and wildlife research, survey and management techniques

- 3.5.4.2 Develop, implement, monitor and evaluate management strategies to reduce the impacts of herbivory on native vegetation and the degradation of habitats supporting SGCN by invasive and/or native, over-abundant wildlife species including but not limited to mute swans, Canada geese, beaver and white-tailed deer.
- 3.5.4.10 Develop BMPs for lighting of/on tall structures that minimize harm to and/or disorientation of wildlife, in particular but not limited to migratory birds, bats and invertebrates.
- 3.5.4.14 Develop and implement agreements, and update existing agreements, with government agencies regarding the protection of critical SGCN habitats (e.g., significant breeding populations of beach nesting birds, colonial waterbird nesting areas, bat colonies, etc.).
- 3.5.4.15 Investigate the success of management strategies used to protect and/or enhance SGCN populations and when appropriate, aid in identifying failures/resource problems and issues, and developing new strategies.
- 3.5.4.16 Use data regarding SGCN population numbers/trends and demography, on-going threats, habitat changes, etc. to determine if directed management efforts are needed to reach or maintain viable population levels and develop the necessary management strategies.
- 3.5.4.17 Investigate new, non-invasive techniques for SGCN population evaluation through literature review, expert opinion, trial studies (if low risk), etc.
- 3.5.4.18 Investigate the effectiveness of survey techniques through selected “ground truthing” and literature and peer review in order to increase efficacy of survey, minimize surveyor bias and error, and increase accuracy of trend data.
- 3.5.4.19 Develop reliable, standardized survey and monitoring protocols for SGCN species, for which none currently exist, and their habitats.

4 Education

4.1 Educator/Instructor training

4.1.0 Public education

- 4.1.0.1 Provide educational resources and training programs to private and public landowners, as well as schools, regarding the benefits and creation of backyard habitats for wildlife.

5 Facilities and Areas

5.15 Wildlife Management Areas

5.15.6 Roads

- 5.15.6.1 Clearly post areas/roads where vehicle access is permitted.
- 5.15.6.2 Clearly post areas/trails where vehicle access is not permitted.

6 Land and Water Rights Acquisition and Protection

6.0 Acquisition and protection strategies

6.0.0 Combined acquisition and protection strategies

Red-headed Woodpecker

- 6.0.0.1 Enhance and increase the effective size of critical migratory stopover habitats for songbirds, raptors, shorebirds, bats and invertebrates by securing adjacent habitats through an appropriate combination of fee title, non-fee title and landowner agreements.
- 6.0.0.2 Enhance and increase the effective size of SGCN habitats by protecting adjacent habitats that contribute to the overall size of the "core" area and/or provide a natural buffer, enhancing the suitability of the core area for SGCN, and/or connect conserved SGCN habitats through an appropriate combination of fee title, non-fee title and landowner agreements.
- 6.0.0.3 Secure and protect riparian and floodplain habitats, inland wetland habitats (marsh, vernal pool, fen, emergent shrubland, forest), and other aquatic habitats (including open waters) and/or biologically appropriate buffers to minimize degradation through an appropriate combination of fee title, non-fee title and landowner agreements.
- 6.0.0.5 Secure and protect critical coastal habitats (beach/dune, scrub-shrub, forest, wetland, marsh, and marine and estuarine habitats) that provide nesting, migrating and wintering areas for SGCN birds, fish and other coastal SGCN through an appropriate combination of fee title, non-fee title and landowner agreements.

6.3 Conservation area designation

6.3.0 Conservation area designation strategies

- 6.3.0.1 Promote the protection of critical migratory stopover habitats for songbirds, raptors, shorebirds, bats and invertebrates and enhance these lands by increasing the effective size through conservation area designations of stopover habitats and adjacent private lands.
- 6.3.0.2 Enhance and increase the effective size of SGCN habitats by protecting adjacent habitats that contribute to the overall size of the "core" area and/or provide a natural buffer, enhancing the suitability of the core area for SGCN and/or connect conserved SGCN habitats through conservation area designations.
- 6.3.0.3 Increase the protection of riparian and floodplain habitats, inland wetland habitats (marsh, vernal pool, fen, emergent shrubland, forest), and other aquatic habitats (including open waters) and/or biologically appropriate buffers to minimize degradation through conservation area designations.
- 6.3.0.5 Promote the protection of critical coastal habitats (beach/dune, scrub-shrub, forest, wetland, marsh, and marine and estuarine habitats) that provide nesting, migrating and wintering areas for SGCN birds, fish and other coastal SGCN through conservation area designations.

6.4 Private lands agreements

6.4.0 Private land agreement strategies

- 6.4.0.1 Enter into private lands agreements to expand control burns on private lands, in particular those adjacent to conserved lands to improve SGCN habitats.

7 Law Enforcement

7.1 Law enforcement

7.1.4 Scale Unspecified

- 7.1.4.4 Improve enforcement of policies/regulations aimed at protecting and preserving critical coastal and marsh habitats, and secure mitigation for losses that create an environmental benefit.
- 7.1.4.5 Enforce current policies and/or regulations to increase the ability to protect and preserve coastal habitats (beach/dune, scrub-shrub, forest, wetland, marsh, marine and estuarine habitats) that provide nesting, migrating, and wintering areas for SGCN birds, fish and other coastal SGCN, and implement and enforce amended policies/regulations.

Red-headed Woodpecker

- 7.1.4.7 Increase law enforcement presence to enforce regulations governing recreational activities (e.g., the use of personal watercraft and off road vehicles, caving, rock climbing, etc.) on conserved lands and within other sensitive habitats, and discourage activities that cause harm or disturbance to vegetation, wetlands, fish and wildlife.
- 7.1.4.8 Implement policies that protect critical migratory stopover habitats for songbirds, raptors, shorebirds, bats and invertebrates.
- 7.1.4.10 Implement policies that promotes expanding acreages and enhances the effective size of SGCN habitats by providing biologically appropriate buffers of native habitat surrounding SGCN habitats.
- 7.1.4.11 Implement and enforce policies/regulations that will increase the ability to protect and preserve coastal habitats (beach/dune, scrub-shrub, forest, wetland, marsh, and marine and estuarine habitats) that provide nesting, migrating, and wintering areas for SGCN birds, fish and other coastal and aquatic SGCN.
- 7.1.4.12 Implement policies and/or regulations that protect significant natural and/or unique communities in perpetuity.
- 7.1.4.17 Improve the enforcement of policies and/or regulations that protect wetlands, riparian and floodplain areas, and aquatic habitats (including open waters).
- 7.1.4.21 Implement regulations for lighting of/on tall structures that will minimize harm to and/or disorientation of wildlife, and enforce within state, county and local permitting processes.
- 7.1.4.22 Implement policies and/or regulations that prohibit the presence of managed cat colonies and trap, neuter and release programs in or near critical wildlife habitats.
- 7.1.4.25 Encourage the enforcement of municipal laws regulating domestic pets that may predate on wildlife.

8 Outreach

8.1 Partner/stakeholder engagement

8.1.0 Partner/stakeholder engagement strategies

- 8.1.0.4 Engage government agencies, conservation partners and other stakeholders in constructive dialogues encouraging them to influence policy change and the creation of incentives through a habitat bill and/or municipal ordinances for backyard habitat.
- 8.1.0.13 Engage DOD in a constructive dialogue regarding strategies to minimize disturbances to all SGCN (i.e., beyond their federal requirements) from forest management and other practices on their lands.
- 8.1.0.16 Engage local governments in discussions regarding the importance of them adopting/passing ordinances which require assessing and addressing secondary impacts (i.e., ancillary prescribed burns, trespassers, ORV use, mosquitoes, deer, buffers) on biological resources when revising planning/zoning documents or granted site plan/subdivision approvals.
- 8.1.0.19 Engage government agencies, conservation partners and other stakeholders to collaboratively develop a list of important projects, targeting SGCN and/or their habitat, as a guide for graduate student research. Distribute the list and contact information to all State colleges and universities.
- 8.1.0.21 Work with government agencies and environmental educators to develop educational resources and training programs, educate the public on the devastation human-subsidized and/or overabundant, native species cause to local nesting species, and provide expert guidance on how residents can help alleviate this threat.

Red-headed Woodpecker

- 8.1.0.22 Work with government agencies and environmental educators to develop educational resources and training programs, educate the public on the devastation invasive species cause to native nesting species, and provide expert guidance on how residents can help alleviate this threat.
- 8.1.0.24 Engage government agencies, conservation partners and other stakeholders in constructive dialogue regarding the importance of providing and methods to provide technical support for carrying out restoration and management practices aimed at increasing structural habitat diversity.
- 8.1.0.25 Provide technical support to public landowners and land managers for carrying out restoration and management practices aimed at increasing structural habitat diversity.
- 8.1.0.26 Coordinate across federal, state and local agencies and approved consulting foresters that provide financial, logistical or planning assistance to woodland landowners to adopt or endorse consistent best management practices concerning controlled burns to maintain and/or improve forested habitat for wildlife.
- 8.1.0.30 Encourage government agencies and conservation partners to advise members of the relevant scientific community of the need for specific studies, reports or investigations targeting the data-deficiency regarding SGCN and/or their habitats.
- 8.1.0.33 Engage government agencies, conservation partners and other land managers, communities, landowners, and commercial and industrial stakeholders in discussions regarding the importance of protecting and methods to protect priority wetlands beyond the levels afforded through regulation by maintaining and/or restoring optimal biological buffers around wetlands.
- 8.1.0.37 Enlist landowners and NJ citizens in the protection of and survey efforts for SGCN, in particular rare species, by increasing enrollment in landowner incentives, forest stewardship, backyard habitat management and wildlife-related volunteer programs.
- 8.1.0.38 Engage partners, stakeholders and land managers in constructive dialogue promoting forest stewardship for SGCN that use core forests and forested corridors.
- 8.1.0.44 Engage conservation partners, stakeholders, government agencies and other land stewards in constructive dialogues encouraging their inclusion of controlled burns in forest and other stewardship plans.
- 8.1.0.47 Form cooperative partnerships with energy companies to facilitate habitat creation and enhancement away from and outside of project areas, the restoration of appropriate habitats within project areas (e.g., rights-of-way could benefit butterflies and some bird species), and to identify seasonal timing of activities that would minimize impacts to wildlife.
- 8.1.0.48 Form cooperative partnerships with transportation and shipment agencies and companies to facilitate habitat creation and enhancement away from and outside of project areas and to identify seasonal timing of activities that would minimize impacts to wildlife.

8.2 Recruitment and retention activities

8.2.3 For wildlife watching

- 8.2.3.1 Develop and implement nature-focused tourism opportunities including wildlife viewing sites, interpretive signage highlighting unique ecosystems/habitats, and wildlife-related recreational opportunities that do not negatively impact SGCN or their habitats.

8.3 WSFR program/subprogram outreach

8.3.0 WSFR program/subprogram outreach strategies

Red-headed Woodpecker

- 8.3.0.5 Develop and provide (or otherwise make publicly available) educational programs and/or materials that provide homeowners information on how to design dwellings and other structures in a manner that is wildlife friendly (e.g., using bird-safe glass on windows).
- 8.3.0.6 Develop and provide (or otherwise make publicly available) educational programs and/or materials to enlist landowners, land managers and local communities to discourage the presence of managed cat colonies and trap, neuter and release programs in wildlife habitats.
- 8.3.0.9 Develop and provide (or otherwise make publicly available) educational programs and/or materials to enlist landowners and land managers to include only native plants in landscaping and restoration projects. Provide information to assist them in detecting problematic establishment of invasive, non-indigenous plants.
- 8.3.0.10 Develop and provide (or otherwise make publicly available) educational programs and/or materials to educate landowners and NJ citizens on threats to fish and wildlife (including marine animals).
- 8.3.0.12 Promote awareness of WSFR (Wildlife and Sportfish Restoration) Outreach/Awareness grants, an important funding source for conservation among hunters and anglers as well as the general public.
- 8.3.0.13 Conduct an educational campaign to encourage observer ethics and respect for wildlife and natural habitat.
- 8.3.0.19 Develop an educational outreach program for the public on the devastating effects predators can have on native nesting wildlife.
- 8.3.0.25 Develop educational outreach programs for landowners, nurseries and the general public regarding the negative impacts of invasive and non-native plants on our natural communities.
- 8.3.0.26 Develop educational outreach programs for private and public landowners and land managers regarding the importance of and how to manage core forests and forested corridors in a way that will be beneficial for SGCN, particularly endangered, threatened and special concern species.
- 8.3.0.27 Develop educational outreach programs for public and private landowners and land managers regarding the importance of structural habitat diversity, methods to increase diversity, and/or incentive programs available to increase habitat diversity.
- 8.3.0.30 Develop educational outreach programs for private and public landowners, as well as schools, regarding the benefits and creation of backyard habitats for wildlife.
- 8.3.0.32 Develop an educational outreach program for landowners and citizens on the threats that herbicides and pesticides pose to aquatic systems and wildlife, and to promote safer usage of such products.

9 Planning

9.1 Land use planning

9.1.0 Land use planning strategies

- 9.1.0.1 Develop smart-growth plans and critical habitat designations that consider SGCN life history requirements and habitat needs, connectivity and health of those habitats, and minimizes human-associated disturbances to those habitats and SGCN inhabiting them.
- 9.1.0.2 Develop town plans that avoid impacts to SGCN species and their habitats.
- 9.1.0.3 Develop a plan that directs the creation of impervious surfaces away from and to minimize impacts on aquatic systems and critical terrestrial habitats. The plan should also include strategies to increase the resiliency of aquatic and critical terrestrial habitats to threats and stressors that would impact the reproduction and survival of wildlife.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Red-headed Woodpecker

- 9.1.0.5 Develop a plan that directs the creation or expansion of energy or utility rights-of-way in a manner that minimizes the impacts on critical forested habitats and the wildlife community.
- 9.1.0.6 Develop a plan that directs the creation or expansion of roads and railroads or the re-establishment of abandoned railroads within and adjacent to critical forested habitats in a manner that minimizes the impacts on critical forested habitats and the wildlife community.
- 9.1.0.7 Develop a plan that directs the maintenance of or new channelization of forested streams and rivers in a manner that minimizes impacts of the aquatic ecological system and adjacent forest
- 9.1.0.9 Develop a plan that focuses on strategies to minimize the creation of renewable energy farms (e.g., solar, wind) and related infrastructures within and their impacts on forested habitats and the wildlife community.
- 9.1.0.10 Develop a plan that focuses on strategies to minimize the impacts of mining on critical forested habitats.
- 9.1.0.11 Develop a plan that focuses on strategies to minimize the impacts of power plants on critical forested habitats and the wildlife community.
- 9.1.0.13 Develop a plan to minimize agriculture that would result in groundwater withdrawal in critical forested areas.
- 9.1.0.14 Develop a plan to minimize development that would result in groundwater withdrawal in critical forested areas.
- 9.1.0.16 Develop a plan to minimize new lawns and preserve natural vegetation within and adjacent to critical forest areas.
- 9.1.0.19 Develop a plan to minimize the extent of impervious surfaces as part of new construction to increase water recharge in those areas.
- 9.1.0.20 Develop a plan to minimize the impacts of existing agricultural properties adjacent to and the conversion of forest habitats (terrestrial and aquatic, within or adjacent to critical forests) to agriculture, grazing areas/livestock farms, and plantations.
- 9.1.0.21 Develop a plan to minimize the use of any-sized dam in critical forested areas.
- 9.1.0.22 Incorporate habitat connectivity and preservation of natural areas into state and local land-use policy and the environmental review process to minimize the impacts of transportation and service corridors on fish and wildlife and their habitats.
- 9.1.0.24 Develop a plan to prevent livestock from entering water bodies in critical forested habitats.
- 9.1.0.25 Develop a plan to prevent the conversion of forested stream buffers to pastures in critical forested habitats.
- 9.1.0.28 Develop and coordinate state, regional and local plans for suitable lot layout and landscaping to minimize human-wildlife conflicts that also incorporates habitat connectivity and preservation of natural areas.
- 9.1.0.29 Provide GIS or related data, maps, resource inventories, as well as related training, pertaining to the SWAP and its recommended conservation actions for use or consideration by State, County or municipal planning agencies.
- 9.1.0.30 Incorporate habitat connectivity and preservation of natural areas into state and local land-use policy and the environmental review process to minimize habitat fragmentation and other related threats associated with development.
- 9.1.0.31 Develop wetland restoration plans that consider the life history and needs of wildlife occupying targeted habitats.

- 9.1.0.33 Review the species, threats, action successes, and habitats, and work with partners to revise the 2017 State Wildlife Action Plan for the 2025 resubmittal.

9.3 Species and habitat management planning

9.3.1 Species management planning

- 9.3.1.4 Develop town plans that avoid impacts to SGCN species and their habitats.
- 9.3.1.7 Develop a rapid response plan for various scenarios (e.g., insect infestations destroying native habitat, wildlife disease) to be implemented upon exotic pathogen introduction or incident.
- 9.3.1.9 Develop a management plan incorporating the effects of pesticides, herbicides and other biological controls on SGCN and their critical and supporting habitats.
- 9.3.1.13 Develop a management plan to ensure SGCN populations' persistence based on long-term monitoring of resident and migratory SGCN populations and their habitats.
- 9.3.1.16 DOD and appropriate state agencies work together to improve DOD Integrated Natural Resource Management Plans (INRMP) to develop strategies to minimize or eliminate disturbances to all SGCN (i.e., beyond their federal requirements) during military activities and to improve SGCN habitat and presence.

9.3.2 Listed species recovery planning

- 9.3.2.1 Develop proactive species recovery plans for all endangered and threatened species including guidance and objectives pertaining to critical and supporting habitat to meet and maintain recovery goals.

9.3.3 Habitat management planning

- 9.3.3.6 Develop a management plan for maintaining and enhancing healthy, SGCN-associated terrestrial and aquatic habitats and associated riparian habitats, and to minimize (if not avoid) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
- 9.3.3.7 Develop a management plan to reduce the impacts of herbivory on native vegetation and the degradation of habitats supporting SGCN by invasive and/or native, over-abundant wildlife species including but not limited to mute swans, Canada geese, beaver and white-tailed deer.
- 9.3.3.8 Develop a management plan to combat the impacts of diseases/pathogens impacting SGCN and/or their habitats.
- 9.3.3.9 Develop a response plan to outbreaks using BMPs to control infestations and limit their spread in a way that avoids excessive harm to non-target species.
- 9.3.3.10 Develop a management plan to ensure SGCN populations' persistence based on long-term monitoring of resident and migratory SGCN populations and their habitats.
- 9.3.3.11 Develop town plans that avoid impacts to SGCN species and their habitats.
- 9.3.3.13 Develop a management plan that will establish/improve habitat resilience (e.g., shorelines of the coast and Delaware Bay, forested habitats of the Pinelands and Skylands) that benefits wildlife inhabiting these areas and prevents or ameliorates near-term impacts of climate change throughout the State, but in particular within the coastal and Delaware Bay areas.
- 9.3.3.15 Develop a management plan incorporating the effects of pesticides, herbicides and other biological controls on SGCN and their critical and supporting habitats.
- 9.3.3.17 Develop a management plan for prescribed burning that will benefit Pinelands dependent species and increase or maintain habitat quality for these species in the Pinelands.

Red-headed Woodpecker

- 9.3.3.18 In cooperation with species and habitat experts, develop management plans for significant natural and/or unique communities, in particular those supporting SGCN, and provide the information to the landowners/managers (federal, state and local government agencies or non-government organization) for review and implementation.
- 9.3.3.19 Develop management plans for SGCN inhabiting permanently protected natural lands using available baseline and population trend data.
- 9.3.3.20 Develop an action plan for immediate implementation should habitat levels fall below the minimum necessary size and/or structure within the Cape May Peninsula to sustain the avian migration.
- 9.3.3.21 Develop a rapid response plan for various scenarios (e.g., insect infestations destroying native habitat, wildlife disease) to be implemented upon exotic pathogen introduction or incident.
- 9.3.3.24 Develop a plan to improve the enforcement of policies and/or regulations that protect wetlands, riparian and floodplain areas, and aquatic habitats (including open waters).
- 9.3.3.29 Develop habitat management plans aimed at reducing or eliminating negative impacts of ORVs.
- 9.3.3.32 DOD and appropriate state agencies work together to improve DOD Integrated Natural Resource Management Plans (INRMP) to develop strategies to minimize or eliminate disturbances to all SGCN (i.e., beyond their federal requirements) during military activities and to improve SGCN habitat and presence.
- 9.3.3.34 Include controlled burn prescriptions in forest and stewardship plans to improve wildlife habitat.
- 9.3.3.35 Incorporate habitat connectivity, preservation of natural areas, and the implementation of BMPs into state and local land-use policy environmental review process and energy development plans to minimize habitat fragmentation and related threats associated with solar farms and altered habitats.
- 9.3.3.36 Integrate plans for properly located and timed habitat restoration and management along transportation, energy and service corridors to minimize risks to and benefit wildlife.

11 Technical Assistance

11.1 Environmental review

11.1.1 Review of proposed projects

- 11.1.1.1 Use Biotics database and Landscape Project Mapping in regulatory reviews to ensure protection by applicable laws and regulations.
- 11.1.1.2 Develop smart-growth plans and critical habitat designations that consider SGCN life history requirements and habitat needs, connectivity and health of those habitats, and minimize human-associated disturbances to those habitats and the SGCN inhabiting them.
- 11.1.1.3 Government organizations to thoroughly review wetland restoration plans, applying the most current science for wildlife, habitats and aquatic systems, to assess the impacts to resident and migratory wildlife occupying the targeted habitats.
- 11.1.1.4 Incorporate habitat connectivity and preservation of natural areas into state and local land-use policy and the environmental review process to minimize habitat fragmentation and related threats associated with development.
- 11.1.1.5 Incorporate habitat connectivity and preservation of natural areas into state and local land-use policy and the environmental review process to minimize the impacts of transportation and service corridors on fish and wildlife and their habitats.

Red-headed Woodpecker

11.1.1.10 Use CHANJ mapping in reviews of proposed energy, mining, transportation and utility service companies/agencies' projects to attempt to maintain habitat connectivity and reduce fragmentation, and identify potential impacts of the projects.

11.1.1.11 Use the best available science (species data, habitat present, site layout options, etc.) when conducting regulatory reviews of proposed offshore energy projects relating to drilling, extraction and distribution of petroleum and gas products to reduce habitat destruction and minimize impacts on wildlife.

11.1.1.12 Use the best available science (species data, habitat present, site layout options, etc.) when conducting regulatory reviews of proposed solar farm projects to reduce habitat fragmentation and minimize impacts on wildlife.

11.1.1.13 Use the best available science (species data, habitat present, wind farm layout options, wind blade impacts on migratory species, location of migration routes, etc.) when conducting regulatory reviews of proposed wind farm projects to minimize impacts on migratory and resident wildlife and reduce habitat fragmentation.

11.1.2 Review of proposed policies and plans

11.1.2.1 Develop smart-growth plans and critical habitat designations that consider SGCN life history requirements and habitat needs, connectivity and health of those habitats, and minimize human-associated disturbances to those habitats and the SGCN inhabiting them.

11.2 Technical assistance

11.2.0 Assorted technical assistance strategies

11.2.0.1 Provide technical support to private and public landowners and land managers for carrying out restoration and management practices aimed at increasing structural habitat diversity.

11.2.0.2 Provide technical support to public and private landowners and land managers for controlling invasive, native and non-native plant species in order to increase structural habitat diversity.

11.2.0.3 Develop state, regional and local BMPs that focus on minimizing habitat fragmentation and human-wildlife conflicts associated with development. Make information available to land developers and private and public landowners for implementation.

11.2.0.5 Provide educational resources, training programs, and expert guidance to private and public landowners and land managers on the threats that herbicides and pesticides pose to aquatic systems and wildlife, and to promote safer usage of such products.

11.2.0.6 Provide educational resources, training programs, and on-the-ground guidance to energy, mining, transportation, and utility service agencies/companies and their project and resource managers on habitat creation, enhancement and restoration within and adjacent to project areas, as well as away from and outside of project areas (depending on the target species), by managing vegetation for a variety of species and that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife. Wind farms should address both terrestrial bound and low-flying species. Examples of habitat management include, but are not limited to, integrating short and tall grasses, specific host plants, brush piles, water sources/wetlands, shrubby areas, nesting areas and no-mow set-asides.

11.2.0.7 Provide educational resources, training programs, and on-the-ground guidance to energy, mining, transportation, and utility service agencies/companies and their project and resource managers on the importance of maintaining habitat connectivity, minimizing fragmentation, and the use of CHANJ products to help them target areas for such planning.

Red-headed Woodpecker

- 11.2.0.8 Provide educational resources, training programs, and on-the-ground guidance to public and private landowners and land managers on habitat creation and enhancement strategies that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife.
 - 11.2.0.9 Provide educational resources, training programs, and on-the-ground guidance to municipalities, land developers, and other land managers and private landowners about the importance of leaving vegetation in place, especially along riparian areas and wildlife movement corridors.
 - 11.2.0.10 Provide technical support to private landowners, consultants, and land managers to create customized management plans based on location and SGCN.
 - 11.2.0.14 Provide educational resources and technical support to public and private landowners and land managers to promote the protection of wetlands, riparian and floodplain areas, and aquatic habitats (including open waters), and to enhance or restore biologically appropriate buffers.
 - 11.2.0.20 Provide educational resources and technical support to public and private landowners and land managers to promote the protection and/or enhancement of critical coastal habitats (beach/dune, scrub-shrub, forest, wetland, marsh, and marine and estuarine habitats) that provide nesting, migrating and wintering areas for SGCN birds, fish and other coastal SGCN.
 - 11.2.0.21 Provide educational resources and technical support to public and private landowners and land managers of lands adjacent to critical migratory stopover habitats for songbirds, raptors, shorebirds, bats and invertebrates to promote the protection and/or enhancement of those adjacent habitats to increase the effective size of the migratory habitat.
 - 11.2.0.22 Provide educational resources, training programs, and expert guidance to public and private landowners and land managers about lawn alternatives and the importance of natural vegetation and "edge" habitats on developed properties.
 - 11.2.0.23 Provide educational resources and technical support to public and private landowners and land managers of lands adjacent to SGCN habitats to promote the protection and/or enhancement of those adjacent habitats to increase the overall size of the "core" area and/or provide a natural buffer, enhancing the suitability of the core area for SGCN, and that connect conserved SGCN habitats.
 - 11.2.0.25 Provide educational resources, training programs, and on-the-ground guidance to resource managers regarding the assessment of and addressing secondary impacts (i.e. ancillary prescribed burns, trespassers, ORV use, mosquitoes, deer, buffers) related to residential and commercial development.
- 11.2.1 With individuals and groups involved in resource management decision making
 - 11.2.1.1 Engage partners and stakeholders in constructive dialogue regarding the importance of providing and methods to provide technical support for carrying out restoration and management practices aimed at increasing structural habitat diversity.
 - 11.2.1.2 Provide professional training and technical assistance tools (e.g., mapping, guidance documents, justification, etc.) to agencies/divisions/programs within and outside of the NJ DEP regarding the SWAP, and the conservation actions recommended therein to help facilitate SWAP implementation.
 - 11.2.1.3 Provide educational resources, training programs, and on-the-ground guidance to DOD to improve DOD Integrated Natural Resource Management Plans (INRMP) to develop and implement forest management and other practices that minimize disturbances to SGCN (i.e., beyond their federal requirements).

Red-headed Woodpecker

- 11.2.1.6 Provide educational resources, training programs, and on-the-ground guidance to resource agencies prior to project initiation to ensure wildlife and their habitats are protected to the highest degree possible during construction, and provisions are in place for post-construction habitat use.

100 Law and Policy

100. Legislation

100.1.3 Sub-national Level

- 100.1.3.1 Develop laws and policies to increase protection and biological buffers of wetlands.
- 100.1.3.3 Initiate legislative action to establish an annual budgetary line item designating funds to support programs focused on long-term research and monitoring of wildlife diseases.

100.1.4 County and Local

- 100.1.4.1 Enhance critical migratory stopover habitats for songbirds, raptors, shorebirds, bats and invertebrates through the local ordinances of adjacent private lands to increase the effective size of the habitat.
- 100.1.4.2 Secure and increase the effective size of SGCN habitats and connect conserved SGCN habitats through local ordinances.
- 100.1.4.3 Expand the acreages and enhance the effective size of SGCN habitats by protecting adjacent habitats that contribute to the overall size of the "core" area and/or provide a natural buffer, enhancing the suitability of the core area for SGCN through local ordinances.
- 100.1.4.4 Secure wetlands, riparian and floodplain areas, and aquatic habitats (including open waters) and biologically appropriate buffers through local ordinances.
- 100.1.4.5 Secure SGCN-inhabited/used freshwater wetlands and biologically appropriate buffers through local ordinances.
- 100.1.4.8 Secure critical coastal habitats (beach/dune, scrub-shrub, forest, wetland, marsh, and marine and estuarine habitats) that provide nesting, migrating and wintering areas for SGCN birds, fish and other coastal SGCN through local ordinances.
- 100.1.4.13 Encourage municipal laws regulating domestic pets that may predate on wildlife.
- 100.1.4.14 Adopt/pass local ordinances which require assessing and addressing secondary impacts (i.e. ancillary prescribed burns, trespassers, ORV use, mosquitoes, deer, buffers) on biological resources when revising planning/zoning documents or granted site plan/subdivision approvals.
- 100.1.4.15 Incorporate habitat connectivity and the preservation of natural areas into state and local land-use policy and the environmental review process to minimize habitat fragmentation and related threats associated with development.

100.1.5 Scale Unspecified

- 100.1.5.1 Develop laws and policies to increase protection and biological buffers of wetlands.
- 100.1.5.2 Develop policies for wetland restoration plans that consider life history requirements and needs of wildlife occupying targeted habitats.
- 100.1.5.4 Incorporate habitat connectivity and preservation of natural areas into state and local land-use policy and the environmental review process to minimize the impacts of transportation and service corridors on fish and wildlife and their habitats.
- 100.1.5.5 Develop legislation to provide financial support for the New Jersey Invasive Species Strike Team.

100. State Regulations

100.3.0 Regulatory initiatives for species and habitat protection

- 100.3.0.3** Develop policies that will promote the long term protection of critical migratory stopover habitats for songbirds, raptors, shorebirds, bats and invertebrates.
- 100.3.0.5** Develop policies that will promote improved and secure habitat connections between conserved SGCN habitats.
- 100.3.0.6** Develop policies that will promote expanding acreages and enhancing the effective size of SGCN habitats by providing biologically appropriate buffers of native habitat surrounding SGCN habitats.
- 100.3.0.7** Amend current policies and/or regulations to increase the ability to protect and preserve coastal habitats (beach/dune, scrub-shrub, forest, wetland, marsh, and marine and estuarine habitats) that provide nesting, migrating, and wintering areas for SGCN birds, fish and other coastal and aquatic SGCN.
- 100.3.0.8** Develop policies and/or regulations with the objective of protecting significant natural and/or unique communities in perpetuity.
- 100.3.0.9** Secure mitigation that creates an environmental benefit for losses of SGCN and their habitats.
- 100.3.0.14** Develop policies and/or regulations that increase the protective buffers of wetlands, riparian and floodplain areas, and aquatic habitats (including open waters) to biologically appropriate distances to benefit SGCN that rely upon these habitats and improve the function of the [associated] aquatic systems.
- 100.3.0.18** Develop policies for conserved lands that prohibit planting and supports the control of non-native vegetation and invasive, native vegetation.
- 100.3.0.19** Develop regulations for lighting of/on tall structures that will minimize harm to and/or disorientation of wildlife, in particular but not limited to migratory birds, bats and invertebrates. Implement BMPs into state, county and local permitting processes.
- 100.3.0.20** Develop policies and/or regulations that prohibit the presence of managed cat colonies and trap, neuter and release programs in or near critical wildlife habitats.
- 100.3.0.23** Review existing CAFRA regulations and ensure that the Coastal Zone Management Rules (NJAC 7:7E) adequately address mitigation that creates an environmental benefit for losses of SGCN and their habitats.
- 100.3.0.31** Create or expand tax-based incentive programs available to private, agricultural, commercial, industrial or governmental landowners and land managers to include or provide for incentives for the maintenance and/or improvement to existing habitat via the endorsement of wildlife-related BMPs.
- 100.3.0.32** Coordinate regulations across agencies to maximize availability of and enrollment in existing Forestry Stewardship Programs (e.g., "Woodland Stewards", Farm Bill, partners, etc.) to maintain and/or improve forest habitat.
- 100.3.0.41** Explore all State regulatory requirements for mitigation, restoration, habitat management, etc. to ensure they prohibit the use of specified invasive or other problematic plant species.
- 100.3.0.42** Fully adopt the former Storm water Management Rules' 300ft buffer requirements into the Flood Hazard Area Control Act Rules.
- 100.3.0.43** Identify and address (amend) regulatory impediments to beneficial habitat management.
- 100.3.0.44** Incorporate requirements for technical support and funding for mitigation or restoration efforts so as to be consistent with existing regulations.

Red-headed Woodpecker

- 100.3.0.45 Increase the controlled burn season to focus on restoring vegetative communities.
- 100.3.0.46 Investigate and/or develop inter-agency Memorandum of Agreements to share common data stored or managed in program-specific databases.
- 100.3.0.48 Propose new State law or regulation mandating that a State-level "development impact fee" be assessed on all new development approved by municipalities (via the Municipal Land Use Law processes), and dedicate such monies to the development and implementation of regional Habitat Conservation Plans (or existing plans/programs serving the same regional function).
- 100.3.0.50 Retain endangered, threatened and special concern wildlife and habitat protection measures in the Water Quality Management Program Rules.
- 100.3.0.52 Revise existing and/or incorporate new State land use regulations that specifically address the impacts of new or expanded energy sitings and facilities.
- 100.3.0.53 Revise existing and/or incorporate new State land use regulations that specifically address the impacts of new or expanded rights-of-way corridors associated with energy transport/transmission.
- 100.3.0.54 Revise existing and/or incorporate new State land use regulations that specifically address the impacts of new or expanded surface mining areas.
- 100.3.0.56 Develop regulations that when implemented will protect critical migratory stopover habitats for songbirds, raptors, shorebirds, bats and invertebrates.
- 100.3.0.57 Develop regulations that when implemented will improve and secure habitat connections between conserved SGCN habitats.
- 100.3.0.58 Develop regulations that when implemented will promote the expansion of acreages and enhancement of the effective size of SGCN habitats by providing biologically appropriate buffers of native habitat surrounding SGCN habitats.
- 100.3.0.59 Develop regulations that when implemented will increase the ability to protect and preserve coastal habitats (beach/dune, scrub-shrub, forest, wetland, marsh, and marine and estuarine habitats) that provide nesting, migrating, and wintering areas for SGCN birds, fish and other coastal and aquatic SGCN.
- 100.3.0.60 Develop regulations that when implemented will protect significant natural and/or unique communities in perpetuity.
- 100.3.0.67 Develop regulations for lighting of/on tall structures that will minimize harm to and/or disorientation of wildlife, and enforce within state, county and local permitting processes.
- 100.3.0.68 Develop regulations that when implemented will prohibit the presence of managed cat colonies and trap, neuter and release programs in or near critical wildlife habitats.
- 100.3.0.72 Develop regulations that require permit applicants and/or review agencies to assess the cumulative and synergistic effects of a proposed project (i.e., "secondary effects"), both over time and over a larger spatial scale than the site itself.
- 100.3.0.73 Develop regulations that would exempt the conversion of lawns to native vegetation (beneficial to wildlife) from local lawn ordinances.

100. State Agency Policy Integration

100.4.0 Policy initiatives for species and habitat protection

- 100.4.0.1 Create any necessary policy changes (including those to incentive programs) to encourage the integration of SWAP actions associated with SGCN priority habitats as a deliberative factor in agencies' actions (e.g., environmental and land management review processes, land acquisition and management).

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Red-headed Woodpecker

- 100.4.0.4 Create a policy that requires the use of wildlife habitat and corridor mapping products for both regulatory use when conducting project reviews and planning/siting new or expanded rights-of-way projects.
- 100.4.0.9 Develop and implement policies to minimize the removal of coarse, woody debris in terrestrial, aquatic and riparian habitats in order to benefit wildlife.
- 100.4.0.13 Develop policies for different circumstances (e.g., roadsides and medians, riparian, aquatic and terrestrial habitats) that outline appropriate habitat/vegetation management strategies and schedules to minimize risks to and benefit wildlife.
- 100.4.0.16 Develop policies to implement habitat management strategies that will increase the structural diversity surrounding areas used for energy, mining, and transportation and service corridors which include but are not limited to the presence of short and tall grasses, specific host plants, brush piles, water sources/wetlands, shrubby areas, nesting areas, and no-mow set-
- 100.4.0.17 Develop policies to implement habitat management strategies, including prescribed burns, that will increase the structural diversity on preserved farmlands, state-owned agricultural lands, forests, parks and wildlife management areas, and any conserved lands purchased with the assistance of Green Acres and Federal Land & Water Conservation Fund monies to control and reduce the impacts of invasive, non-native species in order to increase structural habitat diversity.
- 100.4.0.18 Develop policies to minimize the extent of infrastructure associated with energy and service corridors or areas (e.g., wind and solar farms, pipelines, utility lines) and that require the implementation of habitat management strategies that will increase the structural diversity in the area including (e.g., the presence of short and tall grasses, specific host plants, brush piles, water sources/wetlands, shrubby areas, nesting areas, and no-mow set-asides).
- 100.4.0.20 Develop state regulations that require energy developers and utility service companies to implement habitat management strategies that will increase the structural diversity of the habitat, minimize habitat fragmentation and commercial infrastructure, and minimize the loss, alteration and/or degradation of the habitat and adjacent lands when working on preserved farmlands, state-owned agricultural lands, forests, parks and wildlife management areas, and any conserved lands purchased with the assistance of Green Acres and Federal Land & Water Conservation Fund monies.
- 100.4.0.24 Develop policies to provide financial support for the New Jersey Invasive Species Strike Team.
- 100.4.0.25 Develop policies that require permit applicants and/or review agencies to assess the cumulative and synergistic effects of a proposed project (i.e., "secondary effects"), both over time and over a larger spatial scale than the site itself.

Young Forest Birds

Focal species that comprise this Conservation Target:

American Woodcock	Blue-winged Warbler	Golden-winged Warbler
Northern Bobwhite		

Threats and Action Drivers associated with this Conservation Target:

1 **Residential and Commercial Development**

1.1 Housing and Urban Areas

1.1.1 Land conversion from natural habitat to urban and other residential areas (large and small scale) (Avg. Score: 2.25)

NJ Specific Threats: 1.1.1.1 Fragments terrestrial and aquatic habitats making the area unsuitable for area-sensitive species and inhibit dispersal of animals, reducing gene flow.

1.1.1.2 Loss, alteration and/or degradation of habitat.

1.1.1.4 Increased risk of vehicle strikes/mortality to terrestrial-bound and some bird species.

1.1.1.6 Impervious surfaces can cause an increased risk of floods, flash floods and storm damage that degrade terrestrial and aquatic habitats.

1.1.2 Residential development using materials that cause collision hazards (Avg. Score: 1.50)

NJ Specific Threats: 1.1.2.1 Collision risk to volant species (birds, bats and invertebrates).

1.2 Commercial and Industrial Areas

1.2.1 Land conversion from natural habitat to commercial or industrial areas (large and small scale) (Avg. Score: 2.25)

NJ Specific Threats: 1.2.1.1 Fragments terrestrial and aquatic habitats making the area unsuitable for area-sensitive species and inhibit dispersal of animals, reducing gene flow.

1.2.1.2 Loss, alteration and/or degradation of habitat.

1.2.1.4 Increased risk of vehicle strikes/mortality to terrestrial-bound and some bird species.

1.2.1.6 Impervious surfaces can cause an increased risk of floods, flash floods and storm damage that degrade terrestrial and aquatic habitats.

1.2.2 Commercial development using materials that cause collision hazards (Avg. Score: 1.50)

NJ Specific Threats: 1.2.2.1 Collision risk to volant species (birds, bats and invertebrates).

1.3 Tourism and Recreational Areas

1.3.1 Land conversion from natural habitat to recreation or tourism areas (large and small scale) (Avg. Score: 1.75)

NJ Specific Threats: 1.3.1.1 Fragments terrestrial and aquatic habitats making the area unsuitable for area-sensitive species and inhibit dispersal of animals, reducing gene flow.

1.3.1.2 Loss, alteration and/or degradation of habitat.

1.3.1.5 Impervious surfaces can cause an increased risk of floods, flash floods and storm damage that degrade terrestrial and aquatic habitats.

2 **Agriculture and Aquaculture**

2.1 Annual and Perennial Crops (non-timber)

2.1.1 Shifting Agriculture (Avg. Score: 1.50)

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Young Forest Birds

- NJ Specific Threats:** 2.1.1.1 Conversion of low-intensity agriculture to intensive agriculture (e.g., tree nursery, row crop) degrades habitat, especially for early-successional species.
- 2.1.1.5 Lack of competitive market prices to maintain native grasslands causes conversion to other crops that have more monetary value but less value as wildlife habitat.

2.1.2 Small-holder Farming

(Avg. Score: 1.75)

- NJ Specific Threats:** 2.1.2.1 Conversion of low-intensity agriculture to intensive agriculture (e.g., tree nursery, row crop) degrades habitat, especially for early-successional species.
- 2.1.2.2 Fragments terrestrial and aquatic habitats.
- 2.1.2.3 Agricultural practices (e.g., mechanized, row-crop agriculture) can render lands unsuitable for most wildlife due to soil degradation and erosion.
- 2.1.2.4 Agricultural practices (e.g., mechanized, row-crop agriculture) can cause direct mortality to wildlife when harvesting takes places.
- 2.1.2.5 Lack of competitive market prices to maintain native grasslands causes conversion to other crops that have more monetary value but less value as wildlife habitat.

2.1.3 Agro-industry

(Avg. Score: 2.75)

- NJ Specific Threats:** 2.1.3.1 Conversion of low-intensity agriculture to intensive agriculture (e.g., tree nursery, row crop) degrades habitat, especially for early-successional species.
- 2.1.3.2 Fragments terrestrial and aquatic habitats.
- 2.1.3.3 Agricultural practices (e.g., mechanized, row-crop agriculture) can render lands unsuitable for most wildlife due to soil degradation and erosion.
- 2.1.3.4 Agricultural practices (e.g., mechanized, row-crop agriculture) can cause direct mortality to wildlife when harvesting takes places.
- 2.1.3.5 Loss of ecotones by implementing clean farming (edge-to-edge) practices degrades habitat for early successional wildlife.
- 2.1.3.6 Lack of competitive market prices to maintain native grasslands causes conversion to other crops that have more monetary value but less value as wildlife habitat.

2.2 Wood and Pulp Plantations

2.2.1 Small Holder

(Avg. Score: 1.00)

- NJ Specific Threats:** 2.2.1.1 Conversion of native forests to plantations decreases the habitat quality for forest-dependent species.
- 2.2.1.2 Tree harvesting can cause direct mortality to wildlife, especially if done during peak activity periods or vulnerable life stages (e.g., denning, nesting, gestation/birthing, basking, roosting, pre-volancy, etc.).

2.2.2 Agro-industry Plantations

(Avg. Score: 1.50)

- NJ Specific Threats:** 2.2.2.1 Conversion of native forests to plantations decreases the habitat quality for forest-dependent species.
- 2.2.2.2 Tree harvesting can cause direct mortality to wildlife, especially if done during peak activity periods or vulnerable life stages (e.g., denning, nesting, gestation/birthing, basking, roosting, pre-volancy, etc.).

2.3 Livestock Farming and Ranching

2.3.2 Small-holder Grazing

(Avg. Score: 1.75)

- NJ Specific Threats:** 2.3.2.1 Inappropriately located, newly created horse/livestock farms may fragment forest habitats.
- 2.3.2.2 Overgrazing of pasturelands and/or hay-fields degrade suitability for wildlife.

Young Forest Birds

2.3.3 Agro-industry Grazing (Avg. Score: 2.00)

NJ Specific Threats: 2.3.3.1 Inappropriately located, newly created horse/livestock farms may fragment forest habitats.

2.3.3.2 Overgrazing of pasturelands and/or hay-fields degrade suitability for wildlife.

3 Energy Production and Mining

3.1 Oil and Gas Facilities and Pipelines

3.1.1 Distribution processes of petroleum and other liquid hydrocarbons (Avg. Score: 1.25)

NJ Specific Threats: 3.1.1.1 Fragments terrestrial and aquatic habitats.

3.1.1.2 Loss, alteration and/or degradation of habitat.

3.1.1.3 Increased risk of oil spills.

3.1.1.4 Increased noise pollution.

3.1.1.5 Increased vehicular and ship traffic associated with construction and operations, and therefore an increased risk of wildlife mortality from strikes.

3.1.2 Natural gas distribution processes (Avg. Score: 1.25)

NJ Specific Threats: 3.1.2.1 Fragments terrestrial and aquatic habitats.

3.1.2.2 Loss, alteration and/or degradation of habitat.

3.1.2.3 Increased risk of gas leaks and explosions.

3.1.2.4 Increased noise pollution.

3.1.2.5 Increased vehicular and ship traffic associated with construction and operations, and therefore an increased risk of wildlife mortality from strikes.

3.2 Mining and Quarrying

3.2.2 Surface Mining - Rock Quarry (and sand quarries) (Avg. Score: 2.00)

NJ Specific Threats: 3.2.2.1 Fragments terrestrial and aquatic habitats.

3.2.2.2 Loss, alteration and/or degradation of terrestrial and aquatic habitats.

3.2.2.3 Increased risk of vehicle strikes/mortality to wildlife.

3.3 Renewable Energy

3.3.1 Wind Power (Avg. Score: 1.50)

NJ Specific Threats: 3.3.1.1 Turbines, blades, and structure foundations create a collision risk to volant species (birds, bats and invertebrates) and marine animals.

3.3.1.2 Fragments terrestrial habitats.

3.3.1.3 Loss, alteration and/or degradation of habitat.

3.3.2 Solar Power (Avg. Score: 2.00)

NJ Specific Threats: 3.3.2.1 Fragments terrestrial habitats.

3.3.2.2 Loss, alteration and/or degradation of habitat.

3.4 Conventional Power Plants

3.4.0 Conventional Power Plants (Avg. Score: 1.00)

NJ Specific Threats: 3.4.0.2 Loss, alteration and/or degradation of habitat due to new or the expansion of current facilities.

4 Transportation and Service Corridors

4.1 Roads and Railroads

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Young Forest Birds

4.1.1 Land conversion from natural habitat to roads and railroads (large and small scale) (Avg. Score: 1.00)

NJ Specific Threats: 4.1.1.1 Fragments terrestrial and aquatic habitats making the landscape unsuitable for area-sensitive species and inhibiting dispersal of non-volant animals, reducing gene flow.

4.1.1.2 Loss, alteration and/or degradation of habitat associated with road and railroad construction and maintenance, and degradation of adjacent habitats.

4.1.1.4 Re-establishment of abandoned railroad lines may increase the risk of direct mortality on wildlife.

4.1.2 Movement of cars and other vehicles on roads and railroads (large and small scale) (Avg. Score: 2.00)

NJ Specific Threats: 4.1.2.1 Increased vehicle traffic increases the risk of wildlife mortality from strikes.

4.2 Utility and Service Lines

4.2.1 Land conversion from natural habitat to utility and other service lines (large and small scale) or communication towers and associated access roads (Avg. Score: 1.00)

NJ Specific Threats: 4.2.1.2 Loss, alteration and/or degradation of habitat associated with rights-of-way construction and maintenance, and degradation of adjacent habitats.

4.2.1.5 Tall radio and utility towers with guy lines pose a strike hazard for migrant bats and birds, especially in poor visibility conditions (e.g., fog, nighttime, poor weather conditions).

4.2.2 Management of rights-of-way or communication tower facilities and/or their associated access roads (Avg. Score: 2.25)

NJ Specific Threats: 4.2.2.1 Improper or poorly scheduled vegetation management can cause direct mortality to and may reduce productivity of wildlife.

4.4 Flight Paths

4.4.1 Airplane flight paths (Avg. Score: 1.00)

NJ Specific Threats: 4.4.1.1 Increased noise disturbance to wildlife, disrupting their normal behaviors.

4.4.1.2 Increased risk of collision between airplanes and birds, bats and insects.

5 Biological Resource Use

5.1 Hunting and Collecting Terrestrial Animals

5.1.1 Intentional Use (Avg. Score: 1.00)

NJ Specific Threats: 5.1.1.2 Legal but excessive harvest of SGCN game species.

5.1.2 Unintentional effects (Avg. Score: 1.50)

NJ Specific Threats: 5.1.2.2 Disruption of normal wildlife behavior.

5.2 Gathering Terrestrial Plants

5.2.2 Unintentional effects (Avg. Score: 1.00)

NJ Specific Threats: 5.2.2.1 Stepping on nests or young/hatchling animals.

5.2.3 Control (Avg. Score: 1.00)

NJ Specific Threats: 5.2.3.2 Clearing of scrub-shrub vegetation [and snags] diminishes cover and nesting habitat.

5.3 Logging and Wood Harvesting

5.3.1 Intentional Use (subsistence/small scale) (Avg. Score: 1.50)

NJ Specific Threats: 5.3.1.1 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN may fragment their terrestrial habitats.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Young Forest Birds

- 5.3.1.2 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN may cause the loss, alteration and/or degradation of wildlife habitat.
- 5.3.1.3 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN and unsustainable forestry practices may increase soil erosion, impacting SGCN habitats.
- 5.3.1.4 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN and unsustainable forestry practices may increase the risk of invasive species establishment, impacting SGCN habitats.
- 5.3.1.5 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN and unsustainable forestry practices may decrease structural diversity and biomass leading to reduced biodiversity and ecological integrity.

5.3.2 Intentional Use (large scale) (Avg. Score: 1.50)

- NJ Specific Threats:** 5.3.2.1 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN may fragment their terrestrial habitats.
- 5.3.2.2 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN may cause the loss, alteration and/or degradation of wildlife habitat.
 - 5.3.2.3 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN and unsustainable forestry practices may increase soil erosion, impacting SGCN habitats.
 - 5.3.2.4 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN and unsustainable forestry practices may increase the risk of invasive species establishment, impacting SGCN habitats.
 - 5.3.2.5 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN and unsustainable forestry practices may decrease structural diversity and biomass leading to reduced biodiversity and ecological integrity.

5.3.3 Unintentional effects (subsistence/small scale) (Avg. Score: 1.00)

- NJ Specific Threats:** 5.3.3.1 Direct mortality of wildlife, direct loss of suitable habitats (roost, foraging, shelter, etc.), and can disrupt sensitive species, decreasing the likelihood of success and/or reproduction.

5.3.4 Unintentional effects (large scale) (Avg. Score: 2.00)

- NJ Specific Threats:** 5.3.4.1 Direct mortality of wildlife, direct loss of suitable habitats (roost, foraging, shelter, etc.), and can disrupt sensitive species, decreasing the likelihood of success and/or reproduction.
- 5.3.4.2 Extensive infrastructure and larger equipment requirements present a potential risk of direct injury/mortality to wildlife.
 - 5.3.4.4 Infrastructure and/or equipment use may result in subtle changes to drainage patterns, adversely affecting vernal pool and wetland hydrology.
 - 5.3.4.5 Lack of appropriate, sustainable forest management can lead to a decrease in forest habitat diversity, degraded habitat for many forest species, the loss of habitat for early-successional species, and/or the loss of unique habitats for species that need canopy breaks and multi-aged tree composition to fulfill various life history requirements.

6 Human Intrusions and Disturbance

6.1 Recreational Activities

6.1.1 Off-road vehicles (motorized and non-motorized) (Avg. Score: 2.00)

- NJ Specific Threats:** 6.1.1.1 Inappropriate use of off-road vehicles creates new roads/trails which fragments habitat.
- 6.1.1.2 Inappropriate use of off-road vehicles can degrade terrestrial and aquatic habitat and reduce the suitability of adjacent habitats for wildlife.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Young Forest Birds

6.1.1.3 Increased risk of harassment that results in a change in wildlife behavior and/or direct mortality from vehicle strikes.

6.1.1.4 Increased noise pollution.

6.1.1.6 Off-road vehicles can be a mechanism of transference of wildlife diseases and invasive plant species if gear and apparel are not properly sanitized between sites.

6.1.5 Wildlife observation and photography (Avg. Score: 1.00)

NJ Specific Threats: 6.1.5.1 Improperly conducted recreational activities may disrupt normal wildlife behaviors which can result in reduced reproductive success or survival, abandonment of critical sites, etc.

6.1.5.2 Participants may introduce wildlife diseases and invasive plant species when gear and apparel is not properly sanitized between sites.

6.1.7 Other (Avg. Score: 1.00)

NJ Specific Threats: 6.1.7.1 Use of recreational or commercial pyrotechnics may cause temporary disturbance to wildlife, in particular to nesting birds.

6.1.7.3 Drone use in areas with sensitive wildlife (e.g., nesting and foraging birds, migrating and foraging/feeding whales) can alter their behavior and can cause disturbance that impacts their reproductive and/or foraging success.

6.2 Military Exercises

6.2.1 Military exercises (Avg. Score: 1.00)

NJ Specific Threats: 6.2.1.1 Military testing and training exercises may inflict disturbance and potential physical harm to wildlife.

6.2.1.3 Lack of opportunity for non-federal wildlife managers to influence activities on military bases may result in detrimental impacts to SGCN and/or missed opportunities to engage in projects that benefit SGCN.

6.3 Work and Other Activities

6.3.1 Unauthorized research projects at significant habitats (Avg. Score: 1.00)

NJ Specific Threats: 6.3.1.1 Participants may introduce wildlife diseases and invasive plant species when gear and apparel is not properly sanitized between sites.

6.3.1.2 Accidental trampling of nests, eggs/egg masses, and unseen individuals may impact reproductive success or cause direct mortality to SGCN.

6.3.1.3 Activities conducted without proper precautions may disturb and disrupt normal wildlife behaviors, which may impact reproductive success or survival, cause abandonment of critical sites, etc.

6.3.2 Authorized research projects at significant habitats (Avg. Score: 1.00)

NJ Specific Threats: 6.3.2.2 Participants may introduce wildlife diseases and invasive plant species when gear and apparel is not properly sanitized between sites.

6.3.2.3 Accidental trampling of nests, eggs/egg masses, and unseen individuals may impact reproductive success or cause direct mortality to SGCN.

6.3.2.4 Activities conducted without proper precautions may disturb and disrupt normal wildlife behaviors, which may impact reproductive success or survival, cause abandonment of critical sites, etc.

6.3.3 Other "work" unrelated to research (Avg. Score: 1.00)

NJ Specific Threats: 6.3.3.4 Workers may introduce wildlife diseases and invasive plant species when gear and apparel is not properly sanitized between sites.

7 Natural Systems Modifications

7.1 Fire and Fire Suppression

7.1.1 Increase in Fire Frequency/Intensity (Avg. Score: 1.00)

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Young Forest Birds

NJ Specific Threats: 7.1.1.1 Increase in frequency and intensity of wild fires as a result of droughts and heat waves drying out vegetation and litter.

7.1.1.2 Increase in frequency of wild fires as a result of illegal activities.

7.1.1.3 Unnatural fire regimes occurring as a result of military exercises.

7.1.2 Suppression of Fire Frequency/Intensity (Avg. Score: 3.00)

NJ Specific Threats: 7.1.2.1 Shift in vegetative communities as a result of suppression of natural fires.

7.1.2.2 Lack of diversity in age structure and composition of vegetation due to the suppression of fire.

7.2 Dams and Water Management/Use

7.2.1 Abstraction of Surface Water (domestic use) (Avg. Score: 0.75)

NJ Specific Threats: 7.2.1.5 Abstraction of surface water may deplete upland mesic habitats of water needed by plants and wildlife.

7.2.2 Abstraction of Surface Water (commercial use) (Avg. Score: 0.75)

NJ Specific Threats: 7.2.2.5 Abstraction of surface water may deplete upland mesic habitats of water needed by plants and wildlife.

7.2.3 Abstraction of Surface Water (agricultural use) (Avg. Score: 0.75)

NJ Specific Threats: 7.2.3.6 Abstraction of surface water may deplete upland mesic habitats of water needed by plants and wildlife.

7.2.5 Abstraction of Ground Water (domestic use) (Avg. Score: 1.50)

NJ Specific Threats: 7.2.5.2 Abstraction of ground water may deplete upland mesic habitats of water needed by plants and wildlife.

7.2.6 Abstraction of Ground Water (commercial use) (Avg. Score: 1.50)

NJ Specific Threats: 7.2.6.2 Abstraction of ground water may deplete upland mesic habitats of water needed by plants and wildlife.

7.2.7 Abstraction of Ground Water (agricultural use) (Avg. Score: 1.25)

NJ Specific Threats: 7.2.7.2 Abstraction of ground water may deplete upland mesic habitats of water needed by plants and wildlife.

7.2.13 Stream Burial (Avg. Score: 1.50)

NJ Specific Threats: 7.2.13.1 Eliminates riparian habitats.

7.2.13.2 Eliminates in-stream habitat and water resources for wildlife.

7.3 Other Ecosystem Modifications

7.3.2 Inappropriate timing of mowing (Avg. Score: 2.00)

NJ Specific Threats: 7.3.2.1 Increased risk of direct mortality and/or reduced productivity of wildlife, as well as reduced use by migrating species.

7.3.3 Removal of coarse woody debris (streams, forests, scrub-shrub habitats) (Avg. Score: 1.50)

NJ Specific Threats: 7.3.3.3 Removal of dead trees (snags), large felled logs (i.e., those > 12" dbh), and other downed woody material diminishes nesting, roosting, and sheltering options for wildlife, and increases the ease at which deer can browse regenerating vegetation.

7.3.4 Lack of natural disturbance patterns or ecosystem functions due to species loss (Avg. Score: 2.00)

NJ Specific Threats: 7.3.4.1 The management and/or loss of beavers decreases natural disturbance patterns.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Young Forest Birds

7.3.4.2 The loss of top-tier predators results in an overabundance of prey species which alter or degrade the natural function of the ecological system.

7.3.4.5 The lack of forest disturbance minimizes the diversity of herbaceous vegetation and other shrubs and trees that need a lot of sunlight to grow.

7.3.5 Poor habitat management

(Avg. Score: 3.00)

NJ Specific Threats: 7.3.5.1 Improper or poorly scheduled maintenance of man-made corridors (e.g., roadsides and medians) can cause direct mortality to and may reduce productivity of wildlife.

7.3.5.5 Habitat management that alters or removes vegetation without implementing long-term management increases the risk of invasive and exotic plants establishing themselves, outcompeting native vegetation.

7.3.5.6 Habitat management, including that which occurs on public and private lands, that does not consider timing and species' behaviors can result in the direct mortality and/or alteration or loss of habitat.

7.3.5.10 Ditching, draining and filling of marshes and wetlands eliminates habitat and degrades the remaining surrounding areas for wildlife.

7.3.5.12 Lack of diversity in age structure and composition of vegetation due to lack of natural disturbances and/or vegetation management.

7.3.5.15 Lack of funding, incentives, or technical guidance resources to proactively manage land to benefit SGCN wildlife.

7.3.5.17 Decreased diversity in height and species of herbaceous vegetation resulting in reduced cover and food for nesting and foraging wildlife.

7.3.5.18 Lack of funding or competitive market prices to maintain native grasslands for grassland-dependent species causes conversion of fallow or hay fields to other crops or shrublands.

8 Invasive and Other Problematic Species, Genes and Diseases

8.1 Invasive Non-native/ Alien Species/ Diseases

8.1.1 Unspecified Species

(Avg. Score: 2.00)

NJ Specific Threats: 8.1.1.1 Displace or outcompete native species for resources.

8.1.1.2 Alters, degrades and/or reduces the structural diversity of the natural composition of the landscape, including aquatic systems.

8.1.1.3 Invasive, non-native insects can damage native vegetation at a large scale, leading to die-offs, altering the ecological community.

8.1.1.4 Invasive, non-native animals increase the risk of predation on native animals and/or herbivory on native vegetation.

8.1.1.5 Invasive, non-native animals and plants increase the risk of introduction and transference of diseases

8.1.4 Invasive non-native terrestrial/wetland animals

(Avg. Score: 2.00)

NJ Specific Threats: 8.1.4.1 Displace or out-compete native species for resources (food, shelter), alter the composition of the native landscapes/aquatic systems, diminish habitat suitability and reduce ecological integrity of natural communities, and may introduce disease into a population.

8.1.4.2 Free-roaming and feral domestic animals such as cats and dogs causes direct mortality of wildlife and disturbance to wildlife breeding and resting areas.

8.1.5 Invasive non-native terrestrial/wetland plants

(Avg. Score: 2.50)

NJ Specific Threats: 8.1.5.1 Displace or out-compete native species for resources (food, light, shelter), alter the composition of the native landscapes/aquatic systems, diminish habitat suitability and reduce ecological integrity of natural communities, and may introduce disease into a population.

8.2 Problematic Native Species/Diseases

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Young Forest Birds

8.2.1 Unspecified Species (Avg. Score: 2.00)

- NJ Specific Threats:** 8.2.1.1 Overabundant native insects can damage native vegetation at a large scale, leading to die-offs, altering the ecological community.
- 8.2.1.2 Invasive pathogens and insects may increase in range and abundance as limiting factors (such as temperature) are altered as a result of climate change.
- 8.2.1.4 Human-subsidized native species can become overabundant, increasing predation on other native wildlife and/or altering the ecological community.

8.2.2 Named Species (Avg. Score: 2.00)

- NJ Specific Threats:** 8.2.2.2 Human-subsidized native species can become overabundant, increasing predation on other native wildlife and/or altering the ecological community.

8.3 Introduced Genetic Material

8.3.0 Introduced Genetic Material (Avg. Score: 1.25)

- NJ Specific Threats:** 8.3.0.1 Introduction of farm-reared species (e.g., bobwhite and brook trout) for hunting and fishing purposes introduces genetic material into the native population when species hybridize.
- 8.3.0.2 Species hybridizing as a result of the alteration of, and subsequent connectivity of, habitats that once separated species.

8.5 Viral/Prion-induced Diseases

8.5.2 Named Species (Disease) (Avg. Score: 1.00)

- NJ Specific Threats:** 8.5.2.1 Diseases such as West Nile Virus, arenavirus, sudden oak death, Avian Influenza, and snake fungal disease cause morbidity or mortality to native populations.

8.6 Diseases of Unknown Cause

8.6.0 Unknown Diseases (Avg. Score: 1.00)

- NJ Specific Threats:** 8.6.0.1 Diseases yet to be identified by pathologists and virologists cause decreased fitness or mortality to native populations.

9 Pollution

9.1 Domestic and Urban Waste Water

9.1.1 Sewage (Avg. Score: 1.00)

- NJ Specific Threats:** 9.1.1.3 Contaminants in sewage treatment effluents and Combined Sewer Overflows can cause developmental and behavioral abnormalities and reproductive failure in wildlife.

9.1.2 Run-off (Avg. Score: 1.50)

- NJ Specific Threats:** 9.1.2.3 Contaminants from road runoff (oil, sediment, salt, etc.) impact native vegetation and the species that rely upon them, degrade water quality in aquatic systems, and can injure or kill the aquatic and semi-aquatic species that rely upon them.

9.2 Industrial and Military Effluents

9.2.1 Oil Spills (Avg. Score: 1.00)

- NJ Specific Threats:** 9.2.1.1 Oil spills render resting, breeding and foraging habitats temporarily unavailable to wildlife, altering normal wildlife behavior.

- 9.2.1.2 Oil spills have long term effects on habitats and damage ecological processes that can cause local wildlife population declines and impaired foraging or reproduction.

9.2.3 Other (Avg. Score: 1.00)

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Young Forest Birds

NJ Specific Threats: 9.2.3.1 Point and nonpoint source pollution such as polychlorinated biphenyls (PCBs), pesticides, heavy metals, and endocrine disrupting compounds (EDC's) into freshwater and marine systems pose threats to wildlife through direct contact and/or ingestion, and to aquatic species and their predators through bioaccumulation, impacting the reproductive success and neurological function of many avian and fish species.

9.2.3.2 Chemical spills have long term effects on habitats and damage ecological processes that can cause local wildlife population declines and impaired foraging or reproduction.

9.2.3.3 Chemical spills may render resting, breeding and foraging habitats temporarily unavailable to wildlife, altering normal wildlife behavior.

9.2.4 Other: Hydrofracturing (Avg. Score: 1.00)

NJ Specific Threats: 9.2.4.1 Contaminants from hydrofracturing degrade water quality in aquatic systems, and can injure or kill the aquatic and semi-aquatic species that rely upon them.

9.2.4.2 Uncontrolled effluents escaping from hydrofracturing facilities can cause injury to wildlife and alter normal behaviors.

9.3 Agricultural and Forestry Effluents

9.3.2 Soil Erosion and Sedimentation (Avg. Score: 0.75)

NJ Specific Threats: 9.3.2.2 Soil erosion and sedimentation limit the re-establishment of plants needed by terrestrial wildlife as cover and a food base.

9.3.3 Herbicides and Pesticides (Avg. Score: 1.75)

NJ Specific Threats: 9.3.3.1 Pesticides degrade terrestrial and aquatic habitats, especially streams, ponds and wetlands. Aquatic wildlife are particularly sensitive to these contaminants, which can cause developmental and behavioral abnormalities and reproductive failure. Some contaminants may bioaccumulate in predatory fish and birds and disrupt reproduction.

9.3.3.3 Use of pesticides can directly harm non-target species through direct contact and/or by reducing and/or contaminating their food supply.

9.3.5 Control of insect pests and plants leading to mortality of non-target species (Avg. Score: 1.50)
not associated with agriculture

NJ Specific Threats: 9.3.5.3 Use of pesticides and herbicides can minimize the abundance of invertebrates needed as a food source for many birds.

9.3.5.4 Improper use of current insecticides, such as those containing esfenvalerate, prallethrin, or piperonyl butoxide, or past use of pesticides containing chlordane still present in the soils, are toxic to various wildlife species, and can cause injury, mortality, or other effects that impair population viability.

9.3.5.5 Use of pesticides and herbicides can minimize the abundance of food sources for native wildlife populations.

9.5 Air-Bourne Pollutants

9.5.1 Acid Rain (Avg. Score: 2.00)

NJ Specific Threats: 9.5.1.1 Causes acidification of water bodies, resulting in changes to aquatic and marine communities and reducing biodiversity, and creating conditions that are unsuitable for some aquatic (freshwater and marine) and semi-aquatic species that are sensitive to pH shifts.

9.5.1.2 Leaches calcium from the soils which in turn reduces the availability of prey, particularly calcium-rich prey such as snails.

9.5.2 Smog (Avg. Score: 1.00)

NJ Specific Threats: 9.5.2.1 Fine airborne particulate pollutants (such as smoke from controlled burns, soil particles from plowing arid soil, etc.) can adversely affect low mobility wildlife species, including avian species during nesting.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Young Forest Birds

9.5.4 Other (Avg. Score: 0.50)

NJ Specific Threats: 9.5.4.1 Dust and/or airborne sedimentation from construction sites, agricultural operations or related earth disturbances can introduce mineral or organic sediments into adjacent wildlife habitats, degrading their quality and suitability for wildlife short-term and/or long-term.

9.5.6 Herbicides and Pesticides (Avg. Score: 2.00)

NJ Specific Threats: 9.5.6.1 May result in injury or direct mortality of non-target species.

9.6 Excess Energy

9.6.1 Light Pollution (Avg. Score: 1.25)

NJ Specific Threats: 9.6.1.1 Artificial lighting can reduce suitability of adjacent habitat for species sensitive to artificial lights by disorienting wildlife, reducing foraging suitability or success, or increasing visibility to predators, resulting in reduced diversity and/or productivity of species in adjacent habitat.

9.6.3 Noise Pollution (Avg. Score: 1.00)

NJ Specific Threats: 9.6.3.1 Acute and chronic noise pollution in and adjacent to terrestrial and aquatic (marine and freshwater) environments could disrupt normal behaviors of wildlife such as migration, communication, feeding, eluding predators, resting and breeding, etc.

11 Climate Change and Severe Weather

11.1 Habitat Shifting or Alteration

11.1.0 Macro- and Micro-Climate Alterations (Avg. Score: 1.25)

NJ Specific Threats: 11.1.0.1 Alters native terrestrial and aquatic habitats at the macro- and micro-climate levels that can affect suitability for wildlife, in particular specialist species.

11.2 Droughts

11.2.1 Droughts (Avg. Score: 1.75)

NJ Specific Threats: 11.2.1.1 Contribute to hardened soils, decreasing water recharge during rains and increasing the likelihood of flash floods during storms.

11.2.1.2 Lead to lower groundwater levels and therefore, less available water for people and habitats.

11.2.1.3 Loss, alteration and/or degradation of terrestrial and aquatic habitats.

11.3 Temperature Extremes

11.3.1 Temperature extremes (Avg. Score: 1.75)

NJ Specific Threats: 11.3.1.1 Increasing temperatures may cause habitat loss and degradation by desiccating and/or raising the temperatures of small wetlands and streams leading to the loss of freshwater mussels and other aquatic species and species reliant upon these habitats.

11.3.1.2 Increased temperatures can negatively impact wetland, riverine, lacustrine and vernal pool-associated or -dependent wildlife by reducing flows, increasing water temperatures, lowering water levels and causing premature drying of vernal habitats.

11.4 Storms and Flooding

11.4.1 Storms and flooding (Avg. Score: 1.50)

NJ Specific Threats: 11.4.1.5 Storm damage can alter forest structure via blow-downs or micro-bursts, and can destroy bird nesting in the locales where the storms occur.

11.4.1.6 Increased storms and flooding reduce nesting success, especially for ground-nesting birds.

11.4.2 Increased rainfall (Avg. Score: 1.50)

NJ Specific Threats: 11.4.2.2 Extreme rain events can damage wildlife nesting and resting habitats, including impacts to avian eggs and chick and small mammal survivorship.

Young Forest Birds

- 11.4.2.3 More frequent rain events can alter terrestrial and wetland vegetation communities as well as wetland hydrology, shifting wildlife community use.

11.6 Phenology Shifting or Alteration

11.6.2 Phenology shifts related to predator-prey ecology (Avg. Score: 2.00)

- NJ Specific Threats:** 11.6.2.1 Alters inter-specific relationships (e.g., competition, parasitism, predation) of wildlife, ultimately leads to detrimental impacts on the ecological system.

- 11.6.2.2 Shifts timing of species migration, breeding and hibernation, and available food resources, causes redistribution of species, or mortality for species that are unable to relocate due to their already isolated habitat or limited mobility.

11.6.3 Phenology shifts related to species redistribution (Avg. Score: 1.50)

- NJ Specific Threats:** 11.6.3.1 Shifts in timing of species migration, breeding and hibernation, and available food resources, as a result of wildlife range shifts driven by climate change.

- 11.6.3.2 Shifts in nesting times or egg incubation durations can limit nest success and longterm populations.

12 Resource Management Needs

12.1 Resource information collection needs

12.1.1 Lack of initial baseline inventory (Avg. Score: 1.00)

- NJ Specific Threats:** 12.1.1.1 Lack of information regarding the distribution, connectivity and quality of SGCN habitats throughout the State, and where habitat enhancement/restoration will benefit SGCN and other wildlife.

- 12.1.1.6 Lack of information regarding migratory pathways and response of wildlife to lights and noise associated with offshore wind turbines.

12.1.2 Lack of up-to-date existing information (Avg. Score: 1.25)

- NJ Specific Threats:** 12.1.2.1 Lack of (routine, regular, ongoing) surveys/assessments that provide up-to-date information regarding population trends or health, and/or status of fish, wildlife and/or their habitats.

- 12.1.2.2 Lack of wildlife monitoring at sites with structures that pose high risk of mortality to SGCN wildlife.

12.1.3 Need to answer research question (Avg. Score: 1.25)

- NJ Specific Threats:** 12.1.3.1 There are significant knowledge gaps regarding distribution, dispersal, diseases, population trends, etc. of SGCN.

- 12.1.3.4 Lack of information regarding the potential short- and long-term impacts of wind turbines and other tall coastal structures on migratory populations.

12.1.4 Need to develop new technique (Avg. Score: 1.00)

- NJ Specific Threats:** 12.1.4.1 Improve and evaluate survey methods for SGCN and their habitats; alter as needed.

- 12.1.4.2 Improve and evaluate survey methods for species not easily detected through standard survey methods.

12.3 Regulatory Reform

12.3.0 State Regulatory Reforms (Avg. Score: 2.00)

- NJ Specific Threats:** 12.3.0.1 Regulatory habitat protections within state land use regulations are spatially limited to specific geographic areas (e.g., Pinelands, Coastal Area) or geographic features (e.g., wetlands, streams) and so fail to protect critical habitats that exist outside of these regulated areas.

- 12.3.0.7 Activities that threaten SGCN, their food sources, and/or habitats are often regulated separately and without consideration for the cumulative and synergistic effects over time or over a larger spatial scale. Therefore, regulations can fail to protect SGCN populations over time.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Young Forest Birds

- 12.3.0.9 Prescribed burns implemented by the NJ Forest Fire Service are constrained by State air quality regulations to a timeframe where seasonal weather conditions are less than ideal for effective burning. As a result, the Forest Fire Service is limited in the number of overall prescribed burns it can implement to restore habitat for wildlife.
- 12.3.0.10 Land use regulatory processes pertaining to habitat creation, enhancement or restoration projects can be costly and/or burdensome, precluding or discouraging the development or implementation of conservation projects.

12.4 Internal Policy & Procedures Reform

12.4.0 State Policy and Procedure Reform

(Avg. Score: 2.00)

- NJ Specific Threats:**
- 12.4.0.1 A species-by-species management focus as opposed to ecological systems and biodiversity generally has greater opportunity for unintended consequences for other species and may be less efficient in developing appropriate management actions.
 - 12.4.0.2 Policies and procedures for lands management that lack consideration of the impacts of activity timing can result in unintended impacts to wildlife during vulnerable periods.
 - 12.4.0.5 Bureau of Forest Fire Management policy has traditionally implemented prescribed burns on State lands for the sole purpose of public safety (i.e., addressing hazard fuel reduction), missing opportunities to burn in a manner that would additionally manage habitat for ecological diversity.
 - 12.4.0.7 Land preservation contracts, easements, etc. that do not contain prescriptive language or flexibility allowing for habitat management can result in unsuitable habitat conditions and biodiversity declines for SGCN.

14 Education/ Outreach Needs

14.1 Education needs

14.1.1 Need for improved knowledge of fish and wildlife and their habitats

(Avg. Score: 1.75)

- NJ Specific Threats:**
- 14.1.1.1 Lack of understanding of the importance of various SGCN habitats, their connectivity to similar habitats, and how planning decisions impact their quality and the wildlife that depend upon them.
 - 14.1.1.2 Lack of general knowledge of SGCN life histories and vulnerabilities as they relate to land management practices.
 - 14.1.1.3 Lack of understanding of the need to manage both natural and anthropogenic (e.g., yards, lawns, hayfields, etc.) habitats to minimize impacts or increase benefits to SGCN and their habitats.

14.2 Outreach needs

14.2.1 Need to improve specific understanding of agency/organization goals, objectives and ongoing wildlife conservation actions

(Avg. Score: 2.50)

- NJ Specific Threats:**
- 14.2.1.1 Need to develop greater understanding of and support for efforts implemented to enhance SGCN habitat and biodiversity through various forest management practices.
 - 14.2.1.5 Need to develop greater understanding of and support for efforts implemented to enhance SGCN habitat and biodiversity through various wetland management practices.

15 Administrative Needs

15.2 Organizational/program planning needs

15.2.3 Need for multi-state, regional and landscape scale planning

(Avg. Score: 2.00)

- NJ Specific Threats:**
- 15.2.3.1 State governance and financial structures can sometimes inhibit conservation planning and implementation at the regional and landscape-scales that are often more effective at setting priorities and meeting species and habitat conservation goals and objectives.

Actions to address the Threats and Action Drivers associated with this Conservation Target:

1 Coordination and Administration

1.2 Incentives

1.2.1 Incentives

- 1.2.1.1** Enhance critical migratory stopover habitats for songbirds, raptors, shorebirds, bats and invertebrates through incentive programs with adjacent private landowners to increase the effective size of the habitat.
- 1.2.1.2** Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to private and public landowners and land managers to increase the effective size of SGCN habitats by protecting/restoring adjacent habitats that contribute to the overall size of the "core" area and/or provide a natural buffer, enhancing the suitability of the core area for SGCN, and/or connect conserved SGCN habitats.
- 1.2.1.3** Secure and promote the protection/restoration of critical coastal habitats (beach/dune, scrub-shrub, forest, wetland, marsh, and marine and estuarine habitats) that provide nesting, migrating and wintering areas for SGCN birds, fish and other coastal SGCN through incentive programs.
- 1.2.1.5** Secure and promote the protection/restoration of critical SGCN forested habitat and minimize forest edge to benefit interior forest and disturbance-sensitive SGCN through incentive programs.
- 1.2.1.6** Secure and promote the protection/restoration of riparian and floodplain habitats, inland wetland habitats (marsh, vernal pool, fen, emergent shrubland, forest), and other aquatic habitats (including open waters) and/or biologically appropriate buffers through incentive programs.
- 1.2.1.8** Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to municipalities, land developers, and other land managers to retain and/or enhance native vegetation adjacent to aquatic habitats, and along riparian areas and wildlife movement corridors.
- 1.2.1.9** Develop a new funding source, targeting natural resource damages monies, mitigation monies or other available sources, to fund new or existing Forestry Stewardship Programs.
- 1.2.1.10** Coordinate across government agencies and non-government organizations to maximize the availability of and enrollment in existing landowner incentive programs (e.g., "farm bill," partners, etc.) to maintain and/or improve habitat.
- 1.2.1.11** Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to public and private landowners and managers, including but not limited to government and non-government agencies/organizations, energy, mining, and transportation and utility service companies/agencies, to minimize commercial infrastructure and impervious surfaces, and to improve wildlife habitats, limit fragmentation, reduce elements which would exacerbate mortality, and/or implement activities/restoration that would create new or improved corridor habitat and/or increase connectivity, and to increase structural habitat diversity through the implementation of a variety of vegetation management practices that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting), and to minimize (if not avoid) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
- 1.2.1.12** Create incentives (non-monetary and/or monetary) for land developers to redevelop abandoned areas (e.g., shopping centers, office complexes) to minimize the loss of natural habitats and reduce the extent of impervious surfaces as part of new construction to increase water recharge in those areas.

Young Forest Birds

- 1.2.1.13 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to land developers to minimize the impacts of new residential and commercial developments on SGCN and their habitats.
- 1.2.1.14 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to NJ landowners and land managers (including farmers, foresters and developers) for reducing or eliminating the use of herbicides and pesticides, and implementing more ecologically safe strategies when using such products.
- 1.2.1.16 Create incentives (non-monetary and/or monetary) within State regulations (mitigations requirements or credit, BMP satisfaction, etc.) to promote the use of retailers who refrain from selling specified invasive or other problematic plant species.
- 1.2.1.17 Develop a public-relations oriented certification program for private retailers who refrain from selling specified invasive or other problematic plant species.
- 1.2.1.18 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to public and private landowners and land managers to control and reduce the impacts of invasive, native and non-native species in order to increase structural habitat diversity.
- 1.2.1.19 Create incentives for federal, state and local agencies and approved consulting foresters that provide financial, logistical or planning assistance to farmers, woodland landowners, and private landowners to adopt and/or endorse consistent BMPs concerning controlled burns to maintain and/or improve wildlife habitat.
- 1.2.1.20 Coordinate across government agencies and non-government organizations to create or expand upon tax-based incentive programs available to private, agricultural, commercial, industrial or governmental landowners and land managers to include or provide for incentives for the maintenance and/or improvement to existing habitat via the endorsement of wildlife-related BMP's.
- 1.2.1.21 Create and/or support market-based programs that subsidize or create branding for products derived sustainably from managed wildlife habitats.
- 1.2.1.22 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to horse/livestock farm owners and managers to increase structural habitat diversity in and around the farms by managing vegetation for a variety of species, in particular, farms that have fragmented forests, and by implementing ecologically best practices (e.g., do not permit overgrazing, do not allow livestock to wade in waterbodies).
- 1.2.1.23 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to private and public landowners and land managers to provide cost shares and/or plan approvals for management based on management approaches and prescriptions.
- 1.2.1.24 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to public and private landowners, with habitat of suitable patch size to support breeding grassland-dependent species, to alter the timing of vegetation management to benefit grassland and pollinator species.
- 1.2.1.26 Develop a new funding source, targeting natural resource damages monies, mitigation monies or other available sources, to fund new or existing landowner incentive programs.
- 1.2.1.28 Create incentives to implement dynamic forest disturbance patterns, using tools such as fire, flooding, and silviculture, to support the full life cycle requirements of forest and early successional wildlife species.

2 Direct Management of Natural Resources

2.3 Fire management

Young Forest Birds

2.3.2 Fuel reduction

2.3.2.1 Prevent wildfires by reducing natural fuel (e.g., leaf litter).

2.3.3 Prescribed burning

2.3.3.1 Evaluate different management techniques of prescribed burns that might be used to mimic the historic role of fire and other natural disturbances in shaping an ecosystem.

2.3.3.2 Conduct prescribed burning in Northern New Jersey forests to maintain and regenerate a mosaic of upland forest habitats.

2.3.3.3 Conduct prescribed burning to improve wildlife habitat.

2.8 Invasive species control

2.8.0 Invasive species control strategies and implementation

2.8.0.1 Control invasive insect infestations by implementing BMP strategies through biological, chemical and/or mechanical means that will depress, or when appropriate, eradicate populations in a manner that avoids excessive harm to non-target species using BMPs to control infestations and limit their spread based on an inventory of invasive insect distribution and response to outbreaks.

2.8.0.2 Develop, implement, monitor and evaluate pest control/management strategies to reduce the impacts of over-abundant wildlife species (native and/or native, invasive species) on native vegetation and the degradation of habitats supporting SGCN. Over-abundant wildlife species include but are not limited to mute swans, Canada geese, beaver and white-tailed deer.

2.8.0.4 Implement control/management strategies to reduce the impacts and/or limit the distribution of invasive, native and non-native species (wildlife and plants) that pose threats to native wildlife or communities. Encourage the implementation of biological and mechanical removal/control. When chemical control is used, encourage low-volume, targeted application using NJDEP-approved chemicals in accordance with the specific instructions for that chemical. Follow BMPs to maximize the effectiveness of the strategies while avoiding excessive harm to non-target species.

2.8.0.6 Implement long-term management of invasive and/or non-native plants to help maintain functioning ecological systems and biological diversity, and to enhance travel corridors. Encourage the implementation of biological and mechanical removal/control. When chemical control is used, encourage low-volume, targeted application using NJDEP-approved chemicals in accordance with the specific instructions for that chemical.

2.10 Planting/seeding

2.10.0 Planting/seeding strategies for terrestrial or aquatic habitat creation or restoration

2.10.0.1 Prevent or ameliorate near-term impacts of climate change throughout the State by developing, implementing and monitoring/evaluating habitat management strategies that will establish/improve habitat resilience (e.g., shorelines of the coast and Delaware Bay, forested habitats of the Pinelands and Skylands) that benefits wildlife inhabiting these areas, in particular within the coastal and Delaware Bay areas.

2.10.0.5 Implement habitat restoration and/or enhancement activities that include the creation of vegetative buffers between sensitive habitats (e.g., aquatic systems) and human-inhabited areas (e.g., residences, parks, etc.) and that is conducted during appropriate timing to avoid sensitive periods (e.g., nesting, denning, roosting) while minimizing (if not avoiding) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Young Forest Birds

- 2.10.0.6 Expand the acreages and enhance the effective size of SGCN habitats by restoring adjacent, less optimal or unsuitable, habitats.
- 2.10.0.7 Restore/reclaim and enhance degraded rare species habitats through strategic revegetation and management efforts for documented/target SGCN.
- 2.10.0.8 Protect significant natural and/or unique communities by implementing best management practices when conducting habitat restoration strategies.
- 2.10.0.9 Restore and/or enhance riparian and floodplain habitats, inland wetland habitats (marsh, vernal pool, fen, emergent shrubland, forest), and other aquatic habitats (including open waters) and/or biologically appropriate buffers to minimize degradation, alteration and/or changes in hydrology and subsequent disturbances to and behavioral changes of wildlife (e.g., restoring biologically appropriate buffers, revegetation or restoration efforts, etc.).
- 2.10.0.10 Minimize the loss of important habitats (e.g., coastal scrub-shrub and grassy habitats, high and low marsh habitats, etc.) that provide nesting, migrating, and wintering areas for SGCN birds and other coastal and marsh-dependent species through habitat restoration efforts.
- 2.10.0.11 Restore and/or enhance critical migratory terrestrial and aquatic habitats (e.g., beach, grasslands, forest, scrub-shrub, etc.) for songbirds, raptors, shorebirds, waterfowl, bats and invertebrates through habitat restoration efforts and expand habitat restoration to adjacent private lands to increase the effective size of the habitat.
- 2.10.0.12 Create and/or maintain scrub-shrub habitats through revegetation efforts with little to no impact on forested, wetland and grassland habitats to maintain populations of shrub-dependent SGCN.
- 2.10.0.14 Implement best management practices (BMPs), protective strategies and guidelines for restoring and enhancing healthy, SGCN-associated habitats while minimizing (if not avoiding) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
- 2.10.0.21 Restore and/or enhance understory habitats that suppress invasive species and provide critical resources and enhance sheltering, foraging, and nesting cover for wildlife.
- 2.10.0.22 Restore and/or enhance terrestrial and aquatic habitats to promote the regeneration of native vegetation and enhance structural diversity to benefit SGCN (e.g., vegetative buffers of aquatic systems, allow coarse, woody debris to remain in terrestrial, aquatic and riparian habitats to provide shelter, riparian stabilization and necessary microclimates, plant native trees, shrubs and grasses, etc.).
- 2.10.0.23 Restore and/or enhance roosting habitats for migratory species (shorebirds, raptors, bats, songbirds and invertebrates) in appropriate areas along documented migratory corridors around the State.

2.11 Vegetation management

2.11.0 Vegetation management strategies for terrestrial or aquatic habitat creation or restoration

- 2.11.0.1 Conduct vegetation management in native terrestrial and aquatic habitats to provide suitable and appropriately sized areas to improve ecological diversity.
- 2.11.0.2 Conduct vegetation management in native terrestrial and aquatic habitats to provide suitable and appropriately sized areas for target SGCN and/or species groups; management should complement rare species needs in a targeted area.
- 2.11.0.3 Create suitable travel corridors connecting and increasing the effective size of conserved habitats for SGCN by restoring unsuitable (or less optimal) habitats through vegetation management.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Young Forest Birds

- 2.11.0.4 Implement vegetation management strategies that consider appropriate timing to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife, particularly SGCN.
- 2.11.0.5 Expand the acreages and enhance the effective size of SGCN habitats by restoring adjacent, less optimal or unsuitable, habitats through vegetation management.
- 2.11.0.6 Reclaim degraded rare species habitats by conducting vegetation management needed to restore habitat value for the documented/target SGCN.
- 2.11.0.7 Protect significant natural and/or unique communities by implementing best management practices through vegetation management.
- 2.11.0.8 Maintain, enhance and/or restore biologically appropriate buffers for SGCN-inhabited/used freshwater wetlands through vegetation management.
- 2.11.0.9 Minimize habitat loss of critical coastal habitats that provide nesting, migrating, and wintering areas for birds and other coastal species by maintaining or enhancing these areas through vegetation management.
- 2.11.0.12 Conduct vegetation management to create feeding and roosting habitats for migratory species (shorebirds, raptors, bats, songbirds and invertebrates) in appropriate areas along documented migratory corridors around the State.
- 2.11.0.13 Implement best management practices (BMPs), protective strategies, and guidelines for vegetation management to maintain and enhance healthy, SGCN-associated habitats while minimizing (if not avoiding) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
- 2.11.0.16 Prevent or ameliorate near-term impacts of climate change throughout the State by developing, implementing and monitoring/evaluating habitat management strategies that will establish/improve habitat resilience (e.g., shorelines of the coast and Delaware Bay, forested habitats of the Pinelands and Skylands) that benefits wildlife inhabiting these areas, in particular within the coastal and Delaware Bay areas.
- 2.11.0.19 Implement forest management/silviculture strategies that enhance and maintain critical core forests as appropriate for targeted species (e.g., for many SGCN forest birds, "core" forest would include the forest area >90 meters from the forest edge), in perpetuity, to benefit interior forest and disturbance-sensitive SGCN.
- 2.11.0.20 Create and/or maintain scrub-shrub habitats through management efforts with little to no impact on forested, wetland and grassland habitats to maintain populations of shrub-dependent SGCN.
- 2.11.0.21 Minimize the degradation, alteration and/or changes in hydrology of wetlands, riparian and floodplain areas, and aquatic habitats (including open waters) and subsequent disturbances to and behavioral changes of wildlife by maintaining or enhancing these areas and biologically appropriate buffers through habitat management and/or revegetation or restoration efforts.
- 2.11.0.23 Implement appropriate habitat management actions in areas where natural disturbances, such as wildfire, have been precluded.
- 2.11.0.25 Conduct vegetation management along access roads following BMPs to enhance habitat for target shrub- or young forest-dependent SGCN while minimizing negative impacts to other SGCN.
- 2.11.0.27 Conduct vegetation management for target shrub- or young forest-dependent SGCN following BMPs to minimize the risk of the establishment of invasive and non-native plants.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Young Forest Birds

- 2.11.0.28 Conduct vegetation management in agricultural areas following BMPs to enhance habitat for target shrub- or young forest-dependent SGCN while minimizing negative impacts to other SGCN.
- 2.11.0.29 Conduct vegetation management on transportation and service corridors (i.e., rights-of-way) following BMPs to enhance habitat for target shrub- or young forest-dependent SGCN while minimizing negative impacts to other SGCN.
- 2.11.0.31 In areas where vegetative communities are shifting due to fire suppression and controlled burns are not feasible, manage vegetation to improve wildlife habitat.
- 2.11.0.32 Increase structural habitat diversity around and when feasible, within agricultural landscapes by managing vegetation for a variety of species, in particular, those farms that have removed scrub-shrub habitat and/or fragmented forests, and by implementing ecologically best practices (e.g., no-till farming, maintaining hedgerows, buffer set-asides, etc.).
- 2.11.0.33 Increase structural habitat diversity by implementing long-term vegetation management to minimize the potential for the establishment of invasive and/or non-native plants that may outcompete native vegetation.
- 2.11.0.34 Increase structural habitat diversity by managing residential, commercial and recreational areas' landscapes for a variety of species. For example, integrate short and tall grasses, specific host plants, brush piles, water sources/wetlands, shrubby areas, nesting areas and no-mow set-asides.
- 2.11.0.36 Increase structural habitat diversity by managing vegetation for a variety of species and considering their life history requirements (e.g., travel corridors, shelter, resting and breeding areas) to minimize the risk of harm.
- 2.11.0.37 Increase structural habitat diversity by minimizing the removal of coarse, woody debris in terrestrial, aquatic and riparian habitats which benefits wildlife.
- 2.11.0.38 Increase structural habitat diversity in and around horse/livestock farms by managing vegetation for a variety of species, in particular, in and around farms that have fragmented forests, and by implementing ecologically best practices (e.g., do not permit overgrazing, do not allow livestock to wade in waterbodies).
- 2.11.0.39 Increase structural habitat diversity in and around solar farms by managing vegetation for a variety of species and that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife. For example, integrate short and tall grasses, specific host plants, brush piles, water sources/wetlands, shrubby areas, nesting areas and no-mow set-asides.
- 2.11.0.40 Increase structural habitat diversity surrounding areas used for energy, mining, and transportation and service corridors by managing vegetation for a variety of species and that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife. For example, integrate short and tall grasses, specific host plants, brush piles, water sources/wetlands, shrubby areas, nesting areas and no-mow set-asides, and avoid managing habitat during the breeding seasons for ground-nesting birds, reptiles, amphibians and small mammals.
- 2.11.0.41 Increase structural habitat diversity through the implementation of a variety of vegetation management practices such as prescribed burns (either increasing or decreasing their frequency depending on the site and objective), plantings, etc. that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife.

Young Forest Birds

- 2.11.0.42 Increase structural habitat diversity within wind farms for terrestrial bound and low-flying species and around wind farms for other wildlife by managing vegetation for a variety of species and that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife.
- 2.11.0.43 Manage forests to increase variation in age structure and composition using BMPs that promote and maintain functioning ecological forest-based systems and biological diversity.
- 2.11.0.45 Regularly and/or rotationally create young forest habitat in targeted areas to maintain and regenerate a mosaic of upland forest habitats that will benefit shrub- and young forest-dependent species.

2.13 Wildlife damage management

2.13.0 Nuisance fish and wildlife damage

- 2.13.0.5 Investigate the impacts of human-subsidized and/or naturally occurring predator species on SGCN to assess the need for integrated wildlife damage management techniques (e.g., predator exclosures, fish blockages, electric fence, culls) and/or policy changes on state land management that minimize the impacts of human-subsidized predators.
- 2.13.0.6 Develop, implement and evaluate the effectiveness of predator-control techniques aimed at improving SGCN populations and methods to minimize the impact of those species carrying parasites or diseases that may impact SGCN (e.g., raccoon roundworm kills Allegheny woodrat).
- 2.13.0.7 Develop, implement, monitor and evaluate management strategies to reduce the impacts of herbivory on native vegetation and the degradation of habitats supporting SGCN by invasive and/or native, over-abundant wildlife species including but not limited to mute swans, Canada geese, beaver and white-tailed deer.
- 2.13.0.8 Implement and assess management strategies to control and reduce the impacts of detrimental species and diseases that pose threats to native wildlife or communities.

2.14 Wildlife disease management

2.14.0 Wildlife disease strategy development and investigation

- 2.14.0.1 Investigate diseases/pathogens impacting SGCN and/or their habitats.
- 2.14.0.2 Develop and implement strategies to combat the impacts of diseases/pathogens impacting SGCN and/or their habitats, track disease occurrences and monitor/research impacts to SGCN populations and their habitats.

3 Data Collection and Analysis

3.0 General fish and wildlife research, survey or monitoring

3.0.0 Research, survey or monitoring - general fish and wildlife needs

- 3.0.0.1 Conduct long-term monitoring of resident and migratory SGCN populations using standardized survey protocols to determine the variables that may impact their long-term persistence in the State (e.g., population viability, distribution, dispersal, home range and habitat use, travel corridors, food availability, vulnerability to pollutants and disease, etc.). Compile this information to determine the likely causes of population declines and to understand metapopulation dynamics. Provide data to NJ DEP for integration into the Biotics database, Landscape Project and permitting review processes.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Young Forest Birds

- 3.0.0.2 Identify (through literature searches, review of available data, enlistment of habitat and/or species experts, etc.) where data gaps exist regarding SGCN distribution, and their critical and supportive habitats. Conduct surveys using standardized survey protocols to acquire baseline data, and provide the data to NJ DEP for integration into the Biotics database, Landscape Project Map and permitting review processes.
- 3.0.0.3 Gather baseline data on SGCN inhabiting permanently protected natural lands regarding their distribution and population (e.g., abundance, dispersal, demography including productivity and survival, etc.), and identify (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) critical and supporting habitats within those landscapes.
- 3.0.0.4 Conduct long-term studies on SGCN inhabiting permanently protected natural lands to develop population trend data and changes in demography, and to determine if critical and/or supporting habitats are limited or changing; i.e., diminishing in value, acreage or connectivity.
- 3.0.0.5 Gather baseline data on resident and migratory SGCN (in particular migratory species for which New Jersey habitats are significant), terrestrial, freshwater and marine species, regarding the location and condition of their critical and supporting habitats (e.g., foraging, roosting, nesting/breeding, stopover, migration paths, etc.), and population demography (e.g., productivity, survival, dispersal). Compile this information into a database that includes descriptions of the conditions of the habitats and species, and a GIS component of the locations of these important habitats. Provide data to NJ DEP for integration into the Biotics database, Landscape Project and permitting review processes.
- 3.0.0.6 Conduct long-term studies on resident and migratory SGCN to determine if there are changes to the populations' demography (productivity, survival, dispersal) and/or to their critical and/or supporting habitats (i.e., diminishing in value, acreage or connectivity, etc.), in particular changes that would not maintain SGCN at viable levels for species populations. Update data and GIS maps; provide updated information to NJ DEP for integration into the Biotics database, Landscape Project and permitting review processes.
- 3.0.0.7 Collect baseline data to document species distributions, in particular SGCN, and current habitat for future analysis of possible distribution shifting as a result of habitat shifting or alteration associated with climate change impacts.
- 3.0.0.8 Conduct long-term studies and compare baseline metrics of documented species distributions and associated habitats to identify possible species and/or habitat shifting or alteration associated with climate change impacts.
- 3.0.0.9 Identify SGCN (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) whose populations are thought to be limited due wholly or in part to a lack of (or contaminated) food resources, and compile/collect and evaluate data/information regarding potential management strategies to improve the availability of such SGCN's food resources.
- 3.0.0.10 Conduct long-term studies to evaluate the effectiveness of management strategies implemented to enhance food/prey availability for SGCN [whose populations are thought to be limited due wholly or in part to a lack of (or contaminated) food resources] through studies that investigate the populations and health of the food resources as well as the target SGCN. Revise management strategies as needed and continue to monitor the effectiveness of the efforts.
- 3.0.0.11 Develop, implement and evaluate the effectiveness of town plans that avoid impacts to SGCN species and their habitats.

Young Forest Birds

- 3.0.0.13 Investigate the effects of pesticides, herbicides and other biological controls on SGCN and their critical and supporting habitats. Evaluate and modify management practices as appropriate.
- 3.0.0.25 Identify pathways of migratory SGCN in the Atlantic Coastal and Marine Regions (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) and use the data to help evaluate the potential short- and long-term impacts of wind turbines, radio towers, utility guy lines, and other tall coastal structures on migratory populations.
- 3.0.0.26 Conduct studies to evaluate the effectiveness of proactive species recovery plans for all endangered and threatened species including objectives and guidance pertaining to and the condition/status of critical and supporting habitats.
- 3.0.0.30 Conduct research to investigate the feasibility of managing and/or creating roosting habitats for migratory species (shorebirds, raptors, bats, songbirds and invertebrates) in appropriate areas along documented migratory corridors around the State.
- 3.0.0.31 Conduct short- and long-term studies (e.g., wildlife surveys and habitat assessments) to evaluate the effectiveness of vegetation management efforts to maintain, enhance and/or create roosting habitats for migratory species (shorebirds, raptors, bats, songbirds and invertebrates) in appropriate areas along documented migratory corridors around the State.

3.2 Research, survey or monitoring - fish and wildlife populations

3.2.0 Data deficiency

- 3.2.0.1 Division of Fish and Wildlife should maintain a robust, up-to-date database and mapping of species occurrences.
- 3.2.0.2 Conduct species status assessments using the Delphi Technique and review of available data and literature on fish and wildlife (including marine animals) to maintain accurate legal status categorization of native wildlife.
- 3.2.0.5 Prevent or ameliorate near-term impacts of climate change throughout the State by developing, implementing and monitoring/evaluating habitat management strategies that will establish/improve habitat resilience (e.g., shorelines of the coast and Delaware Bay, forested habitats of the Pinelands and Skylands) that benefits wildlife inhabiting these areas, in particular within the coastal and Delaware Bay areas.
- 3.2.0.10 Evaluate the effectiveness of sanitation/decontamination protocols in minimizing the transference of wildlife diseases and invasive plant species.
- 3.2.0.11 Investigate the impacts of ORV use as a mechanism to spread wildlife diseases and invasive plant species to native wildlife and habitats. Integrate this information when mapping undeveloped roads and trails to identify potentially sensitive areas in northern NJ forests.
- 3.2.0.17 Conduct monitoring at constructed wind farms (within or outside of NJ) to assess the impacts on migratory species (birds, bats, insects) and determine if NJ's land use planning efforts and/or smart-growth plans need to be revised.
- 3.2.0.24 Develop, implement and evaluate the effectiveness of BMPs for lighting of/on tall structures that minimize harm to and/or disorient wildlife, in particular but not limited to migratory birds, bats and invertebrates. Implement BMPs into state, county and local permitting processes.

3.2.1 Abundance determination

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Young Forest Birds

- 3.2.1.1 Identify (through literature searches, review of available data, enlistment of habitat and/or species experts, etc.) population abundance and trends for SGCN using standardized survey protocols. Provide data to NJ DEP for integration into the Biotics database, Landscape Project Map and permitting review processes.
 - 3.2.1.2 Conduct wildlife surveys on resident and migratory SGCN regarding their population abundance and trends.
 - 3.2.2 Age, size and sex structure
 - 3.2.2.1 Conduct wildlife surveys on resident and migratory SGCN regarding their survivorship.
 - 3.2.3 Baseline inventory
 - 3.2.3.9 Investigate hazardous environmental issues that may impact grassland invertebrates.
 - 3.2.5 Genetics
 - 3.2.5.1 Investigate the feasibility and potential for success of conducting genetic rescue through translocation and/or reintroduction of animals into suitable habitat that was historically occupied to increase genetic diversity and reconnect isolated populations. Methods of investigation should include, but are not limited to, thorough literature reviews, expert opinions, identifying potential pitfalls (e.g., species' fidelity to their range or critical areas), and an examination of historic and current SGCN population distribution and suitable habitat availability.
 - 3.2.7 Population assessment
 - 3.2.7.1 Conduct species status assessments using the Delphi Technique and review of available data and literature on fish and wildlife (including marine animals) to maintain accurate legal status categorization of native wildlife.
 - 3.2.7.2 Conduct studies to evaluate the effectiveness of proactive species recovery plans for all endangered and threatened species to meet and maintain recovery goals.
- 3.3 Research, survey or monitoring - habitat
 - 3.3.1 Baseline inventory
 - 3.3.1.1 Conduct habitat assessments of significant natural and/or unique communities to identify threats to native terrestrial and aquatic habitats through systematic monitoring, review of available data, enlistment of habitat management and/or species experts, etc. Incorporate findings into a database that includes descriptions/qualifiers of the habitats, identifies and values/qualifies the threats, and includes a GIS component of the locations of the assessed areas. Share this information with landowners/managers (e.g., federal, state and local government agencies or non-government organization).
 - 3.3.1.2 Identify (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) resident and migratory SGCN habitats. Investigate their suitability for the various life history requirements of the species that dependent upon them to determine the ability for maintaining applicable SGCN populations in perpetuity.
 - 3.3.1.4 Identify (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) and investigate the suitability of corridors that connect large, contiguous tracts of similar habitats to increase their effective size (i.e., forest with forest, grassland with grassland, wetlands with wetlands, etc.) for dependent SGCN.
 - 3.3.1.5 Identify areas (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) where habitat restoration and/or enhancement would benefit wildlife SGCN.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Young Forest Birds

- 3.3.1.7 Map and prioritize existing and potential areas for early succession forest management. Share the results with state, county and municipal planners.
- 3.3.1.8 Assess the availability and suitability of forest habitats for SGCN species (particularly reptiles and amphibians, birds, pollinators, and tiger beetles) in southern forests since Superstorm Sandy.
- 3.3.1.9 Inventory forests throughout northern New Jersey to develop a baseline characterization of the structure and composition of habitats and identify deficient forest habitat types.
- 3.3.1.18 Conduct an assessment using available data regarding SGCN population numbers/trends and demography, on-going threats, habitat changes, etc. to determine if directed management efforts are needed to reach or maintain viable population levels.
- 3.3.1.20 Identify areas (through surveys/studies, literature searches, review of available data, enlistment of habitat management and/or species experts, etc.) where invasive, non-indigenous plants and animals are either already established or are becoming established. Create a system for reporting and qualifying new locations of invasive species and for prioritizing areas for control measures according to the potential level of impact on the ecosystem and SGCN and the likelihood of success. Researchers and contractors encountering invasive plant species while performing plant and/or forest inventories on state or other conserved lands and/or private lands should report invasive plant species through the New Jersey Invasive Species Strike Team phone application.
- 3.3.1.24 Conduct regular investigations of SGCN habitat health and biodiversity on public and private lands to identify locations in need of revegetation, reduction of over-abundant, native wildlife and/or exotic species, conservation focal areas requiring limitations on human activity, etc.

3.3.2 Monitoring

- 3.3.2.1 Evaluate the effectiveness of forest management/silviculture strategies that enhance and maintain critical core forests as appropriate for targeted species (e.g., for many SGCN forest birds, "core" forest would include the forest area >90 meters from the forest edge), in perpetuity, to benefit interior forest and disturbance-sensitive SGCN through research and monitoring.
- 3.3.2.2 Conduct long-term monitoring of resident and migratory SGCN habitats using standardized survey protocols to determine changes in habitat quality/suitability and threats (e.g., habitat loss and degradation, increased edge habitat, water quality) and other variables that may impact their long-term persistence in the State and to provide information needed for determining causes of population declines and understanding metapopulation dynamics.
- 3.3.2.3 Continue to update wildlife and habitat databases and revise models of critical SGCN habitats using the most current data available and where lacking, develop new SGCN and/or habitat models as data on species habitat requirements and applicable GIS data layers become available.
- 3.3.2.8 Evaluate the effectiveness of current prescribed burning practices on Pinelands dependent species.
- 3.3.2.9 Investigate the effectiveness of various silviculture techniques for enhancing forests for forest-dependent SGCN.
- 3.3.2.10 Evaluate the efficacy and success of different management techniques (e.g., ecologically-based forestry activities, prescribed burns) that might be used to mimic the historic role of fire and other natural disturbances in shaping an ecosystem.
- 3.3.2.11 Evaluate and compare the effectiveness of delayed mowing of warm season grass fields versus cool season hay fields to benefit grassland-dependent species.

Young Forest Birds

- 3.3.2.12 Evaluate and compare the effectiveness of different management techniques (e.g., prescribed burning, mowing, brush-hogging, etc.) for maintaining suitable habitat for grassland-dependent species and species dependent upon early successional habitats.
- 3.3.2.13 Evaluate the effectiveness of management strategies (e.g., timing restrictions for mowing, cooperative agreements with utility companies for maintenance of rights-of-ways) that maintain and enhance large existing areas of grassland in perpetuity. Focus on habitat patches that can be managed to enhance the total size of suitable grassland habitat and create interspersed early-successional habitat.
- 3.3.2.15 Investigate the effectiveness of management techniques implemented to eliminate invasive terrestrial and aquatic plant species on private and public lands, and/or within sensitive and/or important habitats for SGCN.
- 3.3.2.16 Evaluate the effectiveness of best management practices (BMPs), protective strategies, and guidelines for maintaining and enhancing healthy, SGCN-associated terrestrial and aquatic habitats and associated riparian habitats, and to minimize (if not avoid) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
- 3.3.2.20 Once a system is developed for reporting and qualifying new locations of invasive species, develop, implement and monitor/evaluate invasive species removal strategies at identified locations. Priority should be given to those areas critical to SGCN and/or contain unique and/or rare plant communities supporting SGCN and/or other fish/wildlife species.
- 3.3.2.24 Conduct regular inventories of forests throughout northern New Jersey to characterize the changing structure and composition of habitats and monitor forest conditions.

3.5 Techniques development

3.5.3 Habitat restoration methods

- 3.5.3.1 Work with land management agencies to determine the appropriate actions needed to restore/reclaim degraded habitat for the documented/target SGCN.
- 3.5.3.3 Develop/improve management techniques that might be used to mimic the historic role of fire and other natural disturbances in shaping an ecosystem.
- 3.5.3.7 Develop/improve forest management/silviculture strategies that enhance and maintain critical core forests as appropriate for targeted species (e.g., for many SGCN forest birds, "core" forest would include the forest area >90 meters from the forest edge), in perpetuity, to benefit interior forest and disturbance-sensitive SGCN through research and monitoring.
- 3.5.3.8 Develop best management practices (BMPs), protective strategies, and guidelines for maintaining and enhancing healthy, SGCN-associated terrestrial and aquatic habitats and associated riparian habitats, and to minimize (if not avoid) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
- 3.5.3.9 Develop strategies to combat the impacts of diseases/pathogens impacting SGCN and/or their habitats.
- 3.5.3.11 Develop strategies to protect native terrestrial and aquatic habitats and dependent SGCN species from the identified threats.
- 3.5.3.15 Modify management practices based on the effects of pesticides, herbicides and other biological controls on critical and supporting SGCN habitats.
- 3.5.3.19 Work with foresters to develop prescribed burning practices for Pinelands dependent species that increase or maintain habitat quality for these species in the Pinelands.

Young Forest Birds

- 3.5.3.20 Develop guidance on various silviculture techniques for enhancing forests for forest-dependent SGCN.
 - 3.5.3.21 Develop management techniques (e.g., ecologically-based forestry activities, prescribed burns) that might be used to mimic the historic role of fire and other natural disturbances in shaping an ecosystem.
 - 3.5.3.22 Identify (through surveys/studies, literature searches, review of available data, enlistment of habitat management and/or species experts, etc.) and modify management strategies (e.g., timing restrictions for mowing, cooperative agreements with utility companies for maintenance of rights-of-ways), based on research, that maintain and enhance large existing areas of grassland in perpetuity.
 - 3.5.3.24 Based on research, modify management techniques implemented to eliminate invasive terrestrial and aquatic plant species on private and public lands, and/or within sensitive and/or important habitats for SGCN.
 - 3.5.3.25 Use data regarding SGCN population numbers/trends and demography, on-going threats, habitat changes, etc. to develop the necessary management strategies to reach or maintain viable population levels.
 - 3.5.3.29 Explore the use of alternative vegetation (i.e., commodity crops) to address agriculture concerns.
- 3.5.4 Fish and wildlife research, survey and management techniques
 - 3.5.4.2 Develop, implement, monitor and evaluate management strategies to reduce the impacts of herbivory on native vegetation and the degradation of habitats supporting SGCN by invasive and/or native, over-abundant wildlife species including but not limited to mute swans, Canada geese, beaver and white-tailed deer.
 - 3.5.4.10 Develop BMPs for lighting of/on tall structures that minimize harm to and/or disorientation of wildlife, in particular but not limited to migratory birds, bats and invertebrates.
 - 3.5.4.14 Develop and implement agreements, and update existing agreements, with government agencies regarding the protection of critical SGCN habitats (e.g., significant breeding populations of beach nesting birds, colonial waterbird nesting areas, bat colonies, etc.).
 - 3.5.4.15 Investigate the success of management strategies used to protect and/or enhance SGCN populations and when appropriate, aid in identifying failures/resource problems and issues, and developing new strategies.
 - 3.5.4.16 Use data regarding SGCN population numbers/trends and demography, on-going threats, habitat changes, etc. to determine if directed management efforts are needed to reach or maintain viable population levels and develop the necessary management strategies.
 - 3.5.4.17 Investigate new, non-invasive techniques for SGCN population evaluation through literature review, expert opinion, trial studies (if low risk), etc.
 - 3.5.4.18 Investigate the effectiveness of survey techniques through selected “ground truthing” and literature and peer review in order to increase efficacy of survey, minimize surveyor bias and error, and increase accuracy of trend data.
 - 3.5.4.19 Develop reliable, standardized survey and monitoring protocols for SGCN species, for which none currently exist, and their habitats.

4 Education

4.1 Educator/Instructor training

4.1.0 Public education

Young Forest Birds

- 4.1.0.1 Provide educational resources and training programs to private and public landowners, as well as schools, regarding the benefits and creation of backyard habitats for wildlife.

5 Facilities and Areas

5.15 Wildlife Management Areas

5.15.6 Roads

- 5.15.6.1 Clearly post areas/roads where vehicle access is permitted.
- 5.15.6.2 Clearly post areas/trails where vehicle access is not permitted.

6 Land and Water Rights Acquisition and Protection

6.0 Acquisition and protection strategies

6.0.0 Combined acquisition and protection strategies

- 6.0.0.1 Enhance and increase the effective size of critical migratory stopover habitats for songbirds, raptors, shorebirds, bats and invertebrates by securing adjacent habitats through an appropriate combination of fee title, non-fee title and landowner agreements.
- 6.0.0.2 Enhance and increase the effective size of SGCN habitats by protecting adjacent habitats that contribute to the overall size of the "core" area and/or provide a natural buffer, enhancing the suitability of the core area for SGCN, and/or connect conserved SGCN habitats through an appropriate combination of fee title, non-fee title and landowner agreements.
- 6.0.0.3 Secure and protect riparian and floodplain habitats, inland wetland habitats (marsh, vernal pool, fen, emergent shrubland, forest), and other aquatic habitats (including open waters) and/or biologically appropriate buffers to minimize degradation through an appropriate combination of fee title, non-fee title and landowner agreements.
- 6.0.0.5 Secure and protect critical coastal habitats (beach/dune, scrub-shrub, forest, wetland, marsh, and marine and estuarine habitats) that provide nesting, migrating and wintering areas for SGCN birds, fish and other coastal SGCN through an appropriate combination of fee title, non-fee title and landowner agreements.
- 6.0.0.7 Secure and protect critical SGCN forested habitat and minimize forest edge to benefit interior forest and disturbance-sensitive SGCN through an appropriate combination of fee title, non-fee title and landowner agreements.
- 6.0.0.8 Secure and protect scrub-shrub habitats for SGCN through an appropriate combination of fee title, non-fee title and landowner agreements.

6.3 Conservation area designation

6.3.0 Conservation area designation strategies

- 6.3.0.1 Promote the protection of critical migratory stopover habitats for songbirds, raptors, shorebirds, bats and invertebrates and enhance these lands by increasing the effective size through conservation area designations of stopover habitats and adjacent private lands.
- 6.3.0.2 Enhance and increase the effective size of SGCN habitats by protecting adjacent habitats that contribute to the overall size of the "core" area and/or provide a natural buffer, enhancing the suitability of the core area for SGCN and/or connect conserved SGCN habitats through conservation area designations.
- 6.3.0.3 Increase the protection of riparian and floodplain habitats, inland wetland habitats (marsh, vernal pool, fen, emergent shrubland, forest), and other aquatic habitats (including open waters) and/or biologically appropriate buffers to minimize degradation through conservation area designations.

Young Forest Birds

- 6.3.0.5 Promote the protection of critical coastal habitats (beach/dune, scrub-shrub, forest, wetland, marsh, and marine and estuarine habitats) that provide nesting, migrating and wintering areas for SGCN birds, fish and other coastal SGCN through conservation area designations.
- 6.3.0.7 Promote the protection of critical SGCN forested habitat and minimize forest edge to benefit interior forest and disturbance-sensitive SGCN through conservation area designations.
- 6.3.0.8 Promote the protection of scrub-shrub habitats for SGCN through conservation area designations.

6.4 Private lands agreements

6.4.0 Private land agreement strategies

- 6.4.0.1 Enter into private lands agreements to expand control burns on private lands, in particular those adjacent to conserved lands to improve SGCN habitats.

7 Law Enforcement

7.1 Law enforcement

7.1.4 Scale Unspecified

- 7.1.4.1 Improve enforcement of policies and/or regulations that promote the reduction of run-off and point and non-point source pollution into NJ's aquatic systems (streams, rivers, lakes/ponds, bays, ocean, wetlands, etc.).
- 7.1.4.4 Improve enforcement of policies/regulations aimed at protecting and preserving critical coastal and marsh habitats, and secure mitigation for losses that create an environmental benefit.
- 7.1.4.5 Enforce current policies and/or regulations to increase the ability to protect and preserve coastal habitats (beach/dune, scrub-shrub, forest, wetland, marsh, marine and estuarine habitats) that provide nesting, migrating, and wintering areas for SGCN birds, fish and other coastal SGCN, and implement and enforce amended policies/regulations.
- 7.1.4.7 Increase law enforcement presence to enforce regulations governing recreational activities (e.g., the use of personal watercraft and off road vehicles, caving, rock climbing, etc.) on conserved lands and within other sensitive habitats, and discourage activities that cause harm or disturbance to vegetation, wetlands, fish and wildlife.
- 7.1.4.8 Implement policies that protect critical migratory stopover habitats for songbirds, raptors, shorebirds, bats and invertebrates.
- 7.1.4.10 Implement policies that promotes expanding acreages and enhances the effective size of SGCN habitats by providing biologically appropriate buffers of native habitat surrounding SGCN habitats.
- 7.1.4.11 Implement and enforce policies/regulations that will increase the ability to protect and preserve coastal habitats (beach/dune, scrub-shrub, forest, wetland, marsh, and marine and estuarine habitats) that provide nesting, migrating, and wintering areas for SGCN birds, fish and other coastal and aquatic SGCN.
- 7.1.4.12 Implement policies and/or regulations that protect significant natural and/or unique communities in perpetuity.
- 7.1.4.15 Implement policies that preserve and protect critical SGCN forested habitat and minimize forest edge to benefit interior forest and disturbance-sensitive SGCN.
- 7.1.4.16 Implement policies that protect and restore riparian areas.
- 7.1.4.17 Improve the enforcement of policies and/or regulations that protect wetlands, riparian and floodplain areas, and aquatic habitats (including open waters).

Young Forest Birds

- 7.1.4.19 Implement policies that protect and restore scrub-shrub habitats to benefit shrub-dependent SGCN.
- 7.1.4.21 Implement regulations for lighting of/on tall structures that will minimize harm to and/or disorientation of wildlife, and enforce within state, county and local permitting processes.
- 7.1.4.22 Implement policies and/or regulations that prohibit the presence of managed cat colonies and trap, neuter and release programs in or near critical wildlife habitats.
- 7.1.4.25 Encourage the enforcement of municipal laws regulating domestic pets that may predate on wildlife.

8 Outreach

8.1 Partner/stakeholder engagement

8.1.0 Partner/stakeholder engagement strategies

- 8.1.0.4 Engage government agencies, conservation partners and other stakeholders in constructive dialogues encouraging them to influence policy change and the creation of incentives through a habitat bill and/or municipal ordinances for backyard habitat.
- 8.1.0.13 Engage DOD in a constructive dialogue regarding strategies to minimize disturbances to all SGCN (i.e., beyond their federal requirements) from forest management and other practices on their lands.
- 8.1.0.15 Engage government agencies, conservation partners and other stakeholders in discussions encouraging and supporting the creation of laws and policies requiring vegetative buffers of native plants on preserved farmland and state lands with agricultural leases or agreements.
- 8.1.0.16 Engage local governments in discussions regarding the importance of them adopting/passing ordinances which require assessing and addressing secondary impacts (i.e., ancillary prescribed burns, trespassers, ORV use, mosquitoes, deer, buffers) on biological resources when revising planning/zoning documents or granted site plan/subdivision approvals.
- 8.1.0.17 Engage municipalities in constructive dialogue to identify and minimize destruction of areas prioritized for early succession forest management.
- 8.1.0.19 Engage government agencies, conservation partners and other stakeholders to collaboratively develop a list of important projects, targeting SGCN and/or their habitat, as a guide for graduate student research. Distribute the list and contact information to all State colleges and universities.
- 8.1.0.21 Work with government agencies and environmental educators to develop educational resources and training programs, educate the public on the devastation human-subsidized and/or overabundant, native species cause to local nesting species, and provide expert guidance on how residents can help alleviate this threat.
- 8.1.0.22 Work with government agencies and environmental educators to develop educational resources and training programs, educate the public on the devastation invasive species cause to native nesting species, and provide expert guidance on how residents can help alleviate this threat.
- 8.1.0.24 Engage government agencies, conservation partners and other stakeholders in constructive dialogue regarding the importance of providing and methods to provide technical support for carrying out restoration and management practices aimed at increasing structural habitat diversity.
- 8.1.0.25 Provide technical support to public landowners and land managers for carrying out restoration and management practices aimed at increasing structural habitat diversity.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Young Forest Birds

- 8.1.0.26 Coordinate across federal, state and local agencies and approved consulting foresters that provide financial, logistical or planning assistance to woodland landowners to adopt or endorse consistent best management practices concerning controlled burns to maintain and/or improve forested habitat for wildlife.
- 8.1.0.30 Encourage government agencies and conservation partners to advise members of the relevant scientific community of the need for specific studies, reports or investigations targeting the data-deficiency regarding SGCN and/or their habitats.
- 8.1.0.33 Engage government agencies, conservation partners and other land managers, communities, landowners, and commercial and industrial stakeholders in discussions regarding the importance of protecting and methods to protect priority wetlands beyond the levels afforded through regulation by maintaining and/or restoring optimal biological buffers around wetlands.
- 8.1.0.37 Enlist landowners and NJ citizens in the protection of and survey efforts for SGCN, in particular rare species, by increasing enrollment in landowner incentives, forest stewardship, backyard habitat management and wildlife-related volunteer programs.
- 8.1.0.38 Engage partners, stakeholders and land managers in constructive dialogue promoting forest stewardship for SGCN that use core forests and forested corridors.
- 8.1.0.44 Engage conservation partners, stakeholders, government agencies and other land stewards in constructive dialogues encouraging their inclusion of controlled burns in forest and other stewardship plans.
- 8.1.0.47 Form cooperative partnerships with energy companies to facilitate habitat creation and enhancement away from and outside of project areas, the restoration of appropriate habitats within project areas (e.g., rights-of-way could benefit butterflies and some bird species), and to identify seasonal timing of activities that would minimize impacts to wildlife.
- 8.1.0.48 Form cooperative partnerships with transportation and shipment agencies and companies to facilitate habitat creation and enhancement away from and outside of project areas and to identify seasonal timing of activities that would minimize impacts to wildlife.

8.2 Recruitment and retention activities

8.2.3 For wildlife watching

- 8.2.3.1 Develop and implement nature-focused tourism opportunities including wildlife viewing sites, interpretive signage highlighting unique ecosystems/habitats, and wildlife-related recreational opportunities that do not negatively impact SGCN or their habitats.

8.3 WSFR program/subprogram outreach

8.3.0 WSFR program/subprogram outreach strategies

- 8.3.0.5 Develop and provide (or otherwise make publicly available) educational programs and/or materials that provide homeowners information on how to design dwellings and other structures in a manner that is wildlife friendly (e.g., using bird-safe glass on windows).
- 8.3.0.6 Develop and provide (or otherwise make publicly available) educational programs and/or materials to enlist landowners, land managers and local communities to discourage the presence of managed cat colonies and trap, neuter and release programs in wildlife habitats.
- 8.3.0.9 Develop and provide (or otherwise make publicly available) educational programs and/or materials to enlist landowners and land managers to include only native plants in landscaping and restoration projects. Provide information to assist them in detecting problematic establishment of invasive, non-indigenous plants.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Young Forest Birds

- 8.3.0.10 Develop and provide (or otherwise make publicly available) educational programs and/or materials to educate landowners and NJ citizens on threats to fish and wildlife (including marine animals).
- 8.3.0.12 Promote awareness of WSFR (Wildlife and Sportfish Restoration) Outreach/Awareness grants, an important funding source for conservation among hunters and anglers as well as the general public.
- 8.3.0.13 Conduct an educational campaign to encourage observer ethics and respect for wildlife and natural habitat.
- 8.3.0.19 Develop an educational outreach program for the public on the devastating effects predators can have on native nesting wildlife.
- 8.3.0.25 Develop educational outreach programs for landowners, nurseries and the general public regarding the negative impacts of invasive and non-native plants on our natural communities.
- 8.3.0.26 Develop educational outreach programs for private and public landowners and land managers regarding the importance of and how to manage core forests and forested corridors in a way that will be beneficial for SGCN, particularly endangered, threatened and special concern species.
- 8.3.0.27 Develop educational outreach programs for public and private landowners and land managers regarding the importance of structural habitat diversity, methods to increase diversity, and/or incentive programs available to increase habitat diversity.
- 8.3.0.28 Develop educational outreach programs for public and private landowners and land managers regarding the importance of managing grasslands for grassland-dependent species, methods of management, and/or incentive programs available.
- 8.3.0.30 Develop educational outreach programs for private and public landowners, as well as schools, regarding the benefits and creation of backyard habitats for wildlife.
- 8.3.0.32 Develop an educational outreach program for landowners and citizens on the threats that herbicides and pesticides pose to aquatic systems and wildlife, and to promote safer usage of such products.

9 Planning

9.1 Land use planning

9.1.0 Land use planning strategies

- 9.1.0.1 Develop smart-growth plans and critical habitat designations that consider SGCN life history requirements and habitat needs, connectivity and health of those habitats, and minimizes human-associated disturbances to those habitats and SGCN inhabiting them.
- 9.1.0.2 Develop town plans that avoid impacts to SGCN species and their habitats.
- 9.1.0.3 Develop a plan that directs the creation of impervious surfaces away from and to minimize impacts on aquatic systems and critical terrestrial habitats. The plan should also include strategies to increase the resiliency of aquatic and critical terrestrial habitats to threats and stressors that would impact the reproduction and survival of wildlife.
- 9.1.0.5 Develop a plan that directs the creation or expansion of energy or utility rights-of-way in a manner that minimizes the impacts on critical forested habitats and the wildlife community.
- 9.1.0.6 Develop a plan that directs the creation or expansion of roads and railroads or the re-establishment of abandoned railroads within and adjacent to critical forested habitats in a manner that minimizes the impacts on critical forested habitats and the wildlife community.
- 9.1.0.7 Develop a plan that directs the maintenance of or new channelization of forested streams and rivers in a manner that minimizes impacts of the aquatic ecological system and adjacent forest

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Young Forest Birds

- 9.1.0.9 Develop a plan that focuses on strategies to minimize the creation of renewable energy farms (e.g., solar, wind) and related infrastructures within and their impacts on forested habitats and the wildlife community.
- 9.1.0.10 Develop a plan that focuses on strategies to minimize the impacts of mining on critical forested habitats.
- 9.1.0.11 Develop a plan that focuses on strategies to minimize the impacts of power plants on critical forested habitats and the wildlife community.
- 9.1.0.13 Develop a plan to minimize agriculture that would result in groundwater withdrawal in critical forested areas.
- 9.1.0.14 Develop a plan to minimize development that would result in groundwater withdrawal in critical forested areas.
- 9.1.0.15 Develop a plan to minimize fragmentation of terrestrial and aquatic habitats by roads.
- 9.1.0.16 Develop a plan to minimize new lawns and preserve natural vegetation within and adjacent to critical forest areas.
- 9.1.0.19 Develop a plan to minimize the extent of impervious surfaces as part of new construction to increase water recharge in those areas.
- 9.1.0.20 Develop a plan to minimize the impacts of existing agricultural properties adjacent to and the conversion of forest habitats (terrestrial and aquatic, within or adjacent to critical forests) to agriculture, grazing areas/livestock farms, and plantations.
- 9.1.0.21 Develop a plan to minimize the use of any-sized dam in critical forested areas.
- 9.1.0.22 Incorporate habitat connectivity and preservation of natural areas into state and local land-use policy and the environmental review process to minimize the impacts of transportation and service corridors on fish and wildlife and their habitats.
- 9.1.0.24 Develop a plan to prevent livestock from entering water bodies in critical forested habitats.
- 9.1.0.25 Develop a plan to prevent the conversion of forested stream buffers to pastures in critical forested habitats.
- 9.1.0.28 Develop and coordinate state, regional and local plans for suitable lot layout and landscaping to minimize human-wildlife conflicts that also incorporates habitat connectivity and preservation of natural areas.
- 9.1.0.29 Provide GIS or related data, maps, resource inventories, as well as related training, pertaining to the SWAP and its recommended conservation actions for use or consideration by State, County or municipal planning agencies.
- 9.1.0.30 Incorporate habitat connectivity and preservation of natural areas into state and local land-use policy and the environmental review process to minimize habitat fragmentation and other related threats associated with development.
- 9.1.0.31 Develop wetland restoration plans that consider the life history and needs of wildlife occupying targeted habitats.
- 9.1.0.33 Review the species, threats, action successes, and habitats, and work with partners to revise the 2017 State Wildlife Action Plan for the 2025 resubmittal.

9.3 Species and habitat management planning

9.3.1 Species management planning

- 9.3.1.4 Develop town plans that avoid impacts to SGCN species and their habitats.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Young Forest Birds

- 9.3.1.7 Develop a rapid response plan for various scenarios (e.g., insect infestations destroying native habitat, wildlife disease) to be implemented upon exotic pathogen introduction or incident.
 - 9.3.1.9 Develop a management plan incorporating the effects of pesticides, herbicides and other biological controls on SGCN and their critical and supporting habitats.
 - 9.3.1.13 Develop a management plan to ensure SGCN populations' persistence based on long-term monitoring of resident and migratory SGCN populations and their habitats.
 - 9.3.1.16 DOD and appropriate state agencies work together to improve DOD Integrated Natural Resource Management Plans (INRMP) to develop strategies to minimize or eliminate disturbances to all SGCN (i.e., beyond their federal requirements) during military activities and to improve SGCN habitat and presence.
 - 9.3.2 Listed species recovery planning
 - 9.3.2.1 Develop proactive species recovery plans for all endangered and threatened species including guidance and objectives pertaining to critical and supporting habitat to meet and maintain recovery goals.
 - 9.3.3 Habitat management planning
 - 9.3.3.5 Develop a management plan using forest management/silviculture strategies that enhance and maintain critical core forests as appropriate for targeted species (e.g., for many SGCN forest birds, "core" forest would include the forest area >90 meters from the forest edge), in perpetuity, to benefit interior forest and disturbance-sensitive SGCN through research and monitoring.
 - 9.3.3.6 Develop a management plan for maintaining and enhancing healthy, SGCN-associated terrestrial and aquatic habitats and associated riparian habitats, and to minimize (if not avoid) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
 - 9.3.3.7 Develop a management plan to reduce the impacts of herbivory on native vegetation and the degradation of habitats supporting SGCN by invasive and/or native, over-abundant wildlife species including but not limited to mute swans, Canada geese, beaver and white-tailed deer.
 - 9.3.3.8 Develop a management plan to combat the impacts of diseases/pathogens impacting SGCN and/or their habitats.
 - 9.3.3.9 Develop a response plan to outbreaks using BMPs to control infestations and limit their spread in a way that avoids excessive harm to non-target species.
 - 9.3.3.10 Develop a management plan to ensure SGCN populations' persistence based on long-term monitoring of resident and migratory SGCN populations and their habitats.
 - 9.3.3.11 Develop town plans that avoid impacts to SGCN species and their habitats.
 - 9.3.3.13 Develop a management plan that will establish/improve habitat resilience (e.g., shorelines of the coast and Delaware Bay, forested habitats of the Pinelands and Skylands) that benefits wildlife inhabiting these areas and prevents or ameliorates near-term impacts of climate change throughout the State, but in particular within the coastal and Delaware Bay areas.
 - 9.3.3.15 Develop a management plan incorporating the effects of pesticides, herbicides and other biological controls on SGCN and their critical and supporting habitats.
 - 9.3.3.17 Develop a management plan for prescribed burning that will benefit Pinelands dependent species and increase or maintain habitat quality for these species in the Pinelands.

Young Forest Birds

- 9.3.3.18 In cooperation with species and habitat experts, develop management plans for significant natural and/or unique communities, in particular those supporting SGCN, and provide the information to the landowners/managers (federal, state and local government agencies or non-government organization) for review and implementation.
- 9.3.3.19 Develop management plans for SGCN inhabiting permanently protected natural lands using available baseline and population trend data.
- 9.3.3.20 Develop an action plan for immediate implementation should habitat levels fall below the minimum necessary size and/or structure within the Cape May Peninsula to sustain the avian migration.
- 9.3.3.21 Develop a rapid response plan for various scenarios (e.g., insect infestations destroying native habitat, wildlife disease) to be implemented upon exotic pathogen introduction or incident.
- 9.3.3.24 Develop a plan to improve the enforcement of policies and/or regulations that protect wetlands, riparian and floodplain areas, and aquatic habitats (including open waters).
- 9.3.3.26 Develop a management plan for parcels of suitable size to be managed for native herbaceous plant species that support breeding grassland dependent species.
- 9.3.3.29 Develop habitat management plans aimed at reducing or eliminating negative impacts of ORVs.
- 9.3.3.32 DOD and appropriate state agencies work together to improve DOD Integrated Natural Resource Management Plans (INRMP) to develop strategies to minimize or eliminate disturbances to all SGCN (i.e., beyond their federal requirements) during military activities and to improve SGCN habitat and presence.
- 9.3.3.34 Include controlled burn prescriptions in forest and stewardship plans to improve wildlife habitat.
- 9.3.3.35 Incorporate habitat connectivity, preservation of natural areas, and the implementation of BMPs into state and local land-use policy environmental review process and energy development plans to minimize habitat fragmentation and related threats associated with solar farms and altered habitats.
- 9.3.3.36 Integrate plans for properly located and timed habitat restoration and management along transportation, energy and service corridors to minimize risks to and benefit wildlife.

11 Technical Assistance

11.1 Environmental review

11.1.1 Review of proposed projects

- 11.1.1.1 Use Biotics database and Landscape Project Mapping in regulatory reviews to ensure protection by applicable laws and regulations.
- 11.1.1.2 Develop smart-growth plans and critical habitat designations that consider SGCN life history requirements and habitat needs, connectivity and health of those habitats, and minimize human-associated disturbances to those habitats and the SGCN inhabiting them.
- 11.1.1.3 Government organizations to thoroughly review wetland restoration plans, applying the most current science for wildlife, habitats and aquatic systems, to assess the impacts to resident and migratory wildlife occupying the targeted habitats.
- 11.1.1.4 Incorporate habitat connectivity and preservation of natural areas into state and local land-use policy and the environmental review process to minimize habitat fragmentation and related threats associated with development.

Young Forest Birds

- 11.1.1.5 Incorporate habitat connectivity and preservation of natural areas into state and local land-use policy and the environmental review process to minimize the impacts of transportation and service corridors on fish and wildlife and their habitats.
- 11.1.1.10 Use CHANJ mapping in reviews of proposed energy, mining, transportation and utility service companies/agencies' projects to attempt to maintain habitat connectivity and reduce fragmentation, and identify potential impacts of the projects.
- 11.1.1.11 Use the best available science (species data, habitat present, site layout options, etc.) when conducting regulatory reviews of proposed offshore energy projects relating to drilling, extraction and distribution of petroleum and gas products to reduce habitat destruction and minimize impacts on wildlife.
- 11.1.1.12 Use the best available science (species data, habitat present, site layout options, etc.) when conducting regulatory reviews of proposed solar farm projects to reduce habitat fragmentation and minimize impacts on wildlife.
- 11.1.1.13 Use the best available science (species data, habitat present, wind farm layout options, wind blade impacts on migratory species, location of migration routes, etc.) when conducting regulatory reviews of proposed wind farm projects to minimize impacts on migratory and resident wildlife and reduce habitat fragmentation.

11.1.2 Review of proposed policies and plans

- 11.1.2.1 Develop smart-growth plans and critical habitat designations that consider SGCN life history requirements and habitat needs, connectivity and health of those habitats, and minimize human-associated disturbances to those habitats and the SGCN inhabiting them.

11.2 Technical assistance

11.2.0 Assorted technical assistance strategies

- 11.2.0.1 Provide technical support to private and public landowners and land managers for carrying out restoration and management practices aimed at increasing structural habitat diversity.
- 11.2.0.2 Provide technical support to public and private landowners and land managers for controlling invasive, native and non-native plant species in order to increase structural habitat diversity.
- 11.2.0.3 Develop state, regional and local BMPs that focus on minimizing habitat fragmentation and human-wildlife conflicts associated with development. Make information available to land developers and private and public landowners for implementation.
- 11.2.0.5 Provide educational resources, training programs, and expert guidance to private and public landowners and land managers on the threats that herbicides and pesticides pose to aquatic systems and wildlife, and to promote safer usage of such products.
- 11.2.0.6 Provide educational resources, training programs, and on-the-ground guidance to energy, mining, transportation, and utility service agencies/companies and their project and resource managers on habitat creation, enhancement and restoration within and adjacent to project areas, as well as away from and outside of project areas (depending on the target species), by managing vegetation for a variety of species and that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife. Wind farms should address both terrestrial bound and low-flying species. Examples of habitat management include, but are not limited to, integrating short and tall grasses, specific host plants, brush piles, water sources/wetlands, shrubby areas, nesting areas and no-mow set-asides.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Young Forest Birds

- 11.2.0.7 Provide educational resources, training programs, and on-the-ground guidance to energy, mining, transportation, and utility service agencies/companies and their project and resource managers on the importance of maintaining habitat connectivity, minimizing fragmentation, and the use of CHANJ products to help them target areas for such planning.
- 11.2.0.8 Provide educational resources, training programs, and on-the-ground guidance to public and private landowners and land managers on habitat creation and enhancement strategies that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife.
- 11.2.0.9 Provide educational resources, training programs, and on-the-ground guidance to municipalities, land developers, and other land managers and private landowners about the importance of leaving vegetation in place, especially along riparian areas and wildlife movement corridors.
- 11.2.0.10 Provide technical support to private landowners, consultants, and land managers to create customized management plans based on location and SGCN.
- 11.2.0.11 Provide educational resources, training programs, and on-the-ground guidance to private and public landowners and land managers on the benefits of and for creating young forest and early succession habitat for SGCN.
- 11.2.0.12 Provide educational resources and technical support to public landowners and land managers for managing grasslands for grassland-dependent species.
- 11.2.0.14 Provide educational resources and technical support to public and private landowners and land managers to promote the protection of wetlands, riparian and floodplain areas, and aquatic habitats (including open waters), and to enhance or restore biologically appropriate buffers.
- 11.2.0.16 Provide educational resources and technical support to public and private landowners and land managers to promote the protection of critical SGCN forested habitat and minimize forest edge to benefit interior forest and disturbance-sensitive SGCN.
- 11.2.0.19 Provide educational resources and technical support to public and private landowners and land managers to promote the protection and/or enhancement of scrub-shrub habitats for SGCN.
- 11.2.0.20 Provide educational resources and technical support to public and private landowners and land managers to promote the protection and/or enhancement of critical coastal habitats (beach/dune, scrub-shrub, forest, wetland, marsh, and marine and estuarine habitats) that provide nesting, migrating and wintering areas for SGCN birds, fish and other coastal SGCN.
- 11.2.0.21 Provide educational resources and technical support to public and private landowners and land managers of lands adjacent to critical migratory stopover habitats for songbirds, raptors, shorebirds, bats and invertebrates to promote the protection and/or enhancement of those adjacent habitats to increase the effective size of the migratory habitat.
- 11.2.0.22 Provide educational resources, training programs, and expert guidance to public and private landowners and land managers about lawn alternatives and the importance of natural vegetation and "edge" habitats on developed properties.
- 11.2.0.23 Provide educational resources and technical support to public and private landowners and land managers of lands adjacent to SGCN habitats to promote the protection and/or enhancement of those adjacent habitats to increase the overall size of the "core" area and/or provide a natural buffer, enhancing the suitability of the core area for SGCN, and that connect conserved SGCN habitats.

Young Forest Birds

11.2.0.25 Provide educational resources, training programs, and on-the-ground guidance to resource managers regarding the assessment of and addressing secondary impacts (i.e. ancillary prescribed burns, trespassers, ORV use, mosquitoes, deer, buffers) related to residential and commercial development.

11.2.1 With individuals and groups involved in resource management decision making

11.2.1.1 Engage partners and stakeholders in constructive dialogue regarding the importance of providing and methods to provide technical support for carrying out restoration and management practices aimed at increasing structural habitat diversity.

11.2.1.2 Provide professional training and technical assistance tools (e.g., mapping, guidance documents, justification, etc.) to agencies/divisions/programs within and outside of the NJ DEP regarding the SWAP, and the conservation actions recommended therein to help facilitate SWAP implementation.

11.2.1.3 Provide educational resources, training programs, and on-the-ground guidance to DOD to improve DOD Integrated Natural Resource Management Plans (INRMP) to develop and implement forest management and other practices that minimize disturbances to SGCN (i.e., beyond their federal requirements).

11.2.1.6 Provide educational resources, training programs, and on-the-ground guidance to resource agencies prior to project initiation to ensure wildlife and their habitats are protected to the highest degree possible during construction, and provisions are in place for post-construction habitat use.

11.2.2 With private landowners

11.2.2.1 Provide technical support to farming operations and woodland landowners on ways to decrease clean farming (edge-to-edge) practices and create ecotones to benefit bobwhite and other species dependent on early successional habitat.

100 Law and Policy

100. Legislation

100.1.3 Sub-national Level

100.1.3.1 Develop laws and policies to increase protection and biological buffers of wetlands.

100.1.3.3 Initiate legislative action to establish an annual budgetary line item designating funds to support programs focused on long-term research and monitoring of wildlife diseases.

100.1.4 County and Local

100.1.4.1 Enhance critical migratory stopover habitats for songbirds, raptors, shorebirds, bats and invertebrates through the local ordinances of adjacent private lands to increase the effective size of the habitat.

100.1.4.2 Secure and increase the effective size of SGCN habitats and connect conserved SGCN habitats through local ordinances.

100.1.4.3 Expand the acreages and enhance the effective size of SGCN habitats by protecting adjacent habitats that contribute to the overall size of the "core" area and/or provide a natural buffer, enhancing the suitability of the core area for SGCN through local ordinances.

100.1.4.4 Secure wetlands, riparian and floodplain areas, and aquatic habitats (including open waters) and biologically appropriate buffers through local ordinances.

100.1.4.5 Secure SGCN-inhabited/used freshwater wetlands and biologically appropriate buffers through local ordinances.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Young Forest Birds

- 100.1.4.8 Secure critical coastal habitats (beach/dune, scrub-shrub, forest, wetland, marsh, and marine and estuarine habitats) that provide nesting, migrating and wintering areas for SGCN birds, fish and other coastal SGCN through local ordinances.
- 100.1.4.10 Secure critical SGCN forested habitat and minimize forest edge to benefit interior forest and disturbance-sensitive SGCN through local ordinances.
- 100.1.4.11 Secure riparian areas through local ordinances.
- 100.1.4.12 Secure scrub-shrub habitats for SGCN through local ordinances.
- 100.1.4.13 Encourage municipal laws regulating domestic pets that may predate on wildlife.
- 100.1.4.14 Adopt/pass local ordinances which require assessing and addressing secondary impacts (i.e. ancillary prescribed burns, trespassers, ORV use, mosquitoes, deer, buffers) on biological resources when revising planning/zoning documents or granted site plan/subdivision approvals.
- 100.1.4.15 Incorporate habitat connectivity and the preservation of natural areas into state and local land-use policy and the environmental review process to minimize habitat fragmentation and related threats associated with development.

100.1.5 Scale Unspecified

- 100.1.5.1 Develop laws and policies to increase protection and biological buffers of wetlands.
- 100.1.5.2 Develop policies for wetland restoration plans that consider life history requirements and needs of wildlife occupying targeted habitats.
- 100.1.5.4 Incorporate habitat connectivity and preservation of natural areas into state and local land-use policy and the environmental review process to minimize the impacts of transportation and service corridors on fish and wildlife and their habitats.
- 100.1.5.5 Develop legislation to provide financial support for the New Jersey Invasive Species Strike Team.

100. State Regulations

100.3.0 Regulatory initiatives for species and habitat protection

- 100.3.0.3 Develop policies that will promote the long term protection of critical migratory stopover habitats for songbirds, raptors, shorebirds, bats and invertebrates.
- 100.3.0.5 Develop policies that will promote improved and secure habitat connections between conserved SGCN habitats.
- 100.3.0.6 Develop policies that will promote expanding acreages and enhancing the effective size of SGCN habitats by providing biologically appropriate buffers of native habitat surrounding SGCN habitats.
- 100.3.0.7 Amend current policies and/or regulations to increase the ability to protect and preserve coastal habitats (beach/dune, scrub-shrub, forest, wetland, marsh, and marine and estuarine habitats) that provide nesting, migrating, and wintering areas for SGCN birds, fish and other coastal and aquatic SGCN.
- 100.3.0.8 Develop policies and/or regulations with the objective of protecting significant natural and/or unique communities in perpetuity.
- 100.3.0.9 Secure mitigation that creates an environmental benefit for losses of SGCN and their habitats.
- 100.3.0.12 Develop policies that promote the preservation and protection of critical SGCN forested habitat and minimize forest edge to benefit interior forest and disturbance-sensitive SGCN.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Young Forest Birds

- 100.3.0.14 Develop policies and/or regulations that increase the protective buffers of wetlands, riparian and floodplain areas, and aquatic habitats (including open waters) to biologically appropriate distances to benefit SGCN that rely upon these habitats and improve the function of the [associated] aquatic systems.
- 100.3.0.15 Develop policies that promote protecting and restoring scrub-shrub habitats to benefit shrub-dependent SGCN.
- 100.3.0.18 Develop policies for conserved lands that prohibit planting and supports the control of non-native vegetation and invasive, native vegetation.
- 100.3.0.19 Develop regulations for lighting of/on tall structures that will minimize harm to and/or disorientation of wildlife, in particular but not limited to migratory birds, bats and invertebrates. Implement BMPs into state, county and local permitting processes.
- 100.3.0.20 Develop policies and/or regulations that prohibit the presence of managed cat colonies and trap, neuter and release programs in or near critical wildlife habitats.
- 100.3.0.23 Review existing CAFRA regulations and ensure that the Coastal Zone Management Rules (NJAC 7:7E) adequately address mitigation that creates an environmental benefit for losses of SGCN and their habitats.
- 100.3.0.24 Create legislation to establish markets for warm-season grasses to increase the permanency of this crop on the landscape.
- 100.3.0.31 Create or expand tax-based incentive programs available to private, agricultural, commercial, industrial or governmental landowners and land managers to include or provide for incentives for the maintenance and/or improvement to existing habitat via the endorsement of wildlife-related BMPs.
- 100.3.0.32 Coordinate regulations across agencies to maximize availability of and enrollment in existing Forestry Stewardship Programs (e.g., "Woodland Stewards", Farm Bill, partners, etc.) to maintain and/or improve forest habitat.
- 100.3.0.40 Develop laws and/or policies to require vegetative buffers of native plants on preserved farmland and state lands with agricultural leases or agreements.
- 100.3.0.41 Explore all State regulatory requirements for mitigation, restoration, habitat management, etc. to ensure they prohibit the use of specified invasive or other problematic plant species.
- 100.3.0.42 Fully adopt the former Storm water Management Rules' 300ft buffer requirements into the Flood Hazard Area Control Act Rules.
- 100.3.0.43 Identify and address (amend) regulatory impediments to beneficial habitat management.
- 100.3.0.44 Incorporate requirements for technical support and funding for mitigation or restoration efforts so as to be consistent with existing regulations.
- 100.3.0.45 Increase the controlled burn season to focus on restoring vegetative communities.
- 100.3.0.46 Investigate and/or develop inter-agency Memorandum of Agreements to share common data stored or managed in program-specific databases.
- 100.3.0.48 Propose new State law or regulation mandating that a State-level "development impact fee" be assessed on all new development approved by municipalities (via the Municipal Land Use Law processes), and dedicate such monies to the development and implementation of regional Habitat Conservation Plans (or existing plans/programs serving the same regional function).
- 100.3.0.50 Retain endangered, threatened and special concern wildlife and habitat protection measures in the Water Quality Management Program Rules.

Young Forest Birds

- 100.3.0.52 Revise existing and/or incorporate new State land use regulations that specifically address the impacts of new or expanded energy sitings and facilities.
- 100.3.0.53 Revise existing and/or incorporate new State land use regulations that specifically address the impacts of new or expanded rights-of-way corridors associated with energy transport/transmission.
- 100.3.0.54 Revise existing and/or incorporate new State land use regulations that specifically address the impacts of new or expanded surface mining areas.
- 100.3.0.56 Develop regulations that when implemented will protect critical migratory stopover habitats for songbirds, raptors, shorebirds, bats and invertebrates.
- 100.3.0.57 Develop regulations that when implemented will improve and secure habitat connections between conserved SGCN habitats.
- 100.3.0.58 Develop regulations that when implemented will promote the expansion of acreages and enhancement of the effective size of SGCN habitats by providing biologically appropriate buffers of native habitat surrounding SGCN habitats.
- 100.3.0.59 Develop regulations that when implemented will increase the ability to protect and preserve coastal habitats (beach/dune, scrub-shrub, forest, wetland, marsh, and marine and estuarine habitats) that provide nesting, migrating, and wintering areas for SGCN birds, fish and other coastal and aquatic SGCN.
- 100.3.0.60 Develop regulations that when implemented will protect significant natural and/or unique communities in perpetuity.
- 100.3.0.63 Develop regulations that when implemented will preserve and protect critical SGCN forested habitat and minimize forest edge to benefit interior forest and disturbance-sensitive SGCN.
- 100.3.0.64 Develop regulations that when implemented will protect and restore riparian areas.
- 100.3.0.65 Develop regulations that when implemented will protect and restore scrub-shrub habitats to benefit shrub-dependent SGCN.
- 100.3.0.67 Develop regulations for lighting of/on tall structures that will minimize harm to and/or disorientation of wildlife, and enforce within state, county and local permitting processes.
- 100.3.0.68 Develop regulations that when implemented will prohibit the presence of managed cat colonies and trap, neuter and release programs in or near critical wildlife habitats.
- 100.3.0.70 Develop regulations that when implemented will facilitate the restoration of dynamic forest disturbance patterns, using tools such as fire, flooding, and silviculture, to support the full life cycle requirements of forest and early successional wildlife species.
- 100.3.0.72 Develop regulations that require permit applicants and/or review agencies to assess the cumulative and synergistic effects of a proposed project (i.e., "secondary effects"), both over time and over a larger spatial scale than the site itself.
- 100.3.0.73 Develop regulations that would exempt the conversion of lawns to native vegetation (beneficial to wildlife) from local lawn ordinances.

100. State Agency Policy Integration

100.4.0 Policy initiatives for species and habitat protection

- 100.4.0.1 Create any necessary policy changes (including those to incentive programs) to encourage the integration of SWAP actions associated with SGCN priority habitats as a deliberative factor in agencies' actions (e.g., environmental and land management review processes, land acquisition and management).

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Young Forest Birds

- 100.4.0.3 Develop policies for mandatory buffer strips on preserved farmlands and state-owned agricultural lands.
- 100.4.0.4 Create a policy that requires the use of wildlife habitat and corridor mapping products for both regulatory use when conducting project reviews and planning/siting new or expanded rights-of-way projects.
- 100.4.0.8 Develop a white paper addressing the impacts that existing, new or expanded rights-of-way have upon wildlife, wildlife habitats and habitat connectivity.
- 100.4.0.9 Develop and implement policies to minimize the removal of coarse, woody debris in terrestrial, aquatic and riparian habitats in order to benefit wildlife.
- 100.4.0.12 Develop laws and/or policies to require vegetative buffers of native plants on preserved farmland and state lands with agricultural leases or agreements.
- 100.4.0.13 Develop policies for different circumstances (e.g., roadsides and medians, riparian, aquatic and terrestrial habitats) that outline appropriate habitat/vegetation management strategies and schedules to minimize risks to and benefit wildlife.
- 100.4.0.14 Develop policies to facilitate agreements between eligible entities to manage appropriate conserved lands for grassland-dependent species, and to have access to/obtain restoration funds.
- 100.4.0.16 Develop policies to implement habitat management strategies that will increase the structural diversity surrounding areas used for energy, mining, and transportation and service corridors which include but are not limited to the presence of short and tall grasses, specific host plants, brush piles, water sources/wetlands, shrubby areas, nesting areas, and no-mow set-
- 100.4.0.17 Develop policies to implement habitat management strategies, including prescribed burns, that will increase the structural diversity on preserved farmlands, state-owned agricultural lands, forests, parks and wildlife management areas, and any conserved lands purchased with the assistance of Green Acres and Federal Land & Water Conservation Fund monies to control and reduce the impacts of invasive, non-native species in order to increase structural habitat diversity.
- 100.4.0.18 Develop policies to minimize the extent of infrastructure associated with energy and service corridors or areas (e.g., wind and solar farms, pipelines, utility lines) and that require the implementation of habitat management strategies that will increase the structural diversity in the area including (e.g., the presence of short and tall grasses, specific host plants, brush piles, water sources/wetlands, shrubby areas, nesting areas, and no-mow set-asides).
- 100.4.0.20 Develop state regulations that require energy developers and utility service companies to implement habitat management strategies that will increase the structural diversity of the habitat, minimize habitat fragmentation and commercial infrastructure, and minimize the loss, alteration and/or degradation of the habitat and adjacent lands when working on preserved farmlands, state-owned agricultural lands, forests, parks and wildlife management areas, and any conserved lands purchased with the assistance of Green Acres and Federal Land & Water Conservation Fund monies.
- 100.4.0.24 Develop policies to provide financial support for the New Jersey Invasive Species Strike Team.
- 100.4.0.25 Develop policies that require permit applicants and/or review agencies to assess the cumulative and synergistic effects of a proposed project (i.e., "secondary effects"), both over time and over a larger spatial scale than the site itself.

Reptiles & Amphibians

Bog Turtle

Focal species that comprise this Conservation Target:

Bog Turtle

Threats and Action Drivers associated with this Conservation Target:

1 Residential and Commercial Development

1.1 Housing and Urban Areas

1.1.1 Land conversion from natural habitat to urban and other residential areas (large and small scale) (Avg. Score: 2.00)

- NJ Specific Threats:**
- 1.1.1.1 Fragments terrestrial and aquatic habitats making the area unsuitable for area-sensitive species and inhibit dispersal of animals, reducing gene flow.
 - 1.1.1.2 Loss, alteration and/or degradation of habitat.
 - 1.1.1.3 Lot layout, design and/or landscaping may create conditions that increase wildlife-human conflict.
 - 1.1.1.4 Increased risk of vehicle strikes/mortality to terrestrial-bound and some bird species.
 - 1.1.1.5 Impervious surfaces can lead to a decrease in water recharge.
 - 1.1.1.6 Impervious surfaces can cause an increased risk of floods, flash floods and storm damage that degrade terrestrial and aquatic habitats.
 - 1.1.1.7 Impervious surfaces can cause an increase in temperatures of local aquatic systems making them unsuitable (or less suitable) for aquatic species' reproduction and survival.

1.2 Commercial and Industrial Areas

1.2.1 Land conversion from natural habitat to commercial or industrial areas (large and small scale) (Avg. Score: 2.00)

- NJ Specific Threats:**
- 1.2.1.1 Fragments terrestrial and aquatic habitats making the area unsuitable for area-sensitive species and inhibit dispersal of animals, reducing gene flow.
 - 1.2.1.2 Loss, alteration and/or degradation of habitat.
 - 1.2.1.3 Lot layout, design and/or landscaping may create conditions that increase wildlife-human conflict.
 - 1.2.1.4 Increased risk of vehicle strikes/mortality to terrestrial-bound and some bird species.
 - 1.2.1.5 Impervious surfaces can lead to a decrease in water recharge.
 - 1.2.1.6 Impervious surfaces can cause an increased risk of floods, flash floods and storm damage that degrade terrestrial and aquatic habitats.
 - 1.2.1.7 Impervious surfaces can cause an increase in temperatures of local aquatic systems making them unsuitable (or less suitable) for aquatic species' reproduction and survival.

1.3 Tourism and Recreational Areas

1.3.1 Land conversion from natural habitat to recreation or tourism areas (large and small scale) (Avg. Score: 1.00)

- NJ Specific Threats:**
- 1.3.1.1 Fragments terrestrial and aquatic habitats making the area unsuitable for area-sensitive species and inhibit dispersal of animals, reducing gene flow.
 - 1.3.1.2 Loss, alteration and/or degradation of habitat.

Bog Turtle

- 1.3.1.3 Lot layout, design and/or landscaping may create conditions that increase wildlife-human conflict.
- 1.3.1.4 Impervious surfaces can lead to a decrease in water recharge.
- 1.3.1.5 Impervious surfaces can cause an increased risk of floods, flash floods and storm damage that degrade terrestrial and aquatic habitats.
- 1.3.1.6 Impervious surfaces can cause an increase in temperatures of local aquatic systems making them unsuitable (or less suitable) for aquatic species' reproduction and survival.

2 **Agriculture and Aquaculture**

2.1 Annual and Perennial Crops (non-timber)

2.1.1 Shifting Agriculture (Avg. Score: 2.00)

- NJ Specific Threats:** 2.1.1.1 Conversion of low-intensity agriculture to intensive agriculture (e.g., tree nursery, row crop) degrades habitat, especially for early-successional species.
- 2.1.1.3 Conversion of agricultural landscape that results in increased erosion, runoff, and chemical and thermal pollution decreases the landscape's ability to buffer aquatic systems from various forms of terrestrial degradation.

2.1.2 Small-holder Farming (Avg. Score: 2.00)

- NJ Specific Threats:** 2.1.2.1 Conversion of low-intensity agriculture to intensive agriculture (e.g., tree nursery, row crop) degrades habitat, especially for early-successional species.
- 2.1.2.2 Fragments terrestrial and aquatic habitats.
- 2.1.2.3 Agricultural practices (e.g., mechanized, row-crop agriculture) can render lands unsuitable for most wildlife due to soil degradation and erosion.
- 2.1.2.4 Agricultural practices (e.g., mechanized, row-crop agriculture) can cause direct mortality to wildlife when harvesting takes places.

2.1.3 Agro-industry (Avg. Score: 2.00)

- NJ Specific Threats:** 2.1.3.1 Conversion of low-intensity agriculture to intensive agriculture (e.g., tree nursery, row crop) degrades habitat, especially for early-successional species.
- 2.1.3.2 Fragments terrestrial and aquatic habitats.
- 2.1.3.3 Agricultural practices (e.g., mechanized, row-crop agriculture) can render lands unsuitable for most wildlife due to soil degradation and erosion.
- 2.1.3.5 Loss of ecotones by implementing clean farming (edge-to-edge) practices degrades habitat for early successional wildlife.

2.2 Wood and Pulp Plantations

2.2.1 Small Holder (Avg. Score: 1.00)

- NJ Specific Threats:** 2.2.1.2 Tree harvesting can cause direct mortality to wildlife, especially if done during peak activity periods or vulnerable life stages (e.g., denning, nesting, gestation/birthing, basking, roosting, pre-volancy, etc.).

2.2.2 Agro-industry Plantations (Avg. Score: 1.00)

- NJ Specific Threats:** 2.2.2.2 Tree harvesting can cause direct mortality to wildlife, especially if done during peak activity periods or vulnerable life stages (e.g., denning, nesting, gestation/birthing, basking, roosting, pre-volancy, etc.).

2.3 Livestock Farming and Ranching

2.3.2 Small-holder Grazing (Avg. Score: 2.00)

- NJ Specific Threats:** 2.3.2.2 Overgrazing of pasturelands and/or hay-fields degrade suitability for wildlife.

Bog Turtle

2.3.2.3 Conversion of natural stream buffers into pastures decreases the landscape's ability to buffer aquatic systems from various forms of terrestrial degradation.

2.3.2.4 Livestock allowed to wade into waterbodies trample and degrade aquatic habitats.

2.3.3 Agro-industry Grazing (Avg. Score: 2.00)

NJ Specific Threats: 2.3.3.2 Overgrazing of pasturelands and/or hay-fields degrade suitability for wildlife.

2.3.3.3 Conversion of natural stream buffers into pastures decreases the landscape's ability to buffer aquatic systems from various forms of terrestrial degradation.

2.3.3.4 Livestock allowed to wade into waterbodies trample and degrade aquatic habitats.

3 Energy Production and Mining

3.1 Oil and Gas Facilities and Pipelines

3.1.1 Distribution processes of petroleum and other liquid hydrocarbons (Avg. Score: 2.00)

NJ Specific Threats: 3.1.1.1 Fragments terrestrial and aquatic habitats.

3.1.1.2 Loss, alteration and/or degradation of habitat.

3.1.1.3 Increased risk of oil spills.

3.1.1.5 Increased vehicular and ship traffic associated with construction and operations, and therefore an increased risk of wildlife mortality from strikes.

3.1.2 Natural gas distribution processes (Avg. Score: 2.00)

NJ Specific Threats: 3.1.2.1 Fragments terrestrial and aquatic habitats.

3.1.2.2 Loss, alteration and/or degradation of habitat.

3.1.2.3 Increased risk of gas leaks and explosions.

3.1.2.5 Increased vehicular and ship traffic associated with construction and operations, and therefore an increased risk of wildlife mortality from strikes.

3.2 Mining and Quarrying

3.2.2 Surface Mining - Rock Quarry (and sand quarries) (Avg. Score: 2.00)

NJ Specific Threats: 3.2.2.1 Fragments terrestrial and aquatic habitats.

3.2.2.2 Loss, alteration and/or degradation of terrestrial and aquatic habitats.

3.2.2.3 Increased risk of vehicle strikes/mortality to wildlife.

3.3 Renewable Energy

3.3.1 Wind Power (Avg. Score: 1.00)

NJ Specific Threats: 3.3.1.2 Fragments terrestrial habitats.

3.3.1.3 Loss, alteration and/or degradation of habitat.

3.3.1.4 Increased commercial infrastructure.

3.3.2 Solar Power (Avg. Score: 2.00)

NJ Specific Threats: 3.3.2.1 Fragments terrestrial habitats.

3.3.2.2 Loss, alteration and/or degradation of habitat.

3.3.2.3 Increased commercial infrastructure.

3.4 Conventional Power Plants

3.4.0 Conventional Power Plants (Avg. Score: 2.00)

Bog Turtle

NJ Specific Threats: 3.4.0.2 Loss, alteration and/or degradation of habitat due to new or the expansion of current facilities.

4 Transportation and Service Corridors

4.1 Roads and Railroads

4.1.1 Land conversion from natural habitat to roads and railroads (large and small scale) (Avg. Score: 3.00)

NJ Specific Threats: 4.1.1.1 Fragments terrestrial and aquatic habitats making the landscape unsuitable for area-sensitive species and inhibiting dispersal of non-volant animals, reducing gene flow.

4.1.1.2 Loss, alteration and/or degradation of habitat associated with road and railroad construction and maintenance, and degradation of adjacent habitats.

4.1.1.5 Re-establishment of abandoned railroad lines may decrease turtles' abilities to disperse due to their difficulty traversing the railroad ties and tracks, leading to decreased genetic exchange.

4.1.2 Movement of cars and other vehicles on roads and railroads (large and small scale) (Avg. Score: 3.00)

NJ Specific Threats: 4.1.2.1 Increased vehicle traffic increases the risk of wildlife mortality from strikes.

4.2 Utility and Service Lines

4.2.1 Land conversion from natural habitat to utility and other service lines (large and small scale) or communication towers and associated access roads (Avg. Score: 2.00)

NJ Specific Threats: 4.2.1.1 Fragments terrestrial and aquatic habitats making the landscape unsuitable for area-sensitive species, inhibiting dispersal of non-volant animals, reducing gene flow, and creating barriers to fish when service line-associated roads cross streams (e.g., bridges, culverts, fords, etc.).

4.2.1.2 Loss, alteration and/or degradation of habitat associated with rights-of-way construction and maintenance, and degradation of adjacent habitats.

4.2.1.4 Lines that cross or run parallel to streams result in a loss or reduction of vegetated riparian buffers and streamside shading, affecting water quality and in-stream habitat for aquatic biota.

4.2.2 Management of rights-of-way or communication tower facilities and/or their associated access roads (Avg. Score: 2.00)

NJ Specific Threats: 4.2.2.1 Improper or poorly scheduled vegetation management can cause direct mortality to and may reduce productivity of wildlife.

5 Biological Resource Use

5.1 Hunting and Collecting Terrestrial Animals

5.1.1 Intentional Use (Avg. Score: 3.00)

NJ Specific Threats: 5.1.1.1 Illegal collection of wildlife can have detrimental impacts on populations.

5.1.2 Unintentional effects (Avg. Score: 1.00)

NJ Specific Threats: 5.1.2.2 Disruption of normal wildlife behavior.

5.2 Gathering Terrestrial Plants

5.2.2 Unintentional effects (Avg. Score: 1.00)

NJ Specific Threats: 5.2.2.1 Stepping on nests or young/hatchling animals.

5.2.3 Control (Avg. Score: 1.00)

NJ Specific Threats: 5.2.3.2 Clearing of scrub-shrub vegetation [and snags] diminishes cover and nesting habitat.

Bog Turtle

- 5.2.3.3 Removal of riparian or near-stream vegetation alters water quality and in-stream habitat for aquatic organisms by reducing streamside shading, increasing bank erosion, and affecting the natural filtering ability of trees, shrubs, and grasses.

5.3 Logging and Wood Harvesting

5.3.1 Intentional Use (subsistence/small scale) (Avg. Score: 1.00)

- NJ Specific Threats:** 5.3.1.1 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN may fragment their terrestrial habitats.
- 5.3.1.2 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN may cause the loss, alteration and/or degradation of wildlife habitat.
- 5.3.1.3 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN and unsustainable forestry practices may increase soil erosion, impacting SGCN habitats.
- 5.3.1.4 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN and unsustainable forestry practices may increase the risk of invasive species establishment, impacting SGCN habitats.
- 5.3.1.5 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN and unsustainable forestry practices may decrease structural diversity and biomass leading to reduced biodiversity and ecological integrity.

5.3.2 Intentional Use (large scale) (Avg. Score: 2.00)

- NJ Specific Threats:** 5.3.2.1 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN may fragment their terrestrial habitats.
- 5.3.2.2 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN may cause the loss, alteration and/or degradation of wildlife habitat.
- 5.3.2.3 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN and unsustainable forestry practices may increase soil erosion, impacting SGCN habitats.
- 5.3.2.4 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN and unsustainable forestry practices may increase the risk of invasive species establishment, impacting SGCN habitats.
- 5.3.2.5 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN and unsustainable forestry practices may decrease structural diversity and biomass leading to reduced biodiversity and ecological integrity.

5.3.3 Unintentional effects (subsistence/small scale) (Avg. Score: 1.00)

- NJ Specific Threats:** 5.3.3.1 Direct mortality of wildlife, direct loss of suitable habitats (roost, foraging, shelter, etc.), and can disrupt sensitive species, decreasing the likelihood of success and/or reproduction.
- 5.3.3.2 Poorly planned/implemented tree harvesting adjacent to waterways and vernal pools can lead to increased water temperatures, soil erosion and sedimentation, and reduces the potential for woody debris within the aquatic system, leading to negative impacts on wildlife.

5.3.4 Unintentional effects (large scale) (Avg. Score: 2.00)

- NJ Specific Threats:** 5.3.4.1 Direct mortality of wildlife, direct loss of suitable habitats (roost, foraging, shelter, etc.), and can disrupt sensitive species, decreasing the likelihood of success and/or reproduction.
- 5.3.4.2 Extensive infrastructure and larger equipment requirements present a potential risk of direct injury/mortality to wildlife.
- 5.3.4.3 Poorly planned/implemented tree harvesting adjacent to waterways and vernal pools can lead to increased water temperatures, soil erosion and sedimentation, and reduces the potential for woody debris within the aquatic system, leading to negative impacts on wildlife.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Bog Turtle

- 5.3.4.4 Infrastructure and/or equipment use may result in subtle changes to drainage patterns, adversely affecting vernal pool and wetland hydrology.
- 5.3.4.5 Lack of appropriate, sustainable forest management can lead to a decrease in forest habitat diversity, degraded habitat for many forest species, the loss of habitat for early-successional species, and/or the loss of unique habitats for species that need canopy breaks and multi-aged tree composition to fulfill various life history requirements.

5.4 Fishing and Harvesting of Aquatic Resources

5.4.1 Intentional Use (subsistence/small scale) (Avg. Score: 1.00)

NJ Specific Threats: 5.4.1.4 Illegal collection of aquatic and semi-aquatic wildlife can have detrimental impacts on populations.

5.4.2 Intentional Use (large scale) (Avg. Score: 1.00)

NJ Specific Threats: 5.4.2.4 Illegal collection of aquatic and semi-aquatic wildlife can have detrimental impacts on populations.

6 Human Intrusions and Disturbance

6.1 Recreational Activities

6.1.1 Off-road vehicles (motorized and non-motorized) (Avg. Score: 1.00)

NJ Specific Threats: 6.1.1.1 Inappropriate use of off-road vehicles creates new roads/trails which fragments habitat.

6.1.1.2 Inappropriate use of off-road vehicles can degrade terrestrial and aquatic habitat and reduce the suitability of adjacent habitats for wildlife.

6.1.1.3 Increased risk of harassment that results in a change in wildlife behavior and/or direct mortality from vehicle strikes.

6.1.1.6 Off-road vehicles can be a mechanism of transference of wildlife diseases and invasive plant species if gear and apparel are not properly sanitized between sites.

6.1.5 Wildlife observation and photography (Avg. Score: 1.00)

NJ Specific Threats: 6.1.5.1 Improperly conducted recreational activities may disrupt normal wildlife behaviors which can result in reduced reproductive success or survival, abandonment of critical sites, etc.

6.1.5.2 Participants may introduce wildlife diseases and invasive plant species when gear and apparel is not properly sanitized between sites.

6.3 Work and Other Activities

6.3.1 Unauthorized research projects at significant habitats (Avg. Score: 2.00)

NJ Specific Threats: 6.3.1.1 Participants may introduce wildlife diseases and invasive plant species when gear and apparel is not properly sanitized between sites.

6.3.1.2 Accidental trampling of nests, eggs/egg masses, and unseen individuals may impact reproductive success or cause direct mortality to SGCN.

6.3.2 Authorized research projects at significant habitats (Avg. Score: 2.00)

NJ Specific Threats: 6.3.2.2 Participants may introduce wildlife diseases and invasive plant species when gear and apparel is not properly sanitized between sites.

6.3.2.3 Accidental trampling of nests, eggs/egg masses, and unseen individuals may impact reproductive success or cause direct mortality to SGCN.

6.3.3 Other "work" unrelated to research (Avg. Score: 2.00)

NJ Specific Threats: 6.3.3.1 Construction projects may disrupt normal wildlife behavior which can result in reduced reproductive success or survival, abandonment of critical sites, etc. (e.g., bridge-nesting birds).

6.3.3.4 Workers may introduce wildlife diseases and invasive plant species when gear and apparel is not properly sanitized between sites.

7 **Natural Systems Modifications**

7.1 Fire and Fire Suppression

7.1.1 Increase in Fire Frequency/Intensity (Avg. Score: 2.00)

- NJ Specific Threats:** 7.1.1.1 Increase in frequency and intensity of wild fires as a result of droughts and heat waves drying out vegetation and litter.
- 7.1.1.2 Increase in frequency of wild fires as a result of illegal activities.
- 7.1.1.3 Unnatural fire regimes occurring as a result of military exercises.

7.1.2 Suppression of Fire Frequency/Intensity (Avg. Score: 2.00)

- NJ Specific Threats:** 7.1.2.1 Shift in vegetative communities as a result of suppression of natural fires.
- 7.1.2.2 Lack of diversity in age structure and composition of vegetation due to the suppression of fire.

7.2 Dams and Water Management/Use

7.2.1 Abstraction of Surface Water (domestic use) (Avg. Score: 3.00)

- NJ Specific Threats:** 7.2.1.1 Changing water levels due to water body drawdowns (legal and illegal) may lower dissolved oxygen levels, increase water temperatures, expose wildlife to predation, and increase exposure to winter temperatures, altering wildlife behavior and survival.
- 7.2.1.2 Controlled water releases and/or improper water level management of water bodies may alter downstream dissolved oxygen levels, water temperatures, sediment deposition, and flow rates, altering wildlife behavior and survival.
- 7.2.1.3 Channelization alters water volume and flow rates, removes aquatic vegetation and coarse, woody debris, and eliminates shallow water habitats.

7.2.2 Abstraction of Surface Water (commercial use) (Avg. Score: 3.00)

- NJ Specific Threats:** 7.2.2.1 Channelization alters water volume and flow rates, removes aquatic vegetation and coarse, woody debris, eliminates shallow water habitats, and disrupts/removes stream bottom habitat.
- 7.2.2.2 Changing water levels due to water body drawdowns (legal and illegal) may lower dissolved oxygen levels, increase water temperatures, expose wildlife to predation, and increase exposure to winter temperatures, altering wildlife behavior and survival.
- 7.2.2.3 Controlled water releases and/or improper water level management of water bodies may alter downstream dissolved oxygen levels, water temperatures, sediment deposition, and flow rates, altering wildlife behavior and survival.

7.2.3 Abstraction of Surface Water (agricultural use) (Avg. Score: 3.00)

- NJ Specific Threats:** 7.2.3.1 Controlled water releases and/or improper water level management of water bodies may alter downstream dissolved oxygen levels, water temperatures, sediment deposition, and flow rates, altering wildlife behavior and survival.
- 7.2.3.2 Channelization alters water volume and flow rates, removes aquatic vegetation and coarse, woody debris, and eliminates shallow water habitats.
- 7.2.3.5 Changing water levels due to water body drawdowns (legal and illegal) may lower dissolved oxygen levels, increase water temperatures, expose wildlife to predation, and increase exposure to winter temperatures, altering wildlife behavior and survival.

7.2.5 Abstraction of Ground Water (domestic use) (Avg. Score: 3.00)

- NJ Specific Threats:** 7.2.5.1 Heavy withdrawal of ground water for domestic use may lower water tables and alter the hydrology of freshwater wetlands and headwater streams, including tributaries, seepages and vernal pools.

7.2.6 Abstraction of Ground Water (commercial use) (Avg. Score: 3.00)

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Bog Turtle

- NJ Specific Threats:** 7.2.6.1 Heavy withdrawal of ground water for industrial and commercial use may lower water tables and alter the hydrology of freshwater wetlands and headwater streams, including tributaries, seepages and vernal pools.
- 7.2.7 Abstraction of Ground Water (agricultural use) (Avg. Score: 3.00)
- NJ Specific Threats:** 7.2.7.1 Heavy withdrawal of ground water for agricultural use may lower water tables and alter the hydrology of freshwater wetlands and headwater streams, including tributaries, seepages and vernal pools.
- 7.2.9 Small Dams (Avg. Score: 3.00)
- NJ Specific Threats:** 7.2.9.1 Alter the physical, chemical and biological stream environment, causing changes in substrate composition, flow rates, dissolved oxygen, and water temperatures.
- 7.2.9.3 Dams act as a barrier to movement, limiting the ability of aquatic or semi-aquatic wildlife to move safely between habitats.
- 7.2.10 Large Dams (Avg. Score: 3.00)
- NJ Specific Threats:** 7.2.10.1 Alter the physical, chemical and biological stream environment, causing changes in substrate composition, flow rates, dissolved oxygen, and water temperatures.
- 7.2.10.3 Dams act as a barrier to movement, limiting the ability of aquatic or semi-aquatic wildlife to move safely between habitats.
- 7.2.11 Dams (size unknown) (Avg. Score: 3.00)
- NJ Specific Threats:** 7.2.11.1 Alter the physical, chemical and biological stream environment, causing changes in substrate composition, flow rates, dissolved oxygen, and water temperatures.
- 7.2.11.3 Dams act as a barrier to movement, limiting the ability of aquatic or semi-aquatic wildlife to move safely between habitats.
- 7.2.12 Culverts (Avg. Score: 2.00)
- NJ Specific Threats:** 7.2.12.1 Improper design, placement, installation and maintenance of culverts and other stream crossing structures can impede or prevent the movements of terrestrial organisms and can restrict or limit stream flow, impeding the movement of aquatic organisms along riparian corridors.
- 7.2.13 Stream Burial (Avg. Score: 2.00)
- NJ Specific Threats:** 7.2.13.1 Eliminates riparian habitats.
- 7.2.13.2 Eliminates in-stream habitat and water resources for wildlife.
- 7.2.13.3 Alters the hydrology and quality of downstream aquatic and riparian habitats.
- 7.3 Other Ecosystem Modifications
- 7.3.2 Inappropriate timing of mowing (Avg. Score: 2.00)
- NJ Specific Threats:** 7.3.2.1 Increased risk of direct mortality and/or reduced productivity of wildlife, as well as reduced use by migrating species.
- 7.3.3 Removal of coarse woody debris (streams, forests, scrub-shrub habitats) (Avg. Score: 1.00)
- NJ Specific Threats:** 7.3.3.2 Decreases habitat and/or corridor suitability due to limited or absent shelter and foraging habitat.
- 7.3.3.3 Removal of dead trees (snags), large felled logs (i.e., those > 12" dbh), and other downed woody material diminishes nesting, roosting, and sheltering options for wildlife, and increases the ease at which deer can browse regenerating vegetation.
- 7.3.4 Lack of natural disturbance patterns or ecosystem functions due to species loss (Avg. Score: 1.00)

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Bog Turtle

NJ Specific Threats: 7.3.4.3 The extinction of prehistoric herd grazers and the more recent decline of the state's dairy industry has reduced the low-impact maintenance of early successional habitat relied upon by wildlife.

7.3.5 Poor habitat management (Avg. Score: 2.00)

NJ Specific Threats: 7.3.5.1 Improper or poorly scheduled maintenance of man-made corridors (e.g., roadsides and medians) can cause direct mortality to and may reduce productivity of wildlife.

7.3.5.2 Shifting from natural vegetation to lawns can cause increased temperatures of local aquatic systems making them unsuitable (or less suitable) for aquatic species' reproduction and survival.

7.3.5.3 Vegetation clearing removes terrestrial and riparian corridors for animal movement, shelter, and resting areas.

7.3.5.4 Vegetation clearing or inappropriate alteration adjacent to aquatic habitats threatens aquatic species by degrading habitat and water quality (altering temperature and dissolved oxygen, increasing siltation and desiccation, etc.).

7.3.5.5 Habitat management that alters or removes vegetation without implementing long-term management increases the risk of invasive and exotic plants establishing themselves, outcompeting native vegetation.

7.3.5.6 Habitat management, including that which occurs on public and private lands, that does not consider timing and species' behaviors can result in the direct mortality and/or alteration or loss of habitat.

7.3.5.7 Improperly planned habitat management and/or mitigation efforts along roadsides and within the medians can attract wildlife and increase the risk of vehicle strikes.

7.3.5.10 Ditching, draining and filling of marshes and wetlands eliminates habitat and degrades the remaining surrounding areas for wildlife.

7.3.5.12 Lack of diversity in age structure and composition of vegetation due to lack of natural disturbances and/or vegetation management.

7.3.5.13 Private landowners with rare species on their properties are not always cooperative in the protection and management of the species' habitats. Landowners may be held accountable for their actions when they cause harm to the species or destroy the habitat, but it is often too late for the species' population.

7.3.5.14 Intentional felling and removal of dead standing trees or snags eliminates resting, nesting or feeding habitat, and precludes the snags eventual contribution to coarse woody debris and forest floor structure and habitat.

7.3.5.15 Lack of funding, incentives, or technical guidance resources to proactively manage land to benefit SGCN wildlife.

8 Invasive and Other Problematic Species, Genes and Diseases

8.1 Invasive Non-native/ Alien Species/ Diseases

8.1.1 Unspecified Species (Avg. Score: 2.00)

NJ Specific Threats: 8.1.1.1 Displace or outcompete native species for resources.

8.1.1.2 Alters, degrades and/or reduces the structural diversity of the natural composition of the landscape, including aquatic systems.

8.1.1.3 Invasive, non-native insects can damage native vegetation at a large scale, leading to die-offs, altering the ecological community.

8.1.1.4 Invasive, non-native animals increase the risk of predation on native animals and/or herbivory on native vegetation.

8.1.1.5 Invasive, non-native animals and plants increase the risk of introduction and transference of diseases

8.1.1.6 Invasive, non-native plants may create physical barriers for some species.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Bog Turtle

8.1.2 Invasive non-native aquatic animals (Avg. Score: 2.00)

NJ Specific Threats: 8.1.2.2 Displace or out-compete native species for resources (food, shelter), alter the composition of the native landscapes/aquatic systems, diminishing habitat suitability and reducing ecological integrity of natural communities, and may introduce disease into a population.

8.1.3 Invasive non-native aquatic plants (Avg. Score: 2.00)

NJ Specific Threats: 8.1.3.1 Displace or out-compete native species for resources (food, light, shelter), alter the composition of the native landscapes/aquatic systems, diminish habitat suitability and reduce ecological integrity of natural communities, and may introduce disease into a population.

8.1.4 Invasive non-native terrestrial/wetland animals (Avg. Score: 1.00)

NJ Specific Threats: 8.1.4.1 Displace or out-compete native species for resources (food, shelter), alter the composition of the native landscapes/aquatic systems, diminish habitat suitability and reduce ecological integrity of natural communities, and may introduce disease into a population.

8.1.4.2 Free-roaming and feral domestic animals such as cats and dogs causes direct mortality of wildlife and disturbance to wildlife breeding and resting areas.

8.1.5 Invasive non-native terrestrial/wetland plants (Avg. Score: 2.00)

NJ Specific Threats: 8.1.5.1 Displace or out-compete native species for resources (food, light, shelter), alter the composition of the native landscapes/aquatic systems, diminish habitat suitability and reduce ecological integrity of natural communities, and may introduce disease into a population.

8.1.6 Invasive non-native fungal/bacterial diseases (Avg. Score: 2.00)

NJ Specific Threats: 8.1.6.1 The introduction of non-native fungal and bacterial diseases threatens native populations and ecosystems.

8.2 Problematic Native Species/Diseases

8.2.1 Unspecified Species (Avg. Score: 1.00)

NJ Specific Threats: 8.2.1.1 Overabundant native insects can damage native vegetation at a large scale, leading to die-offs, altering the ecological community.

8.2.1.2 Invasive pathogens and insects may increase in range and abundance as limiting factors (such as temperature) are altered as a result of climate change.

8.2.1.3 Invasive, native species can out-compete non-invasive species for resources (food, light, shelter), leading to the demise of some species populations.

8.2.1.4 Human-subsidized native species can become overabundant, increasing predation on other native wildlife and/or altering the ecological community.

8.2.2 Named Species (Avg. Score: 1.00)

NJ Specific Threats: 8.2.2.2 Human-subsidized native species can become overabundant, increasing predation on other native wildlife and/or altering the ecological community.

8.4 Problematic Species/Diseases of Unknown Origin

8.4.1 Unspecified Species (Avg. Score: 1.00)

NJ Specific Threats: 8.4.1.1 Non-native or poorly understood diseases and parasites could potentially impact native animals.

8.4.2 Named Species (Avg. Score: 1.00)

NJ Specific Threats: 8.4.2.2 Diseases of unknown origin, such as snake fungal disease and Ranavirus, can cause significant mortality among native animal populations.

8.5 Viral/Prion-induced Diseases

8.5.1 Unspecified Species (Disease) (Avg. Score: 1.00)

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Bog Turtle

NJ Specific Threats: 8.5.1.1 There is a large knowledge gap regarding the existence of, or potential for, other diseases impacting native wildlife.

8.5.2 Named Species (Disease) (Avg. Score: 1.00)

NJ Specific Threats: 8.5.2.1 Diseases such as West Nile Virus, arenavirus, sudden oak death, Avian Influenza, and snake fungal disease cause morbidity or mortality to native populations.

8.6 Diseases of Unknown Cause

8.6.0 Unknown Diseases (Avg. Score: 1.00)

NJ Specific Threats: 8.6.0.1 Diseases yet to be identified by pathologists and virologists cause decreased fitness or mortality to native populations.

9 Pollution

9.1 Domestic and Urban Waste Water

9.1.1 Sewage (Avg. Score: 2.00)

NJ Specific Threats: 9.1.1.1 Degradation of aquatic and marine water quality and habitats by changing turbidity, flow and water chemistry.

9.1.1.2 Leads to increased eutrophication and algae blooms that result in oxygen depletion.

9.1.1.3 Contaminants in sewage treatment effluents and Combined Sewer Overflows can cause developmental and behavioral abnormalities and reproductive failure in wildlife.

9.1.2 Run-off (Avg. Score: 2.00)

NJ Specific Threats: 9.1.2.1 Chemical fertilizers and nutrient run-off changes the pH in streams and ponds and causes eutrophication in inland waters and estuaries, which can make habitat unsuitable for specialist species and increase the risk of invasive and generalist species.

9.1.2.2 Contaminants degrade aquatic and marine water quality and can bioaccumulate in benthic organisms, threatening wildlife by causing developmental and behavioral abnormalities and reproductive failure.

9.1.2.3 Contaminants from road runoff (oil, sediment, salt, etc.) impact native vegetation and the species that rely upon them, degrade water quality in aquatic systems, and can injure or kill the aquatic and semi-aquatic species that rely upon them.

9.2 Industrial and Military Effluents

9.2.1 Oil Spills (Avg. Score: 2.00)

NJ Specific Threats: 9.2.1.1 Oil spills render resting, breeding and foraging habitats temporarily unavailable to wildlife, altering normal wildlife behavior.

9.2.1.2 Oil spills have long term effects on habitats and damage ecological processes that can cause local wildlife population declines and impaired foraging or reproduction.

9.2.1.3 Oil spills cause external oiling of wildlife and ingestion of oil, both of which can injure or kill wildlife.

9.2.2 Seepage from Mining (Avg. Score: 2.00)

NJ Specific Threats: 9.2.2.1 Contaminants from mining degrade water quality in aquatic systems, and can injure or kill the aquatic and semi-aquatic species that rely upon them.

9.2.3 Other (Avg. Score: 2.00)

NJ Specific Threats: 9.2.3.1 Point and nonpoint source pollution such as polychlorinated biphenyls (PCBs), pesticides, heavy metals, and endocrine disrupting compounds (EDC's) into freshwater and marine systems pose threats to wildlife through direct contact and/or ingestion, and to aquatic species and their predators through bioaccumulation, impacting the reproductive success and neurological function of many avian and fish species.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Bog Turtle

9.2.3.2 Chemical spills have long term effects on habitats and damage ecological processes that can cause local wildlife population declines and impaired foraging or reproduction.

9.2.3.3 Chemical spills may render resting, breeding and foraging habitats temporarily unavailable to wildlife, altering normal wildlife behavior.

9.2.4 Other: Hydrofracturing (Avg. Score: 1.00)

NJ Specific Threats: 9.2.4.1 Contaminants from hydrofracturing degrade water quality in aquatic systems, and can injure or kill the aquatic and semi-aquatic species that rely upon them.

9.2.4.2 Uncontrolled effluents escaping from hydrofracturing facilities can cause injury to wildlife and alter normal behaviors.

9.2.5 Other: Industrial toxic settling ponds (Avg. Score: 1.00)

NJ Specific Threats: 9.2.5.1 Surficial or open industrial effluent ponds can cause injury or death to wildlife that become exposed through ingestion or submersion.

9.3 Agricultural and Forestry Effluents

9.3.1 Nutrient Loads (Avg. Score: 2.00)

NJ Specific Threats: 9.3.1.1 Chemical fertilizers and nutrient run-off changes the pH in streams, ponds and wetlands and causes eutrophication in inland waters and estuaries, which can make habitat unsuitable for specialist species and increase the risk of invasive and generalist species.

9.3.1.2 Animal waste degrades terrestrial and aquatic habitats, especially streams, ponds and wetlands, resulting in eutrophication, which disrupts oxygen and nutrient balances, and causes injury and mortality to aquatic organisms.

9.3.1.4 Conversion of low-intensity agriculture to intensive agriculture (e.g., tree nursery, row crop) degrades wetland and aquatic habitats with runoff, increasing sediment and nutrient loads and pH.

9.3.1.5 Conversion of native forests to plantations degrades wetland and aquatic habitats through increased runoff.

9.3.2 Soil Erosion and Sedimentation (Avg. Score: 2.00)

NJ Specific Threats: 9.3.2.1 Soil erosion, sedimentation and destruction of streambanks and riparian buffers degrade waters making them unsuitable for riparian-dependent wildlife.

9.3.2.3 Conversion of native forests to plantations degrades wetland and aquatic habitats through increased sedimentation.

9.3.3 Herbicides and Pesticides (Avg. Score: 2.00)

NJ Specific Threats: 9.3.3.1 Pesticides degrade terrestrial and aquatic habitats, especially streams, ponds and wetlands. Aquatic wildlife are particularly sensitive to these contaminants, which can cause developmental and behavioral abnormalities and reproductive failure. Some contaminants may bioaccumulate in predatory fish and birds and disrupt reproduction.

9.3.3.3 Use of pesticides can directly harm non-target species through direct contact and/or by reducing and/or contaminating their food supply.

9.3.4 Other (Avg. Score: 2.00)

NJ Specific Threats: 9.3.4.1 Spills, leaks or discharges of fuel, oil or other contaminant fluids from machinery or equipment used in the normal course of agricultural or forestry activities can degrade or destroy adjacent aquatic and terrestrial habitats and/or cause harm to non-target species (plants and animals).

9.3.5 Control of insect pests and plants leading to mortality of non-target species (Avg. Score: 2.00)
not associated with agriculture

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Bog Turtle

NJ Specific Threats: 9.3.5.4 Improper use of current insecticides, such as those containing esfenvalerate, prallethrin, or piperonyl butoxide, or past use of pesticides containing chlordane still present in the soils, are toxic to various wildlife species, and can cause injury, mortality, or other effects that impair population viability.

9.3.5.5 Use of pesticides and herbicides can minimize the abundance of food sources for native wildlife populations.

9.4 Garbage and Solid Waste

9.4.1 Direct hazards to wildlife (Avg. Score: 1.00)

NJ Specific Threats: 9.4.1.2 Garbage and solid waste destroys natural habitats and obstructs wildlife movements.

9.5 Air-Bourne Pollutants

9.5.1 Acid Rain (Avg. Score: 1.00)

NJ Specific Threats: 9.5.1.1 Causes acidification of water bodies, resulting in changes to aquatic and marine communities and reducing biodiversity, and creating conditions that are unsuitable for some aquatic (freshwater and marine) and semi-aquatic species that are sensitive to pH shifts.

9.5.1.2 Leaches calcium from the soils which in turn reduces the availability of prey, particularly calcium-rich prey such as snails.

9.5.4 Other (Avg. Score: 1.00)

NJ Specific Threats: 9.5.4.1 Dust and/or airborne sedimentation from construction sites, agricultural operations or related earth disturbances can introduce mineral or organic sediments into adjacent wildlife habitats, degrading their quality and suitability for wildlife short-term and/or long-term.

9.5.6 Herbicides and Pesticides (Avg. Score: 2.00)

NJ Specific Threats: 9.5.6.1 May result in injury or direct mortality of non-target species.

9.6 Excess Energy

9.6.2 Thermal Pollution (Avg. Score: 1.00)

NJ Specific Threats: 9.6.2.2 Water temperature changes to aquatic systems can deter or preclude use by SGCN (e.g., alter habitat suitability for wildlife species, reduce prey base) or present stressors that are harmful if not fatal to wildlife.

11 Climate Change and Severe Weather

11.1 Habitat Shifting or Alteration

11.1.0 Macro- and Micro-Climate Alterations (Avg. Score: 1.00)

NJ Specific Threats: 11.1.0.1 Alters native terrestrial and aquatic habitats at the macro- and micro-climate levels that can affect suitability for wildlife, in particular specialist species.

11.2 Droughts

11.2.1 Droughts (Avg. Score: 2.00)

NJ Specific Threats: 11.2.1.1 Contribute to hardened soils, decreasing water recharge during rains and increasing the likelihood of flash floods during storms.

11.2.1.2 Lead to lower groundwater levels and therefore, less available water for people and habitats.

11.2.1.3 Loss, alteration and/or degradation of terrestrial and aquatic habitats.

11.3 Temperature Extremes

11.3.1 Temperature extremes (Avg. Score: 2.00)

NJ Specific Threats: 11.3.1.1 Increasing temperatures may cause habitat loss and degradation by desiccating and/or raising the temperatures of small wetlands and streams leading to the loss of freshwater mussels and other aquatic species and species reliant upon these habitats.

Bog Turtle

- 11.3.1.2 Increased temperatures can negatively impact wetland, riverine, lacustrine and vernal pool-associated or -dependent wildlife by reducing flows, increasing water temperatures, lowering water levels and causing premature drying of vernal habitats.
- 11.3.1.4 Extremely low temperatures and/or extensive periods of unseasonably low temperatures during critical life history stages (e.g., hibernation, gestation/nesting) can alter animals' behaviors and decrease survivorship.

11.4 Storms and Flooding

11.4.1 Storms and flooding (Avg. Score: 1.00)

NJ Specific Threats: 11.4.1.1 Extreme storms and flooding events threaten aquatic and marine wildlife through habitat degradation and alteration, including alterations to off-shore or back-bay benthic conditions, damage to submerged aquatic vegetation (SAV), increased turbidity, altered water chemistry, and potentially displacement of aquatic and marine wildlife.

11.4.1.3 Increase risk of saltwater intrusion to freshwater habitats altering the water chemistry and potentially altering aquatic wildlife community.

11.4.1.4 Flood events alter river or stream morphology, benthic conditions and habitat availability for wildlife, cause bank erosion, and deposit sediments in floodplain wetlands altering wildlife habitat.

11.4.2 Increased rainfall (Avg. Score: 1.00)

NJ Specific Threats: 11.4.2.1 Extreme rain events threaten aquatic wildlife through habitat degradation and alteration, including alterations to benthic conditions, damage to submerged aquatic vegetation (SAV), increased turbidity, altered water chemistry, and potentially displacement of aquatic wildlife.

11.4.2.2 Extreme rain events can damage wildlife nesting and resting habitats, including impacts to avian eggs and chick and small mammal survivorship.

11.4.2.3 More frequent rain events can alter terrestrial and wetland vegetation communities as well as wetland hydrology, shifting wildlife community use.

11.6 Phenology Shifting or Alteration

11.6.2 Phenology shifts related to predator-prey ecology (Avg. Score: 1.00)

NJ Specific Threats: 11.6.2.1 Alters inter-specific relationships (e.g., competition, parasitism, predation) of wildlife, ultimately leads to detrimental impacts on the ecological system.

11.6.2.2 Shifts timing of species migration, breeding and hibernation, and available food resources, causes redistribution of species, or mortality for species that are unable to relocate due to their already isolated habitat or limited mobility.

11.6.3 Phenology shifts related to species redistribution (Avg. Score: 1.00)

NJ Specific Threats: 11.6.3.1 Shifts in timing of species migration, breeding and hibernation, and available food resources, as a result of wildlife range shifts driven by climate change.

11.6.3.2 Shifts in nesting times or egg incubation durations can limit nest success and longterm populations.

12 Resource Management Needs

12.1 Resource information collection needs

12.1.1 Lack of initial baseline inventory (Avg. Score: 2.00)

NJ Specific Threats: 12.1.1.1 Lack of information regarding the distribution, connectivity and quality of SGCN habitats throughout the State, and where habitat enhancement/restoration will benefit SGCN and other wildlife.

12.1.1.2 Lack of information regarding the population dynamics and trends, habitat requirements and dispersal distances of the various age classes, and survivorship of SGCN throughout the State.

12.1.2 Lack of up-to-date existing information (Avg. Score: 2.00)

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Bog Turtle

NJ Specific Threats: 12.1.2.1 Lack of (routine, regular, ongoing) surveys/assessments that provide up-to-date information regarding population trends or health, and/or status of fish, wildlife and/or their habitats.

12.1.3 Need to answer research question (Avg. Score: 2.00)

NJ Specific Threats: 12.1.3.1 There are significant knowledge gaps regarding distribution, dispersal, diseases, population trends, etc. of SGCN.

12.1.4 Need to develop new technique (Avg. Score: 1.00)

NJ Specific Threats: 12.1.4.1 Improve and evaluate survey methods for SGCN and their habitats; alter as needed.

12.3 Regulatory Reform

12.3.0 State Regulatory Reforms (Avg. Score: 1.00)

NJ Specific Threats: 12.3.0.6 Certain geographic or habitat features, such as vernal pools and headwater wetlands or streams, may be too small, mischaracterized, or misidentified to benefit from regulatory protection.

12.3.0.7 Activities that threaten SGCN, their food sources, and/or habitats are often regulated separately and without consideration for the cumulative and synergistic effects over time or over a larger spatial scale. Therefore, regulations can fail to protect SGCN populations over time.

12.3.0.10 Land use regulatory processes pertaining to habitat creation, enhancement or restoration projects can be costly and/or burdensome, precluding or discouraging the development or implementation of conservation projects.

12.4 Internal Policy & Procedures Reform

12.4.0 State Policy and Procedure Reform (Avg. Score: 1.00)

NJ Specific Threats: 12.4.0.1 A species-by-species management focus as opposed to ecological systems and biodiversity generally has greater opportunity for unintended consequences for other species and may be less efficient in developing appropriate management actions.

12.4.0.2 Policies and procedures for lands management that lack consideration of the impacts of activity timing can result in unintended impacts to wildlife during vulnerable periods.

12.4.0.7 Land preservation contracts, easements, etc. that do not contain prescriptive language or flexibility allowing for habitat management can result in unsuitable habitat conditions and biodiversity declines for SGCN.

14 Education/ Outreach Needs

14.1 Education needs

14.1.1 Need for improved knowledge of fish and wildlife and their habitats (Avg. Score: 2.00)

NJ Specific Threats: 14.1.1.1 Lack of understanding of the importance of various SGCN habitats, their connectivity to similar habitats, and how planning decisions impact their quality and the wildlife that depend upon them.

14.1.1.2 Lack of general knowledge of SGCN life histories and vulnerabilities as they relate to land management practices.

14.1.1.3 Lack of understanding of the need to manage both natural and anthropogenic (e.g., yards, lawns, hayfields, etc.) habitats to minimize impacts or increase benefits to SGCN and their habitats.

14.2 Outreach needs

14.2.1 Need to improve specific understanding of agency/organization goals, objectives and ongoing wildlife conservation actions (Avg. Score: 2.00)

NJ Specific Threats: 14.2.1.1 Need to develop greater understanding of and support for efforts implemented to enhance SGCN habitat and biodiversity through various forest management practices.

14.2.1.2 Need to develop greater understanding of and support for efforts implemented to enhance SGCN habitat and biodiversity through various aquatic and riparian management practices.

Bog Turtle

- 14.2.1.5 Need to develop greater understanding of and support for efforts implemented to enhance SGCN habitat and biodiversity through various wetland management practices.

15 Administrative Needs

15.2 Organizational/program planning needs

- 15.2.3 Need for multi-state, regional and landscape scale planning (Avg. Score: 1.00)

NJ Specific Threats: 15.2.3.1 State governance and financial structures can sometimes inhibit conservation planning and implementation at the regional and landscape-scales that are often more effective at setting priorities and meeting species and habitat conservation goals and objectives.

Actions to address the Threats and Action Drivers associated with this Conservation Target:

1 Coordination and Administration

1.2 Incentives

1.2.1 Incentives

- 1.2.1.2 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to private and public landowners and land managers to increase the effective size of SGCN habitats by protecting/restoring adjacent habitats that contribute to the overall size of the "core" area and/or provide a natural buffer, enhancing the suitability of the core area for SGCN, and/or connect conserved SGCN habitats.
- 1.2.1.6 Secure and promote the protection/restoration of riparian and floodplain habitats, inland wetland habitats (marsh, vernal pool, fen, emergent shrubland, forest), and other aquatic habitats (including open waters) and/or biologically appropriate buffers through incentive programs.
- 1.2.1.7 Secure and promote the protection/restoration of fish SGCN habitats by protecting lands adjacent to fish SGCN habitats and/or aquatic systems feeding into such habitats through incentive programs.
- 1.2.1.8 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to municipalities, land developers, and other land managers to retain and/or enhance native vegetation adjacent to aquatic habitats, and along riparian areas and wildlife movement corridors.
- 1.2.1.10 Coordinate across government agencies and non-government organizations to maximize the availability of and enrollment in existing landowner incentive programs (e.g., "farm bill," partners, etc.) to maintain and/or improve habitat.
- 1.2.1.11 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to public and private landowners and managers, including but not limited to government and non-government agencies/organizations, energy, mining, and transportation and utility service companies/agencies, to minimize commercial infrastructure and impervious surfaces, and to improve wildlife habitats, limit fragmentation, reduce elements which would exacerbate mortality, and/or implement activities/restoration that would create new or improved corridor habitat and/or increase connectivity, and to increase structural habitat diversity through the implementation of a variety of vegetation management practices that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting), and to minimize (if not avoid) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.

Bog Turtle

- 1.2.1.12 Create incentives (non-monetary and/or monetary) for land developers to redevelop abandoned areas (e.g., shopping centers, office complexes) to minimize the loss of natural habitats and reduce the extent of impervious surfaces as part of new construction to increase water recharge in those areas.
- 1.2.1.13 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to land developers to minimize the impacts of new residential and commercial developments on SGCN and their habitats.
- 1.2.1.17 Develop a public-relations oriented certification program for private retailers who refrain from selling specified invasive or other problematic plant species.
- 1.2.1.18 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to public and private landowners and land managers to control and reduce the impacts of invasive, native and non-native species in order to increase structural habitat diversity.
- 1.2.1.20 Coordinate across government agencies and non-government organizations to create or expand upon tax-based incentive programs available to private, agricultural, commercial, industrial or governmental landowners and land managers to include or provide for incentives for the maintenance and/or improvement to existing habitat via the endorsement of wildlife-related BMP's.
- 1.2.1.22 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to horse/livestock farm owners and managers to increase structural habitat diversity in and around the farms by managing vegetation for a variety of species, in particular, farms that have fragmented forests, and by implementing ecologically best practices (e.g., do not permit overgrazing, do not allow livestock to wade in waterbodies).
- 1.2.1.23 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to private and public landowners and land managers to provide cost shares and/or plan approvals for management based on management approaches and prescriptions.
- 1.2.1.26 Develop a new funding source, targeting natural resource damages monies, mitigation monies or other available sources, to fund new or existing landowner incentive programs.
- 1.2.1.28 Create incentives to implement dynamic forest disturbance patterns, using tools such as fire, flooding, and silviculture, to support the full life cycle requirements of forest and early successional wildlife species.

2 Direct Management of Natural Resources

2.2 Dam and barrier removal

2.2.1 Culvert work

- 2.2.1.1 Replace existing barriers to wildlife movement with and/or install appropriately-sized systems to accommodate wildlife dispersal.

2.3 Fire management

2.3.3 Prescribed burning

- 2.3.3.1 Evaluate different management techniques of prescribed burns that might be used to mimic the historic role of fire and other natural disturbances in shaping an ecosystem.
- 2.3.3.3 Conduct prescribed burning to improve wildlife habitat.

2.8 Invasive species control

2.8.0 Invasive species control strategies and implementation

Bog Turtle

- 2.8.0.5 Implement biologically safe and appropriate control/management strategies, and where appropriate, eradication strategies to reduce the impacts and/or limit the distribution of invasive and/or non-native plant species within or near aquatic systems using methods that will provide the most protection to the aquatic and riparian ecological system, and minimize disturbance to the soil and wildlife. Encourage the implementation of biological and mechanical removal/control. When chemical control is used, encourage low-volume, targeted application using NJDEP-approved chemicals in accordance with the specific instructions for that chemical.
- 2.8.0.6 Implement long-term management of invasive and/or non-native plants to help maintain functioning ecological systems and biological diversity, and to enhance travel corridors. Encourage the implementation of biological and mechanical removal/control. When chemical control is used, encourage low-volume, targeted application using NJDEP-approved chemicals in accordance with the specific instructions for that chemical.

2.10 Planting/seeding

2.10.0 Planting/seeding strategies for terrestrial or aquatic habitat creation or restoration

- 2.10.0.1 Prevent or ameliorate near-term impacts of climate change throughout the State by developing, implementing and monitoring/evaluating habitat management strategies that will establish/improve habitat resilience (e.g., shorelines of the coast and Delaware Bay, forested habitats of the Pinelands and Skylands) that benefits wildlife inhabiting these areas, in particular within the coastal and Delaware Bay areas.
- 2.10.0.4 Restore and/or enhance suitable travel corridors connecting conserved habitats for SGCN by restoring unsuitable (or less optimal) habitats.
- 2.10.0.5 Implement habitat restoration and/or enhancement activities that include the creation of vegetative buffers between sensitive habitats (e.g., aquatic systems) and human-inhabited areas (e.g., residences, parks, etc.) and that is conducted during appropriate timing to avoid sensitive periods (e.g., nesting, denning, roosting) while minimizing (if not avoiding) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
- 2.10.0.6 Expand the acreages and enhance the effective size of SGCN habitats by restoring adjacent, less optimal or unsuitable, habitats.
- 2.10.0.7 Restore/reclaim and enhance degraded rare species habitats through strategic revegetation and management efforts for documented/target SGCN.
- 2.10.0.8 Protect significant natural and/or unique communities by implementing best management practices when conducting habitat restoration strategies.
- 2.10.0.9 Restore and/or enhance riparian and floodplain habitats, inland wetland habitats (marsh, vernal pool, fen, emergent shrubland, forest), and other aquatic habitats (including open waters) and/or biologically appropriate buffers to minimize degradation, alteration and/or changes in hydrology and subsequent disturbances to and behavioral changes of wildlife (e.g., restoring biologically appropriate buffers, revegetation or restoration efforts, etc.).
- 2.10.0.14 Implement best management practices (BMPs), protective strategies and guidelines for restoring and enhancing healthy, SGCN-associated habitats while minimizing (if not avoiding) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.

Bog Turtle

- 2.10.0.15 Restore and/or enhance terrestrial and aquatic habitats proximate to but not adjacent to roads and other transportation corridors for terrestrial-bound SGCN species whose behavior (i.e., dispersal across roads) may be altered by doing so, and therefore decrease road mortality of such species (e.g., amphibians, snakes, turtles, small mammals).
- 2.10.0.22 Restore and/or enhance terrestrial and aquatic habitats to promote the regeneration of native vegetation and enhance structural diversity to benefit SGCN (e.g., vegetative buffers of aquatic systems, allow coarse, woody debris to remain in terrestrial, aquatic and riparian habitats to provide shelter, riparian stabilization and necessary microclimates, plant native trees, shrubs and grasses, etc.).
- 2.10.0.24 Use NJ's CHANJ mapping and guidance to establish vegetation and enhance or create corridors between fragmented habitats with similar vegetation, slope, soils, structure, etc. to ensure vegetative integrity is maintained to allow wildlife to safely disperse, and corridors are buffered with natural habitats to minimize disturbance to wildlife within the corridors.

2.11 Vegetation management

2.11.0 Vegetation management strategies for terrestrial or aquatic habitat creation or restoration

- 2.11.0.1 Conduct vegetation management in native terrestrial and aquatic habitats to provide suitable and appropriately sized areas to improve ecological diversity.
- 2.11.0.2 Conduct vegetation management in native terrestrial and aquatic habitats to provide suitable and appropriately sized areas for target SGCN and/or species groups; management should complement rare species needs in a targeted area.
- 2.11.0.3 Create suitable travel corridors connecting and increasing the effective size of conserved habitats for SGCN by restoring unsuitable (or less optimal) habitats through vegetation management.
- 2.11.0.4 Implement vegetation management strategies that consider appropriate timing to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife, particularly SGCN.
- 2.11.0.5 Expand the acreages and enhance the effective size of SGCN habitats by restoring adjacent, less optimal or unsuitable, habitats through vegetation management.
- 2.11.0.6 Reclaim degraded rare species habitats by conducting vegetation management needed to restore habitat value for the documented/target SGCN.
- 2.11.0.7 Protect significant natural and/or unique communities by implementing best management practices through vegetation management.
- 2.11.0.8 Maintain, enhance and/or restore biologically appropriate buffers for SGCN-inhabited/used freshwater wetlands through vegetation management.
- 2.11.0.13 Implement best management practices (BMPs), protective strategies, and guidelines for vegetation management to maintain and enhance healthy, SGCN-associated habitats while minimizing (if not avoiding) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
- 2.11.0.14 Conduct vegetation management adjacent to roads for SGCN species whose behavior (i.e., dispersal across roads) may be altered by doing so, and therefore decrease road mortality of such species (e.g., amphibians, snakes, turtles, small mammals).

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Bog Turtle

- 2.11.0.16 Prevent or ameliorate near-term impacts of climate change throughout the State by developing, implementing and monitoring/evaluating habitat management strategies that will establish/improve habitat resilience (e.g., shorelines of the coast and Delaware Bay, forested habitats of the Pinelands and Skylands) that benefits wildlife inhabiting these areas, in particular within the coastal and Delaware Bay areas.
- 2.11.0.21 Minimize the degradation, alteration and/or changes in hydrology of wetlands, riparian and floodplain areas, and aquatic habitats (including open waters) and subsequent disturbances to and behavioral changes of wildlife by maintaining or enhancing these areas and biologically appropriate buffers through habitat management and/or revegetation or restoration efforts.
- 2.11.0.23 Implement appropriate habitat management actions in areas where natural disturbances, such as wildfire, have been precluded.
- 2.11.0.26 Conduct vegetation management along roadsides and medians, avoiding peak activity periods for wildlife, that enhances wildlife dispersal naturally and safely across roads and similar barriers to/between terrestrial and/or aquatic habitats.
- 2.11.0.31 In areas where vegetative communities are shifting due to fire suppression and controlled burns are not feasible, manage vegetation to improve wildlife habitat.
- 2.11.0.32 Increase structural habitat diversity around and when feasible, within agricultural landscapes by managing vegetation for a variety of species, in particular, those farms that have removed scrub-shrub habitat and/or fragmented forests, and by implementing ecologically best practices (e.g., no-till farming, maintaining hedgerows, buffer set-asides, etc.).
- 2.11.0.33 Increase structural habitat diversity by implementing long-term vegetation management to minimize the potential for the establishment of invasive and/or non-native plants that may outcompete native vegetation.
- 2.11.0.35 Increase structural habitat diversity by managing vegetation adjacent to aquatic habitats in a manner that provides a buffer from runoff and erosion and a microclimate to stabilize seasonal temperatures to benefit a variety of aquatic and semi-aquatic species.
- 2.11.0.36 Increase structural habitat diversity by managing vegetation for a variety of species and considering their life history requirements (e.g., travel corridors, shelter, resting and breeding areas) to minimize the risk of harm.
- 2.11.0.37 Increase structural habitat diversity by minimizing the removal of coarse, woody debris in terrestrial, aquatic and riparian habitats which benefits wildlife.
- 2.11.0.38 Increase structural habitat diversity in and around horse/livestock farms by managing vegetation for a variety of species, in particular, in and around farms that have fragmented forests, and by implementing ecologically best practices (e.g., do not permit overgrazing, do not allow livestock to wade in waterbodies).
- 2.11.0.41 Increase structural habitat diversity through the implementation of a variety of vegetation management practices such as prescribed burns (either increasing or decreasing their frequency depending on the site and objective), plantings, etc. that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife.

2.12 Water management

2.12.1 Ditch plugs

Bog Turtle

2.12.1.1 Implement best management practices (BMPs), protective strategies, and guidelines for ditch plugging to maintain and enhance healthy, resident and migratory SGCN-associated habitats while minimizing (if not avoiding) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.

2.12.3 Drainage

2.12.3.2 Prevent or ameliorate near-term impacts of climate change throughout the State by developing, implementing and monitoring/evaluating habitat management strategies that will establish/improve habitat resilience (e.g., shorelines of the coast and Delaware Bay, forested habitats of the Pinelands and Skylands) such as removing drainage ditches to restore natural stream flows and wetlands, that benefit wildlife inhabiting these areas.

2.12.3.3 Remove tile drains and drainage ditches to improve wetland hydrology and restore natural stream flows during appropriate times to avoid sensitive periods (e.g., nesting, denning, roosting) and minimizes harm to wildlife, particularly SGCN.

2.12.3.4 Expand the acreages and enhance the effective size of SGCN habitats by reclaiming/restoring adjacent, degraded habitats by removing tile drains and drainage ditches.

2.12.3.5 Remove drainage ditches adjacent to roads to decrease the attraction for amphibians, reptiles and small mammals, and thereby minimizing road mortality of such species (e.g., amphibians, snakes, turtles, small mammals).

2.12.3.6 Protect significant natural and/or unique communities by and when removing tile drains and drainage ditches.

2.12.3.11 Implement best management practices (BMPs), protective strategies, and guidelines when removing tile drains and drainage ditches to maintain and enhance healthy, SGCN-associated habitats while minimizing (if not avoiding) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.

2.14 Wildlife disease management

2.14.0 Wildlife disease strategy development and investigation

2.14.0.1 Investigate diseases/pathogens impacting SGCN and/or their habitats.

2.14.0.2 Develop and implement strategies to combat the impacts of diseases/pathogens impacting SGCN and/or their habitats, track disease occurrences and monitor/research impacts to SGCN populations and their habitats.

2.14.0.3 Protect SGCN from exotic pathogen introduction or incident through implementation of a "rapid response plan"; DFW to give priority attention to these species in planning and/or implementing a response.

2.14.0.4 Conduct long-term monitoring of diseases in vulnerable wildlife to determine the magnitude of exposure within populations and around the State, the impacts to those species, in particular SGCN, and investigate the feasibility of mitigating for such impacts.

2.14.0.5 Assess the impacts of diseases on the life cycles of wildlife.

3 Data Collection and Analysis

3.0 General fish and wildlife research, survey or monitoring

3.0.0 Research, survey or monitoring - general fish and wildlife needs

Bog Turtle

- 3.0.0.1 Conduct long-term monitoring of resident and migratory SGCN populations using standardized survey protocols to determine the variables that may impact their long-term persistence in the State (e.g., population viability, distribution, dispersal, home range and habitat use, travel corridors, food availability, vulnerability to pollutants and disease, etc.). Compile this information to determine the likely causes of population declines and to understand metapopulation dynamics. Provide data to NJ DEP for integration into the Biotics database, Landscape Project and permitting review processes.
- 3.0.0.2 Identify (through literature searches, review of available data, enlistment of habitat and/or species experts, etc.) where data gaps exist regarding SGCN distribution, and their critical and supportive habitats. Conduct surveys using standardized survey protocols to acquire baseline data, and provide the data to NJ DEP for integration into the Biotics database, Landscape Project Map and permitting review processes.
- 3.0.0.3 Gather baseline data on SGCN inhabiting permanently protected natural lands regarding their distribution and population (e.g., abundance, dispersal, demography including productivity and survival, etc.), and identify (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) critical and supporting habitats within those landscapes.
- 3.0.0.4 Conduct long-term studies on SGCN inhabiting permanently protected natural lands to develop population trend data and changes in demography, and to determine if critical and/or supporting habitats are limited or changing; i.e., diminishing in value, acreage or connectivity.
- 3.0.0.5 Gather baseline data on resident and migratory SGCN (in particular migratory species for which New Jersey habitats are significant), terrestrial, freshwater and marine species, regarding the location and condition of their critical and supporting habitats (e.g., foraging, roosting, nesting/breeding, stopover, migration paths, etc.), and population demography (e.g., productivity, survival, dispersal). Compile this information into a database that includes descriptions of the conditions of the habitats and species, and a GIS component of the locations of these important habitats. Provide data to NJ DEP for integration into the Biotics database, Landscape Project and permitting review processes.
- 3.0.0.6 Conduct long-term studies on resident and migratory SGCN to determine if there are changes to the populations' demography (productivity, survival, dispersal) and/or to their critical and/or supporting habitats (i.e., diminishing in value, acreage or connectivity, etc.), in particular changes that would not maintain SGCN at viable levels for species populations. Update data and GIS maps; provide updated information to NJ DEP for integration into the Biotics database, Landscape Project and permitting review processes.
- 3.0.0.7 Collect baseline data to document species distributions, in particular SGCN, and current habitat for future analysis of possible distribution shifting as a result of habitat shifting or alteration associated with climate change impacts.
- 3.0.0.8 Conduct long-term studies and compare baseline metrics of documented species distributions and associated habitats to identify possible species and/or habitat shifting or alteration associated with climate change impacts.
- 3.0.0.11 Develop, implement and evaluate the effectiveness of town plans that avoid impacts to SGCN species and their habitats.
- 3.0.0.13 Investigate the effects of pesticides, herbicides and other biological controls on SGCN and their critical and supporting habitats. Evaluate and modify management practices as appropriate.

Bog Turtle

- 3.0.0.14 Identify areas with invasive, aquatic plants and animals and collect a detailed baseline assessment of the species' status and distribution. Solicit volunteers from organizations such as the New Jersey Invasive Species Strike Team to support this effort. Researchers and contractors performing Forest Stewardship Inventories and/or Plans on state lands should report invasive plant species through the New Jersey Invasive Species Strike Team phone application.
- 3.0.0.15 Conduct long-term monitoring of areas identified as having invasive, aquatic plants and animals to track the species' status/progress over time with or without the implementation of management strategies. Areas without management strategies should be assessed and prioritized for management/control. Areas where management strategies are being implemented should include an assessment of the management effort and identify/recommend and implement necessary changes to improve its success. Solicit volunteers from organizations such as the New Jersey Invasive Species Strike Team to support this effort.
- 3.0.0.19 Identify the presence and status (e.g., functioning, structure, slated for removal, etc.) of existing dams and culverts within and/or that may impact SGCN and their habitats, and create a database that includes a GIS component identifying the locations of such structures and their status. Share this information with appropriate organizations and/or agencies evaluating the benefits and risks of such structures on SGCN and their habitats.
- 3.0.0.20 Once baseline data identifying and describing the status of existing dams and culverts have been gathered, conduct evaluations at a variety of sites to determine whether the benefits of culvert and dam creation or removal outweigh the risks to SGCN species and their habitats, and if other variables/conditions specific to individual sites/locations result in a different outcome. Identify and target appropriate dams and culverts for removal and/or reconstruction to minimize harm to SGCN species and their habitats.
- 3.0.0.23 Identify (through wildlife and aquatic system surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) and research water quality parameters for all [types of] aquatic systems for various SGCN populations.
- 3.0.0.26 Conduct studies to evaluate the effectiveness of proactive species recovery plans for all endangered and threatened species including objectives and guidance pertaining to and the condition/status of critical and supporting habitats.
- 3.0.0.27 Evaluate the effectiveness of strategies to restrict human activity (e.g., recreational, maintenance work, etc.) from sensitive habitats/areas such as avian nesting sites, reptile and amphibian breeding areas (nesting or gestation/birthing and breeding pools, respectively), and bat hibernacula, and federal buffers for marine mammals through research and monitoring. Develop and provide NJ DEP and other appropriate governing agencies/commissions a summary of findings and recommendations to improve such efforts.

3.2 Research, survey or monitoring - fish and wildlife populations

3.2.0 Data deficiency

- 3.2.0.2 Conduct species status assessments using the Delphi Technique and review of available data and literature on fish and wildlife (including marine animals) to maintain accurate legal status categorization of native wildlife.
- 3.2.0.3 Survey for and monitor populations of freshwater aquatic focal SGCN to assess the populations' demography, trends, condition, distribution, etc.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Bog Turtle

- 3.2.0.4 Conduct long-term monitoring of the impacts of contaminants to vulnerable wildlife to determine the magnitude of exposure within populations and around the State, the impacts to those species, in particular SGCN, and investigate the feasibility of mitigating for such impacts. Maintain records on exposure of vulnerable wildlife to environmental toxins (such as flame retardants and endocrine disruptors), so that sources may be identified and controlled or eliminated.
 - 3.2.0.5 Prevent or ameliorate near-term impacts of climate change throughout the State by developing, implementing and monitoring/evaluating habitat management strategies that will establish/improve habitat resilience (e.g., shorelines of the coast and Delaware Bay, forested habitats of the Pinelands and Skylands) that benefits wildlife inhabiting these areas, in particular within the coastal and Delaware Bay areas.
 - 3.2.0.6 Develop, implement and conduct studies to evaluate the effectiveness of methods implemented to reduce road mortality of wildlife (e.g. wildlife underpasses, road closures).
 - 3.2.0.7 Track (via a database that includes a GIS component) and research problematic species and diseases to determine their distribution, impacts on SGCN wildlife/wildlife communities, and develop potential control measures.
 - 3.2.0.8 Implement and conduct long-term monitoring of control measures aimed at minimizing the impacts of problematic species and/or diseases to evaluate the effectiveness of such efforts and to identify and incorporate additional strategies as appropriate.
 - 3.2.0.10 Evaluate the effectiveness of sanitation/decontamination protocols in minimizing the transference of wildlife diseases and invasive plant species.
 - 3.2.0.11 Investigate the impacts of ORV use as a mechanism to spread wildlife diseases and invasive plant species to native wildlife and habitats. Integrate this information when mapping undeveloped roads and trails to identify potentially sensitive areas in northern NJ forests.
- 3.2.1 Abundance determination
 - 3.2.1.1 Identify (through literature searches, review of available data, enlistment of habitat and/or species experts, etc.) population abundance and trends for SGCN using standardized survey protocols. Provide data to NJ DEP for integration into the Biotics database, Landscape Project Map and permitting review processes.
- 3.2.2 Age, size and sex structure
 - 3.2.2.1 Conduct wildlife surveys on resident and migratory SGCN regarding their survivorship.
- 3.2.3 Baseline inventory
 - 3.2.3.6 Investigate the feasibility and potential for success of conducting genetic rescue through translocation and/or reintroduction of animals into suitable habitat that was historically occupied to increase genetic diversity and reconnect isolated populations. Methods of investigation should include, but are not limited to, thorough literature reviews, expert opinions, identifying potential pitfalls (e.g., species' fidelity to their range or critical areas), and an examination of historic and current SGCN population distribution and suitable habitat availability.

Bog Turtle

- 3.2.3.7 Identify roads or portions of roads, paved or unimproved (through site surveys, land use/land cover assessments and analyses, review of available data, enlistment of species experts, etc.) with high incidences of road mortality and/or presence of snakes, turtles, medium-sized and large mammals. Conduct assessments of the roads and incorporate information into a database that includes descriptions (e.g., qualifiers to help prioritize the roads' risk to wildlife) and a GIS component of the locations of such areas. Share this information with appropriate organizations and/or agencies working to implement measures (e.g., wildlife passages, road closures) to minimize the risk to these species.

3.2.7 Population assessment

- 3.2.7.1 Conduct species status assessments using the Delphi Technique and review of available data and literature on fish and wildlife (including marine animals) to maintain accurate legal status categorization of native wildlife.
- 3.2.7.2 Conduct studies to evaluate the effectiveness of proactive species recovery plans for all endangered and threatened species to meet and maintain recovery goals.

3.3 Research, survey or monitoring - habitat

3.3.1 Baseline inventory

- 3.3.1.1 Conduct habitat assessments of significant natural and/or unique communities to identify threats to native terrestrial and aquatic habitats through systematic monitoring, review of available data, enlistment of habitat management and/or species experts, etc. Incorporate findings into a database that includes descriptions/qualifiers of the habitats, identifies and values/qualifies the threats, and includes a GIS component of the locations of the assessed areas. Share this information with landowners/managers (e.g., federal, state and local government agencies or non-government organization).
- 3.3.1.2 Identify (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) resident and migratory SGCN habitats. Investigate their suitability for the various life history requirements of the species that dependent upon them to determine the ability for maintaining applicable SGCN populations in perpetuity.
- 3.3.1.4 Identify (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) and investigate the suitability of corridors that connect large, contiguous tracts of similar habitats to increase their effective size (i.e., forest with forest, grassland with grassland, wetlands with wetlands, etc.) for dependent SGCN.
- 3.3.1.5 Identify areas (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) where habitat restoration and/or enhancement would benefit wildlife SGCN.
- 3.3.1.6 Identify areas (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) that could, through revegetation and/or enhancement efforts, become suitable travel corridors connecting and increasing the effective size of conserved habitats for SGCN.
- 3.3.1.17 Identify and map undeveloped roads and trails in all conserved forests, and create a database of locations. Integrate information regarding potentially sensitive areas.
- 3.3.1.18 Conduct an assessment using available data regarding SGCN population numbers/trends and demography, on-going threats, habitat changes, etc. to determine if directed management efforts are needed to reach or maintain viable population levels.
- 3.3.1.19 Identify and codify legal ORV access areas on state (and if appropriate, other conserved) lands. Provide GIS mapping to the landowner for potential use in directing such recreational activities.

Bog Turtle

3.3.1.20 Identify areas (through surveys/studies, literature searches, review of available data, enlistment of habitat management and/or species experts, etc.) where invasive, non-indigenous plants and animals are either already established or are becoming established. Create a system for reporting and qualifying new locations of invasive species and for prioritizing areas for control measures according to the potential level of impact on the ecosystem and SGCN and the likelihood of success. Researchers and contractors encountering invasive plant species while performing plant and/or forest inventories on state or other conserved lands and/or private lands should report invasive plant species through the New Jersey Invasive Species Strike Team phone application.

3.3.1.24 Conduct regular investigations of SGCN habitat health and biodiversity on public and private lands to identify locations in need of revegetation, reduction of over-abundant, native wildlife and/or exotic species, conservation focal areas requiring limitations on human activity, etc.

3.3.2 Monitoring

3.3.2.2 Conduct long-term monitoring of resident and migratory SGCN habitats using standardized survey protocols to determine changes in habitat quality/suitability and threats (e.g., habitat loss and degradation, increased edge habitat, water quality) and other variables that may impact their long-term persistence in the State and to provide information needed for determining causes of population declines and understanding metapopulation dynamics.

3.3.2.3 Continue to update wildlife and habitat databases and revise models of critical SGCN habitats using the most current data available and where lacking, develop new SGCN and/or habitat models as data on species habitat requirements and applicable GIS data layers become available.

3.3.2.4 Protect water quality and aquatic-dependent species by appropriately designating Category 1 waters and enforcing protective regulations. Seek appropriate classifications for stream segments based on Endangered and Threatened Status and/or the Index of Biotic Integrity (IBI) results that do not fulfill Category One requirements.

3.3.2.5 Conduct long-term monitoring of water quality of SGCN aquatic habitats (and aquatic systems feeding into those habitats) to evaluate protection and management efforts to reduce, if not eliminate, chemical contamination, siltation, eutrophication, and other forms of pollution/contamination of aquatic systems.

3.3.2.10 Evaluate the efficacy and success of different management techniques (e.g., ecologically-based forestry activities, prescribed burns) that might be used to mimic the historic role of fire and other natural disturbances in shaping an ecosystem.

3.3.2.12 Evaluate and compare the effectiveness of different management techniques (e.g., prescribed burning, mowing, brush-hogging, etc.) for maintaining suitable habitat for grassland-dependent species and species dependent upon early successional habitats.

3.3.2.14 Research and evaluate the effectiveness of water quality management practices on water-dependent and semi-dependent SGCN, particularly those practices associated with permitting or mitigation actions.

3.3.2.15 Investigate the effectiveness of management techniques implemented to eliminate invasive terrestrial and aquatic plant species on private and public lands, and/or within sensitive and/or important habitats for SGCN.

3.3.2.16 Evaluate the effectiveness of best management practices (BMPs), protective strategies, and guidelines for maintaining and enhancing healthy, SGCN-associated terrestrial and aquatic habitats and associated riparian habitats, and to minimize (if not avoid) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.

Bog Turtle

- 3.3.2.20 Once a system is developed for reporting and qualifying new locations of invasive species, develop, implement and monitor/evaluate invasive species removal strategies at identified locations. Priority should be given to those areas critical to SGCN and/or contain unique and/or rare plant communities supporting SGCN and/or other fish/wildlife species.

3.5 Techniques development

3.5.3 Habitat restoration methods

- 3.5.3.1 Work with land management agencies to determine the appropriate actions needed to restore/reclaim degraded habitat for the documented/target SGCN.
- 3.5.3.3 Develop/improve management techniques that might be used to mimic the historic role of fire and other natural disturbances in shaping an ecosystem.
- 3.5.3.8 Develop best management practices (BMPs), protective strategies, and guidelines for maintaining and enhancing healthy, SGCN-associated terrestrial and aquatic habitats and associated riparian habitats, and to minimize (if not avoid) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
- 3.5.3.9 Develop strategies to combat the impacts of diseases/pathogens impacting SGCN and/or their habitats.
- 3.5.3.11 Develop strategies to protect native terrestrial and aquatic habitats and dependent SGCN species from the identified threats.
- 3.5.3.14 Develop aquaculture practices in the coastal areas that are compatible with the recovery of SGCN.
- 3.5.3.15 Modify management practices based on the effects of pesticides, herbicides and other biological controls on critical and supporting SGCN habitats.
- 3.5.3.16 Develop/improve strategies to restrict human activity (e.g., recreational, maintenance work, etc.) from sensitive habitats/areas such as avian nesting sites, reptile and amphibian breeding areas (nesting or gestation/birthing and breeding pools, respectively), and bat hibernacula, and federal buffers for marine mammals. Methods may include, but are not limited to, managing the landscape to deter access, diverting recreational and other activities from sensitive areas during critical periods through permit processes or blocking access (trails, roads, etc.), posting (if appropriate), increasing law enforcement presence, conducting management activities at appropriate times to avoid disturbance and/or harm to wildlife (e.g., habitat management, beach raking, etc.), and decreasing noise and light pollution.
- 3.5.3.21 Develop management techniques (e.g., ecologically-based forestry activities, prescribed burns) that might be used to mimic the historic role of fire and other natural disturbances in shaping an ecosystem.
- 3.5.3.22 Identify (through surveys/studies, literature searches, review of available data, enlistment of habitat management and/or species experts, etc.) and modify management strategies (e.g., timing restrictions for mowing, cooperative agreements with utility companies for maintenance of rights-of-ways), based on research, that maintain and enhance large existing areas of grassland in perpetuity.
- 3.5.3.23 Revise water quality management practices based on research on water-dependent and semi-dependent SGCN, particularly when associated with permitting or mitigation actions.
- 3.5.3.24 Based on research, modify management techniques implemented to eliminate invasive terrestrial and aquatic plant species on private and public lands, and/or within sensitive and/or important habitats for SGCN.

Bog Turtle

3.5.3.25 Use data regarding SGCN population numbers/trends and demography, on-going threats, habitat changes, etc. to develop the necessary management strategies to reach or maintain viable population levels.

3.5.4 Fish and wildlife research, survey and management techniques

3.5.4.5 Develop and implement strategies to combat the impacts of diseases/pathogens impacting SGCN and/or their habitats, track disease occurrences and monitor/research impacts to SGCN populations and their habitats.

3.5.4.7 Investigate the feasibility and potential for success of conducting genetic rescue through translocation and/or reintroduction of animals into suitable habitat that was historically occupied to increase genetic diversity and reconnect isolated populations. Methods of investigation should include, but are not limited to, thorough literature reviews, expert opinions, identifying potential pitfalls (e.g., species' fidelity to their range or critical areas), and an examination of historic and current SGCN population distribution and suitable habitat availability.

3.5.4.9 Conduct studies to evaluate the impacts of roads on SGCN and develop, implement and conduct studies to evaluate the effectiveness of methods to reduce road mortality of wildlife (e.g. wildlife underpasses, road closures).

3.5.4.13 Develop/improve strategies to restrict human activity (e.g., recreational, maintenance work, etc.) from sensitive habitats/areas such as avian nesting sites, reptile and amphibian breeding areas (nesting or gestation/birthing and breeding pools, respectively), and bat hibernacula, and federal buffers for marine mammals. Methods may include, but are not limited to, managing the landscape to deter access, diverting recreational and other activities from sensitive areas during critical periods through permit processes or blocking access (trails, roads, etc.), posting (if appropriate), increasing law enforcement presence, conducting management activities at appropriate times to avoid disturbance and/or harm to wildlife (e.g., habitat management, beach raking, etc.), and decreasing noise and light pollution.

3.5.4.15 Investigate the success of management strategies used to protect and/or enhance SGCN populations and when appropriate, aid in identifying failures/resource problems and issues, and developing new strategies.

3.5.4.16 Use data regarding SGCN population numbers/trends and demography, on-going threats, habitat changes, etc. to determine if directed management efforts are needed to reach or maintain viable population levels and develop the necessary management strategies.

3.5.4.17 Investigate new, non-invasive techniques for SGCN population evaluation through literature review, expert opinion, trial studies (if low risk), etc.

3.5.4.18 Investigate the effectiveness of survey techniques through selected "ground truthing" and literature and peer review in order to increase efficacy of survey, minimize surveyor bias and error, and increase accuracy of trend data.

3.5.4.19 Develop reliable, standardized survey and monitoring protocols for SGCN species, for which none currently exist, and their habitats.

3.5.4.21 Develop BMPs to address problematic species and diseases of unknown origin.

3.5.4.22 Investigate the efficacy of implementing strategies to minimize or eliminate disturbances to all SGCN (i.e., beyond their federal requirements) during military activities.

6 Land and Water Rights Acquisition and Protection

6.0 Acquisition and protection strategies

6.0.0 Combined acquisition and protection strategies

Bog Turtle

- 6.0.0.2 Enhance and increase the effective size of SGCN habitats by protecting adjacent habitats that contribute to the overall size of the "core" area and/or provide a natural buffer, enhancing the suitability of the core area for SGCN, and/or connect conserved SGCN habitats through an appropriate combination of fee title, non-fee title and landowner agreements.
- 6.0.0.3 Secure and protect riparian and floodplain habitats, inland wetland habitats (marsh, vernal pool, fen, emergent shrubland, forest), and other aquatic habitats (including open waters) and/or biologically appropriate buffers to minimize degradation through an appropriate combination of fee title, non-fee title and landowner agreements.
- 6.0.0.4 Secure and protect fish SGCN habitats by protecting lands adjacent to fish SGCN habitats and/or aquatic systems feeding into such habitats through an appropriate combination of fee title, non-fee title and landowner agreements.

6.3 Conservation area designation

6.3.0 Conservation area designation strategies

- 6.3.0.2 Enhance and increase the effective size of SGCN habitats by protecting adjacent habitats that contribute to the overall size of the "core" area and/or provide a natural buffer, enhancing the suitability of the core area for SGCN and/or connect conserved SGCN habitats through conservation area designations.
- 6.3.0.3 Increase the protection of riparian and floodplain habitats, inland wetland habitats (marsh, vernal pool, fen, emergent shrubland, forest), and other aquatic habitats (including open waters) and/or biologically appropriate buffers to minimize degradation through conservation area designations.

6.4 Private lands agreements

6.4.0 Private land agreement strategies

- 6.4.0.1 Enter into private lands agreements to expand control burns on private lands, in particular those adjacent to conserved lands to improve SGCN habitats.

7 Law Enforcement

7.1 Law enforcement

7.1.3 Sub-national Level

- 7.1.3.2 Increase the number of law enforcement officers tending to wildlife issues to a reasonable number to sufficiently cover the State and marine waters.

7.1.4 Scale Unspecified

- 7.1.4.1 Improve enforcement of policies and/or regulations that promote the reduction of run-off and point and non-point source pollution into NJ's aquatic systems (streams, rivers, lakes/ponds, bays, ocean, wetlands, etc.).
- 7.1.4.3 Increase law enforcement presence proximate to sensitive areas [e.g., avian nesting sites, in particular rookeries, and reptile and amphibian breeding areas (nesting or gestation/birthing and breeding pools, respectively)] to deter human activity and subsequent disturbance to SGCN.
- 7.1.4.6 Recruit law enforcement to assist in the protection and enhancement of SGCN populations, in particular endangered species, through improved awareness of species through trainings, partnerships, and other methods. Information should include but is not limited to: 1) Issues concerning illegal collection of reptiles, 2) Persecution of rare snakes, 3) Illegal recreational activities on public lands (e.g., off-road vehicles) and their impact on wildlife, 4) Identification of sensitive areas, critical sites and/or "hot-spots" for collection.

Bog Turtle

- 7.1.4.7 Increase law enforcement presence to enforce regulations governing recreational activities (e.g., the use of personal watercraft and off road vehicles, caving, rock climbing, etc.) on conserved lands and within other sensitive habitats, and discourage activities that cause harm or disturbance to vegetation, wetlands, fish and wildlife.
- 7.1.4.9 Implement policies that improve and secure habitat connections between conserved SGCN habitats.
- 7.1.4.10 Implement policies that promotes expanding acreages and enhances the effective size of SGCN habitats by providing biologically appropriate buffers of native habitat surrounding SGCN habitats.
- 7.1.4.12 Implement policies and/or regulations that protect significant natural and/or unique communities in perpetuity.
- 7.1.4.16 Implement policies that protect and restore riparian areas.
- 7.1.4.17 Improve the enforcement of policies and/or regulations that protect wetlands, riparian and floodplain areas, and aquatic habitats (including open waters).
- 7.1.4.23 Implement policies that minimize wildlife road mortality.
- 7.1.4.26 Educate law enforcement personnel that there may be unauthorized research projects taking place and to encourage them to investigate any activities that appear to be harmful to wildlife.

8 Outreach

8.1 Partner/stakeholder engagement

8.1.0 Partner/stakeholder engagement strategies

- 8.1.0.2 Develop a team of personnel from government entities, conservation organizations and other stakeholders engaged in oil/gas spill response for marine and freshwater habitats to develop a feasible plan for oil spill response and/or to amend NJ's current oil spill response plan that clearly outlines each organizations responsibilities and an assessment and location list of available equipment for boom deployment during oil spills.
- 8.1.0.3 Develop an outreach team of personnel from government entities, conservation organizations and other stakeholders to work together to collaboratively use social media campaigns to grow a constituency of NJ residents who have an elevated ecological and climate consciousness.
- 8.1.0.14 Engage DOD in a constructive dialogue regarding strategies to minimize or eliminate disturbances to all SGCN (i.e., beyond their federal requirements) during military activities.
- 8.1.0.15 Engage government agencies, conservation partners and other stakeholders in discussions encouraging and supporting the creation of laws and policies requiring vegetative buffers of native plants on preserved farmland and state lands with agricultural leases or agreements.
- 8.1.0.16 Engage local governments in discussions regarding the importance of them adopting/passing ordinances which require assessing and addressing secondary impacts (i.e., ancillary prescribed burns, trespassers, ORV use, mosquitoes, deer, buffers) on biological resources when revising planning/zoning documents or granted site plan/subdivision approvals.
- 8.1.0.17 Engage municipalities in constructive dialogue to identify and minimize destruction of areas prioritized for early succession forest management.

Bog Turtle

- 8.1.0.18 Engage NJDOT, NJ Transit Authority and other road management entities, wildlife conservation organizations/agencies (e.g., Division of Fish and Wildlife, New Jersey Conservation Foundation, Conserve Wildlife Foundation of NJ), and communities and citizens in discussions regarding the importance of and methods to enhance habitat connectivity, and work together to develop feasible strategies for ensuring that wildlife can disperse naturally and safely across roads and similar barriers to terrestrial and/or aquatic habitats.
- 8.1.0.19 Engage government agencies, conservation partners and other stakeholders to collaboratively develop a list of important projects, targeting SGCN and/or their habitat, as a guide for graduate student research. Distribute the list and contact information to all State colleges and universities.
- 8.1.0.21 Work with government agencies and environmental educators to develop educational resources and training programs, educate the public on the devastation human-subsidized and/or overabundant, native species cause to local nesting species, and provide expert guidance on how residents can help alleviate this threat.
- 8.1.0.22 Work with government agencies and environmental educators to develop educational resources and training programs, educate the public on the devastation invasive species cause to native nesting species, and provide expert guidance on how residents can help alleviate this threat.
- 8.1.0.24 Engage government agencies, conservation partners and other stakeholders in constructive dialogue regarding the importance of providing and methods to provide technical support for carrying out restoration and management practices aimed at increasing structural habitat diversity.
- 8.1.0.25 Provide technical support to public landowners and land managers for carrying out restoration and management practices aimed at increasing structural habitat diversity.
- 8.1.0.26 Coordinate across federal, state and local agencies and approved consulting foresters that provide financial, logistical or planning assistance to woodland landowners to adopt or endorse consistent best management practices concerning controlled burns to maintain and/or improve forested habitat for wildlife.
- 8.1.0.30 Encourage government agencies and conservation partners to advise members of the relevant scientific community of the need for specific studies, reports or investigations targeting the data-deficiency regarding SGCN and/or their habitats.
- 8.1.0.33 Engage government agencies, conservation partners and other land managers, communities, landowners, and commercial and industrial stakeholders in discussions regarding the importance of protecting and methods to protect priority wetlands beyond the levels afforded through regulation by maintaining and/or restoring optimal biological buffers around wetlands.
- 8.1.0.34 Work with the NJ Education Association and Department of Education to design curriculum and outdoor experimental learning opportunities, and provide training to teachers on implementation of these activities.
- 8.1.0.37 Enlist landowners and NJ citizens in the protection of and survey efforts for SGCN, in particular rare species, by increasing enrollment in landowner incentives, forest stewardship, backyard habitat management and wildlife-related volunteer programs.
- 8.1.0.40 Encourage researchers, land managers, naturalists and enthusiasts to follow proper procedures for the coordination and/or permitting of research/management activities involving wildlife and sensitive habitats, and discourage activities that alter vegetation or wetlands, or cause harm or disturbance to wildlife.

Bog Turtle

- 8.1.0.42 Engage citizens, wildlife observers and photographers through discussions and distributable information regarding the importance of and encouraging implementing responsible and ethical behavior when observing wildlife by developing an alliance of wildlife photographers and widely circulating recommendations on how to reduce impact.
- 8.1.0.44 Engage conservation partners, stakeholders, government agencies and other land stewards in constructive dialogues encouraging their inclusion of controlled burns in forest and other stewardship plans.
- 8.1.0.47 Form cooperative partnerships with energy companies to facilitate habitat creation and enhancement away from and outside of project areas, the restoration of appropriate habitats within project areas (e.g., rights-of-way could benefit butterflies and some bird species), and to identify seasonal timing of activities that would minimize impacts to wildlife.

8.3 WSFR program/subprogram outreach

8.3.0 WSFR program/subprogram outreach strategies

- 8.3.0.8 Develop and provide (or otherwise make publicly available) educational programs and/or materials to educate recreationists and encourage landowners to eliminate garbage in the vicinity of suitable wildlife habitat, in particular SGCN habitat. Information should include the detrimental impacts garbage may have on various wildlife species.
- 8.3.0.9 Develop and provide (or otherwise make publicly available) educational programs and/or materials to enlist landowners and land managers to include only native plants in landscaping and restoration projects. Provide information to assist them in detecting problematic establishment of invasive, non-indigenous plants.
- 8.3.0.10 Develop and provide (or otherwise make publicly available) educational programs and/or materials to educate landowners and NJ citizens on threats to fish and wildlife (including marine animals).
- 8.3.0.12 Promote awareness of WSFR (Wildlife and Sportfish Restoration) Outreach/Awareness grants, an important funding source for conservation among hunters and anglers as well as the general public.
- 8.3.0.13 Conduct an educational campaign to encourage observer ethics and respect for wildlife and natural habitat.
- 8.3.0.15 Develop an educational outreach program for citizens regarding: 1) The impacts to wildlife as a result of plastic bags entering aquatic and marine systems, 2) The importance of decreasing the amount of plastic shopping bags in circulation, 3) The need for businesses to voluntarily charge for bags or reimburse people for using their own non-plastic bags, and 4) The need for their assistance through public pressure on legislators and government to pass legislation that that limits the amount of plastic shopping bags in circulation.
- 8.3.0.19 Develop an educational outreach program for the public on the devastating effects predators can have on native nesting wildlife.
- 8.3.0.25 Develop educational outreach programs for landowners, nurseries and the general public regarding the negative impacts of invasive and non-native plants on our natural communities.
- 8.3.0.27 Develop educational outreach programs for public and private landowners and land managers regarding the importance of structural habitat diversity, methods to increase diversity, and/or incentive programs available to increase habitat diversity.
- 8.3.0.29 Develop educational outreach programs for local decision-makers, land developers, landowners and citizens about the importance of maintaining a vegetative buffer along riparian and aquatic habitats to intercept storm water runoff and minimize soil erosion.

Bog Turtle

- 8.3.0.32 Develop an educational outreach program for landowners and citizens on the threats that herbicides and pesticides pose to aquatic systems and wildlife, and to promote safer usage of such products.

9 Planning

9.1 Land use planning

9.1.0 Land use planning strategies

- 9.1.0.1 Develop smart-growth plans and critical habitat designations that consider SGCN life history requirements and habitat needs, connectivity and health of those habitats, and minimizes human-associated disturbances to those habitats and SGCN inhabiting them.
- 9.1.0.2 Develop town plans that avoid impacts to SGCN species and their habitats.
- 9.1.0.3 Develop a plan that directs the creation of impervious surfaces away from and to minimize impacts on aquatic systems and critical terrestrial habitats. The plan should also include strategies to increase the resiliency of aquatic and critical terrestrial habitats to threats and stressors that would impact the reproduction and survival of wildlife.
- 9.1.0.4 Develop a plan that directs the creation of new impoundments and/or the expansion of bogs for cranberry farming within or immediately adjacent to critical forested habitats in a manner that minimizes impacts on the natural hydrology of the watershed and subsequently, the natural wetlands in the area.
- 9.1.0.8 Develop a plan that focuses on strategies for oil pipelines to avoid sensitive habitats that would be highly impacted by oil spills.
- 9.1.0.12 Develop a plan to avoid freshwater tidal management.
- 9.1.0.13 Develop a plan to minimize agriculture that would result in groundwater withdrawal in critical forested areas.
- 9.1.0.14 Develop a plan to minimize development that would result in groundwater withdrawal in critical forested areas.
- 9.1.0.15 Develop a plan to minimize fragmentation of terrestrial and aquatic habitats by roads.
- 9.1.0.16 Develop a plan to minimize new lawns and preserve natural vegetation within and adjacent to critical forest areas.
- 9.1.0.17 Develop a plan to minimize nutrient and effluent loads from aquaculture practices.
- 9.1.0.18 Develop a plan to minimize the effects of road widening and traffic volume increases within critical wildlife habitat areas using CHANJ products.
- 9.1.0.19 Develop a plan to minimize the extent of impervious surfaces as part of new construction to increase water recharge in those areas.
- 9.1.0.20 Develop a plan to minimize the impacts of existing agricultural properties adjacent to and the conversion of forest habitats (terrestrial and aquatic, within or adjacent to critical forests) to agriculture, grazing areas/livestock farms, and plantations.
- 9.1.0.22 Incorporate habitat connectivity and preservation of natural areas into state and local land-use policy and the environmental review process to minimize the impacts of transportation and service corridors on fish and wildlife and their habitats.
- 9.1.0.23 Develop a plan to mitigate the effects of transportation barriers by using CHANJ products.
- 9.1.0.27 Develop a plan to use wildlife-appropriate culverts in critical forested areas.

Bog Turtle

- 9.1.0.28 Develop and coordinate state, regional and local plans for suitable lot layout and landscaping to minimize human-wildlife conflicts that also incorporates habitat connectivity and preservation of natural areas.
- 9.1.0.29 Provide GIS or related data, maps, resource inventories, as well as related training, pertaining to the SWAP and it's recommended conservation actions for use or consideration by State, County or municipal planning agencies.
- 9.1.0.30 Incorporate habitat connectivity and preservation of natural areas into state and local land-use policy and the environmental review process to minimize habitat fragmentation and other related threats associated with development.
- 9.1.0.31 Develop wetland restoration plans that consider the life history and needs of wildlife occupying targeted habitats.
- 9.1.0.32 Incorporate aquatic habitat connectivity and water quality/effluent standards into local and state aquaculture plans and BMPs.
- 9.1.0.33 Review the species, threats, action successes, and habitats, and work with partners to revise the 2017 State Wildlife Action Plan for the 2025 resubmittal.

9.3 Species and habitat management planning

9.3.1 Species management planning

- 9.3.1.3 Develop a management plan to restrict human activity (e.g., recreational, maintenance work, etc.) from sensitive habitats/areas such as avian nesting sites, reptile and amphibian breeding areas (nesting or gestation/birthing and breeding pools, respectively), and bat hibernacula, and federal buffers for marine mammals.
- 9.3.1.4 Develop town plans that avoid impacts to SGCN species and their habitats.
- 9.3.1.5 Develop response plans to address disease outbreaks within wildlife populations, in particular SGCN.
- 9.3.1.6 Amend NJ's current oil spill response plan to 1) expand the geographic area addressed, 2) expand the targeted species impacted and in need of recovery, and 3) revise current and integrate new actions into the plan as needed.
- 9.3.1.7 Develop a rapid response plan for various scenarios (e.g., insect infestations destroying native habitat, wildlife disease) to be implemented upon exotic pathogen introduction or incident.
- 9.3.1.9 Develop a management plan incorporating the effects of pesticides, herbicides and other biological controls on SGCN and their critical and supporting habitats.
- 9.3.1.10 Develop a management plan to combat the impacts of diseases/pathogens impacting SGCN and/or their habitats.
- 9.3.1.13 Develop a management plan to ensure SGCN populations' persistence based on long-term monitoring of resident and migratory SGCN populations and their habitats.
- 9.3.1.15 Develop a plan to minimize the impacts of oil spills on wildlife and their habitats.
- 9.3.1.16 DOD and appropriate state agencies work together to improve DOD Integrated Natural Resource Management Plans (INRMP) to develop strategies to minimize or eliminate disturbances to all SGCN (i.e., beyond their federal requirements) during military activities and to improve SGCN habitat and presence.

9.3.2 Listed species recovery planning

- 9.3.2.1 Develop proactive species recovery plans for all endangered and threatened species including guidance and objectives pertaining to critical and supporting habitat to meet and maintain recovery goals.

Bog Turtle

9.3.3 Habitat management planning

- 9.3.3.6 Develop a management plan for maintaining and enhancing healthy, SGCN-associated terrestrial and aquatic habitats and associated riparian habitats, and to minimize (if not avoid) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
- 9.3.3.8 Develop a management plan to combat the impacts of diseases/pathogens impacting SGCN and/or their habitats.
- 9.3.3.9 Develop a response plan to outbreaks using BMPs to control infestations and limit their spread in a way that avoids excessive harm to non-target species.
- 9.3.3.10 Develop a management plan to ensure SGCN populations' persistence based on long-term monitoring of resident and migratory SGCN populations and their habitats.
- 9.3.3.11 Develop town plans that avoid impacts to SGCN species and their habitats.
- 9.3.3.15 Develop a management plan incorporating the effects of pesticides, herbicides and other biological controls on SGCN and their critical and supporting habitats.
- 9.3.3.16 Develop a management plan to restrict human activity (e.g., recreational, maintenance work, etc.) from sensitive habitats/areas such as avian nesting sites, reptile and amphibian breeding areas (nesting or gestation/birthing and breeding pools, respectively), and bat hibernacula, and federal buffers for marine mammals.
- 9.3.3.17 Develop a management plan for prescribed burning that will benefit Pinelands dependent species and increase or maintain habitat quality for these species in the Pinelands.
- 9.3.3.18 In cooperation with species and habitat experts, develop management plans for significant natural and/or unique communities, in particular those supporting SGCN, and provide the information to the landowners/managers (federal, state and local government agencies or non-government organization) for review and implementation.
- 9.3.3.19 Develop management plans for SGCN inhabiting permanently protected natural lands using available baseline and population trend data.
- 9.3.3.21 Develop a rapid response plan for various scenarios (e.g., insect infestations destroying native habitat, wildlife disease) to be implemented upon exotic pathogen introduction or incident.
- 9.3.3.22 Create management plans to minimize and/or prevent wildlife road mortality that will incorporate wildlife passages in conjunction with barrier fencing and, where possible, seasonal closures. Aquatic-associated passages must avoid disturbance to the natural streambeds and riparian habitat, permit high volumes of water to flow freely, and provide adequate travel corridors for terrestrial wildlife, while maintaining stream flow for fish passage. Bridges that span rivers and streambeds and include floodplain habitat on either side of the span to provide travel corridors for terrestrial wildlife are preferred over culverts.
- 9.3.3.24 Develop a plan to improve the enforcement of policies and/or regulations that protect wetlands, riparian and floodplain areas, and aquatic habitats (including open waters).
- 9.3.3.28 Develop a plan to minimize the impacts of oil spills on wildlife and their habitats.
- 9.3.3.32 DOD and appropriate state agencies work together to improve DOD Integrated Natural Resource Management Plans (INRMP) to develop strategies to minimize or eliminate disturbances to all SGCN (i.e., beyond their federal requirements) during military activities and to improve SGCN habitat and presence.

Bog Turtle

- 9.3.3.34 Include controlled burn prescriptions in forest and stewardship plans to improve wildlife habitat.
- 9.3.3.35 Incorporate habitat connectivity, preservation of natural areas, and the implementation of BMPs into state and local land-use policy environmental review process and energy development plans to minimize habitat fragmentation and related threats associated with solar farms and altered habitats.
- 9.3.3.36 Integrate plans for properly located and timed habitat restoration and management along transportation, energy and service corridors to minimize risks to and benefit wildlife.

11 Technical Assistance

11.1 Environmental review

11.1.1 Review of proposed projects

- 11.1.1.1 Use Biotics database and Landscape Project Mapping in regulatory reviews to ensure protection by applicable laws and regulations.
- 11.1.1.2 Develop smart-growth plans and critical habitat designations that consider SGCN life history requirements and habitat needs, connectivity and health of those habitats, and minimize human-associated disturbances to those habitats and the SGCN inhabiting them.
- 11.1.1.3 Government organizations to thoroughly review wetland restoration plans, applying the most current science for wildlife, habitats and aquatic systems, to assess the impacts to resident and migratory wildlife occupying the targeted habitats.
- 11.1.1.4 Incorporate habitat connectivity and preservation of natural areas into state and local land-use policy and the environmental review process to minimize habitat fragmentation and related threats associated with development.
- 11.1.1.5 Incorporate habitat connectivity and preservation of natural areas into state and local land-use policy and the environmental review process to minimize the impacts of transportation and service corridors on fish and wildlife and their habitats.
- 11.1.1.7 Review proposed construction or other work projects and permit applications, provide recommendations on how to best avoid disturbing sensitive species, and identify actions not permitted.
- 11.1.1.8 Review proposed research projects and permit applications, provide recommendations on how to best avoid disturbing sensitive species, and identify actions not permitted.
- 11.1.1.9 Review strategies for creating or enhancing connectivity (e.g., installing appropriately-sized wildlife passages) between wetlands to allow wildlife to disperse naturally and safely.
- 11.1.1.10 Use CHANJ mapping in reviews of proposed energy, mining, transportation and utility service companies/agencies' projects to attempt to maintain habitat connectivity and reduce fragmentation, and identify potential impacts of the projects.
- 11.1.1.11 Use the best available science (species data, habitat present, site layout options, etc.) when conducting regulatory reviews of proposed offshore energy projects relating to drilling, extraction and distribution of petroleum and gas products to reduce habitat destruction and minimize impacts on wildlife.
- 11.1.1.12 Use the best available science (species data, habitat present, site layout options, etc.) when conducting regulatory reviews of proposed solar farm projects to reduce habitat fragmentation and minimize impacts on wildlife.

Bog Turtle

- 11.1.1.13 Use the best available science (species data, habitat present, wind farm layout options, wind blade impacts on migratory species, location of migration routes, etc.) when conducting regulatory reviews of proposed wind farm projects to minimize impacts on migratory and resident wildlife and reduce habitat fragmentation.

11.1.2 Review of proposed policies and plans

- 11.1.2.1 Develop smart-growth plans and critical habitat designations that consider SGCN life history requirements and habitat needs, connectivity and health of those habitats, and minimize human-associated disturbances to those habitats and the SGCN inhabiting them.
- 11.1.2.2 Government organizations to thoroughly review wetland restoration plans, applying the most current science for wildlife, habitats and aquatic systems, to assess the impacts to resident and migratory wildlife occupying the targeted habitats.
- 11.1.2.3 Incorporate aquatic habitat connectivity and water quality/effluent standards into the environmental review process to help establish policies and plans that minimize the impact of aquaculture on fish and wildlife.
- 11.1.2.4 Review strategies for creating or enhancing connectivity (e.g., installing appropriately-sized wildlife passages) between wetlands to allow wildlife to disperse naturally and safely.

11.2 Technical assistance

11.2.0 Assorted technical assistance strategies

- 11.2.0.1 Provide technical support to private and public landowners and land managers for carrying out restoration and management practices aimed at increasing structural habitat diversity.
- 11.2.0.2 Provide technical support to public and private landowners and land managers for controlling invasive, native and non-native plant species in order to increase structural habitat diversity.
- 11.2.0.3 Develop state, regional and local BMPs that focus on minimizing habitat fragmentation and human-wildlife conflicts associated with development. Make information available to land developers and private and public landowners for implementation.
- 11.2.0.5 Provide educational resources, training programs, and expert guidance to private and public landowners and land managers on the threats that herbicides and pesticides pose to aquatic systems and wildlife, and to promote safer usage of such products.
- 11.2.0.6 Provide educational resources, training programs, and on-the-ground guidance to energy, mining, transportation, and utility service agencies/companies and their project and resource managers on habitat creation, enhancement and restoration within and adjacent to project areas, as well as away from and outside of project areas (depending on the target species), by managing vegetation for a variety of species and that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife. Wind farms should address both terrestrial bound and low-flying species. Examples of habitat management include, but are not limited to, integrating short and tall grasses, specific host plants, brush piles, water sources/wetlands, shrubby areas, nesting areas and no-mow set-asides.
- 11.2.0.7 Provide educational resources, training programs, and on-the-ground guidance to energy, mining, transportation, and utility service agencies/companies and their project and resource managers on the importance of maintaining habitat connectivity, minimizing fragmentation, and the use of CHANJ products to help them target areas for such planning.
- 11.2.0.8 Provide educational resources, training programs, and on-the-ground guidance to public and private landowners and land managers on habitat creation and enhancement strategies that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife.

Bog Turtle

- 11.2.0.9 Provide educational resources, training programs, and on-the-ground guidance to municipalities, land developers, and other land managers and private landowners about the importance of leaving vegetation in place, especially along riparian areas and wildlife movement corridors.
- 11.2.0.10 Provide technical support to private landowners, consultants, and land managers to create customized management plans based on location and SGCN.
- 11.2.0.14 Provide educational resources and technical support to public and private landowners and land managers to promote the protection of wetlands, riparian and floodplain areas, and aquatic habitats (including open waters), and to enhance or restore biologically appropriate buffers.
- 11.2.0.15 Provide educational resources, training programs, and on-the-ground guidance to municipalities, land developers, and other land managers and landowners about the importance of retaining and in an effort to protect, create, enhance and/or restore vegetation along aquatic habitats.
- 11.2.0.18 Provide educational resources and technical support to public and private landowners and land managers to promote the protection of lands adjacent to fish SGCN habitats and/or aquatic systems feeding into such habitats.
- 11.2.0.22 Provide educational resources, training programs, and expert guidance to public and private landowners and land managers about lawn alternatives and the importance of natural vegetation and "edge" habitats on developed properties.
- 11.2.0.23 Provide educational resources and technical support to public and private landowners and land managers of lands adjacent to SGCN habitats to promote the protection and/or enhancement of those adjacent habitats to increase the overall size of the "core" area and/or provide a natural buffer, enhancing the suitability of the core area for SGCN, and that connect conserved SGCN habitats.
- 11.2.0.24 Provide educational resources, training programs, and expert guidance to public and private landowners and land managers on how to manage vegetated roadside areas (e.g., mowing, brush-hogging, etc.) on a schedule that avoids peak activity periods for wildlife and therefore, minimizes harm.
- 11.2.0.25 Provide educational resources, training programs, and on-the-ground guidance to resource managers regarding the assessment of and addressing secondary impacts (i.e. ancillary prescribed burns, trespassers, ORV use, mosquitoes, deer, buffers) related to residential and commercial development.
- 11.2.0.26 Make educational resources available to the public that encourage researchers to seek out guidance prior to finalizing proposals and submitting State permit applications to reduce potential impacts on sensitive species.
- 11.2.1 With individuals and groups involved in resource management decision making
 - 11.2.1.1 Engage partners and stakeholders in constructive dialogue regarding the importance of providing and methods to provide technical support for carrying out restoration and management practices aimed at increasing structural habitat diversity.
 - 11.2.1.2 Provide professional training and technical assistance tools (e.g., mapping, guidance documents, justification, etc.) to agencies/divisions/programs within and outside of the NJ DEP regarding the SWAP, and the conservation actions recommended therein to help facilitate SWAP implementation.

Bog Turtle

- 11.2.1.3 Provide educational resources, training programs, and on-the-ground guidance to DOD to improve DOD Integrated Natural Resource Management Plans (INRMP) to develop and implement forest management and other practices that minimize disturbances to SGCN (i.e., beyond their federal requirements).
- 11.2.1.6 Provide educational resources, training programs, and on-the-ground guidance to resource agencies prior to project initiation to ensure wildlife and their habitats are protected to the highest degree possible during construction, and provisions are in place for post-construction habitat use.
- 11.2.2 With private landowners
 - 11.2.2.1 Provide technical support to farming operations and woodland landowners on ways to decrease clean farming (edge-to-edge) practices and create ecotones to benefit bobwhite and other species dependent on early successional habitat.

100 Law and Policy

100. Legislation

100.1.2 National Level

- 100.1.2.1 Create legislation to establish markets for warm-season grasses to increase the permanency of this crop on the landscape.

100.1.3 Sub-national Level

- 100.1.3.1 Develop laws and policies to increase protection and biological buffers of wetlands.
- 100.1.3.2 Develop policies for wetland restoration plans that consider life history requirements and needs of wildlife occupying targeted habitats.
- 100.1.3.3 Initiate legislative action to establish an annual budgetary line item designating funds to support programs focused on long-term research and monitoring of wildlife diseases.

100.1.4 County and Local

- 100.1.4.2 Secure and increase the effective size of SGCN habitats and connect conserved SGCN habitats through local ordinances.
- 100.1.4.3 Expand the acreages and enhance the effective size of SGCN habitats by protecting adjacent habitats that contribute to the overall size of the "core" area and/or provide a natural buffer, enhancing the suitability of the core area for SGCN through local ordinances.
- 100.1.4.4 Secure wetlands, riparian and floodplain areas, and aquatic habitats (including open waters) and biologically appropriate buffers through local ordinances.
- 100.1.4.5 Secure SGCN-inhabited/used freshwater wetlands and biologically appropriate buffers through local ordinances.
- 100.1.4.11 Secure riparian areas through local ordinances.
- 100.1.4.13 Encourage municipal laws regulating domestic pets that may predate on wildlife.
- 100.1.4.14 Adopt/pass local ordinances which require assessing and addressing secondary impacts (i.e. ancillary prescribed burns, trespassers, ORV use, mosquitoes, deer, buffers) on biological resources when revising planning/zoning documents or granted site plan/subdivision approvals.
- 100.1.4.15 Incorporate habitat connectivity and the preservation of natural areas into state and local land-use policy and the environmental review process to minimize habitat fragmentation and related threats associated with development.

100.1.5 Scale Unspecified

Bog Turtle

- 100.1.5.1 Develop laws and policies to increase protection and biological buffers of wetlands.
- 100.1.5.2 Develop policies for wetland restoration plans that consider life history requirements and needs of wildlife occupying targeted habitats.
- 100.1.5.3 Incorporate aquatic habitat connectivity and water quality/effluent standards into state/local policy to minimize the impact of aquaculture on fish and wildlife.
- 100.1.5.4 Incorporate habitat connectivity and preservation of natural areas into state and local land-use policy and the environmental review process to minimize the impacts of transportation and service corridors on fish and wildlife and their habitats.
- 100.1.5.5 Develop legislation to provide financial support for the New Jersey Invasive Species Strike Team.

100. State Regulations

100.3.0 Regulatory initiatives for species and habitat protection

- 100.3.0.1 Develop (and/or improve) policies and/or regulations that will promote the reduction of run-off and point and non-point source pollution into NJ's aquatic systems (streams, rivers, lakes/ponds, bays, ocean, wetlands, etc.).
- 100.3.0.5 Develop policies that will promote improved and secure habitat connections between conserved SGCN habitats.
- 100.3.0.6 Develop policies that will promote expanding acreages and enhancing the effective size of SGCN habitats by providing biologically appropriate buffers of native habitat surrounding SGCN habitats.
- 100.3.0.8 Develop policies and/or regulations with the objective of protecting significant natural and/or unique communities in perpetuity.
- 100.3.0.9 Secure mitigation that creates an environmental benefit for losses of SGCN and their habitats.
- 100.3.0.13 Develop policies that will promote protecting and restoring riparian areas.
- 100.3.0.14 Develop policies and/or regulations that increase the protective buffers of wetlands, riparian and floodplain areas, and aquatic habitats (including open waters) to biologically appropriate distances to benefit SGCN that rely upon these habitats and improve the function of the [associated] aquatic systems.
- 100.3.0.18 Develop policies for conserved lands that prohibit planting and supports the control of non-native vegetation and invasive, native vegetation.
- 100.3.0.20 Develop policies and/or regulations that prohibit the presence of managed cat colonies and trap, neuter and release programs in or near critical wildlife habitats.
- 100.3.0.21 Develop policies that minimize wildlife road mortality through: 1) Requiring the integration of wildlife passages into all new and repaired roads, in particular those areas that will connect SGCN habitats, 2) Requiring current fish/wildlife passages be improved and maintained in perpetuity, 3) Supporting seasonal road closures, in particular for unimproved roads, 4) Supporting projects that work to improve connectivity of SGCN habitats such as land conservation through acquisition or other means.
- 100.3.0.31 Create or expand tax-based incentive programs available to private, agricultural, commercial, industrial or governmental landowners and land managers to include or provide for incentives for the maintenance and/or improvement to existing habitat via the endorsement of wildlife-related BMPs.
- 100.3.0.36 Create legislation to limit the amount of plastic from shopping bags in circulation and re-instate incentives for citizens bringing their own shopping bag to grocery store.

Bog Turtle

- 100.3.0.40 Develop laws and/or policies to require vegetative buffers of native plants on preserved farmland and state lands with agricultural leases or agreements.
- 100.3.0.41 Explore all State regulatory requirements for mitigation, restoration, habitat management, etc. to ensure they prohibit the use of specified invasive or other problematic plant species.
- 100.3.0.43 Identify and address (amend) regulatory impediments to beneficial habitat management.
- 100.3.0.44 Incorporate requirements for technical support and funding for mitigation or restoration efforts so as to be consistent with existing regulations.
- 100.3.0.45 Increase the controlled burn season to focus on restoring vegetative communities.
- 100.3.0.46 Investigate and/or develop inter-agency Memorandum of Agreements to share common data stored or managed in program-specific databases.
- 100.3.0.48 Propose new State law or regulation mandating that a State-level "development impact fee" be assessed on all new development approved by municipalities (via the Municipal Land Use Law processes), and dedicate such monies to the development and implementation of regional Habitat Conservation Plans (or existing plans/programs serving the same regional function).
- 100.3.0.49 Review existing CAFRA regulations and ensure that the Coastal Zone Management Rules (NJAC 7:7E) adequately address the issue of disturbance to habitat or species as a result of human activities (e.g., construction, bridge maintenance, road work, etc.).
- 100.3.0.50 Retain endangered, threatened and special concern wildlife and habitat protection measures in the Water Quality Management Program Rules.
- 100.3.0.52 Revise existing and/or incorporate new State land use regulations that specifically address the impacts of new or expanded energy sitings and facilities.
- 100.3.0.53 Revise existing and/or incorporate new State land use regulations that specifically address the impacts of new or expanded rights-of-way corridors associated with energy transport/transmission.
- 100.3.0.54 Revise existing and/or incorporate new State land use regulations that specifically address the impacts of new or expanded surface mining areas.
- 100.3.0.57 Develop regulations that when implemented will improve and secure habitat connections between conserved SGCN habitats.
- 100.3.0.58 Develop regulations that when implemented will promote the expansion of acreages and enhancement of the effective size of SGCN habitats by providing biologically appropriate buffers of native habitat surrounding SGCN habitats.
- 100.3.0.60 Develop regulations that when implemented will protect significant natural and/or unique communities in perpetuity.
- 100.3.0.64 Develop regulations that when implemented will protect and restore riparian areas.
- 100.3.0.69 Develop regulations that when implemented will minimize wildlife road mortality.
- 100.3.0.72 Develop regulations that require permit applicants and/or review agencies to assess the cumulative and synergistic effects of a proposed project (i.e., "secondary effects"), both over time and over a larger spatial scale than the site itself.

100. State Agency Policy Integration

100.4.0 Policy initiatives for species and habitat protection

Bog Turtle

- 100.4.0.1 Create any necessary policy changes (including those to incentive programs) to encourage the integration of SWAP actions associated with SGCN priority habitats as a deliberative factor in agencies' actions (e.g., environmental and land management review processes, land acquisition and management).
- 100.4.0.2 Create a policy that requires the NJ DEP to incorporate scientific information regarding climate change and sea level rise (e.g., predictions, habitat management/acquisition efforts to enhance resilience to inundation) on their websites and to work with other government entities, conservation organizations and other stakeholders to work together to collaboratively use social media campaigns to grow a constituency of NJ residents who have an elevated ecological and climate consciousness.
- 100.4.0.3 Develop policies for mandatory buffer strips on preserved farmlands and state-owned agricultural lands.
- 100.4.0.4 Create a policy that requires the use of wildlife habitat and corridor mapping products for both regulatory use when conducting project reviews and planning/siting new or expanded rights-of-way projects.
- 100.4.0.8 Develop a white paper addressing the impacts that existing, new or expanded rights-of-way have upon wildlife, wildlife habitats and habitat connectivity.
- 100.4.0.9 Develop and implement policies to minimize the removal of coarse, woody debris in terrestrial, aquatic and riparian habitats in order to benefit wildlife.
- 100.4.0.12 Develop laws and/or policies to require vegetative buffers of native plants on preserved farmland and state lands with agricultural leases or agreements.
- 100.4.0.13 Develop policies for different circumstances (e.g., roadsides and medians, riparian, aquatic and terrestrial habitats) that outline appropriate habitat/vegetation management strategies and schedules to minimize risks to and benefit wildlife.
- 100.4.0.16 Develop policies to implement habitat management strategies that will increase the structural diversity surrounding areas used for energy, mining, and transportation and service corridors which include but are not limited to the presence of short and tall grasses, specific host plants, brush piles, water sources/wetlands, shrubby areas, nesting areas, and no-mow set-
- 100.4.0.17 Develop policies to implement habitat management strategies, including prescribed burns, that will increase the structural diversity on preserved farmlands, state-owned agricultural lands, forests, parks and wildlife management areas, and any conserved lands purchased with the assistance of Green Acres and Federal Land & Water Conservation Fund monies to control and reduce the impacts of invasive, non-native species in order to increase structural habitat diversity.
- 100.4.0.18 Develop policies to minimize the extent of infrastructure associated with energy and service corridors or areas (e.g., wind and solar farms, pipelines, utility lines) and that require the implementation of habitat management strategies that will increase the structural diversity in the area including (e.g., the presence of short and tall grasses, specific host plants, brush piles, water sources/wetlands, shrubby areas, nesting areas, and no-mow set-asides).
- 100.4.0.19 Develop regulations that will minimize the creation of new barriers, remove or replace current barriers with appropriately-sized systems to accommodate wildlife dispersal, and to minimize road widening and traffic volume increases within critical wildlife habitat areas.

Bog Turtle

- 100.4.0.20 Develop state regulations that require energy developers and utility service companies to implement habitat management strategies that will increase the structural diversity of the habitat, minimize habitat fragmentation and commercial infrastructure, and minimize the loss, alteration and/or degradation of the habitat and adjacent lands when working on preserved farmlands, state-owned agricultural lands, forests, parks and wildlife management areas, and any conserved lands purchased with the assistance of Green Acres and Federal Land & Water Conservation Fund monies.
- 100.4.0.24 Develop policies to provide financial support for the New Jersey Invasive Species Strike Team.
- 100.4.0.25 Develop policies that require permit applicants and/or review agencies to assess the cumulative and synergistic effects of a proposed project (i.e., "secondary effects"), both over time and over a larger spatial scale than the site itself.

Eastern Box Turtle

Focal species that comprise this Conservation Target:

Eastern Box Turtle

Threats and Action Drivers associated with this Conservation Target:

1 Residential and Commercial Development

1.1 Housing and Urban Areas

1.1.1 Land conversion from natural habitat to urban and other residential areas (large and small scale) (Avg. Score: 2.00)

NJ Specific Threats: 1.1.1.1 Fragments terrestrial and aquatic habitats making the area unsuitable for area-sensitive species and inhibit dispersal of animals, reducing gene flow.
1.1.1.2 Loss, alteration and/or degradation of habitat.
1.1.1.3 Lot layout, design and/or landscaping may create conditions that increase wildlife-human conflict.
1.1.1.4 Increased risk of vehicle strikes/mortality to terrestrial-bound and some bird species.
1.1.1.6 Impervious surfaces can cause an increased risk of floods, flash floods and storm damage that degrade terrestrial and aquatic habitats.

1.2 Commercial and Industrial Areas

1.2.1 Land conversion from natural habitat to commercial or industrial areas (large and small scale) (Avg. Score: 2.00)

NJ Specific Threats: 1.2.1.1 Fragments terrestrial and aquatic habitats making the area unsuitable for area-sensitive species and inhibit dispersal of animals, reducing gene flow.
1.2.1.2 Loss, alteration and/or degradation of habitat.
1.2.1.3 Lot layout, design and/or landscaping may create conditions that increase wildlife-human conflict.
1.2.1.4 Increased risk of vehicle strikes/mortality to terrestrial-bound and some bird species.
1.2.1.6 Impervious surfaces can cause an increased risk of floods, flash floods and storm damage that degrade terrestrial and aquatic habitats.

1.3 Tourism and Recreational Areas

1.3.1 Land conversion from natural habitat to recreation or tourism areas (large and small scale) (Avg. Score: 2.00)

NJ Specific Threats: 1.3.1.1 Fragments terrestrial and aquatic habitats making the area unsuitable for area-sensitive species and inhibit dispersal of animals, reducing gene flow.
1.3.1.2 Loss, alteration and/or degradation of habitat.
1.3.1.3 Lot layout, design and/or landscaping may create conditions that increase wildlife-human conflict.
1.3.1.5 Impervious surfaces can cause an increased risk of floods, flash floods and storm damage that degrade terrestrial and aquatic habitats.

2 Agriculture and Aquaculture

2.1 Annual and Perennial Crops (non-timber)

2.1.1 Shifting Agriculture (Avg. Score: 2.00)

NJ Specific Threats: 2.1.1.1 Conversion of low-intensity agriculture to intensive agriculture (e.g., tree nursery, row crop) degrades habitat, especially for early-successional species.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Eastern Box Turtle

- 2.1.1.5 Lack of competitive market prices to maintain native grasslands causes conversion to other crops that have more monetary value but less value as wildlife habitat.

2.1.2 Small-holder Farming (Avg. Score: 1.00)

- NJ Specific Threats:** 2.1.2.1 Conversion of low-intensity agriculture to intensive agriculture (e.g., tree nursery, row crop) degrades habitat, especially for early-successional species.
- 2.1.2.2 Fragments terrestrial and aquatic habitats.
- 2.1.2.3 Agricultural practices (e.g., mechanized, row-crop agriculture) can render lands unsuitable for most wildlife due to soil degradation and erosion.
- 2.1.2.4 Agricultural practices (e.g., mechanized, row-crop agriculture) can cause direct mortality to wildlife when harvesting takes places.
- 2.1.2.5 Lack of competitive market prices to maintain native grasslands causes conversion to other crops that have more monetary value but less value as wildlife habitat.

2.1.3 Agro-industry (Avg. Score: 2.00)

- NJ Specific Threats:** 2.1.3.1 Conversion of low-intensity agriculture to intensive agriculture (e.g., tree nursery, row crop) degrades habitat, especially for early-successional species.
- 2.1.3.2 Fragments terrestrial and aquatic habitats.
- 2.1.3.3 Agricultural practices (e.g., mechanized, row-crop agriculture) can render lands unsuitable for most wildlife due to soil degradation and erosion.
- 2.1.3.6 Lack of competitive market prices to maintain native grasslands causes conversion to other crops that have more monetary value but less value as wildlife habitat.

2.2 Wood and Pulp Plantations

2.2.1 Small Holder (Avg. Score: 2.00)

- NJ Specific Threats:** 2.2.1.1 Conversion of native forests to plantations decreases the habitat quality for forest-dependent species.
- 2.2.1.2 Tree harvesting can cause direct mortality to wildlife, especially if done during peak activity periods or vulnerable life stages (e.g., denning, nesting, gestation/birthing, basking, roosting, pre-volancy, etc.).

2.2.2 Agro-industry Plantations (Avg. Score: 1.00)

- NJ Specific Threats:** 2.2.2.1 Conversion of native forests to plantations decreases the habitat quality for forest-dependent species.
- 2.2.2.2 Tree harvesting can cause direct mortality to wildlife, especially if done during peak activity periods or vulnerable life stages (e.g., denning, nesting, gestation/birthing, basking, roosting, pre-volancy, etc.).

2.3 Livestock Farming and Ranching

2.3.2 Small-holder Grazing (Avg. Score: 1.00)

- NJ Specific Threats:** 2.3.2.1 Inappropriately located, newly created horse/livestock farms may fragment forest habitats.
- 2.3.2.2 Overgrazing of pasturelands and/or hay-fields degrade suitability for wildlife.

2.3.3 Agro-industry Grazing (Avg. Score: 1.00)

- NJ Specific Threats:** 2.3.3.1 Inappropriately located, newly created horse/livestock farms may fragment forest habitats.
- 2.3.3.2 Overgrazing of pasturelands and/or hay-fields degrade suitability for wildlife.

3 Energy Production and Mining

3.1 Oil and Gas Facilities and Pipelines

3.1.1 Distribution processes of petroleum and other liquid hydrocarbons (Avg. Score: 2.00)

- NJ Specific Threats:** 3.1.1.1 Fragments terrestrial and aquatic habitats.
3.1.1.2 Loss, alteration and/or degradation of habitat.
3.1.1.3 Increased risk of oil spills.
3.1.1.5 Increased vehicular and ship traffic associated with construction and operations, and therefore an increased risk of wildlife mortality from strikes.

3.1.2 Natural gas distribution processes (Avg. Score: 2.00)

- NJ Specific Threats:** 3.1.2.1 Fragments terrestrial and aquatic habitats.
3.1.2.2 Loss, alteration and/or degradation of habitat.
3.1.2.3 Increased risk of gas leaks and explosions.
3.1.2.5 Increased vehicular and ship traffic associated with construction and operations, and therefore an increased risk of wildlife mortality from strikes.

3.2 Mining and Quarrying

3.2.2 Surface Mining - Rock Quarry (and sand quarries) (Avg. Score: 2.00)

- NJ Specific Threats:** 3.2.2.1 Fragments terrestrial and aquatic habitats.
3.2.2.2 Loss, alteration and/or degradation of terrestrial and aquatic habitats.
3.2.2.3 Increased risk of vehicle strikes/mortality to wildlife.

3.3 Renewable Energy

3.3.1 Wind Power (Avg. Score: 1.00)

- NJ Specific Threats:** 3.3.1.2 Fragments terrestrial habitats.
3.3.1.3 Loss, alteration and/or degradation of habitat.
3.3.1.4 Increased commercial infrastructure.

3.3.2 Solar Power (Avg. Score: 2.00)

- NJ Specific Threats:** 3.3.2.1 Fragments terrestrial habitats.
3.3.2.2 Loss, alteration and/or degradation of habitat.
3.3.2.3 Increased commercial infrastructure.

3.4 Conventional Power Plants

3.4.0 Conventional Power Plants (Avg. Score: 2.00)

- NJ Specific Threats:** 3.4.0.2 Loss, alteration and/or degradation of habitat due to new or the expansion of current facilities.

4 **Transportation and Service Corridors**

4.1 Roads and Railroads

4.1.1 Land conversion from natural habitat to roads and railroads (large and small scale) (Avg. Score: 3.00)

- NJ Specific Threats:** 4.1.1.1 Fragments terrestrial and aquatic habitats making the landscape unsuitable for area-sensitive species and inhibiting dispersal of non-volant animals, reducing gene flow.
4.1.1.2 Loss, alteration and/or degradation of habitat associated with road and railroad construction and maintenance, and degradation of adjacent habitats.
4.1.1.4 Re-establishment of abandoned railroad lines may increase the risk of direct mortality on wildlife.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Eastern Box Turtle

- 4.1.1.5 Re-establishment of abandoned railroad lines may decrease turtles' abilities to disperse due to their difficulty traversing the railroad ties and tracks, leading to decreased genetic exchange.

- 4.1.2 Movement of cars and other vehicles on roads and railroads (large and small scale) (Avg. Score: 3.00)

NJ Specific Threats: 4.1.2.1 Increased vehicle traffic increases the risk of wildlife mortality from strikes.

4.2 Utility and Service Lines

- 4.2.1 Land conversion from natural habitat to utility and other service lines (large and small scale) or communication towers and associated access roads (Avg. Score: 2.00)

NJ Specific Threats: 4.2.1.1 Fragments terrestrial and aquatic habitats making the landscape unsuitable for area-sensitive species, inhibiting dispersal of non-volant animals, reducing gene flow, and creating barriers to fish when service line-associated roads cross streams (e.g., bridges, culverts, fords, etc.).

- 4.2.1.2 Loss, alteration and/or degradation of habitat associated with rights-of-way construction and maintenance, and degradation of adjacent habitats.

- 4.2.2 Management of rights-of-way or communication tower facilities and/or their associated access roads (Avg. Score: 2.00)

NJ Specific Threats: 4.2.2.1 Improper or poorly scheduled vegetation management can cause direct mortality to and may reduce productivity of wildlife.

5 Biological Resource Use

5.1 Hunting and Collecting Terrestrial Animals

- 5.1.1 Intentional Use (Avg. Score: 3.00)

NJ Specific Threats: 5.1.1.1 Illegal collection of wildlife can have detrimental impacts on populations.

- 5.1.2 Unintentional effects (Avg. Score: 1.00)

NJ Specific Threats: 5.1.2.2 Disruption of normal wildlife behavior.

5.2 Gathering Terrestrial Plants

- 5.2.3 Control (Avg. Score: 1.00)

NJ Specific Threats: 5.2.3.2 Clearing of scrub-shrub vegetation [and snags] diminishes cover and nesting habitat.

5.3 Logging and Wood Harvesting

- 5.3.1 Intentional Use (subsistence/small scale) (Avg. Score: 1.00)

NJ Specific Threats: 5.3.1.1 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN may fragment their terrestrial habitats.

- 5.3.1.2 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN may cause the loss, alteration and/or degradation of wildlife habitat.

- 5.3.1.3 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN and unsustainable forestry practices may increase soil erosion, impacting SGCN habitats.

- 5.3.1.4 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN and unsustainable forestry practices may increase the risk of invasive species establishment, impacting SGCN habitats.

- 5.3.1.5 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN and unsustainable forestry practices may decrease structural diversity and biomass leading to reduced biodiversity and ecological integrity.

- 5.3.2 Intentional Use (large scale) (Avg. Score: 2.00)

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Eastern Box Turtle

- NJ Specific Threats:** 5.3.2.1 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN may fragment their terrestrial habitats.
- 5.3.2.2 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN may cause the loss, alteration and/or degradation of wildlife habitat.
- 5.3.2.3 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN and unsustainable forestry practices may increase soil erosion, impacting SGCN habitats.
- 5.3.2.4 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN and unsustainable forestry practices may increase the risk of invasive species establishment, impacting SGCN habitats.
- 5.3.2.5 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN and unsustainable forestry practices may decrease structural diversity and biomass leading to reduced biodiversity and ecological integrity.

5.3.3 Unintentional effects (subsistence/small scale) (Avg. Score: 1.00)

- NJ Specific Threats:** 5.3.3.1 Direct mortality of wildlife, direct loss of suitable habitats (roost, foraging, shelter, etc.), and can disrupt sensitive species, decreasing the likelihood of success and/or reproduction.

5.3.4 Unintentional effects (large scale) (Avg. Score: 2.00)

- NJ Specific Threats:** 5.3.4.1 Direct mortality of wildlife, direct loss of suitable habitats (roost, foraging, shelter, etc.), and can disrupt sensitive species, decreasing the likelihood of success and/or reproduction.
- 5.3.4.2 Extensive infrastructure and larger equipment requirements present a potential risk of direct injury/mortality to wildlife.
- 5.3.4.5 Lack of appropriate, sustainable forest management can lead to a decrease in forest habitat diversity, degraded habitat for many forest species, the loss of habitat for early-successional species, and/or the loss of unique habitats for species that need canopy breaks and multi-aged tree composition to fulfill various life history requirements.

6 Human Intrusions and Disturbance

6.1 Recreational Activities

6.1.1 Off-road vehicles (motorized and non-motorized) (Avg. Score: 2.00)

- NJ Specific Threats:** 6.1.1.1 Inappropriate use of off-road vehicles creates new roads/trails which fragments habitat.
- 6.1.1.2 Inappropriate use of off-road vehicles can degrade terrestrial and aquatic habitat and reduce the suitability of adjacent habitats for wildlife.
- 6.1.1.3 Increased risk of harassment that results in a change in wildlife behavior and/or direct mortality from vehicle strikes.
- 6.1.1.6 Off-road vehicles can be a mechanism of transference of wildlife diseases and invasive plant species if gear and apparel are not properly sanitized between sites.

6.1.5 Wildlife observation and photography (Avg. Score: 1.00)

- NJ Specific Threats:** 6.1.5.1 Improperly conducted recreational activities may disrupt normal wildlife behaviors which can result in reduced reproductive success or survival, abandonment of critical sites, etc.
- 6.1.5.2 Participants may introduce wildlife diseases and invasive plant species when gear and apparel is not properly sanitized between sites.

6.2 Military Exercises

6.2.1 Military exercises (Avg. Score: 2.00)

- NJ Specific Threats:** 6.2.1.1 Military testing and training exercises may inflict disturbance and potential physical harm to wildlife.

Eastern Box Turtle

- 6.2.1.3 Lack of opportunity for non-federal wildlife managers to influence activities on military bases may result in detrimental impacts to SGCN and/or missed opportunities to engage in projects that benefit SGCN.

6.3 Work and Other Activities

6.3.1 Unauthorized research projects at significant habitats (Avg. Score: 2.00)

NJ Specific Threats: 6.3.1.1 Participants may introduce wildlife diseases and invasive plant species when gear and apparel is not properly sanitized between sites.

6.3.1.2 Accidental trampling of nests, eggs/egg masses, and unseen individuals may impact reproductive success or cause direct mortality to SGCN.

6.3.2 Authorized research projects at significant habitats (Avg. Score: 2.00)

NJ Specific Threats: 6.3.2.2 Participants may introduce wildlife diseases and invasive plant species when gear and apparel is not properly sanitized between sites.

6.3.2.3 Accidental trampling of nests, eggs/egg masses, and unseen individuals may impact reproductive success or cause direct mortality to SGCN.

6.3.3 Other "work" unrelated to research (Avg. Score: 1.00)

NJ Specific Threats: 6.3.3.1 Construction projects may disrupt normal wildlife behavior which can result in reduced reproductive success or survival, abandonment of critical sites, etc. (e.g., bridge-nesting birds).

6.3.3.4 Workers may introduce wildlife diseases and invasive plant species when gear and apparel is not properly sanitized between sites.

7 Natural Systems Modifications

7.1 Fire and Fire Suppression

7.1.1 Increase in Fire Frequency/Intensity (Avg. Score: 2.00)

NJ Specific Threats: 7.1.1.1 Increase in frequency and intensity of wild fires as a result of droughts and heat waves drying out vegetation and litter.

7.1.1.2 Increase in frequency of wild fires as a result of illegal activities.

7.1.1.3 Unnatural fire regimes occurring as a result of military exercises.

7.1.1.4 Lack of diversity in age structure and composition of vegetation due to expansive, frequent fires.

7.1.2 Suppression of Fire Frequency/Intensity (Avg. Score: 2.00)

NJ Specific Threats: 7.1.2.1 Shift in vegetative communities as a result of suppression of natural fires.

7.1.2.2 Lack of diversity in age structure and composition of vegetation due to the suppression of fire.

7.2 Dams and Water Management/Use

7.2.12 Culverts (Avg. Score: 2.00)

NJ Specific Threats: 7.2.12.1 Improper design, placement, installation and maintenance of culverts and other stream crossing structures can impede or prevent the movements of terrestrial organisms and can restrict or limit stream flow, impeding the movement of aquatic organisms along riparian corridors.

7.2.13 Stream Burial (Avg. Score: 1.00)

NJ Specific Threats: 7.2.13.2 Eliminates in-stream habitat and water resources for wildlife.

7.3 Other Ecosystem Modifications

7.3.2 Inappropriate timing of mowing (Avg. Score: 3.00)

NJ Specific Threats: 7.3.2.1 Increased risk of direct mortality and/or reduced productivity of wildlife, as well as reduced use by migrating species.

Eastern Box Turtle

7.3.3 Removal of coarse woody debris (streams, forests, scrub-shrub habitats) (Avg. Score: 1.00)

NJ Specific Threats: 7.3.3.2 Decreases habitat and/or corridor suitability due to limited or absent shelter and foraging habitat.

7.3.3.3 Removal of dead trees (snags), large felled logs (i.e., those > 12" dbh), and other downed woody material diminishes nesting, roosting, and sheltering options for wildlife, and increases the ease at which deer can browse regenerating vegetation.

7.3.3.4 Decreases available basking, shelter, and foraging habitats.

7.3.4 Lack of natural disturbance patterns or ecosystem functions due to species loss (Avg. Score: 1.00)

NJ Specific Threats: 7.3.4.5 The lack of forest disturbance minimizes the diversity of herbaceous vegetation and other shrubs and trees that need a lot of sunlight to grow.

7.3.5 Poor habitat management (Avg. Score: 1.00)

NJ Specific Threats: 7.3.5.1 Improper or poorly scheduled maintenance of man-made corridors (e.g., roadsides and medians) can cause direct mortality to and may reduce productivity of wildlife.

7.3.5.2 Shifting from natural vegetation to lawns can cause increased temperatures of local aquatic systems making them unsuitable (or less suitable) for aquatic species' reproduction and survival.

7.3.5.3 Vegetation clearing removes terrestrial and riparian corridors for animal movement, shelter, and resting areas.

7.3.5.5 Habitat management that alters or removes vegetation without implementing long-term management increases the risk of invasive and exotic plants establishing themselves, outcompeting native vegetation.

7.3.5.6 Habitat management, including that which occurs on public and private lands, that does not consider timing and species' behaviors can result in the direct mortality and/or alteration or loss of habitat.

7.3.5.7 Improperly planned habitat management and/or mitigation efforts along roadsides and within the medians can attract wildlife and increase the risk of vehicle strikes.

7.3.5.12 Lack of diversity in age structure and composition of vegetation due to lack of natural disturbances and/or vegetation management.

7.3.5.14 Intentional felling and removal of dead standing trees or snags eliminates resting, nesting or feeding habitat, and precludes the snags eventual contribution to coarse woody debris and forest floor structure and habitat.

7.3.5.15 Lack of funding, incentives, or technical guidance resources to proactively manage land to benefit SGCN wildlife.

8 Invasive and Other Problematic Species, Genes and Diseases

8.1 Invasive Non-native/ Alien Species/ Diseases

8.1.1 Unspecified Species (Avg. Score: 2.00)

NJ Specific Threats: 8.1.1.1 Displace or outcompete native species for resources.

8.1.1.2 Alters, degrades and/or reduces the structural diversity of the natural composition of the landscape, including aquatic systems.

8.1.1.3 Invasive, non-native insects can damage native vegetation at a large scale, leading to die-offs, altering the ecological community.

8.1.1.4 Invasive, non-native animals increase the risk of predation on native animals and/or herbivory on native vegetation.

8.1.1.5 Invasive, non-native animals and plants increase the risk of introduction and transference of diseases

8.1.1.6 Invasive, non-native plants may create physical barriers for some species.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Eastern Box Turtle

8.1.2 Invasive non-native aquatic animals (Avg. Score: 1.00)

NJ Specific Threats: 8.1.2.2 Displace or out-compete native species for resources (food, shelter), alter the composition of the native landscapes/aquatic systems, diminishing habitat suitability and reducing ecological integrity of natural communities, and may introduce disease into a population.

8.1.3 Invasive non-native aquatic plants (Avg. Score: 1.00)

NJ Specific Threats: 8.1.3.1 Displace or out-compete native species for resources (food, light, shelter), alter the composition of the native landscapes/aquatic systems, diminish habitat suitability and reduce ecological integrity of natural communities, and may introduce disease into a population.

8.1.4 Invasive non-native terrestrial/wetland animals (Avg. Score: 1.00)

NJ Specific Threats: 8.1.4.1 Displace or out-compete native species for resources (food, shelter), alter the composition of the native landscapes/aquatic systems, diminish habitat suitability and reduce ecological integrity of natural communities, and may introduce disease into a population.

8.1.4.2 Free-roaming and feral domestic animals such as cats and dogs causes direct mortality of wildlife and disturbance to wildlife breeding and resting areas.

8.1.5 Invasive non-native terrestrial/wetland plants (Avg. Score: 1.00)

NJ Specific Threats: 8.1.5.1 Displace or out-compete native species for resources (food, light, shelter), alter the composition of the native landscapes/aquatic systems, diminish habitat suitability and reduce ecological integrity of natural communities, and may introduce disease into a population.

8.1.6 Invasive non-native fungal/bacterial diseases (Avg. Score: 2.00)

NJ Specific Threats: 8.1.6.1 The introduction of non-native fungal and bacterial diseases threatens native populations and ecosystems.

8.2 Problematic Native Species/Diseases

8.2.1 Unspecified Species (Avg. Score: 1.00)

NJ Specific Threats: 8.2.1.1 Overabundant native insects can damage native vegetation at a large scale, leading to die-offs, altering the ecological community.

8.2.1.2 Invasive pathogens and insects may increase in range and abundance as limiting factors (such as temperature) are altered as a result of climate change.

8.2.1.3 Invasive, native species can out-compete non-invasive species for resources (food, light, shelter), leading to the demise of some species populations.

8.2.1.4 Human-subsidized native species can become overabundant, increasing predation on other native wildlife and/or altering the ecological community.

8.2.2 Named Species (Avg. Score: 2.00)

NJ Specific Threats: 8.2.2.2 Human-subsidized native species can become overabundant, increasing predation on other native wildlife and/or altering the ecological community.

8.4 Problematic Species/Diseases of Unknown Origin

8.4.1 Unspecified Species (Avg. Score: 1.00)

NJ Specific Threats: 8.4.1.1 Non-native or poorly understood diseases and parasites could potentially impact native animals.

8.4.2 Named Species (Avg. Score: 1.00)

NJ Specific Threats: 8.4.2.2 Diseases of unknown origin, such as snake fungal disease and Ranavirus, can cause significant mortality among native animal populations.

8.5 Viral/Prion-induced Diseases

8.5.1 Unspecified Species (Disease) (Avg. Score: 1.00)

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Eastern Box Turtle

NJ Specific Threats: 8.5.1.1 There is a large knowledge gap regarding the existence of, or potential for, other diseases impacting native wildlife.

8.5.2 Named Species (Disease) (Avg. Score: 2.00)

NJ Specific Threats: 8.5.2.1 Diseases such as West Nile Virus, arenavirus, sudden oak death, Avian Influenza, and snake fungal disease cause morbidity or mortality to native populations.

8.6 Diseases of Unknown Cause

8.6.0 Unknown Diseases (Avg. Score: 1.00)

NJ Specific Threats: 8.6.0.1 Diseases yet to be identified by pathologists and virologists cause decreased fitness or mortality to native populations.

9 Pollution

9.2 Industrial and Military Effluents

9.2.1 Oil Spills (Avg. Score: 1.00)

NJ Specific Threats: 9.2.1.1 Oil spills render resting, breeding and foraging habitats temporarily unavailable to wildlife, altering normal wildlife behavior.

9.2.1.2 Oil spills have long term effects on habitats and damage ecological processes that can cause local wildlife population declines and impaired foraging or reproduction.

9.2.1.3 Oil spills cause external oiling of wildlife and ingestion of oil, both of which can injure or kill wildlife.

9.2.3 Other (Avg. Score: 1.00)

NJ Specific Threats: 9.2.3.1 Point and nonpoint source pollution such as polychlorinated biphenyls (PCBs), pesticides, heavy metals, and endocrine disrupting compounds (EDC's) into freshwater and marine systems pose threats to wildlife through direct contact and/or ingestion, and to aquatic species and their predators through bioaccumulation, impacting the reproductive success and neurological function of many avian and fish species.

9.2.3.2 Chemical spills have long term effects on habitats and damage ecological processes that can cause local wildlife population declines and impaired foraging or reproduction.

9.2.3.3 Chemical spills may render resting, breeding and foraging habitats temporarily unavailable to wildlife, altering normal wildlife behavior.

9.2.4 Other: Hydrofracturing (Avg. Score: 1.00)

NJ Specific Threats: 9.2.4.1 Contaminants from hydrofracturing degrade water quality in aquatic systems, and can injure or kill the aquatic and semi-aquatic species that rely upon them.

9.2.4.2 Uncontrolled effluents escaping from hydrofracturing facilities can cause injury to wildlife and alter normal behaviors.

9.2.5 Other: Industrial toxic settling ponds (Avg. Score: 1.00)

NJ Specific Threats: 9.2.5.1 Surficial or open industrial effluent ponds can cause injury or death to wildlife that become exposed through ingestion or submersion.

9.3 Agricultural and Forestry Effluents

9.3.1 Nutrient Loads (Avg. Score: 1.00)

NJ Specific Threats: 9.3.1.1 Chemical fertilizers and nutrient run-off changes the pH in streams, ponds and wetlands and causes eutrophication in inland waters and estuaries, which can make habitat unsuitable for specialist species and increase the risk of invasive and generalist species.

9.3.1.2 Animal waste degrades terrestrial and aquatic habitats, especially streams, ponds and wetlands, resulting in eutrophication, which disrupts oxygen and nutrient balances, and causes injury and mortality to aquatic organisms.

Eastern Box Turtle

9.3.2 Soil Erosion and Sedimentation (Avg. Score: 1.00)

NJ Specific Threats: 9.3.2.1 Soil erosion, sedimentation and destruction of streambanks and riparian buffers degrade waters making them unsuitable for riparian-dependent wildlife.

9.3.3 Herbicides and Pesticides (Avg. Score: 1.00)

NJ Specific Threats: 9.3.3.1 Pesticides degrade terrestrial and aquatic habitats, especially streams, ponds and wetlands. Aquatic wildlife are particularly sensitive to these contaminants, which can cause developmental and behavioral abnormalities and reproductive failure. Some contaminants may bioaccumulate in predatory fish and birds and disrupt reproduction.

9.3.3.2 Use of rodenticides can cause secondary actions of injury and death to animals in the course of scavenging.

9.3.3.3 Use of pesticides can directly harm non-target species through direct contact and/or by reducing and/or contaminating their food supply.

9.3.5 Control of insect pests and plants leading to mortality of non-target species not associated with agriculture (Avg. Score: 1.00)

NJ Specific Threats: 9.3.5.4 Improper use of current insecticides, such as those containing esfenvalerate, prallethrin, or piperonyl butoxide, or past use of pesticides containing chlordane still present in the soils, are toxic to various wildlife species, and can cause injury, mortality, or other effects that impair population viability.

9.3.5.5 Use of pesticides and herbicides can minimize the abundance of food sources for native wildlife populations.

9.4 Garbage and Solid Waste

9.4.1 Direct hazards to wildlife (Avg. Score: 1.00)

NJ Specific Threats: 9.4.1.2 Garbage and solid waste destroys natural habitats and obstructs wildlife movements.

9.5 Air-Bourne Pollutants

9.5.1 Acid Rain (Avg. Score: 1.00)

NJ Specific Threats: 9.5.1.2 Leaches calcium from the soils which in turn reduces the availability of prey, particularly calcium-rich prey such as snails.

9.5.4 Other (Avg. Score: 1.00)

NJ Specific Threats: 9.5.4.1 Dust and/or airborne sedimentation from construction sites, agricultural operations or related earth disturbances can introduce mineral or organic sediments into adjacent wildlife habitats, degrading their quality and suitability for wildlife short-term and/or long-term.

9.5.6 Herbicides and Pesticides (Avg. Score: 2.00)

NJ Specific Threats: 9.5.6.1 May result in injury or direct mortality of non-target species.

11 Climate Change and Severe Weather

11.1 Habitat Shifting or Alteration

11.1.0 Macro- and Micro-Climate Alterations (Avg. Score: 1.00)

NJ Specific Threats: 11.1.0.1 Alters native terrestrial and aquatic habitats at the macro- and micro-climate levels that can affect suitability for wildlife, in particular specialist species.

11.2 Droughts

11.2.1 Droughts (Avg. Score: 2.00)

NJ Specific Threats: 11.2.1.1 Contribute to hardened soils, decreasing water recharge during rains and increasing the likelihood of flash floods during storms.

11.2.1.2 Lead to lower groundwater levels and therefore, less available water for people and habitats.

Eastern Box Turtle

11.2.1.3 Loss, alteration and/or degradation of terrestrial and aquatic habitats.

11.3 Temperature Extremes

11.3.1 Temperature extremes (Avg. Score: 2.00)

NJ Specific Threats: 11.3.1.1 Increasing temperatures may cause habitat loss and degradation by desiccating and/or raising the temperatures of small wetlands and streams leading to the loss of freshwater mussels and other aquatic species and species reliant upon these habitats.

11.3.1.2 Increased temperatures can negatively impact wetland, riverine, lacustrine and vernal pool-associated or -dependent wildlife by reducing flows, increasing water temperatures, lowering water levels and causing premature drying of vernal habitats.

11.3.1.4 Extremely low temperatures and/or extensive periods of unseasonably low temperatures during critical life history stages (e.g., hibernation, gestation/nesting) can alter animals' behaviors and decrease survivorship.

11.4 Storms and Flooding

11.4.1 Storms and flooding (Avg. Score: 1.00)

NJ Specific Threats: 11.4.1.1 Extreme storms and flooding events threaten aquatic and marine wildlife through habitat degradation and alteration, including alterations to off-shore or back-bay benthic conditions, damage to submerged aquatic vegetation (SAV), increased turbidity, altered water chemistry, and potentially displacement of aquatic and marine wildlife.

11.4.2 Increased rainfall (Avg. Score: 1.00)

NJ Specific Threats: 11.4.2.1 Extreme rain events threaten aquatic wildlife through habitat degradation and alteration, including alterations to benthic conditions, damage to submerged aquatic vegetation (SAV), increased turbidity, altered water chemistry, and potentially displacement of aquatic wildlife.

11.4.2.2 Extreme rain events can damage wildlife nesting and resting habitats, including impacts to avian eggs and chick and small mammal survivorship.

11.6 Phenology Shifting or Alteration

11.6.2 Phenology shifts related to predator-prey ecology (Avg. Score: 1.00)

NJ Specific Threats: 11.6.2.1 Alters inter-specific relationships (e.g., competition, parasitism, predation) of wildlife, ultimately leads to detrimental impacts on the ecological system.

11.6.2.2 Shifts timing of species migration, breeding and hibernation, and available food resources, causes redistribution of species, or mortality for species that are unable to relocate due to their already isolated habitat or limited mobility.

11.6.3 Phenology shifts related to species redistribution (Avg. Score: 1.00)

NJ Specific Threats: 11.6.3.1 Shifts in timing of species migration, breeding and hibernation, and available food resources, as a result of wildlife range shifts driven by climate change.

11.6.3.2 Shifts in nesting times or egg incubation durations can limit nest success and longterm populations.

12 Resource Management Needs

12.1 Resource information collection needs

12.1.1 Lack of initial baseline inventory (Avg. Score: 2.00)

NJ Specific Threats: 12.1.1.1 Lack of information regarding the distribution, connectivity and quality of SGCN habitats throughout the State, and where habitat enhancement/restoration will benefit SGCN and other wildlife.

12.1.1.2 Lack of information regarding the population dynamics and trends, habitat requirements and dispersal distances of the various age classes, and survivorship of SGCN throughout the State.

12.1.2 Lack of up-to-date existing information (Avg. Score: 2.00)

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Eastern Box Turtle

NJ Specific Threats: 12.1.2.1 Lack of (routine, regular, ongoing) surveys/assessments that provide up-to-date information regarding population trends or health, and/or status of fish, wildlife and/or their habitats.

12.1.3 Need to answer research question (Avg. Score: 2.00)

NJ Specific Threats: 12.1.3.1 There are significant knowledge gaps regarding distribution, dispersal, diseases, population trends, etc. of SGCN.

12.1.4 Need to develop new technique (Avg. Score: 2.00)

NJ Specific Threats: 12.1.4.1 Improve and evaluate survey methods for SGCN and their habitats; alter as needed.

12.3 Regulatory Reform

12.3.0 State Regulatory Reforms (Avg. Score: 1.00)

NJ Specific Threats: 12.3.0.1 Regulatory habitat protections within state land use regulations are spatially limited to specific geographic areas (e.g., Pinelands, Coastal Area) or geographic features (e.g., wetlands, streams) and so fail to protect critical habitats that exist outside of these regulated areas.

12.3.0.3 Lack of a licensing program and standards for NJ Nuisance Wildlife Control Operators (NWCs) leads to inadequate controls over handling of wildlife and lack of reporting of non-game/SGCN species (and all wildlife) encountered in nuisance situations.

12.3.0.7 Activities that threaten SGCN, their food sources, and/or habitats are often regulated separately and without consideration for the cumulative and synergistic effects over time or over a larger spatial scale. Therefore, regulations can fail to protect SGCN populations over time.

12.3.0.10 Land use regulatory processes pertaining to habitat creation, enhancement or restoration projects can be costly and/or burdensome, precluding or discouraging the development or implementation of conservation projects.

12.4 Internal Policy & Procedures Reform

12.4.0 State Policy and Procedure Reform (Avg. Score: 1.00)

NJ Specific Threats: 12.4.0.1 A species-by-species management focus as opposed to ecological systems and biodiversity generally has greater opportunity for unintended consequences for other species and may be less efficient in developing appropriate management actions.

12.4.0.2 Policies and procedures for lands management that lack consideration of the impacts of activity timing can result in unintended impacts to wildlife during vulnerable periods.

12.4.0.7 Land preservation contracts, easements, etc. that do not contain prescriptive language or flexibility allowing for habitat management can result in unsuitable habitat conditions and biodiversity declines for SGCN.

14 Education/ Outreach Needs

14.1 Education needs

14.1.1 Need for improved knowledge of fish and wildlife and their habitats (Avg. Score: 2.00)

NJ Specific Threats: 14.1.1.1 Lack of understanding of the importance of various SGCN habitats, their connectivity to similar habitats, and how planning decisions impact their quality and the wildlife that depend upon them.

14.1.1.2 Lack of general knowledge of SGCN life histories and vulnerabilities as they relate to land management practices.

14.1.1.3 Lack of understanding of the need to manage both natural and anthropogenic (e.g., yards, lawns, hayfields, etc.) habitats to minimize impacts or increase benefits to SGCN and their habitats.

14.2 Outreach needs

14.2.1 Need to improve specific understanding of agency/organization goals, objectives and ongoing wildlife conservation actions (Avg. Score: 2.00)

Eastern Box Turtle

NJ Specific Threats: 14.2.1.1 Need to develop greater understanding of and support for efforts implemented to enhance SGCN habitat and biodiversity through various forest management practices.

15 Administrative Needs

15.2 Organizational/program planning needs

15.2.3 Need for multi-state, regional and landscape scale planning (Avg. Score: 1.00)

NJ Specific Threats: 15.2.3.1 State governance and financial structures can sometimes inhibit conservation planning and implementation at the regional and landscape-scales that are often more effective at setting priorities and meeting species and habitat conservation goals and objectives.

Actions to address the Threats and Action Drivers associated with this Conservation Target:

1 Coordination and Administration

1.2 Incentives

1.2.1 Incentives

- 1.2.1.1 Enhance critical migratory stopover habitats for songbirds, raptors, shorebirds, bats and invertebrates through incentive programs with adjacent private landowners to increase the effective size of the habitat.
- 1.2.1.2 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to private and public landowners and land managers to increase the effective size of SGCN habitats by protecting/restoring adjacent habitats that contribute to the overall size of the "core" area and/or provide a natural buffer, enhancing the suitability of the core area for SGCN, and/or connect conserved SGCN habitats.
- 1.2.1.4 Secure and promote the protection, restoration, and/or development of old-growth forest stands with large trees, in particular those within large, contiguous forest tracts through incentive programs.
- 1.2.1.5 Secure and promote the protection/restoration of critical SGCN forested habitat and minimize forest edge to benefit interior forest and disturbance-sensitive SGCN through incentive programs.
- 1.2.1.6 Secure and promote the protection/restoration of riparian and floodplain habitats, inland wetland habitats (marsh, vernal pool, fen, emergent shrubland, forest), and other aquatic habitats (including open waters) and/or biologically appropriate buffers through incentive programs.
- 1.2.1.7 Secure and promote the protection/restoration of fish SGCN habitats by protecting lands adjacent to fish SGCN habitats and/or aquatic systems feeding into such habitats through incentive programs.
- 1.2.1.8 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to municipalities, land developers, and other land managers to retain and/or enhance native vegetation adjacent to aquatic habitats, and along riparian areas and wildlife movement corridors.
- 1.2.1.10 Coordinate across government agencies and non-government organizations to maximize the availability of and enrollment in existing landowner incentive programs (e.g., "farm bill," partners, etc.) to maintain and/or improve habitat.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Eastern Box Turtle

- 1.2.1.11 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to public and private landowners and managers, including but not limited to government and non-government agencies/organizations, energy, mining, and transportation and utility service companies/agencies, to minimize commercial infrastructure and impervious surfaces, and to improve wildlife habitats, limit fragmentation, reduce elements which would exacerbate mortality, and/or implement activities/restoration that would create new or improved corridor habitat and/or increase connectivity, and to increase structural habitat diversity through the implementation of a variety of vegetation management practices that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting), and to minimize (if not avoid) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
- 1.2.1.12 Create incentives (non-monetary and/or monetary) for land developers to redevelop abandoned areas (e.g., shopping centers, office complexes) to minimize the loss of natural habitats and reduce the extent of impervious surfaces as part of new construction to increase water recharge in those areas.
- 1.2.1.13 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to land developers to minimize the impacts of new residential and commercial developments on SGCN and their habitats.
- 1.2.1.18 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to public and private landowners and land managers to control and reduce the impacts of invasive, native and non-native species in order to increase structural habitat diversity.
- 1.2.1.19 Create incentives for federal, state and local agencies and approved consulting foresters that provide financial, logistical or planning assistance to farmers, woodland landowners, and private landowners to adopt and/or endorse consistent BMPs concerning controlled burns to maintain and/or improve wildlife habitat.
- 1.2.1.20 Coordinate across government agencies and non-government organizations to create or expand upon tax-based incentive programs available to private, agricultural, commercial, industrial or governmental landowners and land managers to include or provide for incentives for the maintenance and/or improvement to existing habitat via the endorsement of wildlife-related BMP's.
- 1.2.1.22 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to horse/livestock farm owners and managers to increase structural habitat diversity in and around the farms by managing vegetation for a variety of species, in particular, farms that have fragmented forests, and by implementing ecologically best practices (e.g., do not permit overgrazing, do not allow livestock to wade in waterbodies).
- 1.2.1.23 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to private and public landowners and land managers to provide cost shares and/or plan approvals for management based on management approaches and prescriptions.
- 1.2.1.24 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to public and private landowners, with habitat of suitable patch size to support breeding grassland-dependent species, to alter the timing of vegetation management to benefit grassland and pollinator species.
- 1.2.1.26 Develop a new funding source, targeting natural resource damages monies, mitigation monies or other available sources, to fund new or existing landowner incentive programs.

Eastern Box Turtle

- 1.2.1.28 Create incentives to implement dynamic forest disturbance patterns, using tools such as fire, flooding, and silviculture, to support the full life cycle requirements of forest and early successional wildlife species.

2 Direct Management of Natural Resources

2.2 Dam and barrier removal

2.2.1 Culvert work

- 2.2.1.1 Replace existing barriers to wildlife movement with and/or install appropriately-sized systems to accommodate wildlife dispersal.

2.3 Fire management

2.3.2 Fuel reduction

- 2.3.2.1 Prevent wildfires by reducing natural fuel (e.g., leaf litter).

2.3.3 Prescribed burning

- 2.3.3.1 Evaluate different management techniques of prescribed burns that might be used to mimic the historic role of fire and other natural disturbances in shaping an ecosystem.
 - 2.3.3.2 Conduct prescribed burning in Northern New Jersey forests to maintain and regenerate a mosaic of upland forest habitats.
 - 2.3.3.3 Conduct prescribed burning to improve wildlife habitat.

2.8 Invasive species control

2.8.0 Invasive species control strategies and implementation

- 2.8.0.4 Implement control/management strategies to reduce the impacts and/or limit the distribution of invasive, native and non-native species (wildlife and plants) that pose threats to native wildlife or communities. Encourage the implementation of biological and mechanical removal/control. When chemical control is used, encourage low-volume, targeted application using NJDEP-approved chemicals in accordance with the specific instructions for that chemical. Follow BMPs to maximize the effectiveness of the strategies while avoiding excessive harm to non-target species.
 - 2.8.0.5 Implement biologically safe and appropriate control/management strategies, and where appropriate, eradication strategies to reduce the impacts and/or limit the distribution of invasive and/or non-native plant species within or near aquatic systems using methods that will provide the most protection to the aquatic and riparian ecological system, and minimize disturbance to the soil and wildlife. Encourage the implementation of biological and mechanical removal/control. When chemical control is used, encourage low-volume, targeted application using NJDEP-approved chemicals in accordance with the specific instructions for that chemical.
 - 2.8.0.6 Implement long-term management of invasive and/or non-native plants to help maintain functioning ecological systems and biological diversity, and to enhance travel corridors. Encourage the implementation of biological and mechanical removal/control. When chemical control is used, encourage low-volume, targeted application using NJDEP-approved chemicals in accordance with the specific instructions for that chemical.

2.10 Planting/seeding

2.10.0 Planting/seeding strategies for terrestrial or aquatic habitat creation or restoration

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Eastern Box Turtle

- 2.10.0.1 Prevent or ameliorate near-term impacts of climate change throughout the State by developing, implementing and monitoring/evaluating habitat management strategies that will establish/improve habitat resilience (e.g., shorelines of the coast and Delaware Bay, forested habitats of the Pinelands and Skylands) that benefits wildlife inhabiting these areas, in particular within the coastal and Delaware Bay areas.
- 2.10.0.3 Restore and/or enhance habitats to benefit urban-associated SGCN.
- 2.10.0.4 Restore and/or enhance suitable travel corridors connecting conserved habitats for SGCN by restoring unsuitable (or less optimal) habitats.
- 2.10.0.5 Implement habitat restoration and/or enhancement activities that include the creation of vegetative buffers between sensitive habitats (e.g., aquatic systems) and human-inhabited areas (e.g., residences, parks, etc.) and that is conducted during appropriate timing to avoid sensitive periods (e.g., nesting, denning, roosting) while minimizing (if not avoiding) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity
- 2.10.0.6 Expand the acreages and enhance the effective size of SGCN habitats by restoring adjacent, less optimal or unsuitable, habitats.
- 2.10.0.7 Restore/reclaim and enhance degraded rare species habitats through strategic revegetation and management efforts for documented/target SGCN.
- 2.10.0.8 Protect significant natural and/or unique communities by implementing best management practices when conducting habitat restoration strategies.
- 2.10.0.9 Restore and/or enhance riparian and floodplain habitats, inland wetland habitats (marsh, vernal pool, fen, emergent shrubland, forest), and other aquatic habitats (including open waters) and/or biologically appropriate buffers to minimize degradation, alteration and/or changes in hydrology and subsequent disturbances to and behavioral changes of wildlife (e.g., restoring biologically appropriate buffers, revegetation or restoration efforts, etc.).
- 2.10.0.12 Create and/or maintain scrub-shrub habitats through revegetation efforts with little to no impact on forested, wetland and grassland habitats to maintain populations of shrub-dependent SGCN.
- 2.10.0.14 Implement best management practices (BMPs), protective strategies and guidelines for restoring and enhancing healthy, SGCN-associated habitats while minimizing (if not avoiding) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
- 2.10.0.15 Restore and/or enhance terrestrial and aquatic habitats proximate to but not adjacent to roads and other transportation corridors for terrestrial-bound SGCN species whose behavior (i.e., dispersal across roads) may be altered by doing so, and therefore decrease road mortality of such species (e.g., amphibians, snakes, turtles, small mammals).
- 2.10.0.21 Restore and/or enhance understory habitats that suppress invasive species and provide critical resources and enhance sheltering, foraging, and nesting cover for wildlife.
- 2.10.0.22 Restore and/or enhance terrestrial and aquatic habitats to promote the regeneration of native vegetation and enhance structural diversity to benefit SGCN (e.g., vegetative buffers of aquatic systems, allow coarse, woody debris to remain in terrestrial, aquatic and riparian habitats to provide shelter, riparian stabilization and necessary microclimates, plant native trees, shrubs and grasses, etc.).
- 2.10.0.23 Restore and/or enhance roosting habitats for migratory species (shorebirds, raptors, bats, songbirds and invertebrates) in appropriate areas along documented migratory corridors around the State.

Eastern Box Turtle

- 2.10.0.24 Use NJ's CHANJ mapping and guidance to establish vegetation and enhance or create corridors between fragmented habitats with similar vegetation, slope, soils, structure, etc. to ensure vegetative integrity is maintained to allow wildlife to safely disperse, and corridors are buffered with natural habitats to minimize disturbance to wildlife within the corridors.
- 2.10.0.25 Enhance SGCN fish habitats through aquatic and riparian vegetation restoration.

2.11 Vegetation management

2.11.0 Vegetation management strategies for terrestrial or aquatic habitat creation or restoration

- 2.11.0.1 Conduct vegetation management in native terrestrial and aquatic habitats to provide suitable and appropriately sized areas to improve ecological diversity.
- 2.11.0.2 Conduct vegetation management in native terrestrial and aquatic habitats to provide suitable and appropriately sized areas for target SGCN and/or species groups; management should complement rare species needs in a targeted area.
- 2.11.0.3 Create suitable travel corridors connecting and increasing the effective size of conserved habitats for SGCN by restoring unsuitable (or less optimal) habitats through vegetation management.
- 2.11.0.4 Implement vegetation management strategies that consider appropriate timing to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife, particularly SGCN.
- 2.11.0.5 Expand the acreages and enhance the effective size of SGCN habitats by restoring adjacent, less optimal or unsuitable, habitats through vegetation management.
- 2.11.0.6 Reclaim degraded rare species habitats by conducting vegetation management needed to restore habitat value for the documented/target SGCN.
- 2.11.0.7 Protect significant natural and/or unique communities by implementing best management practices through vegetation management.
- 2.11.0.8 Maintain, enhance and/or restore biologically appropriate buffers for SGCN-inhabited/used freshwater wetlands through vegetation management.
- 2.11.0.13 Implement best management practices (BMPs), protective strategies, and guidelines for vegetation management to maintain and enhance healthy, SGCN-associated habitats while minimizing (if not avoiding) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
- 2.11.0.14 Conduct vegetation management adjacent to roads for SGCN species whose behavior (i.e., dispersal across roads) may be altered by doing so, and therefore decrease road mortality of such species (e.g., amphibians, snakes, turtles, small mammals).
- 2.11.0.15 Implement vegetation management to benefit urban-associated SGCN.
- 2.11.0.16 Prevent or ameliorate near-term impacts of climate change throughout the State by developing, implementing and monitoring/evaluating habitat management strategies that will establish/improve habitat resilience (e.g., shorelines of the coast and Delaware Bay, forested habitats of the Pinelands and Skylands) that benefits wildlife inhabiting these areas, in particular within the coastal and Delaware Bay areas.
- 2.11.0.18 Implement forest management/silvicultural strategies that promote the development of new old-growth forests and/or minimize the loss of old-growth forest stands with large trees and within large, contiguous tracts.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Eastern Box Turtle

- 2.11.0.20 Create and/or maintain scrub-shrub habitats through management efforts with little to no impact on forested, wetland and grassland habitats to maintain populations of shrub-dependent SGCN.
- 2.11.0.21 Minimize the degradation, alteration and/or changes in hydrology of wetlands, riparian and floodplain areas, and aquatic habitats (including open waters) and subsequent disturbances to and behavioral changes of wildlife by maintaining or enhancing these areas and biologically appropriate buffers through habitat management and/or revegetation or restoration efforts.
- 2.11.0.23 Implement appropriate habitat management actions in areas where natural disturbances, such as wildfire, have been precluded.
- 2.11.0.24 Conduct vegetation management adjacent to aquatic habitats following BMPs to enhance habitat for target shrub- or young forest-dependent SGCN while minimizing negative impacts to other SGCN.
- 2.11.0.25 Conduct vegetation management along access roads following BMPs to enhance habitat for target shrub- or young forest-dependent SGCN while minimizing negative impacts to other SGCN.
- 2.11.0.26 Conduct vegetation management along roadsides and medians, avoiding peak activity periods for wildlife, that enhances wildlife dispersal naturally and safely across roads and similar barriers to/between terrestrial and/or aquatic habitats.
- 2.11.0.27 Conduct vegetation management for target shrub- or young forest-dependent SGCN following BMPs to minimize the risk of the establishment of invasive and non-native plants.
- 2.11.0.28 Conduct vegetation management in agricultural areas following BMPs to enhance habitat for target shrub- or young forest-dependent SGCN while minimizing negative impacts to other SGCN.
- 2.11.0.29 Conduct vegetation management on transportation and service corridors (i.e., rights-of-way) following BMPs to enhance habitat for target shrub- or young forest-dependent SGCN while minimizing negative impacts to other SGCN.
- 2.11.0.31 In areas where vegetative communities are shifting due to fire suppression and controlled burns are not feasible, manage vegetation to improve wildlife habitat.
- 2.11.0.32 Increase structural habitat diversity around and when feasible, within agricultural landscapes by managing vegetation for a variety of species, in particular, those farms that have removed scrub-shrub habitat and/or fragmented forests, and by implementing ecologically best practices (e.g., no-till farming, maintaining hedgerows, buffer set-asides, etc.).
- 2.11.0.33 Increase structural habitat diversity by implementing long-term vegetation management to minimize the potential for the establishment of invasive and/or non-native plants that may outcompete native vegetation.
- 2.11.0.34 Increase structural habitat diversity by managing residential, commercial and recreational areas' landscapes for a variety of species. For example, integrate short and tall grasses, specific host plants, brush piles, water sources/wetlands, shrubby areas, nesting areas and no-mow set-asides.
- 2.11.0.35 Increase structural habitat diversity by managing vegetation adjacent to aquatic habitats in a manner that provides a buffer from runoff and erosion and a microclimate to stabilize seasonal temperatures to benefit a variety of aquatic and semi-aquatic species.
- 2.11.0.36 Increase structural habitat diversity by managing vegetation for a variety of species and considering their life history requirements (e.g., travel corridors, shelter, resting and breeding areas) to minimize the risk of harm.

Eastern Box Turtle

- 2.11.0.37 Increase structural habitat diversity by minimizing the removal of coarse, woody debris in terrestrial, aquatic and riparian habitats which benefits wildlife.
- 2.11.0.38 Increase structural habitat diversity in and around horse/livestock farms by managing vegetation for a variety of species, in particular, in and around farms that have fragmented forests, and by implementing ecologically best practices (e.g., do not permit overgrazing, do not allow livestock to wade in waterbodies).
- 2.11.0.39 Increase structural habitat diversity in and around solar farms by managing vegetation for a variety of species and that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife. For example, integrate short and tall grasses, specific host plants, brush piles, water sources/wetlands, shrubby areas, nesting areas and no-mow set-asides.
- 2.11.0.40 Increase structural habitat diversity surrounding areas used for energy, mining, and transportation and service corridors by managing vegetation for a variety of species and that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife. For example, integrate short and tall grasses, specific host plants, brush piles, water sources/wetlands, shrubby areas, nesting areas and no-mow set-asides, and avoid managing habitat during the breeding seasons for ground-nesting birds, reptiles, amphibians and small mammals.
- 2.11.0.41 Increase structural habitat diversity through the implementation of a variety of vegetation management practices such as prescribed burns (either increasing or decreasing their frequency depending on the site and objective), plantings, etc. that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife.
- 2.11.0.42 Increase structural habitat diversity within wind farms for terrestrial bound and low-flying species and around wind farms for other wildlife by managing vegetation for a variety of species and that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife.
- 2.11.0.43 Manage forests to increase variation in age structure and composition using BMPs that promote and maintain functioning ecological forest-based systems and biological diversity.
- 2.11.0.45 Regularly and/or rotationally create young forest habitat in targeted areas to maintain and regenerate a mosaic of upland forest habitats that will benefit shrub- and young forest-dependent species.

2.13 Wildlife damage management

2.13.0 Nuisance fish and wildlife damage

- 2.13.0.7 Develop, implement, monitor and evaluate management strategies to reduce the impacts of herbivory on native vegetation and the degradation of habitats supporting SGCN by invasive and/or native, over-abundant wildlife species including but not limited to mute swans, Canada geese, beaver and white-tailed deer.
- 2.13.0.8 Implement and assess management strategies to control and reduce the impacts of detrimental species and diseases that pose threats to native wildlife or communities.

2.14 Wildlife disease management

2.14.0 Wildlife disease strategy development and investigation

- 2.14.0.1 Investigate diseases/pathogens impacting SGCN and/or their habitats.
- 2.14.0.2 Develop and implement strategies to combat the impacts of diseases/pathogens impacting SGCN and/or their habitats, track disease occurrences and monitor/research impacts to SGCN populations and their habitats.

Eastern Box Turtle

- 2.14.0.3 Protect SGCN from exotic pathogen introduction or incident through implementation of a "rapid response plan"; DFW to give priority attention to these species in planning and/or implementing a response.
- 2.14.0.4 Conduct long-term monitoring of diseases in vulnerable wildlife to determine the magnitude of exposure within populations and around the State, the impacts to those species, in particular SGCN, and investigate the feasibility of mitigating for such impacts.
- 2.14.0.5 Assess the impacts of diseases on the life cycles of wildlife.

3 Data Collection and Analysis

3.0 General fish and wildlife research, survey or monitoring

3.0.0 Research, survey or monitoring - general fish and wildlife needs

- 3.0.0.1 Conduct long-term monitoring of resident and migratory SGCN populations using standardized survey protocols to determine the variables that may impact their long-term persistence in the State (e.g., population viability, distribution, dispersal, home range and habitat use, travel corridors, food availability, vulnerability to pollutants and disease, etc.). Compile this information to determine the likely causes of population declines and to understand metapopulation dynamics. Provide data to NJ DEP for integration into the Biotics database, Landscape Project and permitting review processes.
- 3.0.0.2 Identify (through literature searches, review of available data, enlistment of habitat and/or species experts, etc.) where data gaps exist regarding SGCN distribution, and their critical and supportive habitats. Conduct surveys using standardized survey protocols to acquire baseline data, and provide the data to NJ DEP for integration into the Biotics database, Landscape Project Map and permitting review processes.
- 3.0.0.3 Gather baseline data on SGCN inhabiting permanently protected natural lands regarding their distribution and population (e.g., abundance, dispersal, demography including productivity and survival, etc.), and identify (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) critical and supporting habitats within those landscapes.
- 3.0.0.4 Conduct long-term studies on SGCN inhabiting permanently protected natural lands to develop population trend data and changes in demography, and to determine if critical and/or supporting habitats are limited or changing; i.e., diminishing in value, acreage or connectivity.
- 3.0.0.5 Gather baseline data on resident and migratory SGCN (in particular migratory species for which New Jersey habitats are significant), terrestrial, freshwater and marine species, regarding the location and condition of their critical and supporting habitats (e.g., foraging, roosting, nesting/breeding, stopover, migration paths, etc.), and population demography (e.g., productivity, survival, dispersal). Compile this information into a database that includes descriptions of the conditions of the habitats and species, and a GIS component of the locations of these important habitats. Provide data to NJ DEP for integration into the Biotics database, Landscape Project and permitting review processes.
- 3.0.0.6 Conduct long-term studies on resident and migratory SGCN to determine if there are changes to the populations' demography (productivity, survival, dispersal) and/or to their critical and/or supporting habitats (i.e., diminishing in value, acreage or connectivity, etc.), in particular changes that would not maintain SGCN at viable levels for species populations. Update data and GIS maps; provide updated information to NJ DEP for integration into the Biotics database, Landscape Project and permitting review processes.
- 3.0.0.7 Collect baseline data to document species distributions, in particular SGCN, and current habitat for future analysis of possible distribution shifting as a result of habitat shifting or alteration associated with climate change impacts.

Eastern Box Turtle

- 3.0.0.8 Conduct long-term studies and compare baseline metrics of documented species distributions and associated habitats to identify possible species and/or habitat shifting or alteration associated with climate change impacts.
- 3.0.0.11 Develop, implement and evaluate the effectiveness of town plans that avoid impacts to SGCN species and their habitats.
- 3.0.0.12 Compile available life history information on urban-associated SGCN (e.g., predators, levels of nest/young depredation, breeding longevity and reproductive effort over time, preferred nesting/reproductive requirements, fidelity to breeding and wintering sites, comprehensive assessment of migration routes and destinations) for future development of management strategies to benefit such species.
- 3.0.0.13 Investigate the effects of pesticides, herbicides and other biological controls on SGCN and their critical and supporting habitats. Evaluate and modify management practices as appropriate.
- 3.0.0.14 Identify areas with invasive, aquatic plants and animals and collect a detailed baseline assessment of the species' status and distribution. Solicit volunteers from organizations such as the New Jersey Invasive Species Strike Team to support this effort. Researchers and contractors performing Forest Stewardship Inventories and/or Plans on state lands should report invasive plant species through the New Jersey Invasive Species Strike Team phone application.
- 3.0.0.19 Identify the presence and status (e.g., functioning, structure, slated for removal, etc.) of existing dams and culverts within and/or that may impact SGCN and their habitats, and create a database that includes a GIS component identifying the locations of such structures and their status. Share this information with appropriate organizations and/or agencies evaluating the benefits and risks of such structures on SGCN and their habitats.
- 3.0.0.20 Once baseline data identifying and describing the status of existing dams and culverts have been gathered, conduct evaluations at a variety of sites to determine whether the benefits of culvert and dam creation or removal outweigh the risks to SGCN species and their habitats, and if other variables/conditions specific to individual sites/locations result in a different outcome. Identify and target appropriate dams and culverts for removal and/or reconstruction to minimize harm to SGCN species and their habitats.
- 3.0.0.23 Identify (through wildlife and aquatic system surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) and research water quality parameters for all [types of] aquatic systems for various SGCN populations.

3.2 Research, survey or monitoring - fish and wildlife populations

3.2.0 Data deficiency

- 3.2.0.1 Division of Fish and Wildlife should maintain a robust, up-to-date database and mapping of species occurrences.
- 3.2.0.2 Conduct species status assessments using the Delphi Technique and review of available data and literature on fish and wildlife (including marine animals) to maintain accurate legal status categorization of native wildlife.
- 3.2.0.4 Conduct long-term monitoring of the impacts of contaminants to vulnerable wildlife to determine the magnitude of exposure within populations and around the State, the impacts to those species, in particular SGCN, and investigate the feasibility of mitigating for such impacts. Maintain records on exposure of vulnerable wildlife to environmental toxins (such as flame retardants and endocrine disruptors), so that sources may be identified and controlled or eliminated.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Eastern Box Turtle

- 3.2.0.5 Prevent or ameliorate near-term impacts of climate change throughout the State by developing, implementing and monitoring/evaluating habitat management strategies that will establish/improve habitat resilience (e.g., shorelines of the coast and Delaware Bay, forested habitats of the Pinelands and Skylands) that benefits wildlife inhabiting these areas, in particular within the coastal and Delaware Bay areas.
 - 3.2.0.6 Develop, implement and conduct studies to evaluate the effectiveness of methods implemented to reduce road mortality of wildlife (e.g. wildlife underpasses, road closures).
 - 3.2.0.7 Track (via a database that includes a GIS component) and research problematic species and diseases to determine their distribution, impacts on SGCN wildlife/wildlife communities, and develop potential control measures.
 - 3.2.0.8 Implement and conduct long-term monitoring of control measures aimed at minimizing the impacts of problematic species and/or diseases to evaluate the effectiveness of such efforts and to identify and incorporate additional strategies as appropriate.
 - 3.2.0.9 Maintain an inventory of invasive insect distribution and where they exist, conduct long-term monitoring of habitat conditions to assist in developing strategies to combat the impacts to SGCN habitats. Report potential infestations to NJ DEP.
 - 3.2.0.10 Evaluate the effectiveness of sanitation/decontamination protocols in minimizing the transference of wildlife diseases and invasive plant species.
 - 3.2.0.11 Investigate the impacts of ORV use as a mechanism to spread wildlife diseases and invasive plant species to native wildlife and habitats. Integrate this information when mapping undeveloped roads and trails to identify potentially sensitive areas in northern NJ forests.
 - 3.2.0.12 Investigate the impacts of ORV use and ORV-created noise on terrestrial and aquatic wildlife behavior and the impact of direct mortality from vehicle strikes. Integrate this information when mapping undeveloped roads and trails to identify potentially sensitive areas in northern NJ forests.
- 3.2.1 Abundance determination
 - 3.2.1.1 Identify (through literature searches, review of available data, enlistment of habitat and/or species experts, etc.) population abundance and trends for SGCN using standardized survey protocols. Provide data to NJ DEP for integration into the Biotics database, Landscape Project Map and permitting review processes.
 - 3.2.1.2 Conduct wildlife surveys on resident and migratory SGCN regarding their population abundance and trends.
- 3.2.2 Age, size and sex structure
 - 3.2.2.1 Conduct wildlife surveys on resident and migratory SGCN regarding their survivorship.
- 3.2.3 Baseline inventory
 - 3.2.3.7 Identify roads or portions of roads, paved or unimproved (through site surveys, land use/land cover assessments and analyses, review of available data, enlistment of species experts, etc.) with high incidences of road mortality and/or presence of snakes, turtles, medium-sized and large mammals. Conduct assessments of the roads and incorporate information into a database that includes descriptions (e.g., qualifiers to help prioritize the roads' risk to wildlife) and a GIS component of the locations of such areas. Share this information with appropriate organizations and/or agencies working to implement measures (e.g., wildlife passages, road closures) to minimize the risk to these species.
- 3.2.7 Population assessment

Eastern Box Turtle

- 3.2.7.1 Conduct species status assessments using the Delphi Technique and review of available data and literature on fish and wildlife (including marine animals) to maintain accurate legal status categorization of native wildlife.

3.3 Research, survey or monitoring - habitat

3.3.1 Baseline inventory

- 3.3.1.1 Conduct habitat assessments of significant natural and/or unique communities to identify threats to native terrestrial and aquatic habitats through systematic monitoring, review of available data, enlistment of habitat management and/or species experts, etc. Incorporate findings into a database that includes descriptions/qualifiers of the habitats, identifies and values/qualifies the threats, and includes a GIS component of the locations of the assessed areas. Share this information with landowners/managers (e.g., federal, state and local government agencies or non-government organization).
- 3.3.1.2 Identify (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) resident and migratory SGCN habitats. Investigate their suitability for the various life history requirements of the species that dependent upon them to determine the ability for maintaining applicable SGCN populations in perpetuity.
- 3.3.1.4 Identify (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) and investigate the suitability of corridors that connect large, contiguous tracts of similar habitats to increase their effective size (i.e., forest with forest, grassland with grassland, wetlands with wetlands, etc.) for dependent SGCN.
- 3.3.1.5 Identify areas (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) where habitat restoration and/or enhancement would benefit wildlife SGCN.
- 3.3.1.6 Identify areas (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) that could, through revegetation and/or enhancement efforts, become suitable travel corridors connecting and increasing the effective size of conserved habitats for SGCN.
- 3.3.1.7 Map and prioritize existing and potential areas for early succession forest management. Share the results with state, county and municipal planners.
- 3.3.1.8 Assess the availability and suitability of forest habitats for SGCN species (particularly reptiles and amphibians, birds, pollinators, and tiger beetles) in southern forests since Superstorm Sandy.
- 3.3.1.16 Gather "best information" for spatial modeling and update/create a current model/depiction of anticipated habitat shifts from sea-level rise, flooding, etc.
- 3.3.1.17 Identify and map undeveloped roads and trails in all conserved forests, and create a database of locations. Integrate information regarding potentially sensitive areas.
- 3.3.1.18 Conduct an assessment using available data regarding SGCN population numbers/trends and demography, on-going threats, habitat changes, etc. to determine if directed management efforts are needed to reach or maintain viable population levels.
- 3.3.1.19 Identify and codify legal ORV access areas on state (and if appropriate, other conserved) lands. Provide GIS mapping to the landowner for potential use in directing such recreational activities.

Eastern Box Turtle

3.3.1.20 Identify areas (through surveys/studies, literature searches, review of available data, enlistment of habitat management and/or species experts, etc.) where invasive, non-indigenous plants and animals are either already established or are becoming established. Create a system for reporting and qualifying new locations of invasive species and for prioritizing areas for control measures according to the potential level of impact on the ecosystem and SGCN and the likelihood of success. Researchers and contractors encountering invasive plant species while performing plant and/or forest inventories on state or other conserved lands and/or private lands should report invasive plant species through the New Jersey Invasive Species Strike Team phone application.

3.3.1.24 Conduct regular investigations of SGCN habitat health and biodiversity on public and private lands to identify locations in need of revegetation, reduction of over-abundant, native wildlife and/or exotic species, conservation focal areas requiring limitations on human activity, etc.

3.3.2 Monitoring

3.3.2.2 Conduct long-term monitoring of resident and migratory SGCN habitats using standardized survey protocols to determine changes in habitat quality/suitability and threats (e.g., habitat loss and degradation, increased edge habitat, water quality) and other variables that may impact their long-term persistence in the State and to provide information needed for determining causes of population declines and understanding metapopulation dynamics.

3.3.2.3 Continue to update wildlife and habitat databases and revise models of critical SGCN habitats using the most current data available and where lacking, develop new SGCN and/or habitat models as data on species habitat requirements and applicable GIS data layers become available.

3.3.2.8 Evaluate the effectiveness of current prescribed burning practices on Pinelands dependent species.

3.3.2.9 Investigate the effectiveness of various silviculture techniques for enhancing forests for forest-dependent SGCN.

3.3.2.10 Evaluate the efficacy and success of different management techniques (e.g., ecologically-based forestry activities, prescribed burns) that might be used to mimic the historic role of fire and other natural disturbances in shaping an ecosystem.

3.3.2.11 Evaluate and compare the effectiveness of delayed mowing of warm season grass fields versus cool season hay fields to benefit grassland-dependent species.

3.3.2.12 Evaluate and compare the effectiveness of different management techniques (e.g., prescribed burning, mowing, brush-hogging, etc.) for maintaining suitable habitat for grassland-dependent species and species dependent upon early successional habitats.

3.3.2.13 Evaluate the effectiveness of management strategies (e.g., timing restrictions for mowing, cooperative agreements with utility companies for maintenance of rights-of-ways) that maintain and enhance large existing areas of grassland in perpetuity. Focus on habitat patches that can be managed to enhance the total size of suitable grassland habitat and create interspersed early-successional habitat.

3.3.2.14 Research and evaluate the effectiveness of water quality management practices on water-dependent and semi-dependent SGCN, particularly those practices associated with permitting or mitigation actions.

3.3.2.15 Investigate the effectiveness of management techniques implemented to eliminate invasive terrestrial and aquatic plant species on private and public lands, and/or within sensitive and/or important habitats for SGCN.

Eastern Box Turtle

- 3.3.2.16 Evaluate the effectiveness of best management practices (BMPs), protective strategies, and guidelines for maintaining and enhancing healthy, SGCN-associated terrestrial and aquatic habitats and associated riparian habitats, and to minimize (if not avoid) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.

3.5 Techniques development

3.5.3 Habitat restoration methods

- 3.5.3.1 Work with land management agencies to determine the appropriate actions needed to restore/reclaim degraded habitat for the documented/target SGCN.
- 3.5.3.3 Develop/improve management techniques that might be used to mimic the historic role of fire and other natural disturbances in shaping an ecosystem.
- 3.5.3.8 Develop best management practices (BMPs), protective strategies, and guidelines for maintaining and enhancing healthy, SGCN-associated terrestrial and aquatic habitats and associated riparian habitats, and to minimize (if not avoid) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
- 3.5.3.9 Develop strategies to combat the impacts of diseases/pathogens impacting SGCN and/or their habitats.
- 3.5.3.11 Develop strategies to protect native terrestrial and aquatic habitats and dependent SGCN species from the identified threats.
- 3.5.3.14 Develop aquaculture practices in the coastal areas that are compatible with the recovery of SGCN.
- 3.5.3.15 Modify management practices based on the effects of pesticides, herbicides and other biological controls on critical and supporting SGCN habitats.
- 3.5.3.16 Develop/improve strategies to restrict human activity (e.g., recreational, maintenance work, etc.) from sensitive habitats/areas such as avian nesting sites, reptile and amphibian breeding areas (nesting or gestation/birthing and breeding pools, respectively), and bat hibernacula, and federal buffers for marine mammals. Methods may include, but are not limited to, managing the landscape to deter access, diverting recreational and other activities from sensitive areas during critical periods through permit processes or blocking access (trails, roads, etc.), posting (if appropriate), increasing law enforcement presence, conducting management activities at appropriate times to avoid disturbance and/or harm to wildlife (e.g., habitat management, beach raking, etc.), and decreasing noise and light pollution.
- 3.5.3.19 Work with foresters to develop prescribed burning practices for Pinelands dependent species that increase or maintain habitat quality for these species in the Pinelands.
- 3.5.3.20 Develop guidance on various silviculture techniques for enhancing forests for forest-dependent SGCN.
- 3.5.3.21 Develop management techniques (e.g., ecologically-based forestry activities, prescribed burns) that might be used to mimic the historic role of fire and other natural disturbances in shaping an ecosystem.
- 3.5.3.22 Identify (through surveys/studies, literature searches, review of available data, enlistment of habitat management and/or species experts, etc.) and modify management strategies (e.g., timing restrictions for mowing, cooperative agreements with utility companies for maintenance of rights-of-ways), based on research, that maintain and enhance large existing areas of grassland in perpetuity.

Eastern Box Turtle

- 3.5.3.24 Based on research, modify management techniques implemented to eliminate invasive terrestrial and aquatic plant species on private and public lands, and/or within sensitive and/or important habitats for SGCN.
- 3.5.3.25 Use data regarding SGCN population numbers/trends and demography, on-going threats, habitat changes, etc. to develop the necessary management strategies to reach or maintain viable population levels.

3.5.4 Fish and wildlife research, survey and management techniques

- 3.5.4.2 Develop, implement, monitor and evaluate management strategies to reduce the impacts of herbivory on native vegetation and the degradation of habitats supporting SGCN by invasive and/or native, over-abundant wildlife species including but not limited to mute swans, Canada geese, beaver and white-tailed deer.
- 3.5.4.5 Develop and implement strategies to combat the impacts of diseases/pathogens impacting SGCN and/or their habitats, track disease occurrences and monitor/research impacts to SGCN populations and their habitats.
- 3.5.4.9 Conduct studies to evaluate the impacts of roads on SGCN and develop, implement and conduct studies to evaluate the effectiveness of methods to reduce road mortality of wildlife (e.g. wildlife underpasses, road closures).
- 3.5.4.13 Develop/improve strategies to restrict human activity (e.g., recreational, maintenance work, etc.) from sensitive habitats/areas such as avian nesting sites, reptile and amphibian breeding areas (nesting or gestation/birthing and breeding pools, respectively), and bat hibernacula, and federal buffers for marine mammals. Methods may include, but are not limited to, managing the landscape to deter access, diverting recreational and other activities from sensitive areas during critical periods through permit processes or blocking access (trails, roads, etc.), posting (if appropriate), increasing law enforcement presence, conducting management activities at appropriate times to avoid disturbance and/or harm to wildlife (e.g., habitat management, beach raking, etc.), and decreasing noise and light pollution.
- 3.5.4.15 Investigate the success of management strategies used to protect and/or enhance SGCN populations and when appropriate, aid in identifying failures/resource problems and issues, and developing new strategies.
- 3.5.4.16 Use data regarding SGCN population numbers/trends and demography, on-going threats, habitat changes, etc. to determine if directed management efforts are needed to reach or maintain viable population levels and develop the necessary management strategies.
- 3.5.4.17 Investigate new, non-invasive techniques for SGCN population evaluation through literature review, expert opinion, trial studies (if low risk), etc.
- 3.5.4.18 Investigate the effectiveness of survey techniques through selected “ground truthing” and literature and peer review in order to increase efficacy of survey, minimize surveyor bias and error, and increase accuracy of trend data.
- 3.5.4.19 Develop reliable, standardized survey and monitoring protocols for SGCN species, for which none currently exist, and their habitats.
- 3.5.4.21 Develop BMPs to address problematic species and diseases of unknown origin.
- 3.5.4.22 Investigate the efficacy of implementing strategies to minimize or eliminate disturbances to all SGCN (i.e., beyond their federal requirements) during military activities.

4 Education

4.1 Educator/Instructor training

4.1.0 Public education

Eastern Box Turtle

- 4.1.0.1 Provide educational resources and training programs to private and public landowners, as well as schools, regarding the benefits and creation of backyard habitats for wildlife.

5 Facilities and Areas

5.15 Wildlife Management Areas

5.15.6 Roads

- 5.15.6.1 Clearly post areas/roads where vehicle access is permitted.
- 5.15.6.2 Clearly post areas/trails where vehicle access is not permitted.

6 Land and Water Rights Acquisition and Protection

6.0 Acquisition and protection strategies

6.0.0 Combined acquisition and protection strategies

- 6.0.0.1 Enhance and increase the effective size of critical migratory stopover habitats for songbirds, raptors, shorebirds, bats and invertebrates by securing adjacent habitats through an appropriate combination of fee title, non-fee title and landowner agreements.
- 6.0.0.2 Enhance and increase the effective size of SGCN habitats by protecting adjacent habitats that contribute to the overall size of the "core" area and/or provide a natural buffer, enhancing the suitability of the core area for SGCN, and/or connect conserved SGCN habitats through an appropriate combination of fee title, non-fee title and landowner agreements.
- 6.0.0.3 Secure and protect riparian and floodplain habitats, inland wetland habitats (marsh, vernal pool, fen, emergent shrubland, forest), and other aquatic habitats (including open waters) and/or biologically appropriate buffers to minimize degradation through an appropriate combination of fee title, non-fee title and landowner agreements.
- 6.0.0.4 Secure and protect fish SGCN habitats by protecting lands adjacent to fish SGCN habitats and/or aquatic systems feeding into such habitats through an appropriate combination of fee title, non-fee title and landowner agreements.
- 6.0.0.5 Secure and protect critical coastal habitats (beach/dune, scrub-shrub, forest, wetland, marsh, and marine and estuarine habitats) that provide nesting, migrating and wintering areas for SGCN birds, fish and other coastal SGCN through an appropriate combination of fee title, non-fee title and landowner agreements.
- 6.0.0.6 Secure and protect old-growth forest stands with large trees and/or stands that are approaching or being actively managed for old growth forests, in particular those within large, contiguous forest tracts, through an appropriate combination of fee title, non-fee title and landowner agreements.
- 6.0.0.7 Secure and protect critical SGCN forested habitat and minimize forest edge to benefit interior forest and disturbance-sensitive SGCN through an appropriate combination of fee title, non-fee title and landowner agreements.
- 6.0.0.8 Secure and protect scrub-shrub habitats for SGCN through an appropriate combination of fee title, non-fee title and landowner agreements.

6.3 Conservation area designation

6.3.0 Conservation area designation strategies

- 6.3.0.1 Promote the protection of critical migratory stopover habitats for songbirds, raptors, shorebirds, bats and invertebrates and enhance these lands by increasing the effective size through conservation area designations of stopover habitats and adjacent private lands.

Eastern Box Turtle

- 6.3.0.2 Enhance and increase the effective size of SGCN habitats by protecting adjacent habitats that contribute to the overall size of the "core" area and/or provide a natural buffer, enhancing the suitability of the core area for SGCN and/or connect conserved SGCN habitats through conservation area designations.
- 6.3.0.3 Increase the protection of riparian and floodplain habitats, inland wetland habitats (marsh, vernal pool, fen, emergent shrubland, forest), and other aquatic habitats (including open waters) and/or biologically appropriate buffers to minimize degradation through conservation area designations.
- 6.3.0.5 Promote the protection of critical coastal habitats (beach/dune, scrub-shrub, forest, wetland, marsh, and marine and estuarine habitats) that provide nesting, migrating and wintering areas for SGCN birds, fish and other coastal SGCN through conservation area designations.
- 6.3.0.6 Promote the protection of old-growth forest stands with large trees and/or stands that are approaching or being actively managed for old growth forests, in particular those within large, contiguous forest tracts, through conservation area designations.
- 6.3.0.7 Promote the protection of critical SGCN forested habitat and minimize forest edge to benefit interior forest and disturbance-sensitive SGCN through conservation area designations.
- 6.3.0.8 Promote the protection of scrub-shrub habitats for SGCN through conservation area designations.

6.4 Private lands agreements

6.4.0 Private land agreement strategies

- 6.4.0.1 Enter into private lands agreements to expand control burns on private lands, in particular those adjacent to conserved lands to improve SGCN habitats.

7 Law Enforcement

7.1 Law enforcement

7.1.3 Sub-national Level

- 7.1.3.2 Increase the number of law enforcement officers tending to wildlife issues to a reasonable number to sufficiently cover the State and marine waters.

7.1.4 Scale Unspecified

- 7.1.4.1 Improve enforcement of policies and/or regulations that promote the reduction of run-off and point and non-point source pollution into NJ's aquatic systems (streams, rivers, lakes/ponds, bays, ocean, wetlands, etc.).
- 7.1.4.5 Enforce current policies and/or regulations to increase the ability to protect and preserve coastal habitats (beach/dune, scrub-shrub, forest, wetland, marsh, marine and estuarine habitats) that provide nesting, migrating, and wintering areas for SGCN birds, fish and other coastal SGCN, and implement and enforce amended policies/regulations.
- 7.1.4.6 Recruit law enforcement to assist in the protection and enhancement of SGCN populations, in particular endangered species, through improved awareness of species through trainings, partnerships, and other methods. Information should include but is not limited to: 1) Issues concerning illegal collection of reptiles, 2) Persecution of rare snakes, 3) Illegal recreational activities on public lands (e.g., off-road vehicles) and their impact on wildlife, 4) Identification of sensitive areas, critical sites and/or "hot-spots" for collection.
- 7.1.4.7 Increase law enforcement presence to enforce regulations governing recreational activities (e.g., the use of personal watercraft and off road vehicles, caving, rock climbing, etc.) on conserved lands and within other sensitive habitats, and discourage activities that cause harm or disturbance to vegetation, wetlands, fish and wildlife.

Eastern Box Turtle

- 7.1.4.8 Implement policies that protect critical migratory stopover habitats for songbirds, raptors, shorebirds, bats and invertebrates.
- 7.1.4.9 Implement policies that improve and secure habitat connections between conserved SGCN habitats.
- 7.1.4.10 Implement policies that promotes expanding acreages and enhances the effective size of SGCN habitats by providing biologically appropriate buffers of native habitat surrounding SGCN habitats.
- 7.1.4.11 Implement and enforce policies/regulations that will increase the ability to protect and preserve coastal habitats (beach/dune, scrub-shrub, forest, wetland, marsh, and marine and estuarine habitats) that provide nesting, migrating, and wintering areas for SGCN birds, fish and other coastal and aquatic SGCN.
- 7.1.4.12 Implement policies and/or regulations that protect significant natural and/or unique communities in perpetuity.
- 7.1.4.14 Implement policies that protect existing and developing old-growth forest stands with large trees, in particular those within large, contiguous forest tracts.
- 7.1.4.15 Implement policies that preserve and protect critical SGCN forested habitat and minimize forest edge to benefit interior forest and disturbance-sensitive SGCN.
- 7.1.4.16 Implement policies that protect and restore riparian areas.
- 7.1.4.17 Improve the enforcement of policies and/or regulations that protect wetlands, riparian and floodplain areas, and aquatic habitats (including open waters).
- 7.1.4.19 Implement policies that protect and restore scrub-shrub habitats to benefit shrub-dependent SGCN.
- 7.1.4.23 Implement policies that minimize wildlife road mortality.
- 7.1.4.24 Implement protective measures to benefit urban-associated SGCN such as restricting human access, buffering sensitive areas with postings, noise and/or light restrictions in sensitive areas and/or during sensitive periods such as breeding, etc.
- 7.1.4.26 Educate law enforcement personnel that there may be unauthorized research projects taking place and to encourage them to investigate any activities that appear to be harmful to wildlife.

8 Outreach

8.1 Partner/stakeholder engagement

8.1.0 Partner/stakeholder engagement strategies

- 8.1.0.2 Develop a team of personnel from government entities, conservation organizations and other stakeholders engaged in oil/gas spill response for marine and freshwater habitats to develop a feasible plan for oil spill response and/or to amend NJ's current oil spill response plan that clearly outlines each organizations responsibilities and an assessment and location list of available equipment for boom deployment during oil spills.
- 8.1.0.3 Develop an outreach team of personnel from government entities, conservation organizations and other stakeholders to work together to collaboratively use social media campaigns to grow a constituency of NJ residents who have an elevated ecological and climate consciousness.
- 8.1.0.4 Engage government agencies, conservation partners and other stakeholders in constructive dialogues encouraging them to influence policy change and the creation of incentives through a habitat bill and/or municipal ordinances for backyard habitat.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Eastern Box Turtle

- 8.1.0.13 Engage DOD in a constructive dialogue regarding strategies to minimize disturbances to all SGCN (i.e., beyond their federal requirements) from forest management and other practices on their lands.
- 8.1.0.14 Engage DOD in a constructive dialogue regarding strategies to minimize or eliminate disturbances to all SGCN (i.e., beyond their federal requirements) during military activities.
- 8.1.0.15 Engage government agencies, conservation partners and other stakeholders in discussions encouraging and supporting the creation of laws and policies requiring vegetative buffers of native plants on preserved farmland and state lands with agricultural leases or agreements.
- 8.1.0.16 Engage local governments in discussions regarding the importance of them adopting/passing ordinances which require assessing and addressing secondary impacts (i.e., ancillary prescribed burns, trespassers, ORV use, mosquitoes, deer, buffers) on biological resources when revising planning/zoning documents or granted site plan/subdivision approvals.
- 8.1.0.17 Engage municipalities in constructive dialogue to identify and minimize destruction of areas prioritized for early succession forest management.
- 8.1.0.18 Engage NJDOT, NJ Transit Authority and other road management entities, wildlife conservation organizations/agencies (e.g., Division of Fish and Wildlife, New Jersey Conservation Foundation, Conserve Wildlife Foundation of NJ), and communities and citizens in discussions regarding the importance of and methods to enhance habitat connectivity, and work together to develop feasible strategies for ensuring that wildlife can disperse naturally and safely across roads and similar barriers to terrestrial and/or aquatic habitats.
- 8.1.0.19 Engage government agencies, conservation partners and other stakeholders to collaboratively develop a list of important projects, targeting SGCN and/or their habitat, as a guide for graduate student research. Distribute the list and contact information to all State colleges and universities.
- 8.1.0.21 Work with government agencies and environmental educators to develop educational resources and training programs, educate the public on the devastation human-subsidized and/or overabundant, native species cause to local nesting species, and provide expert guidance on how residents can help alleviate this threat.
- 8.1.0.22 Work with government agencies and environmental educators to develop educational resources and training programs, educate the public on the devastation invasive species cause to native nesting species, and provide expert guidance on how residents can help alleviate this threat.
- 8.1.0.24 Engage government agencies, conservation partners and other stakeholders in constructive dialogue regarding the importance of providing and methods to provide technical support for carrying out restoration and management practices aimed at increasing structural habitat diversity.
- 8.1.0.25 Provide technical support to public landowners and land managers for carrying out restoration and management practices aimed at increasing structural habitat diversity.
- 8.1.0.26 Coordinate across federal, state and local agencies and approved consulting foresters that provide financial, logistical or planning assistance to woodland landowners to adopt or endorse consistent best management practices concerning controlled burns to maintain and/or improve forested habitat for wildlife.
- 8.1.0.30 Encourage government agencies and conservation partners to advise members of the relevant scientific community of the need for specific studies, reports or investigations targeting the data-deficiency regarding SGCN and/or their habitats.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Eastern Box Turtle

- 8.1.0.33 Engage government agencies, conservation partners and other land managers, communities, landowners, and commercial and industrial stakeholders in discussions regarding the importance of protecting and methods to protect priority wetlands beyond the levels afforded through regulation by maintaining and/or restoring optimal biological buffers around wetlands.
- 8.1.0.34 Work with the NJ Education Association and Department of Education to design curriculum and outdoor experimental learning opportunities, and provide training to teachers on implementation of these activities.
- 8.1.0.35 Promote backyard habitat management to create and/or enhance food availability for migratory species (birds, bats, invertebrates) on private lands.
- 8.1.0.37 Enlist landowners and NJ citizens in the protection of and survey efforts for SGCN, in particular rare species, by increasing enrollment in landowner incentives, forest stewardship, backyard habitat management and wildlife-related volunteer programs.
- 8.1.0.38 Engage partners, stakeholders and land managers in constructive dialogue promoting forest stewardship for SGCN that use core forests and forested corridors.
- 8.1.0.40 Encourage researchers, land managers, naturalists and enthusiasts to follow proper procedures for the coordination and/or permitting of research/management activities involving wildlife and sensitive habitats, and discourage activities that alter vegetation or wetlands, or cause harm or disturbance to wildlife.
- 8.1.0.42 Engage citizens, wildlife observers and photographers through discussions and distributable information regarding the importance of and encouraging implementing responsible and ethical behavior when observing wildlife by developing an alliance of wildlife photographers and widely circulating recommendations on how to reduce impact.
- 8.1.0.44 Engage conservation partners, stakeholders, government agencies and other land stewards in constructive dialogues encouraging their inclusion of controlled burns in forest and other stewardship plans.
- 8.1.0.47 Form cooperative partnerships with energy companies to facilitate habitat creation and enhancement away from and outside of project areas, the restoration of appropriate habitats within project areas (e.g., rights-of-way could benefit butterflies and some bird species), and to identify seasonal timing of activities that would minimize impacts to wildlife.

8.3 WSFR program/subprogram outreach

8.3.0 WSFR program/subprogram outreach strategies

- 8.3.0.7 Develop and provide (or otherwise make publicly available) educational programs and/or materials that describe the negative impacts of off-road vehicles and watercraft use in and adjacent to critical SGCN habitats, and the importance of confining such activities to more appropriate locations and/or seasons.
- 8.3.0.8 Develop and provide (or otherwise make publicly available) educational programs and/or materials to educate recreationists and encourage landowners to eliminate garbage in the vicinity of suitable wildlife habitat, in particular SGCN habitat. Information should include the detrimental impacts garbage may have on various wildlife species.
- 8.3.0.9 Develop and provide (or otherwise make publicly available) educational programs and/or materials to enlist landowners and land managers to include only native plants in landscaping and restoration projects. Provide information to assist them in detecting problematic establishment of invasive, non-indigenous plants.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Eastern Box Turtle

- 8.3.0.10 Develop and provide (or otherwise make publicly available) educational programs and/or materials to educate landowners and NJ citizens on threats to fish and wildlife (including marine animals).
- 8.3.0.12 Promote awareness of WSFR (Wildlife and Sportfish Restoration) Outreach/Awareness grants, an important funding source for conservation among hunters and anglers as well as the general public.
- 8.3.0.13 Conduct an educational campaign to encourage observer ethics and respect for wildlife and natural habitat.
- 8.3.0.19 Develop an educational outreach program for the public on the devastating effects predators can have on native nesting wildlife.
- 8.3.0.21 Develop an educational outreach program for the general public, in particular those within and adjacent to coastal and riparian areas on the realities of sea-level rise to help citizens living in these areas understand how this will affect them, how coastal stabilization negatively impacts wildlife by preventing natural processes, and how their decisions impact species.
- 8.3.0.22 Post signage in sensitive coastal habitats (e.g., bird and Diamondback Terrapin nesting areas) to educate the boating community on responsible use of these areas.
- 8.3.0.24 Develop educational outreach programs for local decision-makers, land developers, landowners and citizens about lawn alternatives and the importance of natural vegetation and "edge" habitats on developed properties.
- 8.3.0.25 Develop educational outreach programs for landowners, nurseries and the general public regarding the negative impacts of invasive and non-native plants on our natural communities.
- 8.3.0.26 Develop educational outreach programs for private and public landowners and land managers regarding the importance of and how to manage core forests and forested corridors in a way that will be beneficial for SGCN, particularly endangered, threatened and special concern species.
- 8.3.0.27 Develop educational outreach programs for public and private landowners and land managers regarding the importance of structural habitat diversity, methods to increase diversity, and/or incentive programs available to increase habitat diversity.
- 8.3.0.28 Develop educational outreach programs for public and private landowners and land managers regarding the importance of managing grasslands for grassland-dependent species, methods of management, and/or incentive programs available.
- 8.3.0.29 Develop educational outreach programs for local decision-makers, land developers, landowners and citizens about the importance of maintaining a vegetative buffer along riparian and aquatic habitats to intercept storm water runoff and minimize soil erosion.
- 8.3.0.30 Develop educational outreach programs for private and public landowners, as well as schools, regarding the benefits and creation of backyard habitats for wildlife.
- 8.3.0.32 Develop an educational outreach program for landowners and citizens on the threats that herbicides and pesticides pose to aquatic systems and wildlife, and to promote safer usage of such products.

9 Planning

9.1 Land use planning

9.1.0 Land use planning strategies

- 9.1.0.1 Develop smart-growth plans and critical habitat designations that consider SGCN life history requirements and habitat needs, connectivity and health of those habitats, and minimizes human-associated disturbances to those habitats and SGCN inhabiting them.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Eastern Box Turtle

- 9.1.0.2 Develop town plans that avoid impacts to SGCN species and their habitats.
- 9.1.0.3 Develop a plan that directs the creation of impervious surfaces away from and to minimize impacts on aquatic systems and critical terrestrial habitats. The plan should also include strategies to increase the resiliency of aquatic and critical terrestrial habitats to threats and stressors that would impact the reproduction and survival of wildlife.
- 9.1.0.4 Develop a plan that directs the creation of new impoundments and/or the expansion of bogs for cranberry farming within or immediately adjacent to critical forested habitats in a manner that minimizes impacts on the natural hydrology of the watershed and subsequently, the natural wetlands in the area.
- 9.1.0.5 Develop a plan that directs the creation or expansion of energy or utility rights-of-way in a manner that minimizes the impacts on critical forested habitats and the wildlife community.
- 9.1.0.6 Develop a plan that directs the creation or expansion of roads and railroads or the re-establishment of abandoned railroads within and adjacent to critical forested habitats in a manner that minimizes the impacts on critical forested habitats and the wildlife community.
- 9.1.0.7 Develop a plan that directs the maintenance of or new channelization of forested streams and rivers in a manner that minimizes impacts of the aquatic ecological system and adjacent forest
- 9.1.0.8 Develop a plan that focuses on strategies for oil pipelines to avoid sensitive habitats that would be highly impacted by oil spills.
- 9.1.0.9 Develop a plan that focuses on strategies to minimize the creation of renewable energy farms (e.g., solar, wind) and related infrastructures within and their impacts on forested habitats and the wildlife community.
- 9.1.0.10 Develop a plan that focuses on strategies to minimize the impacts of mining on critical forested habitats.
- 9.1.0.11 Develop a plan that focuses on strategies to minimize the impacts of power plants on critical forested habitats and the wildlife community.
- 9.1.0.15 Develop a plan to minimize fragmentation of terrestrial and aquatic habitats by roads.
- 9.1.0.16 Develop a plan to minimize new lawns and preserve natural vegetation within and adjacent to critical forest areas.
- 9.1.0.18 Develop a plan to minimize the effects of road widening and traffic volume increases within critical wildlife habitat areas using CHANJ products.
- 9.1.0.19 Develop a plan to minimize the extent of impervious surfaces as part of new construction to increase water recharge in those areas.
- 9.1.0.20 Develop a plan to minimize the impacts of existing agricultural properties adjacent to and the conversion of forest habitats (terrestrial and aquatic, within or adjacent to critical forests) to agriculture, grazing areas/livestock farms, and plantations.
- 9.1.0.21 Develop a plan to minimize the use of any-sized dam in critical forested areas.
- 9.1.0.22 Incorporate habitat connectivity and preservation of natural areas into state and local land-use policy and the environmental review process to minimize the impacts of transportation and service corridors on fish and wildlife and their habitats.
- 9.1.0.23 Develop a plan to mitigate the effects of transportation barriers by using CHANJ products.
- 9.1.0.24 Develop a plan to prevent livestock from entering water bodies in critical forested habitats.
- 9.1.0.25 Develop a plan to prevent the conversion of forested stream buffers to pastures in critical forested habitats.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Eastern Box Turtle

- 9.1.0.27 Develop a plan to use wildlife-appropriate culverts in critical forested areas.
- 9.1.0.28 Develop and coordinate state, regional and local plans for suitable lot layout and landscaping to minimize human-wildlife conflicts that also incorporates habitat connectivity and preservation of natural areas.
- 9.1.0.29 Provide GIS or related data, maps, resource inventories, as well as related training, pertaining to the SWAP and it's recommended conservation actions for use or consideration by State, County or municipal planning agencies.
- 9.1.0.30 Incorporate habitat connectivity and preservation of natural areas into state and local land-use policy and the environmental review process to minimize habitat fragmentation and other related threats associated with development.
- 9.1.0.31 Develop wetland restoration plans that consider the life history and needs of wildlife occupying targeted habitats.
- 9.1.0.33 Review the species, threats, action successes, and habitats, and work with partners to revise the 2017 State Wildlife Action Plan for the 2025 resubmittal.

9.2 Organizational strategic and CMS planning

9.2.1 Organizational strategic and operational planning

- 9.2.1.1 Identify and codify legal ORV access areas on state lands.

9.3 Species and habitat management planning

9.3.1 Species management planning

- 9.3.1.3 Develop a management plan to restrict human activity (e.g., recreational, maintenance work, etc.) from sensitive habitats/areas such as avian nesting sites, reptile and amphibian breeding areas (nesting or gestation/birthing and breeding pools, respectively), and bat hibernacula, and federal buffers for marine mammals.
- 9.3.1.4 Develop town plans that avoid impacts to SGCN species and their habitats.
- 9.3.1.5 Develop response plans to address disease outbreaks within wildlife populations, in particular SGCN.
- 9.3.1.6 Amend NJ's current oil spill response plan to 1) expand the geographic area addressed, 2) expand the targeted species impacted and in need of recovery, and 3) revise current and integrate new actions into the plan as needed.
- 9.3.1.7 Develop a rapid response plan for various scenarios (e.g., insect infestations destroying native habitat, wildlife disease) to be implemented upon exotic pathogen introduction or incident.
- 9.3.1.9 Develop a management plan incorporating the effects of pesticides, herbicides and other biological controls on SGCN and their critical and supporting habitats.
- 9.3.1.10 Develop a management plan to combat the impacts of diseases/pathogens impacting SGCN and/or their habitats.
- 9.3.1.12 Develop a management plan to benefit urban-associated SGCN based on research.
- 9.3.1.13 Develop a management plan to ensure SGCN populations' persistence based on long-term monitoring of resident and migratory SGCN populations and their habitats.
- 9.3.1.14 Create species management plans that will promote the protection and where appropriate, the development of old-growth forest stands with large trees, in particular those within large, contiguous forest tracts.
- 9.3.1.15 Develop a plan to minimize the impacts of oil spills on wildlife and their habitats.

Eastern Box Turtle

- 9.3.1.16 DOD and appropriate state agencies work together to improve DOD Integrated Natural Resource Management Plans (INRMP) to develop strategies to minimize or eliminate disturbances to all SGCN (i.e., beyond their federal requirements) during military activities and to improve SGCN habitat and presence.
- 9.3.1.20 Use compiled life history information on urban-associated SGCN regarding threats, breeding, fecundity, survival, habitat needs, wintering sites/roosts, migration routes and destinations, etc. to develop wildlife management strategies to benefit such species.

9.3.3 Habitat management planning

- 9.3.3.6 Develop a management plan for maintaining and enhancing healthy, SGCN-associated terrestrial and aquatic habitats and associated riparian habitats, and to minimize (if not avoid) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
- 9.3.3.7 Develop a management plan to reduce the impacts of herbivory on native vegetation and the degradation of habitats supporting SGCN by invasive and/or native, over-abundant wildlife species including but not limited to mute swans, Canada geese, beaver and white-tailed deer.
- 9.3.3.8 Develop a management plan to combat the impacts of diseases/pathogens impacting SGCN and/or their habitats.
- 9.3.3.9 Develop a response plan to outbreaks using BMPs to control infestations and limit their spread in a way that avoids excessive harm to non-target species.
- 9.3.3.10 Develop a management plan to ensure SGCN populations' persistence based on long-term monitoring of resident and migratory SGCN populations and their habitats.
- 9.3.3.11 Develop town plans that avoid impacts to SGCN species and their habitats.
- 9.3.3.15 Develop a management plan incorporating the effects of pesticides, herbicides and other biological controls on SGCN and their critical and supporting habitats.
- 9.3.3.16 Develop a management plan to restrict human activity (e.g., recreational, maintenance work, etc.) from sensitive habitats/areas such as avian nesting sites, reptile and amphibian breeding areas (nesting or gestation/birthing and breeding pools, respectively), and bat hibernacula, and federal buffers for marine mammals.
- 9.3.3.17 Develop a management plan for prescribed burning that will benefit Pinelands dependent species and increase or maintain habitat quality for these species in the Pinelands.
- 9.3.3.18 In cooperation with species and habitat experts, develop management plans for significant natural and/or unique communities, in particular those supporting SGCN, and provide the information to the landowners/managers (federal, state and local government agencies or non-government organization) for review and implementation.
- 9.3.3.19 Develop management plans for SGCN inhabiting permanently protected natural lands using available baseline and population trend data.
- 9.3.3.21 Develop a rapid response plan for various scenarios (e.g., insect infestations destroying native habitat, wildlife disease) to be implemented upon exotic pathogen introduction or incident.
- 9.3.3.22 Create management plans to minimize and/or prevent wildlife road mortality that will incorporate wildlife passages in conjunction with barrier fencing and, where possible, seasonal closures. Aquatic-associated passages must avoid disturbance to the natural streambeds and riparian habitat, permit high volumes of water to flow freely, and provide adequate travel corridors for terrestrial wildlife, while maintaining stream flow for fish passage. Bridges that span rivers and streambeds and include floodplain habitat on either side of the span to provide travel corridors for terrestrial wildlife are preferred over culverts.

Eastern Box Turtle

- 9.3.3.23 Create forest management plans that will promote the protection and/or development of old-growth forest stands with large trees, in particular those within large, contiguous forest tracts.
- 9.3.3.24 Develop a plan to improve the enforcement of policies and/or regulations that protect wetlands, riparian and floodplain areas, and aquatic habitats (including open waters).
- 9.3.3.26 Develop a management plan for parcels of suitable size to be managed for native herbaceous plant species that support breeding grassland dependent species.
- 9.3.3.28 Develop a plan to minimize the impacts of oil spills on wildlife and their habitats.
- 9.3.3.29 Develop habitat management plans aimed at reducing or eliminating negative impacts of ORVs.
- 9.3.3.32 DOD and appropriate state agencies work together to improve DOD Integrated Natural Resource Management Plans (INRMP) to develop strategies to minimize or eliminate disturbances to all SGCN (i.e., beyond their federal requirements) during military activities and to improve SGCN habitat and presence.
- 9.3.3.34 Include controlled burn prescriptions in forest and stewardship plans to improve wildlife habitat.
- 9.3.3.35 Incorporate habitat connectivity, preservation of natural areas, and the implementation of BMPs into state and local land-use policy environmental review process and energy development plans to minimize habitat fragmentation and related threats associated with solar farms and altered habitats.
- 9.3.3.36 Integrate plans for properly located and timed habitat restoration and management along transportation, energy and service corridors to minimize risks to and benefit wildlife.
- 9.3.3.38 Use compiled life history information on urban-associated SGCN regarding threats, breeding, fecundity, survival, habitat needs, wintering sites/roosts, migration routes and destinations, etc. to develop habitat management strategies to benefit such species.

11 Technical Assistance

11.1 Environmental review

11.1.1 Review of proposed projects

- 11.1.1.1 Use Biotics database and Landscape Project Mapping in regulatory reviews to ensure protection by applicable laws and regulations.
- 11.1.1.2 Develop smart-growth plans and critical habitat designations that consider SGCN life history requirements and habitat needs, connectivity and health of those habitats, and minimize human-associated disturbances to those habitats and the SGCN inhabiting them.
- 11.1.1.3 Government organizations to thoroughly review wetland restoration plans, applying the most current science for wildlife, habitats and aquatic systems, to assess the impacts to resident and migratory wildlife occupying the targeted habitats.
- 11.1.1.4 Incorporate habitat connectivity and preservation of natural areas into state and local land-use policy and the environmental review process to minimize habitat fragmentation and related threats associated with development.
- 11.1.1.5 Incorporate habitat connectivity and preservation of natural areas into state and local land-use policy and the environmental review process to minimize the impacts of transportation and service corridors on fish and wildlife and their habitats.
- 11.1.1.7 Review proposed construction or other work projects and permit applications, provide recommendations on how to best avoid disturbing sensitive species, and identify actions not permitted.

Eastern Box Turtle

- 11.1.1.8 Review proposed research projects and permit applications, provide recommendations on how to best avoid disturbing sensitive species, and identify actions not permitted.
- 11.1.1.9 Review strategies for creating or enhancing connectivity (e.g., installing appropriately-sized wildlife passages) between wetlands to allow wildlife to disperse naturally and safely.
- 11.1.1.10 Use CHANJ mapping in reviews of proposed energy, mining, transportation and utility service companies/agencies' projects to attempt to maintain habitat connectivity and reduce fragmentation, and identify potential impacts of the projects.
- 11.1.1.11 Use the best available science (species data, habitat present, site layout options, etc.) when conducting regulatory reviews of proposed offshore energy projects relating to drilling, extraction and distribution of petroleum and gas products to reduce habitat destruction and minimize impacts on wildlife.
- 11.1.1.12 Use the best available science (species data, habitat present, site layout options, etc.) when conducting regulatory reviews of proposed solar farm projects to reduce habitat fragmentation and minimize impacts on wildlife.
- 11.1.1.13 Use the best available science (species data, habitat present, wind farm layout options, wind blade impacts on migratory species, location of migration routes, etc.) when conducting regulatory reviews of proposed wind farm projects to minimize impacts on migratory and resident wildlife and reduce habitat fragmentation.

11.1.2 Review of proposed policies and plans

- 11.1.2.1 Develop smart-growth plans and critical habitat designations that consider SGCN life history requirements and habitat needs, connectivity and health of those habitats, and minimize human-associated disturbances to those habitats and the SGCN inhabiting them.
- 11.1.2.2 Government organizations to thoroughly review wetland restoration plans, applying the most current science for wildlife, habitats and aquatic systems, to assess the impacts to resident and migratory wildlife occupying the targeted habitats.
- 11.1.2.3 Incorporate aquatic habitat connectivity and water quality/effluent standards into the environmental review process to help establish policies and plans that minimize the impact of aquaculture on fish and wildlife.
- 11.1.2.4 Review strategies for creating or enhancing connectivity (e.g., installing appropriately-sized wildlife passages) between wetlands to allow wildlife to disperse naturally and safely.

11.2 Technical assistance

11.2.0 Assorted technical assistance strategies

- 11.2.0.1 Provide technical support to private and public landowners and land managers for carrying out restoration and management practices aimed at increasing structural habitat diversity.
- 11.2.0.2 Provide technical support to public and private landowners and land managers for controlling invasive, native and non-native plant species in order to increase structural habitat diversity.
- 11.2.0.3 Develop state, regional and local BMPs that focus on minimizing habitat fragmentation and human-wildlife conflicts associated with development. Make information available to land developers and private and public landowners for implementation.
- 11.2.0.5 Provide educational resources, training programs, and expert guidance to private and public landowners and land managers on the threats that herbicides and pesticides pose to aquatic systems and wildlife, and to promote safer usage of such products.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Eastern Box Turtle

- 11.2.0.6 Provide educational resources, training programs, and on-the-ground guidance to energy, mining, transportation, and utility service agencies/companies and their project and resource managers on habitat creation, enhancement and restoration within and adjacent to project areas, as well as away from and outside of project areas (depending on the target species), by managing vegetation for a variety of species and that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife. Wind farms should address both terrestrial bound and low-flying species. Examples of habitat management include, but are not limited to, integrating short and tall grasses, specific host plants, brush piles, water sources/wetlands, shrubby areas, nesting areas and no-mow set-asides.
- 11.2.0.7 Provide educational resources, training programs, and on-the-ground guidance to energy, mining, transportation, and utility service agencies/companies and their project and resource managers on the importance of maintaining habitat connectivity, minimizing fragmentation, and the use of CHANJ products to help them target areas for such planning.
- 11.2.0.8 Provide educational resources, training programs, and on-the-ground guidance to public and private landowners and land managers on habitat creation and enhancement strategies that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife.
- 11.2.0.9 Provide educational resources, training programs, and on-the-ground guidance to municipalities, land developers, and other land managers and private landowners about the importance of leaving vegetation in place, especially along riparian areas and wildlife movement corridors.
- 11.2.0.10 Provide technical support to private landowners, consultants, and land managers to create customized management plans based on location and SGCN.
- 11.2.0.11 Provide educational resources, training programs, and on-the-ground guidance to private and public landowners and land managers on the benefits of and for creating young forest and early succession habitat for SGCN.
- 11.2.0.12 Provide educational resources and technical support to public landowners and land managers for managing grasslands for grassland-dependent species.
- 11.2.0.13 Provide educational resources and technical support to public landowners, private landowners with sufficient acreage, and land managers to promote the protection and/or development of old-growth forest stands with large trees, in particular those within large, contiguous forest tracts.
- 11.2.0.14 Provide educational resources and technical support to public and private landowners and land managers to promote the protection of wetlands, riparian and floodplain areas, and aquatic habitats (including open waters), and to enhance or restore biologically appropriate buffers.
- 11.2.0.15 Provide educational resources, training programs, and on-the-ground guidance to municipalities, land developers, and other land managers and landowners about the importance of retaining and in an effort to protect, create, enhance and/or restore vegetation along aquatic habitats.
- 11.2.0.16 Provide educational resources and technical support to public and private landowners and land managers to promote the protection of critical SGCN forested habitat and minimize forest edge to benefit interior forest and disturbance-sensitive SGCN.
- 11.2.0.19 Provide educational resources and technical support to public and private landowners and land managers to promote the protection and/or enhancement of scrub-shrub habitats for SGCN.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Eastern Box Turtle

- 11.2.0.20 Provide educational resources and technical support to public and private landowners and land managers to promote the protection and/or enhancement of critical coastal habitats (beach/dune, scrub-shrub, forest, wetland, marsh, and marine and estuarine habitats) that provide nesting, migrating and wintering areas for SGCN birds, fish and other coastal SGCN.
 - 11.2.0.21 Provide educational resources and technical support to public and private landowners and land managers of lands adjacent to critical migratory stopover habitats for songbirds, raptors, shorebirds, bats and invertebrates to promote the protection and/or enhancement of those adjacent habitats to increase the effective size of the migratory habitat.
 - 11.2.0.22 Provide educational resources, training programs, and expert guidance to public and private landowners and land managers about lawn alternatives and the importance of natural vegetation and "edge" habitats on developed properties.
 - 11.2.0.23 Provide educational resources and technical support to public and private landowners and land managers of lands adjacent to SGCN habitats to promote the protection and/or enhancement of those adjacent habitats to increase the overall size of the "core" area and/or provide a natural buffer, enhancing the suitability of the core area for SGCN, and that connect conserved SGCN habitats.
 - 11.2.0.24 Provide educational resources, training programs, and expert guidance to public and private landowners and land managers on how to manage vegetated roadside areas (e.g., mowing, brush-hogging, etc.) on a schedule that avoids peak activity periods for wildlife and therefore, minimizes harm.
 - 11.2.0.25 Provide educational resources, training programs, and on-the-ground guidance to resource managers regarding the assessment of and addressing secondary impacts (i.e. ancillary prescribed burns, trespassers, ORV use, mosquitoes, deer, buffers) related to residential and commercial development.
 - 11.2.0.26 Make educational resources available to the public that encourage researchers to seek out guidance prior to finalizing proposals and submitting State permit applications to reduce potential impacts on sensitive species.
- 11.2.1 With individuals and groups involved in resource management decision making
 - 11.2.1.1 Engage partners and stakeholders in constructive dialogue regarding the importance of providing and methods to provide technical support for carrying out restoration and management practices aimed at increasing structural habitat diversity.
 - 11.2.1.2 Provide professional training and technical assistance tools (e.g., mapping, guidance documents, justification, etc.) to agencies/divisions/programs within and outside of the NJ DEP regarding the SWAP, and the conservation actions recommended therein to help facilitate SWAP implementation.
 - 11.2.1.3 Provide educational resources, training programs, and on-the-ground guidance to DOD to improve DOD Integrated Natural Resource Management Plans (INRMP) to develop and implement forest management and other practices that minimize disturbances to SGCN (i.e., beyond their federal requirements).
 - 11.2.1.6 Provide educational resources, training programs, and on-the-ground guidance to resource agencies prior to project initiation to ensure wildlife and their habitats are protected to the highest degree possible during construction, and provisions are in place for post-construction habitat use.
- 11.2.2 With private landowners

Eastern Box Turtle

- 11.2.2.1 Provide technical support to farming operations and woodland landowners on ways to decrease clean farming (edge-to-edge) practices and create ecotones to benefit bobwhite and other species dependent on early successional habitat.

100 Law and Policy

100. Legislation

100.1.2 National Level

- 100.1.2.1 Create legislation to establish markets for warm-season grasses to increase the permanency of this crop on the landscape.

100.1.3 Sub-national Level

- 100.1.3.1 Develop laws and policies to increase protection and biological buffers of wetlands.
- 100.1.3.2 Develop policies for wetland restoration plans that consider life history requirements and needs of wildlife occupying targeted habitats.
- 100.1.3.3 Initiate legislative action to establish an annual budgetary line item designating funds to support programs focused on long-term research and monitoring of wildlife diseases.

100.1.4 County and Local

- 100.1.4.1 Enhance critical migratory stopover habitats for songbirds, raptors, shorebirds, bats and invertebrates through the local ordinances of adjacent private lands to increase the effective size of the habitat.
- 100.1.4.2 Secure and increase the effective size of SGCN habitats and connect conserved SGCN habitats through local ordinances.
- 100.1.4.3 Expand the acreages and enhance the effective size of SGCN habitats by protecting adjacent habitats that contribute to the overall size of the "core" area and/or provide a natural buffer, enhancing the suitability of the core area for SGCN through local ordinances.
- 100.1.4.4 Secure wetlands, riparian and floodplain areas, and aquatic habitats (including open waters) and biologically appropriate buffers through local ordinances.
- 100.1.4.5 Secure SGCN-inhabited/used freshwater wetlands and biologically appropriate buffers through local ordinances.
- 100.1.4.8 Secure critical coastal habitats (beach/dune, scrub-shrub, forest, wetland, marsh, and marine and estuarine habitats) that provide nesting, migrating and wintering areas for SGCN birds, fish and other coastal SGCN through local ordinances.
- 100.1.4.9 Secure existing and developing old-growth forest stands with large trees, in particular those within large, contiguous forest tracts, through local ordinances.
- 100.1.4.10 Secure critical SGCN forested habitat and minimize forest edge to benefit interior forest and disturbance-sensitive SGCN through local ordinances.
- 100.1.4.11 Secure riparian areas through local ordinances.
- 100.1.4.12 Secure scrub-shrub habitats for SGCN through local ordinances.
- 100.1.4.13 Encourage municipal laws regulating domestic pets that may predate on wildlife.
- 100.1.4.14 Adopt/pass local ordinances which require assessing and addressing secondary impacts (i.e. ancillary prescribed burns, trespassers, ORV use, mosquitoes, deer, buffers) on biological resources when revising planning/zoning documents or granted site plan/subdivision approvals.

Eastern Box Turtle

- 100.1.4.15 Incorporate habitat connectivity and the preservation of natural areas into state and local land-use policy and the environmental review process to minimize habitat fragmentation and related threats associated with development.

100.1.5 Scale Unspecified

- 100.1.5.1 Develop laws and policies to increase protection and biological buffers of wetlands.
- 100.1.5.2 Develop policies for wetland restoration plans that consider life history requirements and needs of wildlife occupying targeted habitats.
- 100.1.5.3 Incorporate aquatic habitat connectivity and water quality/effluent standards into state/local policy to minimize the impact of aquaculture on fish and wildlife.
- 100.1.5.4 Incorporate habitat connectivity and preservation of natural areas into state and local land-use policy and the environmental review process to minimize the impacts of transportation and service corridors on fish and wildlife and their habitats.

100. State Regulations

100.3.0 Regulatory initiatives for species and habitat protection

- 100.3.0.1 Develop (and/or improve) policies and/or regulations that will promote the reduction of run-off and point and non-point source pollution into NJ's aquatic systems (streams, rivers, lakes/ponds, bays, ocean, wetlands, etc.).
- 100.3.0.3 Develop policies that will promote the long term protection of critical migratory stopover habitats for songbirds, raptors, shorebirds, bats and invertebrates.
- 100.3.0.5 Develop policies that will promote improved and secure habitat connections between conserved SGCN habitats.
- 100.3.0.6 Develop policies that will promote expanding acreages and enhancing the effective size of SGCN habitats by providing biologically appropriate buffers of native habitat surrounding SGCN habitats.
- 100.3.0.7 Amend current policies and/or regulations to increase the ability to protect and preserve coastal habitats (beach/dune, scrub-shrub, forest, wetland, marsh, and marine and estuarine habitats) that provide nesting, migrating, and wintering areas for SGCN birds, fish and other coastal and aquatic SGCN.
- 100.3.0.8 Develop policies and/or regulations with the objective of protecting significant natural and/or unique communities in perpetuity.
- 100.3.0.9 Secure mitigation that creates an environmental benefit for losses of SGCN and their habitats.
- 100.3.0.11 Develop policies that will ensure the protection and/or development of old-growth forest stands with large trees, in particular those within large, contiguous forest tracts.
- 100.3.0.12 Develop policies that promote the preservation and protection of critical SGCN forested habitat and minimize forest edge to benefit interior forest and disturbance-sensitive SGCN.
- 100.3.0.13 Develop policies that will promote protecting and restoring riparian areas.
- 100.3.0.14 Develop policies and/or regulations that increase the protective buffers of wetlands, riparian and floodplain areas, and aquatic habitats (including open waters) to biologically appropriate distances to benefit SGCN that rely upon these habitats and improve the function of the [associated] aquatic systems.
- 100.3.0.15 Develop policies that promote protecting and restoring scrub-shrub habitats to benefit shrub-dependent SGCN.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Eastern Box Turtle

- 100.3.0.18 Develop policies for conserved lands that prohibit planting and supports the control of non-native vegetation and invasive, native vegetation.
- 100.3.0.20 Develop policies and/or regulations that prohibit the presence of managed cat colonies and trap, neuter and release programs in or near critical wildlife habitats.
- 100.3.0.21 Develop policies that minimize wildlife road mortality through: 1) Requiring the integration of wildlife passages into all new and repaired roads, in particular those areas that will connect SGCN habitats, 2) Requiring current fish/wildlife passages be improved and maintained in perpetuity, 3) Supporting seasonal road closures, in particular for unimproved roads, 4) Supporting projects that work to improve connectivity of SGCN habitats such as land conservation through acquisition or other means.
- 100.3.0.26 Adopt regulations requiring the combined sewer overflow alternative analyses required by regulation address potential impacts to wildlife in watercourses or receiving water bodies.
- 100.3.0.31 Create or expand tax-based incentive programs available to private, agricultural, commercial, industrial or governmental landowners and land managers to include or provide for incentives for the maintenance and/or improvement to existing habitat via the endorsement of wildlife-related BMPs.
- 100.3.0.40 Develop laws and/or policies to require vegetative buffers of native plants on preserved farmland and state lands with agricultural leases or agreements.
- 100.3.0.41 Explore all State regulatory requirements for mitigation, restoration, habitat management, etc. to ensure they prohibit the use of specified invasive or other problematic plant species.
- 100.3.0.43 Identify and address (amend) regulatory impediments to beneficial habitat management.
- 100.3.0.44 Incorporate requirements for technical support and funding for mitigation or restoration efforts so as to be consistent with existing regulations.
- 100.3.0.45 Increase the controlled burn season to focus on restoring vegetative communities.
- 100.3.0.46 Investigate and/or develop inter-agency Memorandum of Agreements to share common data stored or managed in program-specific databases.
- 100.3.0.48 Propose new State law or regulation mandating that a State-level "development impact fee" be assessed on all new development approved by municipalities (via the Municipal Land Use Law processes), and dedicate such monies to the development and implementation of regional Habitat Conservation Plans (or existing plans/programs serving the same regional function).
- 100.3.0.49 Review existing CAFRA regulations and ensure that the Coastal Zone Management Rules (NJAC 7:7E) adequately address the issue of disturbance to habitat or species as a result of human activities (e.g., construction, bridge maintenance, road work, etc.).
- 100.3.0.50 Retain endangered, threatened and special concern wildlife and habitat protection measures in the Water Quality Management Program Rules.
- 100.3.0.52 Revise existing and/or incorporate new State land use regulations that specifically address the impacts of new or expanded energy sitings and facilities.
- 100.3.0.53 Revise existing and/or incorporate new State land use regulations that specifically address the impacts of new or expanded rights-of-way corridors associated with energy transport/transmission.
- 100.3.0.54 Revise existing and/or incorporate new State land use regulations that specifically address the impacts of new or expanded surface mining areas.
- 100.3.0.56 Develop regulations that when implemented will protect critical migratory stopover habitats for songbirds, raptors, shorebirds, bats and invertebrates.

Eastern Box Turtle

- 100.3.0.57 Develop regulations that when implemented will improve and secure habitat connections between conserved SGCN habitats.
- 100.3.0.58 Develop regulations that when implemented will promote the expansion of acreages and enhancement of the effective size of SGCN habitats by providing biologically appropriate buffers of native habitat surrounding SGCN habitats.
- 100.3.0.59 Develop regulations that when implemented will increase the ability to protect and preserve coastal habitats (beach/dune, scrub-shrub, forest, wetland, marsh, and marine and estuarine habitats) that provide nesting, migrating, and wintering areas for SGCN birds, fish and other coastal and aquatic SGCN.
- 100.3.0.60 Develop regulations that when implemented will protect significant natural and/or unique communities in perpetuity.
- 100.3.0.62 Develop regulations that when implemented will protect existing old-growth forest stands with large trees and/or stands that are being actively managed for old growth forests, in particular those within large, contiguous forest tracts.
- 100.3.0.63 Develop regulations that when implemented will preserve and protect critical SGCN forested habitat and minimize forest edge to benefit interior forest and disturbance-sensitive SGCN.
- 100.3.0.64 Develop regulations that when implemented will protect and restore riparian areas.
- 100.3.0.65 Develop regulations that when implemented will protect and restore scrub-shrub habitats to benefit shrub-dependent SGCN.
- 100.3.0.68 Develop regulations that when implemented will prohibit the presence of managed cat colonies and trap, neuter and release programs in or near critical wildlife habitats.
- 100.3.0.69 Develop regulations that when implemented will minimize wildlife road mortality.
- 100.3.0.72 Develop regulations that require permit applicants and/or review agencies to assess the cumulative and synergistic effects of a proposed project (i.e., "secondary effects"), both over time and over a larger spatial scale than the site itself.
- 100.3.0.73 Develop regulations that would exempt the conversion of lawns to native vegetation (beneficial to wildlife) from local lawn ordinances.

100. State Agency Policy Integration

100.4.0 Policy initiatives for species and habitat protection

- 100.4.0.1 Create any necessary policy changes (including those to incentive programs) to encourage the integration of SWAP actions associated with SGCN priority habitats as a deliberative factor in agencies' actions (e.g., environmental and land management review processes, land acquisition and management).
- 100.4.0.2 Create a policy that requires the NJ DEP to incorporate scientific information regarding climate change and sea level rise (e.g., predictions, habitat management/acquisition efforts to enhance resilience to inundation) on their websites and to work with other government entities, conservation organizations and other stakeholders to work together to collaboratively use social media campaigns to grow a constituency of NJ residents who have an elevated ecological and climate consciousness.
- 100.4.0.3 Develop policies for mandatory buffer strips on preserved farmlands and state-owned agricultural lands.
- 100.4.0.4 Create a policy that requires the use of wildlife habitat and corridor mapping products for both regulatory use when conducting project reviews and planning/siting new or expanded rights-of-way projects.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Eastern Box Turtle

- 100.4.0.8 Develop a white paper addressing the impacts that existing, new or expanded rights-of-way have upon wildlife, wildlife habitats and habitat connectivity.
- 100.4.0.9 Develop and implement policies to minimize the removal of coarse, woody debris in terrestrial, aquatic and riparian habitats in order to benefit wildlife.
- 100.4.0.12 Develop laws and/or policies to require vegetative buffers of native plants on preserved farmland and state lands with agricultural leases or agreements.
- 100.4.0.13 Develop policies for different circumstances (e.g., roadsides and medians, riparian, aquatic and terrestrial habitats) that outline appropriate habitat/vegetation management strategies and schedules to minimize risks to and benefit wildlife.
- 100.4.0.14 Develop policies to facilitate agreements between eligible entities to manage appropriate conserved lands for grassland-dependent species, and to have access to/obtain restoration funds.
- 100.4.0.16 Develop policies to implement habitat management strategies that will increase the structural diversity surrounding areas used for energy, mining, and transportation and service corridors which include but are not limited to the presence of short and tall grasses, specific host plants, brush piles, water sources/wetlands, shrubby areas, nesting areas, and no-mow set-
- 100.4.0.17 Develop policies to implement habitat management strategies, including prescribed burns, that will increase the structural diversity on preserved farmlands, state-owned agricultural lands, forests, parks and wildlife management areas, and any conserved lands purchased with the assistance of Green Acres and Federal Land & Water Conservation Fund monies to control and reduce the impacts of invasive, non-native species in order to increase structural habitat diversity.
- 100.4.0.18 Develop policies to minimize the extent of infrastructure associated with energy and service corridors or areas (e.g., wind and solar farms, pipelines, utility lines) and that require the implementation of habitat management strategies that will increase the structural diversity in the area including (e.g., the presence of short and tall grasses, specific host plants, brush piles, water sources/wetlands, shrubby areas, nesting areas, and no-mow set-asides).
- 100.4.0.19 Develop regulations that will minimize the creation of new barriers, remove or replace current barriers with appropriately-sized systems to accommodate wildlife dispersal, and to minimize road widening and traffic volume increases within critical wildlife habitat areas.
- 100.4.0.20 Develop state regulations that require energy developers and utility service companies to implement habitat management strategies that will increase the structural diversity of the habitat, minimize habitat fragmentation and commercial infrastructure, and minimize the loss, alteration and/or degradation of the habitat and adjacent lands when working on preserved farmlands, state-owned agricultural lands, forests, parks and wildlife management areas, and any conserved lands purchased with the assistance of Green Acres and Federal Land & Water Conservation Fund monies.
- 100.4.0.22 Work with NJ DEP's Division of Land Use Regulation to ensure protection of listed species and their habitats during stream cleaning events.
- 100.4.0.25 Develop policies that require permit applicants and/or review agencies to assess the cumulative and synergistic effects of a proposed project (i.e., "secondary effects"), both over time and over a larger spatial scale than the site itself.

Eastern Hognose Snake

Focal species that comprise this Conservation Target:

Eastern Hognose Snake

Threats and Action Drivers associated with this Conservation Target:

1 **Residential and Commercial Development**

1.1 Housing and Urban Areas

1.1.1 Land conversion from natural habitat to urban and other residential areas (large and small scale) (Avg. Score: 2.00)

NJ Specific Threats: 1.1.1.1 Fragments terrestrial and aquatic habitats making the area unsuitable for area-sensitive species and inhibit dispersal of animals, reducing gene flow.
1.1.1.2 Loss, alteration and/or degradation of habitat.
1.1.1.3 Lot layout, design and/or landscaping may create conditions that increase wildlife-human conflict.
1.1.1.4 Increased risk of vehicle strikes/mortality to terrestrial-bound and some bird species.
1.1.1.6 Impervious surfaces can cause an increased risk of floods, flash floods and storm damage that degrade terrestrial and aquatic habitats.

1.2 Commercial and Industrial Areas

1.2.1 Land conversion from natural habitat to commercial or industrial areas (large and small scale) (Avg. Score: 2.00)

NJ Specific Threats: 1.2.1.1 Fragments terrestrial and aquatic habitats making the area unsuitable for area-sensitive species and inhibit dispersal of animals, reducing gene flow.
1.2.1.2 Loss, alteration and/or degradation of habitat.
1.2.1.3 Lot layout, design and/or landscaping may create conditions that increase wildlife-human conflict.
1.2.1.4 Increased risk of vehicle strikes/mortality to terrestrial-bound and some bird species.
1.2.1.6 Impervious surfaces can cause an increased risk of floods, flash floods and storm damage that degrade terrestrial and aquatic habitats.

1.3 Tourism and Recreational Areas

1.3.1 Land conversion from natural habitat to recreation or tourism areas (large and small scale) (Avg. Score: 1.00)

NJ Specific Threats: 1.3.1.1 Fragments terrestrial and aquatic habitats making the area unsuitable for area-sensitive species and inhibit dispersal of animals, reducing gene flow.
1.3.1.2 Loss, alteration and/or degradation of habitat.
1.3.1.3 Lot layout, design and/or landscaping may create conditions that increase wildlife-human conflict.
1.3.1.5 Impervious surfaces can cause an increased risk of floods, flash floods and storm damage that degrade terrestrial and aquatic habitats.

2 **Agriculture and Aquaculture**

2.1 Annual and Perennial Crops (non-timber)

2.1.1 Shifting Agriculture (Avg. Score: 2.00)

NJ Specific Threats: 2.1.1.1 Conversion of low-intensity agriculture to intensive agriculture (e.g., tree nursery, row crop) degrades habitat, especially for early-successional species.

Eastern Hognose Snake

2.1.2 Small-holder Farming (Avg. Score: 1.00)

- NJ Specific Threats:** 2.1.2.1 Conversion of low-intensity agriculture to intensive agriculture (e.g., tree nursery, row crop) degrades habitat, especially for early-successional species.
- 2.1.2.2 Fragments terrestrial and aquatic habitats.
- 2.1.2.4 Agricultural practices (e.g., mechanized, row-crop agriculture) can cause direct mortality to wildlife when harvesting takes places.

2.1.3 Agro-industry (Avg. Score: 2.00)

- NJ Specific Threats:** 2.1.3.1 Conversion of low-intensity agriculture to intensive agriculture (e.g., tree nursery, row crop) degrades habitat, especially for early-successional species.
- 2.1.3.2 Fragments terrestrial and aquatic habitats.
- 2.1.3.3 Agricultural practices (e.g., mechanized, row-crop agriculture) can render lands unsuitable for most wildlife due to soil degradation and erosion.

2.2 Wood and Pulp Plantations

2.2.1 Small Holder (Avg. Score: 2.00)

- NJ Specific Threats:** 2.2.1.1 Conversion of native forests to plantations decreases the habitat quality for forest-dependent species.
- 2.2.1.2 Tree harvesting can cause direct mortality to wildlife, especially if done during peak activity periods or vulnerable life stages (e.g., denning, nesting, gestation/birthing, basking, roosting, pre-volancy, etc.).

2.2.2 Agro-industry Plantations (Avg. Score: 2.00)

- NJ Specific Threats:** 2.2.2.1 Conversion of native forests to plantations decreases the habitat quality for forest-dependent species.
- 2.2.2.2 Tree harvesting can cause direct mortality to wildlife, especially if done during peak activity periods or vulnerable life stages (e.g., denning, nesting, gestation/birthing, basking, roosting, pre-volancy, etc.).

2.3 Livestock Farming and Ranching

2.3.2 Small-holder Grazing (Avg. Score: 1.00)

- NJ Specific Threats:** 2.3.2.1 Inappropriately located, newly created horse/livestock farms may fragment forest habitats.

2.3.3 Agro-industry Grazing (Avg. Score: 2.00)

- NJ Specific Threats:** 2.3.3.1 Inappropriately located, newly created horse/livestock farms may fragment forest habitats.

3 Energy Production and Mining

3.1 Oil and Gas Facilities and Pipelines

3.1.1 Distribution processes of petroleum and other liquid hydrocarbons (Avg. Score: 2.00)

- NJ Specific Threats:** 3.1.1.1 Fragments terrestrial and aquatic habitats.
- 3.1.1.2 Loss, alteration and/or degradation of habitat.
- 3.1.1.3 Increased risk of oil spills.
- 3.1.1.4 Increased noise pollution.
- 3.1.1.5 Increased vehicular and ship traffic associated with construction and operations, and therefore an increased risk of wildlife mortality from strikes.
- 3.1.1.6 Increased risk of collision between marine mammals, sea turtles and fish and the marine-based structures/facilities.

3.1.2 Natural gas distribution processes (Avg. Score: 2.00)

- NJ Specific Threats:** 3.1.2.1 Fragments terrestrial and aquatic habitats.
3.1.2.2 Loss, alteration and/or degradation of habitat.
3.1.2.3 Increased risk of gas leaks and explosions.
3.1.2.4 Increased noise pollution.
3.1.2.5 Increased vehicular and ship traffic associated with construction and operations, and therefore an increased risk of wildlife mortality from strikes.
3.1.2.6 Increased risk of collision between marine mammals, sea turtles and fish and the marine-based structures/facilities.

3.2 Mining and Quarrying

3.2.2 Surface Mining - Rock Quarry (and sand quarries) (Avg. Score: 2.00)

- NJ Specific Threats:** 3.2.2.1 Fragments terrestrial and aquatic habitats.
3.2.2.2 Loss, alteration and/or degradation of terrestrial and aquatic habitats.
3.2.2.3 Increased risk of vehicle strikes/mortality to wildlife.

3.3 Renewable Energy

3.3.1 Wind Power (Avg. Score: 2.00)

- NJ Specific Threats:** 3.3.1.2 Fragments terrestrial habitats.
3.3.1.3 Loss, alteration and/or degradation of habitat.
3.3.1.4 Increased commercial infrastructure.

3.3.2 Solar Power (Avg. Score: 3.00)

- NJ Specific Threats:** 3.3.2.1 Fragments terrestrial habitats.
3.3.2.2 Loss, alteration and/or degradation of habitat.
3.3.2.3 Increased commercial infrastructure.

3.4 Conventional Power Plants

3.4.0 Conventional Power Plants (Avg. Score: 1.00)

- NJ Specific Threats:** 3.4.0.2 Loss, alteration and/or degradation of habitat due to new or the expansion of current facilities.

4 Transportation and Service Corridors

4.1 Roads and Railroads

4.1.1 Land conversion from natural habitat to roads and railroads (large and small scale) (Avg. Score: 3.00)

- NJ Specific Threats:** 4.1.1.1 Fragments terrestrial and aquatic habitats making the landscape unsuitable for area-sensitive species and inhibiting dispersal of non-volant animals, reducing gene flow.
4.1.1.2 Loss, alteration and/or degradation of habitat associated with road and railroad construction and maintenance, and degradation of adjacent habitats.
4.1.1.3 Re-establishment of abandoned railroad lines may displace wildlife, in particular, less mobile species using the area to fulfill critical life history requirements.
4.1.1.4 Re-establishment of abandoned railroad lines may increase the risk of direct mortality on wildlife.

4.1.2 Movement of cars and other vehicles on roads and railroads (large and small scale) (Avg. Score: 3.00)

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Eastern Hognose Snake

NJ Specific Threats: 4.1.2.1 Increased vehicle traffic increases the risk of wildlife mortality from strikes.

4.2 Utility and Service Lines

4.2.1 Land conversion from natural habitat to utility and other service lines (large (Avg. Score: 2.00)
and small scale) or communication towers and associated access roads

NJ Specific Threats: 4.2.1.1 Fragments terrestrial and aquatic habitats making the landscape unsuitable for area-sensitive species, inhibiting dispersal of non-volant animals, reducing gene flow, and creating barriers to fish when service line-associated roads cross streams (e.g., bridges, culverts, fords, etc.).

4.2.1.2 Loss, alteration and/or degradation of habitat associated with rights-of-way construction and maintenance, and degradation of adjacent habitats.

4.2.2 Management of rights-of-way or communication tower facilities and/or (Avg. Score: 2.00)
their associated access roads

NJ Specific Threats: 4.2.2.1 Improper or poorly scheduled vegetation management can cause direct mortality to and may reduce productivity of wildlife.

5 **Biological Resource Use**

5.1 Hunting and Collecting Terrestrial Animals

5.1.1 Intentional Use (Avg. Score: 2.00)

NJ Specific Threats: 5.1.1.1 Illegal collection of wildlife can have detrimental impacts on populations.

5.1.3 Persecution/Control (Avg. Score: 3.00)

NJ Specific Threats: 5.1.3.1 Wanton killing of perceived dangerous and/or undesirable animals.

5.2 Gathering Terrestrial Plants

5.2.2 Unintentional effects (Avg. Score: 1.00)

NJ Specific Threats: 5.2.2.1 Stepping on nests or young/hatchling animals.

5.3 Logging and Wood Harvesting

5.3.1 Intentional Use (subsistence/small scale) (Avg. Score: 1.00)

NJ Specific Threats: 5.3.1.1 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN may fragment their terrestrial habitats.

5.3.1.2 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN may cause the loss, alteration and/or degradation of wildlife habitat.

5.3.1.5 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN and unsustainable forestry practices may decrease structural diversity and biomass leading to reduced biodiversity and ecological integrity.

5.3.2 Intentional Use (large scale) (Avg. Score: 2.00)

NJ Specific Threats: 5.3.2.1 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN may fragment their terrestrial habitats.

5.3.2.2 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN may cause the loss, alteration and/or degradation of wildlife habitat.

5.3.2.5 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN and unsustainable forestry practices may decrease structural diversity and biomass leading to reduced biodiversity and ecological integrity.

5.3.3 Unintentional effects (subsistence/small scale) (Avg. Score: 2.00)

NJ Specific Threats: 5.3.3.1 Direct mortality of wildlife, direct loss of suitable habitats (roost, foraging, shelter, etc.), and can disrupt sensitive species, decreasing the likelihood of success and/or reproduction.

5.3.4 Unintentional effects (large scale)

(Avg. Score: 2.00)

- NJ Specific Threats:** 5.3.4.1 Direct mortality of wildlife, direct loss of suitable habitats (roost, foraging, shelter, etc.), and can disrupt sensitive species, decreasing the likelihood of success and/or reproduction.
- 5.3.4.2 Extensive infrastructure and larger equipment requirements present a potential risk of direct injury/mortality to wildlife.
- 5.3.4.5 Lack of appropriate, sustainable forest management can lead to a decrease in forest habitat diversity, degraded habitat for many forest species, the loss of habitat for early-successional species, and/or the loss of unique habitats for species that need canopy breaks and multi-aged tree composition to fulfill various life history requirements.

6 Human Intrusions and Disturbance

6.1 Recreational Activities

6.1.1 Off-road vehicles (motorized and non-motorized)

(Avg. Score: 2.00)

- NJ Specific Threats:** 6.1.1.1 Inappropriate use of off-road vehicles creates new roads/trails which fragments habitat.
- 6.1.1.2 Inappropriate use of off-road vehicles can degrade terrestrial and aquatic habitat and reduce the suitability of adjacent habitats for wildlife.
- 6.1.1.3 Increased risk of harassment that results in a change in wildlife behavior and/or direct mortality from vehicle strikes.
- 6.1.1.4 Increased noise pollution.
- 6.1.1.6 Off-road vehicles can be a mechanism of transference of wildlife diseases and invasive plant species if gear and apparel are not properly sanitized between sites.

6.1.5 Wildlife observation and photography

(Avg. Score: 2.00)

- NJ Specific Threats:** 6.1.5.1 Improperly conducted recreational activities may disrupt normal wildlife behaviors which can result in reduced reproductive success or survival, abandonment of critical sites, etc.
- 6.1.5.2 Participants may introduce wildlife diseases and invasive plant species when gear and apparel is not properly sanitized between sites.

6.1.6 Recreational use of cliffs, rocks and ridgelines

(Avg. Score: 2.00)

- NJ Specific Threats:** 6.1.6.1 Recreational rock-climbing and rock-scrambling can cause reduced reproductive success or reproductive failure for wildlife by disrupting normal reproductive behaviors and/or reduce breeding success by forcing them into suboptimal habitats.
- 6.1.6.2 Participants may introduce wildlife diseases and invasive plant species when gear and apparel is not properly sanitized between sites.
- 6.1.6.3 Recreational use of rock outcrops and ridgelines by hikers and bikers can lead to direct mortality through wanton killing or incidental take, and alter natural behaviors, reducing breeding and/or foraging success.

6.1.7 Other

(Avg. Score: 2.00)

- NJ Specific Threats:** 6.1.7.2 Human presence in sensitive areas may introduce wildlife diseases or pathogens into the system.

6.2 Military Exercises

6.2.1 Military exercises

(Avg. Score: 2.00)

- NJ Specific Threats:** 6.2.1.1 Military testing and training exercises may inflict disturbance and potential physical harm to wildlife.
- 6.2.1.3 Lack of opportunity for non-federal wildlife managers to influence activities on military bases may result in detrimental impacts to SGCN and/or missed opportunities to engage in projects that benefit SGCN.

6.3 Work and Other Activities

Eastern Hognose Snake

6.3.1 Unauthorized research projects at significant habitats (Avg. Score: 2.00)

- NJ Specific Threats:** 6.3.1.1 Participants may introduce wildlife diseases and invasive plant species when gear and apparel is not properly sanitized between sites.
- 6.3.1.2 Accidental trampling of nests, eggs/egg masses, and unseen individuals may impact reproductive success or cause direct mortality to SGCN.
- 6.3.1.3 Activities conducted without proper precautions may disturb and disrupt normal wildlife behaviors, which may impact reproductive success or survival, cause abandonment of critical sites, etc.

6.3.2 Authorized research projects at significant habitats (Avg. Score: 2.00)

- NJ Specific Threats:** 6.3.2.2 Participants may introduce wildlife diseases and invasive plant species when gear and apparel is not properly sanitized between sites.
- 6.3.2.3 Accidental trampling of nests, eggs/egg masses, and unseen individuals may impact reproductive success or cause direct mortality to SGCN.
- 6.3.2.4 Activities conducted without proper precautions may disturb and disrupt normal wildlife behaviors, which may impact reproductive success or survival, cause abandonment of critical sites, etc.

6.3.3 Other "work" unrelated to research (Avg. Score: 1.00)

- NJ Specific Threats:** 6.3.3.1 Construction projects may disrupt normal wildlife behavior which can result in reduced reproductive success or survival, abandonment of critical sites, etc. (e.g., bridge-nesting birds).
- 6.3.3.4 Workers may introduce wildlife diseases and invasive plant species when gear and apparel is not properly sanitized between sites.

7 **Natural Systems Modifications**

7.1 Fire and Fire Suppression

7.1.1 Increase in Fire Frequency/Intensity (Avg. Score: 2.00)

- NJ Specific Threats:** 7.1.1.1 Increase in frequency and intensity of wild fires as a result of droughts and heat waves drying out vegetation and litter.
- 7.1.1.2 Increase in frequency of wild fires as a result of illegal activities.
- 7.1.1.3 Unnatural fire regimes occurring as a result of military exercises.
- 7.1.1.4 Lack of diversity in age structure and composition of vegetation due to expansive, frequent fires.

7.1.2 Suppression of Fire Frequency/Intensity (Avg. Score: 3.00)

- NJ Specific Threats:** 7.1.2.1 Shift in vegetative communities as a result of suppression of natural fires.
- 7.1.2.2 Lack of diversity in age structure and composition of vegetation due to the suppression of fire.

7.2 Dams and Water Management/Use

7.2.12 Culverts (Avg. Score: 1.00)

- NJ Specific Threats:** 7.2.12.1 Improper design, placement, installation and maintenance of culverts and other stream crossing structures can impede or prevent the movements of terrestrial organisms and can restrict or limit stream flow, impeding the movement of aquatic organisms along riparian corridors.

7.3 Other Ecosystem Modifications

7.3.2 Inappropriate timing of mowing (Avg. Score: 2.00)

- NJ Specific Threats:** 7.3.2.1 Increased risk of direct mortality and/or reduced productivity of wildlife, as well as reduced use by migrating species.

7.3.3 Removal of coarse woody debris (streams, forests, scrub-shrub habitats) (Avg. Score: 2.00)

- NJ Specific Threats:** 7.3.3.2 Decreases habitat and/or corridor suitability due to limited or absent shelter and foraging habitat.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Eastern Hognose Snake

- 7.3.3.3 Removal of dead trees (snags), large felled logs (i.e., those > 12" dbh), and other downed woody material diminishes nesting, roosting, and sheltering options for wildlife, and increases the ease at which deer can browse regenerating vegetation.

- 7.3.3.4 Decreases available basking, shelter, and foraging habitats.

7.3.4 Lack of natural disturbance patterns or ecosystem functions due to species loss (Avg. Score: 1.00)

- NJ Specific Threats:** 7.3.4.5 The lack of forest disturbance minimizes the diversity of herbaceous vegetation and other shrubs and trees that need a lot of sunlight to grow.

7.3.5 Poor habitat management (Avg. Score: 3.00)

- NJ Specific Threats:** 7.3.5.1 Improper or poorly scheduled maintenance of man-made corridors (e.g., roadsides and medians) can cause direct mortality to and may reduce productivity of wildlife.

- 7.3.5.3 Vegetation clearing removes terrestrial and riparian corridors for animal movement, shelter, and resting areas.

- 7.3.5.5 Habitat management that alters or removes vegetation without implementing long-term management increases the risk of invasive and exotic plants establishing themselves, outcompeting native vegetation.

- 7.3.5.6 Habitat management, including that which occurs on public and private lands, that does not consider timing and species' behaviors can result in the direct mortality and/or alteration or loss of habitat.

- 7.3.5.7 Improperly planned habitat management and/or mitigation efforts along roadsides and within the medians can attract wildlife and increase the risk of vehicle strikes.

- 7.3.5.12 Lack of diversity in age structure and composition of vegetation due to lack of natural disturbances and/or vegetation management.

- 7.3.5.15 Lack of funding, incentives, or technical guidance resources to proactively manage land to benefit SGCN wildlife.

8 Invasive and Other Problematic Species, Genes and Diseases

8.1 Invasive Non-native/ Alien Species/ Diseases

8.1.1 Unspecified Species (Avg. Score: 1.00)

- NJ Specific Threats:** 8.1.1.1 Displace or outcompete native species for resources.

- 8.1.1.2 Alters, degrades and/or reduces the structural diversity of the natural composition of the landscape, including aquatic systems.

- 8.1.1.3 Invasive, non-native insects can damage native vegetation at a large scale, leading to die-offs, altering the ecological community.

- 8.1.1.4 Invasive, non-native animals increase the risk of predation on native animals and/or herbivory on native vegetation.

- 8.1.1.5 Invasive, non-native animals and plants increase the risk of introduction and transference of diseases

- 8.1.1.6 Invasive, non-native plants may create physical barriers for some species.

8.1.4 Invasive non-native terrestrial/wetland animals (Avg. Score: 1.00)

- NJ Specific Threats:** 8.1.4.1 Displace or out-compete native species for resources (food, shelter), alter the composition of the native landscapes/aquatic systems, diminish habitat suitability and reduce ecological integrity of natural communities, and may introduce disease into a population.

- 8.1.4.2 Free-roaming and feral domestic animals such as cats and dogs causes direct mortality of wildlife and disturbance to wildlife breeding and resting areas.

8.1.5 Invasive non-native terrestrial/wetland plants (Avg. Score: 1.00)

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Eastern Hognose Snake

NJ Specific Threats: 8.1.5.1 Displace or out-compete native species for resources (food, light, shelter), alter the composition of the native landscapes/aquatic systems, diminish habitat suitability and reduce ecological integrity of natural communities, and may introduce disease into a population.

8.1.6 Invasive non-native fungal/bacterial diseases (Avg. Score: 1.00)

NJ Specific Threats: 8.1.6.1 The introduction of non-native fungal and bacterial diseases threatens native populations and ecosystems.

8.2 Problematic Native Species/Diseases

8.2.1 Unspecified Species (Avg. Score: 1.00)

NJ Specific Threats: 8.2.1.1 Overabundant native insects can damage native vegetation at a large scale, leading to die-offs, altering the ecological community.

8.2.1.2 Invasive pathogens and insects may increase in range and abundance as limiting factors (such as temperature) are altered as a result of climate change.

8.2.1.4 Human-subsidized native species can become overabundant, increasing predation on other native wildlife and/or altering the ecological community.

8.2.2 Named Species (Avg. Score: 1.00)

NJ Specific Threats: 8.2.2.2 Human-subsidized native species can become overabundant, increasing predation on other native wildlife and/or altering the ecological community.

8.4 Problematic Species/Diseases of Unknown Origin

8.4.1 Unspecified Species (Avg. Score: 1.00)

NJ Specific Threats: 8.4.1.1 Non-native or poorly understood diseases and parasites could potentially impact native animals.

8.4.2 Named Species (Avg. Score: 2.00)

NJ Specific Threats: 8.4.2.2 Diseases of unknown origin, such as snake fungal disease and Ranavirus, can cause significant mortality among native animal populations.

8.5 Viral/Prion-induced Diseases

8.5.1 Unspecified Species (Disease) (Avg. Score: 1.00)

NJ Specific Threats: 8.5.1.1 There is a large knowledge gap regarding the existence of, or potential for, other diseases impacting native wildlife.

8.5.2 Named Species (Disease) (Avg. Score: 2.00)

NJ Specific Threats: 8.5.2.1 Diseases such as West Nile Virus, arenavirus, sudden oak death, Avian Influenza, and snake fungal disease cause morbidity or mortality to native populations.

8.6 Diseases of Unknown Cause

8.6.0 Unknown Diseases (Avg. Score: 1.00)

NJ Specific Threats: 8.6.0.1 Diseases yet to be identified by pathologists and virologists cause decreased fitness or mortality to native populations.

9 **Pollution**

9.2 Industrial and Military Effluents

9.2.1 Oil Spills (Avg. Score: 1.00)

NJ Specific Threats: 9.2.1.1 Oil spills render resting, breeding and foraging habitats temporarily unavailable to wildlife, altering normal wildlife behavior.

9.2.1.2 Oil spills have long term effects on habitats and damage ecological processes that can cause local wildlife population declines and impaired foraging or reproduction.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Eastern Hognose Snake

9.2.1.3 Oil spills cause external oiling of wildlife and ingestion of oil, both of which can injure or kill wildlife.

9.2.3 Other (Avg. Score: 1.00)

NJ Specific Threats: 9.2.3.2 Chemical spills have long term effects on habitats and damage ecological processes that can cause local wildlife population declines and impaired foraging or reproduction.

9.2.3.3 Chemical spills may render resting, breeding and foraging habitats temporarily unavailable to wildlife, altering normal wildlife behavior.

9.2.4 Other: Hydrofracturing (Avg. Score: 1.00)

NJ Specific Threats: 9.2.4.2 Uncontrolled effluents escaping from hydrofracturing facilities can cause injury to wildlife and alter normal behaviors.

9.2.5 Other: Industrial toxic settling ponds (Avg. Score: 1.00)

NJ Specific Threats: 9.2.5.1 Surficial or open industrial effluent ponds can cause injury or death to wildlife that become exposed through ingestion or submersion.

9.3 Agricultural and Forestry Effluents

9.3.2 Soil Erosion and Sedimentation (Avg. Score: 1.00)

NJ Specific Threats: 9.3.2.2 Soil erosion and sedimentation limit the re-establishment of plants needed by terrestrial wildlife as cover and a food base.

9.3.3 Herbicides and Pesticides (Avg. Score: 1.00)

NJ Specific Threats: 9.3.3.2 Use of rodenticides can cause secondary actions of injury and death to animals in the course of scavenging.

9.3.3.3 Use of pesticides can directly harm non-target species through direct contact and/or by reducing and/or contaminating their food supply.

9.3.5 Control of insect pests and plants leading to mortality of non-target species not associated with agriculture (Avg. Score: 1.00)

NJ Specific Threats: 9.3.5.1 Use of pesticides, insecticides, and/or herbicides can directly harm non-target species, such as amphibians and beneficial invertebrates through direct contact and/or by reducing and/or contaminating their food supply.

9.3.5.4 Improper use of current insecticides, such as those containing esfenvalerate, prallethrin, or piperonyl butoxide, or past use of pesticides containing chlordane still present in the soils, are toxic to various wildlife species, and can cause injury, mortality, or other effects that impair population viability.

9.3.5.5 Use of pesticides and herbicides can minimize the abundance of food sources for native wildlife populations.

9.4 Garbage and Solid Waste

9.4.1 Direct hazards to wildlife (Avg. Score: 1.00)

NJ Specific Threats: 9.4.1.1 Wildlife may ingest garbage causing choking or impingement in the digestive system, or they may become physically entangled in it (e.g., plastic or abandoned fish nets); conditions that make them unable to feed or drink, cause them to suffocate or drown, or otherwise restrict the animal's movement making them more susceptible to predators, starvation or injury.

9.4.1.2 Garbage and solid waste destroys natural habitats and obstructs wildlife movements.

9.5 Air-Bourne Pollutants

9.5.6 Herbicides and Pesticides (Avg. Score: 2.00)

NJ Specific Threats: 9.5.6.1 May result in injury or direct mortality of non-target species.

9.6 Excess Energy

Eastern Hognose Snake

9.6.3 Noise Pollution

(Avg. Score: 1.00)

NJ Specific Threats: 9.6.3.1 Acute and chronic noise pollution in and adjacent to terrestrial and aquatic (marine and freshwater) environments could disrupt normal behaviors of wildlife such as migration, communication, feeding, eluding predators, resting and breeding, etc.

11 Climate Change and Severe Weather

11.1 Habitat Shifting or Alteration

11.1.0 Macro- and Micro-Climate Alterations

(Avg. Score: 1.00)

NJ Specific Threats: 11.1.0.1 Alters native terrestrial and aquatic habitats at the macro- and micro-climate levels that can affect suitability for wildlife, in particular specialist species.

11.3 Temperature Extremes

11.3.1 Temperature extremes

(Avg. Score: 2.00)

NJ Specific Threats: 11.3.1.4 Extremely low temperatures and/or extensive periods of unseasonably low temperatures during critical life history stages (e.g., hibernation, gestation/nesting) can alter animals' behaviors and decrease survivorship.

11.4 Storms and Flooding

11.4.2 Increased rainfall

(Avg. Score: 2.00)

NJ Specific Threats: 11.4.2.2 Extreme rain events can damage wildlife nesting and resting habitats, including impacts to avian eggs and chick and small mammal survivorship.

11.6 Phenology Shifting or Alteration

11.6.2 Phenology shifts related to predator-prey ecology

(Avg. Score: 1.00)

NJ Specific Threats: 11.6.2.1 Alters inter-specific relationships (e.g., competition, parasitism, predation) of wildlife, ultimately leads to detrimental impacts on the ecological system.

11.6.2.2 Shifts timing of species migration, breeding and hibernation, and available food resources, causes redistribution of species, or mortality for species that are unable to relocate due to their already isolated habitat or limited mobility.

11.6.3 Phenology shifts related to species redistribution

(Avg. Score: 1.00)

NJ Specific Threats: 11.6.3.1 Shifts in timing of species migration, breeding and hibernation, and available food resources, as a result of wildlife range shifts driven by climate change.

11.6.3.2 Shifts in nesting times or egg incubation durations can limit nest success and longterm populations.

12 Resource Management Needs

12.1 Resource information collection needs

12.1.1 Lack of initial baseline inventory

(Avg. Score: 3.00)

NJ Specific Threats: 12.1.1.1 Lack of information regarding the distribution, connectivity and quality of SGCN habitats throughout the State, and where habitat enhancement/restoration will benefit SGCN and other wildlife.

12.1.1.2 Lack of information regarding the population dynamics and trends, habitat requirements and dispersal distances of the various age classes, and survivorship of SGCN throughout the State.

12.1.2 Lack of up-to-date existing information

(Avg. Score: 3.00)

NJ Specific Threats: 12.1.2.1 Lack of (routine, regular, ongoing) surveys/assessments that provide up-to-date information regarding population trends or health, and/or status of fish, wildlife and/or their habitats.

12.1.3 Need to answer research question

(Avg. Score: 3.00)

NJ Specific Threats: 12.1.3.1 There are significant knowledge gaps regarding distribution, dispersal, diseases, population trends, etc. of SGCN.

Eastern Hognose Snake

12.1.4 Need to develop new technique

(Avg. Score: 2.00)

NJ Specific Threats: 12.1.4.1 Improve and evaluate survey methods for SGCN and their habitats; alter as needed.

12.1.4.2 Improve and evaluate survey methods for species not easily detected through standard survey methods.

12.3 Regulatory Reform

12.3.0 State Regulatory Reforms

(Avg. Score: 1.00)

NJ Specific Threats: 12.3.0.1 Regulatory habitat protections within state land use regulations are spatially limited to specific geographic areas (e.g., Pinelands, Coastal Area) or geographic features (e.g., wetlands, streams) and so fail to protect critical habitats that exist outside of these regulated areas.

12.3.0.3 Lack of a licensing program and standards for NJ Nuisance Wildlife Control Operators (NWCs) leads to inadequate controls over handling of wildlife and lack of reporting of non-game/SGCN species (and all wildlife) encountered in nuisance situations.

12.3.0.7 Activities that threaten SGCN, their food sources, and/or habitats are often regulated separately and without consideration for the cumulative and synergistic effects over time or over a larger spatial scale. Therefore, regulations can fail to protect SGCN populations over time.

12.3.0.9 Prescribed burns implemented by the NJ Forest Fire Service are constrained by State air quality regulations to a timeframe where seasonal weather conditions are less than ideal for effective burning. As a result, the Forest Fire Service is limited in the number of overall prescribed burns it can implement to restore habitat for wildlife.

12.3.0.10 Land use regulatory processes pertaining to habitat creation, enhancement or restoration projects can be costly and/or burdensome, precluding or discouraging the development or implementation of conservation projects.

12.4 Internal Policy & Procedures Reform

12.4.0 State Policy and Procedure Reform

(Avg. Score: 1.00)

NJ Specific Threats: 12.4.0.1 A species-by-species management focus as opposed to ecological systems and biodiversity generally has greater opportunity for unintended consequences for other species and may be less efficient in developing appropriate management actions.

12.4.0.2 Policies and procedures for lands management that lack consideration of the impacts of activity timing can result in unintended impacts to wildlife during vulnerable periods.

12.4.0.3 Lack of internal understanding regarding beneficial habitat impacts of storm events leads to policies and practices that reverse or decrease such beneficial effects (e.g., beach-filling, shoreline hardening, "hazard" tree and log removal from forests, etc.

12.4.0.5 Bureau of Forest Fire Management policy has traditionally implemented prescribed burns on State lands for the sole purpose of public safety (i.e., addressing hazard fuel reduction), missing opportunities to burn in a manner that would additionally manage habitat for ecological diversity.

12.4.0.7 Land preservation contracts, easements, etc. that do not contain prescriptive language or flexibility allowing for habitat management can result in unsuitable habitat conditions and biodiversity declines for SGCN.

14 Education/ Outreach Needs

14.1 Education needs

14.1.1 Need for improved knowledge of fish and wildlife and their habitats

(Avg. Score: 2.00)

NJ Specific Threats: 14.1.1.1 Lack of understanding of the importance of various SGCN habitats, their connectivity to similar habitats, and how planning decisions impact their quality and the wildlife that depend upon them.

14.1.1.2 Lack of general knowledge of SGCN life histories and vulnerabilities as they relate to land management practices.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Eastern Hognose Snake

- 14.1.1.3 Lack of understanding of the need to manage both natural and anthropogenic (e.g., yards, lawns, hayfields, etc.) habitats to minimize impacts or increase benefits to SGCM and their habitats.

14.2 Outreach needs

- 14.2.1 Need to improve specific understanding of agency/organization goals, objectives and ongoing wildlife conservation actions (Avg. Score: 2.00)

NJ Specific Threats: 14.2.1.1 Need to develop greater understanding of and support for efforts implemented to enhance SGCM habitat and biodiversity through various forest management practices.

15 Administrative Needs

15.2 Organizational/program planning needs

- 15.2.3 Need for multi-state, regional and landscape scale planning (Avg. Score: 1.00)

NJ Specific Threats: 15.2.3.1 State governance and financial structures can sometimes inhibit conservation planning and implementation at the regional and landscape-scales that are often more effective at setting priorities and meeting species and habitat conservation goals and objectives.

Actions to address the Threats and Action Drivers associated with this Conservation Target:

1 Coordination and Administration

1.2 Incentives

1.2.1 Incentives

- 1.2.1.2 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to private and public landowners and land managers to increase the effective size of SGCM habitats by protecting/restoring adjacent habitats that contribute to the overall size of the "core" area and/or provide a natural buffer, enhancing the suitability of the core area for SGCM, and/or connect conserved SGCM habitats.
- 1.2.1.4 Secure and promote the protection, restoration, and/or development of old-growth forest stands with large trees, in particular those within large, contiguous forest tracts through incentive programs.
- 1.2.1.5 Secure and promote the protection/restoration of critical SGCM forested habitat and minimize forest edge to benefit interior forest and disturbance-sensitive SGCM through incentive programs.
- 1.2.1.8 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to municipalities, land developers, and other land managers to retain and/or enhance native vegetation adjacent to aquatic habitats, and along riparian areas and wildlife movement corridors.
- 1.2.1.9 Develop a new funding source, targeting natural resource damages monies, mitigation monies or other available sources, to fund new or existing Forestry Stewardship Programs.
- 1.2.1.10 Coordinate across government agencies and non-government organizations to maximize the availability of and enrollment in existing landowner incentive programs (e.g., "farm bill," partners, etc.) to maintain and/or improve habitat.

Eastern Hognose Snake

- 1.2.1.11 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to public and private landowners and managers, including but not limited to government and non-government agencies/organizations, energy, mining, and transportation and utility service companies/agencies, to minimize commercial infrastructure and impervious surfaces, and to improve wildlife habitats, limit fragmentation, reduce elements which would exacerbate mortality, and/or implement activities/restoration that would create new or improved corridor habitat and/or increase connectivity, and to increase structural habitat diversity through the implementation of a variety of vegetation management practices that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting), and to minimize (if not avoid) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
- 1.2.1.12 Create incentives (non-monetary and/or monetary) for land developers to redevelop abandoned areas (e.g., shopping centers, office complexes) to minimize the loss of natural habitats and reduce the extent of impervious surfaces as part of new construction to increase water recharge in those areas.
- 1.2.1.13 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to land developers to minimize the impacts of new residential and commercial developments on SGCN and their habitats.
- 1.2.1.18 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to public and private landowners and land managers to control and reduce the impacts of invasive, native and non-native species in order to increase structural habitat diversity.
- 1.2.1.19 Create incentives for federal, state and local agencies and approved consulting foresters that provide financial, logistical or planning assistance to farmers, woodland landowners, and private landowners to adopt and/or endorse consistent BMPs concerning controlled burns to maintain and/or improve wildlife habitat.
- 1.2.1.20 Coordinate across government agencies and non-government organizations to create or expand upon tax-based incentive programs available to private, agricultural, commercial, industrial or governmental landowners and land managers to include or provide for incentives for the maintenance and/or improvement to existing habitat via the endorsement of wildlife-related BMP's.
- 1.2.1.23 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to private and public landowners and land managers to provide cost shares and/or plan approvals for management based on management approaches and prescriptions.
- 1.2.1.26 Develop a new funding source, targeting natural resource damages monies, mitigation monies or other available sources, to fund new or existing landowner incentive programs.
- 1.2.1.28 Create incentives to implement dynamic forest disturbance patterns, using tools such as fire, flooding, and silviculture, to support the full life cycle requirements of forest and early successional wildlife species.

2 Direct Management of Natural Resources

2.2 Dam and barrier removal

2.2.1 Culvert work

- 2.2.1.1 Replace existing barriers to wildlife movement with and/or install appropriately-sized systems to accommodate wildlife dispersal.

2.3 Fire management

Eastern Hognose Snake

2.3.2 Fuel reduction

2.3.2.1 Prevent wildfires by reducing natural fuel (e.g., leaf litter).

2.3.3 Prescribed burning

2.3.3.1 Evaluate different management techniques of prescribed burns that might be used to mimic the historic role of fire and other natural disturbances in shaping an ecosystem.

2.3.3.2 Conduct prescribed burning in Northern New Jersey forests to maintain and regenerate a mosaic of upland forest habitats.

2.3.3.3 Conduct prescribed burning to improve wildlife habitat.

2.8 Invasive species control

2.8.0 Invasive species control strategies and implementation

2.8.0.4 Implement control/management strategies to reduce the impacts and/or limit the distribution of invasive, native and non-native species (wildlife and plants) that pose threats to native wildlife or communities. Encourage the implementation of biological and mechanical removal/control. When chemical control is used, encourage low-volume, targeted application using NJDEP-approved chemicals in accordance with the specific instructions for that chemical. Follow BMPs to maximize the effectiveness of the strategies while avoiding excessive harm to non-target species.

2.8.0.5 Implement biologically safe and appropriate control/management strategies, and where appropriate, eradication strategies to reduce the impacts and/or limit the distribution of invasive and/or non-native plant species within or near aquatic systems using methods that will provide the most protection to the aquatic and riparian ecological system, and minimize disturbance to the soil and wildlife. Encourage the implementation of biological and mechanical removal/control. When chemical control is used, encourage low-volume, targeted application using NJDEP-approved chemicals in accordance with the specific instructions for that chemical.

2.8.0.6 Implement long-term management of invasive and/or non-native plants to help maintain functioning ecological systems and biological diversity, and to enhance travel corridors. Encourage the implementation of biological and mechanical removal/control. When chemical control is used, encourage low-volume, targeted application using NJDEP-approved chemicals in accordance with the specific instructions for that chemical.

2.10 Planting/seeding

2.10.0 Planting/seeding strategies for terrestrial or aquatic habitat creation or restoration

2.10.0.1 Prevent or ameliorate near-term impacts of climate change throughout the State by developing, implementing and monitoring/evaluating habitat management strategies that will establish/improve habitat resilience (e.g., shorelines of the coast and Delaware Bay, forested habitats of the Pinelands and Skylands) that benefits wildlife inhabiting these areas, in particular within the coastal and Delaware Bay areas.

2.10.0.3 Restore and/or enhance habitats to benefit urban-associated SGCN.

2.10.0.4 Restore and/or enhance suitable travel corridors connecting conserved habitats for SGCN by restoring unsuitable (or less optimal) habitats.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Eastern Hognose Snake

- 2.10.0.5 Implement habitat restoration and/or enhancement activities that include the creation of vegetative buffers between sensitive habitats (e.g., aquatic systems) and human-inhabited areas (e.g., residences, parks, etc.) and that is conducted during appropriate timing to avoid sensitive periods (e.g., nesting, denning, roosting) while minimizing (if not avoiding) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity
- 2.10.0.6 Expand the acreages and enhance the effective size of SGCN habitats by restoring adjacent, less optimal or unsuitable, habitats.
- 2.10.0.7 Restore/reclaim and enhance degraded rare species habitats through strategic revegetation and management efforts for documented/target SGCN.
- 2.10.0.8 Protect significant natural and/or unique communities by implementing best management practices when conducting habitat restoration strategies.
- 2.10.0.9 Restore and/or enhance riparian and floodplain habitats, inland wetland habitats (marsh, vernal pool, fen, emergent shrubland, forest), and other aquatic habitats (including open waters) and/or biologically appropriate buffers to minimize degradation, alteration and/or changes in hydrology and subsequent disturbances to and behavioral changes of wildlife (e.g., restoring biologically appropriate buffers, revegetation or restoration efforts, etc.).
- 2.10.0.12 Create and/or maintain scrub-shrub habitats through revegetation efforts with little to no impact on forested, wetland and grassland habitats to maintain populations of shrub-dependent SGCN.
- 2.10.0.14 Implement best management practices (BMPs), protective strategies and guidelines for restoring and enhancing healthy, SGCN-associated habitats while minimizing (if not avoiding) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
- 2.10.0.15 Restore and/or enhance terrestrial and aquatic habitats proximate to but not adjacent to roads and other transportation corridors for terrestrial-bound SGCN species whose behavior (i.e., dispersal across roads) may be altered by doing so, and therefore decrease road mortality of such species (e.g., amphibians, snakes, turtles, small mammals).
- 2.10.0.21 Restore and/or enhance understory habitats that suppress invasive species and provide critical resources and enhance sheltering, foraging, and nesting cover for wildlife.
- 2.10.0.22 Restore and/or enhance terrestrial and aquatic habitats to promote the regeneration of native vegetation and enhance structural diversity to benefit SGCN (e.g., vegetative buffers of aquatic systems, allow coarse, woody debris to remain in terrestrial, aquatic and riparian habitats to provide shelter, riparian stabilization and necessary microclimates, plant native trees, shrubs and grasses, etc.).
- 2.10.0.24 Use NJ's CHANJ mapping and guidance to establish vegetation and enhance or create corridors between fragmented habitats with similar vegetation, slope, soils, structure, etc. to ensure vegetative integrity is maintained to allow wildlife to safely disperse, and corridors are buffered with natural habitats to minimize disturbance to wildlife within the corridors.

2.11 Vegetation management

2.11.0 Vegetation management strategies for terrestrial or aquatic habitat creation or restoration

- 2.11.0.1 Conduct vegetation management in native terrestrial and aquatic habitats to provide suitable and appropriately sized areas to improve ecological diversity.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Eastern Hognose Snake

- 2.11.0.2 Conduct vegetation management in native terrestrial and aquatic habitats to provide suitable and appropriately sized areas for target SGCN and/or species groups; management should complement rare species needs in a targeted area.
- 2.11.0.3 Create suitable travel corridors connecting and increasing the effective size of conserved habitats for SGCN by restoring unsuitable (or less optimal) habitats through vegetation management.
- 2.11.0.4 Implement vegetation management strategies that consider appropriate timing to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife, particularly SGCN.
- 2.11.0.5 Expand the acreages and enhance the effective size of SGCN habitats by restoring adjacent, less optimal or unsuitable, habitats through vegetation management.
- 2.11.0.6 Reclaim degraded rare species habitats by conducting vegetation management needed to restore habitat value for the documented/target SGCN.
- 2.11.0.7 Protect significant natural and/or unique communities by implementing best management practices through vegetation management.
- 2.11.0.13 Implement best management practices (BMPs), protective strategies, and guidelines for vegetation management to maintain and enhance healthy, SGCN-associated habitats while minimizing (if not avoiding) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
- 2.11.0.14 Conduct vegetation management adjacent to roads for SGCN species whose behavior (i.e., dispersal across roads) may be altered by doing so, and therefore decrease road mortality of such species (e.g., amphibians, snakes, turtles, small mammals).
- 2.11.0.16 Prevent or ameliorate near-term impacts of climate change throughout the State by developing, implementing and monitoring/evaluating habitat management strategies that will establish/improve habitat resilience (e.g., shorelines of the coast and Delaware Bay, forested habitats of the Pinelands and Skylands) that benefits wildlife inhabiting these areas, in particular within the coastal and Delaware Bay areas.
- 2.11.0.18 Implement forest management/silvicultural strategies that promote the development of new old-growth forests and/or minimize the loss of old-growth forest stands with large trees and within large, contiguous tracts.
- 2.11.0.19 Implement forest management/silviculture strategies that enhance and maintain critical core forests as appropriate for targeted species (e.g., for many SGCN forest birds, "core" forest would include the forest area >90 meters from the forest edge), in perpetuity, to benefit interior forest and disturbance-sensitive SGCN.
- 2.11.0.20 Create and/or maintain scrub-shrub habitats through management efforts with little to no impact on forested, wetland and grassland habitats to maintain populations of shrub-dependent SGCN.
- 2.11.0.23 Implement appropriate habitat management actions in areas where natural disturbances, such as wildfire, have been precluded.
- 2.11.0.25 Conduct vegetation management along access roads following BMPs to enhance habitat for target shrub- or young forest-dependent SGCN while minimizing negative impacts to other SGCN.
- 2.11.0.26 Conduct vegetation management along roadsides and medians, avoiding peak activity periods for wildlife, that enhances wildlife dispersal naturally and safely across roads and similar barriers to/between terrestrial and/or aquatic habitats.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Eastern Hognose Snake

- 2.11.0.27 Conduct vegetation management for target shrub- or young forest-dependent SGCN following BMPs to minimize the risk of the establishment of invasive and non-native plants.
- 2.11.0.28 Conduct vegetation management in agricultural areas following BMPs to enhance habitat for target shrub- or young forest-dependent SGCN while minimizing negative impacts to other SGCN.
- 2.11.0.29 Conduct vegetation management on transportation and service corridors (i.e., rights-of-way) following BMPs to enhance habitat for target shrub- or young forest-dependent SGCN while minimizing negative impacts to other SGCN.
- 2.11.0.31 In areas where vegetative communities are shifting due to fire suppression and controlled burns are not feasible, manage vegetation to improve wildlife habitat.
- 2.11.0.32 Increase structural habitat diversity around and when feasible, within agricultural landscapes by managing vegetation for a variety of species, in particular, those farms that have removed scrub-shrub habitat and/or fragmented forests, and by implementing ecologically best practices (e.g., no-till farming, maintaining hedgerows, buffer set-asides, etc.).
- 2.11.0.33 Increase structural habitat diversity by implementing long-term vegetation management to minimize the potential for the establishment of invasive and/or non-native plants that may outcompete native vegetation.
- 2.11.0.34 Increase structural habitat diversity by managing residential, commercial and recreational areas' landscapes for a variety of species. For example, integrate short and tall grasses, specific host plants, brush piles, water sources/wetlands, shrubby areas, nesting areas and no-mow set-asides.
- 2.11.0.36 Increase structural habitat diversity by managing vegetation for a variety of species and considering their life history requirements (e.g., travel corridors, shelter, resting and breeding areas) to minimize the risk of harm.
- 2.11.0.37 Increase structural habitat diversity by minimizing the removal of coarse, woody debris in terrestrial, aquatic and riparian habitats which benefits wildlife.
- 2.11.0.38 Increase structural habitat diversity in and around horse/livestock farms by managing vegetation for a variety of species, in particular, in and around farms that have fragmented forests, and by implementing ecologically best practices (e.g., do not permit overgrazing, do not allow livestock to wade in waterbodies).
- 2.11.0.39 Increase structural habitat diversity in and around solar farms by managing vegetation for a variety of species and that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife. For example, integrate short and tall grasses, specific host plants, brush piles, water sources/wetlands, shrubby areas, nesting areas and no-mow set-asides.
- 2.11.0.40 Increase structural habitat diversity surrounding areas used for energy, mining, and transportation and service corridors by managing vegetation for a variety of species and that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife. For example, integrate short and tall grasses, specific host plants, brush piles, water sources/wetlands, shrubby areas, nesting areas and no-mow set-asides, and avoid managing habitat during the breeding seasons for ground-nesting birds, reptiles, amphibians and small mammals.
- 2.11.0.41 Increase structural habitat diversity through the implementation of a variety of vegetation management practices such as prescribed burns (either increasing or decreasing their frequency depending on the site and objective), plantings, etc. that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife.

Eastern Hognose Snake

- 2.11.0.42 Increase structural habitat diversity within wind farms for terrestrial bound and low-flying species and around wind farms for other wildlife by managing vegetation for a variety of species and that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife.
- 2.11.0.43 Manage forests to increase variation in age structure and composition using BMPs that promote and maintain functioning ecological forest-based systems and biological diversity.
- 2.11.0.45 Regularly and/or rotationally create young forest habitat in targeted areas to maintain and regenerate a mosaic of upland forest habitats that will benefit shrub- and young forest-dependent species.

2.13 Wildlife damage management

2.13.0 Nuisance fish and wildlife damage

- 2.13.0.5 Investigate the impacts of human-subsidized and/or naturally occurring predator species on SGCN to assess the need for integrated wildlife damage management techniques (e.g., predator exclosures, fish blockages, electric fence, culls) and/or policy changes on state land management that minimize the impacts of human-subsidized predators.
- 2.13.0.8 Implement and assess management strategies to control and reduce the impacts of detrimental species and diseases that pose threats to native wildlife or communities.

2.14 Wildlife disease management

2.14.0 Wildlife disease strategy development and investigation

- 2.14.0.1 Investigate diseases/pathogens impacting SGCN and/or their habitats.
- 2.14.0.2 Develop and implement strategies to combat the impacts of diseases/pathogens impacting SGCN and/or their habitats, track disease occurrences and monitor/research impacts to SGCN populations and their habitats.
- 2.14.0.4 Conduct long-term monitoring of diseases in vulnerable wildlife to determine the magnitude of exposure within populations and around the State, the impacts to those species, in particular SGCN, and investigate the feasibility of mitigating for such impacts.
- 2.14.0.5 Assess the impacts of diseases on the life cycles of wildlife.

3 Data Collection and Analysis

3.0 General fish and wildlife research, survey or monitoring

3.0.0 Research, survey or monitoring - general fish and wildlife needs

- 3.0.0.1 Conduct long-term monitoring of resident and migratory SGCN populations using standardized survey protocols to determine the variables that may impact their long-term persistence in the State (e.g., population viability, distribution, dispersal, home range and habitat use, travel corridors, food availability, vulnerability to pollutants and disease, etc.). Compile this information to determine the likely causes of population declines and to understand metapopulation dynamics. Provide data to NJ DEP for integration into the Biotics database, Landscape Project and permitting review processes.
- 3.0.0.2 Identify (through literature searches, review of available data, enlistment of habitat and/or species experts, etc.) where data gaps exist regarding SGCN distribution, and their critical and supportive habitats. Conduct surveys using standardized survey protocols to acquire baseline data, and provide the data to NJ DEP for integration into the Biotics database, Landscape Project Map and permitting review processes.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Eastern Hognose Snake

- 3.0.0.3 Gather baseline data on SGCN inhabiting permanently protected natural lands regarding their distribution and population (e.g., abundance, dispersal, demography including productivity and survival, etc.), and identify (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) critical and supporting habitats within those landscapes.
- 3.0.0.4 Conduct long-term studies on SGCN inhabiting permanently protected natural lands to develop population trend data and changes in demography, and to determine if critical and/or supporting habitats are limited or changing; i.e., diminishing in value, acreage or connectivity.
- 3.0.0.5 Gather baseline data on resident and migratory SGCN (in particular migratory species for which New Jersey habitats are significant), terrestrial, freshwater and marine species, regarding the location and condition of their critical and supporting habitats (e.g., foraging, roosting, nesting/breeding, stopover, migration paths, etc.), and population demography (e.g., productivity, survival, dispersal). Compile this information into a database that includes descriptions of the conditions of the habitats and species, and a GIS component of the locations of these important habitats. Provide data to NJ DEP for integration into the Biotics database, Landscape Project and permitting review processes.
- 3.0.0.6 Conduct long-term studies on resident and migratory SGCN to determine if there are changes to the populations' demography (productivity, survival, dispersal) and/or to their critical and/or supporting habitats (i.e., diminishing in value, acreage or connectivity, etc.), in particular changes that would not maintain SGCN at viable levels for species populations. Update data and GIS maps; provide updated information to NJ DEP for integration into the Biotics database, Landscape Project and permitting review processes.
- 3.0.0.7 Collect baseline data to document species distributions, in particular SGCN, and current habitat for future analysis of possible distribution shifting as a result of habitat shifting or alteration associated with climate change impacts.
- 3.0.0.8 Conduct long-term studies and compare baseline metrics of documented species distributions and associated habitats to identify possible species and/or habitat shifting or alteration associated with climate change impacts.
- 3.0.0.11 Develop, implement and evaluate the effectiveness of town plans that avoid impacts to SGCN species and their habitats.
- 3.0.0.13 Investigate the effects of pesticides, herbicides and other biological controls on SGCN and their critical and supporting habitats. Evaluate and modify management practices as appropriate.
- 3.0.0.19 Identify the presence and status (e.g., functioning, structure, slated for removal, etc.) of existing dams and culverts within and/or that may impact SGCN and their habitats, and create a database that includes a GIS component identifying the locations of such structures and their status. Share this information with appropriate organizations and/or agencies evaluating the benefits and risks of such structures on SGCN and their habitats.
- 3.0.0.20 Once baseline data identifying and describing the status of existing dams and culverts have been gathered, conduct evaluations at a variety of sites to determine whether the benefits of culvert and dam creation or removal outweigh the risks to SGCN species and their habitats, and if other variables/conditions specific to individual sites/locations result in a different outcome. Identify and target appropriate dams and culverts for removal and/or reconstruction to minimize harm to SGCN species and their habitats.
- 3.0.0.26 Conduct studies to evaluate the effectiveness of proactive species recovery plans for all endangered and threatened species including objectives and guidance pertaining to and the condition/status of critical and supporting habitats.

Eastern Hognose Snake

- 3.0.0.27 Evaluate the effectiveness of strategies to restrict human activity (e.g., recreational, maintenance work, etc.) from sensitive habitats/areas such as avian nesting sites, reptile and amphibian breeding areas (nesting or gestation/birthing and breeding pools, respectively), and bat hibernacula, and federal buffers for marine mammals through research and monitoring. Develop and provide NJ DEP and other appropriate governing agencies/commissions a summary of findings and recommendations to improve such efforts.

3.2 Research, survey or monitoring - fish and wildlife populations

3.2.0 Data deficiency

- 3.2.0.1 Division of Fish and Wildlife should maintain a robust, up-to-date database and mapping of species occurrences.
- 3.2.0.4 Conduct long-term monitoring of the impacts of contaminants to vulnerable wildlife to determine the magnitude of exposure within populations and around the State, the impacts to those species, in particular SGCN, and investigate the feasibility of mitigating for such impacts. Maintain records on exposure of vulnerable wildlife to environmental toxins (such as flame retardants and endocrine disruptors), so that sources may be identified and controlled or eliminated.
- 3.2.0.5 Prevent or ameliorate near-term impacts of climate change throughout the State by developing, implementing and monitoring/evaluating habitat management strategies that will establish/improve habitat resilience (e.g., shorelines of the coast and Delaware Bay, forested habitats of the Pinelands and Skylands) that benefits wildlife inhabiting these areas, in particular within the coastal and Delaware Bay areas.
- 3.2.0.6 Develop, implement and conduct studies to evaluate the effectiveness of methods implemented to reduce road mortality of wildlife (e.g. wildlife underpasses, road closures).
- 3.2.0.7 Track (via a database that includes a GIS component) and research problematic species and diseases to determine their distribution, impacts on SGCN wildlife/wildlife communities, and develop potential control measures.
- 3.2.0.8 Implement and conduct long-term monitoring of control measures aimed at minimizing the impacts of problematic species and/or diseases to evaluate the effectiveness of such efforts and to identify and incorporate additional strategies as appropriate.
- 3.2.0.10 Evaluate the effectiveness of sanitation/decontamination protocols in minimizing the transference of wildlife diseases and invasive plant species.
- 3.2.0.12 Investigate the impacts of ORV use and ORV-created noise on terrestrial and aquatic wildlife behavior and the impact of direct mortality from vehicle strikes. Integrate this information when mapping undeveloped roads and trails to identify potentially sensitive areas in northern NJ forests.

3.2.1 Abundance determination

- 3.2.1.1 Identify (through literature searches, review of available data, enlistment of habitat and/or species experts, etc.) population abundance and trends for SGCN using standardized survey protocols. Provide data to NJ DEP for integration into the Biotics database, Landscape Project Map and permitting review processes.
- 3.2.1.2 Conduct wildlife surveys on resident and migratory SGCN regarding their population abundance and trends.

3.2.2 Age, size and sex structure

- 3.2.2.1 Conduct wildlife surveys on resident and migratory SGCN regarding their survivorship.

3.2.3 Baseline inventory

Eastern Hognose Snake

- 3.2.3.6 Investigate the feasibility and potential for success of conducting genetic rescue through translocation and/or reintroduction of animals into suitable habitat that was historically occupied to increase genetic diversity and reconnect isolated populations. Methods of investigation should include, but are not limited to, thorough literature reviews, expert opinions, identifying potential pitfalls (e.g., species' fidelity to their range or critical areas), and an examination of historic and current SGCN population distribution and suitable habitat availability.
 - 3.2.3.7 Identify roads or portions of roads, paved or unimproved (through site surveys, land use/land cover assessments and analyses, review of available data, enlistment of species experts, etc.) with high incidences of road mortality and/or presence of snakes, turtles, medium-sized and large mammals. Conduct assessments of the roads and incorporate information into a database that includes descriptions (e.g., qualifiers to help prioritize the roads' risk to wildlife) and a GIS component of the locations of such areas. Share this information with appropriate organizations and/or agencies working to implement measures (e.g., wildlife passages, road closures) to minimize the risk to these species.
 - 3.2.4 Food habits
 - 3.2.4.1 Monitor and investigate the populations and health of SGCN prey/food resources for those SGCN whose populations are thought to be limited due wholly or in part to a lack of food resources or toxins in food resources.
 - 3.2.5 Genetics
 - 3.2.5.1 Investigate the feasibility and potential for success of conducting genetic rescue through translocation and/or reintroduction of animals into suitable habitat that was historically occupied to increase genetic diversity and reconnect isolated populations. Methods of investigation should include, but are not limited to, thorough literature reviews, expert opinions, identifying potential pitfalls (e.g., species' fidelity to their range or critical areas), and an examination of historic and current SGCN population distribution and suitable habitat availability.
 - 3.2.7 Population assessment
 - 3.2.7.1 Conduct species status assessments using the Delphi Technique and review of available data and literature on fish and wildlife (including marine animals) to maintain accurate legal status categorization of native wildlife.
 - 3.2.7.2 Conduct studies to evaluate the effectiveness of proactive species recovery plans for all endangered and threatened species to meet and maintain recovery goals.
 - 3.3 Research, survey or monitoring - habitat
 - 3.3.1 Baseline inventory
 - 3.3.1.1 Conduct habitat assessments of significant natural and/or unique communities to identify threats to native terrestrial and aquatic habitats through systematic monitoring, review of available data, enlistment of habitat management and/or species experts, etc. Incorporate findings into a database that includes descriptions/qualifiers of the habitats, identifies and values/qualifies the threats, and includes a GIS component of the locations of the assessed areas. Share this information with landowners/managers (e.g., federal, state and local government agencies or non-government organization).
 - 3.3.1.2 Identify (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) resident and migratory SGCN habitats. Investigate their suitability for the various life history requirements of the species that dependent upon them to determine the ability for maintaining applicable SGCN populations in perpetuity.

Eastern Hognose Snake

- 3.3.1.4 Identify (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) and investigate the suitability of corridors that connect large, contiguous tracts of similar habitats to increase their effective size (i.e., forest with forest, grassland with grassland, wetlands with wetlands, etc.) for dependent SGCN.
- 3.3.1.5 Identify areas (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) where habitat restoration and/or enhancement would benefit wildlife SGCN.
- 3.3.1.6 Identify areas (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) that could, through revegetation and/or enhancement efforts, become suitable travel corridors connecting and increasing the effective size of conserved habitats for SGCN.
- 3.3.1.7 Map and prioritize existing and potential areas for early succession forest management. Share the results with state, county and municipal planners.
- 3.3.1.8 Assess the availability and suitability of forest habitats for SGCN species (particularly reptiles and amphibians, birds, pollinators, and tiger beetles) in southern forests since Superstorm Sandy.
- 3.3.1.9 Inventory forests throughout northern New Jersey to develop a baseline characterization of the structure and composition of habitats and identify deficient forest habitat types.
- 3.3.1.16 Gather "best information" for spatial modeling and update/create a current model/depiction of anticipated habitat shifts from sea-level rise, flooding, etc.
- 3.3.1.17 Identify and map undeveloped roads and trails in all conserved forests, and create a database of locations. Integrate information regarding potentially sensitive areas.
- 3.3.1.18 Conduct an assessment using available data regarding SGCN population numbers/trends and demography, on-going threats, habitat changes, etc. to determine if directed management efforts are needed to reach or maintain viable population levels.
- 3.3.1.19 Identify and codify legal ORV access areas on state (and if appropriate, other conserved) lands. Provide GIS mapping to the landowner for potential use in directing such recreational activities.
- 3.3.1.20 Identify areas (through surveys/studies, literature searches, review of available data, enlistment of habitat management and/or species experts, etc.) where invasive, non-indigenous plants and animals are either already established or are becoming established. Create a system for reporting and qualifying new locations of invasive species and for prioritizing areas for control measures according to the potential level of impact on the ecosystem and SGCN and the likelihood of success. Researchers and contractors encountering invasive plant species while performing plant and/or forest inventories on state or other conserved lands and/or private lands should report invasive plant species through the New Jersey Invasive Species Strike Team phone application.
- 3.3.1.24 Conduct regular investigations of SGCN habitat health and biodiversity on public and private lands to identify locations in need of revegetation, reduction of over-abundant, native wildlife and/or exotic species, conservation focal areas requiring limitations on human activity, etc.

3.3.2 Monitoring

- 3.3.2.1 Evaluate the effectiveness of forest management/silviculture strategies that enhance and maintain critical core forests as appropriate for targeted species (e.g., for many SGCN forest birds, "core" forest would include the forest area >90 meters from the forest edge), in perpetuity, to benefit interior forest and disturbance-sensitive SGCN through research and monitoring.

Eastern Hognose Snake

- 3.3.2.2 Conduct long-term monitoring of resident and migratory SGCN habitats using standardized survey protocols to determine changes in habitat quality/suitability and threats (e.g., habitat loss and degradation, increased edge habitat, water quality) and other variables that may impact their long-term persistence in the State and to provide information needed for determining causes of population declines and understanding metapopulation dynamics.
- 3.3.2.3 Continue to update wildlife and habitat databases and revise models of critical SGCN habitats using the most current data available and where lacking, develop new SGCN and/or habitat models as data on species habitat requirements and applicable GIS data layers become available.
- 3.3.2.8 Evaluate the effectiveness of current prescribed burning practices on Pinelands dependent species.
- 3.3.2.9 Investigate the effectiveness of various silviculture techniques for enhancing forests for forest-dependent SGCN.
- 3.3.2.10 Evaluate the efficacy and success of different management techniques (e.g., ecologically-based forestry activities, prescribed burns) that might be used to mimic the historic role of fire and other natural disturbances in shaping an ecosystem.
- 3.3.2.15 Investigate the effectiveness of management techniques implemented to eliminate invasive terrestrial and aquatic plant species on private and public lands, and/or within sensitive and/or important habitats for SGCN.
- 3.3.2.20 Once a system is developed for reporting and qualifying new locations of invasive species, develop, implement and monitor/evaluate invasive species removal strategies at identified locations. Priority should be given to those areas critical to SGCN and/or contain unique and/or rare plant communities supporting SGCN and/or other fish/wildlife species.
- 3.3.2.24 Conduct regular inventories of forests throughout northern New Jersey to characterize the changing structure and composition of habitats and monitor forest conditions.

3.5 Techniques development

3.5.3 Habitat restoration methods

- 3.5.3.1 Work with land management agencies to determine the appropriate actions needed to restore/reclaim degraded habitat for the documented/target SGCN.
- 3.5.3.3 Develop/improve management techniques that might be used to mimic the historic role of fire and other natural disturbances in shaping an ecosystem.
- 3.5.3.7 Develop/improve forest management/silviculture strategies that enhance and maintain critical core forests as appropriate for targeted species (e.g., for many SGCN forest birds, "core" forest would include the forest area >90 meters from the forest edge), in perpetuity, to benefit interior forest and disturbance-sensitive SGCN through research and monitoring.
- 3.5.3.8 Develop best management practices (BMPs), protective strategies, and guidelines for maintaining and enhancing healthy, SGCN-associated terrestrial and aquatic habitats and associated riparian habitats, and to minimize (if not avoid) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
- 3.5.3.9 Develop strategies to combat the impacts of diseases/pathogens impacting SGCN and/or their habitats.
- 3.5.3.11 Develop strategies to protect native terrestrial and aquatic habitats and dependent SGCN species from the identified threats.
- 3.5.3.14 Develop aquaculture practices in the coastal areas that are compatible with the recovery of SGCN.

Eastern Hognose Snake

- 3.5.3.15 Modify management practices based on the effects of pesticides, herbicides and other biological controls on critical and supporting SGCN habitats.
- 3.5.3.16 Develop/improve strategies to restrict human activity (e.g., recreational, maintenance work, etc.) from sensitive habitats/areas such as avian nesting sites, reptile and amphibian breeding areas (nesting or gestation/birthing and breeding pools, respectively), and bat hibernacula, and federal buffers for marine mammals. Methods may include, but are not limited to, managing the landscape to deter access, diverting recreational and other activities from sensitive areas during critical periods through permit processes or blocking access (trails, roads, etc.), posting (if appropriate), increasing law enforcement presence, conducting management activities at appropriate times to avoid disturbance and/or harm to wildlife (e.g., habitat management, beach raking, etc.), and decreasing noise and light pollution.
- 3.5.3.19 Work with foresters to develop prescribed burning practices for Pinelands dependent species that increase or maintain habitat quality for these species in the Pinelands.
- 3.5.3.20 Develop guidance on various silviculture techniques for enhancing forests for forest-dependent SGCN.
- 3.5.3.21 Develop management techniques (e.g., ecologically-based forestry activities, prescribed burns) that might be used to mimic the historic role of fire and other natural disturbances in shaping an ecosystem.
- 3.5.3.24 Based on research, modify management techniques implemented to eliminate invasive terrestrial and aquatic plant species on private and public lands, and/or within sensitive and/or important habitats for SGCN.
- 3.5.3.25 Use data regarding SGCN population numbers/trends and demography, on-going threats, habitat changes, etc. to develop the necessary management strategies to reach or maintain viable population levels.
- 3.5.4 Fish and wildlife research, survey and management techniques
 - 3.5.4.1 Develop studies to evaluate management strategies to improve the availability of prey/food resources for SGCN whose populations are thought to be limited due wholly or in part to a lack of (or contaminated) food resources. Monitor and investigate the management strategies over time to determine success and/or the need to revise methods.
 - 3.5.4.5 Develop and implement strategies to combat the impacts of diseases/pathogens impacting SGCN and/or their habitats, track disease occurrences and monitor/research impacts to SGCN populations and their habitats.
 - 3.5.4.6 Investigate the feasibility of mitigating for the impacts of contaminants to vulnerable wildlife, particularly SGCN. Maintain records on exposure of vulnerable wildlife to environmental toxins (such as flame retardants and endocrine disruptors), so that sources may be identified and controlled or eliminated.
 - 3.5.4.7 Investigate the feasibility and potential for success of conducting genetic rescue through translocation and/or reintroduction of animals into suitable habitat that was historically occupied to increase genetic diversity and reconnect isolated populations. Methods of investigation should include, but are not limited to, thorough literature reviews, expert opinions, identifying potential pitfalls (e.g., species' fidelity to their range or critical areas), and an examination of historic and current SGCN population distribution and suitable habitat availability.
 - 3.5.4.9 Conduct studies to evaluate the impacts of roads on SGCN and develop, implement and conduct studies to evaluate the effectiveness of methods to reduce road mortality of wildlife (e.g. wildlife underpasses, road closures).

Eastern Hognose Snake

- 3.5.4.13 Develop/improve strategies to restrict human activity (e.g., recreational, maintenance work, etc.) from sensitive habitats/areas such as avian nesting sites, reptile and amphibian breeding areas (nesting or gestation/birthing and breeding pools, respectively), and bat hibernacula, and federal buffers for marine mammals. Methods may include, but are not limited to, managing the landscape to deter access, diverting recreational and other activities from sensitive areas during critical periods through permit processes or blocking access (trails, roads, etc.), posting (if appropriate), increasing law enforcement presence, conducting management activities at appropriate times to avoid disturbance and/or harm to wildlife (e.g., habitat management, beach raking, etc.), and decreasing noise and light pollution.
- 3.5.4.14 Develop and implement agreements, and update existing agreements, with government agencies regarding the protection of critical SGCN habitats (e.g., significant breeding populations of beach nesting birds, colonial waterbird nesting areas, bat colonies, etc.).
- 3.5.4.15 Investigate the success of management strategies used to protect and/or enhance SGCN populations and when appropriate, aid in identifying failures/resource problems and issues, and developing new strategies.
- 3.5.4.16 Use data regarding SGCN population numbers/trends and demography, on-going threats, habitat changes, etc. to determine if directed management efforts are needed to reach or maintain viable population levels and develop the necessary management strategies.
- 3.5.4.17 Investigate new, non-invasive techniques for SGCN population evaluation through literature review, expert opinion, trial studies (if low risk), etc.
- 3.5.4.18 Investigate the effectiveness of survey techniques through selected “ground truthing” and literature and peer review in order to increase efficacy of survey, minimize surveyor bias and error, and increase accuracy of trend data.
- 3.5.4.19 Develop reliable, standardized survey and monitoring protocols for SGCN species, for which none currently exist, and their habitats.
- 3.5.4.21 Develop BMPs to address problematic species and diseases of unknown origin.
- 3.5.4.22 Investigate the efficacy of implementing strategies to minimize or eliminate disturbances to all SGCN (i.e., beyond their federal requirements) during military activities.

4 Education

4.1 Educator/Instructor training

4.1.0 Public education

- 4.1.0.1 Provide educational resources and training programs to private and public landowners, as well as schools, regarding the benefits and creation of backyard habitats for wildlife.

5 Facilities and Areas

5.15 Wildlife Management Areas

5.15.6 Roads

- 5.15.6.2 Clearly post areas/trails where vehicle access is not permitted.

6 Land and Water Rights Acquisition and Protection

6.0 Acquisition and protection strategies

6.0.0 Combined acquisition and protection strategies

- 6.0.0.1 Enhance and increase the effective size of critical migratory stopover habitats for songbirds, raptors, shorebirds, bats and invertebrates by securing adjacent habitats through an appropriate combination of fee title, non-fee title and landowner agreements.

Eastern Hognose Snake

- 6.0.0.2 Enhance and increase the effective size of SGCN habitats by protecting adjacent habitats that contribute to the overall size of the "core" area and/or provide a natural buffer, enhancing the suitability of the core area for SGCN, and/or connect conserved SGCN habitats through an appropriate combination of fee title, non-fee title and landowner agreements.
- 6.0.0.6 Secure and protect old-growth forest stands with large trees and/or stands that are approaching or being actively managed for old growth forests, in particular those within large, contiguous forest tracts, through an appropriate combination of fee title, non-fee title and landowner agreements.
- 6.0.0.7 Secure and protect critical SGCN forested habitat and minimize forest edge to benefit interior forest and disturbance-sensitive SGCN through an appropriate combination of fee title, non-fee title and landowner agreements.
- 6.0.0.8 Secure and protect scrub-shrub habitats for SGCN through an appropriate combination of fee title, non-fee title and landowner agreements.

6.3 Conservation area designation

6.3.0 Conservation area designation strategies

- 6.3.0.1 Promote the protection of critical migratory stopover habitats for songbirds, raptors, shorebirds, bats and invertebrates and enhance these lands by increasing the effective size through conservation area designations of stopover habitats and adjacent private lands.
- 6.3.0.2 Enhance and increase the effective size of SGCN habitats by protecting adjacent habitats that contribute to the overall size of the "core" area and/or provide a natural buffer, enhancing the suitability of the core area for SGCN and/or connect conserved SGCN habitats through conservation area designations.
- 6.3.0.6 Promote the protection of old-growth forest stands with large trees and/or stands that are approaching or being actively managed for old growth forests, in particular those within large, contiguous forest tracts, through conservation area designations.
- 6.3.0.7 Promote the protection of critical SGCN forested habitat and minimize forest edge to benefit interior forest and disturbance-sensitive SGCN through conservation area designations.
- 6.3.0.8 Promote the protection of scrub-shrub habitats for SGCN through conservation area designations.

6.4 Private lands agreements

6.4.0 Private land agreement strategies

- 6.4.0.1 Enter into private lands agreements to expand control burns on private lands, in particular those adjacent to conserved lands to improve SGCN habitats.

7 Law Enforcement

7.1 Law enforcement

7.1.3 Sub-national Level

- 7.1.3.2 Increase the number of law enforcement officers tending to wildlife issues to a reasonable number to sufficiently cover the State and marine waters.

7.1.4 Scale Unspecified

- 7.1.4.3 Increase law enforcement presence proximate to sensitive areas [e.g., avian nesting sites, in particular rookeries, and reptile and amphibian breeding areas (nesting or gestation/birthing and breeding pools, respectively)] to deter human activity and subsequent disturbance to SGCN.

Eastern Hognose Snake

- 7.1.4.6 Recruit law enforcement to assist in the protection and enhancement of SGCN populations, in particular endangered species, through improved awareness of species through trainings, partnerships, and other methods. Information should include but is not limited to: 1) Issues concerning illegal collection of reptiles, 2) Persecution of rare snakes, 3) Illegal recreational activities on public lands (e.g., off-road vehicles) and their impact on wildlife, 4) Identification of sensitive areas, critical sites and/or "hot-spots" for collection.
- 7.1.4.7 Increase law enforcement presence to enforce regulations governing recreational activities (e.g., the use of personal watercraft and off road vehicles, caving, rock climbing, etc.) on conserved lands and within other sensitive habitats, and discourage activities that cause harm or disturbance to vegetation, wetlands, fish and wildlife.
- 7.1.4.9 Implement policies that improve and secure habitat connections between conserved SGCN habitats.
- 7.1.4.10 Implement policies that promotes expanding acreages and enhances the effective size of SGCN habitats by providing biologically appropriate buffers of native habitat surrounding SGCN habitats.
- 7.1.4.12 Implement policies and/or regulations that protect significant natural and/or unique communities in perpetuity.
- 7.1.4.14 Implement policies that protect existing and developing old-growth forest stands with large trees, in particular those within large, contiguous forest tracts.
- 7.1.4.15 Implement policies that preserve and protect critical SGCN forested habitat and minimize forest edge to benefit interior forest and disturbance-sensitive SGCN.
- 7.1.4.19 Implement policies that protect and restore scrub-shrub habitats to benefit shrub-dependent SGCN.
- 7.1.4.22 Implement policies and/or regulations that prohibit the presence of managed cat colonies and trap, neuter and release programs in or near critical wildlife habitats.
- 7.1.4.23 Implement policies that minimize wildlife road mortality.
- 7.1.4.25 Encourage the enforcement of municipal laws regulating domestic pets that may predate on wildlife.
- 7.1.4.26 Educate law enforcement personnel that there may be unauthorized research projects taking place and to encourage them to investigate any activities that appear to be harmful to wildlife.

8 Outreach

8.1 Partner/stakeholder engagement

8.1.0 Partner/stakeholder engagement strategies

- 8.1.0.3 Develop an outreach team of personnel from government entities, conservation organizations and other stakeholders to work together to collaboratively use social media campaigns to grow a constituency of NJ residents who have an elevated ecological and climate consciousness.
- 8.1.0.4 Engage government agencies, conservation partners and other stakeholders in constructive dialogues encouraging them to influence policy change and the creation of incentives through a habitat bill and/or municipal ordinances for backyard habitat.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Eastern Hognose Snake

- 8.1.0.11 Engage government agencies, conservation partners and other stakeholders to collaboratively develop and implement an extensive educational/outreach program targeting sportsmen's organizations and fisheries, as well as public constituents, addressing the unintended effects abandoned fishing gear, tackle and crab pots can have on wildlife, and promote the collection and/or reporting of abandoned items and their locations.
- 8.1.0.13 Engage DOD in a constructive dialogue regarding strategies to minimize disturbances to all SGCN (i.e., beyond their federal requirements) from forest management and other practices on their lands.
- 8.1.0.14 Engage DOD in a constructive dialogue regarding strategies to minimize or eliminate disturbances to all SGCN (i.e., beyond their federal requirements) during military activities.
- 8.1.0.15 Engage government agencies, conservation partners and other stakeholders in discussions encouraging and supporting the creation of laws and policies requiring vegetative buffers of native plants on preserved farmland and state lands with agricultural leases or agreements.
- 8.1.0.16 Engage local governments in discussions regarding the importance of them adopting/passing ordinances which require assessing and addressing secondary impacts (i.e., ancillary prescribed burns, trespassers, ORV use, mosquitoes, deer, buffers) on biological resources when revising planning/zoning documents or granted site plan/subdivision approvals.
- 8.1.0.17 Engage municipalities in constructive dialogue to identify and minimize destruction of areas prioritized for early succession forest management.
- 8.1.0.18 Engage NJDOT, NJ Transit Authority and other road management entities, wildlife conservation organizations/agencies (e.g., Division of Fish and Wildlife, New Jersey Conservation Foundation, Conserve Wildlife Foundation of NJ), and communities and citizens in discussions regarding the importance of and methods to enhance habitat connectivity, and work together to develop feasible strategies for ensuring that wildlife can disperse naturally and safely across roads and similar barriers to terrestrial and/or aquatic habitats.
- 8.1.0.19 Engage government agencies, conservation partners and other stakeholders to collaboratively develop a list of important projects, targeting SGCN and/or their habitat, as a guide for graduate student research. Distribute the list and contact information to all State colleges and universities.
- 8.1.0.21 Work with government agencies and environmental educators to develop educational resources and training programs, educate the public on the devastation human-subsidized and/or overabundant, native species cause to local nesting species, and provide expert guidance on how residents can help alleviate this threat.
- 8.1.0.24 Engage government agencies, conservation partners and other stakeholders in constructive dialogue regarding the importance of providing and methods to provide technical support for carrying out restoration and management practices aimed at increasing structural habitat diversity.
- 8.1.0.25 Provide technical support to public landowners and land managers for carrying out restoration and management practices aimed at increasing structural habitat diversity.
- 8.1.0.26 Coordinate across federal, state and local agencies and approved consulting foresters that provide financial, logistical or planning assistance to woodland landowners to adopt or endorse consistent best management practices concerning controlled burns to maintain and/or improve forested habitat for wildlife.
- 8.1.0.30 Encourage government agencies and conservation partners to advise members of the relevant scientific community of the need for specific studies, reports or investigations targeting the data-deficiency regarding SGCN and/or their habitats.

Eastern Hognose Snake

- 8.1.0.34 Work with the NJ Education Association and Department of Education to design curriculum and outdoor experimental learning opportunities, and provide training to teachers on implementation of these activities.
- 8.1.0.37 Enlist landowners and NJ citizens in the protection of and survey efforts for SGCN, in particular rare species, by increasing enrollment in landowner incentives, forest stewardship, backyard habitat management and wildlife-related volunteer programs.
- 8.1.0.38 Engage partners, stakeholders and land managers in constructive dialogue promoting forest stewardship for SGCN that use core forests and forested corridors.
- 8.1.0.40 Encourage researchers, land managers, naturalists and enthusiasts to follow proper procedures for the coordination and/or permitting of research/management activities involving wildlife and sensitive habitats, and discourage activities that alter vegetation or wetlands, or cause harm or disturbance to wildlife.
- 8.1.0.42 Engage citizens, wildlife observers and photographers through discussions and distributable information regarding the importance of and encouraging implementing responsible and ethical behavior when observing wildlife by developing an alliance of wildlife photographers and widely circulating recommendations on how to reduce impact.
- 8.1.0.44 Engage conservation partners, stakeholders, government agencies and other land stewards in constructive dialogues encouraging their inclusion of controlled burns in forest and other stewardship plans.
- 8.1.0.47 Form cooperative partnerships with energy companies to facilitate habitat creation and enhancement away from and outside of project areas, the restoration of appropriate habitats within project areas (e.g., rights-of-way could benefit butterflies and some bird species), and to identify seasonal timing of activities that would minimize impacts to wildlife.

8.3 WSFR program/subprogram outreach

8.3.0 WSFR program/subprogram outreach strategies

- 8.3.0.6 Develop and provide (or otherwise make publicly available) educational programs and/or materials to enlist landowners, land managers and local communities to discourage the presence of managed cat colonies and trap, neuter and release programs in wildlife habitats.
- 8.3.0.7 Develop and provide (or otherwise make publicly available) educational programs and/or materials that describe the negative impacts of off-road vehicles and watercraft use in and adjacent to critical SGCN habitats, and the importance of confining such activities to more appropriate locations and/or seasons.
- 8.3.0.8 Develop and provide (or otherwise make publicly available) educational programs and/or materials to educate recreationists and encourage landowners to eliminate garbage in the vicinity of suitable wildlife habitat, in particular SGCN habitat. Information should include the detrimental impacts garbage may have on various wildlife species.
- 8.3.0.9 Develop and provide (or otherwise make publicly available) educational programs and/or materials to enlist landowners and land managers to include only native plants in landscaping and restoration projects. Provide information to assist them in detecting problematic establishment of invasive, non-indigenous plants.
- 8.3.0.10 Develop and provide (or otherwise make publicly available) educational programs and/or materials to educate landowners and NJ citizens on threats to fish and wildlife (including marine animals).

Eastern Hognose Snake

- 8.3.0.11 Develop and provide (or otherwise make publicly available) educational programs and/or materials to the public, wildlife-related professionals, foresters, etc., that describe the value of species that are often feared (e.g., snakes, bats, spiders, Allegheny woodrat) and/or deemed a "nuisance" (e.g., squirrel, deer, snapping turtle), and therefore, persecuted by people. Include information on tolerance, proper identification, eviction from human dwellings, how to minimize the animal's presence on the property, and/or how to live in harmony with the animal.
- 8.3.0.12 Promote awareness of WSFR (Wildlife and Sportfish Restoration) Outreach/Awareness grants, an important funding source for conservation among hunters and anglers as well as the general public.
- 8.3.0.13 Conduct an educational campaign to encourage observer ethics and respect for wildlife and natural habitat.
- 8.3.0.19 Develop an educational outreach program for the public on the devastating effects predators can have on native nesting wildlife.
- 8.3.0.24 Develop educational outreach programs for local decision-makers, land developers, landowners and citizens about lawn alternatives and the importance of natural vegetation and "edge" habitats on developed properties.
- 8.3.0.26 Develop educational outreach programs for private and public landowners and land managers regarding the importance of and how to manage core forests and forested corridors in a way that will be beneficial for SGCN, particularly endangered, threatened and special concern species.
- 8.3.0.27 Develop educational outreach programs for public and private landowners and land managers regarding the importance of structural habitat diversity, methods to increase diversity, and/or incentive programs available to increase habitat diversity.
- 8.3.0.30 Develop educational outreach programs for private and public landowners, as well as schools, regarding the benefits and creation of backyard habitats for wildlife.
- 8.3.0.31 Develop an educational outreach program for landowners and citizens on the secondary impacts of rodenticides on predators and scavengers.
- 8.3.0.32 Develop an educational outreach program for landowners and citizens on the threats that herbicides and pesticides pose to aquatic systems and wildlife, and to promote safer usage of such products.

9 Planning

9.1 Land use planning

9.1.0 Land use planning strategies

- 9.1.0.1 Develop smart-growth plans and critical habitat designations that consider SGCN life history requirements and habitat needs, connectivity and health of those habitats, and minimizes human-associated disturbances to those habitats and SGCN inhabiting them.
- 9.1.0.2 Develop town plans that avoid impacts to SGCN species and their habitats.
- 9.1.0.3 Develop a plan that directs the creation of impervious surfaces away from and to minimize impacts on aquatic systems and critical terrestrial habitats. The plan should also include strategies to increase the resiliency of aquatic and critical terrestrial habitats to threats and stressors that would impact the reproduction and survival of wildlife.
- 9.1.0.5 Develop a plan that directs the creation or expansion of energy or utility rights-of-way in a manner that minimizes the impacts on critical forested habitats and the wildlife community.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Eastern Hognose Snake

- 9.1.0.6 Develop a plan that directs the creation or expansion of roads and railroads or the re-establishment of abandoned railroads within and adjacent to critical forested habitats in a manner that minimizes the impacts on critical forested habitats and the wildlife community.
- 9.1.0.8 Develop a plan that focuses on strategies for oil pipelines to avoid sensitive habitats that would be highly impacted by oil spills.
- 9.1.0.9 Develop a plan that focuses on strategies to minimize the creation of renewable energy farms (e.g., solar, wind) and related infrastructures within and their impacts on forested habitats and the wildlife community.
- 9.1.0.10 Develop a plan that focuses on strategies to minimize the impacts of mining on critical forested habitats.
- 9.1.0.11 Develop a plan that focuses on strategies to minimize the impacts of power plants on critical forested habitats and the wildlife community.
- 9.1.0.15 Develop a plan to minimize fragmentation of terrestrial and aquatic habitats by roads.
- 9.1.0.16 Develop a plan to minimize new lawns and preserve natural vegetation within and adjacent to critical forest areas.
- 9.1.0.18 Develop a plan to minimize the effects of road widening and traffic volume increases within critical wildlife habitat areas using CHANJ products.
- 9.1.0.19 Develop a plan to minimize the extent of impervious surfaces as part of new construction to increase water recharge in those areas.
- 9.1.0.20 Develop a plan to minimize the impacts of existing agricultural properties adjacent to and the conversion of forest habitats (terrestrial and aquatic, within or adjacent to critical forests) to agriculture, grazing areas/livestock farms, and plantations.
- 9.1.0.22 Incorporate habitat connectivity and preservation of natural areas into state and local land-use policy and the environmental review process to minimize the impacts of transportation and service corridors on fish and wildlife and their habitats.
- 9.1.0.23 Develop a plan to mitigate the effects of transportation barriers by using CHANJ products.
- 9.1.0.27 Develop a plan to use wildlife-appropriate culverts in critical forested areas.
- 9.1.0.28 Develop and coordinate state, regional and local plans for suitable lot layout and landscaping to minimize human-wildlife conflicts that also incorporates habitat connectivity and preservation of natural areas.
- 9.1.0.29 Provide GIS or related data, maps, resource inventories, as well as related training, pertaining to the SWAP and its recommended conservation actions for use or consideration by State, County or municipal planning agencies.
- 9.1.0.30 Incorporate habitat connectivity and preservation of natural areas into state and local land-use policy and the environmental review process to minimize habitat fragmentation and other related threats associated with development.
- 9.1.0.33 Review the species, threats, action successes, and habitats, and work with partners to revise the 2017 State Wildlife Action Plan for the 2025 resubmittal.

9.2 Organizational strategic and CMS planning

9.2.1 Organizational strategic and operational planning

- 9.2.1.1 Identify and codify legal ORV access areas on state lands.

9.3 Species and habitat management planning

9.3.1 Species management planning

Eastern Hognose Snake

- 9.3.1.3 Develop a management plan to restrict human activity (e.g., recreational, maintenance work, etc.) from sensitive habitats/areas such as avian nesting sites, reptile and amphibian breeding areas (nesting or gestation/birthing and breeding pools, respectively), and bat hibernacula, and federal buffers for marine mammals.
 - 9.3.1.4 Develop town plans that avoid impacts to SGCN species and their habitats.
 - 9.3.1.7 Develop a rapid response plan for various scenarios (e.g., insect infestations destroying native habitat, wildlife disease) to be implemented upon exotic pathogen introduction or incident.
 - 9.3.1.9 Develop a management plan incorporating the effects of pesticides, herbicides and other biological controls on SGCN and their critical and supporting habitats.
 - 9.3.1.10 Develop a management plan to combat the impacts of diseases/pathogens impacting SGCN and/or their habitats.
 - 9.3.1.13 Develop a management plan to ensure SGCN populations' persistence based on long-term monitoring of resident and migratory SGCN populations and their habitats.
 - 9.3.1.14 Create species management plans that will promote the protection and where appropriate, the development of old-growth forest stands with large trees, in particular those within large, contiguous forest tracts.
 - 9.3.1.16 DOD and appropriate state agencies work together to improve DOD Integrated Natural Resource Management Plans (INRMP) to develop strategies to minimize or eliminate disturbances to all SGCN (i.e., beyond their federal requirements) during military activities and to improve SGCN habitat and presence.
- 9.3.2 Listed species recovery planning
 - 9.3.2.1 Develop proactive species recovery plans for all endangered and threatened species including guidance and objectives pertaining to critical and supporting habitat to meet and maintain recovery goals.
- 9.3.3 Habitat management planning
 - 9.3.3.5 Develop a management plan using forest management/silviculture strategies that enhance and maintain critical core forests as appropriate for targeted species (e.g., for many SGCN forest birds, "core" forest would include the forest area >90 meters from the forest edge), in perpetuity, to benefit interior forest and disturbance-sensitive SGCN through research and monitoring.
 - 9.3.3.6 Develop a management plan for maintaining and enhancing healthy, SGCN-associated terrestrial and aquatic habitats and associated riparian habitats, and to minimize (if not avoid) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
 - 9.3.3.7 Develop a management plan to reduce the impacts of herbivory on native vegetation and the degradation of habitats supporting SGCN by invasive and/or native, over-abundant wildlife species including but not limited to mute swans, Canada geese, beaver and white-tailed deer.
 - 9.3.3.8 Develop a management plan to combat the impacts of diseases/pathogens impacting SGCN and/or their habitats.
 - 9.3.3.10 Develop a management plan to ensure SGCN populations' persistence based on long-term monitoring of resident and migratory SGCN populations and their habitats.
 - 9.3.3.11 Develop town plans that avoid impacts to SGCN species and their habitats.

Eastern Hognose Snake

- 9.3.3.13 Develop a management plan that will establish/improve habitat resilience (e.g., shorelines of the coast and Delaware Bay, forested habitats of the Pinelands and Skylands) that benefits wildlife inhabiting these areas and prevents or ameliorates near-term impacts of climate change throughout the State, but in particular within the coastal and Delaware Bay areas.
- 9.3.3.15 Develop a management plan incorporating the effects of pesticides, herbicides and other biological controls on SGCN and their critical and supporting habitats.
- 9.3.3.16 Develop a management plan to restrict human activity (e.g., recreational, maintenance work, etc.) from sensitive habitats/areas such as avian nesting sites, reptile and amphibian breeding areas (nesting or gestation/birthing and breeding pools, respectively), and bat hibernacula, and federal buffers for marine mammals.
- 9.3.3.17 Develop a management plan for prescribed burning that will benefit Pinelands dependent species and increase or maintain habitat quality for these species in the Pinelands.
- 9.3.3.18 In cooperation with species and habitat experts, develop management plans for significant natural and/or unique communities, in particular those supporting SGCN, and provide the information to the landowners/managers (federal, state and local government agencies or non-government organization) for review and implementation.
- 9.3.3.19 Develop management plans for SGCN inhabiting permanently protected natural lands using available baseline and population trend data.
- 9.3.3.21 Develop a rapid response plan for various scenarios (e.g., insect infestations destroying native habitat, wildlife disease) to be implemented upon exotic pathogen introduction or incident.
- 9.3.3.22 Create management plans to minimize and/or prevent wildlife road mortality that will incorporate wildlife passages in conjunction with barrier fencing and, where possible, seasonal closures. Aquatic-associated passages must avoid disturbance to the natural streambeds and riparian habitat, permit high volumes of water to flow freely, and provide adequate travel corridors for terrestrial wildlife, while maintaining stream flow for fish passage. Bridges that span rivers and streambeds and include floodplain habitat on either side of the span to provide travel corridors for terrestrial wildlife are preferred over culverts.
- 9.3.3.23 Create forest management plans that will promote the protection and/or development of old-growth forest stands with large trees, in particular those within large, contiguous forest tracts.
- 9.3.3.29 Develop habitat management plans aimed at reducing or eliminating negative impacts of ORVs.
- 9.3.3.32 DOD and appropriate state agencies work together to improve DOD Integrated Natural Resource Management Plans (INRMP) to develop strategies to minimize or eliminate disturbances to all SGCN (i.e., beyond their federal requirements) during military activities and to improve SGCN habitat and presence.
- 9.3.3.34 Include controlled burn prescriptions in forest and stewardship plans to improve wildlife habitat.
- 9.3.3.35 Incorporate habitat connectivity, preservation of natural areas, and the implementation of BMPs into state and local land-use policy environmental review process and energy development plans to minimize habitat fragmentation and related threats associated with solar farms and altered habitats.
- 9.3.3.36 Integrate plans for properly located and timed habitat restoration and management along transportation, energy and service corridors to minimize risks to and benefit wildlife.

11 Technical Assistance

11.1 Environmental review

Eastern Hognose Snake

11.1.1 Review of proposed projects

- 11.1.1.1** Use Biotics database and Landscape Project Mapping in regulatory reviews to ensure protection by applicable laws and regulations.
- 11.1.1.2** Develop smart-growth plans and critical habitat designations that consider SGCN life history requirements and habitat needs, connectivity and health of those habitats, and minimize human-associated disturbances to those habitats and the SGCN inhabiting them.
- 11.1.1.4** Incorporate habitat connectivity and preservation of natural areas into state and local land-use policy and the environmental review process to minimize habitat fragmentation and related threats associated with development.
- 11.1.1.5** Incorporate habitat connectivity and preservation of natural areas into state and local land-use policy and the environmental review process to minimize the impacts of transportation and service corridors on fish and wildlife and their habitats.
- 11.1.1.7** Review proposed construction or other work projects and permit applications, provide recommendations on how to best avoid disturbing sensitive species, and identify actions not permitted.
- 11.1.1.8** Review proposed research projects and permit applications, provide recommendations on how to best avoid disturbing sensitive species, and identify actions not permitted.
- 11.1.1.10** Use CHANJ mapping in reviews of proposed energy, mining, transportation and utility service companies/agencies' projects to attempt to maintain habitat connectivity and reduce fragmentation, and identify potential impacts of the projects.
- 11.1.1.12** Use the best available science (species data, habitat present, site layout options, etc.) when conducting regulatory reviews of proposed solar farm projects to reduce habitat fragmentation and minimize impacts on wildlife.
- 11.1.1.13** Use the best available science (species data, habitat present, wind farm layout options, wind blade impacts on migratory species, location of migration routes, etc.) when conducting regulatory reviews of proposed wind farm projects to minimize impacts on migratory and resident wildlife and reduce habitat fragmentation.

11.1.2 Review of proposed policies and plans

- 11.1.2.1** Develop smart-growth plans and critical habitat designations that consider SGCN life history requirements and habitat needs, connectivity and health of those habitats, and minimize human-associated disturbances to those habitats and the SGCN inhabiting them.

11.2 Technical assistance

11.2.0 Assorted technical assistance strategies

- 11.2.0.1** Provide technical support to private and public landowners and land managers for carrying out restoration and management practices aimed at increasing structural habitat diversity.
- 11.2.0.2** Provide technical support to public and private landowners and land managers for controlling invasive, native and non-native plant species in order to increase structural habitat diversity.
- 11.2.0.3** Develop state, regional and local BMPs that focus on minimizing habitat fragmentation and human-wildlife conflicts associated with development. Make information available to land developers and private and public landowners for implementation.
- 11.2.0.4** Provide educational resources, training programs, and expert guidance to private and public landowners and land managers on the secondary impacts of rodenticides on predators and scavengers.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Eastern Hognose Snake

- 11.2.0.5 Provide educational resources, training programs, and expert guidance to private and public landowners and land managers on the threats that herbicides and pesticides pose to aquatic systems and wildlife, and to promote safer usage of such products.
- 11.2.0.6 Provide educational resources, training programs, and on-the-ground guidance to energy, mining, transportation, and utility service agencies/companies and their project and resource managers on habitat creation, enhancement and restoration within and adjacent to project areas, as well as away from and outside of project areas (depending on the target species), by managing vegetation for a variety of species and that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife. Wind farms should address both terrestrial bound and low-flying species. Examples of habitat management include, but are not limited to, integrating short and tall grasses, specific host plants, brush piles, water sources/wetlands, shrubby areas, nesting areas and no-mow set-asides.
- 11.2.0.7 Provide educational resources, training programs, and on-the-ground guidance to energy, mining, transportation, and utility service agencies/companies and their project and resource managers on the importance of maintaining habitat connectivity, minimizing fragmentation, and the use of CHANJ products to help them target areas for such planning.
- 11.2.0.8 Provide educational resources, training programs, and on-the-ground guidance to public and private landowners and land managers on habitat creation and enhancement strategies that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife.
- 11.2.0.9 Provide educational resources, training programs, and on-the-ground guidance to municipalities, land developers, and other land managers and private landowners about the importance of leaving vegetation in place, especially along riparian areas and wildlife movement corridors.
- 11.2.0.10 Provide technical support to private landowners, consultants, and land managers to create customized management plans based on location and SGCN.
- 11.2.0.11 Provide educational resources, training programs, and on-the-ground guidance to private and public landowners and land managers on the benefits of and for creating young forest and early succession habitat for SGCN.
- 11.2.0.13 Provide educational resources and technical support to public landowners, private landowners with sufficient acreage, and land managers to promote the protection and/or development of old-growth forest stands with large trees, in particular those within large, contiguous forest tracts.
- 11.2.0.16 Provide educational resources and technical support to public and private landowners and land managers to promote the protection of critical SGCN forested habitat and minimize forest edge to benefit interior forest and disturbance-sensitive SGCN.
- 11.2.0.19 Provide educational resources and technical support to public and private landowners and land managers to promote the protection and/or enhancement of scrub-shrub habitats for SGCN.
- 11.2.0.21 Provide educational resources and technical support to public and private landowners and land managers of lands adjacent to critical migratory stopover habitats for songbirds, raptors, shorebirds, bats and invertebrates to promote the protection and/or enhancement of those adjacent habitats to increase the effective size of the migratory habitat.
- 11.2.0.22 Provide educational resources, training programs, and expert guidance to public and private landowners and land managers about lawn alternatives and the importance of natural vegetation and "edge" habitats on developed properties.

Eastern Hognose Snake

- 11.2.0.23 Provide educational resources and technical support to public and private landowners and land managers of lands adjacent to SGCN habitats to promote the protection and/or enhancement of those adjacent habitats to increase the overall size of the "core" area and/or provide a natural buffer, enhancing the suitability of the core area for SGCN, and that connect conserved SGCN habitats.
 - 11.2.0.24 Provide educational resources, training programs, and expert guidance to public and private landowners and land managers on how to manage vegetated roadside areas (e.g., mowing, brush-hogging, etc.) on a schedule that avoids peak activity periods for wildlife and therefore, minimizes harm.
 - 11.2.0.25 Provide educational resources, training programs, and on-the-ground guidance to resource managers regarding the assessment of and addressing secondary impacts (i.e. ancillary prescribed burns, trespassers, ORV use, mosquitoes, deer, buffers) related to residential and commercial development.
 - 11.2.0.26 Make educational resources available to the public that encourage researchers to seek out guidance prior to finalizing proposals and submitting State permit applications to reduce potential impacts on sensitive species.
 - 11.2.0.29 Provide educational resources, training programs, and on-the-ground guidance to Nuisance Wildlife Control Operators (NWCs), conservation partners, and the public in conserving snake populations by advising proper removal from buildings, exclusion methods from buildings, and improving the public's understanding and acceptance of snakes.
- 11.2.1 With individuals and groups involved in resource management decision making
 - 11.2.1.1 Engage partners and stakeholders in constructive dialogue regarding the importance of providing and methods to provide technical support for carrying out restoration and management practices aimed at increasing structural habitat diversity.
 - 11.2.1.2 Provide professional training and technical assistance tools (e.g., mapping, guidance documents, justification, etc.) to agencies/divisions/programs within and outside of the NJ DEP regarding the SWAP, and the conservation actions recommended therein to help facilitate SWAP implementation.
 - 11.2.1.3 Provide educational resources, training programs, and on-the-ground guidance to DOD to improve DOD Integrated Natural Resource Management Plans (INRMP) to develop and implement forest management and other practices that minimize disturbances to SGCN (i.e., beyond their federal requirements).
 - 11.2.1.6 Provide educational resources, training programs, and on-the-ground guidance to resource agencies prior to project initiation to ensure wildlife and their habitats are protected to the highest degree possible during construction, and provisions are in place for post-construction habitat use.
- 11.2.2 With private landowners
 - 11.2.2.1 Provide technical support to farming operations and woodland landowners on ways to decrease clean farming (edge-to-edge) practices and create ecotones to benefit bobwhite and other species dependent on early successional habitat.

100 Law and Policy

100. Legislation

100.1.3 Sub-national Level

- 100.1.3.3 Initiate legislative action to establish an annual budgetary line item designating funds to support programs focused on long-term research and monitoring of wildlife diseases.

Eastern Hognose Snake

100.1.4 County and Local

- 100.1.4.1** Enhance critical migratory stopover habitats for songbirds, raptors, shorebirds, bats and invertebrates through the local ordinances of adjacent private lands to increase the effective size of the habitat.
- 100.1.4.2** Secure and increase the effective size of SGCN habitats and connect conserved SGCN habitats through local ordinances.
- 100.1.4.3** Expand the acreages and enhance the effective size of SGCN habitats by protecting adjacent habitats that contribute to the overall size of the "core" area and/or provide a natural buffer, enhancing the suitability of the core area for SGCN through local ordinances.
- 100.1.4.9** Secure existing and developing old-growth forest stands with large trees, in particular those within large, contiguous forest tracts, through local ordinances.
- 100.1.4.10** Secure critical SGCN forested habitat and minimize forest edge to benefit interior forest and disturbance-sensitive SGCN through local ordinances.
- 100.1.4.12** Secure scrub-shrub habitats for SGCN through local ordinances.
- 100.1.4.13** Encourage municipal laws regulating domestic pets that may predate on wildlife.
- 100.1.4.14** Adopt/pass local ordinances which require assessing and addressing secondary impacts (i.e. ancillary prescribed burns, trespassers, ORV use, mosquitoes, deer, buffers) on biological resources when revising planning/zoning documents or granted site plan/subdivision approvals.
- 100.1.4.15** Incorporate habitat connectivity and the preservation of natural areas into state and local land-use policy and the environmental review process to minimize habitat fragmentation and related threats associated with development.

100.1.5 Scale Unspecified

- 100.1.5.4** Incorporate habitat connectivity and preservation of natural areas into state and local land-use policy and the environmental review process to minimize the impacts of transportation and service corridors on fish and wildlife and their habitats.

100. State Regulations

100.3.0 Regulatory initiatives for species and habitat protection

- 100.3.0.3** Develop policies that will promote the long term protection of critical migratory stopover habitats for songbirds, raptors, shorebirds, bats and invertebrates.
- 100.3.0.5** Develop policies that will promote improved and secure habitat connections between conserved SGCN habitats.
- 100.3.0.6** Develop policies that will promote expanding acreages and enhancing the effective size of SGCN habitats by providing biologically appropriate buffers of native habitat surrounding SGCN habitats.
- 100.3.0.8** Develop policies and/or regulations with the objective of protecting significant natural and/or unique communities in perpetuity.
- 100.3.0.9** Secure mitigation that creates an environmental benefit for losses of SGCN and their habitats.
- 100.3.0.11** Develop policies that will ensure the protection and/or development of old-growth forest stands with large trees, in particular those within large, contiguous forest tracts.
- 100.3.0.12** Develop policies that promote the preservation and protection of critical SGCN forested habitat and minimize forest edge to benefit interior forest and disturbance-sensitive SGCN.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Eastern Hognose Snake

- 100.3.0.15 Develop policies that promote protecting and restoring scrub-shrub habitats to benefit shrub-dependent SGCN.
- 100.3.0.18 Develop policies for conserved lands that prohibit planting and supports the control of non-native vegetation and invasive, native vegetation.
- 100.3.0.20 Develop policies and/or regulations that prohibit the presence of managed cat colonies and trap, neuter and release programs in or near critical wildlife habitats.
- 100.3.0.21 Develop policies that minimize wildlife road mortality through: 1) Requiring the integration of wildlife passages into all new and repaired roads, in particular those areas that will connect SGCN habitats, 2) Requiring current fish/wildlife passages be improved and maintained in perpetuity, 3) Supporting seasonal road closures, in particular for unimproved roads, 4) Supporting projects that work to improve connectivity of SGCN habitats such as land conservation through acquisition or other means.
- 100.3.0.31 Create or expand tax-based incentive programs available to private, agricultural, commercial, industrial or governmental landowners and land managers to include or provide for incentives for the maintenance and/or improvement to existing habitat via the endorsement of wildlife-related BMPs.
- 100.3.0.32 Coordinate regulations across agencies to maximize availability of and enrollment in existing Forestry Stewardship Programs (e.g., "Woodland Stewards", Farm Bill, partners, etc.) to maintain and/or improve forest habitat.
- 100.3.0.36 Create legislation to limit the amount of plastic from shopping bags in circulation and re-instate incentives for citizens bringing their own shopping bag to grocery store.
- 100.3.0.40 Develop laws and/or policies to require vegetative buffers of native plants on preserved farmland and state lands with agricultural leases or agreements.
- 100.3.0.41 Explore all State regulatory requirements for mitigation, restoration, habitat management, etc. to ensure they prohibit the use of specified invasive or other problematic plant species.
- 100.3.0.43 Identify and address (amend) regulatory impediments to beneficial habitat management.
- 100.3.0.44 Incorporate requirements for technical support and funding for mitigation or restoration efforts so as to be consistent with existing regulations.
- 100.3.0.45 Increase the controlled burn season to focus on restoring vegetative communities.
- 100.3.0.46 Investigate and/or develop inter-agency Memorandum of Agreements to share common data stored or managed in program-specific databases.
- 100.3.0.48 Propose new State law or regulation mandating that a State-level "development impact fee" be assessed on all new development approved by municipalities (via the Municipal Land Use Law processes), and dedicate such monies to the development and implementation of regional Habitat Conservation Plans (or existing plans/programs serving the same regional function).
- 100.3.0.50 Retain endangered, threatened and special concern wildlife and habitat protection measures in the Water Quality Management Program Rules.
- 100.3.0.52 Revise existing and/or incorporate new State land use regulations that specifically address the impacts of new or expanded energy sitings and facilities.
- 100.3.0.53 Revise existing and/or incorporate new State land use regulations that specifically address the impacts of new or expanded rights-of-way corridors associated with energy transport/transmission.
- 100.3.0.54 Revise existing and/or incorporate new State land use regulations that specifically address the impacts of new or expanded surface mining areas.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Eastern Hognose Snake

- 100.3.0.57 Develop regulations that when implemented will improve and secure habitat connections between conserved SGCN habitats.
- 100.3.0.58 Develop regulations that when implemented will promote the expansion of acreages and enhancement of the effective size of SGCN habitats by providing biologically appropriate buffers of native habitat surrounding SGCN habitats.
- 100.3.0.60 Develop regulations that when implemented will protect significant natural and/or unique communities in perpetuity.
- 100.3.0.62 Develop regulations that when implemented will protect existing old-growth forest stands with large trees and/or stands that are being actively managed for old growth forests, in particular those within large, contiguous forest tracts.
- 100.3.0.63 Develop regulations that when implemented will preserve and protect critical SGCN forested habitat and minimize forest edge to benefit interior forest and disturbance-sensitive SGCN.
- 100.3.0.65 Develop regulations that when implemented will protect and restore scrub-shrub habitats to benefit shrub-dependent SGCN.
- 100.3.0.68 Develop regulations that when implemented will prohibit the presence of managed cat colonies and trap, neuter and release programs in or near critical wildlife habitats.
- 100.3.0.69 Develop regulations that when implemented will minimize wildlife road mortality.
- 100.3.0.71 Develop regulations for licensing, permitting, or certification of Nuisance Wildlife Control Operators (NWCOS) that handle removal/exclusion of protected wildlife, such as bats and snakes, to ensure that proper methods are followed and that occurrences are reported.
- 100.3.0.72 Develop regulations that require permit applicants and/or review agencies to assess the cumulative and synergistic effects of a proposed project (i.e., "secondary effects"), both over time and over a larger spatial scale than the site itself.
- 100.3.0.73 Develop regulations that would exempt the conversion of lawns to native vegetation (beneficial to wildlife) from local lawn ordinances.

100. State Agency Policy Integration

100.4.0 Policy initiatives for species and habitat protection

- 100.4.0.1 Create any necessary policy changes (including those to incentive programs) to encourage the integration of SWAP actions associated with SGCN priority habitats as a deliberative factor in agencies' actions (e.g., environmental and land management review processes, land acquisition and management).
- 100.4.0.2 Create a policy that requires the NJ DEP to incorporate scientific information regarding climate change and sea level rise (e.g., predictions, habitat management/acquisition efforts to enhance resilience to inundation) on their websites and to work with other government entities, conservation organizations and other stakeholders to work together to collaboratively use social media campaigns to grow a constituency of NJ residents who have an elevated ecological and climate consciousness.
- 100.4.0.3 Develop policies for mandatory buffer strips on preserved farmlands and state-owned agricultural lands.
- 100.4.0.4 Create a policy that requires the use of wildlife habitat and corridor mapping products for both regulatory use when conducting project reviews and planning/siting new or expanded rights-of-way projects.
- 100.4.0.8 Develop a white paper addressing the impacts that existing, new or expanded rights-of-way have upon wildlife, wildlife habitats and habitat connectivity.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Eastern Hognose Snake

- 100.4.0.9 Develop and implement policies to minimize the removal of coarse, woody debris in terrestrial, aquatic and riparian habitats in order to benefit wildlife.
- 100.4.0.12 Develop laws and/or policies to require vegetative buffers of native plants on preserved farmland and state lands with agricultural leases or agreements.
- 100.4.0.13 Develop policies for different circumstances (e.g., roadsides and medians, riparian, aquatic and terrestrial habitats) that outline appropriate habitat/vegetation management strategies and schedules to minimize risks to and benefit wildlife.
- 100.4.0.16 Develop policies to implement habitat management strategies that will increase the structural diversity surrounding areas used for energy, mining, and transportation and service corridors which include but are not limited to the presence of short and tall grasses, specific host plants, brush piles, water sources/wetlands, shrubby areas, nesting areas, and no-mow set-
- 100.4.0.17 Develop policies to implement habitat management strategies, including prescribed burns, that will increase the structural diversity on preserved farmlands, state-owned agricultural lands, forests, parks and wildlife management areas, and any conserved lands purchased with the assistance of Green Acres and Federal Land & Water Conservation Fund monies to control and reduce the impacts of invasive, non-native species in order to increase structural habitat diversity.
- 100.4.0.18 Develop policies to minimize the extent of infrastructure associated with energy and service corridors or areas (e.g., wind and solar farms, pipelines, utility lines) and that require the implementation of habitat management strategies that will increase the structural diversity in the area including (e.g., the presence of short and tall grasses, specific host plants, brush piles, water sources/wetlands, shrubby areas, nesting areas, and no-mow set-asides).
- 100.4.0.19 Develop regulations that will minimize the creation of new barriers, remove or replace current barriers with appropriately-sized systems to accommodate wildlife dispersal, and to minimize road widening and traffic volume increases within critical wildlife habitat areas.
- 100.4.0.20 Develop state regulations that require energy developers and utility service companies to implement habitat management strategies that will increase the structural diversity of the habitat, minimize habitat fragmentation and commercial infrastructure, and minimize the loss, alteration and/or degradation of the habitat and adjacent lands when working on preserved farmlands, state-owned agricultural lands, forests, parks and wildlife management areas, and any conserved lands purchased with the assistance of Green Acres and Federal Land & Water Conservation Fund monies.
- 100.4.0.25 Develop policies that require permit applicants and/or review agencies to assess the cumulative and synergistic effects of a proposed project (i.e., "secondary effects"), both over time and over a larger spatial scale than the site itself.

Eastern Redbelly Turtle

Focal species that comprise this Conservation Target:

Eastern Redbelly Turtle

Threats and Action Drivers associated with this Conservation Target:

1 Residential and Commercial Development

1.1 Housing and Urban Areas

1.1.1 Land conversion from natural habitat to urban and other residential areas (Avg. Score: 2.00)
(large and small scale)

NJ Specific Threats: 1.1.1.1 Fragments terrestrial and aquatic habitats making the area unsuitable for area-sensitive species and inhibit dispersal of animals, reducing gene flow.
1.1.1.2 Loss, alteration and/or degradation of habitat.
1.1.1.3 Lot layout, design and/or landscaping may create conditions that increase wildlife-human conflict.
1.1.1.4 Increased risk of vehicle strikes/mortality to terrestrial-bound and some bird species.
1.1.1.5 Impervious surfaces can lead to a decrease in water recharge.
1.1.1.6 Impervious surfaces can cause an increased risk of floods, flash floods and storm damage that degrade terrestrial and aquatic habitats.

1.2 Commercial and Industrial Areas

1.2.1 Land conversion from natural habitat to commercial or industrial areas (Avg. Score: 1.00)
(large and small scale)

NJ Specific Threats: 1.2.1.1 Fragments terrestrial and aquatic habitats making the area unsuitable for area-sensitive species and inhibit dispersal of animals, reducing gene flow.
1.2.1.2 Loss, alteration and/or degradation of habitat.
1.2.1.3 Lot layout, design and/or landscaping may create conditions that increase wildlife-human conflict.
1.2.1.4 Increased risk of vehicle strikes/mortality to terrestrial-bound and some bird species.
1.2.1.5 Impervious surfaces can lead to a decrease in water recharge.
1.2.1.6 Impervious surfaces can cause an increased risk of floods, flash floods and storm damage that degrade terrestrial and aquatic habitats.

1.3 Tourism and Recreational Areas

1.3.1 Land conversion from natural habitat to recreation or tourism areas (large and small scale) (Avg. Score: 2.00)

NJ Specific Threats: 1.3.1.1 Fragments terrestrial and aquatic habitats making the area unsuitable for area-sensitive species and inhibit dispersal of animals, reducing gene flow.
1.3.1.2 Loss, alteration and/or degradation of habitat.
1.3.1.3 Lot layout, design and/or landscaping may create conditions that increase wildlife-human conflict.
1.3.1.4 Impervious surfaces can lead to a decrease in water recharge.
1.3.1.5 Impervious surfaces can cause an increased risk of floods, flash floods and storm damage that degrade terrestrial and aquatic habitats.

2 Agriculture and Aquaculture

2.1 Annual and Perennial Crops (non-timber)

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Eastern Redbelly Turtle

2.1.1 Shifting Agriculture (Avg. Score: 1.00)

NJ Specific Threats: 2.1.1.3 Conversion of agricultural landscape that results in increased erosion, runoff, and chemical and thermal pollution decreases the landscape's ability to buffer aquatic systems from various forms of terrestrial degradation.

2.1.2 Small-holder Farming (Avg. Score: 1.00)

NJ Specific Threats: 2.1.2.2 Fragments terrestrial and aquatic habitats.

2.1.2.4 Agricultural practices (e.g., mechanized, row-crop agriculture) can cause direct mortality to wildlife when harvesting takes places.

2.1.3 Agro-industry (Avg. Score: 1.00)

NJ Specific Threats: 2.1.3.2 Fragments terrestrial and aquatic habitats.

2.3 Livestock Farming and Ranching

2.3.2 Small-holder Grazing (Avg. Score: 1.00)

NJ Specific Threats: 2.3.2.3 Conversion of natural stream buffers into pastures decreases the landscape's ability to buffer aquatic systems from various forms of terrestrial degradation.

2.3.2.4 Livestock allowed to wade into waterbodies trample and degrade aquatic habitats.

2.3.3 Agro-industry Grazing (Avg. Score: 1.00)

NJ Specific Threats: 2.3.3.3 Conversion of natural stream buffers into pastures decreases the landscape's ability to buffer aquatic systems from various forms of terrestrial degradation.

2.3.3.4 Livestock allowed to wade into waterbodies trample and degrade aquatic habitats.

3 **Energy Production and Mining**

3.1 Oil and Gas Facilities and Pipelines

3.1.1 Distribution processes of petroleum and other liquid hydrocarbons (Avg. Score: 2.00)

NJ Specific Threats: 3.1.1.1 Fragments terrestrial and aquatic habitats.

3.1.1.2 Loss, alteration and/or degradation of habitat.

3.1.1.3 Increased risk of oil spills.

3.1.1.5 Increased vehicular and ship traffic associated with construction and operations, and therefore an increased risk of wildlife mortality from strikes.

3.1.2 Natural gas distribution processes (Avg. Score: 2.00)

NJ Specific Threats: 3.1.2.1 Fragments terrestrial and aquatic habitats.

3.1.2.2 Loss, alteration and/or degradation of habitat.

3.1.2.3 Increased risk of gas leaks and explosions.

3.1.2.5 Increased vehicular and ship traffic associated with construction and operations, and therefore an increased risk of wildlife mortality from strikes.

3.2 Mining and Quarrying

3.2.2 Surface Mining - Rock Quarry (and sand quarries) (Avg. Score: 1.00)

NJ Specific Threats: 3.2.2.1 Fragments terrestrial and aquatic habitats.

3.2.2.2 Loss, alteration and/or degradation of terrestrial and aquatic habitats.

3.2.2.3 Increased risk of vehicle strikes/mortality to wildlife.

3.3 Renewable Energy

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Eastern Redbelly Turtle

3.3.1 Wind Power (Avg. Score: 1.00)

- NJ Specific Threats:** 3.3.1.2 Fragments terrestrial habitats.
3.3.1.3 Loss, alteration and/or degradation of habitat.
3.3.1.4 Increased commercial infrastructure.

3.3.2 Solar Power (Avg. Score: 2.00)

- NJ Specific Threats:** 3.3.2.1 Fragments terrestrial habitats.
3.3.2.2 Loss, alteration and/or degradation of habitat.
3.3.2.3 Increased commercial infrastructure.

3.4 Conventional Power Plants

3.4.0 Conventional Power Plants (Avg. Score: 2.00)

- NJ Specific Threats:** 3.4.0.2 Loss, alteration and/or degradation of habitat due to new or the expansion of current facilities.

4 Transportation and Service Corridors

4.1 Roads and Railroads

4.1.1 Land conversion from natural habitat to roads and railroads (large and small scale) (Avg. Score: 3.00)

- NJ Specific Threats:** 4.1.1.1 Fragments terrestrial and aquatic habitats making the landscape unsuitable for area-sensitive species and inhibiting dispersal of non-volant animals, reducing gene flow.
4.1.1.2 Loss, alteration and/or degradation of habitat associated with road and railroad construction and maintenance, and degradation of adjacent habitats.
4.1.1.4 Re-establishment of abandoned railroad lines may increase the risk of direct mortality on wildlife.
4.1.1.5 Re-establishment of abandoned railroad lines may decrease turtles' abilities to disperse due to their difficulty traversing the railroad ties and tracks, leading to decreased genetic exchange.

4.1.2 Movement of cars and other vehicles on roads and railroads (large and small scale) (Avg. Score: 3.00)

- NJ Specific Threats:** 4.1.2.1 Increased vehicle traffic increases the risk of wildlife mortality from strikes.

4.2 Utility and Service Lines

4.2.1 Land conversion from natural habitat to utility and other service lines (large and small scale) or communication towers and associated access roads (Avg. Score: 2.00)

- NJ Specific Threats:** 4.2.1.1 Fragments terrestrial and aquatic habitats making the landscape unsuitable for area-sensitive species, inhibiting dispersal of non-volant animals, reducing gene flow, and creating barriers to fish when service line-associated roads cross streams (e.g., bridges, culverts, fords, etc.).
4.2.1.2 Loss, alteration and/or degradation of habitat associated with rights-of-way construction and maintenance, and degradation of adjacent habitats.
4.2.1.4 Lines that cross or run parallel to streams result in a loss or reduction of vegetated riparian buffers and streamside shading, affecting water quality and in-stream habitat for aquatic biota.

4.2.2 Management of rights-of-way or communication tower facilities and/or their associated access roads (Avg. Score: 2.00)

- NJ Specific Threats:** 4.2.2.1 Improper or poorly scheduled vegetation management can cause direct mortality to and may reduce productivity of wildlife.

4.3 Shipping Lanes

4.3.2 Dredging impacts (Avg. Score: 1.00)

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Eastern Redbelly Turtle

- NJ Specific Threats:** 4.3.2.1 Threatens wildlife by disrupting/removing stream bottom habitat.
- 4.3.2.3 Transportation of materials to and from disposal facilities may pose temporary disturbance to wildlife impacting foraging and nesting success.

5 Biological Resource Use

5.1 Hunting and Collecting Terrestrial Animals

- 5.1.1 Intentional Use (Avg. Score: 1.00)

- NJ Specific Threats:** 5.1.1.1 Illegal collection of wildlife can have detrimental impacts on populations.

- 5.1.2 Unintentional effects (Avg. Score: 1.00)

- NJ Specific Threats:** 5.1.2.2 Disruption of normal wildlife behavior.

5.2 Gathering Terrestrial Plants

- 5.2.3 Control (Avg. Score: 1.00)

- NJ Specific Threats:** 5.2.3.2 Clearing of scrub-shrub vegetation [and snags] diminishes cover and nesting habitat.
- 5.2.3.3 Removal of riparian or near-stream vegetation alters water quality and in-stream habitat for aquatic organisms by reducing streamside shading, increasing bank erosion, and affecting the natural filtering ability of trees, shrubs, and grasses.

5.3 Logging and Wood Harvesting

- 5.3.1 Intentional Use (subsistence/small scale) (Avg. Score: 1.00)

- NJ Specific Threats:** 5.3.1.2 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN may cause the loss, alteration and/or degradation of wildlife habitat.
- 5.3.1.3 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN and unsustainable forestry practices may increase soil erosion, impacting SGCN habitats.
- 5.3.1.4 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN and unsustainable forestry practices may increase the risk of invasive species establishment, impacting SGCN habitats.
- 5.3.1.5 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN and unsustainable forestry practices may decrease structural diversity and biomass leading to reduced biodiversity and ecological integrity.

- 5.3.2 Intentional Use (large scale) (Avg. Score: 2.00)

- NJ Specific Threats:** 5.3.2.2 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN may cause the loss, alteration and/or degradation of wildlife habitat.
- 5.3.2.3 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN and unsustainable forestry practices may increase soil erosion, impacting SGCN habitats.
- 5.3.2.4 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN and unsustainable forestry practices may increase the risk of invasive species establishment, impacting SGCN habitats.
- 5.3.2.5 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN and unsustainable forestry practices may decrease structural diversity and biomass leading to reduced biodiversity and ecological integrity.

- 5.3.3 Unintentional effects (subsistence/small scale) (Avg. Score: 1.00)

- NJ Specific Threats:** 5.3.3.1 Direct mortality of wildlife, direct loss of suitable habitats (roost, foraging, shelter, etc.), and can disrupt sensitive species, decreasing the likelihood of success and/or reproduction.

Eastern Redbelly Turtle

5.3.4 Unintentional effects (large scale) (Avg. Score: 2.00)

- NJ Specific Threats:** 5.3.4.1 Direct mortality of wildlife, direct loss of suitable habitats (roost, foraging, shelter, etc.), and can disrupt sensitive species, decreasing the likelihood of success and/or reproduction.
- 5.3.4.2 Extensive infrastructure and larger equipment requirements present a potential risk of direct injury/mortality to wildlife.
- 5.3.4.5 Lack of appropriate, sustainable forest management can lead to a decrease in forest habitat diversity, degraded habitat for many forest species, the loss of habitat for early-successional species, and/or the loss of unique habitats for species that need canopy breaks and multi-aged tree composition to fulfill various life history requirements.

5.4 Fishing and Harvesting of Aquatic Resources

5.4.1 Intentional Use (subsistence/small scale) (Avg. Score: 1.00)

- NJ Specific Threats:** 5.4.1.4 Illegal collection of aquatic and semi-aquatic wildlife can have detrimental impacts on populations.

5.4.2 Intentional Use (large scale) (Avg. Score: 1.00)

- NJ Specific Threats:** 5.4.2.4 Illegal collection of aquatic and semi-aquatic wildlife can have detrimental impacts on populations.

5.4.3 Unintentional effects (subsistence/small scale) (Avg. Score: 1.00)

- NJ Specific Threats:** 5.4.3.7 Improperly sanitized equipment, relocation of fish, importation and release of non-native species, and the use of bait from a different location can spread invasive species and diseases from one waterbody to another.
- 5.4.3.8 Lead in fishing tackle is consumed by wildlife in the course of foraging and scavenging, causing injury and death.

5.4.4 Unintentional effects (large scale) (Avg. Score: 1.00)

- NJ Specific Threats:** 5.4.4.7 Improperly sanitized equipment, relocation of fish, use of bait from a different location, can spread invasive species and diseases from one waterbody to another.

6 Human Intrusions and Disturbance

6.1 Recreational Activities

6.1.1 Off-road vehicles (motorized and non-motorized) (Avg. Score: 1.00)

- NJ Specific Threats:** 6.1.1.1 Inappropriate use of off-road vehicles creates new roads/trails which fragments habitat.
- 6.1.1.2 Inappropriate use of off-road vehicles can degrade terrestrial and aquatic habitat and reduce the suitability of adjacent habitats for wildlife.
- 6.1.1.3 Increased risk of harassment that results in a change in wildlife behavior and/or direct mortality from vehicle strikes.
- 6.1.1.6 Off-road vehicles can be a mechanism of transference of wildlife diseases and invasive plant species if gear and apparel are not properly sanitized between sites.

6.1.2 Boating (Avg. Score: 1.00)

- NJ Specific Threats:** 6.1.2.1 Alteration and/or degradation of aquatic habitat.
- 6.1.2.3 Motorized boat propellers can inflict physical harm aquatic wildlife species.
- 6.1.2.5 Watercraft can be a mechanism of transference of wildlife diseases and invasive plant species if gear is not properly sanitized between sites.

6.1.5 Wildlife observation and photography (Avg. Score: 1.00)

- NJ Specific Threats:** 6.1.5.1 Improperly conducted recreational activities may disrupt normal wildlife behaviors which can result in reduced reproductive success or survival, abandonment of critical sites, etc.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Eastern Redbelly Turtle

- 6.1.5.2 Participants may introduce wildlife diseases and invasive plant species when gear and apparel is not properly sanitized between sites.

6.2 Military Exercises

6.2.1 Military exercises (Avg. Score: 2.00)

- NJ Specific Threats:** 6.2.1.1 Military testing and training exercises may inflict disturbance and potential physical harm to wildlife.
- 6.2.1.3 Lack of opportunity for non-federal wildlife managers to influence activities on military bases may result in detrimental impacts to SGCN and/or missed opportunities to engage in projects that benefit SGCN.

6.3 Work and Other Activities

6.3.1 Unauthorized research projects at significant habitats (Avg. Score: 2.00)

- NJ Specific Threats:** 6.3.1.1 Participants may introduce wildlife diseases and invasive plant species when gear and apparel is not properly sanitized between sites.
- 6.3.1.2 Accidental trampling of nests, eggs/egg masses, and unseen individuals may impact reproductive success or cause direct mortality to SGCN.

6.3.2 Authorized research projects at significant habitats (Avg. Score: 2.00)

- NJ Specific Threats:** 6.3.2.2 Participants may introduce wildlife diseases and invasive plant species when gear and apparel is not properly sanitized between sites.
- 6.3.2.3 Accidental trampling of nests, eggs/egg masses, and unseen individuals may impact reproductive success or cause direct mortality to SGCN.

6.3.3 Other "work" unrelated to research (Avg. Score: 2.00)

- NJ Specific Threats:** 6.3.3.1 Construction projects may disrupt normal wildlife behavior which can result in reduced reproductive success or survival, abandonment of critical sites, etc. (e.g., bridge-nesting birds).
- 6.3.3.4 Workers may introduce wildlife diseases and invasive plant species when gear and apparel is not properly sanitized between sites.

7 Natural Systems Modifications

7.1 Fire and Fire Suppression

7.1.1 Increase in Fire Frequency/Intensity (Avg. Score: 2.00)

- NJ Specific Threats:** 7.1.1.1 Increase in frequency and intensity of wild fires as a result of droughts and heat waves drying out vegetation and litter.
- 7.1.1.2 Increase in frequency of wild fires as a result of illegal activities.
- 7.1.1.3 Unnatural fire regimes occurring as a result of military exercises.

7.1.2 Suppression of Fire Frequency/Intensity (Avg. Score: 1.00)

- NJ Specific Threats:** 7.1.2.1 Shift in vegetative communities as a result of suppression of natural fires.
- 7.1.2.2 Lack of diversity in age structure and composition of vegetation due to the suppression of fire.

7.2 Dams and Water Management/Use

7.2.1 Abstraction of Surface Water (domestic use) (Avg. Score: 3.00)

- NJ Specific Threats:** 7.2.1.1 Changing water levels due to water body drawdowns (legal and illegal) may lower dissolved oxygen levels, increase water temperatures, expose wildlife to predation, and increase exposure to winter temperatures, altering wildlife behavior and survival.
- 7.2.1.2 Controlled water releases and/or improper water level management of water bodies may alter downstream dissolved oxygen levels, water temperatures, sediment deposition, and flow rates, altering wildlife behavior and survival.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Eastern Redbelly Turtle

7.2.1.3 Channelization alters water volume and flow rates, removes aquatic vegetation and coarse, woody debris, and eliminates shallow water habitats.

7.2.2 Abstraction of Surface Water (commercial use) (Avg. Score: 3.00)

NJ Specific Threats: 7.2.2.1 Channelization alters water volume and flow rates, removes aquatic vegetation and coarse, woody debris, eliminates shallow water habitats, and disrupts/removes stream bottom habitat.

7.2.2.2 Changing water levels due to water body drawdowns (legal and illegal) may lower dissolved oxygen levels, increase water temperatures, expose wildlife to predation, and increase exposure to winter temperatures, altering wildlife behavior and survival.

7.2.2.3 Controlled water releases and/or improper water level management of water bodies may alter downstream dissolved oxygen levels, water temperatures, sediment deposition, and flow rates, altering wildlife behavior and survival.

7.2.3 Abstraction of Surface Water (agricultural use) (Avg. Score: 3.00)

NJ Specific Threats: 7.2.3.1 Controlled water releases and/or improper water level management of water bodies may alter downstream dissolved oxygen levels, water temperatures, sediment deposition, and flow rates, altering wildlife behavior and survival.

7.2.3.2 Channelization alters water volume and flow rates, removes aquatic vegetation and coarse, woody debris, and eliminates shallow water habitats.

7.2.3.3 Impounding water to create or expand bogs for cranberry farming leads to the loss of natural wetlands and the alteration of the natural hydrology in the area.

7.2.3.5 Changing water levels due to water body drawdowns (legal and illegal) may lower dissolved oxygen levels, increase water temperatures, expose wildlife to predation, and increase exposure to winter temperatures, altering wildlife behavior and survival.

7.2.5 Abstraction of Ground Water (domestic use) (Avg. Score: 3.00)

NJ Specific Threats: 7.2.5.1 Heavy withdrawal of ground water for domestic use may lower water tables and alter the hydrology of freshwater wetlands and headwater streams, including tributaries, seepages and vernal pools.

7.2.6 Abstraction of Ground Water (commercial use) (Avg. Score: 3.00)

NJ Specific Threats: 7.2.6.1 Heavy withdrawal of ground water for industrial and commercial use may lower water tables and alter the hydrology of freshwater wetlands and headwater streams, including tributaries, seepages and vernal pools.

7.2.7 Abstraction of Ground Water (agricultural use) (Avg. Score: 3.00)

NJ Specific Threats: 7.2.7.1 Heavy withdrawal of ground water for agricultural use may lower water tables and alter the hydrology of freshwater wetlands and headwater streams, including tributaries, seepages and vernal pools.

7.2.9 Small Dams (Avg. Score: 3.00)

NJ Specific Threats: 7.2.9.1 Alter the physical, chemical and biological stream environment, causing changes in substrate composition, flow rates, dissolved oxygen, and water temperatures.

7.2.9.3 Dams act as a barrier to movement, limiting the ability of aquatic or semi-aquatic wildlife to move safely between habitats.

7.2.10 Large Dams (Avg. Score: 3.00)

NJ Specific Threats: 7.2.10.1 Alter the physical, chemical and biological stream environment, causing changes in substrate composition, flow rates, dissolved oxygen, and water temperatures.

7.2.10.3 Dams act as a barrier to movement, limiting the ability of aquatic or semi-aquatic wildlife to move safely between habitats.

7.2.11 Dams (size unknown) (Avg. Score: 3.00)

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Eastern Redbelly Turtle

- NJ Specific Threats:** 7.2.11.1 Alter the physical, chemical and biological stream environment, causing changes in substrate composition, flow rates, dissolved oxygen, and water temperatures.
- 7.2.11.3 Dams act as a barrier to movement, limiting the ability of aquatic or semi-aquatic wildlife to move safely between habitats.
- 7.2.12 Culverts** (Avg. Score: 2.00)
- NJ Specific Threats:** 7.2.12.1 Improper design, placement, installation and maintenance of culverts and other stream crossing structures can impede or prevent the movements of terrestrial organisms and can restrict or limit stream flow, impeding the movement of aquatic organisms along riparian corridors.
- 7.2.13 Stream Burial** (Avg. Score: 1.00)
- NJ Specific Threats:** 7.2.13.1 Eliminates riparian habitats.
- 7.2.13.2 Eliminates in-stream habitat and water resources for wildlife.
- 7.3 Other Ecosystem Modifications**
- 7.3.2 Inappropriate timing of mowing** (Avg. Score: 3.00)
- NJ Specific Threats:** 7.3.2.1 Increased risk of direct mortality and/or reduced productivity of wildlife, as well as reduced use by migrating species.
- 7.3.3 Removal of coarse woody debris (streams, forests, scrub-shrub habitats)** (Avg. Score: 2.00)
- NJ Specific Threats:** 7.3.3.1 Decreases the available detritus that normally accumulates behind and within stream obstructions, minimizing or eliminating food sources and shelters for fishes, invertebrates and amphibians.
- 7.3.3.2 Decreases habitat and/or corridor suitability due to limited or absent shelter and foraging habitat.
- 7.3.3.3 Removal of dead trees (snags), large felled logs (i.e., those > 12" dbh), and other downed woody material diminishes nesting, roosting, and sheltering options for wildlife, and increases the ease at which deer can browse regenerating vegetation.
- 7.3.3.4 Decreases available basking, shelter, and foraging habitats.
- 7.3.5 Poor habitat management** (Avg. Score: 1.00)
- NJ Specific Threats:** 7.3.5.1 Improper or poorly scheduled maintenance of man-made corridors (e.g., roadsides and medians) can cause direct mortality to and may reduce productivity of wildlife.
- 7.3.5.2 Shifting from natural vegetation to lawns can cause increased temperatures of local aquatic systems making them unsuitable (or less suitable) for aquatic species' reproduction and survival.
- 7.3.5.3 Vegetation clearing removes terrestrial and riparian corridors for animal movement, shelter, and resting areas.
- 7.3.5.4 Vegetation clearing or inappropriate alteration adjacent to aquatic habitats threatens aquatic species by degrading habitat and water quality (altering temperature and dissolved oxygen, increasing siltation and desiccation, etc.).
- 7.3.5.5 Habitat management that alters or removes vegetation without implementing long-term management increases the risk of invasive and exotic plants establishing themselves, outcompeting native vegetation.
- 7.3.5.6 Habitat management, including that which occurs on public and private lands, that does not consider timing and species' behaviors can result in the direct mortality and/or alteration or loss of habitat.
- 7.3.5.7 Improperly planned habitat management and/or mitigation efforts along roadsides and within the medians can attract wildlife and increase the risk of vehicle strikes.
- 7.3.5.9 Channelization alters water volume and flow rates, removes aquatic vegetation and coarse, woody debris, eliminates shallow water habitats, and disrupts/removes stream bottom habitat.
- 7.3.5.10 Ditching, draining and filling of marshes and wetlands eliminates habitat and degrades the remaining surrounding areas for wildlife.

Eastern Redbelly Turtle

- 7.3.5.12 Lack of diversity in age structure and composition of vegetation due to lack of natural disturbances and/or vegetation management.
- 7.3.5.13 Private landowners with rare species on their properties are not always cooperative in the protection and management of the species' habitats. Landowners may be held accountable for their actions when they cause harm to the species or destroy the habitat, but it is often too late for the species' population.
- 7.3.5.14 Intentional felling and removal of dead standing trees or snags eliminates resting, nesting or feeding habitat, and precludes the snags eventual contribution to coarse woody debris and forest floor structure and habitat.

8 **Invasive and Other Problematic Species, Genes and Diseases**

8.1 Invasive Non-native/ Alien Species/ Diseases

8.1.1 Unspecified Species (Avg. Score: 2.00)

- NJ Specific Threats:**
- 8.1.1.1 Displace or outcompete native species for resources.
 - 8.1.1.2 Alters, degrades and/or reduces the structural diversity of the natural composition of the landscape, including aquatic systems.
 - 8.1.1.3 Invasive, non-native insects can damage native vegetation at a large scale, leading to die-offs, altering the ecological community.
 - 8.1.1.5 Invasive, non-native animals and plants increase the risk of introduction and transference of diseases
 - 8.1.1.6 Invasive, non-native plants may create physical barriers for some species.

8.1.2 Invasive non-native aquatic animals (Avg. Score: 2.00)

- NJ Specific Threats:**
- 8.1.2.2 Displace or out-compete native species for resources (food, shelter), alter the composition of the native landscapes/aquatic systems, diminishing habitat suitability and reducing ecological integrity of natural communities, and may introduce disease into a population.

8.1.3 Invasive non-native aquatic plants (Avg. Score: 2.00)

- NJ Specific Threats:**
- 8.1.3.1 Displace or out-compete native species for resources (food, light, shelter), alter the composition of the native landscapes/aquatic systems, diminish habitat suitability and reduce ecological integrity of natural communities, and may introduce disease into a population.

8.1.4 Invasive non-native terrestrial/wetland animals (Avg. Score: 1.00)

- NJ Specific Threats:**
- 8.1.4.1 Displace or out-compete native species for resources (food, shelter), alter the composition of the native landscapes/aquatic systems, diminish habitat suitability and reduce ecological integrity of natural communities, and may introduce disease into a population.
 - 8.1.4.2 Free-roaming and feral domestic animals such as cats and dogs causes direct mortality of wildlife and disturbance to wildlife breeding and resting areas.

8.1.5 Invasive non-native terrestrial/wetland plants (Avg. Score: 1.00)

- NJ Specific Threats:**
- 8.1.5.1 Displace or out-compete native species for resources (food, light, shelter), alter the composition of the native landscapes/aquatic systems, diminish habitat suitability and reduce ecological integrity of natural communities, and may introduce disease into a population.

8.1.6 Invasive non-native fungal/bacterial diseases (Avg. Score: 2.00)

- NJ Specific Threats:**
- 8.1.6.1 The introduction of non-native fungal and bacterial diseases threatens native populations and ecosystems.

8.2 Problematic Native Species/Diseases

8.2.1 Unspecified Species (Avg. Score: 1.00)

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Eastern Redbelly Turtle

- NJ Specific Threats:** 8.2.1.2 Invasive pathogens and insects may increase in range and abundance as limiting factors (such as temperature) are altered as a result of climate change.
- 8.2.1.3 Invasive, native species can out-compete non-invasive species for resources (food, light, shelter), leading to the demise of some species populations.
- 8.2.1.4 Human-subsidized native species can become overabundant, increasing predation on other native wildlife and/or altering the ecological community.

8.2.2 Named Species (Avg. Score: 2.00)

- NJ Specific Threats:** 8.2.2.2 Human-subsidized native species can become overabundant, increasing predation on other native wildlife and/or altering the ecological community.

8.4 Problematic Species/Diseases of Unknown Origin

8.4.1 Unspecified Species (Avg. Score: 1.00)

- NJ Specific Threats:** 8.4.1.1 Non-native or poorly understood diseases and parasites could potentially impact native animals.

8.4.2 Named Species (Avg. Score: 1.00)

- NJ Specific Threats:** 8.4.2.2 Diseases of unknown origin, such as snake fungal disease and Ranavirus, can cause significant mortality among native animal populations.

8.5 Viral/Prion-induced Diseases

8.5.1 Unspecified Species (Disease) (Avg. Score: 1.00)

- NJ Specific Threats:** 8.5.1.1 There is a large knowledge gap regarding the existence of, or potential for, other diseases impacting native wildlife.

8.5.2 Named Species (Disease) (Avg. Score: 1.00)

- NJ Specific Threats:** 8.5.2.1 Diseases such as West Nile Virus, arenavirus, sudden oak death, Avian Influenza, and snake fungal disease cause morbidity or mortality to native populations.

8.6 Diseases of Unknown Cause

8.6.0 Unknown Diseases (Avg. Score: 1.00)

- NJ Specific Threats:** 8.6.0.1 Diseases yet to be identified by pathologists and virologists cause decreased fitness or mortality to native populations.

9 Pollution

9.1 Domestic and Urban Waste Water

9.1.1 Sewage (Avg. Score: 2.00)

- NJ Specific Threats:** 9.1.1.1 Degradation of aquatic and marine water quality and habitats by changing turbidity, flow and water chemistry.
- 9.1.1.2 Leads to increased eutrophication and algae blooms that result in oxygen depletion.
- 9.1.1.3 Contaminants in sewage treatment effluents and Combined Sewer Overflows can cause developmental and behavioral abnormalities and reproductive failure in wildlife.

9.1.2 Run-off (Avg. Score: 2.00)

- NJ Specific Threats:** 9.1.2.1 Chemical fertilizers and nutrient run-off changes the pH in streams and ponds and causes eutrophication in inland waters and estuaries, which can make habitat unsuitable for specialist species and increase the risk of invasive and generalist species.
- 9.1.2.2 Contaminants degrade aquatic and marine water quality and can bioaccumulate in benthic organisms, threatening wildlife by causing developmental and behavioral abnormalities and reproductive failure.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Eastern Redbelly Turtle

- 9.1.2.3 Contaminants from road runoff (oil, sediment, salt, etc.) impact native vegetation and the species that rely upon them, degrade water quality in aquatic systems, and can injure or kill the aquatic and semi-aquatic species that rely upon them.

9.2 Industrial and Military Effluents

9.2.1 Oil Spills (Avg. Score: 2.00)

NJ Specific Threats: 9.2.1.1 Oil spills render resting, breeding and foraging habitats temporarily unavailable to wildlife, altering normal wildlife behavior.

9.2.1.2 Oil spills have long term effects on habitats and damage ecological processes that can cause local wildlife population declines and impaired foraging or reproduction.

9.2.1.3 Oil spills cause external oiling of wildlife and ingestion of oil, both of which can injure or kill wildlife.

9.2.2 Seepage from Mining (Avg. Score: 2.00)

NJ Specific Threats: 9.2.2.1 Contaminants from mining degrade water quality in aquatic systems, and can injure or kill the aquatic and semi-aquatic species that rely upon them.

9.2.3 Other (Avg. Score: 2.00)

NJ Specific Threats: 9.2.3.1 Point and nonpoint source pollution such as polychlorinated biphenyls (PCBs), pesticides, heavy metals, and endocrine disrupting compounds (EDC's) into freshwater and marine systems pose threats to wildlife through direct contact and/or ingestion, and to aquatic species and their predators through bioaccumulation, impacting the reproductive success and neurological function of many avian and fish species.

9.2.3.2 Chemical spills have long term effects on habitats and damage ecological processes that can cause local wildlife population declines and impaired foraging or reproduction.

9.2.3.3 Chemical spills may render resting, breeding and foraging habitats temporarily unavailable to wildlife, altering normal wildlife behavior.

9.2.4 Other: Hydrofracturing (Avg. Score: 1.00)

NJ Specific Threats: 9.2.4.1 Contaminants from hydrofracturing degrade water quality in aquatic systems, and can injure or kill the aquatic and semi-aquatic species that rely upon them.

9.2.4.2 Uncontrolled effluents escaping from hydrofracturing facilities can cause injury to wildlife and alter normal behaviors.

9.2.5 Other: Industrial toxic settling ponds (Avg. Score: 2.00)

NJ Specific Threats: 9.2.5.1 Surficial or open industrial effluent ponds can cause injury or death to wildlife that become exposed through ingestion or submersion.

9.3 Agricultural and Forestry Effluents

9.3.1 Nutrient Loads (Avg. Score: 2.00)

NJ Specific Threats: 9.3.1.1 Chemical fertilizers and nutrient run-off changes the pH in streams, ponds and wetlands and causes eutrophication in inland waters and estuaries, which can make habitat unsuitable for specialist species and increase the risk of invasive and generalist species.

9.3.1.2 Animal waste degrades terrestrial and aquatic habitats, especially streams, ponds and wetlands, resulting in eutrophication, which disrupts oxygen and nutrient balances, and causes injury and mortality to aquatic organisms.

9.3.1.4 Conversion of low-intensity agriculture to intensive agriculture (e.g., tree nursery, row crop) degrades wetland and aquatic habitats with runoff, increasing sediment and nutrient loads and pH.

9.3.1.5 Conversion of native forests to plantations degrades wetland and aquatic habitats through increased runoff.

9.3.2 Soil Erosion and Sedimentation (Avg. Score: 1.00)

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Eastern Redbelly Turtle

NJ Specific Threats: 9.3.2.1 Soil erosion, sedimentation and destruction of streambanks and riparian buffers degrade waters making them unsuitable for riparian-dependent wildlife.

9.3.2.3 Conversion of native forests to plantations degrades wetland and aquatic habitats through increased sedimentation.

9.3.3 Herbicides and Pesticides (Avg. Score: 1.00)

NJ Specific Threats: 9.3.3.1 Pesticides degrade terrestrial and aquatic habitats, especially streams, ponds and wetlands. Aquatic wildlife are particularly sensitive to these contaminants, which can cause developmental and behavioral abnormalities and reproductive failure. Some contaminants may bioaccumulate in predatory fish and birds and disrupt reproduction.

9.3.3.3 Use of pesticides can directly harm non-target species through direct contact and/or by reducing and/or contaminating their food supply.

9.3.4 Other (Avg. Score: 1.00)

NJ Specific Threats: 9.3.4.1 Spills, leaks or discharges of fuel, oil or other contaminant fluids from machinery or equipment used in the normal course of agricultural or forestry activities can degrade or destroy adjacent aquatic and terrestrial habitats and/or cause harm to non-target species (plants and animals).

9.3.5 Control of insect pests and plants leading to mortality of non-target species (Avg. Score: 1.00)
not associated with agriculture

NJ Specific Threats: 9.3.5.4 Improper use of current insecticides, such as those containing esfenvalerate, prallethrin, or piperonyl butoxide, or past use of pesticides containing chlordane still present in the soils, are toxic to various wildlife species, and can cause injury, mortality, or other effects that impair population viability.

9.3.5.5 Use of pesticides and herbicides can minimize the abundance of food sources for native wildlife populations.

9.4 Garbage and Solid Waste

9.4.1 Direct hazards to wildlife (Avg. Score: 1.00)

NJ Specific Threats: 9.4.1.1 Wildlife may ingest garbage causing choking or impingement in the digestive system, or they may become physically entangled in it (e.g., plastic or abandoned fish nets); conditions that make them unable to feed or drink, cause them to suffocate or drown, or otherwise restrict the animal's movement making them more susceptible to predators, starvation or injury.

9.4.1.2 Garbage and solid waste destroys natural habitats and obstructs wildlife movements.

9.5 Air-Bourne Pollutants

9.5.1 Acid Rain (Avg. Score: 1.00)

NJ Specific Threats: 9.5.1.1 Causes acidification of water bodies, resulting in changes to aquatic and marine communities and reducing biodiversity, and creating conditions that are unsuitable for some aquatic (freshwater and marine) and semi-aquatic species that are sensitive to pH shifts.

9.5.6 Herbicides and Pesticides (Avg. Score: 2.00)

NJ Specific Threats: 9.5.6.1 May result in injury or direct mortality of non-target species.

9.6 Excess Energy

9.6.2 Thermal Pollution (Avg. Score: 1.00)

NJ Specific Threats: 9.6.2.2 Water temperature changes to aquatic systems can deter or preclude use by SGCN (e.g., alter habitat suitability for wildlife species, reduce prey base) or present stressors that are harmful if not fatal to wildlife.

11 Climate Change and Severe Weather

11.1 Habitat Shifting or Alteration

Eastern Redbelly Turtle

11.1.0 Macro- and Micro-Climate Alterations

(Avg. Score: 1.00)

NJ Specific Threats: 11.1.0.1 Alters native terrestrial and aquatic habitats at the macro- and micro-climate levels that can affect suitability for wildlife, in particular specialist species.

11.2 Droughts

11.2.1 Droughts

(Avg. Score: 2.00)

NJ Specific Threats: 11.2.1.1 Contribute to hardened soils, decreasing water recharge during rains and increasing the likelihood of flash floods during storms.

11.2.1.2 Lead to lower groundwater levels and therefore, less available water for people and habitats.

11.2.1.3 Loss, alteration and/or degradation of terrestrial and aquatic habitats.

11.3 Temperature Extremes

11.3.1 Temperature extremes

(Avg. Score: 2.00)

NJ Specific Threats: 11.3.1.1 Increasing temperatures may cause habitat loss and degradation by desiccating and/or raising the temperatures of small wetlands and streams leading to the loss of freshwater mussels and other aquatic species and species reliant upon these habitats.

11.3.1.2 Increased temperatures can negatively impact wetland, riverine, lacustrine and vernal pool-associated or -dependent wildlife by reducing flows, increasing water temperatures, lowering water levels and causing premature drying of vernal habitats.

11.3.1.4 Extremely low temperatures and/or extensive periods of unseasonably low temperatures during critical life history stages (e.g., hibernation, gestation/nesting) can alter animals' behaviors and decrease survivorship.

11.4 Storms and Flooding

11.4.1 Storms and flooding

(Avg. Score: 1.00)

NJ Specific Threats: 11.4.1.1 Extreme storms and flooding events threaten aquatic and marine wildlife through habitat degradation and alteration, including alterations to off-shore or back-bay benthic conditions, damage to submerged aquatic vegetation (SAV), increased turbidity, altered water chemistry, and potentially displacement of aquatic and marine wildlife.

11.4.1.3 Increase risk of saltwater intrusion to freshwater habitats altering the water chemistry and potentially altering aquatic wildlife community.

11.4.1.4 Flood events alter river or stream morphology, benthic conditions and habitat availability for wildlife, cause bank erosion, and deposit sediments in floodplain wetlands altering wildlife habitat.

11.4.2 Increased rainfall

(Avg. Score: 1.00)

NJ Specific Threats: 11.4.2.1 Extreme rain events threaten aquatic wildlife through habitat degradation and alteration, including alterations to benthic conditions, damage to submerged aquatic vegetation (SAV), increased turbidity, altered water chemistry, and potentially displacement of aquatic wildlife.

11.4.2.2 Extreme rain events can damage wildlife nesting and resting habitats, including impacts to avian eggs and chick and small mammal survivorship.

11.4.2.3 More frequent rain events can alter terrestrial and wetland vegetation communities as well as wetland hydrology, shifting wildlife community use.

11.6 Phenology Shifting or Alteration

11.6.2 Phenology shifts related to predator-prey ecology

(Avg. Score: 1.00)

NJ Specific Threats: 11.6.2.1 Alters inter-specific relationships (e.g., competition, parasitism, predation) of wildlife, ultimately leads to detrimental impacts on the ecological system.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Eastern Redbelly Turtle

11.6.2.2 Shifts timing of species migration, breeding and hibernation, and available food resources, causes redistribution of species, or mortality for species that are unable to relocate due to their already isolated habitat or limited mobility.

11.6.3 Phenology shifts related to species redistribution (Avg. Score: 1.00)

NJ Specific Threats: 11.6.3.1 Shifts in timing of species migration, breeding and hibernation, and available food resources, as a result of wildlife range shifts driven by climate change.

11.6.3.2 Shifts in nesting times or egg incubation durations can limit nest success and longterm populations.

12 Resource Management Needs

12.1 Resource information collection needs

12.1.1 Lack of initial baseline inventory (Avg. Score: 2.00)

NJ Specific Threats: 12.1.1.1 Lack of information regarding the distribution, connectivity and quality of SGCN habitats throughout the State, and where habitat enhancement/restoration will benefit SGCN and other wildlife.

12.1.1.2 Lack of information regarding the population dynamics and trends, habitat requirements and dispersal distances of the various age classes, and survivorship of SGCN throughout the State.

12.1.2 Lack of up-to-date existing information (Avg. Score: 2.00)

NJ Specific Threats: 12.1.2.1 Lack of (routine, regular, ongoing) surveys/assessments that provide up-to-date information regarding population trends or health, and/or status of fish, wildlife and/or their habitats.

12.1.3 Need to answer research question (Avg. Score: 2.00)

NJ Specific Threats: 12.1.3.1 There are significant knowledge gaps regarding distribution, dispersal, diseases, population trends, etc. of SGCN.

12.1.4 Need to develop new technique (Avg. Score: 2.00)

NJ Specific Threats: 12.1.4.1 Improve and evaluate survey methods for SGCN and their habitats; alter as needed.

12.3 Regulatory Reform

12.3.0 State Regulatory Reforms (Avg. Score: 1.00)

NJ Specific Threats: 12.3.0.3 Lack of a licensing program and standards for NJ Nuisance Wildlife Control Operators (NWCOS) leads to inadequate controls over handling of wildlife and lack of reporting of non-game/SGCN species (and all wildlife) encountered in nuisance situations.

12.3.0.7 Activities that threaten SGCN, their food sources, and/or habitats are often regulated separately and without consideration for the cumulative and synergistic effects over time or over a larger spatial scale. Therefore, regulations can fail to protect SGCN populations over time.

12.3.0.10 Land use regulatory processes pertaining to habitat creation, enhancement or restoration projects can be costly and/or burdensome, precluding or discouraging the development or implementation of conservation projects.

12.4 Internal Policy & Procedures Reform

12.4.0 State Policy and Procedure Reform (Avg. Score: 1.00)

NJ Specific Threats: 12.4.0.1 A species-by-species management focus as opposed to ecological systems and biodiversity generally has greater opportunity for unintended consequences for other species and may be less efficient in developing appropriate management actions.

12.4.0.2 Policies and procedures for lands management that lack consideration of the impacts of activity timing can result in unintended impacts to wildlife during vulnerable periods.

12.4.0.7 Land preservation contracts, easements, etc. that do not contain prescriptive language or flexibility allowing for habitat management can result in unsuitable habitat conditions and biodiversity declines for SGCN.

14 **Education/ Outreach Needs**

14.1 Education needs

14.1.1 Need for improved knowledge of fish and wildlife and their habitats (Avg. Score: 2.00)

- NJ Specific Threats:** 14.1.1.1 Lack of understanding of the importance of various SGCN habitats, their connectivity to similar habitats, and how planning decisions impact their quality and the wildlife that depend upon them.
- 14.1.1.2 Lack of general knowledge of SGCN life histories and vulnerabilities as they relate to land management practices.
- 14.1.1.3 Lack of understanding of the need to manage both natural and anthropogenic (e.g., yards, lawns, hayfields, etc.) habitats to minimize impacts or increase benefits to SGCN and their habitats.

14.2 Outreach needs

14.2.1 Need to improve specific understanding of agency/organization goals, objectives and ongoing wildlife conservation actions (Avg. Score: 2.00)

- NJ Specific Threats:** 14.2.1.1 Need to develop greater understanding of and support for efforts implemented to enhance SGCN habitat and biodiversity through various forest management practices.
- 14.2.1.2 Need to develop greater understanding of and support for efforts implemented to enhance SGCN habitat and biodiversity through various aquatic and riparian management practices.

15 **Administrative Needs**

15.2 Organizational/program planning needs

15.2.3 Need for multi-state, regional and landscape scale planning (Avg. Score: 1.00)

- NJ Specific Threats:** 15.2.3.1 State governance and financial structures can sometimes inhibit conservation planning and implementation at the regional and landscape-scales that are often more effective at setting priorities and meeting species and habitat conservation goals and objectives.

Actions to address the Threats and Action Drivers associated with this Conservation Target:

1 Coordination and Administration

1.2 Incentives

1.2.1 Incentives

- 1.2.1.2 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to private and public landowners and land managers to increase the effective size of SGCN habitats by protecting/restoring adjacent habitats that contribute to the overall size of the "core" area and/or provide a natural buffer, enhancing the suitability of the core area for SGCN, and/or connect conserved SGCN habitats.
- 1.2.1.6 Secure and promote the protection/restoration of riparian and floodplain habitats, inland wetland habitats (marsh, vernal pool, fen, emergent shrubland, forest), and other aquatic habitats (including open waters) and/or biologically appropriate buffers through incentive programs.
- 1.2.1.7 Secure and promote the protection/restoration of fish SGCN habitats by protecting lands adjacent to fish SGCN habitats and/or aquatic systems feeding into such habitats through incentive programs.
- 1.2.1.8 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to municipalities, land developers, and other land managers to retain and/or enhance native vegetation adjacent to aquatic habitats, and along riparian areas and wildlife movement corridors.

Eastern Redbelly Turtle

- 1.2.1.11 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to public and private landowners and managers, including but not limited to government and non-government agencies/organizations, energy, mining, and transportation and utility service companies/agencies, to minimize commercial infrastructure and impervious surfaces, and to improve wildlife habitats, limit fragmentation, reduce elements which would exacerbate mortality, and/or implement activities/restoration that would create new or improved corridor habitat and/or increase connectivity, and to increase structural habitat diversity through the implementation of a variety of vegetation management practices that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting), and to minimize (if not avoid) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
- 1.2.1.12 Create incentives (non-monetary and/or monetary) for land developers to redevelop abandoned areas (e.g., shopping centers, office complexes) to minimize the loss of natural habitats and reduce the extent of impervious surfaces as part of new construction to increase water recharge in those areas.
- 1.2.1.18 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to public and private landowners and land managers to control and reduce the impacts of invasive, native and non-native species in order to increase structural habitat diversity.
- 1.2.1.26 Develop a new funding source, targeting natural resource damages monies, mitigation monies or other available sources, to fund new or existing landowner incentive programs.

2 Direct Management of Natural Resources

2.2 Dam and barrier removal

2.2.1 Culvert work

- 2.2.1.1 Replace existing barriers to wildlife movement with and/or install appropriately-sized systems to accommodate wildlife dispersal.

2.3 Fire management

2.3.3 Prescribed burning

- 2.3.3.1 Evaluate different management techniques of prescribed burns that might be used to mimic the historic role of fire and other natural disturbances in shaping an ecosystem.

2.6 Hazard or infrastructure removal

2.6.6 Shoreline armoring removal

- 2.6.6.1 Remove shoreline armoring to reduce its impacts on aquatic habitats.

2.8 Invasive species control

2.8.0 Invasive species control strategies and implementation

- 2.8.0.4 Implement control/management strategies to reduce the impacts and/or limit the distribution of invasive, native and non-native species (wildlife and plants) that pose threats to native wildlife or communities. Encourage the implementation of biological and mechanical removal/control. When chemical control is used, encourage low-volume, targeted application using NJDEP-approved chemicals in accordance with the specific instructions for that chemical. Follow BMPs to maximize the effectiveness of the strategies while avoiding excessive harm to non-target species.

Eastern Redbelly Turtle

- 2.8.0.5 Implement biologically safe and appropriate control/management strategies, and where appropriate, eradication strategies to reduce the impacts and/or limit the distribution of invasive and/or non-native plant species within or near aquatic systems using methods that will provide the most protection to the aquatic and riparian ecological system, and minimize disturbance to the soil and wildlife. Encourage the implementation of biological and mechanical removal/control. When chemical control is used, encourage low-volume, targeted application using NJDEP-approved chemicals in accordance with the specific instructions for that chemical.
- 2.8.0.6 Implement long-term management of invasive and/or non-native plants to help maintain functioning ecological systems and biological diversity, and to enhance travel corridors. Encourage the implementation of biological and mechanical removal/control. When chemical control is used, encourage low-volume, targeted application using NJDEP-approved chemicals in accordance with the specific instructions for that chemical.

2.10 Planting/seeding

2.10.0 Planting/seeding strategies for terrestrial or aquatic habitat creation or restoration

- 2.10.0.1 Prevent or ameliorate near-term impacts of climate change throughout the State by developing, implementing and monitoring/evaluating habitat management strategies that will establish/improve habitat resilience (e.g., shorelines of the coast and Delaware Bay, forested habitats of the Pinelands and Skylands) that benefits wildlife inhabiting these areas, in particular within the coastal and Delaware Bay areas.
- 2.10.0.3 Restore and/or enhance habitats to benefit urban-associated SGCN.
- 2.10.0.4 Restore and/or enhance suitable travel corridors connecting conserved habitats for SGCN by restoring unsuitable (or less optimal) habitats.
- 2.10.0.5 Implement habitat restoration and/or enhancement activities that include the creation of vegetative buffers between sensitive habitats (e.g., aquatic systems) and human-inhabited areas (e.g., residences, parks, etc.) and that is conducted during appropriate timing to avoid sensitive periods (e.g., nesting, denning, roosting) while minimizing (if not avoiding) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
- 2.10.0.6 Expand the acreages and enhance the effective size of SGCN habitats by restoring adjacent, less optimal or unsuitable, habitats.
- 2.10.0.7 Restore/reclaim and enhance degraded rare species habitats through strategic revegetation and management efforts for documented/target SGCN.
- 2.10.0.8 Protect significant natural and/or unique communities by implementing best management practices when conducting habitat restoration strategies.
- 2.10.0.9 Restore and/or enhance riparian and floodplain habitats, inland wetland habitats (marsh, vernal pool, fen, emergent shrubland, forest), and other aquatic habitats (including open waters) and/or biologically appropriate buffers to minimize degradation, alteration and/or changes in hydrology and subsequent disturbances to and behavioral changes of wildlife (e.g., restoring biologically appropriate buffers, revegetation or restoration efforts, etc.).
- 2.10.0.12 Create and/or maintain scrub-shrub habitats through revegetation efforts with little to no impact on forested, wetland and grassland habitats to maintain populations of shrub-dependent SGCN.

Eastern Redbelly Turtle

- 2.10.0.14 Implement best management practices (BMPs), protective strategies and guidelines for restoring and enhancing healthy, SGCN-associated habitats while minimizing (if not avoiding) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
- 2.10.0.15 Restore and/or enhance terrestrial and aquatic habitats proximate to but not adjacent to roads and other transportation corridors for terrestrial-bound SGCN species whose behavior (i.e., dispersal across roads) may be altered by doing so, and therefore decrease road mortality of such species (e.g., amphibians, snakes, turtles, small mammals).
- 2.10.0.21 Restore and/or enhance understory habitats that suppress invasive species and provide critical resources and enhance sheltering, foraging, and nesting cover for wildlife.
- 2.10.0.22 Restore and/or enhance terrestrial and aquatic habitats to promote the regeneration of native vegetation and enhance structural diversity to benefit SGCN (e.g., vegetative buffers of aquatic systems, allow coarse, woody debris to remain in terrestrial, aquatic and riparian habitats to provide shelter, riparian stabilization and necessary microclimates, plant native trees, shrubs and grasses, etc.).
- 2.10.0.23 Restore and/or enhance roosting habitats for migratory species (shorebirds, raptors, bats, songbirds and invertebrates) in appropriate areas along documented migratory corridors around the State.
- 2.10.0.24 Use NJ's CHANJ mapping and guidance to establish vegetation and enhance or create corridors between fragmented habitats with similar vegetation, slope, soils, structure, etc. to ensure vegetative integrity is maintained to allow wildlife to safely disperse, and corridors are buffered with natural habitats to minimize disturbance to wildlife within the corridors.
- 2.10.0.25 Enhance SGCN fish habitats through aquatic and riparian vegetation restoration.

2.11 Vegetation management

2.11.0 Vegetation management strategies for terrestrial or aquatic habitat creation or restoration

- 2.11.0.3 Create suitable travel corridors connecting and increasing the effective size of conserved habitats for SGCN by restoring unsuitable (or less optimal) habitats through vegetation management.
- 2.11.0.4 Implement vegetation management strategies that consider appropriate timing to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife, particularly SGCN.
- 2.11.0.5 Expand the acreages and enhance the effective size of SGCN habitats by restoring adjacent, less optimal or unsuitable, habitats through vegetation management.
- 2.11.0.6 Reclaim degraded rare species habitats by conducting vegetation management needed to restore habitat value for the documented/target SGCN.
- 2.11.0.7 Protect significant natural and/or unique communities by implementing best management practices through vegetation management.
- 2.11.0.8 Maintain, enhance and/or restore biologically appropriate buffers for SGCN-inhabited/used freshwater wetlands through vegetation management.
- 2.11.0.13 Implement best management practices (BMPs), protective strategies, and guidelines for vegetation management to maintain and enhance healthy, SGCN-associated habitats while minimizing (if not avoiding) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Eastern Redbelly Turtle

- 2.11.0.14 Conduct vegetation management adjacent to roads for SGCN species whose behavior (i.e., dispersal across roads) may be altered by doing so, and therefore decrease road mortality of such species (e.g., amphibians, snakes, turtles, small mammals).
- 2.11.0.16 Prevent or ameliorate near-term impacts of climate change throughout the State by developing, implementing and monitoring/evaluating habitat management strategies that will establish/improve habitat resilience (e.g., shorelines of the coast and Delaware Bay, forested habitats of the Pinelands and Skylands) that benefits wildlife inhabiting these areas, in particular within the coastal and Delaware Bay areas.
- 2.11.0.21 Minimize the degradation, alteration and/or changes in hydrology of wetlands, riparian and floodplain areas, and aquatic habitats (including open waters) and subsequent disturbances to and behavioral changes of wildlife by maintaining or enhancing these areas and biologically appropriate buffers through habitat management and/or revegetation or restoration efforts.
- 2.11.0.23 Implement appropriate habitat management actions in areas where natural disturbances, such as wildfire, have been precluded.
- 2.11.0.24 Conduct vegetation management adjacent to aquatic habitats following BMPs to enhance habitat for target shrub- or young forest-dependent SGCN while minimizing negative impacts to other SGCN.
- 2.11.0.26 Conduct vegetation management along roadsides and medians, avoiding peak activity periods for wildlife, that enhances wildlife dispersal naturally and safely across roads and similar barriers to/between terrestrial and/or aquatic habitats.
- 2.11.0.28 Conduct vegetation management in agricultural areas following BMPs to enhance habitat for target shrub- or young forest-dependent SGCN while minimizing negative impacts to other SGCN.
- 2.11.0.29 Conduct vegetation management on transportation and service corridors (i.e., rights-of-way) following BMPs to enhance habitat for target shrub- or young forest-dependent SGCN while minimizing negative impacts to other SGCN.
- 2.11.0.30 Identify and prioritize areas where various management tools (such as increasing salinity through the management of water levels or chemical applications) may be effective in reducing phragmites within and restoring marsh habitat.
- 2.11.0.32 Increase structural habitat diversity around and when feasible, within agricultural landscapes by managing vegetation for a variety of species, in particular, those farms that have removed scrub-shrub habitat and/or fragmented forests, and by implementing ecologically best practices (e.g., no-till farming, maintaining hedgerows, buffer set-asides, etc.).
- 2.11.0.33 Increase structural habitat diversity by implementing long-term vegetation management to minimize the potential for the establishment of invasive and/or non-native plants that may outcompete native vegetation.
- 2.11.0.34 Increase structural habitat diversity by managing residential, commercial and recreational areas' landscapes for a variety of species. For example, integrate short and tall grasses, specific host plants, brush piles, water sources/wetlands, shrubby areas, nesting areas and no-mow set-asides.
- 2.11.0.35 Increase structural habitat diversity by managing vegetation adjacent to aquatic habitats in a manner that provides a buffer from runoff and erosion and a microclimate to stabilize seasonal temperatures to benefit a variety of aquatic and semi-aquatic species.
- 2.11.0.36 Increase structural habitat diversity by managing vegetation for a variety of species and considering their life history requirements (e.g., travel corridors, shelter, resting and breeding areas) to minimize the risk of harm.

Eastern Redbelly Turtle

- 2.11.0.37 Increase structural habitat diversity by minimizing the removal of coarse, woody debris in terrestrial, aquatic and riparian habitats which benefits wildlife.
- 2.11.0.38 Increase structural habitat diversity in and around horse/livestock farms by managing vegetation for a variety of species, in particular, in and around farms that have fragmented forests, and by implementing ecologically best practices (e.g., do not permit overgrazing, do not allow livestock to wade in waterbodies).
- 2.11.0.39 Increase structural habitat diversity in and around solar farms by managing vegetation for a variety of species and that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife. For example, integrate short and tall grasses, specific host plants, brush piles, water sources/wetlands, shrubby areas, nesting areas and no-mow set-asides.
- 2.11.0.40 Increase structural habitat diversity surrounding areas used for energy, mining, and transportation and service corridors by managing vegetation for a variety of species and that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife. For example, integrate short and tall grasses, specific host plants, brush piles, water sources/wetlands, shrubby areas, nesting areas and no-mow set-asides, and avoid managing habitat during the breeding seasons for ground-nesting birds, reptiles, amphibians and small mammals.

2.12 Water management

2.12.7 Waterfowl impoundment maintenance

- 2.12.7.1 Manage impoundments to benefit SGCN species inhabiting them (e.g., bitterns, rails, ducks, turtles and some invertebrates).
- 2.12.7.2 Use impoundment management to create feeding and roosting habitats for migratory species (shorebirds, raptors, bats, songbirds and invertebrates) in appropriate areas along documented migratory corridors around the State.
- 2.12.7.3 Implement best management practices (BMPs), protective strategies, and guidelines for impoundment management to maintain and enhance healthy, SGCN-associated habitats while minimizing (if not avoiding) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
- 2.12.7.4 Implement impoundment management strategies that consider appropriate timing to avoid sensitive periods (e.g., nesting, denning, roosting) and minimizes harm to wildlife, particularly SGCN.
- 2.12.7.5 Expand the acreages and enhance the effective size of SGCN habitats by restoring adjacent, less optimal or unsuitable, habitats through impoundment management.
- 2.12.7.6 Reclaim degraded rare species habitats through impoundment management needed to restore habitat value for the documented/target SGCN.
- 2.12.7.7 Protect significant natural and/or unique communities by implementing best management practices for impoundment management.
- 2.12.7.8 Repair impoundments damaged by salt hay farm/dike abandonment and conduct restoration of degraded sites for targeted SGCN species and their habitats.
- 2.12.7.12 Implement impoundment management to benefit urban-associated SGCN.
- 2.12.7.13 Manage impoundments adjacent to roads for SGCN species whose behavior (i.e., dispersal across roads) may be altered by doing so, and therefore decrease road mortality of such species (e.g., marsh birds, amphibians, turtles, small mammals).

Eastern Redbelly Turtle

- 2.12.7.14 Prevent or ameliorate near-term impacts of climate change throughout the State but in particular within the coastal and Delaware Bay areas by implementing habitat management strategies that will establish/improve habitat resilience, such as impoundment management, that benefits wildlife inhabiting these areas.

2.13 Wildlife damage management

2.13.0 Nuisance fish and wildlife damage

- 2.13.0.5 Investigate the impacts of human-subsidized and/or naturally occurring predator species on SGCN to assess the need for integrated wildlife damage management techniques (e.g., predator exclosures, fish blockages, electric fence, culls) and/or policy changes on state land management that minimize the impacts of human-subsidized predators.
- 2.13.0.8 Implement and assess management strategies to control and reduce the impacts of detrimental species and diseases that pose threats to native wildlife or communities.

2.14 Wildlife disease management

2.14.0 Wildlife disease strategy development and investigation

- 2.14.0.1 Investigate diseases/pathogens impacting SGCN and/or their habitats.
- 2.14.0.2 Develop and implement strategies to combat the impacts of diseases/pathogens impacting SGCN and/or their habitats, track disease occurrences and monitor/research impacts to SGCN populations and their habitats.
- 2.14.0.3 Protect SGCN from exotic pathogen introduction or incident through implementation of a "rapid response plan"; DFW to give priority attention to these species in planning and/or implementing a response.
- 2.14.0.4 Conduct long-term monitoring of diseases in vulnerable wildlife to determine the magnitude of exposure within populations and around the State, the impacts to those species, in particular SGCN, and investigate the feasibility of mitigating for such impacts.
- 2.14.0.5 Assess the impacts of diseases on the life cycles of wildlife.

3 Data Collection and Analysis

3.0 General fish and wildlife research, survey or monitoring

3.0.0 Research, survey or monitoring - general fish and wildlife needs

- 3.0.0.1 Conduct long-term monitoring of resident and migratory SGCN populations using standardized survey protocols to determine the variables that may impact their long-term persistence in the State (e.g., population viability, distribution, dispersal, home range and habitat use, travel corridors, food availability, vulnerability to pollutants and disease, etc.). Compile this information to determine the likely causes of population declines and to understand metapopulation dynamics. Provide data to NJ DEP for integration into the Biotics database, Landscape Project and permitting review processes.
- 3.0.0.2 Identify (through literature searches, review of available data, enlistment of habitat and/or species experts, etc.) where data gaps exist regarding SGCN distribution, and their critical and supportive habitats. Conduct surveys using standardized survey protocols to acquire baseline data, and provide the data to NJ DEP for integration into the Biotics database, Landscape Project Map and permitting review processes.
- 3.0.0.3 Gather baseline data on SGCN inhabiting permanently protected natural lands regarding their distribution and population (e.g., abundance, dispersal, demography including productivity and survival, etc.), and identify (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) critical and supporting habitats within those landscapes.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Eastern Redbelly Turtle

- 3.0.0.4 Conduct long-term studies on SGCN inhabiting permanently protected natural lands to develop population trend data and changes in demography, and to determine if critical and/or supporting habitats are limited or changing; i.e., diminishing in value, acreage or connectivity.
- 3.0.0.5 Gather baseline data on resident and migratory SGCN (in particular migratory species for which New Jersey habitats are significant), terrestrial, freshwater and marine species, regarding the location and condition of their critical and supporting habitats (e.g., foraging, roosting, nesting/breeding, stopover, migration paths, etc.), and population demography (e.g., productivity, survival, dispersal). Compile this information into a database that includes descriptions of the conditions of the habitats and species, and a GIS component of the locations of these important habitats. Provide data to NJ DEP for integration into the Biotics database, Landscape Project and permitting review processes.
- 3.0.0.6 Conduct long-term studies on resident and migratory SGCN to determine if there are changes to the populations' demography (productivity, survival, dispersal) and/or to their critical and/or supporting habitats (i.e., diminishing in value, acreage or connectivity, etc.), in particular changes that would not maintain SGCN at viable levels for species populations. Update data and GIS maps; provide updated information to NJ DEP for integration into the Biotics database, Landscape Project and permitting review processes.
- 3.0.0.7 Collect baseline data to document species distributions, in particular SGCN, and current habitat for future analysis of possible distribution shifting as a result of habitat shifting or alteration associated with climate change impacts.
- 3.0.0.8 Conduct long-term studies and compare baseline metrics of documented species distributions and associated habitats to identify possible species and/or habitat shifting or alteration associated with climate change impacts.
- 3.0.0.11 Develop, implement and evaluate the effectiveness of town plans that avoid impacts to SGCN species and their habitats.
- 3.0.0.13 Investigate the effects of pesticides, herbicides and other biological controls on SGCN and their critical and supporting habitats. Evaluate and modify management practices as appropriate.
- 3.0.0.14 Identify areas with invasive, aquatic plants and animals and collect a detailed baseline assessment of the species' status and distribution. Solicit volunteers from organizations such as the New Jersey Invasive Species Strike Team to support this effort. Researchers and contractors performing Forest Stewardship Inventories and/or Plans on state lands should report invasive plant species through the New Jersey Invasive Species Strike Team phone application.
- 3.0.0.19 Identify the presence and status (e.g., functioning, structure, slated for removal, etc.) of existing dams and culverts within and/or that may impact SGCN and their habitats, and create a database that includes a GIS component identifying the locations of such structures and their status. Share this information with appropriate organizations and/or agencies evaluating the benefits and risks of such structures on SGCN and their habitats.
- 3.0.0.20 Once baseline data identifying and describing the status of existing dams and culverts have been gathered, conduct evaluations at a variety of sites to determine whether the benefits of culvert and dam creation or removal outweigh the risks to SGCN species and their habitats, and if other variables/conditions specific to individual sites/locations result in a different outcome. Identify and target appropriate dams and culverts for removal and/or reconstruction to minimize harm to SGCN species and their habitats.
- 3.0.0.23 Identify (through wildlife and aquatic system surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) and research water quality parameters for all [types of] aquatic systems for various SGCN populations.

3.2 Research, survey or monitoring - fish and wildlife populations

3.2.0 Data deficiency

- 3.2.0.1** Division of Fish and Wildlife should maintain a robust, up-to-date database and mapping of species occurrences.
- 3.2.0.2** Conduct species status assessments using the Delphi Technique and review of available data and literature on fish and wildlife (including marine animals) to maintain accurate legal status categorization of native wildlife.
- 3.2.0.3** Survey for and monitor populations of freshwater aquatic focal SGCN to assess the populations' demography, trends, condition, distribution, etc.
- 3.2.0.4** Conduct long-term monitoring of the impacts of contaminants to vulnerable wildlife to determine the magnitude of exposure within populations and around the State, the impacts to those species, in particular SGCN, and investigate the feasibility of mitigating for such impacts. Maintain records on exposure of vulnerable wildlife to environmental toxins (such as flame retardants and endocrine disruptors), so that sources may be identified and controlled or eliminated.
- 3.2.0.5** Prevent or ameliorate near-term impacts of climate change throughout the State by developing, implementing and monitoring/evaluating habitat management strategies that will establish/improve habitat resilience (e.g., shorelines of the coast and Delaware Bay, forested habitats of the Pinelands and Skylands) that benefits wildlife inhabiting these areas, in particular within the coastal and Delaware Bay areas.
- 3.2.0.6** Develop, implement and conduct studies to evaluate the effectiveness of methods implemented to reduce road mortality of wildlife (e.g. wildlife underpasses, road closures).
- 3.2.0.7** Track (via a database that includes a GIS component) and research problematic species and diseases to determine their distribution, impacts on SGCN wildlife/wildlife communities, and develop potential control measures.
- 3.2.0.8** Implement and conduct long-term monitoring of control measures aimed at minimizing the impacts of problematic species and/or diseases to evaluate the effectiveness of such efforts and to identify and incorporate additional strategies as appropriate.
- 3.2.0.9** Maintain an inventory of invasive insect distribution and where they exist, conduct long-term monitoring of habitat conditions to assist in developing strategies to combat the impacts to SGCN habitats. Report potential infestations to NJ DEP.
- 3.2.0.10** Evaluate the effectiveness of sanitation/decontamination protocols in minimizing the transference of wildlife diseases and invasive plant species.
- 3.2.0.11** Investigate the impacts of ORV use as a mechanism to spread wildlife diseases and invasive plant species to native wildlife and habitats. Integrate this information when mapping undeveloped roads and trails to identify potentially sensitive areas in northern NJ forests.

3.2.1 Abundance determination

- 3.2.1.1** Identify (through literature searches, review of available data, enlistment of habitat and/or species experts, etc.) population abundance and trends for SGCN using standardized survey protocols. Provide data to NJ DEP for integration into the Biotics database, Landscape Project Map and permitting review processes.
- 3.2.1.2** Conduct wildlife surveys on resident and migratory SGCN regarding their population abundance and trends.

3.2.2 Age, size and sex structure

- 3.2.2.1** Conduct wildlife surveys on resident and migratory SGCN regarding their survivorship.

Eastern Redbelly Turtle

3.2.3 Baseline inventory

3.2.3.5 Investigate and develop strategies to reduce "by-catch" of SGCN and other non-target species. Present findings and strategies to NJ DEP and conservation organizations for review and possible implementation. Develop a database documenting by-catch for use in management planning decisions.

3.2.3.7 Identify roads or portions of roads, paved or unimproved (through site surveys, land use/land cover assessments and analyses, review of available data, enlistment of species experts, etc.) with high incidences of road mortality and/or presence of snakes, turtles, medium-sized and large mammals. Conduct assessments of the roads and incorporate information into a database that includes descriptions (e.g., qualifiers to help prioritize the roads' risk to wildlife) and a GIS component of the locations of such areas. Share this information with appropriate organizations and/or agencies working to implement measures (e.g., wildlife passages, road closures) to minimize the risk to these species.

3.2.7 Population assessment

3.2.7.1 Conduct species status assessments using the Delphi Technique and review of available data and literature on fish and wildlife (including marine animals) to maintain accurate legal status categorization of native wildlife.

3.3 Research, survey or monitoring - habitat

3.3.1 Baseline inventory

3.3.1.1 Conduct habitat assessments of significant natural and/or unique communities to identify threats to native terrestrial and aquatic habitats through systematic monitoring, review of available data, enlistment of habitat management and/or species experts, etc. Incorporate findings into a database that includes descriptions/qualifiers of the habitats, identifies and values/qualifies the threats, and includes a GIS component of the locations of the assessed areas. Share this information with landowners/managers (e.g., federal, state and local government agencies or non-government organization).

3.3.1.2 Identify (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) resident and migratory SGCN habitats. Investigate their suitability for the various life history requirements of the species that dependent upon them to determine the ability for maintaining applicable SGCN populations in perpetuity.

3.3.1.4 Identify (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) and investigate the suitability of corridors that connect large, contiguous tracts of similar habitats to increase their effective size (i.e., forest with forest, grassland with grassland, wetlands with wetlands, etc.) for dependent SGCN.

3.3.1.5 Identify areas (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) where habitat restoration and/or enhancement would benefit wildlife SGCN.

3.3.1.6 Identify areas (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) that could, through revegetation and/or enhancement efforts, become suitable travel corridors connecting and increasing the effective size of conserved habitats for SGCN.

3.3.1.16 Gather "best information" for spatial modeling and update/create a current model/depiction of anticipated habitat shifts from sea-level rise, flooding, etc.

3.3.1.17 Identify and map undeveloped roads and trails in all conserved forests, and create a database of locations. Integrate information regarding potentially sensitive areas.

Eastern Redbelly Turtle

- 3.3.1.19 Identify and codify legal ORV access areas on state (and if appropriate, other conserved) lands. Provide GIS mapping to the landowner for potential use in directing such recreational activities.
- 3.3.1.20 Identify areas (through surveys/studies, literature searches, review of available data, enlistment of habitat management and/or species experts, etc.) where invasive, non-indigenous plants and animals are either already established or are becoming established. Create a system for reporting and qualifying new locations of invasive species and for prioritizing areas for control measures according to the potential level of impact on the ecosystem and SGCN and the likelihood of success. Researchers and contractors encountering invasive plant species while performing plant and/or forest inventories on state or other conserved lands and/or private lands should report invasive plant species through the New Jersey Invasive Species Strike Team phone application.
- 3.3.1.24 Conduct regular investigations of SGCN habitat health and biodiversity on public and private lands to identify locations in need of revegetation, reduction of over-abundant, native wildlife and/or exotic species, conservation focal areas requiring limitations on human activity, etc.
- 3.3.1.26 Survey all historic locations and unsurveyed suitable habitats to identify populations of freshwater aquatic focal species.

3.3.2 Monitoring

- 3.3.2.2 Conduct long-term monitoring of resident and migratory SGCN habitats using standardized survey protocols to determine changes in habitat quality/suitability and threats (e.g., habitat loss and degradation, increased edge habitat, water quality) and other variables that may impact their long-term persistence in the State and to provide information needed for determining causes of population declines and understanding metapopulation dynamics.
- 3.3.2.3 Continue to update wildlife and habitat databases and revise models of critical SGCN habitats using the most current data available and where lacking, develop new SGCN and/or habitat models as data on species habitat requirements and applicable GIS data layers become available.
- 3.3.2.4 Protect water quality and aquatic-dependent species by appropriately designating Category 1 waters and enforcing protective regulations. Seek appropriate classifications for stream segments based on Endangered and Threatened Status and/or the Index of Biotic Integrity (IBI) results that do not fulfill Category One requirements.
- 3.3.2.5 Conduct long-term monitoring of water quality of SGCN aquatic habitats (and aquatic systems feeding into those habitats) to evaluate protection and management efforts to reduce, if not eliminate, chemical contamination, siltation, eutrophication, and other forms of pollution/contamination of aquatic systems.
- 3.3.2.8 Evaluate the effectiveness of current prescribed burning practices on Pinelands dependent species.
- 3.3.2.11 Evaluate and compare the effectiveness of delayed mowing of warm season grass fields versus cool season hay fields to benefit grassland-dependent species.
- 3.3.2.13 Evaluate the effectiveness of management strategies (e.g., timing restrictions for mowing, cooperative agreements with utility companies for maintenance of rights-of-ways) that maintain and enhance large existing areas of grassland in perpetuity. Focus on habitat patches that can be managed to enhance the total size of suitable grassland habitat and create interspersed early-successional habitat.
- 3.3.2.14 Research and evaluate the effectiveness of water quality management practices on water-dependent and semi-dependent SGCN, particularly those practices associated with permitting or mitigation actions.

Eastern Redbelly Turtle

3.3.2.15 Investigate the effectiveness of management techniques implemented to eliminate invasive terrestrial and aquatic plant species on private and public lands, and/or within sensitive and/or important habitats for SGCN.

3.3.2.16 Evaluate the effectiveness of best management practices (BMPs), protective strategies, and guidelines for maintaining and enhancing healthy, SGCN-associated terrestrial and aquatic habitats and associated riparian habitats, and to minimize (if not avoid) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.

3.5 Techniques development

3.5.3 Habitat restoration methods

3.5.3.1 Work with land management agencies to determine the appropriate actions needed to restore/reclaim degraded habitat for the documented/target SGCN.

3.5.3.8 Develop best management practices (BMPs), protective strategies, and guidelines for maintaining and enhancing healthy, SGCN-associated terrestrial and aquatic habitats and associated riparian habitats, and to minimize (if not avoid) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.

3.5.3.9 Develop strategies to combat the impacts of diseases/pathogens impacting SGCN and/or their habitats.

3.5.3.11 Develop strategies to protect native terrestrial and aquatic habitats and dependent SGCN species from the identified threats.

3.5.3.14 Develop aquaculture practices in the coastal areas that are compatible with the recovery of SGCN.

3.5.3.15 Modify management practices based on the effects of pesticides, herbicides and other biological controls on critical and supporting SGCN habitats.

3.5.3.16 Develop/improve strategies to restrict human activity (e.g., recreational, maintenance work, etc.) from sensitive habitats/areas such as avian nesting sites, reptile and amphibian breeding areas (nesting or gestation/birthing and breeding pools, respectively), and bat hibernacula, and federal buffers for marine mammals. Methods may include, but are not limited to, managing the landscape to deter access, diverting recreational and other activities from sensitive areas during critical periods through permit processes or blocking access (trails, roads, etc.), posting (if appropriate), increasing law enforcement presence, conducting management activities at appropriate times to avoid disturbance and/or harm to wildlife (e.g., habitat management, beach raking, etc.), and decreasing noise and light pollution.

3.5.3.19 Work with foresters to develop prescribed burning practices for Pinelands dependent species that increase or maintain habitat quality for these species in the Pinelands.

3.5.3.22 Identify (through surveys/studies, literature searches, review of available data, enlistment of habitat management and/or species experts, etc.) and modify management strategies (e.g., timing restrictions for mowing, cooperative agreements with utility companies for maintenance of rights-of-ways), based on research, that maintain and enhance large existing areas of grassland in perpetuity.

3.5.3.23 Revise water quality management practices based on research on water-dependent and semi-dependent SGCN, particularly when associated with permitting or mitigation actions.

3.5.3.24 Based on research, modify management techniques implemented to eliminate invasive terrestrial and aquatic plant species on private and public lands, and/or within sensitive and/or important habitats for SGCN.

Eastern Redbelly Turtle

3.5.3.25 Use data regarding SGCN population numbers/trends and demography, on-going threats, habitat changes, etc. to develop the necessary management strategies to reach or maintain viable population levels.

3.5.3.27 Conduct an assessment and develop a location list of available equipment for boom deployment during oil spills.

3.5.4 Fish and wildlife research, survey and management techniques

3.5.4.2 Develop, implement, monitor and evaluate management strategies to reduce the impacts of herbivory on native vegetation and the degradation of habitats supporting SGCN by invasive and/or native, over-abundant wildlife species including but not limited to mute swans, Canada geese, beaver and white-tailed deer.

3.5.4.5 Develop and implement strategies to combat the impacts of diseases/pathogens impacting SGCN and/or their habitats, track disease occurrences and monitor/research impacts to SGCN populations and their habitats.

3.5.4.9 Conduct studies to evaluate the impacts of roads on SGCN and develop, implement and conduct studies to evaluate the effectiveness of methods to reduce road mortality of wildlife (e.g. wildlife underpasses, road closures).

3.5.4.12 Investigate and develop strategies to reduce "by-catch" of SGCN and other non-target species. Present findings and strategies to NJ DEP and conservation organizations for review and possible implementation. Develop a database documenting by-catch for use in management planning decisions.

3.5.4.13 Develop/improve strategies to restrict human activity (e.g., recreational, maintenance work, etc.) from sensitive habitats/areas such as avian nesting sites, reptile and amphibian breeding areas (nesting or gestation/birthing and breeding pools, respectively), and bat hibernacula, and federal buffers for marine mammals. Methods may include, but are not limited to, managing the landscape to deter access, diverting recreational and other activities from sensitive areas during critical periods through permit processes or blocking access (trails, roads, etc.), posting (if appropriate), increasing law enforcement presence, conducting management activities at appropriate times to avoid disturbance and/or harm to wildlife (e.g., habitat management, beach raking, etc.), and decreasing noise and light pollution.

3.5.4.15 Investigate the success of management strategies used to protect and/or enhance SGCN populations and when appropriate, aid in identifying failures/resource problems and issues, and developing new strategies.

3.5.4.16 Use data regarding SGCN population numbers/trends and demography, on-going threats, habitat changes, etc. to determine if directed management efforts are needed to reach or maintain viable population levels and develop the necessary management strategies.

3.5.4.17 Investigate new, non-invasive techniques for SGCN population evaluation through literature review, expert opinion, trial studies (if low risk), etc.

3.5.4.18 Investigate the effectiveness of survey techniques through selected "ground truthing" and literature and peer review in order to increase efficacy of survey, minimize surveyor bias and error, and increase accuracy of trend data.

3.5.4.19 Develop reliable, standardized survey and monitoring protocols for SGCN species, for which none currently exist, and their habitats.

3.5.4.21 Develop BMPs to address problematic species and diseases of unknown origin.

3.5.4.22 Investigate the efficacy of implementing strategies to minimize or eliminate disturbances to all SGCN (i.e., beyond their federal requirements) during military activities.

4 Education

Eastern Redbelly Turtle

4.1 Educator/Instructor training

4.1.0 Public education

- 4.1.0.1** Provide educational resources and training programs to private and public landowners, as well as schools, regarding the benefits and creation of backyard habitats for wildlife.

4.1.1 Aquatic resource education

- 4.1.1.1** Provide educational resources and training programs to teachers in aquatic resource education that includes information regarding climate change and sea-level rise for incorporation into the class curriculum and/or as the focus of school field trips.

5 Facilities and Areas

5.15 Wildlife Management Areas

5.15.6 Roads

- 5.15.6.1** Clearly post areas/roads where vehicle access is permitted.
- 5.15.6.2** Clearly post areas/trails where vehicle access is not permitted.

6 Land and Water Rights Acquisition and Protection

6.0 Acquisition and protection strategies

6.0.0 Combined acquisition and protection strategies

- 6.0.0.2** Enhance and increase the effective size of SGCN habitats by protecting adjacent habitats that contribute to the overall size of the "core" area and/or provide a natural buffer, enhancing the suitability of the core area for SGCN, and/or connect conserved SGCN habitats through an appropriate combination of fee title, non-fee title and landowner agreements.
- 6.0.0.3** Secure and protect riparian and floodplain habitats, inland wetland habitats (marsh, vernal pool, fen, emergent shrubland, forest), and other aquatic habitats (including open waters) and/or biologically appropriate buffers to minimize degradation through an appropriate combination of fee title, non-fee title and landowner agreements.
- 6.0.0.4** Secure and protect fish SGCN habitats by protecting lands adjacent to fish SGCN habitats and/or aquatic systems feeding into such habitats through an appropriate combination of fee title, non-fee title and landowner agreements.
- 6.0.0.6** Secure and protect old-growth forest stands with large trees and/or stands that are approaching or being actively managed for old growth forests, in particular those within large, contiguous forest tracts, through an appropriate combination of fee title, non-fee title and landowner agreements.
- 6.0.0.8** Secure and protect scrub-shrub habitats for SGCN through an appropriate combination of fee title, non-fee title and landowner agreements.

6.3 Conservation area designation

6.3.0 Conservation area designation strategies

- 6.3.0.1** Promote the protection of critical migratory stopover habitats for songbirds, raptors, shorebirds, bats and invertebrates and enhance these lands by increasing the effective size through conservation area designations of stopover habitats and adjacent private lands.
- 6.3.0.2** Enhance and increase the effective size of SGCN habitats by protecting adjacent habitats that contribute to the overall size of the "core" area and/or provide a natural buffer, enhancing the suitability of the core area for SGCN and/or connect conserved SGCN habitats through conservation area designations.

Eastern Redbelly Turtle

- 6.3.0.3 Increase the protection of riparian and floodplain habitats, inland wetland habitats (marsh, vernal pool, fen, emergent shrubland, forest), and other aquatic habitats (including open waters) and/or biologically appropriate buffers to minimize degradation through conservation area designations.
- 6.3.0.4 Promote the protection of fish SGCN habitats by protecting lands adjacent to fish SGCN habitats and/or aquatic systems feeding into such habitats through conservation area designations.

7 Law Enforcement

7.1 Law enforcement

7.1.3 Sub-national Level

- 7.1.3.2 Increase the number of law enforcement officers tending to wildlife issues to a reasonable number to sufficiently cover the State and marine waters.

7.1.4 Scale Unspecified

- 7.1.4.1 Improve enforcement of policies and/or regulations that promote the reduction of run-off and point and non-point source pollution into NJ's aquatic systems (streams, rivers, lakes/ponds, bays, ocean, wetlands, etc.).
- 7.1.4.6 Recruit law enforcement to assist in the protection and enhancement of SGCN populations, in particular endangered species, through improved awareness of species through trainings, partnerships, and other methods. Information should include but is not limited to: 1) Issues concerning illegal collection of reptiles, 2) Persecution of rare snakes, 3) Illegal recreational activities on public lands (e.g., off-road vehicles) and their impact on wildlife, 4) Identification of sensitive areas, critical sites and/or "hot-spots" for collection.
- 7.1.4.7 Increase law enforcement presence to enforce regulations governing recreational activities (e.g., the use of personal watercraft and off road vehicles, caving, rock climbing, etc.) on conserved lands and within other sensitive habitats, and discourage activities that cause harm or disturbance to vegetation, wetlands, fish and wildlife.
- 7.1.4.9 Implement policies that improve and secure habitat connections between conserved SGCN habitats.
- 7.1.4.10 Implement policies that promotes expanding acreages and enhances the effective size of SGCN habitats by providing biologically appropriate buffers of native habitat surrounding SGCN habitats.
- 7.1.4.12 Implement policies and/or regulations that protect significant natural and/or unique communities in perpetuity.
- 7.1.4.16 Implement policies that protect and restore riparian areas.
- 7.1.4.17 Improve the enforcement of policies and/or regulations that protect wetlands, riparian and floodplain areas, and aquatic habitats (including open waters).
- 7.1.4.20 Implement policies and/or regulations with the objective of reducing "by-catch" of SGCN and other non-target species.
- 7.1.4.23 Implement policies that minimize wildlife road mortality.
- 7.1.4.24 Implement protective measures to benefit urban-associated SGCN such as restricting human access, buffering sensitive areas with postings, noise and/or light restrictions in sensitive areas and/or during sensitive periods such as breeding, etc.

Eastern Redbelly Turtle

- 7.1.4.26 Educate law enforcement personnel that there may be unauthorized research projects taking place and to encourage them to investigate any activities that appear to be harmful to wildlife.

8 Outreach

8.1 Partner/stakeholder engagement

8.1.0 Partner/stakeholder engagement strategies

- 8.1.0.2 Develop a team of personnel from government entities, conservation organizations and other stakeholders engaged in oil/gas spill response for marine and freshwater habitats to develop a feasible plan for oil spill response and/or to amend NJ's current oil spill response plan that clearly outlines each organizations responsibilities and an assessment and location list of available equipment for boom deployment during oil spills.
- 8.1.0.3 Develop an outreach team of personnel from government entities, conservation organizations and other stakeholders to work together to collaboratively use social media campaigns to grow a constituency of NJ residents who have an elevated ecological and climate consciousness.
- 8.1.0.4 Engage government agencies, conservation partners and other stakeholders in constructive dialogues encouraging them to influence policy change and the creation of incentives through a habitat bill and/or municipal ordinances for backyard habitat.
- 8.1.0.8 Engage government agencies, conservation partners and other stakeholders to collaboratively develop and implement an extensive educational/outreach program targeting sportsmen's organizations and fisheries addressing the potential effects of over-harvesting wildlife and promote "catch and release".
- 8.1.0.10 Engage government agencies, conservation partners and other stakeholders to collaboratively develop and implement an extensive educational/outreach program targeting sportsmen's organizations and fisheries, as well as public constituents, addressing the potential impacts of over-harvesting wildlife can have on the ecological system and to promote "sustainable harvest".
- 8.1.0.11 Engage government agencies, conservation partners and other stakeholders to collaboratively develop and implement an extensive educational/outreach program targeting sportsmen's organizations and fisheries, as well as public constituents, addressing the unintended effects abandoned fishing gear, tackle and crab pots can have on wildlife, and promote the collection and/or reporting of abandoned items and their locations.
- 8.1.0.12 Engage government agencies, conservation partners and other stakeholders to collaboratively develop and implement an extensive educational/outreach program targeting sportsmen's organizations and fisheries, as well as public constituents, addressing the unintended effects fishing gear and tackle can have on wildlife.
- 8.1.0.13 Engage DOD in a constructive dialogue regarding strategies to minimize disturbances to all SGCN (i.e., beyond their federal requirements) from forest management and other practices on their lands.
- 8.1.0.14 Engage DOD in a constructive dialogue regarding strategies to minimize or eliminate disturbances to all SGCN (i.e., beyond their federal requirements) during military activities.
- 8.1.0.15 Engage government agencies, conservation partners and other stakeholders in discussions encouraging and supporting the creation of laws and policies requiring vegetative buffers of native plants on preserved farmland and state lands with agricultural leases or agreements.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Eastern Redbelly Turtle

- 8.1.0.16 Engage local governments in discussions regarding the importance of them adopting/passing ordinances which require assessing and addressing secondary impacts (i.e., ancillary prescribed burns, trespassers, ORV use, mosquitoes, deer, buffers) on biological resources when revising planning/zoning documents or granted site plan/subdivision approvals.
- 8.1.0.18 Engage NJDOT, NJ Transit Authority and other road management entities, wildlife conservation organizations/agencies (e.g., Division of Fish and Wildlife, New Jersey Conservation Foundation, Conserve Wildlife Foundation of NJ), and communities and citizens in discussions regarding the importance of and methods to enhance habitat connectivity, and work together to develop feasible strategies for ensuring that wildlife can disperse naturally and safely across roads and similar barriers to terrestrial and/or aquatic habitats.
- 8.1.0.19 Engage government agencies, conservation partners and other stakeholders to collaboratively develop a list of important projects, targeting SGCN and/or their habitat, as a guide for graduate student research. Distribute the list and contact information to all State colleges and universities.
- 8.1.0.21 Work with government agencies and environmental educators to develop educational resources and training programs, educate the public on the devastation human-subsidized and/or overabundant, native species cause to local nesting species, and provide expert guidance on how residents can help alleviate this threat.
- 8.1.0.22 Work with government agencies and environmental educators to develop educational resources and training programs, educate the public on the devastation invasive species cause to native nesting species, and provide expert guidance on how residents can help alleviate this threat.
- 8.1.0.24 Engage government agencies, conservation partners and other stakeholders in constructive dialogue regarding the importance of providing and methods to provide technical support for carrying out restoration and management practices aimed at increasing structural habitat diversity.
- 8.1.0.25 Provide technical support to public landowners and land managers for carrying out restoration and management practices aimed at increasing structural habitat diversity.
- 8.1.0.30 Encourage government agencies and conservation partners to advise members of the relevant scientific community of the need for specific studies, reports or investigations targeting the data-deficiency regarding SGCN and/or their habitats.
- 8.1.0.33 Engage government agencies, conservation partners and other land managers, communities, landowners, and commercial and industrial stakeholders in discussions regarding the importance of protecting and methods to protect priority wetlands beyond the levels afforded through regulation by maintaining and/or restoring optimal biological buffers around wetlands.
- 8.1.0.34 Work with the NJ Education Association and Department of Education to design curriculum and outdoor experimental learning opportunities, and provide training to teachers on implementation of these activities.
- 8.1.0.37 Enlist landowners and NJ citizens in the protection of and survey efforts for SGCN, in particular rare species, by increasing enrollment in landowner incentives, forest stewardship, backyard habitat management and wildlife-related volunteer programs.
- 8.1.0.40 Encourage researchers, land managers, naturalists and enthusiasts to follow proper procedures for the coordination and/or permitting of research/management activities involving wildlife and sensitive habitats, and discourage activities that alter vegetation or wetlands, or cause harm or disturbance to wildlife.

Eastern Redbelly Turtle

- 8.1.0.42 Engage citizens, wildlife observers and photographers through discussions and distributable information regarding the importance of and encouraging implementing responsible and ethical behavior when observing wildlife by developing an alliance of wildlife photographers and widely circulating recommendations on how to reduce impact.
- 8.1.0.47 Form cooperative partnerships with energy companies to facilitate habitat creation and enhancement away from and outside of project areas, the restoration of appropriate habitats within project areas (e.g., rights-of-way could benefit butterflies and some bird species), and to identify seasonal timing of activities that would minimize impacts to wildlife.

8.3 WSFR program/subprogram outreach

8.3.0 WSFR program/subprogram outreach strategies

- 8.3.0.2 Utilize WSFR grant funds, in combination with alternate funding sources as needed, to implement an extensive educational/outreach program consisting of displays, fliers, list-serve mailings, Facebook posts and speaking engagements with sportsmen's organizations and fisheries, as well as public constituents, addressing the unintended effects fishing gear and tackle can have on non-target species.
- 8.3.0.3 Utilize WSFR grant funds, in combination with alternate funding sources as needed, to implement catch and release outreach program(s).
- 8.3.0.4 Utilize WSFR grant funds, in combination with alternate funding sources as needed, to implement an extensive educational/outreach program consisting of displays, fliers, list-serve mailings, Facebook posts and speaking engagements with sportsmen's organizations and fisheries addressing the unintended effects abandoned fishing gear, tackle and crab pots can have on wildlife.
- 8.3.0.7 Develop and provide (or otherwise make publicly available) educational programs and/or materials that describe the negative impacts of off-road vehicles and watercraft use in and adjacent to critical SGCN habitats, and the importance of confining such activities to more appropriate locations and/or seasons.
- 8.3.0.8 Develop and provide (or otherwise make publicly available) educational programs and/or materials to educate recreationists and encourage landowners to eliminate garbage in the vicinity of suitable wildlife habitat, in particular SGCN habitat. Information should include the detrimental impacts garbage may have on various wildlife species.
- 8.3.0.9 Develop and provide (or otherwise make publicly available) educational programs and/or materials to enlist landowners and land managers to include only native plants in landscaping and restoration projects. Provide information to assist them in detecting problematic establishment of invasive, non-indigenous plants.
- 8.3.0.10 Develop and provide (or otherwise make publicly available) educational programs and/or materials to educate landowners and NJ citizens on threats to fish and wildlife (including marine animals).
- 8.3.0.12 Promote awareness of WSFR (Wildlife and Sportfish Restoration) Outreach/Awareness grants, an important funding source for conservation among hunters and anglers as well as the general public.
- 8.3.0.13 Conduct an educational campaign to encourage observer ethics and respect for wildlife and natural habitat.
- 8.3.0.14 Develop an educational outreach program using a variety of media to ensure maximizing the distribution of information, in particular targeting sportsmen's organizations and fisheries, regarding the unintended effects abandoned fishing gear, tackle and crab pots can have on wildlife, including non-target species.

Eastern Redbelly Turtle

- 8.3.0.15 Develop an educational outreach program for citizens regarding: 1) The impacts to wildlife as a result of plastic bags entering aquatic and marine systems, 2) The importance of decreasing the amount of plastic shopping bags in circulation, 3) The need for businesses to voluntarily charge for bags or reimburse people for using their own non-plastic bags, and 4) The need for their assistance through public pressure on legislators and government to pass legislation that that limits the amount of plastic shopping bags in circulation.
- 8.3.0.16 Develop an educational outreach program using a variety of media to ensure maximizing the distribution of information, in particular targeting sportsmen's organizations and fisheries, promoting "catch and release" and the impacts excessive harvests can have on wildlife populations.
- 8.3.0.17 Develop an educational outreach program using a variety of media to ensure maximizing the distribution of information, in particular targeting sportsmen's organizations and fisheries, promoting "sustainable harvest" using scientific data, and garner support from constituents through this outreach.
- 8.3.0.19 Develop an educational outreach program for the public on the devastating effects predators can have on native nesting wildlife.
- 8.3.0.22 Post signage in sensitive coastal habitats (e.g., bird and Diamondback Terrapin nesting areas) to educate the boating community on responsible use of these areas.
- 8.3.0.24 Develop educational outreach programs for local decision-makers, land developers, landowners and citizens about lawn alternatives and the importance of natural vegetation and "edge" habitats on developed properties.
- 8.3.0.25 Develop educational outreach programs for landowners, nurseries and the general public regarding the negative impacts of invasive and non-native plants on our natural communities.
- 8.3.0.27 Develop educational outreach programs for public and private landowners and land managers regarding the importance of structural habitat diversity, methods to increase diversity, and/or incentive programs available to increase habitat diversity.
- 8.3.0.29 Develop educational outreach programs for local decision-makers, land developers, landowners and citizens about the importance of maintaining a vegetative buffer along riparian and aquatic habitats to intercept storm water runoff and minimize soil erosion.
- 8.3.0.30 Develop educational outreach programs for private and public landowners, as well as schools, regarding the benefits and creation of backyard habitats for wildlife.
- 8.3.0.32 Develop an educational outreach program for landowners and citizens on the threats that herbicides and pesticides pose to aquatic systems and wildlife, and to promote safer usage of such products.

9 Planning

9.1 Land use planning

9.1.0 Land use planning strategies

- 9.1.0.1 Develop smart-growth plans and critical habitat designations that consider SGCN life history requirements and habitat needs, connectivity and health of those habitats, and minimizes human-associated disturbances to those habitats and SGCN inhabiting them.
- 9.1.0.2 Develop town plans that avoid impacts to SGCN species and their habitats.
- 9.1.0.3 Develop a plan that directs the creation of impervious surfaces away from and to minimize impacts on aquatic systems and critical terrestrial habitats. The plan should also include strategies to increase the resiliency of aquatic and critical terrestrial habitats to threats and stressors that would impact the reproduction and survival of wildlife.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Eastern Redbelly Turtle

- 9.1.0.4 Develop a plan that directs the creation of new impoundments and/or the expansion of bogs for cranberry farming within or immediately adjacent to critical forested habitats in a manner that minimizes impacts on the natural hydrology of the watershed and subsequently, the natural wetlands in the area.
- 9.1.0.5 Develop a plan that directs the creation or expansion of energy or utility rights-of-way in a manner that minimizes the impacts on critical forested habitats and the wildlife community.
- 9.1.0.7 Develop a plan that directs the maintenance of or new channelization of forested streams and rivers in a manner that minimizes impacts of the aquatic ecological system and adjacent forest
- 9.1.0.8 Develop a plan that focuses on strategies for oil pipelines to avoid sensitive habitats that would be highly impacted by oil spills.
- 9.1.0.13 Develop a plan to minimize agriculture that would result in groundwater withdrawal in critical forested areas.
- 9.1.0.14 Develop a plan to minimize development that would result in groundwater withdrawal in critical forested areas.
- 9.1.0.15 Develop a plan to minimize fragmentation of terrestrial and aquatic habitats by roads.
- 9.1.0.16 Develop a plan to minimize new lawns and preserve natural vegetation within and adjacent to critical forest areas.
- 9.1.0.18 Develop a plan to minimize the effects of road widening and traffic volume increases within critical wildlife habitat areas using CHANJ products.
- 9.1.0.19 Develop a plan to minimize the extent of impervious surfaces as part of new construction to increase water recharge in those areas.
- 9.1.0.20 Develop a plan to minimize the impacts of existing agricultural properties adjacent to and the conversion of forest habitats (terrestrial and aquatic, within or adjacent to critical forests) to agriculture, grazing areas/livestock farms, and plantations.
- 9.1.0.21 Develop a plan to minimize the use of any-sized dam in critical forested areas.
- 9.1.0.22 Incorporate habitat connectivity and preservation of natural areas into state and local land-use policy and the environmental review process to minimize the impacts of transportation and service corridors on fish and wildlife and their habitats.
- 9.1.0.23 Develop a plan to mitigate the effects of transportation barriers by using CHANJ products.
- 9.1.0.24 Develop a plan to prevent livestock from entering water bodies in critical forested habitats.
- 9.1.0.25 Develop a plan to prevent the conversion of forested stream buffers to pastures in critical forested habitats.
- 9.1.0.27 Develop a plan to use wildlife-appropriate culverts in critical forested areas.
- 9.1.0.28 Develop and coordinate state, regional and local plans for suitable lot layout and landscaping to minimize human-wildlife conflicts that also incorporates habitat connectivity and preservation of natural areas.
- 9.1.0.29 Provide GIS or related data, maps, resource inventories, as well as related training, pertaining to the SWAP and it's recommended conservation actions for use or consideration by State, County or municipal planning agencies.
- 9.1.0.30 Incorporate habitat connectivity and preservation of natural areas into state and local land-use policy and the environmental review process to minimize habitat fragmentation and other related threats associated with development.
- 9.1.0.31 Develop wetland restoration plans that consider the life history and needs of wildlife occupying targeted habitats.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need
Eastern Redbelly Turtle

- 9.1.0.33 Review the species, threats, action successes, and habitats, and work with partners to revise the 2017 State Wildlife Action Plan for the 2025 resubmittal.

9.2 Organizational strategic and CMS planning

9.2.1 Organizational strategic and operational planning

- 9.2.1.1 Identify and codify legal ORV access areas on state lands.

9.3 Species and habitat management planning

9.3.1 Species management planning

- 9.3.1.3 Develop a management plan to restrict human activity (e.g., recreational, maintenance work, etc.) from sensitive habitats/areas such as avian nesting sites, reptile and amphibian breeding areas (nesting or gestation/birthing and breeding pools, respectively), and bat hibernacula, and federal buffers for marine mammals.
- 9.3.1.4 Develop town plans that avoid impacts to SGCN species and their habitats.
- 9.3.1.5 Develop response plans to address disease outbreaks within wildlife populations, in particular SGCN.
- 9.3.1.6 Amend NJ's current oil spill response plan to 1) expand the geographic area addressed, 2) expand the targeted species impacted and in need of recovery, and 3) revise current and integrate new actions into the plan as needed.
- 9.3.1.7 Develop a rapid response plan for various scenarios (e.g., insect infestations destroying native habitat, wildlife disease) to be implemented upon exotic pathogen introduction or incident.
- 9.3.1.9 Develop a management plan incorporating the effects of pesticides, herbicides and other biological controls on SGCN and their critical and supporting habitats.
- 9.3.1.10 Develop a management plan to combat the impacts of diseases/pathogens impacting SGCN and/or their habitats.
- 9.3.1.12 Develop a management plan to benefit urban-associated SGCN based on research.
- 9.3.1.13 Develop a management plan to ensure SGCN populations' persistence based on long-term monitoring of resident and migratory SGCN populations and their habitats.
- 9.3.1.15 Develop a plan to minimize the impacts of oil spills on wildlife and their habitats.
- 9.3.1.16 DOD and appropriate state agencies work together to improve DOD Integrated Natural Resource Management Plans (INRMP) to develop strategies to minimize or eliminate disturbances to all SGCN (i.e., beyond their federal requirements) during military activities and to improve SGCN habitat and presence.

9.3.3 Habitat management planning

- 9.3.3.6 Develop a management plan for maintaining and enhancing healthy, SGCN-associated terrestrial and aquatic habitats and associated riparian habitats, and to minimize (if not avoid) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
- 9.3.3.8 Develop a management plan to combat the impacts of diseases/pathogens impacting SGCN and/or their habitats.
- 9.3.3.9 Develop a response plan to outbreaks using BMPs to control infestations and limit their spread in a way that avoids excessive harm to non-target species.
- 9.3.3.10 Develop a management plan to ensure SGCN populations' persistence based on long-term monitoring of resident and migratory SGCN populations and their habitats.

Eastern Redbelly Turtle

- 9.3.3.11 Develop town plans that avoid impacts to SGCN species and their habitats.
- 9.3.3.13 Develop a management plan that will establish/improve habitat resilience (e.g., shorelines of the coast and Delaware Bay, forested habitats of the Pinelands and Skylands) that benefits wildlife inhabiting these areas and prevents or ameliorates near-term impacts of climate change throughout the State, but in particular within the coastal and Delaware Bay areas.
- 9.3.3.15 Develop a management plan incorporating the effects of pesticides, herbicides and other biological controls on SGCN and their critical and supporting habitats.
- 9.3.3.16 Develop a management plan to restrict human activity (e.g., recreational, maintenance work, etc.) from sensitive habitats/areas such as avian nesting sites, reptile and amphibian breeding areas (nesting or gestation/birthing and breeding pools, respectively), and bat hibernacula, and federal buffers for marine mammals.
- 9.3.3.17 Develop a management plan for prescribed burning that will benefit Pinelands dependent species and increase or maintain habitat quality for these species in the Pinelands.
- 9.3.3.18 In cooperation with species and habitat experts, develop management plans for significant natural and/or unique communities, in particular those supporting SGCN, and provide the information to the landowners/managers (federal, state and local government agencies or non-government organization) for review and implementation.
- 9.3.3.19 Develop management plans for SGCN inhabiting permanently protected natural lands using available baseline and population trend data.
- 9.3.3.21 Develop a rapid response plan for various scenarios (e.g., insect infestations destroying native habitat, wildlife disease) to be implemented upon exotic pathogen introduction or incident.
- 9.3.3.22 Create management plans to minimize and/or prevent wildlife road mortality that will incorporate wildlife passages in conjunction with barrier fencing and, where possible, seasonal closures. Aquatic-associated passages must avoid disturbance to the natural streambeds and riparian habitat, permit high volumes of water to flow freely, and provide adequate travel corridors for terrestrial wildlife, while maintaining stream flow for fish passage. Bridges that span rivers and streambeds and include floodplain habitat on either side of the span to provide travel corridors for terrestrial wildlife are preferred over culverts.
- 9.3.3.24 Develop a plan to improve the enforcement of policies and/or regulations that protect wetlands, riparian and floodplain areas, and aquatic habitats (including open waters).
- 9.3.3.28 Develop a plan to minimize the impacts of oil spills on wildlife and their habitats.
- 9.3.3.29 Develop habitat management plans aimed at reducing or eliminating negative impacts of ORVs.
- 9.3.3.32 DOD and appropriate state agencies work together to improve DOD Integrated Natural Resource Management Plans (INRMP) to develop strategies to minimize or eliminate disturbances to all SGCN (i.e., beyond their federal requirements) during military activities and to improve SGCN habitat and presence.
- 9.3.3.35 Incorporate habitat connectivity, preservation of natural areas, and the implementation of BMPs into state and local land-use policy environmental review process and energy development plans to minimize habitat fragmentation and related threats associated with solar farms and altered habitats.
- 9.3.3.36 Integrate plans for properly located and timed habitat restoration and management along transportation, energy and service corridors to minimize risks to and benefit wildlife.

11 Technical Assistance

11.1 Environmental review

11.1.1 Review of proposed projects

- 11.1.1.2** Develop smart-growth plans and critical habitat designations that consider SGCN life history requirements and habitat needs, connectivity and health of those habitats, and minimize human-associated disturbances to those habitats and the SGCN inhabiting them.
- 11.1.1.3** Government organizations to thoroughly review wetland restoration plans, applying the most current science for wildlife, habitats and aquatic systems, to assess the impacts to resident and migratory wildlife occupying the targeted habitats.
- 11.1.1.4** Incorporate habitat connectivity and preservation of natural areas into state and local land-use policy and the environmental review process to minimize habitat fragmentation and related threats associated with development.
- 11.1.1.5** Incorporate habitat connectivity and preservation of natural areas into state and local land-use policy and the environmental review process to minimize the impacts of transportation and service corridors on fish and wildlife and their habitats.
- 11.1.1.7** Review proposed construction or other work projects and permit applications, provide recommendations on how to best avoid disturbing sensitive species, and identify actions not permitted.
- 11.1.1.8** Review proposed research projects and permit applications, provide recommendations on how to best avoid disturbing sensitive species, and identify actions not permitted.
- 11.1.1.9** Review strategies for creating or enhancing connectivity (e.g., installing appropriately-sized wildlife passages) between wetlands to allow wildlife to disperse naturally and safely.
- 11.1.1.10** Use CHANJ mapping in reviews of proposed energy, mining, transportation and utility service companies/agencies' projects to attempt to maintain habitat connectivity and reduce fragmentation, and identify potential impacts of the projects.
- 11.1.1.11** Use the best available science (species data, habitat present, site layout options, etc.) when conducting regulatory reviews of proposed offshore energy projects relating to drilling, extraction and distribution of petroleum and gas products to reduce habitat destruction and minimize impacts on wildlife.
- 11.1.1.12** Use the best available science (species data, habitat present, site layout options, etc.) when conducting regulatory reviews of proposed solar farm projects to reduce habitat fragmentation and minimize impacts on wildlife.
- 11.1.1.13** Use the best available science (species data, habitat present, wind farm layout options, wind blade impacts on migratory species, location of migration routes, etc.) when conducting regulatory reviews of proposed wind farm projects to minimize impacts on migratory and resident wildlife and reduce habitat fragmentation.

11.1.2 Review of proposed policies and plans

- 11.1.2.1** Develop smart-growth plans and critical habitat designations that consider SGCN life history requirements and habitat needs, connectivity and health of those habitats, and minimize human-associated disturbances to those habitats and the SGCN inhabiting them.
- 11.1.2.2** Government organizations to thoroughly review wetland restoration plans, applying the most current science for wildlife, habitats and aquatic systems, to assess the impacts to resident and migratory wildlife occupying the targeted habitats.
- 11.1.2.3** Incorporate aquatic habitat connectivity and water quality/effluent standards into the environmental review process to help establish policies and plans that minimize the impact of aquaculture on fish and wildlife.

Eastern Redbelly Turtle

- 11.1.2.4 Review strategies for creating or enhancing connectivity (e.g., installing appropriately-sized wildlife passages) between wetlands to allow wildlife to disperse naturally and safely.

11.2 Technical assistance

11.2.0 Assorted technical assistance strategies

- 11.2.0.1 Provide technical support to private and public landowners and land managers for carrying out restoration and management practices aimed at increasing structural habitat diversity.
- 11.2.0.2 Provide technical support to public and private landowners and land managers for controlling invasive, native and non-native plant species in order to increase structural habitat diversity.
- 11.2.0.3 Develop state, regional and local BMPs that focus on minimizing habitat fragmentation and human-wildlife conflicts associated with development. Make information available to land developers and private and public landowners for implementation.
- 11.2.0.5 Provide educational resources, training programs, and expert guidance to private and public landowners and land managers on the threats that herbicides and pesticides pose to aquatic systems and wildlife, and to promote safer usage of such products.
- 11.2.0.6 Provide educational resources, training programs, and on-the-ground guidance to energy, mining, transportation, and utility service agencies/companies and their project and resource managers on habitat creation, enhancement and restoration within and adjacent to project areas, as well as away from and outside of project areas (depending on the target species), by managing vegetation for a variety of species and that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife. Wind farms should address both terrestrial bound and low-flying species. Examples of habitat management include, but are not limited to, integrating short and tall grasses, specific host plants, brush piles, water sources/wetlands, shrubby areas, nesting areas and no-mow set-asides.
- 11.2.0.7 Provide educational resources, training programs, and on-the-ground guidance to energy, mining, transportation, and utility service agencies/companies and their project and resource managers on the importance of maintaining habitat connectivity, minimizing fragmentation, and the use of CHANJ products to help them target areas for such planning.
- 11.2.0.8 Provide educational resources, training programs, and on-the-ground guidance to public and private landowners and land managers on habitat creation and enhancement strategies that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife.
- 11.2.0.9 Provide educational resources, training programs, and on-the-ground guidance to municipalities, land developers, and other land managers and private landowners about the importance of leaving vegetation in place, especially along riparian areas and wildlife movement corridors.
- 11.2.0.10 Provide technical support to private landowners, consultants, and land managers to create customized management plans based on location and SGCN.
- 11.2.0.14 Provide educational resources and technical support to public and private landowners and land managers to promote the protection of wetlands, riparian and floodplain areas, and aquatic habitats (including open waters), and to enhance or restore biologically appropriate buffers.
- 11.2.0.15 Provide educational resources, training programs, and on-the-ground guidance to municipalities, land developers, and other land managers and landowners about the importance of retaining and in an effort to protect, create, enhance and/or restore vegetation along aquatic habitats.

Eastern Redbelly Turtle

- 11.2.0.18 Provide educational resources and technical support to public and private landowners and land managers to promote the protection of lands adjacent to fish SGCN habitats and/or aquatic systems feeding into such habitats.
- 11.2.0.21 Provide educational resources and technical support to public and private landowners and land managers of lands adjacent to critical migratory stopover habitats for songbirds, raptors, shorebirds, bats and invertebrates to promote the protection and/or enhancement of those adjacent habitats to increase the effective size of the migratory habitat.
- 11.2.0.22 Provide educational resources, training programs, and expert guidance to public and private landowners and land managers about lawn alternatives and the importance of natural vegetation and "edge" habitats on developed properties.
- 11.2.0.23 Provide educational resources and technical support to public and private landowners and land managers of lands adjacent to SGCN habitats to promote the protection and/or enhancement of those adjacent habitats to increase the overall size of the "core" area and/or provide a natural buffer, enhancing the suitability of the core area for SGCN, and that connect conserved SGCN habitats.
- 11.2.0.24 Provide educational resources, training programs, and expert guidance to public and private landowners and land managers on how to manage vegetated roadside areas (e.g., mowing, brush-hogging, etc.) on a schedule that avoids peak activity periods for wildlife and therefore, minimizes harm.
- 11.2.0.25 Provide educational resources, training programs, and on-the-ground guidance to resource managers regarding the assessment of and addressing secondary impacts (i.e. ancillary prescribed burns, trespassers, ORV use, mosquitoes, deer, buffers) related to residential and commercial development.
- 11.2.0.26 Make educational resources available to the public that encourage researchers to seek out guidance prior to finalizing proposals and submitting State permit applications to reduce potential impacts on sensitive species.
- 11.2.1 With individuals and groups involved in resource management decision making
 - 11.2.1.1 Engage partners and stakeholders in constructive dialogue regarding the importance of providing and methods to provide technical support for carrying out restoration and management practices aimed at increasing structural habitat diversity.
 - 11.2.1.2 Provide professional training and technical assistance tools (e.g., mapping, guidance documents, justification, etc.) to agencies/divisions/programs within and outside of the NJ DEP regarding the SWAP, and the conservation actions recommended therein to help facilitate SWAP implementation.
 - 11.2.1.3 Provide educational resources, training programs, and on-the-ground guidance to DOD to improve DOD Integrated Natural Resource Management Plans (INRMP) to develop and implement forest management and other practices that minimize disturbances to SGCN (i.e., beyond their federal requirements).
 - 11.2.1.6 Provide educational resources, training programs, and on-the-ground guidance to resource agencies prior to project initiation to ensure wildlife and their habitats are protected to the highest degree possible during construction, and provisions are in place for post-construction habitat use.

100 Law and Policy

100. Legislation

100.1.3 Sub-national Level

Eastern Redbelly Turtle

100.1.3.1 Develop laws and policies to increase protection and biological buffers of wetlands.

100.1.3.2 Develop policies for wetland restoration plans that consider life history requirements and needs of wildlife occupying targeted habitats.

100.1.3.3 Initiate legislative action to establish an annual budgetary line item designating funds to support programs focused on long-term research and monitoring of wildlife diseases.

100.1.4 County and Local

100.1.4.1 Enhance critical migratory stopover habitats for songbirds, raptors, shorebirds, bats and invertebrates through the local ordinances of adjacent private lands to increase the effective size of the habitat.

100.1.4.2 Secure and increase the effective size of SGCN habitats and connect conserved SGCN habitats through local ordinances.

100.1.4.3 Expand the acreages and enhance the effective size of SGCN habitats by protecting adjacent habitats that contribute to the overall size of the "core" area and/or provide a natural buffer, enhancing the suitability of the core area for SGCN through local ordinances.

100.1.4.4 Secure wetlands, riparian and floodplain areas, and aquatic habitats (including open waters) and biologically appropriate buffers through local ordinances.

100.1.4.5 Secure SGCN-inhabited/used freshwater wetlands and biologically appropriate buffers through local ordinances.

100.1.4.11 Secure riparian areas through local ordinances.

100.1.4.13 Encourage municipal laws regulating domestic pets that may predate on wildlife.

100.1.4.14 Adopt/pass local ordinances which require assessing and addressing secondary impacts (i.e. ancillary prescribed burns, trespassers, ORV use, mosquitoes, deer, buffers) on biological resources when revising planning/zoning documents or granted site plan/subdivision approvals.

100.1.4.15 Incorporate habitat connectivity and the preservation of natural areas into state and local land-use policy and the environmental review process to minimize habitat fragmentation and related threats associated with development.

100.1.5 Scale Unspecified

100.1.5.1 Develop laws and policies to increase protection and biological buffers of wetlands.

100.1.5.2 Develop policies for wetland restoration plans that consider life history requirements and needs of wildlife occupying targeted habitats.

100.1.5.3 Incorporate aquatic habitat connectivity and water quality/effluent standards into state/local policy to minimize the impact of aquaculture on fish and wildlife.

100.1.5.4 Incorporate habitat connectivity and preservation of natural areas into state and local land-use policy and the environmental review process to minimize the impacts of transportation and service corridors on fish and wildlife and their habitats.

100. State Regulations

100.3.0 Regulatory initiatives for species and habitat protection

100.3.0.1 Develop (and/or improve) policies and/or regulations that will promote the reduction of run-off and point and non-point source pollution into NJ's aquatic systems (streams, rivers, lakes/ponds, bays, ocean, wetlands, etc.).

100.3.0.3 Develop policies that will promote the long term protection of critical migratory stopover habitats for songbirds, raptors, shorebirds, bats and invertebrates.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Eastern Redbelly Turtle

- 100.3.0.5 Develop policies that will promote improved and secure habitat connections between conserved SGCN habitats.
- 100.3.0.6 Develop policies that will promote expanding acreages and enhancing the effective size of SGCN habitats by providing biologically appropriate buffers of native habitat surrounding SGCN habitats.
- 100.3.0.8 Develop policies and/or regulations with the objective of protecting significant natural and/or unique communities in perpetuity.
- 100.3.0.9 Secure mitigation that creates an environmental benefit for losses of SGCN and their habitats.
- 100.3.0.13 Develop policies that will promote protecting and restoring riparian areas.
- 100.3.0.14 Develop policies and/or regulations that increase the protective buffers of wetlands, riparian and floodplain areas, and aquatic habitats (including open waters) to biologically appropriate distances to benefit SGCN that rely upon these habitats and improve the function of the [associated] aquatic systems.
- 100.3.0.17 Develop and implement policies and/or regulations with the objective of reducing "by-catch" of SGCN and other non-target species.
- 100.3.0.18 Develop policies for conserved lands that prohibit planting and supports the control of non-native vegetation and invasive, native vegetation.
- 100.3.0.20 Develop policies and/or regulations that prohibit the presence of managed cat colonies and trap, neuter and release programs in or near critical wildlife habitats.
- 100.3.0.21 Develop policies that minimize wildlife road mortality through: 1) Requiring the integration of wildlife passages into all new and repaired roads, in particular those areas that will connect SGCN habitats, 2) Requiring current fish/wildlife passages be improved and maintained in perpetuity, 3) Supporting seasonal road closures, in particular for unimproved roads, 4) Supporting projects that work to improve connectivity of SGCN habitats such as land conservation through acquisition or other means.
- 100.3.0.25 Amend the harvest quota or "bag limits" within the freshwater fish code relative to SGCN or sensitive game species' as needed.
- 100.3.0.26 Adopt regulations requiring the combined sewer overflow alternative analyses required by regulation address potential impacts to wildlife in watercourses or receiving water bodies.
- 100.3.0.27 Amend harvest, license and/or permit requirements to incorporate guidance regarding the use of gear and/or tackle and current best practices to minimize bycatch or entanglement of non-target species.
- 100.3.0.28 Amend harvest, license and/or permit requirements to require mandatory reporting by permittees/licensees of lost harvest gear, by-catch and, entanglement of non-target species.
- 100.3.0.29 Amend harvest, license and/or permit requirements to incorporate the exclusion devices and/or to require trap/pot designs with a quick-corrode feature which would render the device ineffective upon short-term sustained submersion.
- 100.3.0.31 Create or expand tax-based incentive programs available to private, agricultural, commercial, industrial or governmental landowners and land managers to include or provide for incentives for the maintenance and/or improvement to existing habitat via the endorsement of wildlife-related BMPs.
- 100.3.0.36 Create legislation to limit the amount of plastic from shopping bags in circulation and re-instate incentives for citizens bringing their own shopping bag to grocery store.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Eastern Redbelly Turtle

- 100.3.0.40 Develop laws and/or policies to require vegetative buffers of native plants on preserved farmland and state lands with agricultural leases or agreements.
- 100.3.0.41 Explore all State regulatory requirements for mitigation, restoration, habitat management, etc. to ensure they prohibit the use of specified invasive or other problematic plant species.
- 100.3.0.42 Fully adopt the former Storm water Management Rules' 300ft buffer requirements into the Flood Hazard Area Control Act Rules.
- 100.3.0.43 Identify and address (amend) regulatory impediments to beneficial habitat management.
- 100.3.0.44 Incorporate requirements for technical support and funding for mitigation or restoration efforts so as to be consistent with existing regulations.
- 100.3.0.46 Investigate and/or develop inter-agency Memorandum of Agreements to share common data stored or managed in program-specific databases.
- 100.3.0.48 Propose new State law or regulation mandating that a State-level "development impact fee" be assessed on all new development approved by municipalities (via the Municipal Land Use Law processes), and dedicate such monies to the development and implementation of regional Habitat Conservation Plans (or existing plans/programs serving the same regional function).
- 100.3.0.49 Review existing CAFRA regulations and ensure that the Coastal Zone Management Rules (NJAC 7:7E) adequately address the issue of disturbance to habitat or species as a result of human activities (e.g., construction, bridge maintenance, road work, etc.).
- 100.3.0.52 Revise existing and/or incorporate new State land use regulations that specifically address the impacts of new or expanded energy sitings and facilities.
- 100.3.0.53 Revise existing and/or incorporate new State land use regulations that specifically address the impacts of new or expanded rights-of-way corridors associated with energy transport/transmission.
- 100.3.0.54 Revise existing and/or incorporate new State land use regulations that specifically address the impacts of new or expanded surface mining areas.
- 100.3.0.57 Develop regulations that when implemented will improve and secure habitat connections between conserved SGCN habitats.
- 100.3.0.58 Develop regulations that when implemented will promote the expansion of acreages and enhancement of the effective size of SGCN habitats by providing biologically appropriate buffers of native habitat surrounding SGCN habitats.
- 100.3.0.60 Develop regulations that when implemented will protect significant natural and/or unique communities in perpetuity.
- 100.3.0.64 Develop regulations that when implemented will protect and restore riparian areas.
- 100.3.0.66 Develop regulations with the objective of reducing "by-catch" of SGCN and other non-target species.
- 100.3.0.68 Develop regulations that when implemented will prohibit the presence of managed cat colonies and trap, neuter and release programs in or near critical wildlife habitats.
- 100.3.0.69 Develop regulations that when implemented will minimize wildlife road mortality.
- 100.3.0.72 Develop regulations that require permit applicants and/or review agencies to assess the cumulative and synergistic effects of a proposed project (i.e., "secondary effects"), both over time and over a larger spatial scale than the site itself.

100. State Agency Policy Integration

100.4.0 Policy initiatives for species and habitat protection

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Eastern Redbelly Turtle

- 100.4.0.1 Create any necessary policy changes (including those to incentive programs) to encourage the integration of SWAP actions associated with SGCN priority habitats as a deliberative factor in agencies' actions (e.g., environmental and land management review processes, land acquisition and management).
- 100.4.0.2 Create a policy that requires the NJ DEP to incorporate scientific information regarding climate change and sea level rise (e.g., predictions, habitat management/acquisition efforts to enhance resilience to inundation) on their websites and to work with other government entities, conservation organizations and other stakeholders to work together to collaboratively use social media campaigns to grow a constituency of NJ residents who have an elevated ecological and climate consciousness.
- 100.4.0.3 Develop policies for mandatory buffer strips on preserved farmlands and state-owned agricultural lands.
- 100.4.0.4 Create a policy that requires the use of wildlife habitat and corridor mapping products for both regulatory use when conducting project reviews and planning/siting new or expanded rights-of-way projects.
- 100.4.0.8 Develop a white paper addressing the impacts that existing, new or expanded rights-of-way have upon wildlife, wildlife habitats and habitat connectivity.
- 100.4.0.9 Develop and implement policies to minimize the removal of coarse, woody debris in terrestrial, aquatic and riparian habitats in order to benefit wildlife.
- 100.4.0.12 Develop laws and/or policies to require vegetative buffers of native plants on preserved farmland and state lands with agricultural leases or agreements.
- 100.4.0.13 Develop policies for different circumstances (e.g., roadsides and medians, riparian, aquatic and terrestrial habitats) that outline appropriate habitat/vegetation management strategies and schedules to minimize risks to and benefit wildlife.
- 100.4.0.16 Develop policies to implement habitat management strategies that will increase the structural diversity surrounding areas used for energy, mining, and transportation and service corridors which include but are not limited to the presence of short and tall grasses, specific host plants, brush piles, water sources/wetlands, shrubby areas, nesting areas, and no-mow set-
- 100.4.0.19 Develop regulations that will minimize the creation of new barriers, remove or replace current barriers with appropriately-sized systems to accommodate wildlife dispersal, and to minimize road widening and traffic volume increases within critical wildlife habitat areas.
- 100.4.0.20 Develop state regulations that require energy developers and utility service companies to implement habitat management strategies that will increase the structural diversity of the habitat, minimize habitat fragmentation and commercial infrastructure, and minimize the loss, alteration and/or degradation of the habitat and adjacent lands when working on preserved farmlands, state-owned agricultural lands, forests, parks and wildlife management areas, and any conserved lands purchased with the assistance of Green Acres and Federal Land & Water Conservation Fund monies.
- 100.4.0.21 Ensure that Section 303(d) of the Clean Water Act and applicable State statutory/regulatory requirements for surface water pollutant budgets are being met by monitoring and enforcing regulatory Total Maximum Daily Load (TMDL) targets established within regional Water Quality Management Plans.
- 100.4.0.25 Develop policies that require permit applicants and/or review agencies to assess the cumulative and synergistic effects of a proposed project (i.e., "secondary effects"), both over time and over a larger spatial scale than the site itself.

Longtail Salamander

Focal species that comprise this Conservation Target:

Longtail Salamander

Threats and Action Drivers associated with this Conservation Target:

1 **Residential and Commercial Development**

1.1 Housing and Urban Areas

1.1.1 Land conversion from natural habitat to urban and other residential areas (large and small scale) (Avg. Score: 2.00)

- NJ Specific Threats:**
- 1.1.1.1 Fragments terrestrial and aquatic habitats making the area unsuitable for area-sensitive species and inhibit dispersal of animals, reducing gene flow.
 - 1.1.1.2 Loss, alteration and/or degradation of habitat.
 - 1.1.1.3 Lot layout, design and/or landscaping may create conditions that increase wildlife-human conflict.
 - 1.1.1.4 Increased risk of vehicle strikes/mortality to terrestrial-bound and some bird species.
 - 1.1.1.5 Impervious surfaces can lead to a decrease in water recharge.
 - 1.1.1.6 Impervious surfaces can cause an increased risk of floods, flash floods and storm damage that degrade terrestrial and aquatic habitats.
 - 1.1.1.7 Impervious surfaces can cause an increase in temperatures of local aquatic systems making them unsuitable (or less suitable) for aquatic species' reproduction and survival.

1.2 Commercial and Industrial Areas

1.2.1 Land conversion from natural habitat to commercial or industrial areas (large and small scale) (Avg. Score: 1.00)

- NJ Specific Threats:**
- 1.2.1.1 Fragments terrestrial and aquatic habitats making the area unsuitable for area-sensitive species and inhibit dispersal of animals, reducing gene flow.
 - 1.2.1.2 Loss, alteration and/or degradation of habitat.
 - 1.2.1.3 Lot layout, design and/or landscaping may create conditions that increase wildlife-human conflict.
 - 1.2.1.4 Increased risk of vehicle strikes/mortality to terrestrial-bound and some bird species.
 - 1.2.1.5 Impervious surfaces can lead to a decrease in water recharge.
 - 1.2.1.6 Impervious surfaces can cause an increased risk of floods, flash floods and storm damage that degrade terrestrial and aquatic habitats.
 - 1.2.1.7 Impervious surfaces can cause an increase in temperatures of local aquatic systems making them unsuitable (or less suitable) for aquatic species' reproduction and survival.

1.3 Tourism and Recreational Areas

1.3.1 Land conversion from natural habitat to recreation or tourism areas (large and small scale) (Avg. Score: 1.00)

- NJ Specific Threats:**
- 1.3.1.1 Fragments terrestrial and aquatic habitats making the area unsuitable for area-sensitive species and inhibit dispersal of animals, reducing gene flow.
 - 1.3.1.2 Loss, alteration and/or degradation of habitat.
 - 1.3.1.3 Lot layout, design and/or landscaping may create conditions that increase wildlife-human conflict.
 - 1.3.1.4 Impervious surfaces can lead to a decrease in water recharge.

Longtail Salamander

1.3.1.5 Impervious surfaces can cause an increased risk of floods, flash floods and storm damage that degrade terrestrial and aquatic habitats.

1.3.1.6 Impervious surfaces can cause an increase in temperatures of local aquatic systems making them unsuitable (or less suitable) for aquatic species' reproduction and survival.

2 **Agriculture and Aquaculture**

2.1 Annual and Perennial Crops (non-timber)

2.1.1 Shifting Agriculture (Avg. Score: 1.00)

NJ Specific Threats: 2.1.1.3 Conversion of agricultural landscape that results in increased erosion, runoff, and chemical and thermal pollution decreases the landscape's ability to buffer aquatic systems from various forms of terrestrial degradation.

2.1.2 Small-holder Farming (Avg. Score: 1.00)

NJ Specific Threats: 2.1.2.2 Fragments terrestrial and aquatic habitats.

2.1.3 Agro-industry (Avg. Score: 1.00)

NJ Specific Threats: 2.1.3.2 Fragments terrestrial and aquatic habitats.

2.2 Wood and Pulp Plantations

2.2.1 Small Holder (Avg. Score: 2.00)

NJ Specific Threats: 2.2.1.1 Conversion of native forests to plantations decreases the habitat quality for forest-dependent species.

2.2.1.2 Tree harvesting can cause direct mortality to wildlife, especially if done during peak activity periods or vulnerable life stages (e.g., denning, nesting, gestation/birthing, basking, roosting, pre-volancy, etc.).

2.2.2 Agro-industry Plantations (Avg. Score: 1.00)

NJ Specific Threats: 2.2.2.1 Conversion of native forests to plantations decreases the habitat quality for forest-dependent species.

2.2.2.2 Tree harvesting can cause direct mortality to wildlife, especially if done during peak activity periods or vulnerable life stages (e.g., denning, nesting, gestation/birthing, basking, roosting, pre-volancy, etc.).

2.3 Livestock Farming and Ranching

2.3.2 Small-holder Grazing (Avg. Score: 1.00)

NJ Specific Threats: 2.3.2.3 Conversion of natural stream buffers into pastures decreases the landscape's ability to buffer aquatic systems from various forms of terrestrial degradation.

2.3.2.4 Livestock allowed to wade into waterbodies trample and degrade aquatic habitats.

2.3.3 Agro-industry Grazing (Avg. Score: 1.00)

NJ Specific Threats: 2.3.3.3 Conversion of natural stream buffers into pastures decreases the landscape's ability to buffer aquatic systems from various forms of terrestrial degradation.

2.3.3.4 Livestock allowed to wade into waterbodies trample and degrade aquatic habitats.

3 **Energy Production and Mining**

3.1 Oil and Gas Facilities and Pipelines

3.1.1 Distribution processes of petroleum and other liquid hydrocarbons (Avg. Score: 2.00)

NJ Specific Threats: 3.1.1.1 Fragments terrestrial and aquatic habitats.

3.1.1.2 Loss, alteration and/or degradation of habitat.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Longtail Salamander

3.1.1.3 Increased risk of oil spills.

3.1.1.5 Increased vehicular and ship traffic associated with construction and operations, and therefore an increased risk of wildlife mortality from strikes.

3.1.2 Natural gas distribution processes (Avg. Score: 2.00)

NJ Specific Threats: 3.1.2.1 Fragments terrestrial and aquatic habitats.

3.1.2.2 Loss, alteration and/or degradation of habitat.

3.1.2.3 Increased risk of gas leaks and explosions.

3.1.2.5 Increased vehicular and ship traffic associated with construction and operations, and therefore an increased risk of wildlife mortality from strikes.

3.2 Mining and Quarrying

3.2.2 Surface Mining - Rock Quarry (and sand quarries) (Avg. Score: 1.00)

NJ Specific Threats: 3.2.2.1 Fragments terrestrial and aquatic habitats.

3.2.2.2 Loss, alteration and/or degradation of terrestrial and aquatic habitats.

3.2.2.3 Increased risk of vehicle strikes/mortality to wildlife.

3.3 Renewable Energy

3.3.1 Wind Power (Avg. Score: 1.00)

NJ Specific Threats: 3.3.1.2 Fragments terrestrial habitats.

3.3.1.3 Loss, alteration and/or degradation of habitat.

3.3.1.4 Increased commercial infrastructure.

3.3.2 Solar Power (Avg. Score: 1.00)

NJ Specific Threats: 3.3.2.1 Fragments terrestrial habitats.

3.3.2.2 Loss, alteration and/or degradation of habitat.

3.3.2.3 Increased commercial infrastructure.

3.4 Conventional Power Plants

3.4.0 Conventional Power Plants (Avg. Score: 1.00)

NJ Specific Threats: 3.4.0.2 Loss, alteration and/or degradation of habitat due to new or the expansion of current facilities.

3.4.0.3 Alteration of the temperature, pH and/or hydrology of aquatic ecosystems change plant communities and can harm wildlife and/or impact their behavior and survivorship.

4 Transportation and Service Corridors

4.1 Roads and Railroads

4.1.1 Land conversion from natural habitat to roads and railroads (large and small scale) (Avg. Score: 2.00)

NJ Specific Threats: 4.1.1.1 Fragments terrestrial and aquatic habitats making the landscape unsuitable for area-sensitive species and inhibiting dispersal of non-volant animals, reducing gene flow.

4.1.1.2 Loss, alteration and/or degradation of habitat associated with road and railroad construction and maintenance, and degradation of adjacent habitats.

4.1.2 Movement of cars and other vehicles on roads and railroads (large and small scale) (Avg. Score: 2.00)

NJ Specific Threats: 4.1.2.1 Increased vehicle traffic increases the risk of wildlife mortality from strikes.

Longtail Salamander

4.2 Utility and Service Lines

4.2.1 Land conversion from natural habitat to utility and other service lines (large (Avg. Score: 2.00) and small scale) or communication towers and associated access roads

NJ Specific Threats: 4.2.1.1 Fragments terrestrial and aquatic habitats making the landscape unsuitable for area-sensitive species, inhibiting dispersal of non-volant animals, reducing gene flow, and creating barriers to fish when service line-associated roads cross streams (e.g., bridges, culverts, fords, etc.).

4.2.1.2 Loss, alteration and/or degradation of habitat associated with rights-of-way construction and maintenance, and degradation of adjacent habitats.

4.2.1.4 Lines that cross or run parallel to streams result in a loss or reduction of vegetated riparian buffers and streamside shading, affecting water quality and in-stream habitat for aquatic biota.

4.2.2 Management of rights-of-way or communication tower facilities and/or (Avg. Score: 2.00) their associated access roads

NJ Specific Threats: 4.2.2.1 Improper or poorly scheduled vegetation management can cause direct mortality to and may reduce productivity of wildlife.

5 Biological Resource Use

5.1 Hunting and Collecting Terrestrial Animals

5.1.1 Intentional Use (Avg. Score: 1.00)

NJ Specific Threats: 5.1.1.1 Illegal collection of wildlife can have detrimental impacts on populations.

5.1.2 Unintentional effects (Avg. Score: 1.00)

NJ Specific Threats: 5.1.2.2 Disruption of normal wildlife behavior.

5.2 Gathering Terrestrial Plants

5.2.3 Control (Avg. Score: 1.00)

NJ Specific Threats: 5.2.3.3 Removal of riparian or near-stream vegetation alters water quality and in-stream habitat for aquatic organisms by reducing streamside shading, increasing bank erosion, and affecting the natural filtering ability of trees, shrubs, and grasses.

5.3 Logging and Wood Harvesting

5.3.1 Intentional Use (subsistence/small scale) (Avg. Score: 1.00)

NJ Specific Threats: 5.3.1.1 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN may fragment their terrestrial habitats.

5.3.1.2 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN may cause the loss, alteration and/or degradation of wildlife habitat.

5.3.1.3 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN and unsustainable forestry practices may increase soil erosion, impacting SGCN habitats.

5.3.1.4 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN and unsustainable forestry practices may increase the risk of invasive species establishment, impacting SGCN habitats.

5.3.1.5 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN and unsustainable forestry practices may decrease structural diversity and biomass leading to reduced biodiversity and ecological integrity.

5.3.2 Intentional Use (large scale) (Avg. Score: 2.00)

NJ Specific Threats: 5.3.2.1 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN may fragment their terrestrial habitats.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Longtail Salamander

- 5.3.2.2 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN may cause the loss, alteration and/or degradation of wildlife habitat.
- 5.3.2.3 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN and unsustainable forestry practices may increase soil erosion, impacting SGCN habitats.
- 5.3.2.4 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN and unsustainable forestry practices may increase the risk of invasive species establishment, impacting SGCN habitats.
- 5.3.2.5 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN and unsustainable forestry practices may decrease structural diversity and biomass leading to reduced biodiversity and ecological integrity.

5.3.3 Unintentional effects (subsistence/small scale) (Avg. Score: 1.00)

- NJ Specific Threats:** 5.3.3.1 Direct mortality of wildlife, direct loss of suitable habitats (roost, foraging, shelter, etc.), and can disrupt sensitive species, decreasing the likelihood of success and/or reproduction.
- 5.3.3.2 Poorly planned/implemented tree harvesting adjacent to waterways and vernal pools can lead to increased water temperatures, soil erosion and sedimentation, and reduces the potential for woody debris within the aquatic system, leading to negative impacts on wildlife.

5.3.4 Unintentional effects (large scale) (Avg. Score: 2.00)

- NJ Specific Threats:** 5.3.4.1 Direct mortality of wildlife, direct loss of suitable habitats (roost, foraging, shelter, etc.), and can disrupt sensitive species, decreasing the likelihood of success and/or reproduction.
- 5.3.4.2 Extensive infrastructure and larger equipment requirements present a potential risk of direct injury/mortality to wildlife.
- 5.3.4.3 Poorly planned/implemented tree harvesting adjacent to waterways and vernal pools can lead to increased water temperatures, soil erosion and sedimentation, and reduces the potential for woody debris within the aquatic system, leading to negative impacts on wildlife.
- 5.3.4.4 Infrastructure and/or equipment use may result in subtle changes to drainage patterns, adversely affecting vernal pool and wetland hydrology.
- 5.3.4.5 Lack of appropriate, sustainable forest management can lead to a decrease in forest habitat diversity, degraded habitat for many forest species, the loss of habitat for early-successional species, and/or the loss of unique habitats for species that need canopy breaks and multi-aged tree composition to fulfill various life history requirements.

5.4 Fishing and Harvesting of Aquatic Resources

5.4.1 Intentional Use (subsistence/small scale) (Avg. Score: 1.00)

- NJ Specific Threats:** 5.4.1.4 Illegal collection of aquatic and semi-aquatic wildlife can have detrimental impacts on populations.

5.4.2 Intentional Use (large scale) (Avg. Score: 1.00)

- NJ Specific Threats:** 5.4.2.4 Illegal collection of aquatic and semi-aquatic wildlife can have detrimental impacts on populations.

6 Human Intrusions and Disturbance

6.1 Recreational Activities

6.1.1 Off-road vehicles (motorized and non-motorized) (Avg. Score: 1.00)

- NJ Specific Threats:** 6.1.1.1 Inappropriate use of off-road vehicles creates new roads/trails which fragments habitat.
- 6.1.1.2 Inappropriate use of off-road vehicles can degrade terrestrial and aquatic habitat and reduce the suitability of adjacent habitats for wildlife.
- 6.1.1.3 Increased risk of harassment that results in a change in wildlife behavior and/or direct mortality from vehicle strikes.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Longtail Salamander

- 6.1.1.6 Off-road vehicles can be a mechanism of transference of wildlife diseases and invasive plant species if gear and apparel are not properly sanitized between sites.

6.1.5 Wildlife observation and photography (Avg. Score: 1.00)

- NJ Specific Threats:** 6.1.5.1 Improperly conducted recreational activities may disrupt normal wildlife behaviors which can result in reduced reproductive success or survival, abandonment of critical sites, etc.

- 6.1.5.2 Participants may introduce wildlife diseases and invasive plant species when gear and apparel is not properly sanitized between sites.

6.2 Military Exercises

6.2.1 Military exercises (Avg. Score: 1.00)

- NJ Specific Threats:** 6.2.1.1 Military testing and training exercises may inflict disturbance and potential physical harm to wildlife.

- 6.2.1.3 Lack of opportunity for non-federal wildlife managers to influence activities on military bases may result in detrimental impacts to SGCN and/or missed opportunities to engage in projects that benefit SGCN.

6.3 Work and Other Activities

6.3.1 Unauthorized research projects at significant habitats (Avg. Score: 2.00)

- NJ Specific Threats:** 6.3.1.1 Participants may introduce wildlife diseases and invasive plant species when gear and apparel is not properly sanitized between sites.

- 6.3.1.2 Accidental trampling of nests, eggs/egg masses, and unseen individuals may impact reproductive success or cause direct mortality to SGCN.

6.3.2 Authorized research projects at significant habitats (Avg. Score: 2.00)

- NJ Specific Threats:** 6.3.2.2 Participants may introduce wildlife diseases and invasive plant species when gear and apparel is not properly sanitized between sites.

- 6.3.2.3 Accidental trampling of nests, eggs/egg masses, and unseen individuals may impact reproductive success or cause direct mortality to SGCN.

6.3.3 Other "work" unrelated to research (Avg. Score: 2.00)

- NJ Specific Threats:** 6.3.3.1 Construction projects may disrupt normal wildlife behavior which can result in reduced reproductive success or survival, abandonment of critical sites, etc. (e.g., bridge-nesting birds).

- 6.3.3.4 Workers may introduce wildlife diseases and invasive plant species when gear and apparel is not properly sanitized between sites.

7 Natural Systems Modifications

7.1 Fire and Fire Suppression

7.1.1 Increase in Fire Frequency/Intensity (Avg. Score: 1.00)

- NJ Specific Threats:** 7.1.1.1 Increase in frequency and intensity of wild fires as a result of droughts and heat waves drying out vegetation and litter.

- 7.1.1.2 Increase in frequency of wild fires as a result of illegal activities.

- 7.1.1.3 Unnatural fire regimes occurring as a result of military exercises.

7.1.2 Suppression of Fire Frequency/Intensity (Avg. Score: 1.00)

- NJ Specific Threats:** 7.1.2.1 Shift in vegetative communities as a result of suppression of natural fires.

7.2 Dams and Water Management/Use

7.2.1 Abstraction of Surface Water (domestic use) (Avg. Score: 3.00)

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Longtail Salamander

- NJ Specific Threats:** 7.2.1.1 Changing water levels due to water body drawdowns (legal and illegal) may lower dissolved oxygen levels, increase water temperatures, expose wildlife to predation, and increase exposure to winter temperatures, altering wildlife behavior and survival.
- 7.2.1.2 Controlled water releases and/or improper water level management of water bodies may alter downstream dissolved oxygen levels, water temperatures, sediment deposition, and flow rates, altering wildlife behavior and survival.
- 7.2.1.3 Channelization alters water volume and flow rates, removes aquatic vegetation and coarse, woody debris, and eliminates shallow water habitats.
- 7.2.1.5 Abstraction of surface water may deplete upland mesic habitats of water needed by plants and wildlife.

7.2.2 Abstraction of Surface Water (commercial use) (Avg. Score: 3.00)

- NJ Specific Threats:** 7.2.2.1 Channelization alters water volume and flow rates, removes aquatic vegetation and coarse, woody debris, eliminates shallow water habitats, and disrupts/removes stream bottom habitat.
- 7.2.2.2 Changing water levels due to water body drawdowns (legal and illegal) may lower dissolved oxygen levels, increase water temperatures, expose wildlife to predation, and increase exposure to winter temperatures, altering wildlife behavior and survival.
- 7.2.2.3 Controlled water releases and/or improper water level management of water bodies may alter downstream dissolved oxygen levels, water temperatures, sediment deposition, and flow rates, altering wildlife behavior and survival.
- 7.2.2.5 Abstraction of surface water may deplete upland mesic habitats of water needed by plants and wildlife.

7.2.3 Abstraction of Surface Water (agricultural use) (Avg. Score: 3.00)

- NJ Specific Threats:** 7.2.3.1 Controlled water releases and/or improper water level management of water bodies may alter downstream dissolved oxygen levels, water temperatures, sediment deposition, and flow rates, altering wildlife behavior and survival.
- 7.2.3.2 Channelization alters water volume and flow rates, removes aquatic vegetation and coarse, woody debris, and eliminates shallow water habitats.
- 7.2.3.5 Changing water levels due to water body drawdowns (legal and illegal) may lower dissolved oxygen levels, increase water temperatures, expose wildlife to predation, and increase exposure to winter temperatures, altering wildlife behavior and survival.
- 7.2.3.6 Abstraction of surface water may deplete upland mesic habitats of water needed by plants and wildlife.

7.2.5 Abstraction of Ground Water (domestic use) (Avg. Score: 3.00)

- NJ Specific Threats:** 7.2.5.1 Heavy withdrawal of ground water for domestic use may lower water tables and alter the hydrology of freshwater wetlands and headwater streams, including tributaries, seepages and vernal pools.

7.2.6 Abstraction of Ground Water (commercial use) (Avg. Score: 3.00)

- NJ Specific Threats:** 7.2.6.1 Heavy withdrawal of ground water for industrial and commercial use may lower water tables and alter the hydrology of freshwater wetlands and headwater streams, including tributaries, seepages and vernal pools.

7.2.7 Abstraction of Ground Water (agricultural use) (Avg. Score: 3.00)

- NJ Specific Threats:** 7.2.7.1 Heavy withdrawal of ground water for agricultural use may lower water tables and alter the hydrology of freshwater wetlands and headwater streams, including tributaries, seepages and vernal pools.

7.2.9 Small Dams (Avg. Score: 3.00)

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Longtail Salamander

- NJ Specific Threats:** 7.2.9.1 Alter the physical, chemical and biological stream environment, causing changes in substrate composition, flow rates, dissolved oxygen, and water temperatures.
- 7.2.9.3 Dams act as a barrier to movement, limiting the ability of aquatic or semi-aquatic wildlife to move safely between habitats.

7.2.10 Large Dams (Avg. Score: 3.00)

- NJ Specific Threats:** 7.2.10.1 Alter the physical, chemical and biological stream environment, causing changes in substrate composition, flow rates, dissolved oxygen, and water temperatures.
- 7.2.10.3 Dams act as a barrier to movement, limiting the ability of aquatic or semi-aquatic wildlife to move safely between habitats.

7.2.11 Dams (size unknown) (Avg. Score: 3.00)

- NJ Specific Threats:** 7.2.11.1 Alter the physical, chemical and biological stream environment, causing changes in substrate composition, flow rates, dissolved oxygen, and water temperatures.
- 7.2.11.3 Dams act as a barrier to movement, limiting the ability of aquatic or semi-aquatic wildlife to move safely between habitats.

7.2.12 Culverts (Avg. Score: 2.00)

- NJ Specific Threats:** 7.2.12.1 Improper design, placement, installation and maintenance of culverts and other stream crossing structures can impede or prevent the movements of terrestrial organisms and can restrict or limit stream flow, impeding the movement of aquatic organisms along riparian corridors.

7.2.13 Stream Burial (Avg. Score: 3.00)

- NJ Specific Threats:** 7.2.13.1 Eliminates riparian habitats.
- 7.2.13.2 Eliminates in-stream habitat and water resources for wildlife.
- 7.2.13.3 Alters the hydrology and quality of downstream aquatic and riparian habitats.

7.3 Other Ecosystem Modifications

7.3.2 Inappropriate timing of mowing (Avg. Score: 1.00)

- NJ Specific Threats:** 7.3.2.1 Increased risk of direct mortality and/or reduced productivity of wildlife, as well as reduced use by migrating species.

7.3.3 Removal of coarse woody debris (streams, forests, scrub-shrub habitats) (Avg. Score: 1.00)

- NJ Specific Threats:** 7.3.3.1 Decreases the available detritus that normally accumulates behind and within stream obstructions, minimizing or eliminating food sources and shelters for fishes, invertebrates and amphibians.
- 7.3.3.2 Decreases habitat and/or corridor suitability due to limited or absent shelter and foraging habitat.
- 7.3.3.3 Removal of dead trees (snags), large felled logs (i.e., those > 12" dbh), and other downed woody material diminishes nesting, roosting, and sheltering options for wildlife, and increases the ease at which deer can browse regenerating vegetation.
- 7.3.3.4 Decreases available basking, shelter, and foraging habitats.

7.3.5 Poor habitat management (Avg. Score: 1.00)

- NJ Specific Threats:** 7.3.5.1 Improper or poorly scheduled maintenance of man-made corridors (e.g., roadsides and medians) can cause direct mortality to and may reduce productivity of wildlife.
- 7.3.5.2 Shifting from natural vegetation to lawns can cause increased temperatures of local aquatic systems making them unsuitable (or less suitable) for aquatic species' reproduction and survival.
- 7.3.5.3 Vegetation clearing removes terrestrial and riparian corridors for animal movement, shelter, and resting areas.

Longtail Salamander

- 7.3.5.4 Vegetation clearing or inappropriate alteration adjacent to aquatic habitats threatens aquatic species by degrading habitat and water quality (altering temperature and dissolved oxygen, increasing siltation and desiccation, etc.).
- 7.3.5.5 Habitat management that alters or removes vegetation without implementing long-term management increases the risk of invasive and exotic plants establishing themselves, outcompeting native vegetation.
- 7.3.5.6 Habitat management, including that which occurs on public and private lands, that does not consider timing and species' behaviors can result in the direct mortality and/or alteration or loss of habitat.
- 7.3.5.7 Improperly planned habitat management and/or mitigation efforts along roadsides and within the medians can attract wildlife and increase the risk of vehicle strikes.
- 7.3.5.9 Channelization alters water volume and flow rates, removes aquatic vegetation and coarse, woody debris, eliminates shallow water habitats, and disrupts/removes stream bottom habitat.
- 7.3.5.10 Ditching, draining and filling of marshes and wetlands eliminates habitat and degrades the remaining surrounding areas for wildlife.
- 7.3.5.12 Lack of diversity in age structure and composition of vegetation due to lack of natural disturbances and/or vegetation management.
- 7.3.5.14 Intentional felling and removal of dead standing trees or snags eliminates resting, nesting or feeding habitat, and precludes the snags eventual contribution to coarse woody debris and forest floor structure and habitat.

8 **Invasive and Other Problematic Species, Genes and Diseases**

8.1 Invasive Non-native/ Alien Species/ Diseases

8.1.1 Unspecified Species

(Avg. Score: 2.00)

- NJ Specific Threats:**
- 8.1.1.1 Displace or outcompete native species for resources.
 - 8.1.1.2 Alters, degrades and/or reduces the structural diversity of the natural composition of the landscape, including aquatic systems.
 - 8.1.1.3 Invasive, non-native insects can damage native vegetation at a large scale, leading to die-offs, altering the ecological community.
 - 8.1.1.4 Invasive, non-native animals increase the risk of predation on native animals and/or herbivory on native vegetation.
 - 8.1.1.5 Invasive, non-native animals and plants increase the risk of introduction and transference of diseases
 - 8.1.1.6 Invasive, non-native plants may create physical barriers for some species.

8.1.2 Invasive non-native aquatic animals

(Avg. Score: 1.00)

- NJ Specific Threats:**
- 8.1.2.2 Displace or out-compete native species for resources (food, shelter), alter the composition of the native landscapes/aquatic systems, diminishing habitat suitability and reducing ecological integrity of natural communities, and may introduce disease into a population.

8.1.3 Invasive non-native aquatic plants

(Avg. Score: 1.00)

- NJ Specific Threats:**
- 8.1.3.1 Displace or out-compete native species for resources (food, light, shelter), alter the composition of the native landscapes/aquatic systems, diminish habitat suitability and reduce ecological integrity of natural communities, and may introduce disease into a population.

8.1.4 Invasive non-native terrestrial/wetland animals

(Avg. Score: 1.00)

- NJ Specific Threats:**
- 8.1.4.1 Displace or out-compete native species for resources (food, shelter), alter the composition of the native landscapes/aquatic systems, diminish habitat suitability and reduce ecological integrity of natural communities, and may introduce disease into a population.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Longtail Salamander

8.1.4.2 Free-roaming and feral domestic animals such as cats and dogs causes direct mortality of wildlife and disturbance to wildlife breeding and resting areas.

8.1.5 Invasive non-native terrestrial/wetland plants (Avg. Score: 1.00)

NJ Specific Threats: 8.1.5.1 Displace or out-compete native species for resources (food, light, shelter), alter the composition of the native landscapes/aquatic systems, diminish habitat suitability and reduce ecological integrity of natural communities, and may introduce disease into a population.

8.1.6 Invasive non-native fungal/bacterial diseases (Avg. Score: 2.00)

NJ Specific Threats: 8.1.6.1 The introduction of non-native fungal and bacterial diseases threatens native populations and ecosystems.

8.2 Problematic Native Species/Diseases

8.2.1 Unspecified Species (Avg. Score: 1.00)

NJ Specific Threats: 8.2.1.1 Overabundant native insects can damage native vegetation at a large scale, leading to die-offs, altering the ecological community.

8.2.1.2 Invasive pathogens and insects may increase in range and abundance as limiting factors (such as temperature) are altered as a result of climate change.

8.2.1.3 Invasive, native species can out-compete non-invasive species for resources (food, light, shelter), leading to the demise of some species populations.

8.2.1.4 Human-subsidized native species can become overabundant, increasing predation on other native wildlife and/or altering the ecological community.

8.4 Problematic Species/Diseases of Unknown Origin

8.4.1 Unspecified Species (Avg. Score: 1.00)

NJ Specific Threats: 8.4.1.1 Non-native or poorly understood diseases and parasites could potentially impact native animals.

8.5 Viral/Prion-induced Diseases

8.5.1 Unspecified Species (Disease) (Avg. Score: 1.00)

NJ Specific Threats: 8.5.1.1 There is a large knowledge gap regarding the existence of, or potential for, other diseases impacting native wildlife.

8.5.2 Named Species (Disease) (Avg. Score: 1.00)

NJ Specific Threats: 8.5.2.1 Diseases such as West Nile Virus, arenavirus, sudden oak death, Avian Influenza, and snake fungal disease cause morbidity or mortality to native populations.

8.6 Diseases of Unknown Cause

8.6.0 Unknown Diseases (Avg. Score: 1.00)

NJ Specific Threats: 8.6.0.1 Diseases yet to be identified by pathologists and virologists cause decreased fitness or mortality to native populations.

9 Pollution

9.1 Domestic and Urban Waste Water

9.1.1 Sewage (Avg. Score: 2.00)

NJ Specific Threats: 9.1.1.1 Degradation of aquatic and marine water quality and habitats by changing turbidity, flow and water chemistry.

9.1.1.2 Leads to increased eutrophication and algae blooms that result in oxygen depletion.

9.1.1.3 Contaminants in sewage treatment effluents and Combined Sewer Overflows can cause developmental and behavioral abnormalities and reproductive failure in wildlife.

Longtail Salamander

9.1.2 Run-off

(Avg. Score: 1.00)

NJ Specific Threats: 9.1.2.1

Chemical fertilizers and nutrient run-off changes the pH in streams and ponds and causes eutrophication in inland waters and estuaries, which can make habitat unsuitable for specialist species and increase the risk of invasive and generalist species.

9.1.2.2

Contaminants degrade aquatic and marine water quality and can bioaccumulate in benthic organisms, threatening wildlife by causing developmental and behavioral abnormalities and reproductive failure.

9.1.2.3

Contaminants from road runoff (oil, sediment, salt, etc.) impact native vegetation and the species that rely upon them, degrade water quality in aquatic systems, and can injure or kill the aquatic and semi-aquatic species that rely upon them.

9.2 Industrial and Military Effluents

9.2.1 Oil Spills

(Avg. Score: 1.00)

NJ Specific Threats: 9.2.1.1

Oil spills render resting, breeding and foraging habitats temporarily unavailable to wildlife, altering normal wildlife behavior.

9.2.1.2

Oil spills have long term effects on habitats and damage ecological processes that can cause local wildlife population declines and impaired foraging or reproduction.

9.2.1.3

Oil spills cause external oiling of wildlife and ingestion of oil, both of which can injure or kill wildlife.

9.2.2 Seepage from Mining

(Avg. Score: 1.00)

NJ Specific Threats: 9.2.2.1

Contaminants from mining degrade water quality in aquatic systems, and can injure or kill the aquatic and semi-aquatic species that rely upon them.

9.2.3 Other

(Avg. Score: 1.00)

NJ Specific Threats: 9.2.3.1

Point and nonpoint source pollution such as polychlorinated biphenyls (PCBs), pesticides, heavy metals, and endocrine disrupting compounds (EDC's) into freshwater and marine systems pose threats to wildlife through direct contact and/or ingestion, and to aquatic species and their predators through bioaccumulation, impacting the reproductive success and neurological function of many avian and fish species.

9.2.3.2

Chemical spills have long term effects on habitats and damage ecological processes that can cause local wildlife population declines and impaired foraging or reproduction.

9.2.3.3

Chemical spills may render resting, breeding and foraging habitats temporarily unavailable to wildlife, altering normal wildlife behavior.

9.2.4 Other: Hydrofracturing

(Avg. Score: 1.00)

NJ Specific Threats: 9.2.4.1

Contaminants from hydrofracturing degrade water quality in aquatic systems, and can injure or kill the aquatic and semi-aquatic species that rely upon them.

9.2.4.2

Uncontrolled effluents escaping from hydrofracturing facilities can cause injury to wildlife and alter normal behaviors.

9.2.5 Other: Industrial toxic settling ponds

(Avg. Score: 1.00)

NJ Specific Threats: 9.2.5.1

Surficial or open industrial effluent ponds can cause injury or death to wildlife that become exposed through ingestion or submersion.

9.3 Agricultural and Forestry Effluents

9.3.1 Nutrient Loads

(Avg. Score: 2.00)

NJ Specific Threats: 9.3.1.1

Chemical fertilizers and nutrient run-off changes the pH in streams, ponds and wetlands and causes eutrophication in inland waters and estuaries, which can make habitat unsuitable for specialist species and increase the risk of invasive and generalist species.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Longtail Salamander

9.3.1.2 Animal waste degrades terrestrial and aquatic habitats, especially streams, ponds and wetlands, resulting in eutrophication, which disrupts oxygen and nutrient balances, and causes injury and mortality to aquatic organisms.

9.3.1.4 Conversion of low-intensity agriculture to intensive agriculture (e.g., tree nursery, row crop) degrades wetland and aquatic habitats with runoff, increasing sediment and nutrient loads and pH.

9.3.1.5 Conversion of native forests to plantations degrades wetland and aquatic habitats through increased runoff.

9.3.2 Soil Erosion and Sedimentation (Avg. Score: 2.00)

NJ Specific Threats: 9.3.2.1 Soil erosion, sedimentation and destruction of streambanks and riparian buffers degrade waters making them unsuitable for riparian-dependent wildlife.

9.3.2.3 Conversion of native forests to plantations degrades wetland and aquatic habitats through increased sedimentation.

9.3.3 Herbicides and Pesticides (Avg. Score: 2.00)

NJ Specific Threats: 9.3.3.1 Pesticides degrade terrestrial and aquatic habitats, especially streams, ponds and wetlands. Aquatic wildlife are particularly sensitive to these contaminants, which can cause developmental and behavioral abnormalities and reproductive failure. Some contaminants may bioaccumulate in predatory fish and birds and disrupt reproduction.

9.3.3.3 Use of pesticides can directly harm non-target species through direct contact and/or by reducing and/or contaminating their food supply.

9.3.4 Other (Avg. Score: 2.00)

NJ Specific Threats: 9.3.4.1 Spills, leaks or discharges of fuel, oil or other contaminant fluids from machinery or equipment used in the normal course of agricultural or forestry activities can degrade or destroy adjacent aquatic and terrestrial habitats and/or cause harm to non-target species (plants and animals).

9.3.5 Control of insect pests and plants leading to mortality of non-target species (Avg. Score: 2.00)
not associated with agriculture

NJ Specific Threats: 9.3.5.1 Use of pesticides, insecticides, and/or herbicides can directly harm non-target species, such as amphibians and beneficial invertebrates through direct contact and/or by reducing and/or contaminating their food supply.

9.3.5.4 Improper use of current insecticides, such as those containing esfenvalerate, prallethrin, or piperonyl butoxide, or past use of pesticides containing chlordane still present in the soils, are toxic to various wildlife species, and can cause injury, mortality, or other effects that impair population viability.

9.3.5.5 Use of pesticides and herbicides can minimize the abundance of food sources for native wildlife populations.

9.4 Garbage and Solid Waste

9.4.1 Direct hazards to wildlife (Avg. Score: 1.00)

NJ Specific Threats: 9.4.1.2 Garbage and solid waste destroys natural habitats and obstructs wildlife movements.

9.5 Air-Bourne Pollutants

9.5.1 Acid Rain (Avg. Score: 2.00)

NJ Specific Threats: 9.5.1.1 Causes acidification of water bodies, resulting in changes to aquatic and marine communities and reducing biodiversity, and creating conditions that are unsuitable for some aquatic (freshwater and marine) and semi-aquatic species that are sensitive to pH shifts.

9.5.1.2 Leaches calcium from the soils which in turn reduces the availability of prey, particularly calcium-rich prey such as snails.

9.5.4 Other (Avg. Score: 1.00)

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Longtail Salamander

NJ Specific Threats: 9.5.4.1 Dust and/or airborne sedimentation from construction sites, agricultural operations or related earth disturbances can introduce mineral or organic sediments into adjacent wildlife habitats, degrading their quality and suitability for wildlife short-term and/or long-term.

9.5.6 Herbicides and Pesticides (Avg. Score: 2.00)

NJ Specific Threats: 9.5.6.1 May result in injury or direct mortality of non-target species.

9.6 Excess Energy

9.6.2 Thermal Pollution (Avg. Score: 1.00)

NJ Specific Threats: 9.6.2.2 Water temperature changes to aquatic systems can deter or preclude use by SGCN (e.g., alter habitat suitability for wildlife species, reduce prey base) or present stressors that are harmful if not fatal to wildlife.

11 Climate Change and Severe Weather

11.1 Habitat Shifting or Alteration

11.1.0 Macro- and Micro-Climate Alterations (Avg. Score: 1.00)

NJ Specific Threats: 11.1.0.1 Alters native terrestrial and aquatic habitats at the macro- and micro-climate levels that can affect suitability for wildlife, in particular specialist species.

11.2 Droughts

11.2.1 Droughts (Avg. Score: 2.00)

NJ Specific Threats: 11.2.1.1 Contribute to hardened soils, decreasing water recharge during rains and increasing the likelihood of flash floods during storms.

11.2.1.2 Lead to lower groundwater levels and therefore, less available water for people and habitats.

11.2.1.3 Loss, alteration and/or degradation of terrestrial and aquatic habitats.

11.2.1.6 Increased desiccation risk for amphibians and altered wetland hydrology for critical habitats including breeding pools.

11.3 Temperature Extremes

11.3.1 Temperature extremes (Avg. Score: 2.00)

NJ Specific Threats: 11.3.1.1 Increasing temperatures may cause habitat loss and degradation by desiccating and/or raising the temperatures of small wetlands and streams leading to the loss of freshwater mussels and other aquatic species and species reliant upon these habitats.

11.3.1.2 Increased temperatures can negatively impact wetland, riverine, lacustrine and vernal pool-associated or -dependent wildlife by reducing flows, increasing water temperatures, lowering water levels and causing premature drying of vernal habitats.

11.3.1.4 Extremely low temperatures and/or extensive periods of unseasonably low temperatures during critical life history stages (e.g., hibernation, gestation/nesting) can alter animals' behaviors and decrease survivorship.

11.4 Storms and Flooding

11.4.1 Storms and flooding (Avg. Score: 1.00)

NJ Specific Threats: 11.4.1.1 Extreme storms and flooding events threaten aquatic and marine wildlife through habitat degradation and alteration, including alterations to off-shore or back-bay benthic conditions, damage to submerged aquatic vegetation (SAV), increased turbidity, altered water chemistry, and potentially displacement of aquatic and marine wildlife.

11.4.1.4 Flood events alter river or stream morphology, benthic conditions and habitat availability for wildlife, cause bank erosion, and deposit sediments in floodplain wetlands altering wildlife habitat.

11.4.2 Increased rainfall (Avg. Score: 1.00)

Longtail Salamander

- NJ Specific Threats:** 11.4.2.1 Extreme rain events threaten aquatic wildlife through habitat degradation and alteration, including alterations to benthic conditions, damage to submerged aquatic vegetation (SAV), increased turbidity, altered water chemistry, and potentially displacement of aquatic wildlife.
- 11.4.2.2 Extreme rain events can damage wildlife nesting and resting habitats, including impacts to avian eggs and chick and small mammal survivorship.
- 11.4.2.3 More frequent rain events can alter terrestrial and wetland vegetation communities as well as wetland hydrology, shifting wildlife community use.

11.6 Phenology Shifting or Alteration

11.6.2 Phenology shifts related to predator-prey ecology (Avg. Score: 1.00)

- NJ Specific Threats:** 11.6.2.1 Alters inter-specific relationships (e.g., competition, parasitism, predation) of wildlife, ultimately leads to detrimental impacts on the ecological system.
- 11.6.2.2 Shifts timing of species migration, breeding and hibernation, and available food resources, causes redistribution of species, or mortality for species that are unable to relocate due to their already isolated habitat or limited mobility.

11.6.3 Phenology shifts related to species redistribution (Avg. Score: 1.00)

- NJ Specific Threats:** 11.6.3.1 Shifts in timing of species migration, breeding and hibernation, and available food resources, as a result of wildlife range shifts driven by climate change.

12 Resource Management Needs

12.1 Resource information collection needs

12.1.1 Lack of initial baseline inventory (Avg. Score: 2.00)

- NJ Specific Threats:** 12.1.1.1 Lack of information regarding the distribution, connectivity and quality of SGCN habitats throughout the State, and where habitat enhancement/restoration will benefit SGCN and other wildlife.
- 12.1.1.2 Lack of information regarding the population dynamics and trends, habitat requirements and dispersal distances of the various age classes, and survivorship of SGCN throughout the State.

12.1.2 Lack of up-to-date existing information (Avg. Score: 2.00)

- NJ Specific Threats:** 12.1.2.1 Lack of (routine, regular, ongoing) surveys/assessments that provide up-to-date information regarding population trends or health, and/or status of fish, wildlife and/or their habitats.

12.1.3 Need to answer research question (Avg. Score: 2.00)

- NJ Specific Threats:** 12.1.3.1 There are significant knowledge gaps regarding distribution, dispersal, diseases, population trends, etc. of SGCN.

12.1.4 Need to develop new technique (Avg. Score: 2.00)

- NJ Specific Threats:** 12.1.4.1 Improve and evaluate survey methods for SGCN and their habitats; alter as needed.

12.3 Regulatory Reform

12.3.0 State Regulatory Reforms (Avg. Score: 1.00)

- NJ Specific Threats:** 12.3.0.6 Certain geographic or habitat features, such as vernal pools and headwater wetlands or streams, may be too small, mischaracterized, or misidentified to benefit from regulatory protection.
- 12.3.0.7 Activities that threaten SGCN, their food sources, and/or habitats are often regulated separately and without consideration for the cumulative and synergistic effects over time or over a larger spatial scale. Therefore, regulations can fail to protect SGCN populations over time.
- 12.3.0.10 Land use regulatory processes pertaining to habitat creation, enhancement or restoration projects can be costly and/or burdensome, precluding or discouraging the development or implementation of conservation projects.

12.4 Internal Policy & Procedures Reform

12.4.0 State Policy and Procedure Reform

(Avg. Score: 1.00)

- NJ Specific Threats:** 12.4.0.1 A species-by-species management focus as opposed to ecological systems and biodiversity generally has greater opportunity for unintended consequences for other species and may be less efficient in developing appropriate management actions.
- 12.4.0.2 Policies and procedures for lands management that lack consideration of the impacts of activity timing can result in unintended impacts to wildlife during vulnerable periods.
- 12.4.0.7 Land preservation contracts, easements, etc. that do not contain prescriptive language or flexibility allowing for habitat management can result in unsuitable habitat conditions and biodiversity declines for SGCN.

14 Education/ Outreach Needs

14.1 Education needs

14.1.1 Need for improved knowledge of fish and wildlife and their habitats

(Avg. Score: 2.00)

- NJ Specific Threats:** 14.1.1.1 Lack of understanding of the importance of various SGCN habitats, their connectivity to similar habitats, and how planning decisions impact their quality and the wildlife that depend upon them.
- 14.1.1.2 Lack of general knowledge of SGCN life histories and vulnerabilities as they relate to land management practices.
- 14.1.1.3 Lack of understanding of the need to manage both natural and anthropogenic (e.g., yards, lawns, hayfields, etc.) habitats to minimize impacts or increase benefits to SGCN and their habitats.

14.2 Outreach needs

14.2.1 Need to improve specific understanding of agency/organization goals, objectives and ongoing wildlife conservation actions

(Avg. Score: 2.00)

- NJ Specific Threats:** 14.2.1.1 Need to develop greater understanding of and support for efforts implemented to enhance SGCN habitat and biodiversity through various forest management practices.
- 14.2.1.2 Need to develop greater understanding of and support for efforts implemented to enhance SGCN habitat and biodiversity through various aquatic and riparian management practices.
- 14.2.1.5 Need to develop greater understanding of and support for efforts implemented to enhance SGCN habitat and biodiversity through various wetland management practices.

15 Administrative Needs

15.2 Organizational/program planning needs

15.2.3 Need for multi-state, regional and landscape scale planning

(Avg. Score: 1.00)

- NJ Specific Threats:** 15.2.3.1 State governance and financial structures can sometimes inhibit conservation planning and implementation at the regional and landscape-scales that are often more effective at setting priorities and meeting species and habitat conservation goals and objectives.

Actions to address the Threats and Action Drivers associated with this Conservation Target:

1 Coordination and Administration

1.2 Incentives

1.2.1 Incentives

- 1.2.1.2 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to private and public landowners and land managers to increase the effective size of SGCN habitats by protecting/restoring adjacent habitats that contribute to the overall size of the "core" area and/or provide a natural buffer, enhancing the suitability of the core area for SGCN, and/or connect conserved SGCN habitats.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Longtail Salamander

- 1.2.1.4 Secure and promote the protection, restoration, and/or development of old-growth forest stands with large trees, in particular those within large, contiguous forest tracts through incentive programs.
- 1.2.1.5 Secure and promote the protection/restoration of critical SGCN forested habitat and minimize forest edge to benefit interior forest and disturbance-sensitive SGCN through incentive programs.
- 1.2.1.6 Secure and promote the protection/restoration of riparian and floodplain habitats, inland wetland habitats (marsh, vernal pool, fen, emergent shrubland, forest), and other aquatic habitats (including open waters) and/or biologically appropriate buffers through incentive programs.
- 1.2.1.7 Secure and promote the protection/restoration of fish SGCN habitats by protecting lands adjacent to fish SGCN habitats and/or aquatic systems feeding into such habitats through incentive programs.
- 1.2.1.8 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to municipalities, land developers, and other land managers to retain and/or enhance native vegetation adjacent to aquatic habitats, and along riparian areas and wildlife movement corridors.
- 1.2.1.10 Coordinate across government agencies and non-government organizations to maximize the availability of and enrollment in existing landowner incentive programs (e.g., "farm bill," partners, etc.) to maintain and/or improve habitat.
- 1.2.1.11 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to public and private landowners and managers, including but not limited to government and non-government agencies/organizations, energy, mining, and transportation and utility service companies/agencies, to minimize commercial infrastructure and impervious surfaces, and to improve wildlife habitats, limit fragmentation, reduce elements which would exacerbate mortality, and/or implement activities/restoration that would create new or improved corridor habitat and/or increase connectivity, and to increase structural habitat diversity through the implementation of a variety of vegetation management practices that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting), and to minimize (if not avoid) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
- 1.2.1.12 Create incentives (non-monetary and/or monetary) for land developers to redevelop abandoned areas (e.g., shopping centers, office complexes) to minimize the loss of natural habitats and reduce the extent of impervious surfaces as part of new construction to increase water recharge in those areas.
- 1.2.1.13 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to land developers to minimize the impacts of new residential and commercial developments on SGCN and their habitats.
- 1.2.1.14 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to NJ landowners and land managers (including farmers, foresters and developers) for reducing or eliminating the use of herbicides and pesticides, and implementing more ecologically safe strategies when using such products.
- 1.2.1.18 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to public and private landowners and land managers to control and reduce the impacts of invasive, native and non-native species in order to increase structural habitat diversity.

Longtail Salamander

- 1.2.1.20 Coordinate across government agencies and non-government organizations to create or expand upon tax-based incentive programs available to private, agricultural, commercial, industrial or governmental landowners and land managers to include or provide for incentives for the maintenance and/or improvement to existing habitat via the endorsement of wildlife-related BMP's.
- 1.2.1.23 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to private and public landowners and land managers to provide cost shares and/or plan approvals for management based on management approaches and prescriptions.
- 1.2.1.25 Create incentives (non-monetary and/or monetary) within State regulations to assist and programs to deliver those incentives to aquaculture growers to relocate, for example, from intertidal to subtidal lease areas through buyouts of leases or microloans, and/or promoting on-lease conservation measures used by aquaculture growers (such as the implementation of conservation easements, use of living shorelines, incorporation of BMPs for habitat protection, etc.) for maintaining and enhancing healthy, SGCN-associated terrestrial and aquatic habitats and associated riparian habitats, and to minimize (if not avoid) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity
- 1.2.1.26 Develop a new funding source, targeting natural resource damages monies, mitigation monies or other available sources, to fund new or existing landowner incentive programs.

2 Direct Management of Natural Resources

2.2 Dam and barrier removal

2.2.1 Culvert work

- 2.2.1.1 Replace existing barriers to wildlife movement with and/or install appropriately-sized systems to accommodate wildlife dispersal.

2.3 Fire management

2.3.3 Prescribed burning

- 2.3.3.1 Evaluate different management techniques of prescribed burns that might be used to mimic the historic role of fire and other natural disturbances in shaping an ecosystem.
- 2.3.3.2 Conduct prescribed burning in Northern New Jersey forests to maintain and regenerate a mosaic of upland forest habitats.
- 2.3.3.3 Conduct prescribed burning to improve wildlife habitat.

2.8 Invasive species control

2.8.0 Invasive species control strategies and implementation

- 2.8.0.4 Implement control/management strategies to reduce the impacts and/or limit the distribution of invasive, native and non-native species (wildlife and plants) that pose threats to native wildlife or communities. Encourage the implementation of biological and mechanical removal/control. When chemical control is used, encourage low-volume, targeted application using NJDEP-approved chemicals in accordance with the specific instructions for that chemical. Follow BMPs to maximize the effectiveness of the strategies while avoiding excessive harm to non-target species.

Longtail Salamander

- 2.8.0.5 Implement biologically safe and appropriate control/management strategies, and where appropriate, eradication strategies to reduce the impacts and/or limit the distribution of invasive and/or non-native plant species within or near aquatic systems using methods that will provide the most protection to the aquatic and riparian ecological system, and minimize disturbance to the soil and wildlife. Encourage the implementation of biological and mechanical removal/control. When chemical control is used, encourage low-volume, targeted application using NJDEP-approved chemicals in accordance with the specific instructions for that chemical.
- 2.8.0.6 Implement long-term management of invasive and/or non-native plants to help maintain functioning ecological systems and biological diversity, and to enhance travel corridors. Encourage the implementation of biological and mechanical removal/control. When chemical control is used, encourage low-volume, targeted application using NJDEP-approved chemicals in accordance with the specific instructions for that chemical.

2.10 Planting/seeding

2.10.0 Planting/seeding strategies for terrestrial or aquatic habitat creation or restoration

- 2.10.0.1 Prevent or ameliorate near-term impacts of climate change throughout the State by developing, implementing and monitoring/evaluating habitat management strategies that will establish/improve habitat resilience (e.g., shorelines of the coast and Delaware Bay, forested habitats of the Pinelands and Skylands) that benefits wildlife inhabiting these areas, in particular within the coastal and Delaware Bay areas.
- 2.10.0.4 Restore and/or enhance suitable travel corridors connecting conserved habitats for SGCN by restoring unsuitable (or less optimal) habitats.
- 2.10.0.5 Implement habitat restoration and/or enhancement activities that include the creation of vegetative buffers between sensitive habitats (e.g., aquatic systems) and human-inhabited areas (e.g., residences, parks, etc.) and that is conducted during appropriate timing to avoid sensitive periods (e.g., nesting, denning, roosting) while minimizing (if not avoiding) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
- 2.10.0.6 Expand the acreages and enhance the effective size of SGCN habitats by restoring adjacent, less optimal or unsuitable, habitats.
- 2.10.0.7 Restore/reclaim and enhance degraded rare species habitats through strategic revegetation and management efforts for documented/target SGCN.
- 2.10.0.8 Protect significant natural and/or unique communities by implementing best management practices when conducting habitat restoration strategies.
- 2.10.0.9 Restore and/or enhance riparian and floodplain habitats, inland wetland habitats (marsh, vernal pool, fen, emergent shrubland, forest), and other aquatic habitats (including open waters) and/or biologically appropriate buffers to minimize degradation, alteration and/or changes in hydrology and subsequent disturbances to and behavioral changes of wildlife (e.g., restoring biologically appropriate buffers, revegetation or restoration efforts, etc.).
- 2.10.0.12 Create and/or maintain scrub-shrub habitats through revegetation efforts with little to no impact on forested, wetland and grassland habitats to maintain populations of shrub-dependent SGCN.
- 2.10.0.14 Implement best management practices (BMPs), protective strategies and guidelines for restoring and enhancing healthy, SGCN-associated habitats while minimizing (if not avoiding) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.

Longtail Salamander

- 2.10.0.15 Restore and/or enhance terrestrial and aquatic habitats proximate to but not adjacent to roads and other transportation corridors for terrestrial-bound SGCN species whose behavior (i.e., dispersal across roads) may be altered by doing so, and therefore decrease road mortality of such species (e.g., amphibians, snakes, turtles, small mammals).
- 2.10.0.18 Implement a habitat improvement and restoration program to restore cold-water fish habitat, ecosystems and populations.
- 2.10.0.20 Expand breeding opportunities for obligate vernal pool breeders and related herpetofauna by creating vegetated buffers for dispersal from breeding pools in all directions, or as needed to establish the connectivity of metapopulations.
- 2.10.0.21 Restore and/or enhance understory habitats that suppress invasive species and provide critical resources and enhance sheltering, foraging, and nesting cover for wildlife.
- 2.10.0.22 Restore and/or enhance terrestrial and aquatic habitats to promote the regeneration of native vegetation and enhance structural diversity to benefit SGCN (e.g., vegetative buffers of aquatic systems, allow coarse, woody debris to remain in terrestrial, aquatic and riparian habitats to provide shelter, riparian stabilization and necessary microclimates, plant native trees, shrubs and grasses, etc.).
- 2.10.0.24 Use NJ's CHANJ mapping and guidance to establish vegetation and enhance or create corridors between fragmented habitats with similar vegetation, slope, soils, structure, etc. to ensure vegetative integrity is maintained to allow wildlife to safely disperse, and corridors are buffered with natural habitats to minimize disturbance to wildlife within the corridors.
- 2.10.0.25 Enhance SGCN fish habitats through aquatic and riparian vegetation restoration.

2.11 Vegetation management

2.11.0 Vegetation management strategies for terrestrial or aquatic habitat creation or restoration

- 2.11.0.1 Conduct vegetation management in native terrestrial and aquatic habitats to provide suitable and appropriately sized areas to improve ecological diversity.
- 2.11.0.2 Conduct vegetation management in native terrestrial and aquatic habitats to provide suitable and appropriately sized areas for target SGCN and/or species groups; management should complement rare species needs in a targeted area.
- 2.11.0.3 Create suitable travel corridors connecting and increasing the effective size of conserved habitats for SGCN by restoring unsuitable (or less optimal) habitats through vegetation management.
- 2.11.0.4 Implement vegetation management strategies that consider appropriate timing to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife, particularly SGCN.
- 2.11.0.5 Expand the acreages and enhance the effective size of SGCN habitats by restoring adjacent, less optimal or unsuitable, habitats through vegetation management.
- 2.11.0.6 Reclaim degraded rare species habitats by conducting vegetation management needed to restore habitat value for the documented/target SGCN.
- 2.11.0.7 Protect significant natural and/or unique communities by implementing best management practices through vegetation management.
- 2.11.0.8 Maintain, enhance and/or restore biologically appropriate buffers for SGCN-inhabited/used freshwater wetlands through vegetation management.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Longtail Salamander

- 2.11.0.13 Implement best management practices (BMPs), protective strategies, and guidelines for vegetation management to maintain and enhance healthy, SGCN-associated habitats while minimizing (if not avoiding) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
- 2.11.0.14 Conduct vegetation management adjacent to roads for SGCN species whose behavior (i.e., dispersal across roads) may be altered by doing so, and therefore decrease road mortality of such species (e.g., amphibians, snakes, turtles, small mammals).
- 2.11.0.16 Prevent or ameliorate near-term impacts of climate change throughout the State by developing, implementing and monitoring/evaluating habitat management strategies that will establish/improve habitat resilience (e.g., shorelines of the coast and Delaware Bay, forested habitats of the Pinelands and Skylands) that benefits wildlife inhabiting these areas, in particular within the coastal and Delaware Bay areas.
- 2.11.0.18 Implement forest management/silvicultural strategies that promote the development of new old-growth forests and/or minimize the loss of old-growth forest stands with large trees and within large, contiguous tracts.
- 2.11.0.20 Create and/or maintain scrub-shrub habitats through management efforts with little to no impact on forested, wetland and grassland habitats to maintain populations of shrub-dependent SGCN.
- 2.11.0.21 Minimize the degradation, alteration and/or changes in hydrology of wetlands, riparian and floodplain areas, and aquatic habitats (including open waters) and subsequent disturbances to and behavioral changes of wildlife by maintaining or enhancing these areas and biologically appropriate buffers through habitat management and/or revegetation or restoration efforts.
- 2.11.0.23 Implement appropriate habitat management actions in areas where natural disturbances, such as wildfire, have been precluded.
- 2.11.0.24 Conduct vegetation management adjacent to aquatic habitats following BMPs to enhance habitat for target shrub- or young forest-dependent SGCN while minimizing negative impacts to other SGCN.
- 2.11.0.25 Conduct vegetation management along access roads following BMPs to enhance habitat for target shrub- or young forest-dependent SGCN while minimizing negative impacts to other SGCN.
- 2.11.0.26 Conduct vegetation management along roadsides and medians, avoiding peak activity periods for wildlife, that enhances wildlife dispersal naturally and safely across roads and similar barriers to/between terrestrial and/or aquatic habitats.
- 2.11.0.27 Conduct vegetation management for target shrub- or young forest-dependent SGCN following BMPs to minimize the risk of the establishment of invasive and non-native plants.
- 2.11.0.28 Conduct vegetation management in agricultural areas following BMPs to enhance habitat for target shrub- or young forest-dependent SGCN while minimizing negative impacts to other SGCN.
- 2.11.0.29 Conduct vegetation management on transportation and service corridors (i.e., rights-of-way) following BMPs to enhance habitat for target shrub- or young forest-dependent SGCN while minimizing negative impacts to other SGCN.
- 2.11.0.31 In areas where vegetative communities are shifting due to fire suppression and controlled burns are not feasible, manage vegetation to improve wildlife habitat.

Longtail Salamander

- 2.11.0.32 Increase structural habitat diversity around and when feasible, within agricultural landscapes by managing vegetation for a variety of species, in particular, those farms that have removed scrub-shrub habitat and/or fragmented forests, and by implementing ecologically best practices (e.g., no-till farming, maintaining hedgerows, buffer set-asides, etc.).
- 2.11.0.33 Increase structural habitat diversity by implementing long-term vegetation management to minimize the potential for the establishment of invasive and/or non-native plants that may outcompete native vegetation.
- 2.11.0.34 Increase structural habitat diversity by managing residential, commercial and recreational areas' landscapes for a variety of species. For example, integrate short and tall grasses, specific host plants, brush piles, water sources/wetlands, shrubby areas, nesting areas and no-mow set-asides.
- 2.11.0.35 Increase structural habitat diversity by managing vegetation adjacent to aquatic habitats in a manner that provides a buffer from runoff and erosion and a microclimate to stabilize seasonal temperatures to benefit a variety of aquatic and semi-aquatic species.
- 2.11.0.36 Increase structural habitat diversity by managing vegetation for a variety of species and considering their life history requirements (e.g., travel corridors, shelter, resting and breeding areas) to minimize the risk of harm.
- 2.11.0.37 Increase structural habitat diversity by minimizing the removal of coarse, woody debris in terrestrial, aquatic and riparian habitats which benefits wildlife.
- 2.11.0.38 Increase structural habitat diversity in and around horse/livestock farms by managing vegetation for a variety of species, in particular, in and around farms that have fragmented forests, and by implementing ecologically best practices (e.g., do not permit overgrazing, do not allow livestock to wade in waterbodies).
- 2.11.0.39 Increase structural habitat diversity in and around solar farms by managing vegetation for a variety of species and that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife. For example, integrate short and tall grasses, specific host plants, brush piles, water sources/wetlands, shrubby areas, nesting areas and no-mow set-asides.
- 2.11.0.40 Increase structural habitat diversity surrounding areas used for energy, mining, and transportation and service corridors by managing vegetation for a variety of species and that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife. For example, integrate short and tall grasses, specific host plants, brush piles, water sources/wetlands, shrubby areas, nesting areas and no-mow set-asides, and avoid managing habitat during the breeding seasons for ground-nesting birds, reptiles, amphibians and small mammals.
- 2.11.0.41 Increase structural habitat diversity through the implementation of a variety of vegetation management practices such as prescribed burns (either increasing or decreasing their frequency depending on the site and objective), plantings, etc. that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife.
- 2.11.0.42 Increase structural habitat diversity within wind farms for terrestrial bound and low-flying species and around wind farms for other wildlife by managing vegetation for a variety of species and that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife.
- 2.11.0.43 Manage forests to increase variation in age structure and composition using BMPs that promote and maintain functioning ecological forest-based systems and biological diversity.

Longtail Salamander

- 2.11.0.45 Regularly and/or rotationally create young forest habitat in targeted areas to maintain and regenerate a mosaic of upland forest habitats that will benefit shrub- and young forest-dependent species.

2.13 Wildlife damage management

2.13.0 Nuisance fish and wildlife damage

- 2.13.0.1 Investigate the impacts of mosquito control methods on predator SGCN (bats, insectivorous birds). Develop, implement and evaluate the effectiveness of mosquito control-BMPs designed to avoid depletion or contamination of SGCN's insect prey base and drinking sources with pyrethroids, organophosphates, or other chemicals.
- 2.13.0.2 Develop, implement and evaluate the effectiveness of BMPs for mosquito control methods that may produce benefits for coastal marsh dependent SGCN wildlife, including but not limited to high-marsh nesting birds and migrating shorebirds and landbirds.
- 2.13.0.4 Investigate the effects of mosquito control methods on freshwater aquatic and semi-aquatic SGCN including but not limited to, amphibian, fish, dragonfly, and damselfly populations.
- 2.13.0.5 Investigate the impacts of human-subsidized and/or naturally occurring predator species on SGCN to assess the need for integrated wildlife damage management techniques (e.g., predator exclosures, fish blockages, electric fence, culls) and/or policy changes on state land management that minimize the impacts of human-subsidized predators.
- 2.13.0.6 Develop, implement and evaluate the effectiveness of predator-control techniques aimed at improving SGCN populations and methods to minimize the impact of those species carrying parasites or diseases that may impact SGCN (e.g., raccoon roundworm kills Allegheny woodrat).
- 2.13.0.8 Implement and assess management strategies to control and reduce the impacts of detrimental species and diseases that pose threats to native wildlife or communities.

2.14 Wildlife disease management

2.14.0 Wildlife disease strategy development and investigation

- 2.14.0.1 Investigate diseases/pathogens impacting SGCN and/or their habitats.
- 2.14.0.2 Develop and implement strategies to combat the impacts of diseases/pathogens impacting SGCN and/or their habitats, track disease occurrences and monitor/research impacts to SGCN populations and their habitats.
- 2.14.0.3 Protect SGCN from exotic pathogen introduction or incident through implementation of a "rapid response plan"; DFW to give priority attention to these species in planning and/or implementing a response.
- 2.14.0.4 Conduct long-term monitoring of diseases in vulnerable wildlife to determine the magnitude of exposure within populations and around the State, the impacts to those species, in particular SGCN, and investigate the feasibility of mitigating for such impacts.
- 2.14.0.5 Assess the impacts of diseases on the life cycles of wildlife.

3 Data Collection and Analysis

3.0 General fish and wildlife research, survey or monitoring

3.0.0 Research, survey or monitoring - general fish and wildlife needs

Longtail Salamander

- 3.0.0.1 Conduct long-term monitoring of resident and migratory SGCN populations using standardized survey protocols to determine the variables that may impact their long-term persistence in the State (e.g., population viability, distribution, dispersal, home range and habitat use, travel corridors, food availability, vulnerability to pollutants and disease, etc.). Compile this information to determine the likely causes of population declines and to understand metapopulation dynamics. Provide data to NJ DEP for integration into the Biotics database, Landscape Project and permitting review processes.
- 3.0.0.2 Identify (through literature searches, review of available data, enlistment of habitat and/or species experts, etc.) where data gaps exist regarding SGCN distribution, and their critical and supportive habitats. Conduct surveys using standardized survey protocols to acquire baseline data, and provide the data to NJ DEP for integration into the Biotics database, Landscape Project Map and permitting review processes.
- 3.0.0.3 Gather baseline data on SGCN inhabiting permanently protected natural lands regarding their distribution and population (e.g., abundance, dispersal, demography including productivity and survival, etc.), and identify (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) critical and supporting habitats within those landscapes.
- 3.0.0.4 Conduct long-term studies on SGCN inhabiting permanently protected natural lands to develop population trend data and changes in demography, and to determine if critical and/or supporting habitats are limited or changing; i.e., diminishing in value, acreage or connectivity.
- 3.0.0.5 Gather baseline data on resident and migratory SGCN (in particular migratory species for which New Jersey habitats are significant), terrestrial, freshwater and marine species, regarding the location and condition of their critical and supporting habitats (e.g., foraging, roosting, nesting/breeding, stopover, migration paths, etc.), and population demography (e.g., productivity, survival, dispersal). Compile this information into a database that includes descriptions of the conditions of the habitats and species, and a GIS component of the locations of these important habitats. Provide data to NJ DEP for integration into the Biotics database, Landscape Project and permitting review processes.
- 3.0.0.6 Conduct long-term studies on resident and migratory SGCN to determine if there are changes to the populations' demography (productivity, survival, dispersal) and/or to their critical and/or supporting habitats (i.e., diminishing in value, acreage or connectivity, etc.), in particular changes that would not maintain SGCN at viable levels for species populations. Update data and GIS maps; provide updated information to NJ DEP for integration into the Biotics database, Landscape Project and permitting review processes.
- 3.0.0.7 Collect baseline data to document species distributions, in particular SGCN, and current habitat for future analysis of possible distribution shifting as a result of habitat shifting or alteration associated with climate change impacts.
- 3.0.0.8 Conduct long-term studies and compare baseline metrics of documented species distributions and associated habitats to identify possible species and/or habitat shifting or alteration associated with climate change impacts.
- 3.0.0.9 Identify SGCN (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) whose populations are thought to be limited due wholly or in part to a lack of (or contaminated) food resources, and compile/collect and evaluate data/information regarding potential management strategies to improve the availability of such SGCN's food resources.

Longtail Salamander

- 3.0.0.10 Conduct long-term studies to evaluate the effectiveness of management strategies implemented to enhance food/prey availability for SGCN [whose populations are thought to be limited due wholly or in part to a lack of (or contaminated) food resources] through studies that investigate the populations and health of the food resources as well as the target SGCN. Revise management strategies as needed and continue to monitor the effectiveness of the efforts.
- 3.0.0.11 Develop, implement and evaluate the effectiveness of town plans that avoid impacts to SGCN species and their habitats.
- 3.0.0.13 Investigate the effects of pesticides, herbicides and other biological controls on SGCN and their critical and supporting habitats. Evaluate and modify management practices as appropriate.
- 3.0.0.14 Identify areas with invasive, aquatic plants and animals and collect a detailed baseline assessment of the species' status and distribution. Solicit volunteers from organizations such as the New Jersey Invasive Species Strike Team to support this effort. Researchers and contractors performing Forest Stewardship Inventories and/or Plans on state lands should report invasive plant species through the New Jersey Invasive Species Strike Team phone application.
- 3.0.0.19 Identify the presence and status (e.g., functioning, structure, slated for removal, etc.) of existing dams and culverts within and/or that may impact SGCN and their habitats, and create a database that includes a GIS component identifying the locations of such structures and their status. Share this information with appropriate organizations and/or agencies evaluating the benefits and risks of such structures on SGCN and their habitats.
- 3.0.0.20 Once baseline data identifying and describing the status of existing dams and culverts have been gathered, conduct evaluations at a variety of sites to determine whether the benefits of culvert and dam creation or removal outweigh the risks to SGCN species and their habitats, and if other variables/conditions specific to individual sites/locations result in a different outcome. Identify and target appropriate dams and culverts for removal and/or reconstruction to minimize harm to SGCN species and their habitats.
- 3.0.0.22 Develop, implement and evaluate the success of a habitat improvement and restoration program to restore cold-water fish habitat, ecosystems and populations.
- 3.0.0.23 Identify (through wildlife and aquatic system surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) and research water quality parameters for all [types of] aquatic systems for various SGCN populations.
- 3.0.0.24 Identify (through aerial and topographic maps), and confirm through field surveys, potential vernal pools using standard protocols. Provide confirmed vernal pool locations (and when possible, a description of the pools condition) and species' presence data to NJ DEP for integration into the Biotics database, Landscape Project and permitting review processes.
- 3.0.0.26 Conduct studies to evaluate the effectiveness of proactive species recovery plans for all endangered and threatened species including objectives and guidance pertaining to and the condition/status of critical and supporting habitats.
- 3.0.0.27 Evaluate the effectiveness of strategies to restrict human activity (e.g., recreational, maintenance work, etc.) from sensitive habitats/areas such as avian nesting sites, reptile and amphibian breeding areas (nesting or gestation/birthing and breeding pools, respectively), and bat hibernacula, and federal buffers for marine mammals through research and monitoring. Develop and provide NJ DEP and other appropriate governing agencies/commissions a summary of findings and recommendations to improve such efforts.

3.2 Research, survey or monitoring - fish and wildlife populations

Longtail Salamander

3.2.0 Data deficiency

- 3.2.0.1** Division of Fish and Wildlife should maintain a robust, up-to-date database and mapping of species occurrences.
- 3.2.0.2** Conduct species status assessments using the Delphi Technique and review of available data and literature on fish and wildlife (including marine animals) to maintain accurate legal status categorization of native wildlife.
- 3.2.0.3** Survey for and monitor populations of freshwater aquatic focal SGCN to assess the populations' demography, trends, condition, distribution, etc.
- 3.2.0.4** Conduct long-term monitoring of the impacts of contaminants to vulnerable wildlife to determine the magnitude of exposure within populations and around the State, the impacts to those species, in particular SGCN, and investigate the feasibility of mitigating for such impacts. Maintain records on exposure of vulnerable wildlife to environmental toxins (such as flame retardants and endocrine disruptors), so that sources may be identified and controlled or eliminated.
- 3.2.0.5** Prevent or ameliorate near-term impacts of climate change throughout the State by developing, implementing and monitoring/evaluating habitat management strategies that will establish/improve habitat resilience (e.g., shorelines of the coast and Delaware Bay, forested habitats of the Pinelands and Skylands) that benefits wildlife inhabiting these areas, in particular within the coastal and Delaware Bay areas.
- 3.2.0.6** Develop, implement and conduct studies to evaluate the effectiveness of methods implemented to reduce road mortality of wildlife (e.g. wildlife underpasses, road closures).
- 3.2.0.7** Track (via a database that includes a GIS component) and research problematic species and diseases to determine their distribution, impacts on SGCN wildlife/wildlife communities, and develop potential control measures.
- 3.2.0.8** Implement and conduct long-term monitoring of control measures aimed at minimizing the impacts of problematic species and/or diseases to evaluate the effectiveness of such efforts and to identify and incorporate additional strategies as appropriate.
- 3.2.0.10** Evaluate the effectiveness of sanitation/decontamination protocols in minimizing the transference of wildlife diseases and invasive plant species.
- 3.2.0.11** Investigate the impacts of ORV use as a mechanism to spread wildlife diseases and invasive plant species to native wildlife and habitats. Integrate this information when mapping undeveloped roads and trails to identify potentially sensitive areas in northern NJ forests.
- 3.2.0.21** Investigate the effects of mosquito control methods on freshwater aquatic and semi-aquatic SGCN including but not limited to, amphibian, fish, dragonfly, and damselfly populations.

3.2.1 Abundance determination

- 3.2.1.1** Identify (through literature searches, review of available data, enlistment of habitat and/or species experts, etc.) population abundance and trends for SGCN using standardized survey protocols. Provide data to NJ DEP for integration into the Biotics database, Landscape Project Map and permitting review processes.
- 3.2.1.2** Conduct wildlife surveys on resident and migratory SGCN regarding their population abundance and trends.

3.2.2 Age, size and sex structure

- 3.2.2.1** Conduct wildlife surveys on resident and migratory SGCN regarding their survivorship.

3.2.3 Baseline inventory

Longtail Salamander

- 3.2.3.7 Identify roads or portions of roads, paved or unimproved (through site surveys, land use/land cover assessments and analyses, review of available data, enlistment of species experts, etc.) with high incidences of road mortality and/or presence of snakes, turtles, medium-sized and large mammals. Conduct assessments of the roads and incorporate information into a database that includes descriptions (e.g., qualifiers to help prioritize the roads' risk to wildlife) and a GIS component of the locations of such areas. Share this information with appropriate organizations and/or agencies working to implement measures (e.g., wildlife passages, road closures) to minimize the risk to these species.

3.2.7 Population assessment

- 3.2.7.1 Conduct species status assessments using the Delphi Technique and review of available data and literature on fish and wildlife (including marine animals) to maintain accurate legal status categorization of native wildlife.
- 3.2.7.2 Conduct studies to evaluate the effectiveness of proactive species recovery plans for all endangered and threatened species to meet and maintain recovery goals.

3.3 Research, survey or monitoring - habitat

3.3.1 Baseline inventory

- 3.3.1.1 Conduct habitat assessments of significant natural and/or unique communities to identify threats to native terrestrial and aquatic habitats through systematic monitoring, review of available data, enlistment of habitat management and/or species experts, etc. Incorporate findings into a database that includes descriptions/qualifiers of the habitats, identifies and values/qualifies the threats, and includes a GIS component of the locations of the assessed areas. Share this information with landowners/managers (e.g., federal, state and local government agencies or non-government organization).
- 3.3.1.2 Identify (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) resident and migratory SGCN habitats. Investigate their suitability for the various life history requirements of the species that dependent upon them to determine the ability for maintaining applicable SGCN populations in perpetuity.
- 3.3.1.4 Identify (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) and investigate the suitability of corridors that connect large, contiguous tracts of similar habitats to increase their effective size (i.e., forest with forest, grassland with grassland, wetlands with wetlands, etc.) for dependent SGCN.
- 3.3.1.5 Identify areas (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) where habitat restoration and/or enhancement would benefit wildlife SGCN.
- 3.3.1.6 Identify areas (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) that could, through revegetation and/or enhancement efforts, become suitable travel corridors connecting and increasing the effective size of conserved habitats for SGCN.
- 3.3.1.7 Map and prioritize existing and potential areas for early succession forest management. Share the results with state, county and municipal planners.
- 3.3.1.8 Assess the availability and suitability of forest habitats for SGCN species (particularly reptiles and amphibians, birds, pollinators, and tiger beetles) in southern forests since Superstorm Sandy.
- 3.3.1.17 Identify and map undeveloped roads and trails in all conserved forests, and create a database of locations. Integrate information regarding potentially sensitive areas.

Longtail Salamander

- 3.3.1.18 Conduct an assessment using available data regarding SGCN population numbers/trends and demography, on-going threats, habitat changes, etc. to determine if directed management efforts are needed to reach or maintain viable population levels.
- 3.3.1.19 Identify and codify legal ORV access areas on state (and if appropriate, other conserved) lands. Provide GIS mapping to the landowner for potential use in directing such recreational activities.
- 3.3.1.20 Identify areas (through surveys/studies, literature searches, review of available data, enlistment of habitat management and/or species experts, etc.) where invasive, non-indigenous plants and animals are either already established or are becoming established. Create a system for reporting and qualifying new locations of invasive species and for prioritizing areas for control measures according to the potential level of impact on the ecosystem and SGCN and the likelihood of success. Researchers and contractors encountering invasive plant species while performing plant and/or forest inventories on state or other conserved lands and/or private lands should report invasive plant species through the New Jersey Invasive Species Strike Team phone application.
- 3.3.1.24 Conduct regular investigations of SGCN habitat health and biodiversity on public and private lands to identify locations in need of revegetation, reduction of over-abundant, native wildlife and/or exotic species, conservation focal areas requiring limitations on human activity, etc.

3.3.2 Monitoring

- 3.3.2.2 Conduct long-term monitoring of resident and migratory SGCN habitats using standardized survey protocols to determine changes in habitat quality/suitability and threats (e.g., habitat loss and degradation, increased edge habitat, water quality) and other variables that may impact their long-term persistence in the State and to provide information needed for determining causes of population declines and understanding metapopulation dynamics.
- 3.3.2.3 Continue to update wildlife and habitat databases and revise models of critical SGCN habitats using the most current data available and where lacking, develop new SGCN and/or habitat models as data on species habitat requirements and applicable GIS data layers become available.
- 3.3.2.4 Protect water quality and aquatic-dependent species by appropriately designating Category 1 waters and enforcing protective regulations. Seek appropriate classifications for stream segments based on Endangered and Threatened Status and/or the Index of Biotic Integrity (IBI) results that do not fulfill Category One requirements.
- 3.3.2.5 Conduct long-term monitoring of water quality of SGCN aquatic habitats (and aquatic systems feeding into those habitats) to evaluate protection and management efforts to reduce, if not eliminate, chemical contamination, siltation, eutrophication, and other forms of pollution/contamination of aquatic systems.
- 3.3.2.9 Investigate the effectiveness of various silviculture techniques for enhancing forests for forest-dependent SGCN.
- 3.3.2.10 Evaluate the efficacy and success of different management techniques (e.g., ecologically-based forestry activities, prescribed burns) that might be used to mimic the historic role of fire and other natural disturbances in shaping an ecosystem.
- 3.3.2.13 Evaluate the effectiveness of management strategies (e.g., timing restrictions for mowing, cooperative agreements with utility companies for maintenance of rights-of-ways) that maintain and enhance large existing areas of grassland in perpetuity. Focus on habitat patches that can be managed to enhance the total size of suitable grassland habitat and create interspersed early-successional habitat.

Longtail Salamander

- 3.3.2.14 Research and evaluate the effectiveness of water quality management practices on water-dependent and semi-dependent SGCN, particularly those practices associated with permitting or mitigation actions.
- 3.3.2.15 Investigate the effectiveness of management techniques implemented to eliminate invasive terrestrial and aquatic plant species on private and public lands, and/or within sensitive and/or important habitats for SGCN.
- 3.3.2.16 Evaluate the effectiveness of best management practices (BMPs), protective strategies, and guidelines for maintaining and enhancing healthy, SGCN-associated terrestrial and aquatic habitats and associated riparian habitats, and to minimize (if not avoid) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.

3.5 Techniques development

3.5.3 Habitat restoration methods

- 3.5.3.1 Work with land management agencies to determine the appropriate actions needed to restore/reclaim degraded habitat for the documented/target SGCN.
- 3.5.3.3 Develop/improve management techniques that might be used to mimic the historic role of fire and other natural disturbances in shaping an ecosystem.
- 3.5.3.8 Develop best management practices (BMPs), protective strategies, and guidelines for maintaining and enhancing healthy, SGCN-associated terrestrial and aquatic habitats and associated riparian habitats, and to minimize (if not avoid) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
- 3.5.3.11 Develop strategies to protect native terrestrial and aquatic habitats and dependent SGCN species from the identified threats.
- 3.5.3.14 Develop aquaculture practices in the coastal areas that are compatible with the recovery of SGCN.
- 3.5.3.15 Modify management practices based on the effects of pesticides, herbicides and other biological controls on critical and supporting SGCN habitats.
- 3.5.3.16 Develop/improve strategies to restrict human activity (e.g., recreational, maintenance work, etc.) from sensitive habitats/areas such as avian nesting sites, reptile and amphibian breeding areas (nesting or gestation/birthing and breeding pools, respectively), and bat hibernacula, and federal buffers for marine mammals. Methods may include, but are not limited to, managing the landscape to deter access, diverting recreational and other activities from sensitive areas during critical periods through permit processes or blocking access (trails, roads, etc.), posting (if appropriate), increasing law enforcement presence, conducting management activities at appropriate times to avoid disturbance and/or harm to wildlife (e.g., habitat management, beach raking, etc.), and decreasing noise and light pollution.
- 3.5.3.20 Develop guidance on various silviculture techniques for enhancing forests for forest-dependent SGCN.
- 3.5.3.21 Develop management techniques (e.g., ecologically-based forestry activities, prescribed burns) that might be used to mimic the historic role of fire and other natural disturbances in shaping an ecosystem.

Longtail Salamander

- 3.5.3.22 Identify (through surveys/studies, literature searches, review of available data, enlistment of habitat management and/or species experts, etc.) and modify management strategies (e.g., timing restrictions for mowing, cooperative agreements with utility companies for maintenance of rights-of-ways), based on research, that maintain and enhance large existing areas of grassland in perpetuity.
- 3.5.3.23 Revise water quality management practices based on research on water-dependent and semi-dependent SGCN, particularly when associated with permitting or mitigation actions.
- 3.5.3.24 Based on research, modify management techniques implemented to eliminate invasive terrestrial and aquatic plant species on private and public lands, and/or within sensitive and/or important habitats for SGCN.
- 3.5.3.25 Use data regarding SGCN population numbers/trends and demography, on-going threats, habitat changes, etc. to develop the necessary management strategies to reach or maintain viable population levels.

3.5.4 Fish and wildlife research, survey and management techniques

- 3.5.4.1 Develop studies to evaluate management strategies to improve the availability of prey/food resources for SGCN whose populations are thought to be limited due wholly or in part to a lack of (or contaminated) food resources. Monitor and investigate the management strategies over time to determine success and/or the need to revise methods.
- 3.5.4.2 Develop, implement, monitor and evaluate management strategies to reduce the impacts of herbivory on native vegetation and the degradation of habitats supporting SGCN by invasive and/or native, over-abundant wildlife species including but not limited to mute swans, Canada geese, beaver and white-tailed deer.
- 3.5.4.4 Investigate the effects of mosquito control methods on freshwater aquatic and semi-aquatic SGCN including but not limited to, amphibian, fish, dragonfly, and damselfly populations.
- 3.5.4.5 Develop and implement strategies to combat the impacts of diseases/pathogens impacting SGCN and/or their habitats, track disease occurrences and monitor/research impacts to SGCN populations and their habitats.
- 3.5.4.9 Conduct studies to evaluate the impacts of roads on SGCN and develop, implement and conduct studies to evaluate the effectiveness of methods to reduce road mortality of wildlife (e.g. wildlife underpasses, road closures).
- 3.5.4.13 Develop/improve strategies to restrict human activity (e.g., recreational, maintenance work, etc.) from sensitive habitats/areas such as avian nesting sites, reptile and amphibian breeding areas (nesting or gestation/birthing and breeding pools, respectively), and bat hibernacula, and federal buffers for marine mammals. Methods may include, but are not limited to, managing the landscape to deter access, diverting recreational and other activities from sensitive areas during critical periods through permit processes or blocking access (trails, roads, etc.), posting (if appropriate), increasing law enforcement presence, conducting management activities at appropriate times to avoid disturbance and/or harm to wildlife (e.g., habitat management, beach raking, etc.), and decreasing noise and light pollution.
- 3.5.4.15 Investigate the success of management strategies used to protect and/or enhance SGCN populations and when appropriate, aid in identifying failures/resource problems and issues, and developing new strategies.
- 3.5.4.16 Use data regarding SGCN population numbers/trends and demography, on-going threats, habitat changes, etc. to determine if directed management efforts are needed to reach or maintain viable population levels and develop the necessary management strategies.
- 3.5.4.17 Investigate new, non-invasive techniques for SGCN population evaluation through literature review, expert opinion, trial studies (if low risk), etc.

Longtail Salamander

- 3.5.4.18 Investigate the effectiveness of survey techniques through selected “ground truthing” and literature and peer review in order to increase efficacy of survey, minimize surveyor bias and error, and increase accuracy of trend data.
- 3.5.4.19 Develop reliable, standardized survey and monitoring protocols for SGCN species, for which none currently exist, and their habitats.
- 3.5.4.21 Develop BMPs to address problematic species and diseases of unknown origin.
- 3.5.4.22 Investigate the efficacy of implementing strategies to minimize or eliminate disturbances to all SGCN (i.e., beyond their federal requirements) during military activities.

5 Facilities and Areas

5.15 Wildlife Management Areas

5.15.6 Roads

- 5.15.6.1 Clearly post areas/roads where vehicle access is permitted.
- 5.15.6.2 Clearly post areas/trails where vehicle access is not permitted.

6 Land and Water Rights Acquisition and Protection

6.0 Acquisition and protection strategies

6.0.0 Combined acquisition and protection strategies

- 6.0.0.2 Enhance and increase the effective size of SGCN habitats by protecting adjacent habitats that contribute to the overall size of the "core" area and/or provide a natural buffer, enhancing the suitability of the core area for SGCN, and/or connect conserved SGCN habitats through an appropriate combination of fee title, non-fee title and landowner agreements.
- 6.0.0.3 Secure and protect riparian and floodplain habitats, inland wetland habitats (marsh, vernal pool, fen, emergent shrubland, forest), and other aquatic habitats (including open waters) and/or biologically appropriate buffers to minimize degradation through an appropriate combination of fee title, non-fee title and landowner agreements.
- 6.0.0.4 Secure and protect fish SGCN habitats by protecting lands adjacent to fish SGCN habitats and/or aquatic systems feeding into such habitats through an appropriate combination of fee title, non-fee title and landowner agreements.
- 6.0.0.6 Secure and protect old-growth forest stands with large trees and/or stands that are approaching or being actively managed for old growth forests, in particular those within large, contiguous forest tracts, through an appropriate combination of fee title, non-fee title and landowner agreements.
- 6.0.0.7 Secure and protect critical SGCN forested habitat and minimize forest edge to benefit interior forest and disturbance-sensitive SGCN through an appropriate combination of fee title, non-fee title and landowner agreements.
- 6.0.0.8 Secure and protect scrub-shrub habitats for SGCN through an appropriate combination of fee title, non-fee title and landowner agreements.

6.3 Conservation area designation

6.3.0 Conservation area designation strategies

- 6.3.0.2 Enhance and increase the effective size of SGCN habitats by protecting adjacent habitats that contribute to the overall size of the "core" area and/or provide a natural buffer, enhancing the suitability of the core area for SGCN and/or connect conserved SGCN habitats through conservation area designations.

Longtail Salamander

- 6.3.0.3 Increase the protection of riparian and floodplain habitats, inland wetland habitats (marsh, vernal pool, fen, emergent shrubland, forest), and other aquatic habitats (including open waters) and/or biologically appropriate buffers to minimize degradation through conservation area designations.
- 6.3.0.6 Promote the protection of old-growth forest stands with large trees and/or stands that are approaching or being actively managed for old growth forests, in particular those within large, contiguous forest tracts, through conservation area designations.
- 6.3.0.7 Promote the protection of critical SGCN forested habitat and minimize forest edge to benefit interior forest and disturbance-sensitive SGCN through conservation area designations.
- 6.3.0.8 Promote the protection of scrub-shrub habitats for SGCN through conservation area designations.

6.4 Private lands agreements

6.4.0 Private land agreement strategies

- 6.4.0.1 Enter into private lands agreements to expand control burns on private lands, in particular those adjacent to conserved lands to improve SGCN habitats.

7 Law Enforcement

7.1 Law enforcement

7.1.3 Sub-national Level

- 7.1.3.2 Increase the number of law enforcement officers tending to wildlife issues to a reasonable number to sufficiently cover the State and marine waters.

7.1.4 Scale Unspecified

- 7.1.4.1 Improve enforcement of policies and/or regulations that promote the reduction of run-off and point and non-point source pollution into NJ's aquatic systems (streams, rivers, lakes/ponds, bays, ocean, wetlands, etc.).
- 7.1.4.3 Increase law enforcement presence proximate to sensitive areas [e.g., avian nesting sites, in particular rookeries, and reptile and amphibian breeding areas (nesting or gestation/birthing and breeding pools, respectively)] to deter human activity and subsequent disturbance to SGCN.
- 7.1.4.6 Recruit law enforcement to assist in the protection and enhancement of SGCN populations, in particular endangered species, through improved awareness of species through trainings, partnerships, and other methods. Information should include but is not limited to: 1) Issues concerning illegal collection of reptiles, 2) Persecution of rare snakes, 3) Illegal recreational activities on public lands (e.g., off-road vehicles) and their impact on wildlife, 4) Identification of sensitive areas, critical sites and/or "hot-spots" for collection.
- 7.1.4.7 Increase law enforcement presence to enforce regulations governing recreational activities (e.g., the use of personal watercraft and off road vehicles, caving, rock climbing, etc.) on conserved lands and within other sensitive habitats, and discourage activities that cause harm or disturbance to vegetation, wetlands, fish and wildlife.
- 7.1.4.9 Implement policies that improve and secure habitat connections between conserved SGCN habitats.
- 7.1.4.10 Implement policies that promotes expanding acreages and enhances the effective size of SGCN habitats by providing biologically appropriate buffers of native habitat surrounding SGCN habitats.

Longtail Salamander

- 7.1.4.12 Implement policies and/or regulations that protect significant natural and/or unique communities in perpetuity.
- 7.1.4.13 Implement policies that protect vernal pool habitats to benefit SGCN that rely upon them and promotes connectivity of SGCN populations.
- 7.1.4.14 Implement policies that protect existing and developing old-growth forest stands with large trees, in particular those within large, contiguous forest tracts.
- 7.1.4.15 Implement policies that preserve and protect critical SGCN forested habitat and minimize forest edge to benefit interior forest and disturbance-sensitive SGCN.
- 7.1.4.16 Implement policies that protect and restore riparian areas.
- 7.1.4.17 Improve the enforcement of policies and/or regulations that protect wetlands, riparian and floodplain areas, and aquatic habitats (including open waters).
- 7.1.4.19 Implement policies that protect and restore scrub-shrub habitats to benefit shrub-dependent SGCN.
- 7.1.4.23 Implement policies that minimize wildlife road mortality.
- 7.1.4.26 Educate law enforcement personnel that there may be unauthorized research projects taking place and to encourage them to investigate any activities that appear to be harmful to wildlife.

8 Outreach

8.1 Partner/stakeholder engagement

8.1.0 Partner/stakeholder engagement strategies

- 8.1.0.3 Develop an outreach team of personnel from government entities, conservation organizations and other stakeholders to work together to collaboratively use social media campaigns to grow a constituency of NJ residents who have an elevated ecological and climate consciousness.
- 8.1.0.4 Engage government agencies, conservation partners and other stakeholders in constructive dialogues encouraging them to influence policy change and the creation of incentives through a habitat bill and/or municipal ordinances for backyard habitat.
- 8.1.0.6 Engage government agencies, conservation partners and other stakeholders in discussions focused on sharing information regarding coastal and marine critical wildlife habitats, developing comprehensive mapping to assist in reducing impacts of energy production activities, and establishing a long-term monitoring program to update the data. Ensure this information is available to appropriate personnel for planning or response measures.
- 8.1.0.11 Engage government agencies, conservation partners and other stakeholders to collaboratively develop and implement an extensive educational/outreach program targeting sportsmen's organizations and fisheries, as well as public constituents, addressing the unintended effects abandoned fishing gear, tackle and crab pots can have on wildlife, and promote the collection and/or reporting of abandoned items and their locations.
- 8.1.0.12 Engage government agencies, conservation partners and other stakeholders to collaboratively develop and implement an extensive educational/outreach program targeting sportsmen's organizations and fisheries, as well as public constituents, addressing the unintended effects fishing gear and tackle can have on wildlife.
- 8.1.0.13 Engage DOD in a constructive dialogue regarding strategies to minimize disturbances to all SGCN (i.e., beyond their federal requirements) from forest management and other practices on their lands.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Longtail Salamander

- 8.1.0.14 Engage DOD in a constructive dialogue regarding strategies to minimize or eliminate disturbances to all SGCN (i.e., beyond their federal requirements) during military activities.
- 8.1.0.15 Engage government agencies, conservation partners and other stakeholders in discussions encouraging and supporting the creation of laws and policies requiring vegetative buffers of native plants on preserved farmland and state lands with agricultural leases or agreements.
- 8.1.0.16 Engage local governments in discussions regarding the importance of them adopting/passing ordinances which require assessing and addressing secondary impacts (i.e., ancillary prescribed burns, trespassers, ORV use, mosquitoes, deer, buffers) on biological resources when revising planning/zoning documents or granted site plan/subdivision approvals.
- 8.1.0.17 Engage municipalities in constructive dialogue to identify and minimize destruction of areas prioritized for early succession forest management.
- 8.1.0.18 Engage NJDOT, NJ Transit Authority and other road management entities, wildlife conservation organizations/agencies (e.g., Division of Fish and Wildlife, New Jersey Conservation Foundation, Conserve Wildlife Foundation of NJ), and communities and citizens in discussions regarding the importance of and methods to enhance habitat connectivity, and work together to develop feasible strategies for ensuring that wildlife can disperse naturally and safely across roads and similar barriers to terrestrial and/or aquatic habitats.
- 8.1.0.19 Engage government agencies, conservation partners and other stakeholders to collaboratively develop a list of important projects, targeting SGCN and/or their habitat, as a guide for graduate student research. Distribute the list and contact information to all State colleges and universities.
- 8.1.0.21 Work with government agencies and environmental educators to develop educational resources and training programs, educate the public on the devastation human-subsidized and/or overabundant, native species cause to local nesting species, and provide expert guidance on how residents can help alleviate this threat.
- 8.1.0.22 Work with government agencies and environmental educators to develop educational resources and training programs, educate the public on the devastation invasive species cause to native nesting species, and provide expert guidance on how residents can help alleviate this threat.
- 8.1.0.24 Engage government agencies, conservation partners and other stakeholders in constructive dialogue regarding the importance of providing and methods to provide technical support for carrying out restoration and management practices aimed at increasing structural habitat diversity.
- 8.1.0.25 Provide technical support to public landowners and land managers for carrying out restoration and management practices aimed at increasing structural habitat diversity.
- 8.1.0.26 Coordinate across federal, state and local agencies and approved consulting foresters that provide financial, logistical or planning assistance to woodland landowners to adopt or endorse consistent best management practices concerning controlled burns to maintain and/or improve forested habitat for wildlife.
- 8.1.0.30 Encourage government agencies and conservation partners to advise members of the relevant scientific community of the need for specific studies, reports or investigations targeting the data-deficiency regarding SGCN and/or their habitats.
- 8.1.0.32 Work with NJ DEP's Water Management, other state agencies and watershed organizations to determine if mitigation is warranted at applicable power plants.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Longtail Salamander

- 8.1.0.33 Engage government agencies, conservation partners and other land managers, communities, landowners, and commercial and industrial stakeholders in discussions regarding the importance of protecting and methods to protect priority wetlands beyond the levels afforded through regulation by maintaining and/or restoring optimal biological buffers around wetlands.
- 8.1.0.34 Work with the NJ Education Association and Department of Education to design curriculum and outdoor experimental learning opportunities, and provide training to teachers on implementation of these activities.
- 8.1.0.37 Enlist landowners and NJ citizens in the protection of and survey efforts for SGCN, in particular rare species, by increasing enrollment in landowner incentives, forest stewardship, backyard habitat management and wildlife-related volunteer programs.
- 8.1.0.38 Engage partners, stakeholders and land managers in constructive dialogue promoting forest stewardship for SGCN that use core forests and forested corridors.
- 8.1.0.40 Encourage researchers, land managers, naturalists and enthusiasts to follow proper procedures for the coordination and/or permitting of research/management activities involving wildlife and sensitive habitats, and discourage activities that alter vegetation or wetlands, or cause harm or disturbance to wildlife.
- 8.1.0.42 Engage citizens, wildlife observers and photographers through discussions and distributable information regarding the importance of and encouraging implementing responsible and ethical behavior when observing wildlife by developing an alliance of wildlife photographers and widely circulating recommendations on how to reduce impact.
- 8.1.0.44 Engage conservation partners, stakeholders, government agencies and other land stewards in constructive dialogues encouraging their inclusion of controlled burns in forest and other stewardship plans.
- 8.1.0.47 Form cooperative partnerships with energy companies to facilitate habitat creation and enhancement away from and outside of project areas, the restoration of appropriate habitats within project areas (e.g., rights-of-way could benefit butterflies and some bird species), and to identify seasonal timing of activities that would minimize impacts to wildlife.

8.3 WSFR program/subprogram outreach

8.3.0 WSFR program/subprogram outreach strategies

- 8.3.0.7 Develop and provide (or otherwise make publicly available) educational programs and/or materials that describe the negative impacts of off-road vehicles and watercraft use in and adjacent to critical SGCN habitats, and the importance of confining such activities to more appropriate locations and/or seasons.
- 8.3.0.8 Develop and provide (or otherwise make publicly available) educational programs and/or materials to educate recreationists and encourage landowners to eliminate garbage in the vicinity of suitable wildlife habitat, in particular SGCN habitat. Information should include the detrimental impacts garbage may have on various wildlife species.
- 8.3.0.9 Develop and provide (or otherwise make publicly available) educational programs and/or materials to enlist landowners and land managers to include only native plants in landscaping and restoration projects. Provide information to assist them in detecting problematic establishment of invasive, non-indigenous plants.
- 8.3.0.10 Develop and provide (or otherwise make publicly available) educational programs and/or materials to educate landowners and NJ citizens on threats to fish and wildlife (including marine animals).

Longtail Salamander

- 8.3.0.12 Promote awareness of WSFR (Wildlife and Sportfish Restoration) Outreach/Awareness grants, an important funding source for conservation among hunters and anglers as well as the general public.
- 8.3.0.13 Conduct an educational campaign to encourage observer ethics and respect for wildlife and natural habitat.
- 8.3.0.15 Develop an educational outreach program for citizens regarding: 1) The impacts to wildlife as a result of plastic bags entering aquatic and marine systems, 2) The importance of decreasing the amount of plastic shopping bags in circulation, 3) The need for businesses to voluntarily charge for bags or reimburse people for using their own non-plastic bags, and 4) The need for their assistance through public pressure on legislators and government to pass legislation that limits the amount of plastic shopping bags in circulation.
- 8.3.0.19 Develop an educational outreach program for the public on the devastating effects predators can have on native nesting wildlife.
- 8.3.0.24 Develop educational outreach programs for local decision-makers, land developers, landowners and citizens about lawn alternatives and the importance of natural vegetation and "edge" habitats on developed properties.
- 8.3.0.25 Develop educational outreach programs for landowners, nurseries and the general public regarding the negative impacts of invasive and non-native plants on our natural communities.
- 8.3.0.26 Develop educational outreach programs for private and public landowners and land managers regarding the importance of and how to manage core forests and forested corridors in a way that will be beneficial for SGCN, particularly endangered, threatened and special concern species.
- 8.3.0.27 Develop educational outreach programs for public and private landowners and land managers regarding the importance of structural habitat diversity, methods to increase diversity, and/or incentive programs available to increase habitat diversity.
- 8.3.0.29 Develop educational outreach programs for local decision-makers, land developers, landowners and citizens about the importance of maintaining a vegetative buffer along riparian and aquatic habitats to intercept storm water runoff and minimize soil erosion.
- 8.3.0.30 Develop educational outreach programs for private and public landowners, as well as schools, regarding the benefits and creation of backyard habitats for wildlife.
- 8.3.0.32 Develop an educational outreach program for landowners and citizens on the threats that herbicides and pesticides pose to aquatic systems and wildlife, and to promote safer usage of such products.

9 Planning

9.1 Land use planning

9.1.0 Land use planning strategies

- 9.1.0.1 Develop smart-growth plans and critical habitat designations that consider SGCN life history requirements and habitat needs, connectivity and health of those habitats, and minimizes human-associated disturbances to those habitats and SGCN inhabiting them.
- 9.1.0.2 Develop town plans that avoid impacts to SGCN species and their habitats.
- 9.1.0.3 Develop a plan that directs the creation of impervious surfaces away from and to minimize impacts on aquatic systems and critical terrestrial habitats. The plan should also include strategies to increase the resiliency of aquatic and critical terrestrial habitats to threats and stressors that would impact the reproduction and survival of wildlife.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Longtail Salamander

- 9.1.0.5 Develop a plan that directs the creation or expansion of energy or utility rights-of-way in a manner that minimizes the impacts on critical forested habitats and the wildlife community.
- 9.1.0.6 Develop a plan that directs the creation or expansion of roads and railroads or the re-establishment of abandoned railroads within and adjacent to critical forested habitats in a manner that minimizes the impacts on critical forested habitats and the wildlife community.
- 9.1.0.7 Develop a plan that directs the maintenance of or new channelization of forested streams and rivers in a manner that minimizes impacts of the aquatic ecological system and adjacent forest
- 9.1.0.8 Develop a plan that focuses on strategies for oil pipelines to avoid sensitive habitats that would be highly impacted by oil spills.
- 9.1.0.9 Develop a plan that focuses on strategies to minimize the creation of renewable energy farms (e.g., solar, wind) and related infrastructures within and their impacts on forested habitats and the wildlife community.
- 9.1.0.10 Develop a plan that focuses on strategies to minimize the impacts of mining on critical forested habitats.
- 9.1.0.11 Develop a plan that focuses on strategies to minimize the impacts of power plants on critical forested habitats and the wildlife community.
- 9.1.0.13 Develop a plan to minimize agriculture that would result in groundwater withdrawal in critical forested areas.
- 9.1.0.14 Develop a plan to minimize development that would result in groundwater withdrawal in critical forested areas.
- 9.1.0.15 Develop a plan to minimize fragmentation of terrestrial and aquatic habitats by roads.
- 9.1.0.16 Develop a plan to minimize new lawns and preserve natural vegetation within and adjacent to critical forest areas.
- 9.1.0.17 Develop a plan to minimize nutrient and effluent loads from aquaculture practices.
- 9.1.0.18 Develop a plan to minimize the effects of road widening and traffic volume increases within critical wildlife habitat areas using CHANJ products.
- 9.1.0.19 Develop a plan to minimize the extent of impervious surfaces as part of new construction to increase water recharge in those areas.
- 9.1.0.20 Develop a plan to minimize the impacts of existing agricultural properties adjacent to and the conversion of forest habitats (terrestrial and aquatic, within or adjacent to critical forests) to agriculture, grazing areas/livestock farms, and plantations.
- 9.1.0.21 Develop a plan to minimize the use of any-sized dam in critical forested areas.
- 9.1.0.22 Incorporate habitat connectivity and preservation of natural areas into state and local land-use policy and the environmental review process to minimize the impacts of transportation and service corridors on fish and wildlife and their habitats.
- 9.1.0.23 Develop a plan to mitigate the effects of transportation barriers by using CHANJ products.
- 9.1.0.24 Develop a plan to prevent livestock from entering water bodies in critical forested habitats.
- 9.1.0.25 Develop a plan to prevent the conversion of forested stream buffers to pastures in critical forested habitats.
- 9.1.0.27 Develop a plan to use wildlife-appropriate culverts in critical forested areas.
- 9.1.0.28 Develop and coordinate state, regional and local plans for suitable lot layout and landscaping to minimize human-wildlife conflicts that also incorporates habitat connectivity and preservation of natural areas.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Longtail Salamander

- 9.1.0.29 Provide GIS or related data, maps, resource inventories, as well as related training, pertaining to the SWAP and it's recommended conservation actions for use or consideration by State, County or municipal planning agencies.
- 9.1.0.30 Incorporate habitat connectivity and preservation of natural areas into state and local land-use policy and the environmental review process to minimize habitat fragmentation and other related threats associated with development.
- 9.1.0.31 Develop wetland restoration plans that consider the life history and needs of wildlife occupying targeted habitats.
- 9.1.0.32 Incorporate aquatic habitat connectivity and water quality/effluent standards into local and state aquaculture plans and BMPs.
- 9.1.0.33 Review the species, threats, action successes, and habitats, and work with partners to revise the 2017 State Wildlife Action Plan for the 2025 resubmittal.

9.2 Organizational strategic and CMS planning

9.2.1 Organizational strategic and operational planning

- 9.2.1.1 Identify and codify legal ORV access areas on state lands.

9.3 Species and habitat management planning

9.3.1 Species management planning

- 9.3.1.3 Develop a management plan to restrict human activity (e.g., recreational, maintenance work, etc.) from sensitive habitats/areas such as avian nesting sites, reptile and amphibian breeding areas (nesting or gestation/birthing and breeding pools, respectively), and bat hibernacula, and federal buffers for marine mammals.
- 9.3.1.4 Develop town plans that avoid impacts to SGCN species and their habitats.
- 9.3.1.5 Develop response plans to address disease outbreaks within wildlife populations, in particular SGCN.
- 9.3.1.7 Develop a rapid response plan for various scenarios (e.g., insect infestations destroying native habitat, wildlife disease) to be implemented upon exotic pathogen introduction or incident.
- 9.3.1.9 Develop a management plan incorporating the effects of pesticides, herbicides and other biological controls on SGCN and their critical and supporting habitats.
- 9.3.1.10 Develop a management plan to combat the impacts of diseases/pathogens impacting SGCN and/or their habitats.
- 9.3.1.13 Develop a management plan to ensure SGCN populations' persistence based on long-term monitoring of resident and migratory SGCN populations and their habitats.
- 9.3.1.14 Create species management plans that will promote the protection and where appropriate, the development of old-growth forest stands with large trees, in particular those within large, contiguous forest tracts.
- 9.3.1.16 DOD and appropriate state agencies work together to improve DOD Integrated Natural Resource Management Plans (INRMP) to develop strategies to minimize or eliminate disturbances to all SGCN (i.e., beyond their federal requirements) during military activities and to improve SGCN habitat and presence.

9.3.2 Listed species recovery planning

- 9.3.2.1 Develop proactive species recovery plans for all endangered and threatened species including guidance and objectives pertaining to critical and supporting habitat to meet and maintain recovery goals.

Longtail Salamander

9.3.3 Habitat management planning

- 9.3.3.6** Develop a management plan for maintaining and enhancing healthy, SGCN-associated terrestrial and aquatic habitats and associated riparian habitats, and to minimize (if not avoid) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
- 9.3.3.7** Develop a management plan to reduce the impacts of herbivory on native vegetation and the degradation of habitats supporting SGCN by invasive and/or native, over-abundant wildlife species including but not limited to mute swans, Canada geese, beaver and white-tailed deer.
- 9.3.3.8** Develop a management plan to combat the impacts of diseases/pathogens impacting SGCN and/or their habitats.
- 9.3.3.9** Develop a response plan to outbreaks using BMPs to control infestations and limit their spread in a way that avoids excessive harm to non-target species.
- 9.3.3.10** Develop a management plan to ensure SGCN populations' persistence based on long-term monitoring of resident and migratory SGCN populations and their habitats.
- 9.3.3.11** Develop town plans that avoid impacts to SGCN species and their habitats.
- 9.3.3.15** Develop a management plan incorporating the effects of pesticides, herbicides and other biological controls on SGCN and their critical and supporting habitats.
- 9.3.3.16** Develop a management plan to restrict human activity (e.g., recreational, maintenance work, etc.) from sensitive habitats/areas such as avian nesting sites, reptile and amphibian breeding areas (nesting or gestation/birthing and breeding pools, respectively), and bat hibernacula, and federal buffers for marine mammals.
- 9.3.3.18** In cooperation with species and habitat experts, develop management plans for significant natural and/or unique communities, in particular those supporting SGCN, and provide the information to the landowners/managers (federal, state and local government agencies or non-government organization) for review and implementation.
- 9.3.3.19** Develop management plans for SGCN inhabiting permanently protected natural lands using available baseline and population trend data.
- 9.3.3.21** Develop a rapid response plan for various scenarios (e.g., insect infestations destroying native habitat, wildlife disease) to be implemented upon exotic pathogen introduction or incident.
- 9.3.3.22** Create management plans to minimize and/or prevent wildlife road mortality that will incorporate wildlife passages in conjunction with barrier fencing and, where possible, seasonal closures. Aquatic-associated passages must avoid disturbance to the natural streambeds and riparian habitat, permit high volumes of water to flow freely, and provide adequate travel corridors for terrestrial wildlife, while maintaining stream flow for fish passage. Bridges that span rivers and streambeds and include floodplain habitat on either side of the span to provide travel corridors for terrestrial wildlife are preferred over culverts.
- 9.3.3.23** Create forest management plans that will promote the protection and/or development of old-growth forest stands with large trees, in particular those within large, contiguous forest tracts.
- 9.3.3.24** Develop a plan to improve the enforcement of policies and/or regulations that protect wetlands, riparian and floodplain areas, and aquatic habitats (including open waters).
- 9.3.3.27** Develop a management plan to expand breeding habitat and connectivity for tiger salamanders and other obligate vernal pool breeders.

Longtail Salamander

- 9.3.3.29 Develop habitat management plans aimed at reducing or eliminating negative impacts of ORVs.
- 9.3.3.32 DOD and appropriate state agencies work together to improve DOD Integrated Natural Resource Management Plans (INRMP) to develop strategies to minimize or eliminate disturbances to all SGCN (i.e., beyond their federal requirements) during military activities and to improve SGCN habitat and presence.
- 9.3.3.34 Include controlled burn prescriptions in forest and stewardship plans to improve wildlife habitat.
- 9.3.3.35 Incorporate habitat connectivity, preservation of natural areas, and the implementation of BMPs into state and local land-use policy environmental review process and energy development plans to minimize habitat fragmentation and related threats associated with solar farms and altered habitats.
- 9.3.3.36 Integrate plans for properly located and timed habitat restoration and management along transportation, energy and service corridors to minimize risks to and benefit wildlife.

11 Technical Assistance

11.1 Environmental review

11.1.1 Review of proposed projects

- 11.1.1.1 Use Biotics database and Landscape Project Mapping in regulatory reviews to ensure protection by applicable laws and regulations.
- 11.1.1.2 Develop smart-growth plans and critical habitat designations that consider SGCN life history requirements and habitat needs, connectivity and health of those habitats, and minimize human-associated disturbances to those habitats and the SGCN inhabiting them.
- 11.1.1.3 Government organizations to thoroughly review wetland restoration plans, applying the most current science for wildlife, habitats and aquatic systems, to assess the impacts to resident and migratory wildlife occupying the targeted habitats.
- 11.1.1.4 Incorporate habitat connectivity and preservation of natural areas into state and local land-use policy and the environmental review process to minimize habitat fragmentation and related threats associated with development.
- 11.1.1.5 Incorporate habitat connectivity and preservation of natural areas into state and local land-use policy and the environmental review process to minimize the impacts of transportation and service corridors on fish and wildlife and their habitats.
- 11.1.1.7 Review proposed construction or other work projects and permit applications, provide recommendations on how to best avoid disturbing sensitive species, and identify actions not permitted.
- 11.1.1.8 Review proposed research projects and permit applications, provide recommendations on how to best avoid disturbing sensitive species, and identify actions not permitted.
- 11.1.1.9 Review strategies for creating or enhancing connectivity (e.g., installing appropriately-sized wildlife passages) between wetlands to allow wildlife to disperse naturally and safely.
- 11.1.1.10 Use CHANJ mapping in reviews of proposed energy, mining, transportation and utility service companies/agencies' projects to attempt to maintain habitat connectivity and reduce fragmentation, and identify potential impacts of the projects.
- 11.1.1.11 Use the best available science (species data, habitat present, site layout options, etc.) when conducting regulatory reviews of proposed offshore energy projects relating to drilling, extraction and distribution of petroleum and gas products to reduce habitat destruction and minimize impacts on wildlife.

Longtail Salamander

11.1.1.12 Use the best available science (species data, habitat present, site layout options, etc.) when conducting regulatory reviews of proposed solar farm projects to reduce habitat fragmentation and minimize impacts on wildlife.

11.1.1.13 Use the best available science (species data, habitat present, wind farm layout options, wind blade impacts on migratory species, location of migration routes, etc.) when conducting regulatory reviews of proposed wind farm projects to minimize impacts on migratory and resident wildlife and reduce habitat fragmentation.

11.1.2 Review of proposed policies and plans

11.1.2.1 Develop smart-growth plans and critical habitat designations that consider SGCN life history requirements and habitat needs, connectivity and health of those habitats, and minimize human-associated disturbances to those habitats and the SGCN inhabiting them.

11.1.2.2 Government organizations to thoroughly review wetland restoration plans, applying the most current science for wildlife, habitats and aquatic systems, to assess the impacts to resident and migratory wildlife occupying the targeted habitats.

11.1.2.3 Incorporate aquatic habitat connectivity and water quality/effluent standards into the environmental review process to help establish policies and plans that minimize the impact of aquaculture on fish and wildlife.

11.1.2.4 Review strategies for creating or enhancing connectivity (e.g., installing appropriately-sized wildlife passages) between wetlands to allow wildlife to disperse naturally and safely.

11.2 Technical assistance

11.2.0 Assorted technical assistance strategies

11.2.0.1 Provide technical support to private and public landowners and land managers for carrying out restoration and management practices aimed at increasing structural habitat diversity.

11.2.0.2 Provide technical support to public and private landowners and land managers for controlling invasive, native and non-native plant species in order to increase structural habitat diversity.

11.2.0.3 Develop state, regional and local BMPs that focus on minimizing habitat fragmentation and human-wildlife conflicts associated with development. Make information available to land developers and private and public landowners for implementation.

11.2.0.5 Provide educational resources, training programs, and expert guidance to private and public landowners and land managers on the threats that herbicides and pesticides pose to aquatic systems and wildlife, and to promote safer usage of such products.

11.2.0.6 Provide educational resources, training programs, and on-the-ground guidance to energy, mining, transportation, and utility service agencies/companies and their project and resource managers on habitat creation, enhancement and restoration within and adjacent to project areas, as well as away from and outside of project areas (depending on the target species), by managing vegetation for a variety of species and that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife. Wind farms should address both terrestrial bound and low-flying species. Examples of habitat management include, but are not limited to, integrating short and tall grasses, specific host plants, brush piles, water sources/wetlands, shrubby areas, nesting areas and no-mow set-asides.

11.2.0.7 Provide educational resources, training programs, and on-the-ground guidance to energy, mining, transportation, and utility service agencies/companies and their project and resource managers on the importance of maintaining habitat connectivity, minimizing fragmentation, and the use of CHANJ products to help them target areas for such planning.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Longtail Salamander

- 11.2.0.8 Provide educational resources, training programs, and on-the-ground guidance to public and private landowners and land managers on habitat creation and enhancement strategies that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife.
- 11.2.0.9 Provide educational resources, training programs, and on-the-ground guidance to municipalities, land developers, and other land managers and private landowners about the importance of leaving vegetation in place, especially along riparian areas and wildlife movement corridors.
- 11.2.0.10 Provide technical support to private landowners, consultants, and land managers to create customized management plans based on location and SGCN.
- 11.2.0.11 Provide educational resources, training programs, and on-the-ground guidance to private and public landowners and land managers on the benefits of and for creating young forest and early succession habitat for SGCN.
- 11.2.0.12 Provide educational resources and technical support to public landowners and land managers for managing grasslands for grassland-dependent species.
- 11.2.0.13 Provide educational resources and technical support to public landowners, private landowners with sufficient acreage, and land managers to promote the protection and/or development of old-growth forest stands with large trees, in particular those within large, contiguous forest tracts.
- 11.2.0.14 Provide educational resources and technical support to public and private landowners and land managers to promote the protection of wetlands, riparian and floodplain areas, and aquatic habitats (including open waters), and to enhance or restore biologically appropriate buffers.
- 11.2.0.15 Provide educational resources, training programs, and on-the-ground guidance to municipalities, land developers, and other land managers and landowners about the importance of retaining and in an effort to protect, create, enhance and/or restore vegetation along aquatic habitats.
- 11.2.0.16 Provide educational resources and technical support to public and private landowners and land managers to promote the protection of critical SGCN forested habitat and minimize forest edge to benefit interior forest and disturbance-sensitive SGCN.
- 11.2.0.17 Provide educational resources and technical support to public and private landowners and land managers to promote the protection of vernal pools and the protection, enhancement and/or restoration of biologically appropriate buffers.
- 11.2.0.18 Provide educational resources and technical support to public and private landowners and land managers to promote the protection of lands adjacent to fish SGCN habitats and/or aquatic systems feeding into such habitats.
- 11.2.0.19 Provide educational resources and technical support to public and private landowners and land managers to promote the protection and/or enhancement of scrub-shrub habitats for SGCN.
- 11.2.0.22 Provide educational resources, training programs, and expert guidance to public and private landowners and land managers about lawn alternatives and the importance of natural vegetation and "edge" habitats on developed properties.
- 11.2.0.23 Provide educational resources and technical support to public and private landowners and land managers of lands adjacent to SGCN habitats to promote the protection and/or enhancement of those adjacent habitats to increase the overall size of the "core" area and/or provide a natural buffer, enhancing the suitability of the core area for SGCN, and that connect conserved SGCN habitats.

Longtail Salamander

- 11.2.0.24 Provide educational resources, training programs, and expert guidance to public and private landowners and land managers on how to manage vegetated roadside areas (e.g., mowing, brush-hogging, etc.) on a schedule that avoids peak activity periods for wildlife and therefore, minimizes harm.
- 11.2.0.25 Provide educational resources, training programs, and on-the-ground guidance to resource managers regarding the assessment of and addressing secondary impacts (i.e. ancillary prescribed burns, trespassers, ORV use, mosquitoes, deer, buffers) related to residential and commercial development.
- 11.2.0.26 Make educational resources available to the public that encourage researchers to seek out guidance prior to finalizing proposals and submitting State permit applications to reduce potential impacts on sensitive species.

11.2.1 With individuals and groups involved in resource management decision making

- 11.2.1.1 Engage partners and stakeholders in constructive dialogue regarding the importance of providing and methods to provide technical support for carrying out restoration and management practices aimed at increasing structural habitat diversity.
- 11.2.1.2 Provide professional training and technical assistance tools (e.g., mapping, guidance documents, justification, etc.) to agencies/divisions/programs within and outside of the NJ DEP regarding the SWAP, and the conservation actions recommended therein to help facilitate SWAP implementation.
- 11.2.1.3 Provide educational resources, training programs, and on-the-ground guidance to DOD to improve DOD Integrated Natural Resource Management Plans (INRMP) to develop and implement forest management and other practices that minimize disturbances to SGCN (i.e., beyond their federal requirements).
- 11.2.1.6 Provide educational resources, training programs, and on-the-ground guidance to resource agencies prior to project initiation to ensure wildlife and their habitats are protected to the highest degree possible during construction, and provisions are in place for post-construction habitat use.

11.2.2 With private landowners

- 11.2.2.1 Provide technical support to farming operations and woodland landowners on ways to decrease clean farming (edge-to-edge) practices and create ecotones to benefit bobwhite and other species dependent on early successional habitat.

100 Law and Policy

100. Legislation

100.1.3 Sub-national Level

- 100.1.3.1 Develop laws and policies to increase protection and biological buffers of wetlands.
- 100.1.3.2 Develop policies for wetland restoration plans that consider life history requirements and needs of wildlife occupying targeted habitats.
- 100.1.3.3 Initiate legislative action to establish an annual budgetary line item designating funds to support programs focused on long-term research and monitoring of wildlife diseases.

100.1.4 County and Local

- 100.1.4.2 Secure and increase the effective size of SGCN habitats and connect conserved SGCN habitats through local ordinances.

Longtail Salamander

- 100.1.4.3 Expand the acreages and enhance the effective size of SGCN habitats by protecting adjacent habitats that contribute to the overall size of the "core" area and/or provide a natural buffer, enhancing the suitability of the core area for SGCN through local ordinances.
- 100.1.4.4 Secure wetlands, riparian and floodplain areas, and aquatic habitats (including open waters) and biologically appropriate buffers through local ordinances.
- 100.1.4.5 Secure SGCN-inhabited/used freshwater wetlands and biologically appropriate buffers through local ordinances.
- 100.1.4.7 Secure vernal pools and biologically appropriate buffers through local ordinances.
- 100.1.4.9 Secure existing and developing old-growth forest stands with large trees, in particular those within large, contiguous forest tracts, through local ordinances.
- 100.1.4.10 Secure critical SGCN forested habitat and minimize forest edge to benefit interior forest and disturbance-sensitive SGCN through local ordinances.
- 100.1.4.11 Secure riparian areas through local ordinances.
- 100.1.4.12 Secure scrub-shrub habitats for SGCN through local ordinances.
- 100.1.4.13 Encourage municipal laws regulating domestic pets that may predate on wildlife.
- 100.1.4.14 Adopt/pass local ordinances which require assessing and addressing secondary impacts (i.e. ancillary prescribed burns, trespassers, ORV use, mosquitoes, deer, buffers) on biological resources when revising planning/zoning documents or granted site plan/subdivision approvals.
- 100.1.4.15 Incorporate habitat connectivity and the preservation of natural areas into state and local land-use policy and the environmental review process to minimize habitat fragmentation and related threats associated with development.

100.1.5 Scale Unspecified

- 100.1.5.1 Develop laws and policies to increase protection and biological buffers of wetlands.
- 100.1.5.2 Develop policies for wetland restoration plans that consider life history requirements and needs of wildlife occupying targeted habitats.
- 100.1.5.3 Incorporate aquatic habitat connectivity and water quality/effluent standards into state/local policy to minimize the impact of aquaculture on fish and wildlife.
- 100.1.5.4 Incorporate habitat connectivity and preservation of natural areas into state and local land-use policy and the environmental review process to minimize the impacts of transportation and service corridors on fish and wildlife and their habitats.

100. State Regulations

100.3.0 Regulatory initiatives for species and habitat protection

- 100.3.0.1 Develop (and/or improve) policies and/or regulations that will promote the reduction of run-off and point and non-point source pollution into NJ's aquatic systems (streams, rivers, lakes/ponds, bays, ocean, wetlands, etc.).
- 100.3.0.5 Develop policies that will promote improved and secure habitat connections between conserved SGCN habitats.
- 100.3.0.6 Develop policies that will promote expanding acreages and enhancing the effective size of SGCN habitats by providing biologically appropriate buffers of native habitat surrounding SGCN habitats.
- 100.3.0.8 Develop policies and/or regulations with the objective of protecting significant natural and/or unique communities in perpetuity.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Longtail Salamander

- 100.3.0.9 Secure mitigation that creates an environmental benefit for losses of SGCN and their habitats.
- 100.3.0.10 Develop policies that promote protecting vernal pool habitats to benefit SGCN that rely upon them and promotes connectivity of SGCN populations.
- 100.3.0.11 Develop policies that will ensure the protection and/or development of old-growth forest stands with large trees, in particular those within large, contiguous forest tracts.
- 100.3.0.12 Develop policies that promote the preservation and protection of critical SGCN forested habitat and minimize forest edge to benefit interior forest and disturbance-sensitive SGCN.
- 100.3.0.13 Develop policies that will promote protecting and restoring riparian areas.
- 100.3.0.14 Develop policies and/or regulations that increase the protective buffers of wetlands, riparian and floodplain areas, and aquatic habitats (including open waters) to biologically appropriate distances to benefit SGCN that rely upon these habitats and improve the function of the [associated] aquatic systems.
- 100.3.0.18 Develop policies for conserved lands that prohibit planting and supports the control of non-native vegetation and invasive, native vegetation.
- 100.3.0.20 Develop policies and/or regulations that prohibit the presence of managed cat colonies and trap, neuter and release programs in or near critical wildlife habitats.
- 100.3.0.21 Develop policies that minimize wildlife road mortality through: 1) Requiring the integration of wildlife passages into all new and repaired roads, in particular those areas that will connect SGCN habitats, 2) Requiring current fish/wildlife passages be improved and maintained in perpetuity, 3) Supporting seasonal road closures, in particular for unimproved roads, 4) Supporting projects that work to improve connectivity of SGCN habitats such as land conservation through acquisition or other means.
- 100.3.0.26 Adopt regulations requiring the combined sewer overflow alternative analyses required by regulation address potential impacts to wildlife in watercourses or receiving water bodies.
- 100.3.0.31 Create or expand tax-based incentive programs available to private, agricultural, commercial, industrial or governmental landowners and land managers to include or provide for incentives for the maintenance and/or improvement to existing habitat via the endorsement of wildlife-related BMPs.
- 100.3.0.41 Explore all State regulatory requirements for mitigation, restoration, habitat management, etc. to ensure they prohibit the use of specified invasive or other problematic plant species.
- 100.3.0.42 Fully adopt the former Storm water Management Rules' 300ft buffer requirements into the Flood Hazard Area Control Act Rules.
- 100.3.0.43 Identify and address (amend) regulatory impediments to beneficial habitat management.
- 100.3.0.44 Incorporate requirements for technical support and funding for mitigation or restoration efforts so as to be consistent with existing regulations.
- 100.3.0.45 Increase the controlled burn season to focus on restoring vegetative communities.
- 100.3.0.46 Investigate and/or develop inter-agency Memorandum of Agreements to share common data stored or managed in program-specific databases.
- 100.3.0.48 Propose new State law or regulation mandating that a State-level "development impact fee" be assessed on all new development approved by municipalities (via the Municipal Land Use Law processes), and dedicate such monies to the development and implementation of regional Habitat Conservation Plans (or existing plans/programs serving the same regional function).

Longtail Salamander

- 100.3.0.50 Retain endangered, threatened and special concern wildlife and habitat protection measures in the Water Quality Management Program Rules.
- 100.3.0.52 Revise existing and/or incorporate new State land use regulations that specifically address the impacts of new or expanded energy sitings and facilities.
- 100.3.0.53 Revise existing and/or incorporate new State land use regulations that specifically address the impacts of new or expanded rights-of-way corridors associated with energy transport/transmission.
- 100.3.0.57 Develop regulations that when implemented will improve and secure habitat connections between conserved SGCN habitats.
- 100.3.0.58 Develop regulations that when implemented will promote the expansion of acreages and enhancement of the effective size of SGCN habitats by providing biologically appropriate buffers of native habitat surrounding SGCN habitats.
- 100.3.0.60 Develop regulations that when implemented will protect significant natural and/or unique communities in perpetuity.
- 100.3.0.61 Develop regulations that when implemented will protect vernal pool habitats to benefit SGCN that rely upon them and promotes connectivity of SGCN populations.
- 100.3.0.62 Develop regulations that when implemented will protect existing old-growth forest stands with large trees and/or stands that are being actively managed for old growth forests, in particular those within large, contiguous forest tracts.
- 100.3.0.63 Develop regulations that when implemented will preserve and protect critical SGCN forested habitat and minimize forest edge to benefit interior forest and disturbance-sensitive SGCN.
- 100.3.0.64 Develop regulations that when implemented will protect and restore riparian areas.
- 100.3.0.65 Develop regulations that when implemented will protect and restore scrub-shrub habitats to benefit shrub-dependent SGCN.
- 100.3.0.67 Develop regulations for lighting of/on tall structures that will minimize harm to and/or disorientation of wildlife, and enforce within state, county and local permitting processes.
- 100.3.0.68 Develop regulations that when implemented will prohibit the presence of managed cat colonies and trap, neuter and release programs in or near critical wildlife habitats.
- 100.3.0.69 Develop regulations that when implemented will minimize wildlife road mortality.
- 100.3.0.72 Develop regulations that require permit applicants and/or review agencies to assess the cumulative and synergistic effects of a proposed project (i.e., "secondary effects"), both over time and over a larger spatial scale than the site itself.

100. State Agency Policy Integration

100.4.0 Policy initiatives for species and habitat protection

- 100.4.0.1 Create any necessary policy changes (including those to incentive programs) to encourage the integration of SWAP actions associated with SGCN priority habitats as a deliberative factor in agencies' actions (e.g., environmental and land management review processes, land acquisition and management).
- 100.4.0.2 Create a policy that requires the NJ DEP to incorporate scientific information regarding climate change and sea level rise (e.g., predictions, habitat management/acquisition efforts to enhance resilience to inundation) on their websites and to work with other government entities, conservation organizations and other stakeholders to work together to collaboratively use social media campaigns to grow a constituency of NJ residents who have an elevated ecological and climate consciousness.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Longtail Salamander

- 100.4.0.4 Create a policy that requires the use of wildlife habitat and corridor mapping products for both regulatory use when conducting project reviews and planning/siting new or expanded rights-of-way projects.
- 100.4.0.8 Develop a white paper addressing the impacts that existing, new or expanded rights-of-way have upon wildlife, wildlife habitats and habitat connectivity.
- 100.4.0.9 Develop and implement policies to minimize the removal of coarse, woody debris in terrestrial, aquatic and riparian habitats in order to benefit wildlife.
- 100.4.0.13 Develop policies for different circumstances (e.g., roadsides and medians, riparian, aquatic and terrestrial habitats) that outline appropriate habitat/vegetation management strategies and schedules to minimize risks to and benefit wildlife.
- 100.4.0.16 Develop policies to implement habitat management strategies that will increase the structural diversity surrounding areas used for energy, mining, and transportation and service corridors which include but are not limited to the presence of short and tall grasses, specific host plants, brush piles, water sources/wetlands, shrubby areas, nesting areas, and no-mow set-
- 100.4.0.17 Develop policies to implement habitat management strategies, including prescribed burns, that will increase the structural diversity on preserved farmlands, state-owned agricultural lands, forests, parks and wildlife management areas, and any conserved lands purchased with the assistance of Green Acres and Federal Land & Water Conservation Fund monies to control and reduce the impacts of invasive, non-native species in order to increase structural habitat diversity.
- 100.4.0.18 Develop policies to minimize the extent of infrastructure associated with energy and service corridors or areas (e.g., wind and solar farms, pipelines, utility lines) and that require the implementation of habitat management strategies that will increase the structural diversity in the area including (e.g., the presence of short and tall grasses, specific host plants, brush piles, water sources/wetlands, shrubby areas, nesting areas, and no-mow set-asides).
- 100.4.0.19 Develop regulations that will minimize the creation of new barriers, remove or replace current barriers with appropriately-sized systems to accommodate wildlife dispersal, and to minimize road widening and traffic volume increases within critical wildlife habitat areas.
- 100.4.0.20 Develop state regulations that require energy developers and utility service companies to implement habitat management strategies that will increase the structural diversity of the habitat, minimize habitat fragmentation and commercial infrastructure, and minimize the loss, alteration and/or degradation of the habitat and adjacent lands when working on preserved farmlands, state-owned agricultural lands, forests, parks and wildlife management areas, and any conserved lands purchased with the assistance of Green Acres and Federal Land & Water Conservation Fund monies.
- 100.4.0.21 Ensure that Section 303(d) of the Clean Water Act and applicable State statutory/regulatory requirements for surface water pollutant budgets are being met by monitoring and enforcing regulatory Total Maximum Daily Load (TMDL) targets established within regional Water Quality Management Plans.
- 100.4.0.22 Work with NJ DEP's Division of Land Use Regulation to ensure protection of listed species and their habitats during stream cleaning events.
- 100.4.0.25 Develop policies that require permit applicants and/or review agencies to assess the cumulative and synergistic effects of a proposed project (i.e., "secondary effects"), both over time and over a larger spatial scale than the site itself.

Marine Turtles

Focal species that comprise this Conservation Target:

Atlantic Green Turtle Atlantic Leatherback Atlantic Loggerhead
Atlantic Ridley

Threats and Action Drivers associated with this Conservation Target:

1 Residential and Commercial Development

1.2 Commercial and Industrial Areas

1.2.1 Land conversion from natural habitat to commercial or industrial areas (large and small scale) (Avg. Score: 1.00)

NJ Specific Threats: 1.2.1.6 Impervious surfaces can cause an increased risk of floods, flash floods and storm damage that degrade terrestrial and aquatic habitats.

2 Agriculture and Aquaculture

2.1 Annual and Perennial Crops (non-timber)

2.1.1 Shifting Agriculture (Avg. Score: 1.00)

NJ Specific Threats: 2.1.1.4 Salt hay farming on Delaware Bay marshes, and the subsequent conversion of those farms to fully tidal marshes, results in compressed sediments that are less resilient to coastal forces of erosion and sea level rise.

2.4 Marine and Freshwater Aquaculture

2.4.1 Subsistence/Artisinal Aquaculture (Avg. Score: 1.00)

NJ Specific Threats: 2.4.1.2 Increased risk of parasite introduction into marine environments.

2.4.2 Industrial Aquaculture (Avg. Score: 1.00)

NJ Specific Threats: 2.4.2.2 Increased risk of parasite introduction into marine environments.

2.4.2.3 Potential for increased nutrient and effluent loads.

3 Energy Production and Mining

3.1 Oil and Gas Facilities and Pipelines

3.1.1 Distribution processes of petroleum and other liquid hydrocarbons (Avg. Score: 2.00)

NJ Specific Threats: 3.1.1.2 Loss, alteration and/or degradation of habitat.

3.1.1.3 Increased risk of oil spills.

3.1.1.4 Increased noise pollution.

3.1.1.5 Increased vehicular and ship traffic associated with construction and operations, and therefore an increased risk of wildlife mortality from strikes.

3.1.1.6 Increased risk of collision between marine mammals, sea turtles and fish and the marine-based structures/facilities.

3.1.2 Natural gas distribution processes (Avg. Score: 2.00)

NJ Specific Threats: 3.1.2.2 Loss, alteration and/or degradation of habitat.

3.1.2.3 Increased risk of gas leaks and explosions.

3.1.2.4 Increased noise pollution.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Marine Turtles

3.1.2.5 Increased vehicular and ship traffic associated with construction and operations, and therefore an increased risk of wildlife mortality from strikes.

3.1.2.6 Increased risk of collision between marine mammals, sea turtles and fish and the marine-based structures/facilities.

3.2 Mining and Quarrying

3.2.4 Sand Dredging (outside shipping lanes) (Avg. Score: 2.00)

NJ Specific Threats: 3.2.4.1 Loss, alteration and/or degradation of benthic marine habitats.

3.2.4.2 Increased noise pollution.

3.2.4.3 Potential for direct mortality of benthic organisms.

3.3 Renewable Energy

3.3.1 Wind Power (Avg. Score: 2.00)

NJ Specific Threats: 3.3.1.1 Turbines, blades, and structure foundations create a collision risk to volant species (birds, bats and invertebrates) and marine animals.

3.3.1.3 Loss, alteration and/or degradation of habitat.

3.3.1.4 Increased commercial infrastructure.

3.4 Conventional Power Plants

3.4.0 Conventional Power Plants (Avg. Score: 2.00)

NJ Specific Threats: 3.4.0.2 Loss, alteration and/or degradation of habitat due to new or the expansion of current facilities.

3.4.0.3 Alteration of the temperature, pH and/or hydrology of aquatic ecosystems change plant communities and can harm wildlife and/or impact their behavior and survivorship.

4 Transportation and Service Corridors

4.3 Shipping Lanes

4.3.1 Movement of large ships in shipping lanes (Avg. Score: 2.00)

NJ Specific Threats: 4.3.1.1 Increased ship traffic increases the risk of wildlife mortality from strikes.

4.3.1.2 May disturb nesting and foraging of shoreline birds and aquatic animals, and/or alter migratory patterns of aquatic and marine wildlife.

4.3.2 Dredging impacts (Avg. Score: 1.00)

NJ Specific Threats: 4.3.2.3 Transportation of materials to and from disposal facilities may pose temporary disturbance to wildlife impacting foraging and nesting success.

5 Biological Resource Use

5.4 Fishing and Harvesting of Aquatic Resources

5.4.3 Unintentional effects (subsistence/small scale) (Avg. Score: 3.00)

NJ Specific Threats: 5.4.3.1 Abandoned fishing tackle and gear, crab pots without excluders and ghost crab pots increase the risk of injury and death to marine mammals, sea turtles, sea birds, pinnipeds and fish species as well as terrestrial and semi-aquatic species as a result of consuming tackle or gear, entrapment and entanglement in gear.

5.4.3.2 Commercial/recreational shellfish dredging may impact marine ecosystems by uprooting submerged aquatic vegetation, disrupting substrates, increasing turbidity, and increasing predator species in localized areas.

5.4.3.5 Trawling disrupts habitat and threatens marine species including benthic/bottom feeding fishes, invertebrates and other benthic organisms as it disrupts and homogenizes the substratum, can lead to species decline and reduced species diversity.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Marine Turtles

5.4.3.6 Fishing gear used by commercial fisheries results in bycatch or entanglement of non-targeted wildlife leading to injury and/or mortality.

5.4.3.7 Improperly sanitized equipment, relocation of fish, importation and release of non-native species, and the use of bait from a different location can spread invasive species and diseases from one waterbody to another.

5.4.3.8 Lead in fishing tackle is consumed by wildlife in the course of foraging and scavenging, causing injury and death.

5.4.4 Unintentional effects (large scale) (Avg. Score: 3.00)

NJ Specific Threats: 5.4.4.2 Commercial/recreational shellfish dredging may impact marine ecosystems by uprooting submerged aquatic vegetation, disrupting substrates, increasing turbidity, and increasing predator species in localized areas.

5.4.4.4 Trawling disrupts habitat and threatens marine species including benthic/bottom feeding fishes, invertebrates and other benthic organisms as it disrupts and homogenizes the substratum, can lead to species decline and reduced species diversity.

5.4.4.5 Fishing gear used by commercial fisheries results in bycatch or entanglement of non-targeted wildlife leading to injury and/or mortality.

5.4.4.6 Overexploitation of riparian, estuarine, and marine fisheries may deplete food resources required by marine mammals, sea turtles, marine fish and piscivorous birds, in turn resulting lower reproduction and survival.

5.4.4.7 Improperly sanitized equipment, relocation of fish, use of bait from a different location, can spread invasive species and diseases from one waterbody to another.

6 Human Intrusions and Disturbance

6.1 Recreational Activities

6.1.2 Boating (Avg. Score: 1.00)

NJ Specific Threats: 6.1.2.1 Alteration and/or degradation of aquatic habitat.

6.1.2.2 Increased disturbance to marine animals and ocean-, bay- and marsh-associated birds which can alter their behavior decreasing the likelihood of their success and/or reproduction.

6.1.2.3 Motorized boat propellers can inflict physical harm aquatic wildlife species.

6.1.2.5 Watercraft can be a mechanism of transference of wildlife diseases and invasive plant species if gear is not properly sanitized between sites.

6.1.5 Wildlife observation and photography (Avg. Score: 1.00)

NJ Specific Threats: 6.1.5.1 Improperly conducted recreational activities may disrupt normal wildlife behaviors which can result in reduced reproductive success or survival, abandonment of critical sites, etc.

6.2 Military Exercises

6.2.1 Military exercises (Avg. Score: 2.00)

NJ Specific Threats: 6.2.1.1 Military testing and training exercises may inflict disturbance and potential physical harm to wildlife.

6.3 Work and Other Activities

6.3.1 Unauthorized research projects at significant habitats (Avg. Score: 1.00)

NJ Specific Threats: 6.3.1.1 Participants may introduce wildlife diseases and invasive plant species when gear and apparel is not properly sanitized between sites.

6.3.2 Authorized research projects at significant habitats (Avg. Score: 3.00)

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Marine Turtles

- NJ Specific Threats:** 6.3.2.1 Seismic air guns used during scientific marine research threatens spawning, feeding and breeding marine fishes in essential fish habitat areas off the NJ coast and may cause disturbance and physical harm to whales, dolphins, pinnipeds and sea turtles. Seismic surveys may also disturb marine mammals by disrupting navigation, foraging and communications ability.
- 6.3.2.2 Participants may introduce wildlife diseases and invasive plant species when gear and apparel is not properly sanitized between sites.

7 Natural Systems Modifications

7.3 Other Ecosystem Modifications

7.3.1 Shoreline Stabilization (Avg. Score: 1.00)

- NJ Specific Threats:** 7.3.1.3 Efforts to stabilize barrier islands and shorelines, including jetties, groins, and bulkheads, degrade foraging areas for migrating whales and sea turtles.

8 Invasive and Other Problematic Species, Genes and Diseases

8.1 Invasive Non-native/ Alien Species/ Diseases

8.1.1 Unspecified Species (Avg. Score: 1.00)

- NJ Specific Threats:** 8.1.1.5 Invasive, non-native animals and plants increase the risk of introduction and transference of diseases

8.1.2 Invasive non-native aquatic animals (Avg. Score: 2.00)

- NJ Specific Threats:** 8.1.2.1 Parasites introduced into the marine environment can alter the reproductive and feeding behavior of native wildlife, leading to their decline.

- 8.1.2.2 Displace or out-compete native species for resources (food, shelter), alter the composition of the native landscapes/aquatic systems, diminishing habitat suitability and reducing ecological integrity of natural communities, and may introduce disease into a population.

8.1.3 Invasive non-native aquatic plants (Avg. Score: 1.00)

- NJ Specific Threats:** 8.1.3.1 Displace or out-compete native species for resources (food, light, shelter), alter the composition of the native landscapes/aquatic systems, diminish habitat suitability and reduce ecological integrity of natural communities, and may introduce disease into a population.

8.1.6 Invasive non-native fungal/bacterial diseases (Avg. Score: 1.00)

- NJ Specific Threats:** 8.1.6.1 The introduction of non-native fungal and bacterial diseases threatens native populations and ecosystems.

8.2 Problematic Native Species/Diseases

8.2.1 Unspecified Species (Avg. Score: 1.00)

- NJ Specific Threats:** 8.2.1.2 Invasive pathogens and insects may increase in range and abundance as limiting factors (such as temperature) are altered as a result of climate change.

8.4 Problematic Species/Diseases of Unknown Origin

8.4.1 Unspecified Species (Avg. Score: 1.00)

- NJ Specific Threats:** 8.4.1.1 Non-native or poorly understood diseases and parasites could potentially impact native animals.

8.5 Viral/Prion-induced Diseases

8.5.1 Unspecified Species (Disease) (Avg. Score: 1.00)

- NJ Specific Threats:** 8.5.1.1 There is a large knowledge gap regarding the existence of, or potential for, other diseases impacting native wildlife.

8.6 Diseases of Unknown Cause

8.6.0 Unknown Diseases (Avg. Score: 1.00)

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Marine Turtles

NJ Specific Threats: 8.6.0.1 Diseases yet to be identified by pathologists and virologists cause decreased fitness or mortality to native populations.

9 Pollution

9.1 Domestic and Urban Waste Water

9.1.1 Sewage (Avg. Score: 2.00)

NJ Specific Threats: 9.1.1.1 Degradation of aquatic and marine water quality and habitats by changing turbidity, flow and water chemistry.

9.1.1.2 Leads to increased eutrophication and algae blooms that result in oxygen depletion.

9.1.1.3 Contaminants in sewage treatment effluents and Combined Sewer Overflows can cause developmental and behavioral abnormalities and reproductive failure in wildlife.

9.1.2 Run-off (Avg. Score: 2.00)

NJ Specific Threats: 9.1.2.1 Chemical fertilizers and nutrient run-off changes the pH in streams and ponds and causes eutrophication in inland waters and estuaries, which can make habitat unsuitable for specialist species and increase the risk of invasive and generalist species.

9.1.2.2 Contaminants degrade aquatic and marine water quality and can bioaccumulate in benthic organisms, threatening wildlife by causing developmental and behavioral abnormalities and reproductive failure.

9.1.2.3 Contaminants from road runoff (oil, sediment, salt, etc.) impact native vegetation and the species that rely upon them, degrade water quality in aquatic systems, and can injure or kill the aquatic and semi-aquatic species that rely upon them.

9.2 Industrial and Military Effluents

9.2.1 Oil Spills (Avg. Score: 3.00)

NJ Specific Threats: 9.2.1.1 Oil spills render resting, breeding and foraging habitats temporarily unavailable to wildlife, altering normal wildlife behavior.

9.2.1.2 Oil spills have long term effects on habitats and damage ecological processes that can cause local wildlife population declines and impaired foraging or reproduction.

9.2.1.3 Oil spills cause external oiling of wildlife and ingestion of oil, both of which can injure or kill wildlife.

9.2.3 Other (Avg. Score: 3.00)

NJ Specific Threats: 9.2.3.1 Point and nonpoint source pollution such as polychlorinated biphenyls (PCBs), pesticides, heavy metals, and endocrine disrupting compounds (EDC's) into freshwater and marine systems pose threats to wildlife through direct contact and/or ingestion, and to aquatic species and their predators through bioaccumulation, impacting the reproductive success and neurological function of many avian and fish species.

9.2.3.2 Chemical spills have long term effects on habitats and damage ecological processes that can cause local wildlife population declines and impaired foraging or reproduction.

9.2.3.3 Chemical spills may render resting, breeding and foraging habitats temporarily unavailable to wildlife, altering normal wildlife behavior.

9.3 Agricultural and Forestry Effluents

9.3.1 Nutrient Loads (Avg. Score: 1.00)

NJ Specific Threats: 9.3.1.1 Chemical fertilizers and nutrient run-off changes the pH in streams, ponds and wetlands and causes eutrophication in inland waters and estuaries, which can make habitat unsuitable for specialist species and increase the risk of invasive and generalist species.

9.3.1.3 Organic nutrient inputs from aquaculture may, depending upon type and location, adversely impact intertidal and subtidal habitats and water bodies where there is insufficient tidal flushing.

Marine Turtles

9.3.3 Herbicides and Pesticides

(Avg. Score: 1.00)

NJ Specific Threats: 9.3.3.1

Pesticides degrade terrestrial and aquatic habitats, especially streams, ponds and wetlands. Aquatic wildlife are particularly sensitive to these contaminants, which can cause developmental and behavioral abnormalities and reproductive failure. Some contaminants may bioaccumulate in predatory fish and birds and disrupt reproduction.

9.4 Garbage and Solid Waste

9.4.1 Direct hazards to wildlife

(Avg. Score: 3.00)

NJ Specific Threats: 9.4.1.1

Wildlife may ingest garbage causing choking or impingement in the digestive system, or they may become physically entangled in it (e.g., plastic or abandoned fish nets); conditions that make them unable to feed or drink, cause them to suffocate or drown, or otherwise restrict the animal's movement making them more susceptible to predators, starvation or injury.

9.5 Air-Bourne Pollutants

9.5.1 Acid Rain

(Avg. Score: 2.00)

NJ Specific Threats: 9.5.1.1

Causes acidification of water bodies, resulting in changes to aquatic and marine communities and reducing biodiversity, and creating conditions that are unsuitable for some aquatic (freshwater and marine) and semi-aquatic species that are sensitive to pH shifts.

9.5.6 Herbicides and Pesticides

(Avg. Score: 1.00)

NJ Specific Threats: 9.5.6.1

May result in injury or direct mortality of non-target species.

9.6 Excess Energy

9.6.1 Light Pollution

(Avg. Score: 1.00)

NJ Specific Threats: 9.6.1.1

Artificial lighting can reduce suitability of adjacent habitat for species sensitive to artificial lights by disorienting wildlife, reducing foraging suitability or success, or increasing visibility to predators, resulting in reduced diversity and/or productivity of species in adjacent habitat.

9.6.2 Thermal Pollution

(Avg. Score: 2.00)

NJ Specific Threats: 9.6.2.1

Water temperature changes due to industrial discharge of heated water may impact species composition in the receiving waterbody. Species such as sea turtles and migrating fish may be attracted to the thermal plume and become more vulnerable to mortality during emergency shutdowns during cooler months.

9.6.3 Noise Pollution

(Avg. Score: 2.00)

NJ Specific Threats: 9.6.3.1

Acute and chronic noise pollution in and adjacent to terrestrial and aquatic (marine and freshwater) environments could disrupt normal behaviors of wildlife such as migration, communication, feeding, eluding predators, resting and breeding, etc.

11 Climate Change and Severe Weather

11.1 Habitat Shifting or Alteration

11.1.0 Macro- and Micro-Climate Alterations

(Avg. Score: 1.00)

NJ Specific Threats: 11.1.0.1

Alters native terrestrial and aquatic habitats at the macro- and micro-climate levels that can affect suitability for wildlife, in particular specialist species.

11.3 Temperature Extremes

11.3.1 Temperature extremes

(Avg. Score: 2.00)

NJ Specific Threats: 11.3.1.3

Temperature extremes of surface water and air degrades marine habitats and ecosystems, threatening marine wildlife. Such extremes also disrupt offshore currents and migratory patterns, species' ranges, and/or impact communities/food chains, all of which further impact the ecosystem.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Marine Turtles

- 11.3.1.4 Extremely low temperatures and/or extensive periods of unseasonably low temperatures during critical life history stages (e.g., hibernation, gestation/nesting) can alter animals' behaviors and decrease survivorship.

11.4 Storms and Flooding

11.4.1 Storms and flooding (Avg. Score: 2.00)

- NJ Specific Threats:** 11.4.1.1 Extreme storms and flooding events threaten aquatic and marine wildlife through habitat degradation and alteration, including alterations to off-shore or back-bay benthic conditions, damage to submerged aquatic vegetation (SAV), increased turbidity, altered water chemistry, and potentially displacement of aquatic and marine wildlife.

- 11.4.1.2 Potentially damage coastal habitats, including beach- and marsh-nesting bird habitats and intertidal wetlands, and can increase marsh erosion.

11.4.2 Increased rainfall (Avg. Score: 1.00)

- NJ Specific Threats:** 11.4.2.1 Extreme rain events threaten aquatic wildlife through habitat degradation and alteration, including alterations to benthic conditions, damage to submerged aquatic vegetation (SAV), increased turbidity, altered water chemistry, and potentially displacement of aquatic wildlife.

11.6 Phenology Shifting or Alteration

11.6.2 Phenology shifts related to predator-prey ecology (Avg. Score: 1.00)

- NJ Specific Threats:** 11.6.2.2 Shifts timing of species migration, breeding and hibernation, and available food resources, causes redistribution of species, or mortality for species that are unable to relocate due to their already isolated habitat or limited mobility.

11.6.3 Phenology shifts related to species redistribution (Avg. Score: 1.00)

- NJ Specific Threats:** 11.6.3.1 Shifts in timing of species migration, breeding and hibernation, and available food resources, as a result of wildlife range shifts driven by climate change.

12 Resource Management Needs

12.1 Resource information collection needs

12.1.1 Lack of initial baseline inventory (Avg. Score: 2.00)

- NJ Specific Threats:** 12.1.1.1 Lack of information regarding the distribution, connectivity and quality of SGCN habitats throughout the State, and where habitat enhancement/restoration will benefit SGCN and other wildlife.

- 12.1.1.2 Lack of information regarding the population dynamics and trends, habitat requirements and dispersal distances of the various age classes, and survivorship of SGCN throughout the State.

- 12.1.1.6 Lack of information regarding migratory pathways and response of wildlife to lights and noise associated with offshore wind turbines.

12.1.2 Lack of up-to-date existing information (Avg. Score: 2.00)

- NJ Specific Threats:** 12.1.2.1 Lack of (routine, regular, ongoing) surveys/assessments that provide up-to-date information regarding population trends or health, and/or status of fish, wildlife and/or their habitats.

12.1.3 Need to answer research question (Avg. Score: 1.00)

- NJ Specific Threats:** 12.1.3.1 There are significant knowledge gaps regarding distribution, dispersal, diseases, population trends, etc. of SGCN.

12.1.4 Need to develop new technique (Avg. Score: 1.00)

- NJ Specific Threats:** 12.1.4.1 Improve and evaluate survey methods for SGCN and their habitats; alter as needed.

12.4 Internal Policy & Procedures Reform

12.4.0 State Policy and Procedure Reform (Avg. Score: 1.00)

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Marine Turtles

- NJ Specific Threats:** 12.4.0.1 A species-by-species management focus as opposed to ecological systems and biodiversity generally has greater opportunity for unintended consequences for other species and may be less efficient in developing appropriate management actions.
- 12.4.0.4 Lack of a mandatory reporting system for lost crab traps threatens diamondback terrapins and other marine species due to persistent trapping/attraction of organisms by ghost pots.
- 12.4.0.6 Techniques for ecological management or restoration of shorelines are not fully developed or evaluated for effectiveness for target and non-target SGCN in coastal areas.

14 Education/ Outreach Needs

14.1 Education needs

- 14.1.1 Need for improved knowledge of fish and wildlife and their habitats (Avg. Score: 2.00)

- NJ Specific Threats:** 14.1.1.1 Lack of understanding of the importance of various SGCN habitats, their connectivity to similar habitats, and how planning decisions impact their quality and the wildlife that depend upon them.

14.2 Outreach needs

- 14.2.1 Need to improve specific understanding of agency/organization goals, objectives and ongoing wildlife conservation actions (Avg. Score: 2.00)

- NJ Specific Threats:** 14.2.1.2 Need to develop greater understanding of and support for efforts implemented to enhance SGCN habitat and biodiversity through various aquatic and riparian management practices.

- 14.2.1.3 Need to develop greater understanding of and support for efforts implemented to enhance SGCN habitat and biodiversity through various coastal management practices.

- 14.2.1.4 Need to develop greater understanding of and support for efforts implemented to maintain disturbance-free habitats that allow coastal wildlife populations to thrive alongside human residential and recreational uses.

15 Administrative Needs

15.2 Organizational/program planning needs

- 15.2.3 Need for multi-state, regional and landscape scale planning (Avg. Score: 2.00)

- NJ Specific Threats:** 15.2.3.1 State governance and financial structures can sometimes inhibit conservation planning and implementation at the regional and landscape-scales that are often more effective at setting priorities and meeting species and habitat conservation goals and objectives.

Actions to address the Threats and Action Drivers associated with this Conservation Target:

1 Coordination and Administration

1.2 Incentives

1.2.1 Incentives

- 1.2.1.3 Secure and promote the protection/restoration of critical coastal habitats (beach/dune, scrub-shrub, forest, wetland, marsh, and marine and estuarine habitats) that provide nesting, migrating and wintering areas for SGCN birds, fish and other coastal SGCN through incentive programs.

- 1.2.1.14 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to NJ landowners and land managers (including farmers, foresters and developers) for reducing or eliminating the use of herbicides and pesticides, and implementing more ecologically safe strategies when using such products.

Marine Turtles

- 1.2.1.25 Create incentives (non-monetary and/or monetary) within State regulations to assist and programs to deliver those incentives to aquaculture growers to relocate, for example, from intertidal to subtidal lease areas through buyouts of leases or microloans, and/or promoting on-lease conservation measures used by aquaculture growers (such as the implementation of conservation easements, use of living shorelines, incorporation of BMPs for habitat protection, etc.) for maintaining and enhancing healthy, SGCN-associated terrestrial and aquatic habitats and associated riparian habitats, and to minimize (if not avoid) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity

2 Direct Management of Natural Resources

2.10 Planting/seeding

2.10.0 Planting/seeding strategies for terrestrial or aquatic habitat creation or restoration

- 2.10.0.1 Prevent or ameliorate near-term impacts of climate change throughout the State by developing, implementing and monitoring/evaluating habitat management strategies that will establish/improve habitat resilience (e.g., shorelines of the coast and Delaware Bay, forested habitats of the Pinelands and Skylands) that benefits wildlife inhabiting these areas, in particular within the coastal and Delaware Bay areas.
- 2.10.0.4 Restore and/or enhance suitable travel corridors connecting conserved habitats for SGCN by restoring unsuitable (or less optimal) habitats.
- 2.10.0.5 Implement habitat restoration and/or enhancement activities that include the creation of vegetative buffers between sensitive habitats (e.g., aquatic systems) and human-inhabited areas (e.g., residences, parks, etc.) and that is conducted during appropriate timing to avoid sensitive periods (e.g., nesting, denning, roosting) while minimizing (if not avoiding) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity
- 2.10.0.6 Expand the acreages and enhance the effective size of SGCN habitats by restoring adjacent, less optimal or unsuitable, habitats.
- 2.10.0.7 Restore/reclaim and enhance degraded rare species habitats through strategic revegetation and management efforts for documented/target SGCN.
- 2.10.0.8 Protect significant natural and/or unique communities by implementing best management practices when conducting habitat restoration strategies.
- 2.10.0.9 Restore and/or enhance riparian and floodplain habitats, inland wetland habitats (marsh, vernal pool, fen, emergent shrubland, forest), and other aquatic habitats (including open waters) and/or biologically appropriate buffers to minimize degradation, alteration and/or changes in hydrology and subsequent disturbances to and behavioral changes of wildlife (e.g., restoring biologically appropriate buffers, revegetation or restoration efforts, etc.).
- 2.10.0.10 Minimize the loss of important habitats (e.g., coastal scrub-shrub and grassy habitats, high and low marsh habitats, etc.) that provide nesting, migrating, and wintering areas for SGCN birds and other coastal and marsh-dependent species through habitat restoration efforts.
- 2.10.0.11 Restore and/or enhance critical migratory terrestrial and aquatic habitats (e.g., beach, grasslands, forest, scrub-shrub, etc.) for songbirds, raptors, shorebirds, waterfowl, bats and invertebrates through habitat restoration efforts and expand habitat restoration to adjacent private lands to increase the effective size of the habitat.

Marine Turtles

- 2.10.0.14 Implement best management practices (BMPs), protective strategies and guidelines for restoring and enhancing healthy, SGCN-associated habitats while minimizing (if not avoiding) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
- 2.10.0.22 Restore and/or enhance terrestrial and aquatic habitats to promote the regeneration of native vegetation and enhance structural diversity to benefit SGCN (e.g., vegetative buffers of aquatic systems, allow coarse, woody debris to remain in terrestrial, aquatic and riparian habitats to provide shelter, riparian stabilization and necessary microclimates, plant native trees, shrubs and grasses, etc.).

2.11 Vegetation management

2.11.0 Vegetation management strategies for terrestrial or aquatic habitat creation or restoration

- 2.11.0.16 Prevent or ameliorate near-term impacts of climate change throughout the State by developing, implementing and monitoring/evaluating habitat management strategies that will establish/improve habitat resilience (e.g., shorelines of the coast and Delaware Bay, forested habitats of the Pinelands and Skylands) that benefits wildlife inhabiting these areas, in particular within the coastal and Delaware Bay areas.
- 2.11.0.35 Increase structural habitat diversity by managing vegetation adjacent to aquatic habitats in a manner that provides a buffer from runoff and erosion and a microclimate to stabilize seasonal temperatures to benefit a variety of aquatic and semi-aquatic species.
- 2.11.0.44 Manage phragmites adjacent to coastal marshes of interest, in particular those that are within underdeveloped areas and are unprotected, through herbicide application and water management to improve resiliency of the marshes to sea level rise.

2.12 Water management

2.12.1 Ditch plugs

- 2.12.1.1 Implement best management practices (BMPs), protective strategies, and guidelines for ditch plugging to maintain and enhance healthy, resident and migratory SGCN-associated habitats while minimizing (if not avoiding) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.

3 Data Collection and Analysis

3.0 General fish and wildlife research, survey or monitoring

3.0.0 Research, survey or monitoring - general fish and wildlife needs

- 3.0.0.1 Conduct long-term monitoring of resident and migratory SGCN populations using standardized survey protocols to determine the variables that may impact their long-term persistence in the State (e.g., population viability, distribution, dispersal, home range and habitat use, travel corridors, food availability, vulnerability to pollutants and disease, etc.). Compile this information to determine the likely causes of population declines and to understand metapopulation dynamics. Provide data to NJ DEP for integration into the Biotics database, Landscape Project and permitting review processes.
- 3.0.0.2 Identify (through literature searches, review of available data, enlistment of habitat and/or species experts, etc.) where data gaps exist regarding SGCN distribution, and their critical and supportive habitats. Conduct surveys using standardized survey protocols to acquire baseline data, and provide the data to NJ DEP for integration into the Biotics database, Landscape Project Map and permitting review processes.

Marine Turtles

- 3.0.0.5 Gather baseline data on resident and migratory SGCN (in particular migratory species for which New Jersey habitats are significant), terrestrial, freshwater and marine species, regarding the location and condition of their critical and supporting habitats (e.g., foraging, roosting, nesting/breeding, stopover, migration paths, etc.), and population demography (e.g., productivity, survival, dispersal). Compile this information into a database that includes descriptions of the conditions of the habitats and species, and a GIS component of the locations of these important habitats. Provide data to NJ DEP for integration into the Biotics database, Landscape Project and permitting review processes.
- 3.0.0.6 Conduct long-term studies on resident and migratory SGCN to determine if there are changes to the populations' demography (productivity, survival, dispersal) and/or to their critical and/or supporting habitats (i.e., diminishing in value, acreage or connectivity, etc.), in particular changes that would not maintain SGCN at viable levels for species populations. Update data and GIS maps; provide updated information to NJ DEP for integration into the Biotics database, Landscape Project and permitting review processes.
- 3.0.0.7 Collect baseline data to document species distributions, in particular SGCN, and current habitat for future analysis of possible distribution shifting as a result of habitat shifting or alteration associated with climate change impacts.
- 3.0.0.8 Conduct long-term studies and compare baseline metrics of documented species distributions and associated habitats to identify possible species and/or habitat shifting or alteration associated with climate change impacts.
- 3.0.0.13 Investigate the effects of pesticides, herbicides and other biological controls on SGCN and their critical and supporting habitats. Evaluate and modify management practices as appropriate.
- 3.0.0.21 Conduct long-term monitoring to determine the impacts of the fish and shellfish aquaculture industries on focal and non-focal SGCN and their habitats (i.e., NJ bays, estuaries, ocean areas). Assess the success of management actions implemented to minimize these impacts and make specific recommendations to the NJ DEP regarding how such management efforts may be improved to minimize harm to wildlife and their habitats.
- 3.0.0.23 Identify (through wildlife and aquatic system surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) and research water quality parameters for all [types of] aquatic systems for various SGCN populations.
- 3.0.0.27 Evaluate the effectiveness of strategies to restrict human activity (e.g., recreational, maintenance work, etc.) from sensitive habitats/areas such as avian nesting sites, reptile and amphibian breeding areas (nesting or gestation/birthing and breeding pools, respectively), and bat hibernacula, and federal buffers for marine mammals through research and monitoring. Develop and provide NJ DEP and other appropriate governing agencies/commissions a summary of findings and recommendations to improve such efforts.

3.2 Research, survey or monitoring - fish and wildlife populations

3.2.0 Data deficiency

- 3.2.0.1 Division of Fish and Wildlife should maintain a robust, up-to-date database and mapping of species occurrences.
- 3.2.0.2 Conduct species status assessments using the Delphi Technique and review of available data and literature on fish and wildlife (including marine animals) to maintain accurate legal status categorization of native wildlife.
- 3.2.0.16 Conduct long-term monitoring to evaluate the success of marine conservation zone designations on marine SGCN.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Marine Turtles

- 3.2.0.17 Conduct monitoring at constructed wind farms (within or outside of NJ) to assess the impacts on migratory species (birds, bats, insects) and determine if NJ's land use planning efforts and/or smart-growth plans need to be revised.
 - 3.2.0.19 Develop, implement and evaluate aquaculture practices in coastal areas that are compatible with the recovery of SGCNs and industry needs.
 - 3.2.1 Abundance determination
 - 3.2.1.1 Identify (through literature searches, review of available data, enlistment of habitat and/or species experts, etc.) population abundance and trends for SGCN using standardized survey protocols. Provide data to NJ DEP for integration into the Biotics database, Landscape Project Map and permitting review processes.
 - 3.2.3 Baseline inventory
 - 3.2.3.2 Identify (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) suitable areas for marine conservation zone designation and promote policies and regulations that support the designation of such areas.
 - 3.2.7 Population assessment
 - 3.2.7.1 Conduct species status assessments using the Delphi Technique and review of available data and literature on fish and wildlife (including marine animals) to maintain accurate legal status categorization of native wildlife.
- 3.3 Research, survey or monitoring - habitat
 - 3.3.1 Baseline inventory
 - 3.3.1.5 Identify areas (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) where habitat restoration and/or enhancement would benefit wildlife SGCN.
 - 3.3.1.11 Identify (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) and investigate the quality and importance of areas with submerged aquatic vegetation to benefit waterfowl, finfish, and shellfish species.
 - 3.3.1.15 Conduct a literature review to determine the potential impacts of underwater vibrational noise on marine mammals, sea turtles and fishes emanating from offshore wind turbines during routine operations.
 - 3.3.1.16 Gather "best information" for spatial modeling and update/create a current model/depiction of anticipated habitat shifts from sea-level rise, flooding, etc.
 - 3.3.1.27 Develop a matrix that lists every commercial and recreational fishery and aquaculture facility that operates in state waters and for each fishery listed, provide details regarding their fishing seasons, gear descriptions, locations and number of fishers. Add a GIS component to overlay species of concern and sensitive areas.
 - 3.3.1.29 Identify coastal wildlife habitats unimpacted by development and/or at greatest risk of habitat loss to help guide enlightened coastal stabilization efforts (i.e., use of soft stabilization) to reduce the impacts on wildlife and their habitats.
 - 3.3.1.30 Using available data, model a comprehensive Marine Submerged Aquatic Vegetation Mapping project (similar to the Statewide freshwater wetlands mapping project) of sufficient quality and integrity that it could support the NJ DEP's coastal regulatory programs. Continue to conduct surveys to gather additional data to test and improve the model.
 - 3.3.2 Monitoring

Marine Turtles

- 3.3.2.2 Conduct long-term monitoring of resident and migratory SGCN habitats using standardized survey protocols to determine changes in habitat quality/suitability and threats (e.g., habitat loss and degradation, increased edge habitat, water quality) and other variables that may impact their long-term persistence in the State and to provide information needed for determining causes of population declines and understanding metapopulation dynamics.
- 3.3.2.3 Continue to update wildlife and habitat databases and revise models of critical SGCN habitats using the most current data available and where lacking, develop new SGCN and/or habitat models as data on species habitat requirements and applicable GIS data layers become available.
- 3.3.2.5 Conduct long-term monitoring of water quality of SGCN aquatic habitats (and aquatic systems feeding into those habitats) to evaluate protection and management efforts to reduce, if not eliminate, chemical contamination, siltation, eutrophication, and other forms of pollution/contamination of aquatic systems.
- 3.3.2.14 Research and evaluate the effectiveness of water quality management practices on water-dependent and semi-dependent SGCN, particularly those practices associated with permitting or mitigation actions.
- 3.3.2.23 Conduct long-term monitoring of marine submerged aquatic vegetation and update the Marine Submerged Aquatic Vegetation Mapping [to be developed under baseline activities] to provide the NJ DEP's coastal regulatory programs with the most current data.

3.5 Techniques development

3.5.3 Habitat restoration methods

- 3.5.3.8 Develop best management practices (BMPs), protective strategies, and guidelines for maintaining and enhancing healthy, SGCN-associated terrestrial and aquatic habitats and associated riparian habitats, and to minimize (if not avoid) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
- 3.5.3.11 Develop strategies to protect native terrestrial and aquatic habitats and dependent SGCN species from the identified threats.
- 3.5.3.12 Develop management actions to minimize the documented adverse impacts and reduce risks of potential adverse impacts of aquaculture on migratory shorebirds and other SGCN, including waterfowl, finfish, and shellfish and their habitats.
- 3.5.3.13 Developing engineering standards that embrace both shore protection/resiliency and habitat creation for shorebirds, horseshoe crabs and other coastal species along the Atlantic and Delaware Bay coasts.
- 3.5.3.14 Develop aquaculture practices in the coastal areas that are compatible with the recovery of SGCN.
- 3.5.3.16 Develop/improve strategies to restrict human activity (e.g., recreational, maintenance work, etc.) from sensitive habitats/areas such as avian nesting sites, reptile and amphibian breeding areas (nesting or gestation/birthing and breeding pools, respectively), and bat hibernacula, and federal buffers for marine mammals. Methods may include, but are not limited to, managing the landscape to deter access, diverting recreational and other activities from sensitive areas during critical periods through permit processes or blocking access (trails, roads, etc.), posting (if appropriate), increasing law enforcement presence, conducting management activities at appropriate times to avoid disturbance and/or harm to wildlife (e.g., habitat management, beach raking, etc.), and decreasing noise and light pollution.
- 3.5.3.27 Conduct an assessment and develop a location list of available equipment for boom deployment during oil spills.

Marine Turtles

3.5.3.28 Conduct baseline surveys to determine areas in Barnegat and Great bays appropriate for eelgrass restoration. Develop necessary techniques to implement restoration efforts.

3.5.4 Fish and wildlife research, survey and management techniques

3.5.4.11 Develop aquaculture practices in the Delaware Bay that are compatible with the recovery of SGCN.

3.5.4.12 Investigate and develop strategies to reduce "by-catch" of SGCN and other non-target species. Present findings and strategies to NJ DEP and conservation organizations for review and possible implementation. Develop a database documenting by-catch for use in management planning decisions.

3.5.4.13 Develop/improve strategies to restrict human activity (e.g., recreational, maintenance work, etc.) from sensitive habitats/areas such as avian nesting sites, reptile and amphibian breeding areas (nesting or gestation/birthing and breeding pools, respectively), and bat hibernacula, and federal buffers for marine mammals. Methods may include, but are not limited to, managing the landscape to deter access, diverting recreational and other activities from sensitive areas during critical periods through permit processes or blocking access (trails, roads, etc.), posting (if appropriate), increasing law enforcement presence, conducting management activities at appropriate times to avoid disturbance and/or harm to wildlife (e.g., habitat management, beach raking, etc.), and decreasing noise and light pollution.

3.5.4.15 Investigate the success of management strategies used to protect and/or enhance SGCN populations and when appropriate, aid in identifying failures/resource problems and issues, and developing new strategies.

3.5.4.17 Investigate new, non-invasive techniques for SGCN population evaluation through literature review, expert opinion, trial studies (if low risk), etc.

3.5.4.19 Develop reliable, standardized survey and monitoring protocols for SGCN species, for which none currently exist, and their habitats.

3.5.4.22 Investigate the efficacy of implementing strategies to minimize or eliminate disturbances to all SGCN (i.e., beyond their federal requirements) during military activities.

3.5.4.23 Reduce the impacts of entrainment, impingement and thermal discharge at power plants by working with conservation partners, academia, etc. to ensure that best available technologies are utilized wherever possible.

4 Education

4.1 Educator/Instructor training

4.1.1 Aquatic resource education

4.1.1.1 Provide educational resources and training programs to teachers in aquatic resource education that includes information regarding climate change and sea-level rise for incorporation into the class curriculum and/or as the focus of school field trips.

4.1.1.2 Provide educational resources and training programs to teachers in aquatic resource education that includes information regarding how coastal stabilization negatively impacts wildlife by preventing natural processes for incorporation into the class curriculum and/or as the focus of school field trips.

6 Land and Water Rights Acquisition and Protection

6.0 Acquisition and protection strategies

6.0.0 Combined acquisition and protection strategies

Marine Turtles

- 6.0.0.5 Secure and protect critical coastal habitats (beach/dune, scrub-shrub, forest, wetland, marsh, and marine and estuarine habitats) that provide nesting, migrating and wintering areas for SGCN birds, fish and other coastal SGCN through an appropriate combination of fee title, non-fee title and landowner agreements.

6.3 Conservation area designation

6.3.0 Conservation area designation strategies

- 6.3.0.3 Increase the protection of riparian and floodplain habitats, inland wetland habitats (marsh, vernal pool, fen, emergent shrubland, forest), and other aquatic habitats (including open waters) and/or biologically appropriate buffers to minimize degradation through conservation area designations.
- 6.3.0.5 Promote the protection of critical coastal habitats (beach/dune, scrub-shrub, forest, wetland, marsh, and marine and estuarine habitats) that provide nesting, migrating and wintering areas for SGCN birds, fish and other coastal SGCN through conservation area designations.
- 6.3.0.9 Promote the protection of critical marine habitats for SGCN through conservation area designations.

7 Law Enforcement

7.1 Law enforcement

7.1.3 Sub-national Level

- 7.1.3.1 Enforce slow wake zones and marine conservation area regulations to protect aquatic vegetation.
- 7.1.3.2 Increase the number of law enforcement officers tending to wildlife issues to a reasonable number to sufficiently cover the State and marine waters.

7.1.4 Scale Unspecified

- 7.1.4.1 Improve enforcement of policies and/or regulations that promote the reduction of run-off and point and non-point source pollution into NJ's aquatic systems (streams, rivers, lakes/ponds, bays, ocean, wetlands, etc.).
- 7.1.4.4 Improve enforcement of policies/regulations aimed at protecting and preserving critical coastal and marsh habitats, and secure mitigation for losses that create an environmental benefit.
- 7.1.4.5 Enforce current policies and/or regulations to increase the ability to protect and preserve coastal habitats (beach/dune, scrub-shrub, forest, wetland, marsh, marine and estuarine habitats) that provide nesting, migrating, and wintering areas for SGCN birds, fish and other coastal SGCN, and implement and enforce amended policies/regulations.
- 7.1.4.7 Increase law enforcement presence to enforce regulations governing recreational activities (e.g., the use of personal watercraft and off road vehicles, caving, rock climbing, etc.) on conserved lands and within other sensitive habitats, and discourage activities that cause harm or disturbance to vegetation, wetlands, fish and wildlife.
- 7.1.4.11 Implement and enforce policies/regulations that will increase the ability to protect and preserve coastal habitats (beach/dune, scrub-shrub, forest, wetland, marsh, and marine and estuarine habitats) that provide nesting, migrating, and wintering areas for SGCN birds, fish and other coastal and aquatic SGCN.
- 7.1.4.12 Implement policies and/or regulations that protect significant natural and/or unique communities in perpetuity.

Marine Turtles

- 7.1.4.17 Improve the enforcement of policies and/or regulations that protect wetlands, riparian and floodplain areas, and aquatic habitats (including open waters).
- 7.1.4.20 Implement policies and/or regulations with the objective of reducing "by-catch" of SGCN and other non-target species.

8 Outreach

8.1 Partner/stakeholder engagement

8.1.0 Partner/stakeholder engagement strategies

- 8.1.0.1 Coordinate research efforts among government agencies, non-government conservation partners and other stakeholders to investigate the impacts of aquaculture on migratory shorebirds, waterfowl, finfish, shellfish and other SGCN and their habitats, to determine relative effects of farming locations and aquaculture techniques, and to evaluate management actions to minimize such impacts.
- 8.1.0.2 Develop a team of personnel from government entities, conservation organizations and other stakeholders engaged in oil/gas spill response for marine and freshwater habitats to develop a feasible plan for oil spill response and/or to amend NJ's current oil spill response plan that clearly outlines each organizations responsibilities and an assessment and location list of available equipment for boom deployment during oil spills.
- 8.1.0.3 Develop an outreach team of personnel from government entities, conservation organizations and other stakeholders to work together to collaboratively use social media campaigns to grow a constituency of NJ residents who have an elevated ecological and climate consciousness.
- 8.1.0.5 Engage government agencies, conservation partners and other stakeholders in discussions focused on establishing a long-term monitoring program for submerged aquatic vegetation distribution throughout Barnegat, Little Egg Harbor and Great Bay.
- 8.1.0.6 Engage government agencies, conservation partners and other stakeholders in discussions focused on sharing information regarding coastal and marine critical wildlife habitats, developing comprehensive mapping to assist in reducing impacts of energy production activities, and establishing a long-term monitoring program to update the data. Ensure this information is available to appropriate personnel for planning or response measures.
- 8.1.0.7 Engage government agencies, conservation partners and other stakeholders to collaboratively develop and implement an extensive educational/outreach program targeting coastal boating and recreation communities about eelgrass/widgeongrass, their impacts on marine environments, and the value, fragility and location of submerged aquatic vegetation beds and habitats.
- 8.1.0.11 Engage government agencies, conservation partners and other stakeholders to collaboratively develop and implement an extensive educational/outreach program targeting sportsmen's organizations and fisheries, as well as public constituents, addressing the unintended effects abandoned fishing gear, tackle and crab pots can have on wildlife, and promote the collection and/or reporting of abandoned items and their locations.
- 8.1.0.12 Engage government agencies, conservation partners and other stakeholders to collaboratively develop and implement an extensive educational/outreach program targeting sportsmen's organizations and fisheries, as well as public constituents, addressing the unintended effects fishing gear and tackle can have on wildlife.
- 8.1.0.14 Engage DOD in a constructive dialogue regarding strategies to minimize or eliminate disturbances to all SGCN (i.e., beyond their federal requirements) during military activities.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Marine Turtles

- 8.1.0.19 Engage government agencies, conservation partners and other stakeholders to collaboratively develop a list of important projects, targeting SGCN and/or their habitat, as a guide for graduate student research. Distribute the list and contact information to all State colleges and universities.
- 8.1.0.23 Work with the NJ Division of Fish and Wildlife's Bureau of Marine Fisheries, local recreational and commercial fisheries associations, and fishers to develop a process that encourages fishermen to report the number and location of lost pots to the appropriate state agency/agencies at the end of the harvest season.
- 8.1.0.24 Engage government agencies, conservation partners and other stakeholders in constructive dialogue regarding the importance of providing and methods to provide technical support for carrying out restoration and management practices aimed at increasing structural habitat diversity.
- 8.1.0.25 Provide technical support to public landowners and land managers for carrying out restoration and management practices aimed at increasing structural habitat diversity.
- 8.1.0.30 Encourage government agencies and conservation partners to advise members of the relevant scientific community of the need for specific studies, reports or investigations targeting the data-deficiency regarding SGCN and/or their habitats.
- 8.1.0.31 Encourage government agencies, conservation partners and other stakeholders to work together to create GIS mapping for marine wildlife and habitat to assist in reducing impacts of energy production activities. Ensure this information is available to appropriate personnel for planning or response measures.
- 8.1.0.36 Reduce "by-catch" of SGCN and other non-target species by enlisting voluntary cooperation to use exclusion devices, appropriate trap sizes, etc. through education and outreach.
- 8.1.0.40 Encourage researchers, land managers, naturalists and enthusiasts to follow proper procedures for the coordination and/or permitting of research/management activities involving wildlife and sensitive habitats, and discourage activities that alter vegetation or wetlands, or cause harm or disturbance to wildlife.
- 8.1.0.42 Engage citizens, wildlife observers and photographers through discussions and distributable information regarding the importance of and encouraging implementing responsible and ethical behavior when observing wildlife by developing an alliance of wildlife photographers and widely circulating recommendations on how to reduce impact.
- 8.1.0.46 Form cooperative partnerships with dredging companies to facilitate habitat creation and enhancement within project areas, and to identify seasonal timing of activities that would minimize impacts to wildlife and their habitats.
- 8.1.0.47 Form cooperative partnerships with energy companies to facilitate habitat creation and enhancement away from and outside of project areas, the restoration of appropriate habitats within project areas (e.g., rights-of-way could benefit butterflies and some bird species), and to identify seasonal timing of activities that would minimize impacts to wildlife.
- 8.1.0.48 Form cooperative partnerships with transportation and shipment agencies and companies to facilitate habitat creation and enhancement away from and outside of project areas and to identify seasonal timing of activities that would minimize impacts to wildlife.
- 8.1.0.49 Reduce the impacts of entrainment, impingement and thermal discharge at power plants by working with conservation partners, academia, etc. to ensure that best available technologies are utilized wherever possible.

8.3 WSFR program/subprogram outreach

8.3.0 WSFR program/subprogram outreach strategies

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Marine Turtles

- 8.3.0.2 Utilize WSFR grant funds, in combination with alternate funding sources as needed, to implement an extensive educational/outreach program consisting of displays, fliers, list-serve mailings, Facebook posts and speaking engagements with sportsmen's organizations and fisheries, as well as public constituents, addressing the unintended effects fishing gear and tackle can have on non-target species.
- 8.3.0.4 Utilize WSFR grant funds, in combination with alternate funding sources as needed, to implement an extensive educational/outreach program consisting of displays, fliers, list-serve mailings, Facebook posts and speaking engagements with sportsmen's organizations and fisheries addressing the unintended effects abandoned fishing gear, tackle and crab pots can have on wildlife.
- 8.3.0.8 Develop and provide (or otherwise make publicly available) educational programs and/or materials to educate recreationists and encourage landowners to eliminate garbage in the vicinity of suitable wildlife habitat, in particular SGCN habitat. Information should include the detrimental impacts garbage may have on various wildlife species.
- 8.3.0.10 Develop and provide (or otherwise make publicly available) educational programs and/or materials to educate landowners and NJ citizens on threats to fish and wildlife (including marine animals).
- 8.3.0.12 Promote awareness of WSFR (Wildlife and Sportfish Restoration) Outreach/Awareness grants, an important funding source for conservation among hunters and anglers as well as the general public.
- 8.3.0.13 Conduct an educational campaign to encourage observer ethics and respect for wildlife and natural habitat.
- 8.3.0.14 Develop an educational outreach program using a variety of media to ensure maximizing the distribution of information, in particular targeting sportsmen's organizations and fisheries, regarding the unintended effects abandoned fishing gear, tackle and crab pots can have on wildlife, including non-target species.
- 8.3.0.15 Develop an educational outreach program for citizens regarding: 1) The impacts to wildlife as a result of plastic bags entering aquatic and marine systems, 2) The importance of decreasing the amount of plastic shopping bags in circulation, 3) The need for businesses to voluntarily charge for bags or reimburse people for using their own non-plastic bags, and 4) The need for their assistance through public pressure on legislators and government to pass legislation that limits the amount of plastic shopping bags in circulation.
- 8.3.0.18 Develop an Eelgrass/Widgeon Grass education and mapping program to educate coastal boating and recreation communities about the value, fragility and location of submerged aquatic vegetation beds and habitats.
- 8.3.0.20 Develop an educational outreach program for landowners, particularly those in the coastal and bay areas, boaters, and the general public with information about the negative impacts on marine wildlife and habitats, and steps they can implement to reduce these impacts.
- 8.3.0.21 Develop an educational outreach program for the general public, in particular those within and adjacent to coastal and riparian areas on the realities of sea-level rise to help citizens living in these areas understand how this will affect them, how coastal stabilization negatively impacts wildlife by preventing natural processes, and how their decisions impact species.
- 8.3.0.22 Post signage in sensitive coastal habitats (e.g., bird and Diamondback Terrapin nesting areas) to educate the boating community on responsible use of these areas.
- 8.3.0.23 Develop an educational outreach program for coastal municipalities and residents to promote an understanding of the benefits of soft structures over hard structures for shoreline stabilization.

Marine Turtles

- 8.3.0.29 Develop educational outreach programs for local decision-makers, land developers, landowners and citizens about the importance of maintaining a vegetative buffer along riparian and aquatic habitats to intercept storm water runoff and minimize soil erosion.
- 8.3.0.32 Develop an educational outreach program for landowners and citizens on the threats that herbicides and pesticides pose to aquatic systems and wildlife, and to promote safer usage of such products.

9 Planning

9.1 Land use planning

9.1.0 Land use planning strategies

- 9.1.0.1 Develop smart-growth plans and critical habitat designations that consider SGCN life history requirements and habitat needs, connectivity and health of those habitats, and minimizes human-associated disturbances to those habitats and SGCN inhabiting them.
- 9.1.0.3 Develop a plan that directs the creation of impervious surfaces away from and to minimize impacts on aquatic systems and critical terrestrial habitats. The plan should also include strategies to increase the resiliency of aquatic and critical terrestrial habitats to threats and stressors that would impact the reproduction and survival of wildlife.
- 9.1.0.8 Develop a plan that focuses on strategies for oil pipelines to avoid sensitive habitats that would be highly impacted by oil spills.
- 9.1.0.17 Develop a plan to minimize nutrient and effluent loads from aquaculture practices.
- 9.1.0.26 Develop a plan to minimize any adverse impacts of aquaculture farming techniques and structures on freshwater and intertidal habitats.
- 9.1.0.29 Provide GIS or related data, maps, resource inventories, as well as related training, pertaining to the SWAP and it's recommended conservation actions for use or consideration by State, County or municipal planning agencies.
- 9.1.0.32 Incorporate aquatic habitat connectivity and water quality/effluent standards into local and state aquaculture plans and BMPs.
- 9.1.0.33 Review the species, threats, action successes, and habitats, and work with partners to revise the 2017 State Wildlife Action Plan for the 2025 resubmittal.

9.3 Species and habitat management planning

9.3.1 Species management planning

- 9.3.1.3 Develop a management plan to restrict human activity (e.g., recreational, maintenance work, etc.) from sensitive habitats/areas such as avian nesting sites, reptile and amphibian breeding areas (nesting or gestation/birthing and breeding pools, respectively), and bat hibernacula, and federal buffers for marine mammals.
- 9.3.1.6 Amend NJ's current oil spill response plan to 1) expand the geographic area addressed, 2) expand the targeted species impacted and in need of recovery, and 3) revise current and integrate new actions into the plan as needed.
- 9.3.1.9 Develop a management plan incorporating the effects of pesticides, herbicides and other biological controls on SGCN and their critical and supporting habitats.
- 9.3.1.15 Develop a plan to minimize the impacts of oil spills on wildlife and their habitats.
- 9.3.1.16 DOD and appropriate state agencies work together to improve DOD Integrated Natural Resource Management Plans (INRMP) to develop strategies to minimize or eliminate disturbances to all SGCN (i.e., beyond their federal requirements) during military activities and to improve SGCN habitat and presence.

Marine Turtles

9.3.2 Listed species recovery planning

- 9.3.2.1** Develop proactive species recovery plans for all endangered and threatened species including guidance and objectives pertaining to critical and supporting habitat to meet and maintain recovery goals.

9.3.3 Habitat management planning

- 9.3.3.6** Develop a management plan for maintaining and enhancing healthy, SGCN-associated terrestrial and aquatic habitats and associated riparian habitats, and to minimize (if not avoid) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
- 9.3.3.10** Develop a management plan to ensure SGCN populations' persistence based on long-term monitoring of resident and migratory SGCN populations and their habitats.
- 9.3.3.12** Develop a management plan using engineering standards that embrace both shore protection/resiliency and habitat creation for shorebirds, horseshoe crabs and other coastal species along the Atlantic and Delaware Bay coasts.
- 9.3.3.13** Develop a management plan that will establish/improve habitat resilience (e.g., shorelines of the coast and Delaware Bay, forested habitats of the Pinelands and Skylands) that benefits wildlife inhabiting these areas and prevents or ameliorates near-term impacts of climate change throughout the State, but in particular within the coastal and Delaware Bay areas.
- 9.3.3.14** Develop a management plan using aquaculture practices in coastal areas that are compatible with the recovery of SGCN.
- 9.3.3.15** Develop a management plan incorporating the effects of pesticides, herbicides and other biological controls on SGCN and their critical and supporting habitats.
- 9.3.3.16** Develop a management plan to restrict human activity (e.g., recreational, maintenance work, etc.) from sensitive habitats/areas such as avian nesting sites, reptile and amphibian breeding areas (nesting or gestation/birthing and breeding pools, respectively), and bat hibernacula, and federal buffers for marine mammals.
- 9.3.3.18** In cooperation with species and habitat experts, develop management plans for significant natural and/or unique communities, in particular those supporting SGCN, and provide the information to the landowners/managers (federal, state and local government agencies or non-government organization) for review and implementation.
- 9.3.3.21** Develop a rapid response plan for various scenarios (e.g., insect infestations destroying native habitat, wildlife disease) to be implemented upon exotic pathogen introduction or incident.
- 9.3.3.24** Develop a plan to improve the enforcement of policies and/or regulations that protect wetlands, riparian and floodplain areas, and aquatic habitats (including open waters).
- 9.3.3.25** Develop a habitat management plan focused on areas important to near-shore, coastal species (e.g., herring, sturgeon, terrapin, nesting birds) that prioritizes these areas to direct resources to minimize the impacts of sea-level rise, flooding and storms (including extreme rain events) such as increased erosion of beach, mudflat and marsh habitats, and the increased risk of saltwater intrusion into freshwater habitats. Gather "best information" for spatial modeling of anticipated habitat shifts from sea-level rise, flooding, etc.
- 9.3.3.28** Develop a plan to minimize the impacts of oil spills on wildlife and their habitats.

Marine Turtles

- 9.3.3.32 DOD and appropriate state agencies work together to improve DOD Integrated Natural Resource Management Plans (INRMP) to develop strategies to minimize or eliminate disturbances to all SGCN (i.e., beyond their federal requirements) during military activities and to improve SGCN habitat and presence.

11 Technical Assistance

11.1 Environmental review

11.1.1 Review of proposed projects

- 11.1.1.1 Use Biotics database and Landscape Project Mapping in regulatory reviews to ensure protection by applicable laws and regulations.
- 11.1.1.2 Develop smart-growth plans and critical habitat designations that consider SGCN life history requirements and habitat needs, connectivity and health of those habitats, and minimize human-associated disturbances to those habitats and the SGCN inhabiting them.
- 11.1.1.7 Review proposed construction or other work projects and permit applications, provide recommendations on how to best avoid disturbing sensitive species, and identify actions not permitted.
- 11.1.1.8 Review proposed research projects and permit applications, provide recommendations on how to best avoid disturbing sensitive species, and identify actions not permitted.
- 11.1.1.11 Use the best available science (species data, habitat present, site layout options, etc.) when conducting regulatory reviews of proposed offshore energy projects relating to drilling, extraction and distribution of petroleum and gas products to reduce habitat destruction and minimize impacts on wildlife.
- 11.1.1.13 Use the best available science (species data, habitat present, wind farm layout options, wind blade impacts on migratory species, location of migration routes, etc.) when conducting regulatory reviews of proposed wind farm projects to minimize impacts on migratory and resident wildlife and reduce habitat fragmentation.

11.1.2 Review of proposed policies and plans

- 11.1.2.3 Incorporate aquatic habitat connectivity and water quality/effluent standards into the environmental review process to help establish policies and plans that minimize the impact of aquaculture on fish and wildlife.

11.2 Technical assistance

11.2.0 Assorted technical assistance strategies

- 11.2.0.1 Provide technical support to private and public landowners and land managers for carrying out restoration and management practices aimed at increasing structural habitat diversity.
- 11.2.0.5 Provide educational resources, training programs, and expert guidance to private and public landowners and land managers on the threats that herbicides and pesticides pose to aquatic systems and wildlife, and to promote safer usage of such products.
- 11.2.0.8 Provide educational resources, training programs, and on-the-ground guidance to public and private landowners and land managers on habitat creation and enhancement strategies that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife.
- 11.2.0.9 Provide educational resources, training programs, and on-the-ground guidance to municipalities, land developers, and other land managers and private landowners about the importance of leaving vegetation in place, especially along riparian areas and wildlife movement corridors.

Marine Turtles

- 11.2.0.14 Provide educational resources and technical support to public and private landowners and land managers to promote the protection of wetlands, riparian and floodplain areas, and aquatic habitats (including open waters), and to enhance or restore biologically appropriate buffers.
- 11.2.0.15 Provide educational resources, training programs, and on-the-ground guidance to municipalities, land developers, and other land managers and landowners about the importance of retaining and in an effort to protect, create, enhance and/or restore vegetation along aquatic habitats.
- 11.2.0.20 Provide educational resources and technical support to public and private landowners and land managers to promote the protection and/or enhancement of critical coastal habitats (beach/dune, scrub-shrub, forest, wetland, marsh, and marine and estuarine habitats) that provide nesting, migrating and wintering areas for SGCN birds, fish and other coastal SGCN.
- 11.2.0.25 Provide educational resources, training programs, and on-the-ground guidance to resource managers regarding the assessment of and addressing secondary impacts (i.e. ancillary prescribed burns, trespassers, ORV use, mosquitoes, deer, buffers) related to residential and commercial development.
- 11.2.0.26 Make educational resources available to the public that encourage researchers to seek out guidance prior to finalizing proposals and submitting State permit applications to reduce potential impacts on sensitive species.
- 11.2.0.27 Provide educational resources and presentations to coastal municipalities and residents to promote the understanding of the benefits of soft structures over hard structures for shoreline stabilization.
- 11.2.1 With individuals and groups involved in resource management decision making
 - 11.2.1.1 Engage partners and stakeholders in constructive dialogue regarding the importance of providing and methods to provide technical support for carrying out restoration and management practices aimed at increasing structural habitat diversity.
 - 11.2.1.2 Provide professional training and technical assistance tools (e.g., mapping, guidance documents, justification, etc.) to agencies/divisions/programs within and outside of the NJ DEP regarding the SWAP, and the conservation actions recommended therein to help facilitate SWAP implementation.
 - 11.2.1.4 Provide educational resources, training programs, and on-the-ground guidance to dredging companies and resource managers on habitat creation and enhancement away from and outside of shipping lanes, and to identify seasonal timing of activities that would minimize impacts to wildlife and their habitats.
 - 11.2.1.6 Provide educational resources, training programs, and on-the-ground guidance to resource agencies prior to project initiation to ensure wildlife and their habitats are protected to the highest degree possible during construction, and provisions are in place for post-construction habitat use.

100 Law and Policy

100. Legislation

100.1.3 Sub-national Level

- 100.1.3.4 Initiate legislative action to establish an annual budgetary line item designating funds to support programs and monitoring stations throughout Barnegat, Little Egg Harbor and Great Bay focused on long-term monitoring of submerged aquatic vegetation, both native and exotic species.

Marine Turtles

100.1.4 County and Local

- 100.1.4.4** Secure wetlands, riparian and floodplain areas, and aquatic habitats (including open waters) and biologically appropriate buffers through local ordinances.
- 100.1.4.8** Secure critical coastal habitats (beach/dune, scrub-shrub, forest, wetland, marsh, and marine and estuarine habitats) that provide nesting, migrating and wintering areas for SGCN birds, fish and other coastal SGCN through local ordinances.

100.1.5 Scale Unspecified

- 100.1.5.3** Incorporate aquatic habitat connectivity and water quality/effluent standards into state/local policy to minimize the impact of aquaculture on fish and wildlife.

100. State Regulations

100.3.0 Regulatory initiatives for species and habitat protection

- 100.3.0.1** Develop (and/or improve) policies and/or regulations that will promote the reduction of run-off and point and non-point source pollution into NJ's aquatic systems (streams, rivers, lakes/ponds, bays, ocean, wetlands, etc.).
- 100.3.0.2** Improve policies/regulations aimed at protecting and preserving critical coastal and marsh habitats and securing mitigation for losses that create an environmental benefit.
- 100.3.0.4** Promote policies and regulations that support marine conservation zone designations in suitable areas identified through research and literature.
- 100.3.0.7** Amend current policies and/or regulations to increase the ability to protect and preserve coastal habitats (beach/dune, scrub-shrub, forest, wetland, marsh, and marine and estuarine habitats) that provide nesting, migrating, and wintering areas for SGCN birds, fish and other coastal and aquatic SGCN.
- 100.3.0.8** Develop policies and/or regulations with the objective of protecting significant natural and/or unique communities in perpetuity.
- 100.3.0.9** Secure mitigation that creates an environmental benefit for losses of SGCN and their habitats.
- 100.3.0.14** Develop policies and/or regulations that increase the protective buffers of wetlands, riparian and floodplain areas, and aquatic habitats (including open waters) to biologically appropriate distances to benefit SGCN that rely upon these habitats and improve the function of the [associated] aquatic systems.
- 100.3.0.17** Develop and implement policies and/or regulations with the objective of reducing "by-catch" of SGCN and other non-target species.
- 100.3.0.23** Review existing CAFRA regulations and ensure that the Coastal Zone Management Rules (NJAC 7:7E) adequately address mitigation that creates an environmental benefit for losses of SGCN and their habitats.
- 100.3.0.26** Adopt regulations requiring the combined sewer overflow alternative analyses required by regulation address potential impacts to wildlife in watercourses or receiving water bodies.
- 100.3.0.27** Amend harvest, license and/or permit requirements to incorporate guidance regarding the use of gear and/or tackle and current best practices to minimize bycatch or entanglement of non-target species.
- 100.3.0.28** Amend harvest, license and/or permit requirements to require mandatory reporting by permittees/licensees of lost harvest gear, by-catch and, entanglement of non-target species.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Marine Turtles

- 100.3.0.29 Amend harvest, license and/or permit requirements to incorporate the exclusion devices and/or to require trap/pot designs with a quick-corrode feature which would render the device ineffective upon short-term sustained submersion.
- 100.3.0.30 Amend the NJ Bureau of Marine Fisheries commercial licensing and harvest reporting system to require fishermen to report the number and location of lost pots to the appropriate state agency/agencies at the end of the harvest season.
- 100.3.0.37 Develop a law and/or policy that requires NJ DEP to continue to address and correct the allowable combined sewer overflow inputs of solid waste into the marine environment to minimize harm to wildlife and their habitats.
- 100.3.0.38 Develop laws and/or policies to ensure appropriate and obligated financial compensation to NJDEP's Office of Natural Resource Restoration (and similar groups) for the purpose of marine habitat enhancement and wildlife research, and mitigation efforts address the disturbance of subtidal shallows and/or impacts to habitat and water quality from pollution.
- 100.3.0.39 Develop laws and/or policies to ensure appropriate financial and obligated compensation to NJDEP's Office of Natural Resource Restoration (and similar groups) for the purpose of marine habitat enhancement and wildlife research, and mitigation efforts address the impacts of invasive, non-native aquatic plant species establishing themselves or thriving as a result of illegal actions.
- 100.3.0.44 Incorporate requirements for technical support and funding for mitigation or restoration efforts so as to be consistent with existing regulations.
- 100.3.0.46 Investigate and/or develop inter-agency Memorandum of Agreements to share common data stored or managed in program-specific databases.
- 100.3.0.47 Investigate regulatory options available to direct the location of aquaculture activities in Aquaculture Development Zone 4 (Delaware Bay area) in a manner which minimizes the loss of wildlife habitats and adverse impacts to the environment.
- 100.3.0.49 Review existing CAFRA regulations and ensure that the Coastal Zone Management Rules (NJAC 7:7E) adequately address the issue of disturbance to habitat or species as a result of human activities (e.g., construction, bridge maintenance, road work, etc.).
- 100.3.0.50 Retain endangered, threatened and special concern wildlife and habitat protection measures in the Water Quality Management Program Rules.
- 100.3.0.52 Revise existing and/or incorporate new State land use regulations that specifically address the impacts of new or expanded energy sitings and facilities.
- 100.3.0.59 Develop regulations that when implemented will increase the ability to protect and preserve coastal habitats (beach/dune, scrub-shrub, forest, wetland, marsh, and marine and estuarine habitats) that provide nesting, migrating, and wintering areas for SGCN birds, fish and other coastal and aquatic SGCN.
- 100.3.0.60 Develop regulations that when implemented will protect significant natural and/or unique communities in perpetuity.
- 100.3.0.66 Develop regulations with the objective of reducing "by-catch" of SGCN and other non-target species.
- 100.3.0.72 Develop regulations that require permit applicants and/or review agencies to assess the cumulative and synergistic effects of a proposed project (i.e., "secondary effects"), both over time and over a larger spatial scale than the site itself.

100. State Agency Policy Integration

100.4.0 Policy initiatives for species and habitat protection

Marine Turtles

- 100.4.0.1 Create any necessary policy changes (including those to incentive programs) to encourage the integration of SWAP actions associated with SGCN priority habitats as a deliberative factor in agencies' actions (e.g., environmental and land management review processes, land acquisition and management).
- 100.4.0.5 Create a policy that requires an initial and subsequent updates of a comprehensive marine submerged aquatic vegetation mapping for use by NJ DEP's coastal regulatory program.
- 100.4.0.7 Develop a law and/or policy that requires NJ DEP to continue to address and correct the allowable combined sewer overflow inputs of solid waste into the marine environment to minimize harm to wildlife and their habitats.
- 100.4.0.10 Develop laws and/or policies to ensure appropriate and obligated financial compensation to NJDEP's Office of Natural Resource Restoration (and similar groups) for the purpose of marine habitat enhancement and wildlife research, and mitigation efforts address the disturbance of subtidal shallows and/or impacts to habitat and water quality from pollution.
- 100.4.0.11 Develop laws and/or policies to ensure appropriate financial and obligated compensation to NJDEP's Office of Natural Resource Restoration (and similar groups) for the purpose of marine habitat enhancement and wildlife research, and mitigation efforts address the impacts of invasive, non-native aquatic plant species establishing themselves or thriving as a result of illegal actions.
- 100.4.0.21 Ensure that Section 303(d) of the Clean Water Act and applicable State statutory/regulatory requirements for surface water pollutant budgets are being met by monitoring and enforcing regulatory Total Maximum Daily Load (TMDL) targets established within regional Water Quality Management Plans.
- 100.4.0.25 Develop policies that require permit applicants and/or review agencies to assess the cumulative and synergistic effects of a proposed project (i.e., "secondary effects"), both over time and over a larger spatial scale than the site itself.

Northern Black Racer

Focal species that comprise this Conservation Target:

Northern Black Racer

Threats and Action Drivers associated with this Conservation Target:

1 Residential and Commercial Development

1.1 Housing and Urban Areas

1.1.1 Land conversion from natural habitat to urban and other residential areas (large and small scale) (Avg. Score: 2.00)

NJ Specific Threats: 1.1.1.1 Fragments terrestrial and aquatic habitats making the area unsuitable for area-sensitive species and inhibit dispersal of animals, reducing gene flow.
1.1.1.2 Loss, alteration and/or degradation of habitat.
1.1.1.3 Lot layout, design and/or landscaping may create conditions that increase wildlife-human conflict.
1.1.1.4 Increased risk of vehicle strikes/mortality to terrestrial-bound and some bird species.
1.1.1.6 Impervious surfaces can cause an increased risk of floods, flash floods and storm damage that degrade terrestrial and aquatic habitats.

1.2 Commercial and Industrial Areas

1.2.1 Land conversion from natural habitat to commercial or industrial areas (large and small scale) (Avg. Score: 2.00)

NJ Specific Threats: 1.2.1.1 Fragments terrestrial and aquatic habitats making the area unsuitable for area-sensitive species and inhibit dispersal of animals, reducing gene flow.
1.2.1.2 Loss, alteration and/or degradation of habitat.
1.2.1.3 Lot layout, design and/or landscaping may create conditions that increase wildlife-human conflict.
1.2.1.4 Increased risk of vehicle strikes/mortality to terrestrial-bound and some bird species.
1.2.1.6 Impervious surfaces can cause an increased risk of floods, flash floods and storm damage that degrade terrestrial and aquatic habitats.

1.3 Tourism and Recreational Areas

1.3.1 Land conversion from natural habitat to recreation or tourism areas (large and small scale) (Avg. Score: 1.00)

NJ Specific Threats: 1.3.1.1 Fragments terrestrial and aquatic habitats making the area unsuitable for area-sensitive species and inhibit dispersal of animals, reducing gene flow.
1.3.1.2 Loss, alteration and/or degradation of habitat.
1.3.1.3 Lot layout, design and/or landscaping may create conditions that increase wildlife-human conflict.
1.3.1.5 Impervious surfaces can cause an increased risk of floods, flash floods and storm damage that degrade terrestrial and aquatic habitats.

2 Agriculture and Aquaculture

2.1 Annual and Perennial Crops (non-timber)

2.1.1 Shifting Agriculture (Avg. Score: 2.00)

NJ Specific Threats: 2.1.1.1 Conversion of low-intensity agriculture to intensive agriculture (e.g., tree nursery, row crop) degrades habitat, especially for early-successional species.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Northern Black Racer

2.1.2 Small-holder Farming (Avg. Score: 1.00)

- NJ Specific Threats:** 2.1.2.2 Fragments terrestrial and aquatic habitats.
2.1.2.4 Agricultural practices (e.g., mechanized, row-crop agriculture) can cause direct mortality to wildlife when harvesting takes places.

2.1.3 Agro-industry (Avg. Score: 2.00)

- NJ Specific Threats:** 2.1.3.2 Fragments terrestrial and aquatic habitats.
2.1.3.3 Agricultural practices (e.g., mechanized, row-crop agriculture) can render lands unsuitable for most wildlife due to soil degradation and erosion.

2.2 Wood and Pulp Plantations

2.2.1 Small Holder (Avg. Score: 2.00)

- NJ Specific Threats:** 2.2.1.1 Conversion of native forests to plantations decreases the habitat quality for forest-dependent species.
2.2.1.2 Tree harvesting can cause direct mortality to wildlife, especially if done during peak activity periods or vulnerable life stages (e.g., denning, nesting, gestation/birthing, basking, roosting, pre-volancy, etc.).

2.2.2 Agro-industry Plantations (Avg. Score: 2.00)

- NJ Specific Threats:** 2.2.2.1 Conversion of native forests to plantations decreases the habitat quality for forest-dependent species.
2.2.2.2 Tree harvesting can cause direct mortality to wildlife, especially if done during peak activity periods or vulnerable life stages (e.g., denning, nesting, gestation/birthing, basking, roosting, pre-volancy, etc.).

2.3 Livestock Farming and Ranching

2.3.2 Small-holder Grazing (Avg. Score: 1.00)

- NJ Specific Threats:** 2.3.2.1 Inappropriately located, newly created horse/livestock farms may fragment forest habitats.

2.3.3 Agro-industry Grazing (Avg. Score: 2.00)

- NJ Specific Threats:** 2.3.3.1 Inappropriately located, newly created horse/livestock farms may fragment forest habitats.

3 Energy Production and Mining

3.1 Oil and Gas Facilities and Pipelines

3.1.1 Distribution processes of petroleum and other liquid hydrocarbons (Avg. Score: 2.00)

- NJ Specific Threats:** 3.1.1.1 Fragments terrestrial and aquatic habitats.
3.1.1.2 Loss, alteration and/or degradation of habitat.
3.1.1.3 Increased risk of oil spills.
3.1.1.4 Increased noise pollution.
3.1.1.5 Increased vehicular and ship traffic associated with construction and operations, and therefore an increased risk of wildlife mortality from strikes.
3.1.1.6 Increased risk of collision between marine mammals, sea turtles and fish and the marine-based structures/facilities.

3.1.2 Natural gas distribution processes (Avg. Score: 2.00)

- NJ Specific Threats:** 3.1.2.1 Fragments terrestrial and aquatic habitats.
3.1.2.2 Loss, alteration and/or degradation of habitat.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Northern Black Racer

- 3.1.2.3 Increased risk of gas leaks and explosions.
- 3.1.2.4 Increased noise pollution.
- 3.1.2.5 Increased vehicular and ship traffic associated with construction and operations, and therefore an increased risk of wildlife mortality from strikes.
- 3.1.2.6 Increased risk of collision between marine mammals, sea turtles and fish and the marine-based structures/facilities.

3.2 Mining and Quarrying

3.2.2 Surface Mining - Rock Quarry (and sand quarries) (Avg. Score: 2.00)

- NJ Specific Threats:**
- 3.2.2.1 Fragments terrestrial and aquatic habitats.
 - 3.2.2.2 Loss, alteration and/or degradation of terrestrial and aquatic habitats.
 - 3.2.2.3 Increased risk of vehicle strikes/mortality to wildlife.

3.3 Renewable Energy

3.3.1 Wind Power (Avg. Score: 2.00)

- NJ Specific Threats:**
- 3.3.1.2 Fragments terrestrial habitats.
 - 3.3.1.3 Loss, alteration and/or degradation of habitat.
 - 3.3.1.4 Increased commercial infrastructure.

3.3.2 Solar Power (Avg. Score: 3.00)

- NJ Specific Threats:**
- 3.3.2.1 Fragments terrestrial habitats.
 - 3.3.2.2 Loss, alteration and/or degradation of habitat.
 - 3.3.2.3 Increased commercial infrastructure.

3.4 Conventional Power Plants

3.4.0 Conventional Power Plants (Avg. Score: 1.00)

- NJ Specific Threats:**
- 3.4.0.2 Loss, alteration and/or degradation of habitat due to new or the expansion of current facilities.

4 Transportation and Service Corridors

4.1 Roads and Railroads

4.1.1 Land conversion from natural habitat to roads and railroads (large and small scale) (Avg. Score: 3.00)

- NJ Specific Threats:**
- 4.1.1.1 Fragments terrestrial and aquatic habitats making the landscape unsuitable for area-sensitive species and inhibiting dispersal of non-volant animals, reducing gene flow.
 - 4.1.1.2 Loss, alteration and/or degradation of habitat associated with road and railroad construction and maintenance, and degradation of adjacent habitats.
 - 4.1.1.3 Re-establishment of abandoned railroad lines may displace wildlife, in particular, less mobile species using the area to fulfill critical life history requirements.
 - 4.1.1.4 Re-establishment of abandoned railroad lines may increase the risk of direct mortality on wildlife.

4.1.2 Movement of cars and other vehicles on roads and railroads (large and small scale) (Avg. Score: 3.00)

- NJ Specific Threats:**
- 4.1.2.1 Increased vehicle traffic increases the risk of wildlife mortality from strikes.

4.2 Utility and Service Lines

Northern Black Racer

4.2.1 Land conversion from natural habitat to utility and other service lines (large and small scale) or communication towers and associated access roads (Avg. Score: 2.00)

NJ Specific Threats: 4.2.1.1 Fragments terrestrial and aquatic habitats making the landscape unsuitable for area-sensitive species, inhibiting dispersal of non-volant animals, reducing gene flow, and creating barriers to fish when service line-associated roads cross streams (e.g., bridges, culverts, fords, etc.).

4.2.1.2 Loss, alteration and/or degradation of habitat associated with rights-of-way construction and maintenance, and degradation of adjacent habitats.

4.2.2 Management of rights-of-way or communication tower facilities and/or their associated access roads (Avg. Score: 2.00)

NJ Specific Threats: 4.2.2.1 Improper or poorly scheduled vegetation management can cause direct mortality to and may reduce productivity of wildlife.

5 Biological Resource Use

5.1 Hunting and Collecting Terrestrial Animals

5.1.1 Intentional Use (Avg. Score: 2.00)

NJ Specific Threats: 5.1.1.1 Illegal collection of wildlife can have detrimental impacts on populations.

5.1.3 Persecution/Control (Avg. Score: 3.00)

NJ Specific Threats: 5.1.3.1 Wanton killing of perceived dangerous and/or undesirable animals.

5.2 Gathering Terrestrial Plants

5.2.2 Unintentional effects (Avg. Score: 1.00)

NJ Specific Threats: 5.2.2.1 Stepping on nests or young/hatchling animals.

5.3 Logging and Wood Harvesting

5.3.1 Intentional Use (subsistence/small scale) (Avg. Score: 1.00)

NJ Specific Threats: 5.3.1.1 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN may fragment their terrestrial habitats.

5.3.1.2 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN may cause the loss, alteration and/or degradation of wildlife habitat.

5.3.1.5 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN and unsustainable forestry practices may decrease structural diversity and biomass leading to reduced biodiversity and ecological integrity.

5.3.2 Intentional Use (large scale) (Avg. Score: 2.00)

NJ Specific Threats: 5.3.2.1 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN may fragment their terrestrial habitats.

5.3.2.2 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN may cause the loss, alteration and/or degradation of wildlife habitat.

5.3.2.5 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN and unsustainable forestry practices may decrease structural diversity and biomass leading to reduced biodiversity and ecological integrity.

5.3.3 Unintentional effects (subsistence/small scale) (Avg. Score: 2.00)

NJ Specific Threats: 5.3.3.1 Direct mortality of wildlife, direct loss of suitable habitats (roost, foraging, shelter, etc.), and can disrupt sensitive species, decreasing the likelihood of success and/or reproduction.

5.3.4 Unintentional effects (large scale) (Avg. Score: 2.00)

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Northern Black Racer

- NJ Specific Threats:** 5.3.4.1 Direct mortality of wildlife, direct loss of suitable habitats (roost, foraging, shelter, etc.), and can disrupt sensitive species, decreasing the likelihood of success and/or reproduction.
- 5.3.4.2 Extensive infrastructure and larger equipment requirements present a potential risk of direct injury/mortality to wildlife.
- 5.3.4.5 Lack of appropriate, sustainable forest management can lead to a decrease in forest habitat diversity, degraded habitat for many forest species, the loss of habitat for early-successional species, and/or the loss of unique habitats for species that need canopy breaks and multi-aged tree composition to fulfill various life history requirements.

6 Human Intrusions and Disturbance

6.1 Recreational Activities

6.1.1 Off-road vehicles (motorized and non-motorized) (Avg. Score: 2.00)

- NJ Specific Threats:** 6.1.1.1 Inappropriate use of off-road vehicles creates new roads/trails which fragments habitat.
- 6.1.1.2 Inappropriate use of off-road vehicles can degrade terrestrial and aquatic habitat and reduce the suitability of adjacent habitats for wildlife.
- 6.1.1.3 Increased risk of harassment that results in a change in wildlife behavior and/or direct mortality from vehicle strikes.
- 6.1.1.4 Increased noise pollution.
- 6.1.1.6 Off-road vehicles can be a mechanism of transference of wildlife diseases and invasive plant species if gear and apparel are not properly sanitized between sites.

6.1.5 Wildlife observation and photography (Avg. Score: 1.00)

- NJ Specific Threats:** 6.1.5.1 Improperly conducted recreational activities may disrupt normal wildlife behaviors which can result in reduced reproductive success or survival, abandonment of critical sites, etc.
- 6.1.5.2 Participants may introduce wildlife diseases and invasive plant species when gear and apparel is not properly sanitized between sites.

6.1.6 Recreational use of cliffs, rocks and ridgelines (Avg. Score: 1.00)

- NJ Specific Threats:** 6.1.6.3 Recreational use of rock outcrops and ridgelines by hikers and bikers can lead to direct mortality through wanton killing or incidental take, and alter natural behaviors, reducing breeding and/or foraging success.

6.1.7 Other (Avg. Score: 2.00)

- NJ Specific Threats:** 6.1.7.2 Human presence in sensitive areas may introduce wildlife diseases or pathogens into the system.

6.2 Military Exercises

6.2.1 Military exercises (Avg. Score: 2.00)

- NJ Specific Threats:** 6.2.1.1 Military testing and training exercises may inflict disturbance and potential physical harm to wildlife.
- 6.2.1.3 Lack of opportunity for non-federal wildlife managers to influence activities on military bases may result in detrimental impacts to SGCN and/or missed opportunities to engage in projects that benefit SGCN.

6.3 Work and Other Activities

6.3.1 Unauthorized research projects at significant habitats (Avg. Score: 2.00)

- NJ Specific Threats:** 6.3.1.1 Participants may introduce wildlife diseases and invasive plant species when gear and apparel is not properly sanitized between sites.
- 6.3.1.2 Accidental trampling of nests, eggs/egg masses, and unseen individuals may impact reproductive success or cause direct mortality to SGCN.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Northern Black Racer

- 6.3.1.3 Activities conducted without proper precautions may disturb and disrupt normal wildlife behaviors, which may impact reproductive success or survival, cause abandonment of critical sites, etc.

6.3.2 Authorized research projects at significant habitats (Avg. Score: 2.00)

- NJ Specific Threats:** 6.3.2.2 Participants may introduce wildlife diseases and invasive plant species when gear and apparel is not properly sanitized between sites.

- 6.3.2.3 Accidental trampling of nests, eggs/egg masses, and unseen individuals may impact reproductive success or cause direct mortality to SGCN.

- 6.3.2.4 Activities conducted without proper precautions may disturb and disrupt normal wildlife behaviors, which may impact reproductive success or survival, cause abandonment of critical sites, etc.

6.3.3 Other "work" unrelated to research (Avg. Score: 1.00)

- NJ Specific Threats:** 6.3.3.1 Construction projects may disrupt normal wildlife behavior which can result in reduced reproductive success or survival, abandonment of critical sites, etc. (e.g., bridge-nesting birds).

- 6.3.3.4 Workers may introduce wildlife diseases and invasive plant species when gear and apparel is not properly sanitized between sites.

7 **Natural Systems Modifications**

7.1 Fire and Fire Suppression

7.1.1 Increase in Fire Frequency/Intensity (Avg. Score: 2.00)

- NJ Specific Threats:** 7.1.1.1 Increase in frequency and intensity of wild fires as a result of droughts and heat waves drying out vegetation and litter.

- 7.1.1.2 Increase in frequency of wild fires as a result of illegal activities.

- 7.1.1.3 Unnatural fire regimes occurring as a result of military exercises.

- 7.1.1.4 Lack of diversity in age structure and composition of vegetation due to expansive, frequent fires.

7.1.2 Suppression of Fire Frequency/Intensity (Avg. Score: 2.00)

- NJ Specific Threats:** 7.1.2.1 Shift in vegetative communities as a result of suppression of natural fires.

- 7.1.2.2 Lack of diversity in age structure and composition of vegetation due to the suppression of fire.

7.2 Dams and Water Management/Use

7.2.12 Culverts (Avg. Score: 1.00)

- NJ Specific Threats:** 7.2.12.1 Improper design, placement, installation and maintenance of culverts and other stream crossing structures can impede or prevent the movements of terrestrial organisms and can restrict or limit stream flow, impeding the movement of aquatic organisms along riparian corridors.

7.3 Other Ecosystem Modifications

7.3.2 Inappropriate timing of mowing (Avg. Score: 2.00)

- NJ Specific Threats:** 7.3.2.1 Increased risk of direct mortality and/or reduced productivity of wildlife, as well as reduced use by migrating species.

7.3.3 Removal of coarse woody debris (streams, forests, scrub-shrub habitats) (Avg. Score: 2.00)

- NJ Specific Threats:** 7.3.3.2 Decreases habitat and/or corridor suitability due to limited or absent shelter and foraging habitat.

- 7.3.3.3 Removal of dead trees (snags), large felled logs (i.e., those > 12" dbh), and other downed woody material diminishes nesting, roosting, and sheltering options for wildlife, and increases the ease at which deer can browse regenerating vegetation.

- 7.3.3.4 Decreases available basking, shelter, and foraging habitats.

Northern Black Racer

7.3.4 Lack of natural disturbance patterns or ecosystem functions due to species loss (Avg. Score: 1.00)

NJ Specific Threats: 7.3.4.5 The lack of forest disturbance minimizes the diversity of herbaceous vegetation and other shrubs and trees that need a lot of sunlight to grow.

7.3.5 Poor habitat management (Avg. Score: 3.00)

NJ Specific Threats: 7.3.5.1 Improper or poorly scheduled maintenance of man-made corridors (e.g., roadsides and medians) can cause direct mortality to and may reduce productivity of wildlife.

7.3.5.3 Vegetation clearing removes terrestrial and riparian corridors for animal movement, shelter, and resting areas.

7.3.5.5 Habitat management that alters or removes vegetation without implementing long-term management increases the risk of invasive and exotic plants establishing themselves, outcompeting native vegetation.

7.3.5.6 Habitat management, including that which occurs on public and private lands, that does not consider timing and species' behaviors can result in the direct mortality and/or alteration or loss of habitat.

7.3.5.7 Improperly planned habitat management and/or mitigation efforts along roadsides and within the medians can attract wildlife and increase the risk of vehicle strikes.

7.3.5.12 Lack of diversity in age structure and composition of vegetation due to lack of natural disturbances and/or vegetation management.

7.3.5.15 Lack of funding, incentives, or technical guidance resources to proactively manage land to benefit SGCN wildlife.

8 Invasive and Other Problematic Species, Genes and Diseases

8.1 Invasive Non-native/ Alien Species/ Diseases

8.1.1 Unspecified Species (Avg. Score: 1.00)

NJ Specific Threats: 8.1.1.1 Displace or outcompete native species for resources.

8.1.1.2 Alters, degrades and/or reduces the structural diversity of the natural composition of the landscape, including aquatic systems.

8.1.1.3 Invasive, non-native insects can damage native vegetation at a large scale, leading to die-offs, altering the ecological community.

8.1.1.4 Invasive, non-native animals increase the risk of predation on native animals and/or herbivory on native vegetation.

8.1.1.5 Invasive, non-native animals and plants increase the risk of introduction and transference of diseases

8.1.1.6 Invasive, non-native plants may create physical barriers for some species.

8.1.4 Invasive non-native terrestrial/wetland animals (Avg. Score: 1.00)

NJ Specific Threats: 8.1.4.1 Displace or out-compete native species for resources (food, shelter), alter the composition of the native landscapes/aquatic systems, diminish habitat suitability and reduce ecological integrity of natural communities, and may introduce disease into a population.

8.1.4.2 Free-roaming and feral domestic animals such as cats and dogs causes direct mortality of wildlife and disturbance to wildlife breeding and resting areas.

8.1.5 Invasive non-native terrestrial/wetland plants (Avg. Score: 1.00)

NJ Specific Threats: 8.1.5.1 Displace or out-compete native species for resources (food, light, shelter), alter the composition of the native landscapes/aquatic systems, diminish habitat suitability and reduce ecological integrity of natural communities, and may introduce disease into a population.

8.1.6 Invasive non-native fungal/bacterial diseases (Avg. Score: 1.00)

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Northern Black Racer

NJ Specific Threats: 8.1.6.1 The introduction of non-native fungal and bacterial diseases threatens native populations and ecosystems.

8.2 Problematic Native Species/Diseases

8.2.1 Unspecified Species (Avg. Score: 1.00)

NJ Specific Threats: 8.2.1.1 Overabundant native insects can damage native vegetation at a large scale, leading to die-offs, altering the ecological community.

8.2.1.2 Invasive pathogens and insects may increase in range and abundance as limiting factors (such as temperature) are altered as a result of climate change.

8.2.1.4 Human-subsidized native species can become overabundant, increasing predation on other native wildlife and/or altering the ecological community.

8.2.2 Named Species (Avg. Score: 1.00)

NJ Specific Threats: 8.2.2.2 Human-subsidized native species can become overabundant, increasing predation on other native wildlife and/or altering the ecological community.

8.4 Problematic Species/Diseases of Unknown Origin

8.4.1 Unspecified Species (Avg. Score: 1.00)

NJ Specific Threats: 8.4.1.1 Non-native or poorly understood diseases and parasites could potentially impact native animals.

8.4.2 Named Species (Avg. Score: 2.00)

NJ Specific Threats: 8.4.2.2 Diseases of unknown origin, such as snake fungal disease and Ranavirus, can cause significant mortality among native animal populations.

8.5 Viral/Prion-induced Diseases

8.5.1 Unspecified Species (Disease) (Avg. Score: 1.00)

NJ Specific Threats: 8.5.1.1 There is a large knowledge gap regarding the existence of, or potential for, other diseases impacting native wildlife.

8.5.2 Named Species (Disease) (Avg. Score: 2.00)

NJ Specific Threats: 8.5.2.1 Diseases such as West Nile Virus, arenavirus, sudden oak death, Avian Influenza, and snake fungal disease cause morbidity or mortality to native populations.

8.6 Diseases of Unknown Cause

8.6.0 Unknown Diseases (Avg. Score: 1.00)

NJ Specific Threats: 8.6.0.1 Diseases yet to be identified by pathologists and virologists cause decreased fitness or mortality to native populations.

9 **Pollution**

9.2 Industrial and Military Effluents

9.2.1 Oil Spills (Avg. Score: 1.00)

NJ Specific Threats: 9.2.1.1 Oil spills render resting, breeding and foraging habitats temporarily unavailable to wildlife, altering normal wildlife behavior.

9.2.1.2 Oil spills have long term effects on habitats and damage ecological processes that can cause local wildlife population declines and impaired foraging or reproduction.

9.2.1.3 Oil spills cause external oiling of wildlife and ingestion of oil, both of which can injure or kill wildlife.

9.2.3 Other (Avg. Score: 1.00)

NJ Specific Threats: 9.2.3.2 Chemical spills have long term effects on habitats and damage ecological processes that can cause local wildlife population declines and impaired foraging or reproduction.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Northern Black Racer

- 9.2.3.3 Chemical spills may render resting, breeding and foraging habitats temporarily unavailable to wildlife, altering normal wildlife behavior.

9.2.4 Other: Hydrofracturing (Avg. Score: 1.00)

- NJ Specific Threats:** 9.2.4.2 Uncontrolled effluents escaping from hydrofracturing facilities can cause injury to wildlife and alter normal behaviors.

9.2.5 Other: Industrial toxic settling ponds (Avg. Score: 1.00)

- NJ Specific Threats:** 9.2.5.1 Surficial or open industrial effluent ponds can cause injury or death to wildlife that become exposed through ingestion or submersion.

9.3 Agricultural and Forestry Effluents

9.3.2 Soil Erosion and Sedimentation (Avg. Score: 1.00)

- NJ Specific Threats:** 9.3.2.2 Soil erosion and sedimentation limit the re-establishment of plants needed by terrestrial wildlife as cover and a food base.

9.3.3 Herbicides and Pesticides (Avg. Score: 1.00)

- NJ Specific Threats:** 9.3.3.2 Use of rodenticides can cause secondary actions of injury and death to animals in the course of scavenging.

- 9.3.3.3 Use of pesticides can directly harm non-target species through direct contact and/or by reducing and/or contaminating their food supply.

9.3.5 Control of insect pests and plants leading to mortality of non-target species not associated with agriculture (Avg. Score: 1.00)

- NJ Specific Threats:** 9.3.5.1 Use of pesticides, insecticides, and/or herbicides can directly harm non-target species, such as amphibians and beneficial invertebrates through direct contact and/or by reducing and/or contaminating their food supply.

- 9.3.5.4 Improper use of current insecticides, such as those containing esfenvalerate, prallethrin, or piperonyl butoxide, or past use of pesticides containing chlordane still present in the soils, are toxic to various wildlife species, and can cause injury, mortality, or other effects that impair population viability.

- 9.3.5.5 Use of pesticides and herbicides can minimize the abundance of food sources for native wildlife populations.

9.4 Garbage and Solid Waste

9.4.1 Direct hazards to wildlife (Avg. Score: 1.00)

- NJ Specific Threats:** 9.4.1.1 Wildlife may ingest garbage causing choking or impingement in the digestive system, or they may become physically entangled in it (e.g., plastic or abandoned fish nets); conditions that make them unable to feed or drink, cause them to suffocate or drown, or otherwise restrict the animal's movement making them more susceptible to predators, starvation or injury.

- 9.4.1.2 Garbage and solid waste destroys natural habitats and obstructs wildlife movements.

9.5 Air-Borne Pollutants

9.5.6 Herbicides and Pesticides (Avg. Score: 2.00)

- NJ Specific Threats:** 9.5.6.1 May result in injury or direct mortality of non-target species.

9.6 Excess Energy

9.6.3 Noise Pollution (Avg. Score: 1.00)

- NJ Specific Threats:** 9.6.3.1 Acute and chronic noise pollution in and adjacent to terrestrial and aquatic (marine and freshwater) environments could disrupt normal behaviors of wildlife such as migration, communication, feeding, eluding predators, resting and breeding, etc.

11 Climate Change and Severe Weather

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Northern Black Racer

11.1 Habitat Shifting or Alteration

11.1.0 Macro- and Micro-Climate Alterations (Avg. Score: 1.00)

NJ Specific Threats: 11.1.0.1 Alters native terrestrial and aquatic habitats at the macro- and micro-climate levels that can affect suitability for wildlife, in particular specialist species.

11.3 Temperature Extremes

11.3.1 Temperature extremes (Avg. Score: 2.00)

NJ Specific Threats: 11.3.1.4 Extremely low temperatures and/or extensive periods of unseasonably low temperatures during critical life history stages (e.g., hibernation, gestation/nesting) can alter animals' behaviors and decrease survivorship.

11.4 Storms and Flooding

11.4.2 Increased rainfall (Avg. Score: 2.00)

NJ Specific Threats: 11.4.2.2 Extreme rain events can damage wildlife nesting and resting habitats, including impacts to avian eggs and chick and small mammal survivorship.

11.6 Phenology Shifting or Alteration

11.6.2 Phenology shifts related to predator-prey ecology (Avg. Score: 1.00)

NJ Specific Threats: 11.6.2.1 Alters inter-specific relationships (e.g., competition, parasitism, predation) of wildlife, ultimately leads to detrimental impacts on the ecological system.

11.6.2.2 Shifts timing of species migration, breeding and hibernation, and available food resources, causes redistribution of species, or mortality for species that are unable to relocate due to their already isolated habitat or limited mobility.

11.6.3 Phenology shifts related to species redistribution (Avg. Score: 1.00)

NJ Specific Threats: 11.6.3.1 Shifts in timing of species migration, breeding and hibernation, and available food resources, as a result of wildlife range shifts driven by climate change.

11.6.3.2 Shifts in nesting times or egg incubation durations can limit nest success and longterm populations.

12 Resource Management Needs

12.1 Resource information collection needs

12.1.1 Lack of initial baseline inventory (Avg. Score: 3.00)

NJ Specific Threats: 12.1.1.1 Lack of information regarding the distribution, connectivity and quality of SGCN habitats throughout the State, and where habitat enhancement/restoration will benefit SGCN and other wildlife.

12.1.1.2 Lack of information regarding the population dynamics and trends, habitat requirements and dispersal distances of the various age classes, and survivorship of SGCN throughout the State.

12.1.2 Lack of up-to-date existing information (Avg. Score: 3.00)

NJ Specific Threats: 12.1.2.1 Lack of (routine, regular, ongoing) surveys/assessments that provide up-to-date information regarding population trends or health, and/or status of fish, wildlife and/or their habitats.

12.1.3 Need to answer research question (Avg. Score: 3.00)

NJ Specific Threats: 12.1.3.1 There are significant knowledge gaps regarding distribution, dispersal, diseases, population trends, etc. of SGCN.

12.1.4 Need to develop new technique (Avg. Score: 2.00)

NJ Specific Threats: 12.1.4.1 Improve and evaluate survey methods for SGCN and their habitats; alter as needed.

12.1.4.2 Improve and evaluate survey methods for species not easily detected through standard survey methods.

Northern Black Racer

12.3 Regulatory Reform

12.3.0 State Regulatory Reforms

(Avg. Score: 1.00)

NJ Specific Threats: 12.3.0.1

Regulatory habitat protections within state land use regulations are spatially limited to specific geographic areas (e.g., Pinelands, Coastal Area) or geographic features (e.g., wetlands, streams) and so fail to protect critical habitats that exist outside of these regulated areas.

12.3.0.3

Lack of a licensing program and standards for NJ Nuisance Wildlife Control Operators (NWCs) leads to inadequate controls over handling of wildlife and lack of reporting of non-game/SGCN species (and all wildlife) encountered in nuisance situations.

12.3.0.7

Activities that threaten SGCN, their food sources, and/or habitats are often regulated separately and without consideration for the cumulative and synergistic effects over time or over a larger spatial scale. Therefore, regulations can fail to protect SGCN populations over time.

12.3.0.9

Prescribed burns implemented by the NJ Forest Fire Service are constrained by State air quality regulations to a timeframe where seasonal weather conditions are less than ideal for effective burning. As a result, the Forest Fire Service is limited in the number of overall prescribed burns it can implement to restore habitat for wildlife.

12.3.0.10

Land use regulatory processes pertaining to habitat creation, enhancement or restoration projects can be costly and/or burdensome, precluding or discouraging the development or implementation of conservation projects.

12.4 Internal Policy & Procedures Reform

12.4.0 State Policy and Procedure Reform

(Avg. Score: 1.00)

NJ Specific Threats: 12.4.0.1

A species-by-species management focus as opposed to ecological systems and biodiversity generally has greater opportunity for unintended consequences for other species and may be less efficient in developing appropriate management actions.

12.4.0.2

Policies and procedures for lands management that lack consideration of the impacts of activity timing can result in unintended impacts to wildlife during vulnerable periods.

12.4.0.3

Lack of internal understanding regarding beneficial habitat impacts of storm events leads to policies and practices that reverse or decrease such beneficial effects (e.g., beach-filling, shoreline hardening, "hazard" tree and log removal from forests, etc.

12.4.0.5

Bureau of Forest Fire Management policy has traditionally implemented prescribed burns on State lands for the sole purpose of public safety (i.e., addressing hazard fuel reduction), missing opportunities to burn in a manner that would additionally manage habitat for ecological diversity.

12.4.0.7

Land preservation contracts, easements, etc. that do not contain prescriptive language or flexibility allowing for habitat management can result in unsuitable habitat conditions and biodiversity declines for SGCN.

14 Education/ Outreach Needs

14.1 Education needs

14.1.1 Need for improved knowledge of fish and wildlife and their habitats

(Avg. Score: 2.00)

NJ Specific Threats: 14.1.1.1

Lack of understanding of the importance of various SGCN habitats, their connectivity to similar habitats, and how planning decisions impact their quality and the wildlife that depend upon them.

14.1.1.2

Lack of general knowledge of SGCN life histories and vulnerabilities as they relate to land management practices.

14.1.1.3

Lack of understanding of the need to manage both natural and anthropogenic (e.g., yards, lawns, hayfields, etc.) habitats to minimize impacts or increase benefits to SGCN and their habitats.

14.2 Outreach needs

Northern Black Racer

- 14.2.1** Need to improve specific understanding of agency/organization goals, objectives and ongoing wildlife conservation actions (Avg. Score: 2.00)

NJ Specific Threats: 14.2.1.1 Need to develop greater understanding of and support for efforts implemented to enhance SGCN habitat and biodiversity through various forest management practices.

15 Administrative Needs

- 15.2** Organizational/program planning needs

- 15.2.3** Need for multi-state, regional and landscape scale planning (Avg. Score: 1.00)

NJ Specific Threats: 15.2.3.1 State governance and financial structures can sometimes inhibit conservation planning and implementation at the regional and landscape-scales that are often more effective at setting priorities and meeting species and habitat conservation goals and objectives.

Actions to address the Threats and Action Drivers associated with this Conservation Target:

1 Coordination and Administration

- 1.2** Incentives

- 1.2.1** Incentives

- 1.2.1.2 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to private and public landowners and land managers to increase the effective size of SGCN habitats by protecting/restoring adjacent habitats that contribute to the overall size of the "core" area and/or provide a natural buffer, enhancing the suitability of the core area for SGCN, and/or connect conserved SGCN habitats.
- 1.2.1.4 Secure and promote the protection, restoration, and/or development of old-growth forest stands with large trees, in particular those within large, contiguous forest tracts through incentive programs.
- 1.2.1.5 Secure and promote the protection/restoration of critical SGCN forested habitat and minimize forest edge to benefit interior forest and disturbance-sensitive SGCN through incentive programs.
- 1.2.1.8 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to municipalities, land developers, and other land managers to retain and/or enhance native vegetation adjacent to aquatic habitats, and along riparian areas and wildlife movement corridors.
- 1.2.1.9 Develop a new funding source, targeting natural resource damages monies, mitigation monies or other available sources, to fund new or existing Forestry Stewardship Programs.
- 1.2.1.10 Coordinate across government agencies and non-government organizations to maximize the availability of and enrollment in existing landowner incentive programs (e.g., "farm bill," partners, etc.) to maintain and/or improve habitat.

Northern Black Racer

- 1.2.1.11 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to public and private landowners and managers, including but not limited to government and non-government agencies/organizations, energy, mining, and transportation and utility service companies/agencies, to minimize commercial infrastructure and impervious surfaces, and to improve wildlife habitats, limit fragmentation, reduce elements which would exacerbate mortality, and/or implement activities/restoration that would create new or improved corridor habitat and/or increase connectivity, and to increase structural habitat diversity through the implementation of a variety of vegetation management practices that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting), and to minimize (if not avoid) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
- 1.2.1.12 Create incentives (non-monetary and/or monetary) for land developers to redevelop abandoned areas (e.g., shopping centers, office complexes) to minimize the loss of natural habitats and reduce the extent of impervious surfaces as part of new construction to increase water recharge in those areas.
- 1.2.1.13 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to land developers to minimize the impacts of new residential and commercial developments on SGCN and their habitats.
- 1.2.1.18 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to public and private landowners and land managers to control and reduce the impacts of invasive, native and non-native species in order to increase structural habitat diversity.
- 1.2.1.19 Create incentives for federal, state and local agencies and approved consulting foresters that provide financial, logistical or planning assistance to farmers, woodland landowners, and private landowners to adopt and/or endorse consistent BMPs concerning controlled burns to maintain and/or improve wildlife habitat.
- 1.2.1.20 Coordinate across government agencies and non-government organizations to create or expand upon tax-based incentive programs available to private, agricultural, commercial, industrial or governmental landowners and land managers to include or provide for incentives for the maintenance and/or improvement to existing habitat via the endorsement of wildlife-related BMP's.
- 1.2.1.23 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to private and public landowners and land managers to provide cost shares and/or plan approvals for management based on management approaches and prescriptions.
- 1.2.1.26 Develop a new funding source, targeting natural resource damages monies, mitigation monies or other available sources, to fund new or existing landowner incentive programs.
- 1.2.1.28 Create incentives to implement dynamic forest disturbance patterns, using tools such as fire, flooding, and silviculture, to support the full life cycle requirements of forest and early successional wildlife species.

2 Direct Management of Natural Resources

2.2 Dam and barrier removal

2.2.1 Culvert work

- 2.2.1.1 Replace existing barriers to wildlife movement with and/or install appropriately-sized systems to accommodate wildlife dispersal.

2.3 Fire management

Northern Black Racer

2.3.2 Fuel reduction

2.3.2.1 Prevent wildfires by reducing natural fuel (e.g., leaf litter).

2.3.3 Prescribed burning

2.3.3.1 Evaluate different management techniques of prescribed burns that might be used to mimic the historic role of fire and other natural disturbances in shaping an ecosystem.

2.3.3.2 Conduct prescribed burning in Northern New Jersey forests to maintain and regenerate a mosaic of upland forest habitats.

2.3.3.3 Conduct prescribed burning to improve wildlife habitat.

2.8 Invasive species control

2.8.0 Invasive species control strategies and implementation

2.8.0.4 Implement control/management strategies to reduce the impacts and/or limit the distribution of invasive, native and non-native species (wildlife and plants) that pose threats to native wildlife or communities. Encourage the implementation of biological and mechanical removal/control. When chemical control is used, encourage low-volume, targeted application using NJDEP-approved chemicals in accordance with the specific instructions for that chemical. Follow BMPs to maximize the effectiveness of the strategies while avoiding excessive harm to non-target species.

2.8.0.5 Implement biologically safe and appropriate control/management strategies, and where appropriate, eradication strategies to reduce the impacts and/or limit the distribution of invasive and/or non-native plant species within or near aquatic systems using methods that will provide the most protection to the aquatic and riparian ecological system, and minimize disturbance to the soil and wildlife. Encourage the implementation of biological and mechanical removal/control. When chemical control is used, encourage low-volume, targeted application using NJDEP-approved chemicals in accordance with the specific instructions for that chemical.

2.8.0.6 Implement long-term management of invasive and/or non-native plants to help maintain functioning ecological systems and biological diversity, and to enhance travel corridors. Encourage the implementation of biological and mechanical removal/control. When chemical control is used, encourage low-volume, targeted application using NJDEP-approved chemicals in accordance with the specific instructions for that chemical.

2.10 Planting/seeding

2.10.0 Planting/seeding strategies for terrestrial or aquatic habitat creation or restoration

2.10.0.1 Prevent or ameliorate near-term impacts of climate change throughout the State by developing, implementing and monitoring/evaluating habitat management strategies that will establish/improve habitat resilience (e.g., shorelines of the coast and Delaware Bay, forested habitats of the Pinelands and Skylands) that benefits wildlife inhabiting these areas, in particular within the coastal and Delaware Bay areas.

2.10.0.3 Restore and/or enhance habitats to benefit urban-associated SGCN.

2.10.0.4 Restore and/or enhance suitable travel corridors connecting conserved habitats for SGCN by restoring unsuitable (or less optimal) habitats.

Northern Black Racer

- 2.10.0.5 Implement habitat restoration and/or enhancement activities that include the creation of vegetative buffers between sensitive habitats (e.g., aquatic systems) and human-inhabited areas (e.g., residences, parks, etc.) and that is conducted during appropriate timing to avoid sensitive periods (e.g., nesting, denning, roosting) while minimizing (if not avoiding) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity
- 2.10.0.6 Expand the acreages and enhance the effective size of SGCN habitats by restoring adjacent, less optimal or unsuitable, habitats.
- 2.10.0.7 Restore/reclaim and enhance degraded rare species habitats through strategic revegetation and management efforts for documented/target SGCN.
- 2.10.0.8 Protect significant natural and/or unique communities by implementing best management practices when conducting habitat restoration strategies.
- 2.10.0.9 Restore and/or enhance riparian and floodplain habitats, inland wetland habitats (marsh, vernal pool, fen, emergent shrubland, forest), and other aquatic habitats (including open waters) and/or biologically appropriate buffers to minimize degradation, alteration and/or changes in hydrology and subsequent disturbances to and behavioral changes of wildlife (e.g., restoring biologically appropriate buffers, revegetation or restoration efforts, etc.).
- 2.10.0.12 Create and/or maintain scrub-shrub habitats through revegetation efforts with little to no impact on forested, wetland and grassland habitats to maintain populations of shrub-dependent SGCN.
- 2.10.0.14 Implement best management practices (BMPs), protective strategies and guidelines for restoring and enhancing healthy, SGCN-associated habitats while minimizing (if not avoiding) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
- 2.10.0.15 Restore and/or enhance terrestrial and aquatic habitats proximate to but not adjacent to roads and other transportation corridors for terrestrial-bound SGCN species whose behavior (i.e., dispersal across roads) may be altered by doing so, and therefore decrease road mortality of such species (e.g., amphibians, snakes, turtles, small mammals).
- 2.10.0.21 Restore and/or enhance understory habitats that suppress invasive species and provide critical resources and enhance sheltering, foraging, and nesting cover for wildlife.
- 2.10.0.22 Restore and/or enhance terrestrial and aquatic habitats to promote the regeneration of native vegetation and enhance structural diversity to benefit SGCN (e.g., vegetative buffers of aquatic systems, allow coarse, woody debris to remain in terrestrial, aquatic and riparian habitats to provide shelter, riparian stabilization and necessary microclimates, plant native trees, shrubs and grasses, etc.).
- 2.10.0.24 Use NJ's CHANJ mapping and guidance to establish vegetation and enhance or create corridors between fragmented habitats with similar vegetation, slope, soils, structure, etc. to ensure vegetative integrity is maintained to allow wildlife to safely disperse, and corridors are buffered with natural habitats to minimize disturbance to wildlife within the corridors.

2.11 Vegetation management

2.11.0 Vegetation management strategies for terrestrial or aquatic habitat creation or restoration

- 2.11.0.1 Conduct vegetation management in native terrestrial and aquatic habitats to provide suitable and appropriately sized areas to improve ecological diversity.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Northern Black Racer

- 2.11.0.2 Conduct vegetation management in native terrestrial and aquatic habitats to provide suitable and appropriately sized areas for target SGCN and/or species groups; management should complement rare species needs in a targeted area.
- 2.11.0.3 Create suitable travel corridors connecting and increasing the effective size of conserved habitats for SGCN by restoring unsuitable (or less optimal) habitats through vegetation management.
- 2.11.0.4 Implement vegetation management strategies that consider appropriate timing to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife, particularly SGCN.
- 2.11.0.5 Expand the acreages and enhance the effective size of SGCN habitats by restoring adjacent, less optimal or unsuitable, habitats through vegetation management.
- 2.11.0.6 Reclaim degraded rare species habitats by conducting vegetation management needed to restore habitat value for the documented/target SGCN.
- 2.11.0.7 Protect significant natural and/or unique communities by implementing best management practices through vegetation management.
- 2.11.0.13 Implement best management practices (BMPs), protective strategies, and guidelines for vegetation management to maintain and enhance healthy, SGCN-associated habitats while minimizing (if not avoiding) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
- 2.11.0.14 Conduct vegetation management adjacent to roads for SGCN species whose behavior (i.e., dispersal across roads) may be altered by doing so, and therefore decrease road mortality of such species (e.g., amphibians, snakes, turtles, small mammals).
- 2.11.0.16 Prevent or ameliorate near-term impacts of climate change throughout the State by developing, implementing and monitoring/evaluating habitat management strategies that will establish/improve habitat resilience (e.g., shorelines of the coast and Delaware Bay, forested habitats of the Pinelands and Skylands) that benefits wildlife inhabiting these areas, in particular within the coastal and Delaware Bay areas.
- 2.11.0.18 Implement forest management/silvicultural strategies that promote the development of new old-growth forests and/or minimize the loss of old-growth forest stands with large trees and within large, contiguous tracts.
- 2.11.0.19 Implement forest management/silviculture strategies that enhance and maintain critical core forests as appropriate for targeted species (e.g., for many SGCN forest birds, "core" forest would include the forest area >90 meters from the forest edge), in perpetuity, to benefit interior forest and disturbance-sensitive SGCN.
- 2.11.0.20 Create and/or maintain scrub-shrub habitats through management efforts with little to no impact on forested, wetland and grassland habitats to maintain populations of shrub-dependent SGCN.
- 2.11.0.23 Implement appropriate habitat management actions in areas where natural disturbances, such as wildfire, have been precluded.
- 2.11.0.25 Conduct vegetation management along access roads following BMPs to enhance habitat for target shrub- or young forest-dependent SGCN while minimizing negative impacts to other SGCN.
- 2.11.0.26 Conduct vegetation management along roadsides and medians, avoiding peak activity periods for wildlife, that enhances wildlife dispersal naturally and safely across roads and similar barriers to/between terrestrial and/or aquatic habitats.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Northern Black Racer

- 2.11.0.27 Conduct vegetation management for target shrub- or young forest-dependent SGCN following BMPs to minimize the risk of the establishment of invasive and non-native plants.
- 2.11.0.28 Conduct vegetation management in agricultural areas following BMPs to enhance habitat for target shrub- or young forest-dependent SGCN while minimizing negative impacts to other SGCN.
- 2.11.0.29 Conduct vegetation management on transportation and service corridors (i.e., rights-of-way) following BMPs to enhance habitat for target shrub- or young forest-dependent SGCN while minimizing negative impacts to other SGCN.
- 2.11.0.31 In areas where vegetative communities are shifting due to fire suppression and controlled burns are not feasible, manage vegetation to improve wildlife habitat.
- 2.11.0.32 Increase structural habitat diversity around and when feasible, within agricultural landscapes by managing vegetation for a variety of species, in particular, those farms that have removed scrub-shrub habitat and/or fragmented forests, and by implementing ecologically best practices (e.g., no-till farming, maintaining hedgerows, buffer set-asides, etc.).
- 2.11.0.33 Increase structural habitat diversity by implementing long-term vegetation management to minimize the potential for the establishment of invasive and/or non-native plants that may outcompete native vegetation.
- 2.11.0.34 Increase structural habitat diversity by managing residential, commercial and recreational areas' landscapes for a variety of species. For example, integrate short and tall grasses, specific host plants, brush piles, water sources/wetlands, shrubby areas, nesting areas and no-mow set-asides.
- 2.11.0.36 Increase structural habitat diversity by managing vegetation for a variety of species and considering their life history requirements (e.g., travel corridors, shelter, resting and breeding areas) to minimize the risk of harm.
- 2.11.0.37 Increase structural habitat diversity by minimizing the removal of coarse, woody debris in terrestrial, aquatic and riparian habitats which benefits wildlife.
- 2.11.0.38 Increase structural habitat diversity in and around horse/livestock farms by managing vegetation for a variety of species, in particular, in and around farms that have fragmented forests, and by implementing ecologically best practices (e.g., do not permit overgrazing, do not allow livestock to wade in waterbodies).
- 2.11.0.39 Increase structural habitat diversity in and around solar farms by managing vegetation for a variety of species and that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife. For example, integrate short and tall grasses, specific host plants, brush piles, water sources/wetlands, shrubby areas, nesting areas and no-mow set-asides.
- 2.11.0.40 Increase structural habitat diversity surrounding areas used for energy, mining, and transportation and service corridors by managing vegetation for a variety of species and that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife. For example, integrate short and tall grasses, specific host plants, brush piles, water sources/wetlands, shrubby areas, nesting areas and no-mow set-asides, and avoid managing habitat during the breeding seasons for ground-nesting birds, reptiles, amphibians and small mammals.
- 2.11.0.41 Increase structural habitat diversity through the implementation of a variety of vegetation management practices such as prescribed burns (either increasing or decreasing their frequency depending on the site and objective), plantings, etc. that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife.

Northern Black Racer

- 2.11.0.42 Increase structural habitat diversity within wind farms for terrestrial bound and low-flying species and around wind farms for other wildlife by managing vegetation for a variety of species and that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife.
- 2.11.0.43 Manage forests to increase variation in age structure and composition using BMPs that promote and maintain functioning ecological forest-based systems and biological diversity.
- 2.11.0.45 Regularly and/or rotationally create young forest habitat in targeted areas to maintain and regenerate a mosaic of upland forest habitats that will benefit shrub- and young forest-dependent species.

2.13 Wildlife damage management

2.13.0 Nuisance fish and wildlife damage

- 2.13.0.5 Investigate the impacts of human-subsidized and/or naturally occurring predator species on SGCN to assess the need for integrated wildlife damage management techniques (e.g., predator exclosures, fish blockages, electric fence, culls) and/or policy changes on state land management that minimize the impacts of human-subsidized predators.
- 2.13.0.8 Implement and assess management strategies to control and reduce the impacts of detrimental species and diseases that pose threats to native wildlife or communities.

2.14 Wildlife disease management

2.14.0 Wildlife disease strategy development and investigation

- 2.14.0.1 Investigate diseases/pathogens impacting SGCN and/or their habitats.
- 2.14.0.2 Develop and implement strategies to combat the impacts of diseases/pathogens impacting SGCN and/or their habitats, track disease occurrences and monitor/research impacts to SGCN populations and their habitats.
- 2.14.0.4 Conduct long-term monitoring of diseases in vulnerable wildlife to determine the magnitude of exposure within populations and around the State, the impacts to those species, in particular SGCN, and investigate the feasibility of mitigating for such impacts.
- 2.14.0.5 Assess the impacts of diseases on the life cycles of wildlife.

3 Data Collection and Analysis

3.0 General fish and wildlife research, survey or monitoring

3.0.0 Research, survey or monitoring - general fish and wildlife needs

- 3.0.0.1 Conduct long-term monitoring of resident and migratory SGCN populations using standardized survey protocols to determine the variables that may impact their long-term persistence in the State (e.g., population viability, distribution, dispersal, home range and habitat use, travel corridors, food availability, vulnerability to pollutants and disease, etc.). Compile this information to determine the likely causes of population declines and to understand metapopulation dynamics. Provide data to NJ DEP for integration into the Biotics database, Landscape Project and permitting review processes.
- 3.0.0.2 Identify (through literature searches, review of available data, enlistment of habitat and/or species experts, etc.) where data gaps exist regarding SGCN distribution, and their critical and supportive habitats. Conduct surveys using standardized survey protocols to acquire baseline data, and provide the data to NJ DEP for integration into the Biotics database, Landscape Project Map and permitting review processes.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Northern Black Racer

- 3.0.0.3 Gather baseline data on SGCN inhabiting permanently protected natural lands regarding their distribution and population (e.g., abundance, dispersal, demography including productivity and survival, etc.), and identify (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) critical and supporting habitats within those landscapes.
- 3.0.0.4 Conduct long-term studies on SGCN inhabiting permanently protected natural lands to develop population trend data and changes in demography, and to determine if critical and/or supporting habitats are limited or changing; i.e., diminishing in value, acreage or connectivity.
- 3.0.0.5 Gather baseline data on resident and migratory SGCN (in particular migratory species for which New Jersey habitats are significant), terrestrial, freshwater and marine species, regarding the location and condition of their critical and supporting habitats (e.g., foraging, roosting, nesting/breeding, stopover, migration paths, etc.), and population demography (e.g., productivity, survival, dispersal). Compile this information into a database that includes descriptions of the conditions of the habitats and species, and a GIS component of the locations of these important habitats. Provide data to NJ DEP for integration into the Biotics database, Landscape Project and permitting review processes.
- 3.0.0.6 Conduct long-term studies on resident and migratory SGCN to determine if there are changes to the populations' demography (productivity, survival, dispersal) and/or to their critical and/or supporting habitats (i.e., diminishing in value, acreage or connectivity, etc.), in particular changes that would not maintain SGCN at viable levels for species populations. Update data and GIS maps; provide updated information to NJ DEP for integration into the Biotics database, Landscape Project and permitting review processes.
- 3.0.0.7 Collect baseline data to document species distributions, in particular SGCN, and current habitat for future analysis of possible distribution shifting as a result of habitat shifting or alteration associated with climate change impacts.
- 3.0.0.8 Conduct long-term studies and compare baseline metrics of documented species distributions and associated habitats to identify possible species and/or habitat shifting or alteration associated with climate change impacts.
- 3.0.0.11 Develop, implement and evaluate the effectiveness of town plans that avoid impacts to SGCN species and their habitats.
- 3.0.0.13 Investigate the effects of pesticides, herbicides and other biological controls on SGCN and their critical and supporting habitats. Evaluate and modify management practices as appropriate.
- 3.0.0.19 Identify the presence and status (e.g., functioning, structure, slated for removal, etc.) of existing dams and culverts within and/or that may impact SGCN and their habitats, and create a database that includes a GIS component identifying the locations of such structures and their status. Share this information with appropriate organizations and/or agencies evaluating the benefits and risks of such structures on SGCN and their habitats.
- 3.0.0.20 Once baseline data identifying and describing the status of existing dams and culverts have been gathered, conduct evaluations at a variety of sites to determine whether the benefits of culvert and dam creation or removal outweigh the risks to SGCN species and their habitats, and if other variables/conditions specific to individual sites/locations result in a different outcome. Identify and target appropriate dams and culverts for removal and/or reconstruction to minimize harm to SGCN species and their habitats.
- 3.0.0.26 Conduct studies to evaluate the effectiveness of proactive species recovery plans for all endangered and threatened species including objectives and guidance pertaining to and the condition/status of critical and supporting habitats.

Northern Black Racer

- 3.0.0.27 Evaluate the effectiveness of strategies to restrict human activity (e.g., recreational, maintenance work, etc.) from sensitive habitats/areas such as avian nesting sites, reptile and amphibian breeding areas (nesting or gestation/birthing and breeding pools, respectively), and bat hibernacula, and federal buffers for marine mammals through research and monitoring. Develop and provide NJ DEP and other appropriate governing agencies/commissions a summary of findings and recommendations to improve such efforts.

3.2 Research, survey or monitoring - fish and wildlife populations

3.2.0 Data deficiency

- 3.2.0.1 Division of Fish and Wildlife should maintain a robust, up-to-date database and mapping of species occurrences.
- 3.2.0.4 Conduct long-term monitoring of the impacts of contaminants to vulnerable wildlife to determine the magnitude of exposure within populations and around the State, the impacts to those species, in particular SGCN, and investigate the feasibility of mitigating for such impacts. Maintain records on exposure of vulnerable wildlife to environmental toxins (such as flame retardants and endocrine disruptors), so that sources may be identified and controlled or eliminated.
- 3.2.0.5 Prevent or ameliorate near-term impacts of climate change throughout the State by developing, implementing and monitoring/evaluating habitat management strategies that will establish/improve habitat resilience (e.g., shorelines of the coast and Delaware Bay, forested habitats of the Pinelands and Skylands) that benefits wildlife inhabiting these areas, in particular within the coastal and Delaware Bay areas.
- 3.2.0.6 Develop, implement and conduct studies to evaluate the effectiveness of methods implemented to reduce road mortality of wildlife (e.g. wildlife underpasses, road closures).
- 3.2.0.7 Track (via a database that includes a GIS component) and research problematic species and diseases to determine their distribution, impacts on SGCN wildlife/wildlife communities, and develop potential control measures.
- 3.2.0.8 Implement and conduct long-term monitoring of control measures aimed at minimizing the impacts of problematic species and/or diseases to evaluate the effectiveness of such efforts and to identify and incorporate additional strategies as appropriate.
- 3.2.0.10 Evaluate the effectiveness of sanitation/decontamination protocols in minimizing the transference of wildlife diseases and invasive plant species.
- 3.2.0.12 Investigate the impacts of ORV use and ORV-created noise on terrestrial and aquatic wildlife behavior and the impact of direct mortality from vehicle strikes. Integrate this information when mapping undeveloped roads and trails to identify potentially sensitive areas in northern NJ forests.

3.2.1 Abundance determination

- 3.2.1.1 Identify (through literature searches, review of available data, enlistment of habitat and/or species experts, etc.) population abundance and trends for SGCN using standardized survey protocols. Provide data to NJ DEP for integration into the Biotics database, Landscape Project Map and permitting review processes.
- 3.2.1.2 Conduct wildlife surveys on resident and migratory SGCN regarding their population abundance and trends.

3.2.2 Age, size and sex structure

- 3.2.2.1 Conduct wildlife surveys on resident and migratory SGCN regarding their survivorship.

3.2.3 Baseline inventory

Northern Black Racer

- 3.2.3.6 Investigate the feasibility and potential for success of conducting genetic rescue through translocation and/or reintroduction of animals into suitable habitat that was historically occupied to increase genetic diversity and reconnect isolated populations. Methods of investigation should include, but are not limited to, thorough literature reviews, expert opinions, identifying potential pitfalls (e.g., species' fidelity to their range or critical areas), and an examination of historic and current SGCN population distribution and suitable habitat availability.
 - 3.2.3.7 Identify roads or portions of roads, paved or unimproved (through site surveys, land use/land cover assessments and analyses, review of available data, enlistment of species experts, etc.) with high incidences of road mortality and/or presence of snakes, turtles, medium-sized and large mammals. Conduct assessments of the roads and incorporate information into a database that includes descriptions (e.g., qualifiers to help prioritize the roads' risk to wildlife) and a GIS component of the locations of such areas. Share this information with appropriate organizations and/or agencies working to implement measures (e.g., wildlife passages, road closures) to minimize the risk to these species.
 - 3.2.4 Food habits
 - 3.2.4.1 Monitor and investigate the populations and health of SGCN prey/food resources for those SGCN whose populations are thought to be limited due wholly or in part to a lack of food resources or toxins in food resources.
 - 3.2.5 Genetics
 - 3.2.5.1 Investigate the feasibility and potential for success of conducting genetic rescue through translocation and/or reintroduction of animals into suitable habitat that was historically occupied to increase genetic diversity and reconnect isolated populations. Methods of investigation should include, but are not limited to, thorough literature reviews, expert opinions, identifying potential pitfalls (e.g., species' fidelity to their range or critical areas), and an examination of historic and current SGCN population distribution and suitable habitat availability.
 - 3.2.7 Population assessment
 - 3.2.7.1 Conduct species status assessments using the Delphi Technique and review of available data and literature on fish and wildlife (including marine animals) to maintain accurate legal status categorization of native wildlife.
 - 3.2.7.2 Conduct studies to evaluate the effectiveness of proactive species recovery plans for all endangered and threatened species to meet and maintain recovery goals.
 - 3.3 Research, survey or monitoring - habitat
 - 3.3.1 Baseline inventory
 - 3.3.1.1 Conduct habitat assessments of significant natural and/or unique communities to identify threats to native terrestrial and aquatic habitats through systematic monitoring, review of available data, enlistment of habitat management and/or species experts, etc. Incorporate findings into a database that includes descriptions/qualifiers of the habitats, identifies and values/qualifies the threats, and includes a GIS component of the locations of the assessed areas. Share this information with landowners/managers (e.g., federal, state and local government agencies or non-government organization).
 - 3.3.1.2 Identify (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) resident and migratory SGCN habitats. Investigate their suitability for the various life history requirements of the species that dependent upon them to determine the ability for maintaining applicable SGCN populations in perpetuity.

Northern Black Racer

- 3.3.1.4 Identify (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) and investigate the suitability of corridors that connect large, contiguous tracts of similar habitats to increase their effective size (i.e., forest with forest, grassland with grassland, wetlands with wetlands, etc.) for dependent SGCN.
- 3.3.1.5 Identify areas (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) where habitat restoration and/or enhancement would benefit wildlife SGCN.
- 3.3.1.6 Identify areas (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) that could, through revegetation and/or enhancement efforts, become suitable travel corridors connecting and increasing the effective size of conserved habitats for SGCN.
- 3.3.1.7 Map and prioritize existing and potential areas for early succession forest management. Share the results with state, county and municipal planners.
- 3.3.1.8 Assess the availability and suitability of forest habitats for SGCN species (particularly reptiles and amphibians, birds, pollinators, and tiger beetles) in southern forests since Superstorm Sandy.
- 3.3.1.9 Inventory forests throughout northern New Jersey to develop a baseline characterization of the structure and composition of habitats and identify deficient forest habitat types.
- 3.3.1.16 Gather "best information" for spatial modeling and update/create a current model/depiction of anticipated habitat shifts from sea-level rise, flooding, etc.
- 3.3.1.17 Identify and map undeveloped roads and trails in all conserved forests, and create a database of locations. Integrate information regarding potentially sensitive areas.
- 3.3.1.18 Conduct an assessment using available data regarding SGCN population numbers/trends and demography, on-going threats, habitat changes, etc. to determine if directed management efforts are needed to reach or maintain viable population levels.
- 3.3.1.19 Identify and codify legal ORV access areas on state (and if appropriate, other conserved) lands. Provide GIS mapping to the landowner for potential use in directing such recreational activities.
- 3.3.1.20 Identify areas (through surveys/studies, literature searches, review of available data, enlistment of habitat management and/or species experts, etc.) where invasive, non-indigenous plants and animals are either already established or are becoming established. Create a system for reporting and qualifying new locations of invasive species and for prioritizing areas for control measures according to the potential level of impact on the ecosystem and SGCN and the likelihood of success. Researchers and contractors encountering invasive plant species while performing plant and/or forest inventories on state or other conserved lands and/or private lands should report invasive plant species through the New Jersey Invasive Species Strike Team phone application.
- 3.3.1.24 Conduct regular investigations of SGCN habitat health and biodiversity on public and private lands to identify locations in need of revegetation, reduction of over-abundant, native wildlife and/or exotic species, conservation focal areas requiring limitations on human activity, etc.

3.3.2 Monitoring

- 3.3.2.1 Evaluate the effectiveness of forest management/silviculture strategies that enhance and maintain critical core forests as appropriate for targeted species (e.g., for many SGCN forest birds, "core" forest would include the forest area >90 meters from the forest edge), in perpetuity, to benefit interior forest and disturbance-sensitive SGCN through research and monitoring.

Northern Black Racer

- 3.3.2.2 Conduct long-term monitoring of resident and migratory SGCN habitats using standardized survey protocols to determine changes in habitat quality/suitability and threats (e.g., habitat loss and degradation, increased edge habitat, water quality) and other variables that may impact their long-term persistence in the State and to provide information needed for determining causes of population declines and understanding metapopulation dynamics.
- 3.3.2.3 Continue to update wildlife and habitat databases and revise models of critical SGCN habitats using the most current data available and where lacking, develop new SGCN and/or habitat models as data on species habitat requirements and applicable GIS data layers become available.
- 3.3.2.8 Evaluate the effectiveness of current prescribed burning practices on Pinelands dependent species.
- 3.3.2.9 Investigate the effectiveness of various silviculture techniques for enhancing forests for forest-dependent SGCN.
- 3.3.2.10 Evaluate the efficacy and success of different management techniques (e.g., ecologically-based forestry activities, prescribed burns) that might be used to mimic the historic role of fire and other natural disturbances in shaping an ecosystem.
- 3.3.2.15 Investigate the effectiveness of management techniques implemented to eliminate invasive terrestrial and aquatic plant species on private and public lands, and/or within sensitive and/or important habitats for SGCN.
- 3.3.2.20 Once a system is developed for reporting and qualifying new locations of invasive species, develop, implement and monitor/evaluate invasive species removal strategies at identified locations. Priority should be given to those areas critical to SGCN and/or contain unique and/or rare plant communities supporting SGCN and/or other fish/wildlife species.
- 3.3.2.24 Conduct regular inventories of forests throughout northern New Jersey to characterize the changing structure and composition of habitats and monitor forest conditions.

3.5 Techniques development

3.5.3 Habitat restoration methods

- 3.5.3.1 Work with land management agencies to determine the appropriate actions needed to restore/reclaim degraded habitat for the documented/target SGCN.
- 3.5.3.3 Develop/improve management techniques that might be used to mimic the historic role of fire and other natural disturbances in shaping an ecosystem.
- 3.5.3.7 Develop/improve forest management/silviculture strategies that enhance and maintain critical core forests as appropriate for targeted species (e.g., for many SGCN forest birds, "core" forest would include the forest area >90 meters from the forest edge), in perpetuity, to benefit interior forest and disturbance-sensitive SGCN through research and monitoring.
- 3.5.3.8 Develop best management practices (BMPs), protective strategies, and guidelines for maintaining and enhancing healthy, SGCN-associated terrestrial and aquatic habitats and associated riparian habitats, and to minimize (if not avoid) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
- 3.5.3.9 Develop strategies to combat the impacts of diseases/pathogens impacting SGCN and/or their habitats.
- 3.5.3.11 Develop strategies to protect native terrestrial and aquatic habitats and dependent SGCN species from the identified threats.
- 3.5.3.14 Develop aquaculture practices in the coastal areas that are compatible with the recovery of SGCN.

Northern Black Racer

- 3.5.3.15 Modify management practices based on the effects of pesticides, herbicides and other biological controls on critical and supporting SGCN habitats.
- 3.5.3.16 Develop/improve strategies to restrict human activity (e.g., recreational, maintenance work, etc.) from sensitive habitats/areas such as avian nesting sites, reptile and amphibian breeding areas (nesting or gestation/birthing and breeding pools, respectively), and bat hibernacula, and federal buffers for marine mammals. Methods may include, but are not limited to, managing the landscape to deter access, diverting recreational and other activities from sensitive areas during critical periods through permit processes or blocking access (trails, roads, etc.), posting (if appropriate), increasing law enforcement presence, conducting management activities at appropriate times to avoid disturbance and/or harm to wildlife (e.g., habitat management, beach raking, etc.), and decreasing noise and light pollution.
- 3.5.3.19 Work with foresters to develop prescribed burning practices for Pinelands dependent species that increase or maintain habitat quality for these species in the Pinelands.
- 3.5.3.20 Develop guidance on various silviculture techniques for enhancing forests for forest-dependent SGCN.
- 3.5.3.21 Develop management techniques (e.g., ecologically-based forestry activities, prescribed burns) that might be used to mimic the historic role of fire and other natural disturbances in shaping an ecosystem.
- 3.5.3.24 Based on research, modify management techniques implemented to eliminate invasive terrestrial and aquatic plant species on private and public lands, and/or within sensitive and/or important habitats for SGCN.
- 3.5.3.25 Use data regarding SGCN population numbers/trends and demography, on-going threats, habitat changes, etc. to develop the necessary management strategies to reach or maintain viable population levels.
- 3.5.4 Fish and wildlife research, survey and management techniques
 - 3.5.4.1 Develop studies to evaluate management strategies to improve the availability of prey/food resources for SGCN whose populations are thought to be limited due wholly or in part to a lack of (or contaminated) food resources. Monitor and investigate the management strategies over time to determine success and/or the need to revise methods.
 - 3.5.4.5 Develop and implement strategies to combat the impacts of diseases/pathogens impacting SGCN and/or their habitats, track disease occurrences and monitor/research impacts to SGCN populations and their habitats.
 - 3.5.4.6 Investigate the feasibility of mitigating for the impacts of contaminants to vulnerable wildlife, particularly SGCN. Maintain records on exposure of vulnerable wildlife to environmental toxins (such as flame retardants and endocrine disruptors), so that sources may be identified and controlled or eliminated.
 - 3.5.4.7 Investigate the feasibility and potential for success of conducting genetic rescue through translocation and/or reintroduction of animals into suitable habitat that was historically occupied to increase genetic diversity and reconnect isolated populations. Methods of investigation should include, but are not limited to, thorough literature reviews, expert opinions, identifying potential pitfalls (e.g., species' fidelity to their range or critical areas), and an examination of historic and current SGCN population distribution and suitable habitat availability.
 - 3.5.4.9 Conduct studies to evaluate the impacts of roads on SGCN and develop, implement and conduct studies to evaluate the effectiveness of methods to reduce road mortality of wildlife (e.g. wildlife underpasses, road closures).

Northern Black Racer

- 3.5.4.13 Develop/improve strategies to restrict human activity (e.g., recreational, maintenance work, etc.) from sensitive habitats/areas such as avian nesting sites, reptile and amphibian breeding areas (nesting or gestation/birthing and breeding pools, respectively), and bat hibernacula, and federal buffers for marine mammals. Methods may include, but are not limited to, managing the landscape to deter access, diverting recreational and other activities from sensitive areas during critical periods through permit processes or blocking access (trails, roads, etc.), posting (if appropriate), increasing law enforcement presence, conducting management activities at appropriate times to avoid disturbance and/or harm to wildlife (e.g., habitat management, beach raking, etc.), and decreasing noise and light pollution.
- 3.5.4.14 Develop and implement agreements, and update existing agreements, with government agencies regarding the protection of critical SGCN habitats (e.g., significant breeding populations of beach nesting birds, colonial waterbird nesting areas, bat colonies, etc.).
- 3.5.4.15 Investigate the success of management strategies used to protect and/or enhance SGCN populations and when appropriate, aid in identifying failures/resource problems and issues, and developing new strategies.
- 3.5.4.16 Use data regarding SGCN population numbers/trends and demography, on-going threats, habitat changes, etc. to determine if directed management efforts are needed to reach or maintain viable population levels and develop the necessary management strategies.
- 3.5.4.17 Investigate new, non-invasive techniques for SGCN population evaluation through literature review, expert opinion, trial studies (if low risk), etc.
- 3.5.4.18 Investigate the effectiveness of survey techniques through selected “ground truthing” and literature and peer review in order to increase efficacy of survey, minimize surveyor bias and error, and increase accuracy of trend data.
- 3.5.4.19 Develop reliable, standardized survey and monitoring protocols for SGCN species, for which none currently exist, and their habitats.
- 3.5.4.21 Develop BMPs to address problematic species and diseases of unknown origin.
- 3.5.4.22 Investigate the efficacy of implementing strategies to minimize or eliminate disturbances to all SGCN (i.e., beyond their federal requirements) during military activities.

4 Education

4.1 Educator/Instructor training

4.1.0 Public education

- 4.1.0.1 Provide educational resources and training programs to private and public landowners, as well as schools, regarding the benefits and creation of backyard habitats for wildlife.

5 Facilities and Areas

5.15 Wildlife Management Areas

5.15.6 Roads

- 5.15.6.2 Clearly post areas/trails where vehicle access is not permitted.

6 Land and Water Rights Acquisition and Protection

6.0 Acquisition and protection strategies

6.0.0 Combined acquisition and protection strategies

- 6.0.0.1 Enhance and increase the effective size of critical migratory stopover habitats for songbirds, raptors, shorebirds, bats and invertebrates by securing adjacent habitats through an appropriate combination of fee title, non-fee title and landowner agreements.

Northern Black Racer

- 6.0.0.2 Enhance and increase the effective size of SGCN habitats by protecting adjacent habitats that contribute to the overall size of the "core" area and/or provide a natural buffer, enhancing the suitability of the core area for SGCN, and/or connect conserved SGCN habitats through an appropriate combination of fee title, non-fee title and landowner agreements.
- 6.0.0.6 Secure and protect old-growth forest stands with large trees and/or stands that are approaching or being actively managed for old growth forests, in particular those within large, contiguous forest tracts, through an appropriate combination of fee title, non-fee title and landowner agreements.
- 6.0.0.7 Secure and protect critical SGCN forested habitat and minimize forest edge to benefit interior forest and disturbance-sensitive SGCN through an appropriate combination of fee title, non-fee title and landowner agreements.
- 6.0.0.8 Secure and protect scrub-shrub habitats for SGCN through an appropriate combination of fee title, non-fee title and landowner agreements.

6.3 Conservation area designation

6.3.0 Conservation area designation strategies

- 6.3.0.1 Promote the protection of critical migratory stopover habitats for songbirds, raptors, shorebirds, bats and invertebrates and enhance these lands by increasing the effective size through conservation area designations of stopover habitats and adjacent private lands.
- 6.3.0.2 Enhance and increase the effective size of SGCN habitats by protecting adjacent habitats that contribute to the overall size of the "core" area and/or provide a natural buffer, enhancing the suitability of the core area for SGCN and/or connect conserved SGCN habitats through conservation area designations.
- 6.3.0.6 Promote the protection of old-growth forest stands with large trees and/or stands that are approaching or being actively managed for old growth forests, in particular those within large, contiguous forest tracts, through conservation area designations.
- 6.3.0.7 Promote the protection of critical SGCN forested habitat and minimize forest edge to benefit interior forest and disturbance-sensitive SGCN through conservation area designations.
- 6.3.0.8 Promote the protection of scrub-shrub habitats for SGCN through conservation area designations.

6.4 Private lands agreements

6.4.0 Private land agreement strategies

- 6.4.0.1 Enter into private lands agreements to expand control burns on private lands, in particular those adjacent to conserved lands to improve SGCN habitats.

7 Law Enforcement

7.1 Law enforcement

7.1.3 Sub-national Level

- 7.1.3.2 Increase the number of law enforcement officers tending to wildlife issues to a reasonable number to sufficiently cover the State and marine waters.

7.1.4 Scale Unspecified

- 7.1.4.3 Increase law enforcement presence proximate to sensitive areas [e.g., avian nesting sites, in particular rookeries, and reptile and amphibian breeding areas (nesting or gestation/birthing and breeding pools, respectively)] to deter human activity and subsequent disturbance to SGCN.

Northern Black Racer

- 7.1.4.6 Recruit law enforcement to assist in the protection and enhancement of SGCN populations, in particular endangered species, through improved awareness of species through trainings, partnerships, and other methods. Information should include but is not limited to: 1) Issues concerning illegal collection of reptiles, 2) Persecution of rare snakes, 3) Illegal recreational activities on public lands (e.g., off-road vehicles) and their impact on wildlife, 4) Identification of sensitive areas, critical sites and/or "hot-spots" for collection.
- 7.1.4.7 Increase law enforcement presence to enforce regulations governing recreational activities (e.g., the use of personal watercraft and off road vehicles, caving, rock climbing, etc.) on conserved lands and within other sensitive habitats, and discourage activities that cause harm or disturbance to vegetation, wetlands, fish and wildlife.
- 7.1.4.9 Implement policies that improve and secure habitat connections between conserved SGCN habitats.
- 7.1.4.10 Implement policies that promotes expanding acreages and enhances the effective size of SGCN habitats by providing biologically appropriate buffers of native habitat surrounding SGCN habitats.
- 7.1.4.12 Implement policies and/or regulations that protect significant natural and/or unique communities in perpetuity.
- 7.1.4.14 Implement policies that protect existing and developing old-growth forest stands with large trees, in particular those within large, contiguous forest tracts.
- 7.1.4.15 Implement policies that preserve and protect critical SGCN forested habitat and minimize forest edge to benefit interior forest and disturbance-sensitive SGCN.
- 7.1.4.19 Implement policies that protect and restore scrub-shrub habitats to benefit shrub-dependent SGCN.
- 7.1.4.22 Implement policies and/or regulations that prohibit the presence of managed cat colonies and trap, neuter and release programs in or near critical wildlife habitats.
- 7.1.4.23 Implement policies that minimize wildlife road mortality.
- 7.1.4.25 Encourage the enforcement of municipal laws regulating domestic pets that may predate on wildlife.
- 7.1.4.26 Educate law enforcement personnel that there may be unauthorized research projects taking place and to encourage them to investigate any activities that appear to be harmful to wildlife.

8 Outreach

8.1 Partner/stakeholder engagement

8.1.0 Partner/stakeholder engagement strategies

- 8.1.0.3 Develop an outreach team of personnel from government entities, conservation organizations and other stakeholders to work together to collaboratively use social media campaigns to grow a constituency of NJ residents who have an elevated ecological and climate consciousness.
- 8.1.0.4 Engage government agencies, conservation partners and other stakeholders in constructive dialogues encouraging them to influence policy change and the creation of incentives through a habitat bill and/or municipal ordinances for backyard habitat.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Northern Black Racer

- 8.1.0.11 Engage government agencies, conservation partners and other stakeholders to collaboratively develop and implement an extensive educational/outreach program targeting sportsmen's organizations and fisheries, as well as public constituents, addressing the unintended effects abandoned fishing gear, tackle and crab pots can have on wildlife, and promote the collection and/or reporting of abandoned items and their locations.
- 8.1.0.13 Engage DOD in a constructive dialogue regarding strategies to minimize disturbances to all SGCN (i.e., beyond their federal requirements) from forest management and other practices on their lands.
- 8.1.0.14 Engage DOD in a constructive dialogue regarding strategies to minimize or eliminate disturbances to all SGCN (i.e., beyond their federal requirements) during military activities.
- 8.1.0.15 Engage government agencies, conservation partners and other stakeholders in discussions encouraging and supporting the creation of laws and policies requiring vegetative buffers of native plants on preserved farmland and state lands with agricultural leases or agreements.
- 8.1.0.16 Engage local governments in discussions regarding the importance of them adopting/passing ordinances which require assessing and addressing secondary impacts (i.e., ancillary prescribed burns, trespassers, ORV use, mosquitoes, deer, buffers) on biological resources when revising planning/zoning documents or granted site plan/subdivision approvals.
- 8.1.0.17 Engage municipalities in constructive dialogue to identify and minimize destruction of areas prioritized for early succession forest management.
- 8.1.0.18 Engage NJDOT, NJ Transit Authority and other road management entities, wildlife conservation organizations/agencies (e.g., Division of Fish and Wildlife, New Jersey Conservation Foundation, Conserve Wildlife Foundation of NJ), and communities and citizens in discussions regarding the importance of and methods to enhance habitat connectivity, and work together to develop feasible strategies for ensuring that wildlife can disperse naturally and safely across roads and similar barriers to terrestrial and/or aquatic habitats.
- 8.1.0.19 Engage government agencies, conservation partners and other stakeholders to collaboratively develop a list of important projects, targeting SGCN and/or their habitat, as a guide for graduate student research. Distribute the list and contact information to all State colleges and universities.
- 8.1.0.21 Work with government agencies and environmental educators to develop educational resources and training programs, educate the public on the devastation human-subsidized and/or overabundant, native species cause to local nesting species, and provide expert guidance on how residents can help alleviate this threat.
- 8.1.0.24 Engage government agencies, conservation partners and other stakeholders in constructive dialogue regarding the importance of providing and methods to provide technical support for carrying out restoration and management practices aimed at increasing structural habitat diversity.
- 8.1.0.25 Provide technical support to public landowners and land managers for carrying out restoration and management practices aimed at increasing structural habitat diversity.
- 8.1.0.26 Coordinate across federal, state and local agencies and approved consulting foresters that provide financial, logistical or planning assistance to woodland landowners to adopt or endorse consistent best management practices concerning controlled burns to maintain and/or improve forested habitat for wildlife.
- 8.1.0.30 Encourage government agencies and conservation partners to advise members of the relevant scientific community of the need for specific studies, reports or investigations targeting the data-deficiency regarding SGCN and/or their habitats.

Northern Black Racer

- 8.1.0.34 Work with the NJ Education Association and Department of Education to design curriculum and outdoor experimental learning opportunities, and provide training to teachers on implementation of these activities.
- 8.1.0.37 Enlist landowners and NJ citizens in the protection of and survey efforts for SGCN, in particular rare species, by increasing enrollment in landowner incentives, forest stewardship, backyard habitat management and wildlife-related volunteer programs.
- 8.1.0.38 Engage partners, stakeholders and land managers in constructive dialogue promoting forest stewardship for SGCN that use core forests and forested corridors.
- 8.1.0.40 Encourage researchers, land managers, naturalists and enthusiasts to follow proper procedures for the coordination and/or permitting of research/management activities involving wildlife and sensitive habitats, and discourage activities that alter vegetation or wetlands, or cause harm or disturbance to wildlife.
- 8.1.0.42 Engage citizens, wildlife observers and photographers through discussions and distributable information regarding the importance of and encouraging implementing responsible and ethical behavior when observing wildlife by developing an alliance of wildlife photographers and widely circulating recommendations on how to reduce impact.
- 8.1.0.44 Engage conservation partners, stakeholders, government agencies and other land stewards in constructive dialogues encouraging their inclusion of controlled burns in forest and other stewardship plans.
- 8.1.0.47 Form cooperative partnerships with energy companies to facilitate habitat creation and enhancement away from and outside of project areas, the restoration of appropriate habitats within project areas (e.g., rights-of-way could benefit butterflies and some bird species), and to identify seasonal timing of activities that would minimize impacts to wildlife.

8.3 WSFR program/subprogram outreach

8.3.0 WSFR program/subprogram outreach strategies

- 8.3.0.6 Develop and provide (or otherwise make publicly available) educational programs and/or materials to enlist landowners, land managers and local communities to discourage the presence of managed cat colonies and trap, neuter and release programs in wildlife habitats.
- 8.3.0.7 Develop and provide (or otherwise make publicly available) educational programs and/or materials that describe the negative impacts of off-road vehicles and watercraft use in and adjacent to critical SGCN habitats, and the importance of confining such activities to more appropriate locations and/or seasons.
- 8.3.0.8 Develop and provide (or otherwise make publicly available) educational programs and/or materials to educate recreationists and encourage landowners to eliminate garbage in the vicinity of suitable wildlife habitat, in particular SGCN habitat. Information should include the detrimental impacts garbage may have on various wildlife species.
- 8.3.0.9 Develop and provide (or otherwise make publicly available) educational programs and/or materials to enlist landowners and land managers to include only native plants in landscaping and restoration projects. Provide information to assist them in detecting problematic establishment of invasive, non-indigenous plants.
- 8.3.0.10 Develop and provide (or otherwise make publicly available) educational programs and/or materials to educate landowners and NJ citizens on threats to fish and wildlife (including marine animals).

Northern Black Racer

- 8.3.0.11 Develop and provide (or otherwise make publicly available) educational programs and/or materials to the public, wildlife-related professionals, foresters, etc., that describe the value of species that are often feared (e.g., snakes, bats, spiders, Allegheny woodrat) and/or deemed a "nuisance" (e.g., squirrel, deer, snapping turtle), and therefore, persecuted by people. Include information on tolerance, proper identification, eviction from human dwellings, how to minimize the animal's presence on the property, and/or how to live in harmony with the animal.
- 8.3.0.12 Promote awareness of WSFR (Wildlife and Sportfish Restoration) Outreach/Awareness grants, an important funding source for conservation among hunters and anglers as well as the general public.
- 8.3.0.13 Conduct an educational campaign to encourage observer ethics and respect for wildlife and natural habitat.
- 8.3.0.19 Develop an educational outreach program for the public on the devastating effects predators can have on native nesting wildlife.
- 8.3.0.24 Develop educational outreach programs for local decision-makers, land developers, landowners and citizens about lawn alternatives and the importance of natural vegetation and "edge" habitats on developed properties.
- 8.3.0.26 Develop educational outreach programs for private and public landowners and land managers regarding the importance of and how to manage core forests and forested corridors in a way that will be beneficial for SGCN, particularly endangered, threatened and special concern species.
- 8.3.0.27 Develop educational outreach programs for public and private landowners and land managers regarding the importance of structural habitat diversity, methods to increase diversity, and/or incentive programs available to increase habitat diversity.
- 8.3.0.30 Develop educational outreach programs for private and public landowners, as well as schools, regarding the benefits and creation of backyard habitats for wildlife.
- 8.3.0.31 Develop an educational outreach program for landowners and citizens on the secondary impacts of rodenticides on predators and scavengers.
- 8.3.0.32 Develop an educational outreach program for landowners and citizens on the threats that herbicides and pesticides pose to aquatic systems and wildlife, and to promote safer usage of such products.

9 Planning

9.1 Land use planning

9.1.0 Land use planning strategies

- 9.1.0.1 Develop smart-growth plans and critical habitat designations that consider SGCN life history requirements and habitat needs, connectivity and health of those habitats, and minimizes human-associated disturbances to those habitats and SGCN inhabiting them.
- 9.1.0.2 Develop town plans that avoid impacts to SGCN species and their habitats.
- 9.1.0.3 Develop a plan that directs the creation of impervious surfaces away from and to minimize impacts on aquatic systems and critical terrestrial habitats. The plan should also include strategies to increase the resiliency of aquatic and critical terrestrial habitats to threats and stressors that would impact the reproduction and survival of wildlife.
- 9.1.0.5 Develop a plan that directs the creation or expansion of energy or utility rights-of-way in a manner that minimizes the impacts on critical forested habitats and the wildlife community.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Northern Black Racer

- 9.1.0.6 Develop a plan that directs the creation or expansion of roads and railroads or the re-establishment of abandoned railroads within and adjacent to critical forested habitats in a manner that minimizes the impacts on critical forested habitats and the wildlife community.
- 9.1.0.8 Develop a plan that focuses on strategies for oil pipelines to avoid sensitive habitats that would be highly impacted by oil spills.
- 9.1.0.9 Develop a plan that focuses on strategies to minimize the creation of renewable energy farms (e.g., solar, wind) and related infrastructures within and their impacts on forested habitats and the wildlife community.
- 9.1.0.10 Develop a plan that focuses on strategies to minimize the impacts of mining on critical forested habitats.
- 9.1.0.11 Develop a plan that focuses on strategies to minimize the impacts of power plants on critical forested habitats and the wildlife community.
- 9.1.0.15 Develop a plan to minimize fragmentation of terrestrial and aquatic habitats by roads.
- 9.1.0.16 Develop a plan to minimize new lawns and preserve natural vegetation within and adjacent to critical forest areas.
- 9.1.0.18 Develop a plan to minimize the effects of road widening and traffic volume increases within critical wildlife habitat areas using CHANJ products.
- 9.1.0.19 Develop a plan to minimize the extent of impervious surfaces as part of new construction to increase water recharge in those areas.
- 9.1.0.20 Develop a plan to minimize the impacts of existing agricultural properties adjacent to and the conversion of forest habitats (terrestrial and aquatic, within or adjacent to critical forests) to agriculture, grazing areas/livestock farms, and plantations.
- 9.1.0.22 Incorporate habitat connectivity and preservation of natural areas into state and local land-use policy and the environmental review process to minimize the impacts of transportation and service corridors on fish and wildlife and their habitats.
- 9.1.0.23 Develop a plan to mitigate the effects of transportation barriers by using CHANJ products.
- 9.1.0.27 Develop a plan to use wildlife-appropriate culverts in critical forested areas.
- 9.1.0.28 Develop and coordinate state, regional and local plans for suitable lot layout and landscaping to minimize human-wildlife conflicts that also incorporates habitat connectivity and preservation of natural areas.
- 9.1.0.29 Provide GIS or related data, maps, resource inventories, as well as related training, pertaining to the SWAP and its recommended conservation actions for use or consideration by State, County or municipal planning agencies.
- 9.1.0.30 Incorporate habitat connectivity and preservation of natural areas into state and local land-use policy and the environmental review process to minimize habitat fragmentation and other related threats associated with development.
- 9.1.0.33 Review the species, threats, action successes, and habitats, and work with partners to revise the 2017 State Wildlife Action Plan for the 2025 resubmittal.

9.2 Organizational strategic and CMS planning

9.2.1 Organizational strategic and operational planning

- 9.2.1.1 Identify and codify legal ORV access areas on state lands.

9.3 Species and habitat management planning

9.3.1 Species management planning

Northern Black Racer

- 9.3.1.3 Develop a management plan to restrict human activity (e.g., recreational, maintenance work, etc.) from sensitive habitats/areas such as avian nesting sites, reptile and amphibian breeding areas (nesting or gestation/birthing and breeding pools, respectively), and bat hibernacula, and federal buffers for marine mammals.
 - 9.3.1.4 Develop town plans that avoid impacts to SGCN species and their habitats.
 - 9.3.1.7 Develop a rapid response plan for various scenarios (e.g., insect infestations destroying native habitat, wildlife disease) to be implemented upon exotic pathogen introduction or incident.
 - 9.3.1.9 Develop a management plan incorporating the effects of pesticides, herbicides and other biological controls on SGCN and their critical and supporting habitats.
 - 9.3.1.10 Develop a management plan to combat the impacts of diseases/pathogens impacting SGCN and/or their habitats.
 - 9.3.1.13 Develop a management plan to ensure SGCN populations' persistence based on long-term monitoring of resident and migratory SGCN populations and their habitats.
 - 9.3.1.14 Create species management plans that will promote the protection and where appropriate, the development of old-growth forest stands with large trees, in particular those within large, contiguous forest tracts.
 - 9.3.1.16 DOD and appropriate state agencies work together to improve DOD Integrated Natural Resource Management Plans (INRMP) to develop strategies to minimize or eliminate disturbances to all SGCN (i.e., beyond their federal requirements) during military activities and to improve SGCN habitat and presence.
- 9.3.2 Listed species recovery planning
 - 9.3.2.1 Develop proactive species recovery plans for all endangered and threatened species including guidance and objectives pertaining to critical and supporting habitat to meet and maintain recovery goals.
- 9.3.3 Habitat management planning
 - 9.3.3.5 Develop a management plan using forest management/silviculture strategies that enhance and maintain critical core forests as appropriate for targeted species (e.g., for many SGCN forest birds, "core" forest would include the forest area >90 meters from the forest edge), in perpetuity, to benefit interior forest and disturbance-sensitive SGCN through research and monitoring.
 - 9.3.3.6 Develop a management plan for maintaining and enhancing healthy, SGCN-associated terrestrial and aquatic habitats and associated riparian habitats, and to minimize (if not avoid) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
 - 9.3.3.7 Develop a management plan to reduce the impacts of herbivory on native vegetation and the degradation of habitats supporting SGCN by invasive and/or native, over-abundant wildlife species including but not limited to mute swans, Canada geese, beaver and white-tailed deer.
 - 9.3.3.8 Develop a management plan to combat the impacts of diseases/pathogens impacting SGCN and/or their habitats.
 - 9.3.3.10 Develop a management plan to ensure SGCN populations' persistence based on long-term monitoring of resident and migratory SGCN populations and their habitats.
 - 9.3.3.11 Develop town plans that avoid impacts to SGCN species and their habitats.

Northern Black Racer

- 9.3.3.13 Develop a management plan that will establish/improve habitat resilience (e.g., shorelines of the coast and Delaware Bay, forested habitats of the Pinelands and Skylands) that benefits wildlife inhabiting these areas and prevents or ameliorates near-term impacts of climate change throughout the State, but in particular within the coastal and Delaware Bay areas.
- 9.3.3.15 Develop a management plan incorporating the effects of pesticides, herbicides and other biological controls on SGCN and their critical and supporting habitats.
- 9.3.3.16 Develop a management plan to restrict human activity (e.g., recreational, maintenance work, etc.) from sensitive habitats/areas such as avian nesting sites, reptile and amphibian breeding areas (nesting or gestation/birthing and breeding pools, respectively), and bat hibernacula, and federal buffers for marine mammals.
- 9.3.3.17 Develop a management plan for prescribed burning that will benefit Pinelands dependent species and increase or maintain habitat quality for these species in the Pinelands.
- 9.3.3.18 In cooperation with species and habitat experts, develop management plans for significant natural and/or unique communities, in particular those supporting SGCN, and provide the information to the landowners/managers (federal, state and local government agencies or non-government organization) for review and implementation.
- 9.3.3.19 Develop management plans for SGCN inhabiting permanently protected natural lands using available baseline and population trend data.
- 9.3.3.21 Develop a rapid response plan for various scenarios (e.g., insect infestations destroying native habitat, wildlife disease) to be implemented upon exotic pathogen introduction or incident.
- 9.3.3.22 Create management plans to minimize and/or prevent wildlife road mortality that will incorporate wildlife passages in conjunction with barrier fencing and, where possible, seasonal closures. Aquatic-associated passages must avoid disturbance to the natural streambeds and riparian habitat, permit high volumes of water to flow freely, and provide adequate travel corridors for terrestrial wildlife, while maintaining stream flow for fish passage. Bridges that span rivers and streambeds and include floodplain habitat on either side of the span to provide travel corridors for terrestrial wildlife are preferred over culverts.
- 9.3.3.23 Create forest management plans that will promote the protection and/or development of old-growth forest stands with large trees, in particular those within large, contiguous forest tracts.
- 9.3.3.29 Develop habitat management plans aimed at reducing or eliminating negative impacts of ORVs.
- 9.3.3.32 DOD and appropriate state agencies work together to improve DOD Integrated Natural Resource Management Plans (INRMP) to develop strategies to minimize or eliminate disturbances to all SGCN (i.e., beyond their federal requirements) during military activities and to improve SGCN habitat and presence.
- 9.3.3.34 Include controlled burn prescriptions in forest and stewardship plans to improve wildlife habitat.
- 9.3.3.35 Incorporate habitat connectivity, preservation of natural areas, and the implementation of BMPs into state and local land-use policy environmental review process and energy development plans to minimize habitat fragmentation and related threats associated with solar farms and altered habitats.
- 9.3.3.36 Integrate plans for properly located and timed habitat restoration and management along transportation, energy and service corridors to minimize risks to and benefit wildlife.

11 Technical Assistance

11.1 Environmental review

Northern Black Racer

11.1.1 Review of proposed projects

- 11.1.1.1** Use Biotics database and Landscape Project Mapping in regulatory reviews to ensure protection by applicable laws and regulations.
- 11.1.1.2** Develop smart-growth plans and critical habitat designations that consider SGCN life history requirements and habitat needs, connectivity and health of those habitats, and minimize human-associated disturbances to those habitats and the SGCN inhabiting them.
- 11.1.1.4** Incorporate habitat connectivity and preservation of natural areas into state and local land-use policy and the environmental review process to minimize habitat fragmentation and related threats associated with development.
- 11.1.1.5** Incorporate habitat connectivity and preservation of natural areas into state and local land-use policy and the environmental review process to minimize the impacts of transportation and service corridors on fish and wildlife and their habitats.
- 11.1.1.7** Review proposed construction or other work projects and permit applications, provide recommendations on how to best avoid disturbing sensitive species, and identify actions not permitted.
- 11.1.1.8** Review proposed research projects and permit applications, provide recommendations on how to best avoid disturbing sensitive species, and identify actions not permitted.
- 11.1.1.10** Use CHANJ mapping in reviews of proposed energy, mining, transportation and utility service companies/agencies' projects to attempt to maintain habitat connectivity and reduce fragmentation, and identify potential impacts of the projects.
- 11.1.1.12** Use the best available science (species data, habitat present, site layout options, etc.) when conducting regulatory reviews of proposed solar farm projects to reduce habitat fragmentation and minimize impacts on wildlife.
- 11.1.1.13** Use the best available science (species data, habitat present, wind farm layout options, wind blade impacts on migratory species, location of migration routes, etc.) when conducting regulatory reviews of proposed wind farm projects to minimize impacts on migratory and resident wildlife and reduce habitat fragmentation.

11.1.2 Review of proposed policies and plans

- 11.1.2.1** Develop smart-growth plans and critical habitat designations that consider SGCN life history requirements and habitat needs, connectivity and health of those habitats, and minimize human-associated disturbances to those habitats and the SGCN inhabiting them.

11.2 Technical assistance

11.2.0 Assorted technical assistance strategies

- 11.2.0.1** Provide technical support to private and public landowners and land managers for carrying out restoration and management practices aimed at increasing structural habitat diversity.
- 11.2.0.2** Provide technical support to public and private landowners and land managers for controlling invasive, native and non-native plant species in order to increase structural habitat diversity.
- 11.2.0.3** Develop state, regional and local BMPs that focus on minimizing habitat fragmentation and human-wildlife conflicts associated with development. Make information available to land developers and private and public landowners for implementation.
- 11.2.0.4** Provide educational resources, training programs, and expert guidance to private and public landowners and land managers on the secondary impacts of rodenticides on predators and scavengers.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Northern Black Racer

- 11.2.0.5 Provide educational resources, training programs, and expert guidance to private and public landowners and land managers on the threats that herbicides and pesticides pose to aquatic systems and wildlife, and to promote safer usage of such products.
- 11.2.0.6 Provide educational resources, training programs, and on-the-ground guidance to energy, mining, transportation, and utility service agencies/companies and their project and resource managers on habitat creation, enhancement and restoration within and adjacent to project areas, as well as away from and outside of project areas (depending on the target species), by managing vegetation for a variety of species and that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife. Wind farms should address both terrestrial bound and low-flying species. Examples of habitat management include, but are not limited to, integrating short and tall grasses, specific host plants, brush piles, water sources/wetlands, shrubby areas, nesting areas and no-mow set-asides.
- 11.2.0.7 Provide educational resources, training programs, and on-the-ground guidance to energy, mining, transportation, and utility service agencies/companies and their project and resource managers on the importance of maintaining habitat connectivity, minimizing fragmentation, and the use of CHANJ products to help them target areas for such planning.
- 11.2.0.8 Provide educational resources, training programs, and on-the-ground guidance to public and private landowners and land managers on habitat creation and enhancement strategies that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife.
- 11.2.0.9 Provide educational resources, training programs, and on-the-ground guidance to municipalities, land developers, and other land managers and private landowners about the importance of leaving vegetation in place, especially along riparian areas and wildlife movement corridors.
- 11.2.0.10 Provide technical support to private landowners, consultants, and land managers to create customized management plans based on location and SGCN.
- 11.2.0.11 Provide educational resources, training programs, and on-the-ground guidance to private and public landowners and land managers on the benefits of and for creating young forest and early succession habitat for SGCN.
- 11.2.0.13 Provide educational resources and technical support to public landowners, private landowners with sufficient acreage, and land managers to promote the protection and/or development of old-growth forest stands with large trees, in particular those within large, contiguous forest tracts.
- 11.2.0.16 Provide educational resources and technical support to public and private landowners and land managers to promote the protection of critical SGCN forested habitat and minimize forest edge to benefit interior forest and disturbance-sensitive SGCN.
- 11.2.0.19 Provide educational resources and technical support to public and private landowners and land managers to promote the protection and/or enhancement of scrub-shrub habitats for SGCN.
- 11.2.0.21 Provide educational resources and technical support to public and private landowners and land managers of lands adjacent to critical migratory stopover habitats for songbirds, raptors, shorebirds, bats and invertebrates to promote the protection and/or enhancement of those adjacent habitats to increase the effective size of the migratory habitat.
- 11.2.0.22 Provide educational resources, training programs, and expert guidance to public and private landowners and land managers about lawn alternatives and the importance of natural vegetation and "edge" habitats on developed properties.

Northern Black Racer

- 11.2.0.23 Provide educational resources and technical support to public and private landowners and land managers of lands adjacent to SGCN habitats to promote the protection and/or enhancement of those adjacent habitats to increase the overall size of the "core" area and/or provide a natural buffer, enhancing the suitability of the core area for SGCN, and that connect conserved SGCN habitats.
 - 11.2.0.24 Provide educational resources, training programs, and expert guidance to public and private landowners and land managers on how to manage vegetated roadside areas (e.g., mowing, brush-hogging, etc.) on a schedule that avoids peak activity periods for wildlife and therefore, minimizes harm.
 - 11.2.0.25 Provide educational resources, training programs, and on-the-ground guidance to resource managers regarding the assessment of and addressing secondary impacts (i.e. ancillary prescribed burns, trespassers, ORV use, mosquitoes, deer, buffers) related to residential and commercial development.
 - 11.2.0.26 Make educational resources available to the public that encourage researchers to seek out guidance prior to finalizing proposals and submitting State permit applications to reduce potential impacts on sensitive species.
 - 11.2.0.29 Provide educational resources, training programs, and on-the-ground guidance to Nuisance Wildlife Control Operators (NWCs), conservation partners, and the public in conserving snake populations by advising proper removal from buildings, exclusion methods from buildings, and improving the public's understanding and acceptance of snakes.
- 11.2.1 With individuals and groups involved in resource management decision making
 - 11.2.1.1 Engage partners and stakeholders in constructive dialogue regarding the importance of providing and methods to provide technical support for carrying out restoration and management practices aimed at increasing structural habitat diversity.
 - 11.2.1.2 Provide professional training and technical assistance tools (e.g., mapping, guidance documents, justification, etc.) to agencies/divisions/programs within and outside of the NJ DEP regarding the SWAP, and the conservation actions recommended therein to help facilitate SWAP implementation.
 - 11.2.1.3 Provide educational resources, training programs, and on-the-ground guidance to DOD to improve DOD Integrated Natural Resource Management Plans (INRMP) to develop and implement forest management and other practices that minimize disturbances to SGCN (i.e., beyond their federal requirements).
 - 11.2.1.6 Provide educational resources, training programs, and on-the-ground guidance to resource agencies prior to project initiation to ensure wildlife and their habitats are protected to the highest degree possible during construction, and provisions are in place for post-construction habitat use.
- 11.2.2 With private landowners
 - 11.2.2.1 Provide technical support to farming operations and woodland landowners on ways to decrease clean farming (edge-to-edge) practices and create ecotones to benefit bobwhite and other species dependent on early successional habitat.

100 Law and Policy

100. Legislation

100.1.3 Sub-national Level

- 100.1.3.3 Initiate legislative action to establish an annual budgetary line item designating funds to support programs focused on long-term research and monitoring of wildlife diseases.

Northern Black Racer

100.1.4 County and Local

- 100.1.4.1** Enhance critical migratory stopover habitats for songbirds, raptors, shorebirds, bats and invertebrates through the local ordinances of adjacent private lands to increase the effective size of the habitat.
- 100.1.4.2** Secure and increase the effective size of SGCN habitats and connect conserved SGCN habitats through local ordinances.
- 100.1.4.3** Expand the acreages and enhance the effective size of SGCN habitats by protecting adjacent habitats that contribute to the overall size of the "core" area and/or provide a natural buffer, enhancing the suitability of the core area for SGCN through local ordinances.
- 100.1.4.9** Secure existing and developing old-growth forest stands with large trees, in particular those within large, contiguous forest tracts, through local ordinances.
- 100.1.4.10** Secure critical SGCN forested habitat and minimize forest edge to benefit interior forest and disturbance-sensitive SGCN through local ordinances.
- 100.1.4.12** Secure scrub-shrub habitats for SGCN through local ordinances.
- 100.1.4.13** Encourage municipal laws regulating domestic pets that may predate on wildlife.
- 100.1.4.14** Adopt/pass local ordinances which require assessing and addressing secondary impacts (i.e. ancillary prescribed burns, trespassers, ORV use, mosquitoes, deer, buffers) on biological resources when revising planning/zoning documents or granted site plan/subdivision approvals.
- 100.1.4.15** Incorporate habitat connectivity and the preservation of natural areas into state and local land-use policy and the environmental review process to minimize habitat fragmentation and related threats associated with development.

100.1.5 Scale Unspecified

- 100.1.5.4** Incorporate habitat connectivity and preservation of natural areas into state and local land-use policy and the environmental review process to minimize the impacts of transportation and service corridors on fish and wildlife and their habitats.

100. State Regulations

100.3.0 Regulatory initiatives for species and habitat protection

- 100.3.0.3** Develop policies that will promote the long term protection of critical migratory stopover habitats for songbirds, raptors, shorebirds, bats and invertebrates.
- 100.3.0.5** Develop policies that will promote improved and secure habitat connections between conserved SGCN habitats.
- 100.3.0.6** Develop policies that will promote expanding acreages and enhancing the effective size of SGCN habitats by providing biologically appropriate buffers of native habitat surrounding SGCN habitats.
- 100.3.0.8** Develop policies and/or regulations with the objective of protecting significant natural and/or unique communities in perpetuity.
- 100.3.0.9** Secure mitigation that creates an environmental benefit for losses of SGCN and their habitats.
- 100.3.0.11** Develop policies that will ensure the protection and/or development of old-growth forest stands with large trees, in particular those within large, contiguous forest tracts.
- 100.3.0.12** Develop policies that promote the preservation and protection of critical SGCN forested habitat and minimize forest edge to benefit interior forest and disturbance-sensitive SGCN.

Northern Black Racer

- 100.3.0.15 Develop policies that promote protecting and restoring scrub-shrub habitats to benefit shrub-dependent SGCN.
- 100.3.0.18 Develop policies for conserved lands that prohibit planting and supports the control of non-native vegetation and invasive, native vegetation.
- 100.3.0.20 Develop policies and/or regulations that prohibit the presence of managed cat colonies and trap, neuter and release programs in or near critical wildlife habitats.
- 100.3.0.21 Develop policies that minimize wildlife road mortality through: 1) Requiring the integration of wildlife passages into all new and repaired roads, in particular those areas that will connect SGCN habitats, 2) Requiring current fish/wildlife passages be improved and maintained in perpetuity, 3) Supporting seasonal road closures, in particular for unimproved roads, 4) Supporting projects that work to improve connectivity of SGCN habitats such as land conservation through acquisition or other means.
- 100.3.0.31 Create or expand tax-based incentive programs available to private, agricultural, commercial, industrial or governmental landowners and land managers to include or provide for incentives for the maintenance and/or improvement to existing habitat via the endorsement of wildlife-related BMPs.
- 100.3.0.32 Coordinate regulations across agencies to maximize availability of and enrollment in existing Forestry Stewardship Programs (e.g., "Woodland Stewards", Farm Bill, partners, etc.) to maintain and/or improve forest habitat.
- 100.3.0.36 Create legislation to limit the amount of plastic from shopping bags in circulation and re-instate incentives for citizens bringing their own shopping bag to grocery store.
- 100.3.0.40 Develop laws and/or policies to require vegetative buffers of native plants on preserved farmland and state lands with agricultural leases or agreements.
- 100.3.0.41 Explore all State regulatory requirements for mitigation, restoration, habitat management, etc. to ensure they prohibit the use of specified invasive or other problematic plant species.
- 100.3.0.43 Identify and address (amend) regulatory impediments to beneficial habitat management.
- 100.3.0.44 Incorporate requirements for technical support and funding for mitigation or restoration efforts so as to be consistent with existing regulations.
- 100.3.0.45 Increase the controlled burn season to focus on restoring vegetative communities.
- 100.3.0.46 Investigate and/or develop inter-agency Memorandum of Agreements to share common data stored or managed in program-specific databases.
- 100.3.0.48 Propose new State law or regulation mandating that a State-level "development impact fee" be assessed on all new development approved by municipalities (via the Municipal Land Use Law processes), and dedicate such monies to the development and implementation of regional Habitat Conservation Plans (or existing plans/programs serving the same regional function).
- 100.3.0.50 Retain endangered, threatened and special concern wildlife and habitat protection measures in the Water Quality Management Program Rules.
- 100.3.0.52 Revise existing and/or incorporate new State land use regulations that specifically address the impacts of new or expanded energy sitings and facilities.
- 100.3.0.53 Revise existing and/or incorporate new State land use regulations that specifically address the impacts of new or expanded rights-of-way corridors associated with energy transport/transmission.
- 100.3.0.54 Revise existing and/or incorporate new State land use regulations that specifically address the impacts of new or expanded surface mining areas.

Northern Black Racer

- 100.3.0.57 Develop regulations that when implemented will improve and secure habitat connections between conserved SGCN habitats.
- 100.3.0.58 Develop regulations that when implemented will promote the expansion of acreages and enhancement of the effective size of SGCN habitats by providing biologically appropriate buffers of native habitat surrounding SGCN habitats.
- 100.3.0.60 Develop regulations that when implemented will protect significant natural and/or unique communities in perpetuity.
- 100.3.0.62 Develop regulations that when implemented will protect existing old-growth forest stands with large trees and/or stands that are being actively managed for old growth forests, in particular those within large, contiguous forest tracts.
- 100.3.0.63 Develop regulations that when implemented will preserve and protect critical SGCN forested habitat and minimize forest edge to benefit interior forest and disturbance-sensitive SGCN.
- 100.3.0.65 Develop regulations that when implemented will protect and restore scrub-shrub habitats to benefit shrub-dependent SGCN.
- 100.3.0.68 Develop regulations that when implemented will prohibit the presence of managed cat colonies and trap, neuter and release programs in or near critical wildlife habitats.
- 100.3.0.69 Develop regulations that when implemented will minimize wildlife road mortality.
- 100.3.0.71 Develop regulations for licensing, permitting, or certification of Nuisance Wildlife Control Operators (NWCOS) that handle removal/exclusion of protected wildlife, such as bats and snakes, to ensure that proper methods are followed and that occurrences are reported.
- 100.3.0.72 Develop regulations that require permit applicants and/or review agencies to assess the cumulative and synergistic effects of a proposed project (i.e., "secondary effects"), both over time and over a larger spatial scale than the site itself.
- 100.3.0.73 Develop regulations that would exempt the conversion of lawns to native vegetation (beneficial to wildlife) from local lawn ordinances.

100. State Agency Policy Integration

100.4.0 Policy initiatives for species and habitat protection

- 100.4.0.1 Create any necessary policy changes (including those to incentive programs) to encourage the integration of SWAP actions associated with SGCN priority habitats as a deliberative factor in agencies' actions (e.g., environmental and land management review processes, land acquisition and management).
- 100.4.0.2 Create a policy that requires the NJ DEP to incorporate scientific information regarding climate change and sea level rise (e.g., predictions, habitat management/acquisition efforts to enhance resilience to inundation) on their websites and to work with other government entities, conservation organizations and other stakeholders to work together to collaboratively use social media campaigns to grow a constituency of NJ residents who have an elevated ecological and climate consciousness.
- 100.4.0.3 Develop policies for mandatory buffer strips on preserved farmlands and state-owned agricultural lands.
- 100.4.0.4 Create a policy that requires the use of wildlife habitat and corridor mapping products for both regulatory use when conducting project reviews and planning/siting new or expanded rights-of-way projects.
- 100.4.0.8 Develop a white paper addressing the impacts that existing, new or expanded rights-of-way have upon wildlife, wildlife habitats and habitat connectivity.

Northern Black Racer

- 100.4.0.9 Develop and implement policies to minimize the removal of coarse, woody debris in terrestrial, aquatic and riparian habitats in order to benefit wildlife.
- 100.4.0.12 Develop laws and/or policies to require vegetative buffers of native plants on preserved farmland and state lands with agricultural leases or agreements.
- 100.4.0.13 Develop policies for different circumstances (e.g., roadsides and medians, riparian, aquatic and terrestrial habitats) that outline appropriate habitat/vegetation management strategies and schedules to minimize risks to and benefit wildlife.
- 100.4.0.16 Develop policies to implement habitat management strategies that will increase the structural diversity surrounding areas used for energy, mining, and transportation and service corridors which include but are not limited to the presence of short and tall grasses, specific host plants, brush piles, water sources/wetlands, shrubby areas, nesting areas, and no-mow set-
- 100.4.0.17 Develop policies to implement habitat management strategies, including prescribed burns, that will increase the structural diversity on preserved farmlands, state-owned agricultural lands, forests, parks and wildlife management areas, and any conserved lands purchased with the assistance of Green Acres and Federal Land & Water Conservation Fund monies to control and reduce the impacts of invasive, non-native species in order to increase structural habitat diversity.
- 100.4.0.18 Develop policies to minimize the extent of infrastructure associated with energy and service corridors or areas (e.g., wind and solar farms, pipelines, utility lines) and that require the implementation of habitat management strategies that will increase the structural diversity in the area including (e.g., the presence of short and tall grasses, specific host plants, brush piles, water sources/wetlands, shrubby areas, nesting areas, and no-mow set-asides).
- 100.4.0.19 Develop regulations that will minimize the creation of new barriers, remove or replace current barriers with appropriately-sized systems to accommodate wildlife dispersal, and to minimize road widening and traffic volume increases within critical wildlife habitat areas.
- 100.4.0.20 Develop state regulations that require energy developers and utility service companies to implement habitat management strategies that will increase the structural diversity of the habitat, minimize habitat fragmentation and commercial infrastructure, and minimize the loss, alteration and/or degradation of the habitat and adjacent lands when working on preserved farmlands, state-owned agricultural lands, forests, parks and wildlife management areas, and any conserved lands purchased with the assistance of Green Acres and Federal Land & Water Conservation Fund monies.
- 100.4.0.25 Develop policies that require permit applicants and/or review agencies to assess the cumulative and synergistic effects of a proposed project (i.e., "secondary effects"), both over time and over a larger spatial scale than the site itself.

Northern Diamondback Terrapin

Focal species that comprise this Conservation Target:

Northern Diamondback Terrapin

Threats and Action Drivers associated with this Conservation Target:

1 Residential and Commercial Development

1.1 Housing and Urban Areas

1.1.1 Land conversion from natural habitat to urban and other residential areas (Avg. Score: 2.00)
(large and small scale)

NJ Specific Threats: 1.1.1.1 Fragments terrestrial and aquatic habitats making the area unsuitable for area-sensitive species and inhibit dispersal of animals, reducing gene flow.
1.1.1.2 Loss, alteration and/or degradation of habitat.
1.1.1.3 Lot layout, design and/or landscaping may create conditions that increase wildlife-human conflict.
1.1.1.4 Increased risk of vehicle strikes/mortality to terrestrial-bound and some bird species.

1.2 Commercial and Industrial Areas

1.2.1 Land conversion from natural habitat to commercial or industrial areas (Avg. Score: 2.00)
(large and small scale)

NJ Specific Threats: 1.2.1.1 Fragments terrestrial and aquatic habitats making the area unsuitable for area-sensitive species and inhibit dispersal of animals, reducing gene flow.
1.2.1.2 Loss, alteration and/or degradation of habitat.
1.2.1.3 Lot layout, design and/or landscaping may create conditions that increase wildlife-human conflict.
1.2.1.4 Increased risk of vehicle strikes/mortality to terrestrial-bound and some bird species.

1.3 Tourism and Recreational Areas

1.3.1 Land conversion from natural habitat to recreation or tourism areas (large (Avg. Score: 2.00)
and small scale)

NJ Specific Threats: 1.3.1.1 Fragments terrestrial and aquatic habitats making the area unsuitable for area-sensitive species and inhibit dispersal of animals, reducing gene flow.
1.3.1.2 Loss, alteration and/or degradation of habitat.
1.3.1.3 Lot layout, design and/or landscaping may create conditions that increase wildlife-human conflict.

2 Agriculture and Aquaculture

2.1 Annual and Perennial Crops (non-timber)

2.1.1 Shifting Agriculture (Avg. Score: 1.00)

NJ Specific Threats: 2.1.1.2 Conversion, and subsequent loss, of high salt marsh to low salt marsh threatens high-marsh dependent species and those dependent on the marsh-upland ecotone.
2.1.1.4 Salt hay farming on Delaware Bay marshes, and the subsequent conversion of those farms to fully tidal marshes, results in compressed sediments that are less resilient to coastal forces of erosion and sea level rise.

2.4 Marine and Freshwater Aquaculture

2.4.1 Subsistence/Artisinal Aquaculture (Avg. Score: 2.00)

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need
Northern Diamondback Terrapin

NJ Specific Threats: 2.4.1.1 May degrade freshwater and intertidal habitat due to farming techniques and damage from associated structures.

2.4.1.2 Increased risk of parasite introduction into marine environments.

2.4.2 Industrial Aquaculture (Avg. Score: 2.00)

NJ Specific Threats: 2.4.2.1 May degrade freshwater and intertidal habitat due to farming techniques and damage from associated structures.

2.4.2.2 Increased risk of parasite introduction into marine environments.

2.4.2.3 Potential for increased nutrient and effluent loads.

3 Energy Production and Mining

3.1 Oil and Gas Facilities and Pipelines

3.1.1 Distribution processes of petroleum and other liquid hydrocarbons (Avg. Score: 2.00)

NJ Specific Threats: 3.1.1.1 Fragments terrestrial and aquatic habitats.

3.1.1.2 Loss, alteration and/or degradation of habitat.

3.1.1.3 Increased risk of oil spills.

3.1.1.4 Increased noise pollution.

3.1.1.5 Increased vehicular and ship traffic associated with construction and operations, and therefore an increased risk of wildlife mortality from strikes.

3.1.1.6 Increased risk of collision between marine mammals, sea turtles and fish and the marine-based structures/facilities.

3.1.2 Natural gas distribution processes (Avg. Score: 1.00)

NJ Specific Threats: 3.1.2.1 Fragments terrestrial and aquatic habitats.

3.1.2.2 Loss, alteration and/or degradation of habitat.

3.1.2.3 Increased risk of gas leaks and explosions.

3.1.2.4 Increased noise pollution.

3.1.2.5 Increased vehicular and ship traffic associated with construction and operations, and therefore an increased risk of wildlife mortality from strikes.

3.1.2.6 Increased risk of collision between marine mammals, sea turtles and fish and the marine-based structures/facilities.

3.4 Conventional Power Plants

3.4.0 Conventional Power Plants (Avg. Score: 2.00)

NJ Specific Threats: 3.4.0.2 Loss, alteration and/or degradation of habitat due to new or the expansion of current facilities.

3.4.0.3 Alteration of the temperature, pH and/or hydrology of aquatic ecosystems change plant communities and can harm wildlife and/or impact their behavior and survivorship.

4 Transportation and Service Corridors

4.1 Roads and Railroads

4.1.1 Land conversion from natural habitat to roads and railroads (large and small scale) (Avg. Score: 3.00)

NJ Specific Threats: 4.1.1.1 Fragments terrestrial and aquatic habitats making the landscape unsuitable for area-sensitive species and inhibiting dispersal of non-volant animals, reducing gene flow.

4.1.1.2 Loss, alteration and/or degradation of habitat associated with road and railroad construction and maintenance, and degradation of adjacent habitats.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need
Northern Diamondback Terrapin

4.1.2 Movement of cars and other vehicles on roads and railroads (large and small scale) (Avg. Score: 3.00)

NJ Specific Threats: 4.1.2.1 Increased vehicle traffic increases the risk of wildlife mortality from strikes.

4.3 Shipping Lanes

4.3.1 Movement of large ships in shipping lanes (Avg. Score: 2.00)

NJ Specific Threats: 4.3.1.1 Increased ship traffic increases the risk of wildlife mortality from strikes.

4.3.1.2 May disturb nesting and foraging of shoreline birds and aquatic animals, and/or alter migratory patterns of aquatic and marine wildlife.

4.3.2 Dredging impacts (Avg. Score: 2.00)

NJ Specific Threats: 4.3.2.1 Threatens wildlife by disrupting/removing stream bottom habitat.

4.3.2.3 Transportation of materials to and from disposal facilities may pose temporary disturbance to wildlife impacting foraging and nesting success.

5 **Biological Resource Use**

5.1 Hunting and Collecting Terrestrial Animals

5.1.1 Intentional Use (Avg. Score: 1.00)

NJ Specific Threats: 5.1.1.1 Illegal collection of wildlife can have detrimental impacts on populations.

5.1.2 Unintentional effects (Avg. Score: 1.00)

NJ Specific Threats: 5.1.2.2 Disruption of normal wildlife behavior.

5.2 Gathering Terrestrial Plants

5.2.2 Unintentional effects (Avg. Score: 1.00)

NJ Specific Threats: 5.2.2.1 Stepping on nests or young/hatchling animals.

5.4 Fishing and Harvesting of Aquatic Resources

5.4.3 Unintentional effects (subsistence/small scale) (Avg. Score: 3.00)

NJ Specific Threats: 5.4.3.1 Abandoned fishing tackle and gear, crab pots without excluders and ghost crab pots increase the risk of injury and death to marine mammals, sea turtles, sea birds, pinnipeds and fish species as well as terrestrial and semi-aquatic species as a result of consuming tackle or gear, entrapment and entanglement in gear.

5.4.3.2 Commercial/recreational shellfish dredging may impact marine ecosystems by uprooting submerged aquatic vegetation, disrupting substrates, increasing turbidity, and increasing predator species in localized areas.

5.4.3.5 Trawling disrupts habitat and threatens marine species including benthic/bottom feeding fishes, invertebrates and other benthic organisms as it disrupts and homogenizes the substratum, can lead to species decline and reduced species diversity.

5.4.3.6 Fishing gear used by commercial fisheries results in bycatch or entanglement of non-targeted wildlife leading to injury and/or mortality.

5.4.3.7 Improperly sanitized equipment, relocation of fish, importation and release of non-native species, and the use of bait from a different location can spread invasive species and diseases from one waterbody to another.

5.4.3.8 Lead in fishing tackle is consumed by wildlife in the course of foraging and scavenging, causing injury and death.

5.4.4 Unintentional effects (large scale) (Avg. Score: 3.00)

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need
Northern Diamondback Terrapin

- NJ Specific Threats:** 5.4.4.2 Commercial/recreational shellfish dredging may impact marine ecosystems by uprooting submerged aquatic vegetation, disrupting substrates, increasing turbidity, and increasing predator species in localized areas.
- 5.4.4.4 Trawling disrupts habitat and threatens marine species including benthic/bottom feeding fishes, invertebrates and other benthic organisms as it disrupts and homogenizes the substratum, can lead to species decline and reduced species diversity.
- 5.4.4.5 Fishing gear used by commercial fisheries results in bycatch or entanglement of non-targeted wildlife leading to injury and/or mortality.
- 5.4.4.6 Overexploitation of riparian, estuarine, and marine fisheries may deplete food resources required by marine mammals, sea turtles, marine fish and piscivorous birds, in turn resulting lower reproduction and survival.
- 5.4.4.7 Improperly sanitized equipment, relocation of fish, use of bait from a different location, can spread invasive species and diseases from one waterbody to another.

5.4.5 Persecution/Control (Avg. Score: 1.00)

- NJ Specific Threats:** 5.4.5.1 Perception of diamondback terrapin as "bait stealers" may lead to harming/killing or relocation of individuals by recreational and/or commercial crabbers.

6 Human Intrusions and Disturbance

6.1 Recreational Activities

6.1.1 Off-road vehicles (motorized and non-motorized) (Avg. Score: 3.00)

- NJ Specific Threats:** 6.1.1.1 Inappropriate use of off-road vehicles creates new roads/trails which fragments habitat.
- 6.1.1.2 Inappropriate use of off-road vehicles can degrade terrestrial and aquatic habitat and reduce the suitability of adjacent habitats for wildlife.
- 6.1.1.3 Increased risk of harassment that results in a change in wildlife behavior and/or direct mortality from vehicle strikes.
- 6.1.1.6 Off-road vehicles can be a mechanism of transference of wildlife diseases and invasive plant species if gear and apparel are not properly sanitized between sites.

6.1.2 Boating (Avg. Score: 2.00)

- NJ Specific Threats:** 6.1.2.1 Alteration and/or degradation of aquatic habitat.
- 6.1.2.2 Increased disturbance to marine animals and ocean-, bay- and marsh-associated birds which can alter their behavior decreasing the likelihood of their success and/or reproduction.
- 6.1.2.3 Motorized boat propellers can inflict physical harm aquatic wildlife species.
- 6.1.2.5 Watercraft can be a mechanism of transference of wildlife diseases and invasive plant species if gear is not properly sanitized between sites.

6.1.5 Wildlife observation and photography (Avg. Score: 1.00)

- NJ Specific Threats:** 6.1.5.1 Improperly conducted recreational activities may disrupt normal wildlife behaviors which can result in reduced reproductive success or survival, abandonment of critical sites, etc.
- 6.1.5.2 Participants may introduce wildlife diseases and invasive plant species when gear and apparel is not properly sanitized between sites.

6.3 Work and Other Activities

6.3.1 Unauthorized research projects at significant habitats (Avg. Score: 1.00)

- NJ Specific Threats:** 6.3.1.1 Participants may introduce wildlife diseases and invasive plant species when gear and apparel is not properly sanitized between sites.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need
Northern Diamondback Terrapin

6.3.1.2 Accidental trampling of nests, eggs/egg masses, and unseen individuals may impact reproductive success or cause direct mortality to SGCN.

6.3.2 Authorized research projects at significant habitats (Avg. Score: 1.00)

NJ Specific Threats: 6.3.2.2 Participants may introduce wildlife diseases and invasive plant species when gear and apparel is not properly sanitized between sites.

6.3.2.3 Accidental trampling of nests, eggs/egg masses, and unseen individuals may impact reproductive success or cause direct mortality to SGCN.

6.3.3 Other "work" unrelated to research (Avg. Score: 1.00)

NJ Specific Threats: 6.3.3.1 Construction projects may disrupt normal wildlife behavior which can result in reduced reproductive success or survival, abandonment of critical sites, etc. (e.g., bridge-nesting birds).

7 **Natural Systems Modifications**

7.2 Dams and Water Management/Use

7.2.1 Abstraction of Surface Water (domestic use) (Avg. Score: 2.00)

NJ Specific Threats: 7.2.1.3 Channelization alters water volume and flow rates, removes aquatic vegetation and coarse, woody debris, and eliminates shallow water habitats.

7.2.2 Abstraction of Surface Water (commercial use) (Avg. Score: 2.00)

NJ Specific Threats: 7.2.2.1 Channelization alters water volume and flow rates, removes aquatic vegetation and coarse, woody debris, eliminates shallow water habitats, and disrupts/removes stream bottom habitat.

7.2.2.4 Water intake systems associated with industrial use and power plants threaten aquatic organisms due to injury or mortality from impingement and/or entrainment.

7.2.3 Abstraction of Surface Water (agricultural use) (Avg. Score: 2.00)

NJ Specific Threats: 7.2.3.2 Channelization alters water volume and flow rates, removes aquatic vegetation and coarse, woody debris, and eliminates shallow water habitats.

7.2.3.4 Water intake systems associated with agriculture threaten aquatic organisms due to injury or mortality from impingement and/or entrainment.

7.2.12 Culverts (Avg. Score: 1.00)

NJ Specific Threats: 7.2.12.1 Improper design, placement, installation and maintenance of culverts and other stream crossing structures can impede or prevent the movements of terrestrial organisms and can restrict or limit stream flow, impeding the movement of aquatic organisms along riparian corridors.

7.3 Other Ecosystem Modifications

7.3.1 Shoreline Stabilization (Avg. Score: 3.00)

NJ Specific Threats: 7.3.1.1 Efforts to stabilize barrier islands and shorelines, including jetties, groins, bulkheads, interfere with the natural geological processes needed to create and maintain high quality habitat for beach strand species.

7.3.1.2 Efforts to stabilize stream corridors, particularly near roads and infrastructure, in which vegetated and dynamic shorelines are replaced with unvegetated and rigid structures such as rip-rap, gabion, concrete raceways and bulkheads interfere with fish spawning, nursery and foraging areas.

7.3.2 Inappropriate timing of mowing (Avg. Score: 2.00)

NJ Specific Threats: 7.3.2.1 Increased risk of direct mortality and/or reduced productivity of wildlife, as well as reduced use by migrating species.

7.3.3 Removal of coarse woody debris (streams, forests, scrub-shrub habitats) (Avg. Score: 1.00)

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need
Northern Diamondback Terrapin

NJ Specific Threats: 7.3.3.3 Removal of dead trees (snags), large felled logs (i.e., those > 12" dbh), and other downed woody material diminishes nesting, roosting, and sheltering options for wildlife, and increases the ease at which deer can browse regenerating vegetation.

7.3.5 Poor habitat management (Avg. Score: 1.00)

NJ Specific Threats: 7.3.5.1 Improper or poorly scheduled maintenance of man-made corridors (e.g., roadsides and medians) can cause direct mortality to and may reduce productivity of wildlife.

7.3.5.3 Vegetation clearing removes terrestrial and riparian corridors for animal movement, shelter, and resting areas.

7.3.5.4 Vegetation clearing or inappropriate alteration adjacent to aquatic habitats threatens aquatic species by degrading habitat and water quality (altering temperature and dissolved oxygen, increasing siltation and desiccation, etc.).

7.3.5.6 Habitat management, including that which occurs on public and private lands, that does not consider timing and species' behaviors can result in the direct mortality and/or alteration or loss of habitat.

7.3.5.7 Improperly planned habitat management and/or mitigation efforts along roadsides and within the medians can attract wildlife and increase the risk of vehicle strikes.

7.3.5.9 Channelization alters water volume and flow rates, removes aquatic vegetation and coarse, woody debris, eliminates shallow water habitats, and disrupts/removes stream bottom habitat.

7.3.5.10 Ditching, draining and filling of marshes and wetlands eliminates habitat and degrades the remaining surrounding areas for wildlife.

7.3.5.11 Salt marsh water management to control mosquitoes may result in negative effects on other species (e.g., changing hydrology of low and high marsh).

7.3.5.13 Private landowners with rare species on their properties are not always cooperative in the protection and management of the species' habitats. Landowners may be held accountable for their actions when they cause harm to the species or destroy the habitat, but it is often too late for the species' population.

8 Invasive and Other Problematic Species, Genes and Diseases

8.1 Invasive Non-native/ Alien Species/ Diseases

8.1.1 Unspecified Species (Avg. Score: 1.00)

NJ Specific Threats: 8.1.1.5 Invasive, non-native animals and plants increase the risk of introduction and transference of diseases

8.1.1.6 Invasive, non-native plants may create physical barriers for some species.

8.1.2 Invasive non-native aquatic animals (Avg. Score: 1.00)

NJ Specific Threats: 8.1.2.2 Displace or out-compete native species for resources (food, shelter), alter the composition of the native landscapes/aquatic systems, diminishing habitat suitability and reducing ecological integrity of natural communities, and may introduce disease into a population.

8.1.4 Invasive non-native terrestrial/wetland animals (Avg. Score: 1.00)

NJ Specific Threats: 8.1.4.2 Free-roaming and feral domestic animals such as cats and dogs causes direct mortality of wildlife and disturbance to wildlife breeding and resting areas.

8.1.5 Invasive non-native terrestrial/wetland plants (Avg. Score: 1.00)

NJ Specific Threats: 8.1.5.1 Displace or out-compete native species for resources (food, light, shelter), alter the composition of the native landscapes/aquatic systems, diminish habitat suitability and reduce ecological integrity of natural communities, and may introduce disease into a population.

8.2 Problematic Native Species/Diseases

8.2.1 Unspecified Species (Avg. Score: 1.00)

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Northern Diamondback Terrapin

NJ Specific Threats: 8.2.1.2 Invasive pathogens and insects may increase in range and abundance as limiting factors (such as temperature) are altered as a result of climate change.

8.2.2 Named Species (Avg. Score: 1.00)

NJ Specific Threats: 8.2.2.2 Human-subsidized native species can become overabundant, increasing predation on other native wildlife and/or altering the ecological community.

8.4 Problematic Species/Diseases of Unknown Origin

8.4.1 Unspecified Species (Avg. Score: 1.00)

NJ Specific Threats: 8.4.1.1 Non-native or poorly understood diseases and parasites could potentially impact native animals.

8.5 Viral/Prion-induced Diseases

8.5.1 Unspecified Species (Disease) (Avg. Score: 1.00)

NJ Specific Threats: 8.5.1.1 There is a large knowledge gap regarding the existence of, or potential for, other diseases impacting native wildlife.

8.6 Diseases of Unknown Cause

8.6.0 Unknown Diseases (Avg. Score: 1.00)

NJ Specific Threats: 8.6.0.1 Diseases yet to be identified by pathologists and virologists cause decreased fitness or mortality to native populations.

9 Pollution

9.1 Domestic and Urban Waste Water

9.1.1 Sewage (Avg. Score: 1.00)

NJ Specific Threats: 9.1.1.1 Degradation of aquatic and marine water quality and habitats by changing turbidity, flow and water chemistry.

9.1.1.2 Leads to increased eutrophication and algae blooms that result in oxygen depletion.

9.1.1.3 Contaminants in sewage treatment effluents and Combined Sewer Overflows can cause developmental and behavioral abnormalities and reproductive failure in wildlife.

9.1.2 Run-off (Avg. Score: 1.00)

NJ Specific Threats: 9.1.2.1 Chemical fertilizers and nutrient run-off changes the pH in streams and ponds and causes eutrophication in inland waters and estuaries, which can make habitat unsuitable for specialist species and increase the risk of invasive and generalist species.

9.1.2.2 Contaminants degrade aquatic and marine water quality and can bioaccumulate in benthic organisms, threatening wildlife by causing developmental and behavioral abnormalities and reproductive failure.

9.1.2.3 Contaminants from road runoff (oil, sediment, salt, etc.) impact native vegetation and the species that rely upon them, degrade water quality in aquatic systems, and can injure or kill the aquatic and semi-aquatic species that rely upon them.

9.2 Industrial and Military Effluents

9.2.1 Oil Spills (Avg. Score: 2.00)

NJ Specific Threats: 9.2.1.1 Oil spills render resting, breeding and foraging habitats temporarily unavailable to wildlife, altering normal wildlife behavior.

9.2.1.2 Oil spills have long term effects on habitats and damage ecological processes that can cause local wildlife population declines and impaired foraging or reproduction.

9.2.1.3 Oil spills cause external oiling of wildlife and ingestion of oil, both of which can injure or kill wildlife.

9.2.3 Other (Avg. Score: 1.00)

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need
Northern Diamondback Terrapin

- NJ Specific Threats:** 9.2.3.1 Point and nonpoint source pollution such as polychlorinated biphenyls (PCBs), pesticides, heavy metals, and endocrine disrupting compounds (EDC's) into freshwater and marine systems pose threats to wildlife through direct contact and/or ingestion, and to aquatic species and their predators through bioaccumulation, impacting the reproductive success and neurological function of many avian and fish species.
- 9.2.3.2 Chemical spills have long term effects on habitats and damage ecological processes that can cause local wildlife population declines and impaired foraging or reproduction.
- 9.2.3.3 Chemical spills may render resting, breeding and foraging habitats temporarily unavailable to wildlife, altering normal wildlife behavior.

9.3 Agricultural and Forestry Effluents

9.3.1 Nutrient Loads (Avg. Score: 1.00)

- NJ Specific Threats:** 9.3.1.1 Chemical fertilizers and nutrient run-off changes the pH in streams, ponds and wetlands and causes eutrophication in inland waters and estuaries, which can make habitat unsuitable for specialist species and increase the risk of invasive and generalist species.
- 9.3.1.2 Animal waste degrades terrestrial and aquatic habitats, especially streams, ponds and wetlands, resulting in eutrophication, which disrupts oxygen and nutrient balances, and causes injury and mortality to aquatic organisms.
- 9.3.1.3 Organic nutrient inputs from aquaculture may, depending upon type and location, adversely impact intertidal and subtidal habitats and water bodies where there is insufficient tidal flushing.

9.3.5 Control of insect pests and plants leading to mortality of non-target species (Avg. Score: 1.00)
not associated with agriculture

- NJ Specific Threats:** 9.3.5.4 Improper use of current insecticides, such as those containing esfenvalerate, prallethrin, or piperonyl butoxide, or past use of pesticides containing chlordane still present in the soils, are toxic to various wildlife species, and can cause injury, mortality, or other effects that impair population viability.

9.4 Garbage and Solid Waste

9.4.1 Direct hazards to wildlife (Avg. Score: 2.00)

- NJ Specific Threats:** 9.4.1.1 Wildlife may ingest garbage causing choking or impingement in the digestive system, or they may become physically entangled in it (e.g., plastic or abandoned fish nets); conditions that make them unable to feed or drink, cause them to suffocate or drown, or otherwise restrict the animal's movement making them more susceptible to predators, starvation or injury.

9.5 Air-Bourne Pollutants

9.5.1 Acid Rain (Avg. Score: 1.00)

- NJ Specific Threats:** 9.5.1.1 Causes acidification of water bodies, resulting in changes to aquatic and marine communities and reducing biodiversity, and creating conditions that are unsuitable for some aquatic (freshwater and marine) and semi-aquatic species that are sensitive to pH shifts.

9.5.6 Herbicides and Pesticides (Avg. Score: 1.00)

- NJ Specific Threats:** 9.5.6.1 May result in injury or direct mortality of non-target species.

9.6 Excess Energy

9.6.2 Thermal Pollution (Avg. Score: 1.00)

- NJ Specific Threats:** 9.6.2.1 Water temperature changes due to industrial discharge of heated water may impact species composition in the receiving waterbody. Species such as sea turtles and migrating fish may be attracted to the thermal plume and become more vulnerable to mortality during emergency shutdowns during cooler months.

11 Climate Change and Severe Weather

11.1 Habitat Shifting or Alteration

11.1.0 Macro- and Micro-Climate Alterations (Avg. Score: 1.00)

NJ Specific Threats: 11.1.0.1 Alters native terrestrial and aquatic habitats at the macro- and micro-climate levels that can affect suitability for wildlife, in particular specialist species.

11.3 Temperature Extremes

11.3.1 Temperature extremes (Avg. Score: 1.00)

NJ Specific Threats: 11.3.1.3 Temperature extremes of surface water and air degrades marine habitats and ecosystems, threatening marine wildlife. Such extremes also disrupt offshore currents and migratory patterns, species' ranges, and/or impact communities/food chains, all of which further impact the ecosystem.

11.3.1.4 Extremely low temperatures and/or extensive periods of unseasonably low temperatures during critical life history stages (e.g., hibernation, gestation/nesting) can alter animals' behaviors and decrease survivorship.

11.4 Storms and Flooding

11.4.1 Storms and flooding (Avg. Score: 3.00)

NJ Specific Threats: 11.4.1.1 Extreme storms and flooding events threaten aquatic and marine wildlife through habitat degradation and alteration, including alterations to off-shore or back-bay benthic conditions, damage to submerged aquatic vegetation (SAV), increased turbidity, altered water chemistry, and potentially displacement of aquatic and marine wildlife.

11.4.1.2 Potentially damage coastal habitats, including beach- and marsh-nesting bird habitats and interdunal wetlands, and can increase marsh erosion.

11.4.1.3 Increase risk of saltwater intrusion to freshwater habitats altering the water chemistry and potentially altering aquatic wildlife community.

11.4.1.7 Potentially damage coastal habitats, including beach and marsh habitats used by spawning horseshoe crabs, nesting diamondback terrapins, and resting and foraging birds.

11.4.2 Increased rainfall (Avg. Score: 1.00)

NJ Specific Threats: 11.4.2.1 Extreme rain events threaten aquatic wildlife through habitat degradation and alteration, including alterations to benthic conditions, damage to submerged aquatic vegetation (SAV), increased turbidity, altered water chemistry, and potentially displacement of aquatic wildlife.

11.4.2.2 Extreme rain events can damage wildlife nesting and resting habitats, including impacts to avian eggs and chick and small mammal survivorship.

11.4.2.3 More frequent rain events can alter terrestrial and wetland vegetation communities as well as wetland hydrology, shifting wildlife community use.

11.6 Phenology Shifting or Alteration

11.6.2 Phenology shifts related to predator-prey ecology (Avg. Score: 1.00)

NJ Specific Threats: 11.6.2.2 Shifts timing of species migration, breeding and hibernation, and available food resources, causes redistribution of species, or mortality for species that are unable to relocate due to their already isolated habitat or limited mobility.

11.6.3 Phenology shifts related to species redistribution (Avg. Score: 1.00)

NJ Specific Threats: 11.6.3.1 Shifts in timing of species migration, breeding and hibernation, and available food resources, as a result of wildlife range shifts driven by climate change.

11.6.3.2 Shifts in nesting times or egg incubation durations can limit nest success and longterm populations.

12 Resource Management Needs

12.1 Resource information collection needs

12.1.1 Lack of initial baseline inventory (Avg. Score: 2.00)

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Northern Diamondback Terrapin

NJ Specific Threats: 12.1.1.1 Lack of information regarding the distribution, connectivity and quality of SGCN habitats throughout the State, and where habitat enhancement/restoration will benefit SGCN and other wildlife.

12.1.1.2 Lack of information regarding the population dynamics and trends, habitat requirements and dispersal distances of the various age classes, and survivorship of SGCN throughout the State.

12.1.1.4 Lack of information on the morphometrics and trends of coastal salt marshes and salt marsh islands.

12.1.1.5 Lack of information regarding the SGCN populations that use managed salt marshes and the best techniques for making improvements for marsh-dependent SGCN wildlife.

12.1.2 Lack of up-to-date existing information (Avg. Score: 2.00)

NJ Specific Threats: 12.1.2.1 Lack of (routine, regular, ongoing) surveys/assessments that provide up-to-date information regarding population trends or health, and/or status of fish, wildlife and/or their habitats.

12.1.3 Need to answer research question (Avg. Score: 2.00)

NJ Specific Threats: 12.1.3.1 There are significant knowledge gaps regarding distribution, dispersal, diseases, population trends, etc. of SGCN.

12.1.4 Need to develop new technique (Avg. Score: 1.00)

NJ Specific Threats: 12.1.4.1 Improve and evaluate survey methods for SGCN and their habitats; alter as needed.

12.3 Regulatory Reform

12.3.0 State Regulatory Reforms (Avg. Score: 1.00)

NJ Specific Threats: 12.3.0.7 Activities that threaten SGCN, their food sources, and/or habitats are often regulated separately and without consideration for the cumulative and synergistic effects over time or over a larger spatial scale. Therefore, regulations can fail to protect SGCN populations over time.

12.3.0.10 Land use regulatory processes pertaining to habitat creation, enhancement or restoration projects can be costly and/or burdensome, precluding or discouraging the development or implementation of conservation projects.

12.4 Internal Policy & Procedures Reform

12.4.0 State Policy and Procedure Reform (Avg. Score: 1.00)

NJ Specific Threats: 12.4.0.1 A species-by-species management focus as opposed to ecological systems and biodiversity generally has greater opportunity for unintended consequences for other species and may be less efficient in developing appropriate management actions.

12.4.0.2 Policies and procedures for lands management that lack consideration of the impacts of activity timing can result in unintended impacts to wildlife during vulnerable periods.

12.4.0.4 Lack of a mandatory reporting system for lost crab traps threatens diamondback terrapins and other marine species due to persistent trapping/attraction of organisms by ghost pots.

12.4.0.6 Techniques for ecological management or restoration of shorelines are not fully developed or evaluated for effectiveness for target and non-target SGCN in coastal areas.

12.4.0.7 Land preservation contracts, easements, etc. that do not contain prescriptive language or flexibility allowing for habitat management can result in unsuitable habitat conditions and biodiversity declines for SGCN.

14 Education/ Outreach Needs

14.1 Education needs

14.1.1 Need for improved knowledge of fish and wildlife and their habitats (Avg. Score: 1.00)

NJ Specific Threats: 14.1.1.1 Lack of understanding of the importance of various SGCN habitats, their connectivity to similar habitats, and how planning decisions impact their quality and the wildlife that depend upon them.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need
Northern Diamondback Terrapin

- 14.1.1.2 Lack of general knowledge of SGCN life histories and vulnerabilities as they relate to land management practices.
- 14.1.1.3 Lack of understanding of the need to manage both natural and anthropogenic (e.g., yards, lawns, hayfields, etc.) habitats to minimize impacts or increase benefits to SGCN and their habitats.

14.2 Outreach needs

- 14.2.1** Need to improve specific understanding of agency/organization goals, objectives and ongoing wildlife conservation actions (Avg. Score: 2.00)

- NJ Specific Threats:**
- 14.2.1.2 Need to develop greater understanding of and support for efforts implemented to enhance SGCN habitat and biodiversity through various aquatic and riparian management practices.
 - 14.2.1.3 Need to develop greater understanding of and support for efforts implemented to enhance SGCN habitat and biodiversity through various coastal management practices.
 - 14.2.1.4 Need to develop greater understanding of and support for efforts implemented to maintain disturbance-free habitats that allow coastal wildlife populations to thrive alongside human residential and recreational uses.

15 Administrative Needs

15.2 Organizational/program planning needs

- 15.2.3** Need for multi-state, regional and landscape scale planning (Avg. Score: 1.00)

- NJ Specific Threats:**
- 15.2.3.1 State governance and financial structures can sometimes inhibit conservation planning and implementation at the regional and landscape-scales that are often more effective at setting priorities and meeting species and habitat conservation goals and objectives.

Actions to address the Threats and Action Drivers associated with this Conservation Target:

1 Coordination and Administration

1.2 Incentives

1.2.1 Incentives

- 1.2.1.2 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to private and public landowners and land managers to increase the effective size of SGCN habitats by protecting/restoring adjacent habitats that contribute to the overall size of the "core" area and/or provide a natural buffer, enhancing the suitability of the core area for SGCN, and/or connect conserved SGCN habitats.
- 1.2.1.3 Secure and promote the protection/restoration of critical coastal habitats (beach/dune, scrub-shrub, forest, wetland, marsh, and marine and estuarine habitats) that provide nesting, migrating and wintering areas for SGCN birds, fish and other coastal SGCN through incentive programs.
- 1.2.1.6 Secure and promote the protection/restoration of riparian and floodplain habitats, inland wetland habitats (marsh, vernal pool, fen, emergent shrubland, forest), and other aquatic habitats (including open waters) and/or biologically appropriate buffers through incentive programs.
- 1.2.1.7 Secure and promote the protection/restoration of fish SGCN habitats by protecting lands adjacent to fish SGCN habitats and/or aquatic systems feeding into such habitats through incentive programs.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need
Northern Diamondback Terrapin

- 1.2.1.8 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to municipalities, land developers, and other land managers to retain and/or enhance native vegetation adjacent to aquatic habitats, and along riparian areas and wildlife movement corridors.
- 1.2.1.10 Coordinate across government agencies and non-government organizations to maximize the availability of and enrollment in existing landowner incentive programs (e.g., "farm bill," partners, etc.) to maintain and/or improve habitat.
- 1.2.1.11 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to public and private landowners and managers, including but not limited to government and non-government agencies/organizations, energy, mining, and transportation and utility service companies/agencies, to minimize commercial infrastructure and impervious surfaces, and to improve wildlife habitats, limit fragmentation, reduce elements which would exacerbate mortality, and/or implement activities/restoration that would create new or improved corridor habitat and/or increase connectivity, and to increase structural habitat diversity through the implementation of a variety of vegetation management practices that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting), and to minimize (if not avoid) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
- 1.2.1.13 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to land developers to minimize the impacts of new residential and commercial developments on SGCN and their habitats.
- 1.2.1.14 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to NJ landowners and land managers (including farmers, foresters and developers) for reducing or eliminating the use of herbicides and pesticides, and implementing more ecologically safe strategies when using such products.
- 1.2.1.20 Coordinate across government agencies and non-government organizations to create or expand upon tax-based incentive programs available to private, agricultural, commercial, industrial or governmental landowners and land managers to include or provide for incentives for the maintenance and/or improvement to existing habitat via the endorsement of wildlife-related BMP's.
- 1.2.1.25 Create incentives (non-monetary and/or monetary) within State regulations to assist and programs to deliver those incentives to aquaculture growers to relocate, for example, from intertidal to subtidal lease areas through buyouts of leases or microloans, and/or promoting on-lease conservation measures used by aquaculture growers (such as the implementation of conservation easements, use of living shorelines, incorporation of BMPs for habitat protection, etc.) for maintaining and enhancing healthy, SGCN-associated terrestrial and aquatic habitats and associated riparian habitats, and to minimize (if not avoid) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
- 1.2.1.26 Develop a new funding source, targeting natural resource damages monies, mitigation monies or other available sources, to fund new or existing landowner incentive programs.

2 Direct Management of Natural Resources

2.1 Create new habitat or natural processes

2.1.1 Habitat conversion

- 2.1.1.1 Create high marsh habitat through impoundments and diking of low marsh areas that are less susceptible to breaching by storms and sea-level rise.

2.2 Dam and barrier removal

2.2.1 Culvert work

- 2.2.1.1** Replace existing barriers to wildlife movement with and/or install appropriately-sized systems to accommodate wildlife dispersal.

2.8 Invasive species control

2.8.0 Invasive species control strategies and implementation

- 2.8.0.5** Implement biologically safe and appropriate control/management strategies, and where appropriate, eradication strategies to reduce the impacts and/or limit the distribution of invasive and/or non-native plant species within or near aquatic systems using methods that will provide the most protection to the aquatic and riparian ecological system, and minimize disturbance to the soil and wildlife. Encourage the implementation of biological and mechanical removal/control. When chemical control is used, encourage low-volume, targeted application using NJDEP-approved chemicals in accordance with the specific instructions for that chemical.
- 2.8.0.6** Implement long-term management of invasive and/or non-native plants to help maintain functioning ecological systems and biological diversity, and to enhance travel corridors. Encourage the implementation of biological and mechanical removal/control. When chemical control is used, encourage low-volume, targeted application using NJDEP-approved chemicals in accordance with the specific instructions for that chemical.

2.9 Living shorelines

2.9.1 Beach renourishment

- 2.9.1.1** Implement best management practices for using mined sand or dredged material to improve habitat for wildlife, particularly for spawning horseshoe crabs and migrating shorebirds.
- 2.9.1.3** Where beach renourishment projects are deemed necessary, implement such projects with a design to increase availability of nesting and foraging habitat for beach nesting birds.
- 2.9.1.4** Implement beach renourishment strategies that consider appropriate timing to avoid sensitive periods (e.g., nesting, denning, roosting) and minimizes harm to wildlife, particularly SGCN.
- 2.9.1.5** Expand the acreages and enhance the effective size of SGCN habitats by utilizing beach renourishment to restore adjacent, less optimal or unsuitable, habitats.
- 2.9.1.6** Reclaim degraded rare species habitats using beach renourishment, when appropriate, to restore habitat value for the documented/target SGCN.
- 2.9.1.7** Protect significant natural and/or unique communities by implementing best management practices for beach renourishment, when applicable.
- 2.9.1.8** Minimize habitat loss of critical coastal beach habitats that provide nesting, migrating, and wintering areas for birds and other coastal species by maintaining or enhancing these areas through beach renourishment.
- 2.9.1.14** Implement best management practices (BMPs), protective strategies, and guidelines for maintaining and enhancing healthy, SGCN-associated beach habitats while minimizing (if not avoiding) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
- 2.9.1.15** Implement beach management strategies to benefit urban-associated SGCN.

Northern Diamondback Terrapin

- 2.9.1.16 Prevent or ameliorate near-term impacts of climate change throughout the State but in particular within the coastal and Delaware Bay areas by implementing habitat management strategies that will establish/improve habitat resilience, such as beach renourishment, that benefits wildlife inhabiting these areas.

2.9.2 Erosion control structures

- 2.9.2.1 Install breakwaters in the form of living shorelines to reduce the impact of wave erosion while preserving the natural character of the site.

2.9.3 Sand dune restoration

- 2.9.3.1 Prevent or ameliorate near-term impacts of climate change throughout the State but in particular within the coastal and Delaware Bay areas by implementing habitat management strategies that will establish/improve habitat resilience, such as sand dune restoration, that benefits wildlife inhabiting these areas.
- 2.9.3.2 Implement sand dune restoration strategies that consider appropriate timing to avoid sensitive periods (e.g., nesting, denning, roosting) and minimizes harm to wildlife, particularly SGCN.
- 2.9.3.3 Expand the acreages and enhance the effective size of SGCN habitats by restoring adjacent, less optimal or unsuitable, habitats through sand dune restoration.
- 2.9.3.4 Reclaim degraded rare species habitats using sand dune restoration needed to restore habitat value for the documented/target SGCN.
- 2.9.3.5 Protect significant natural and/or unique communities by implementing best management practices for sand dune restoration.
- 2.9.3.12 Implement best management practices (BMPs), protective strategies, and guidelines for maintaining and enhancing healthy, SGCN-associated sand dune habitats while minimizing (if not avoiding) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.

2.10 Planting/seeding

2.10.0 Planting/seeding strategies for terrestrial or aquatic habitat creation or restoration

- 2.10.0.1 Prevent or ameliorate near-term impacts of climate change throughout the State by developing, implementing and monitoring/evaluating habitat management strategies that will establish/improve habitat resilience (e.g., shorelines of the coast and Delaware Bay, forested habitats of the Pinelands and Skylands) that benefits wildlife inhabiting these areas, in particular within the coastal and Delaware Bay areas.
- 2.10.0.4 Restore and/or enhance suitable travel corridors connecting conserved habitats for SGCN by restoring unsuitable (or less optimal) habitats.
- 2.10.0.5 Implement habitat restoration and/or enhancement activities that include the creation of vegetative buffers between sensitive habitats (e.g., aquatic systems) and human-inhabited areas (e.g., residences, parks, etc.) and that is conducted during appropriate timing to avoid sensitive periods (e.g., nesting, denning, roosting) while minimizing (if not avoiding) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
- 2.10.0.6 Expand the acreages and enhance the effective size of SGCN habitats by restoring adjacent, less optimal or unsuitable, habitats.
- 2.10.0.7 Restore/reclaim and enhance degraded rare species habitats through strategic revegetation and management efforts for documented/target SGCN.

Northern Diamondback Terrapin

- 2.10.0.8 Protect significant natural and/or unique communities by implementing best management practices when conducting habitat restoration strategies.
- 2.10.0.9 Restore and/or enhance riparian and floodplain habitats, inland wetland habitats (marsh, vernal pool, fen, emergent shrubland, forest), and other aquatic habitats (including open waters) and/or biologically appropriate buffers to minimize degradation, alteration and/or changes in hydrology and subsequent disturbances to and behavioral changes of wildlife (e.g., restoring biologically appropriate buffers, revegetation or restoration efforts, etc.).
- 2.10.0.10 Minimize the loss of important habitats (e.g., coastal scrub-shrub and grassy habitats, high and low marsh habitats, etc.) that provide nesting, migrating, and wintering areas for SGCN birds and other coastal and marsh-dependent species through habitat restoration efforts.
- 2.10.0.12 Create and/or maintain scrub-shrub habitats through revegetation efforts with little to no impact on forested, wetland and grassland habitats to maintain populations of shrub-dependent SGCN.
- 2.10.0.14 Implement best management practices (BMPs), protective strategies and guidelines for restoring and enhancing healthy, SGCN-associated habitats while minimizing (if not avoiding) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
- 2.10.0.22 Restore and/or enhance terrestrial and aquatic habitats to promote the regeneration of native vegetation and enhance structural diversity to benefit SGCN (e.g., vegetative buffers of aquatic systems, allow coarse, woody debris to remain in terrestrial, aquatic and riparian habitats to provide shelter, riparian stabilization and necessary microclimates, plant native trees, shrubs and grasses, etc.).
- 2.10.0.24 Use NJ's CHANJ mapping and guidance to establish vegetation and enhance or create corridors between fragmented habitats with similar vegetation, slope, soils, structure, etc. to ensure vegetative integrity is maintained to allow wildlife to safely disperse, and corridors are buffered with natural habitats to minimize disturbance to wildlife within the corridors.

2.11 Vegetation management

- 2.11.0 Vegetation management strategies for terrestrial or aquatic habitat creation or restoration
 - 2.11.0.2 Conduct vegetation management in native terrestrial and aquatic habitats to provide suitable and appropriately sized areas for target SGCN and/or species groups; management should complement rare species needs in a targeted area.
 - 2.11.0.3 Create suitable travel corridors connecting and increasing the effective size of conserved habitats for SGCN by restoring unsuitable (or less optimal) habitats through vegetation management.
 - 2.11.0.4 Implement vegetation management strategies that consider appropriate timing to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife, particularly SGCN.
 - 2.11.0.6 Reclaim degraded rare species habitats by conducting vegetation management needed to restore habitat value for the documented/target SGCN.
 - 2.11.0.7 Protect significant natural and/or unique communities by implementing best management practices through vegetation management.
 - 2.11.0.9 Minimize habitat loss of critical coastal habitats that provide nesting, migrating, and wintering areas for birds and other coastal species by maintaining or enhancing these areas through vegetation management.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need
Northern Diamondback Terrapin

- 2.11.0.13 Implement best management practices (BMPs), protective strategies, and guidelines for vegetation management to maintain and enhance healthy, SGCN-associated habitats while minimizing (if not avoiding) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
- 2.11.0.14 Conduct vegetation management adjacent to roads for SGCN species whose behavior (i.e., dispersal across roads) may be altered by doing so, and therefore decrease road mortality of such species (e.g., amphibians, snakes, turtles, small mammals).
- 2.11.0.16 Prevent or ameliorate near-term impacts of climate change throughout the State by developing, implementing and monitoring/evaluating habitat management strategies that will establish/improve habitat resilience (e.g., shorelines of the coast and Delaware Bay, forested habitats of the Pinelands and Skylands) that benefits wildlife inhabiting these areas, in particular within the coastal and Delaware Bay areas.
- 2.11.0.20 Create and/or maintain scrub-shrub habitats through management efforts with little to no impact on forested, wetland and grassland habitats to maintain populations of shrub-dependent SGCN.
- 2.11.0.21 Minimize the degradation, alteration and/or changes in hydrology of wetlands, riparian and floodplain areas, and aquatic habitats (including open waters) and subsequent disturbances to and behavioral changes of wildlife by maintaining or enhancing these areas and biologically appropriate buffers through habitat management and/or revegetation or restoration efforts.
- 2.11.0.22 Minimize habitat loss of high and low marsh habitats that provide nesting, migrating and wintering areas for SGCN birds and other marsh-dependent SGCN by maintaining or enhancing these areas through habitat management and/or revegetation or restoration efforts.
- 2.11.0.26 Conduct vegetation management along roadsides and medians, avoiding peak activity periods for wildlife, that enhances wildlife dispersal naturally and safely across roads and similar barriers to/between terrestrial and/or aquatic habitats.
- 2.11.0.34 Increase structural habitat diversity by managing residential, commercial and recreational areas' landscapes for a variety of species. For example, integrate short and tall grasses, specific host plants, brush piles, water sources/wetlands, shrubby areas, nesting areas and no-mow set-asides.
- 2.11.0.35 Increase structural habitat diversity by managing vegetation adjacent to aquatic habitats in a manner that provides a buffer from runoff and erosion and a microclimate to stabilize seasonal temperatures to benefit a variety of aquatic and semi-aquatic species.
- 2.11.0.36 Increase structural habitat diversity by managing vegetation for a variety of species and considering their life history requirements (e.g., travel corridors, shelter, resting and breeding areas) to minimize the risk of harm.
- 2.11.0.37 Increase structural habitat diversity by minimizing the removal of coarse, woody debris in terrestrial, aquatic and riparian habitats which benefits wildlife.
- 2.11.0.40 Increase structural habitat diversity surrounding areas used for energy, mining, and transportation and service corridors by managing vegetation for a variety of species and that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife. For example, integrate short and tall grasses, specific host plants, brush piles, water sources/wetlands, shrubby areas, nesting areas and no-mow set-asides, and avoid managing habitat during the breeding seasons for ground-nesting birds, reptiles, amphibians and small mammals.

Northern Diamondback Terrapin

2.11.0.42 Increase structural habitat diversity within wind farms for terrestrial bound and low-flying species and around wind farms for other wildlife by managing vegetation for a variety of species and that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife.

2.11.0.44 Manage phragmites adjacent to coastal marshes of interest, in particular those that are within underdeveloped areas and are unprotected, through herbicide application and water management to improve resiliency of the marshes to sea level rise.

2.12 Water management

2.12.1 Ditch plugs

2.12.1.1 Implement best management practices (BMPs), protective strategies, and guidelines for ditch plugging to maintain and enhance healthy, resident and migratory SGCN-associated habitats while minimizing (if not avoiding) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.

2.12.3 Drainage

2.12.3.2 Prevent or ameliorate near-term impacts of climate change throughout the State by developing, implementing and monitoring/evaluating habitat management strategies that will establish/improve habitat resilience (e.g., shorelines of the coast and Delaware Bay, forested habitats of the Pinelands and Skylands) such as removing drainage ditches to restore natural stream flows and wetlands, that benefit wildlife inhabiting these areas.

2.12.3.3 Remove tile drains and drainage ditches to improve wetland hydrology and restore natural stream flows during appropriate times to avoid sensitive periods (e.g., nesting, denning, roosting) and minimizes harm to wildlife, particularly SGCN.

2.12.3.4 Expand the acreages and enhance the effective size of SGCN habitats by reclaiming/restoring adjacent, degraded habitats by removing tile drains and drainage ditches.

2.12.3.5 Remove drainage ditches adjacent to roads to decrease the attraction for amphibians, reptiles and small mammals, and thereby minimizing road mortality of such species (e.g., amphibians, snakes, turtles, small mammals).

2.12.3.6 Protect significant natural and/or unique communities by and when removing tile drains and drainage ditches.

2.12.3.7 Minimize habitat loss of critical coastal habitats that provide nesting, migrating, and wintering areas for birds and other coastal species by maintaining or enhancing these areas by removing drainage ditches.

2.12.3.11 Implement best management practices (BMPs), protective strategies, and guidelines when removing tile drains and drainage ditches to maintain and enhance healthy, SGCN-associated habitats while minimizing (if not avoiding) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.

2.12.7 Waterfowl impoundment maintenance

2.12.7.1 Manage impoundments to benefit SGCN species inhabiting them (e.g., bitterns, rails, ducks, turtles and some invertebrates).

2.12.7.3 Implement best management practices (BMPs), protective strategies, and guidelines for impoundment management to maintain and enhance healthy, SGCN-associated habitats while minimizing (if not avoiding) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.

Northern Diamondback Terrapin

- 2.12.7.4 Implement impoundment management strategies that consider appropriate timing to avoid sensitive periods (e.g., nesting, denning, roosting) and minimizes harm to wildlife, particularly SGCN.
 - 2.12.7.7 Protect significant natural and/or unique communities by implementing best management practices for impoundment management.
 - 2.12.7.13 Manage impoundments adjacent to roads for SGCN species whose behavior (i.e., dispersal across roads) may be altered by doing so, and therefore decrease road mortality of such species (e.g., marsh birds, amphibians, turtles, small mammals).
 - 2.12.7.14 Prevent or ameliorate near-term impacts of climate change throughout the State but in particular within the coastal and Delaware Bay areas by implementing habitat management strategies that will establish/improve habitat resilience, such as impoundment management, that benefits wildlife inhabiting these areas.
 - 2.12.8 Watering facilities
 - 2.12.8.2 Manage water levels in impoundments to improve coastal marsh habitat availability to wildlife and improve resiliency of the marshes to sea level rise.
- 2.13 Wildlife damage management
 - 2.13.0 Nuisance fish and wildlife damage
 - 2.13.0.2 Develop, implement and evaluate the effectiveness of BMPs for mosquito control methods that may produce benefits for coastal marsh dependent SGCN wildlife, including but not limited to high-marsh nesting birds and migrating shorebirds and landbirds.
 - 2.13.0.5 Investigate the impacts of human-subsidized and/or naturally occurring predator species on SGCN to assess the need for integrated wildlife damage management techniques (e.g., predator exclosures, fish blockages, electric fence, culls) and/or policy changes on state land management that minimize the impacts of human-subsidized predators.
 - 2.13.0.8 Implement and assess management strategies to control and reduce the impacts of detrimental species and diseases that pose threats to native wildlife or communities.

3 Data Collection and Analysis

- 3.0 General fish and wildlife research, survey or monitoring
 - 3.0.0 Research, survey or monitoring - general fish and wildlife needs
 - 3.0.0.1 Conduct long-term monitoring of resident and migratory SGCN populations using standardized survey protocols to determine the variables that may impact their long-term persistence in the State (e.g., population viability, distribution, dispersal, home range and habitat use, travel corridors, food availability, vulnerability to pollutants and disease, etc.). Compile this information to determine the likely causes of population declines and to understand metapopulation dynamics. Provide data to NJ DEP for integration into the Biotics database, Landscape Project and permitting review processes.
 - 3.0.0.2 Identify (through literature searches, review of available data, enlistment of habitat and/or species experts, etc.) where data gaps exist regarding SGCN distribution, and their critical and supportive habitats. Conduct surveys using standardized survey protocols to acquire baseline data, and provide the data to NJ DEP for integration into the Biotics database, Landscape Project Map and permitting review processes.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need
Northern Diamondback Terrapin

- 3.0.0.3 Gather baseline data on SGCN inhabiting permanently protected natural lands regarding their distribution and population (e.g., abundance, dispersal, demography including productivity and survival, etc.), and identify (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) critical and supporting habitats within those landscapes.
- 3.0.0.4 Conduct long-term studies on SGCN inhabiting permanently protected natural lands to develop population trend data and changes in demography, and to determine if critical and/or supporting habitats are limited or changing; i.e., diminishing in value, acreage or connectivity.
- 3.0.0.5 Gather baseline data on resident and migratory SGCN (in particular migratory species for which New Jersey habitats are significant), terrestrial, freshwater and marine species, regarding the location and condition of their critical and supporting habitats (e.g., foraging, roosting, nesting/breeding, stopover, migration paths, etc.), and population demography (e.g., productivity, survival, dispersal). Compile this information into a database that includes descriptions of the conditions of the habitats and species, and a GIS component of the locations of these important habitats. Provide data to NJ DEP for integration into the Biotics database, Landscape Project and permitting review processes.
- 3.0.0.6 Conduct long-term studies on resident and migratory SGCN to determine if there are changes to the populations' demography (productivity, survival, dispersal) and/or to their critical and/or supporting habitats (i.e., diminishing in value, acreage or connectivity, etc.), in particular changes that would not maintain SGCN at viable levels for species populations. Update data and GIS maps; provide updated information to NJ DEP for integration into the Biotics database, Landscape Project and permitting review processes.
- 3.0.0.7 Collect baseline data to document species distributions, in particular SGCN, and current habitat for future analysis of possible distribution shifting as a result of habitat shifting or alteration associated with climate change impacts.
- 3.0.0.8 Conduct long-term studies and compare baseline metrics of documented species distributions and associated habitats to identify possible species and/or habitat shifting or alteration associated with climate change impacts.
- 3.0.0.13 Investigate the effects of pesticides, herbicides and other biological controls on SGCN and their critical and supporting habitats. Evaluate and modify management practices as appropriate.
- 3.0.0.19 Identify the presence and status (e.g., functioning, structure, slated for removal, etc.) of existing dams and culverts within and/or that may impact SGCN and their habitats, and create a database that includes a GIS component identifying the locations of such structures and their status. Share this information with appropriate organizations and/or agencies evaluating the benefits and risks of such structures on SGCN and their habitats.
- 3.0.0.21 Conduct long-term monitoring to determine the impacts of the fish and shellfish aquaculture industries on focal and non-focal SGCN and their habitats (i.e., NJ bays, estuaries, ocean areas). Assess the success of management actions implemented to minimize these impacts and make specific recommendations to the NJ DEP regarding how such management efforts may be improved to minimize harm to wildlife and their habitats.
- 3.0.0.23 Identify (through wildlife and aquatic system surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) and research water quality parameters for all [types of] aquatic systems for various SGCN populations.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need
Northern Diamondback Terrapin

- 3.0.0.27 Evaluate the effectiveness of strategies to restrict human activity (e.g., recreational, maintenance work, etc.) from sensitive habitats/areas such as avian nesting sites, reptile and amphibian breeding areas (nesting or gestation/birthing and breeding pools, respectively), and bat hibernacula, and federal buffers for marine mammals through research and monitoring. Develop and provide NJ DEP and other appropriate governing agencies/commissions a summary of findings and recommendations to improve such efforts.
- 3.0.0.28 Evaluate best management practices for using mined sand or dredged material to improve habitat for wildlife, particularly for spawning horseshoe crabs and migrating shorebirds.
- 3.0.0.29 Conduct long-term monitoring of sensitive marine species habitats and migration and/or spawning areas to determine their continued use or changes as a result of habitat shifts or alterations that may warrant further management actions.

3.2 Research, survey or monitoring - fish and wildlife populations

3.2.0 Data deficiency

- 3.2.0.1 Division of Fish and Wildlife should maintain a robust, up-to-date database and mapping of species occurrences.
- 3.2.0.2 Conduct species status assessments using the Delphi Technique and review of available data and literature on fish and wildlife (including marine animals) to maintain accurate legal status categorization of native wildlife.
- 3.2.0.5 Prevent or ameliorate near-term impacts of climate change throughout the State by developing, implementing and monitoring/evaluating habitat management strategies that will establish/improve habitat resilience (e.g., shorelines of the coast and Delaware Bay, forested habitats of the Pinelands and Skylands) that benefits wildlife inhabiting these areas, in particular within the coastal and Delaware Bay areas.
- 3.2.0.6 Develop, implement and conduct studies to evaluate the effectiveness of methods implemented to reduce road mortality of wildlife (e.g. wildlife underpasses, road closures).
- 3.2.0.12 Investigate the impacts of ORV use and ORV-created noise on terrestrial and aquatic wildlife behavior and the impact of direct mortality from vehicle strikes. Integrate this information when mapping undeveloped roads and trails to identify potentially sensitive areas in northern NJ forests.
- 3.2.0.16 Conduct long-term monitoring to evaluate the success of marine conservation zone designations on marine SGCN.
- 3.2.0.19 Develop, implement and evaluate aquaculture practices in coastal areas that are compatible with the recovery of SGCNs and industry needs.

3.2.1 Abundance determination

- 3.2.1.1 Identify (through literature searches, review of available data, enlistment of habitat and/or species experts, etc.) population abundance and trends for SGCN using standardized survey protocols. Provide data to NJ DEP for integration into the Biotics database, Landscape Project Map and permitting review processes.
- 3.2.1.2 Conduct wildlife surveys on resident and migratory SGCN regarding their population abundance and trends.

3.2.2 Age, size and sex structure

- 3.2.2.1 Conduct wildlife surveys on resident and migratory SGCN regarding their survivorship.

3.2.3 Baseline inventory

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need
Northern Diamondback Terrapin

- 3.2.3.2 Identify (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) suitable areas for marine conservation zone designation and promote policies and regulations that support the designation of such areas.
 - 3.2.3.5 Investigate and develop strategies to reduce "by-catch" of SGCN and other non-target species. Present findings and strategies to NJ DEP and conservation organizations for review and possible implementation. Develop a database documenting by-catch for use in management planning decisions.
 - 3.2.3.7 Identify roads or portions of roads, paved or unimproved (through site surveys, land use/land cover assessments and analyses, review of available data, enlistment of species experts, etc.) with high incidences of road mortality and/or presence of snakes, turtles, medium-sized and large mammals. Conduct assessments of the roads and incorporate information into a database that includes descriptions (e.g., qualifiers to help prioritize the roads' risk to wildlife) and a GIS component of the locations of such areas. Share this information with appropriate organizations and/or agencies working to implement measures (e.g., wildlife passages, road closures) to minimize the risk to these species.
 - 3.2.7 Population assessment
 - 3.2.7.1 Conduct species status assessments using the Delphi Technique and review of available data and literature on fish and wildlife (including marine animals) to maintain accurate legal status categorization of native wildlife.
 - 3.2.7.2 Conduct studies to evaluate the effectiveness of proactive species recovery plans for all endangered and threatened species to meet and maintain recovery goals.
- 3.3 Research, survey or monitoring - habitat
 - 3.3.1 Baseline inventory
 - 3.3.1.1 Conduct habitat assessments of significant natural and/or unique communities to identify threats to native terrestrial and aquatic habitats through systematic monitoring, review of available data, enlistment of habitat management and/or species experts, etc. Incorporate findings into a database that includes descriptions/qualifiers of the habitats, identifies and values/qualifies the threats, and includes a GIS component of the locations of the assessed areas. Share this information with landowners/managers (e.g., federal, state and local government agencies or non-government organization).
 - 3.3.1.2 Identify (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) resident and migratory SGCN habitats. Investigate their suitability for the various life history requirements of the species that dependent upon them to determine the ability for maintaining applicable SGCN populations in perpetuity.
 - 3.3.1.4 Identify (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) and investigate the suitability of corridors that connect large, contiguous tracts of similar habitats to increase their effective size (i.e., forest with forest, grassland with grassland, wetlands with wetlands, etc.) for dependent SGCN.
 - 3.3.1.5 Identify areas (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) where habitat restoration and/or enhancement would benefit wildlife SGCN.
 - 3.3.1.6 Identify areas (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) that could, through revegetation and/or enhancement efforts, become suitable travel corridors connecting and increasing the effective size of conserved habitats for SGCN.

Northern Diamondback Terrapin

- 3.3.1.11 Identify (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) and investigate the quality and importance of areas with submerged aquatic vegetation to benefit waterfowl, finfish, and shellfish species.
 - 3.3.1.16 Gather "best information" for spatial modeling and update/create a current model/depiction of anticipated habitat shifts from sea-level rise, flooding, etc.
 - 3.3.1.18 Conduct an assessment using available data regarding SGCN population numbers/trends and demography, on-going threats, habitat changes, etc. to determine if directed management efforts are needed to reach or maintain viable population levels.
 - 3.3.1.19 Identify and codify legal ORV access areas on state (and if appropriate, other conserved) lands. Provide GIS mapping to the landowner for potential use in directing such recreational activities.
 - 3.3.1.21 Conduct comprehensive baseline surveys of all marsh islands; surveys to include, but are not limited to, documented elevations, and assessments of the habitat's current condition and vulnerability of dependent SGCN species in relation to the increased inundation rate.
 - 3.3.1.22 Identify, assess and prioritize marsh habitats for restoration where various management tools (such as increasing salinity through the management of water levels or chemical applications) may be effective in reducing the presence of phragmites.
 - 3.3.1.24 Conduct regular investigations of SGCN habitat health and biodiversity on public and private lands to identify locations in need of revegetation, reduction of over-abundant, native wildlife and/or exotic species, conservation focal areas requiring limitations on human activity, etc.
 - 3.3.1.27 Develop a matrix that lists every commercial and recreational fishery and aquaculture facility that operates in state waters and for each fishery listed, provide details regarding their fishing seasons, gear descriptions, locations and number of fishers. Add a GIS component to overlay species of concern and sensitive areas.
 - 3.3.1.29 Identify coastal wildlife habitats unimpacted by development and/or at greatest risk of habitat loss to help guide enlightened coastal stabilization efforts (i.e., use of soft stabilization) to reduce the impacts on wildlife and their habitats.
 - 3.3.1.30 Using available data, model a comprehensive Marine Submerged Aquatic Vegetation Mapping project (similar to the Statewide freshwater wetlands mapping project) of sufficient quality and integrity that it could support the NJ DEP's coastal regulatory programs. Continue to conduct surveys to gather additional data to test and improve the model.
- 3.3.2 Monitoring
 - 3.3.2.2 Conduct long-term monitoring of resident and migratory SGCN habitats using standardized survey protocols to determine changes in habitat quality/suitability and threats (e.g., habitat loss and degradation, increased edge habitat, water quality) and other variables that may impact their long-term persistence in the State and to provide information needed for determining causes of population declines and understanding metapopulation dynamics.
 - 3.3.2.3 Continue to update wildlife and habitat databases and revise models of critical SGCN habitats using the most current data available and where lacking, develop new SGCN and/or habitat models as data on species habitat requirements and applicable GIS data layers become available.
 - 3.3.2.5 Conduct long-term monitoring of water quality of SGCN aquatic habitats (and aquatic systems feeding into those habitats) to evaluate protection and management efforts to reduce, if not eliminate, chemical contamination, siltation, eutrophication, and other forms of pollution/contamination of aquatic systems.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need
Northern Diamondback Terrapin

- 3.3.2.6 Investigate the effectiveness and potential impacts of marsh management techniques by studying the effects of Open Marsh Water Management on wildlife species, in particular high marsh nesting birds and waterfowl. Evaluate best management practices as appropriate.
- 3.3.2.7 Conduct studies on land use practices such as ditching, impounding, dredging, open marsh water management, burning, and marsh restoration to evaluate the effectiveness and potential impacts on marsh-dependent SGCN.
- 3.3.2.14 Research and evaluate the effectiveness of water quality management practices on water-dependent and semi-dependent SGCN, particularly those practices associated with permitting or mitigation actions.
- 3.3.2.15 Investigate the effectiveness of management techniques implemented to eliminate invasive terrestrial and aquatic plant species on private and public lands, and/or within sensitive and/or important habitats for SGCN.
- 3.3.2.16 Evaluate the effectiveness of best management practices (BMPs), protective strategies, and guidelines for maintaining and enhancing healthy, SGCN-associated terrestrial and aquatic habitats and associated riparian habitats, and to minimize (if not avoid) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
- 3.3.2.19 Once baseline data on the marsh islands' and associated SGCN species' vulnerability to inundation is completed, continue to conduct long-term monitoring the islands to determine sustainability for wildlife dependent on these areas.
- 3.3.2.20 Once a system is developed for reporting and qualifying new locations of invasive species, develop, implement and monitor/evaluate invasive species removal strategies at identified locations. Priority should be given to those areas critical to SGCN and/or contain unique and/or rare plant communities supporting SGCN and/or other fish/wildlife species.
- 3.3.2.21 Develop, implement and evaluate the effectiveness of management strategies use to restore marsh habitat (e.g., phragmites reduction).
- 3.3.2.23 Conduct long-term monitoring of marine submerged aquatic vegetation and update the Marine Submerged Aquatic Vegetation Mapping [to be developed under baseline activities] to provide the NJ DEP's coastal regulatory programs with the most current data.

3.5 Techniques development

3.5.1 Artificial propagation studies

- 3.5.1.1 Conduct studies to evaluate the impacts (beneficial and detrimental) of aquaculture on migratory shorebirds, waterfowl, finfish, shellfish and other SGCN and their habitats, including evaluation of the relative effects of location and aquaculture techniques.
- 3.5.1.2 Develop and conduct studies that evaluate relative efficacy and feasibility of management actions designed to minimize adverse impacts and enhance beneficial effects.

3.5.3 Habitat restoration methods

- 3.5.3.1 Work with land management agencies to determine the appropriate actions needed to restore/reclaim degraded habitat for the documented/target SGCN.
- 3.5.3.4 Modify best management practices of Open Marsh Water Management based on evaluation of the effectiveness and potential impacts of marsh management techniques on wildlife species, in particular high marsh nesting birds and waterfowl.
- 3.5.3.5 Develop best management practices for using mined sand or dredged material to improve habitat for wildlife, particularly for spawning horseshoe crabs and migrating shorebirds.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need
Northern Diamondback Terrapin

- 3.5.3.8 Develop best management practices (BMPs), protective strategies, and guidelines for maintaining and enhancing healthy, SGCN-associated terrestrial and aquatic habitats and associated riparian habitats, and to minimize (if not avoid) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
 - 3.5.3.9 Develop strategies to combat the impacts of diseases/pathogens impacting SGCN and/or their habitats.
 - 3.5.3.10 Develop a habitat improvement and restoration program to restore cold-water fish habitat.
 - 3.5.3.11 Develop strategies to protect native terrestrial and aquatic habitats and dependent SGCN species from the identified threats.
 - 3.5.3.12 Develop management actions to minimize the documented adverse impacts and reduce risks of potential adverse impacts of aquaculture on migratory shorebirds and other SGCN, including waterfowl, finfish, and shellfish and their habitats.
 - 3.5.3.13 Developing engineering standards that embrace both shore protection/resiliency and habitat creation for shorebirds, horseshoe crabs and other coastal species along the Atlantic and Delaware Bay coasts.
 - 3.5.3.14 Develop aquaculture practices in the coastal areas that are compatible with the recovery of SGCN.
 - 3.5.3.15 Modify management practices based on the effects of pesticides, herbicides and other biological controls on critical and supporting SGCN habitats.
 - 3.5.3.16 Develop/improve strategies to restrict human activity (e.g., recreational, maintenance work, etc.) from sensitive habitats/areas such as avian nesting sites, reptile and amphibian breeding areas (nesting or gestation/birthing and breeding pools, respectively), and bat hibernacula, and federal buffers for marine mammals. Methods may include, but are not limited to, managing the landscape to deter access, diverting recreational and other activities from sensitive areas during critical periods through permit processes or blocking access (trails, roads, etc.), posting (if appropriate), increasing law enforcement presence, conducting management activities at appropriate times to avoid disturbance and/or harm to wildlife (e.g., habitat management, beach raking, etc.), and decreasing noise and light pollution.
 - 3.5.3.17 Investigate and improve marsh management techniques to benefit critical wildlife species, in particular high marsh nesting birds and waterfowl.
 - 3.5.3.18 Develop recommendations to improve methods on land use practices such as ditching, impounding, dredging, open marsh water management, burning, and marsh restoration based on potential impacts on marsh-dependent SGCN.
 - 3.5.3.24 Based on research, modify management techniques implemented to eliminate invasive terrestrial and aquatic plant species on private and public lands, and/or within sensitive and/or important habitats for SGCN.
 - 3.5.3.25 Use data regarding SGCN population numbers/trends and demography, on-going threats, habitat changes, etc. to develop the necessary management strategies to reach or maintain viable population levels.
 - 3.5.3.27 Conduct an assessment and develop a location list of available equipment for boom deployment during oil spills.
 - 3.5.3.28 Conduct baseline surveys to determine areas in Barnegat and Great bays appropriate for eelgrass restoration. Develop necessary techniques to implement restoration efforts.
- 3.5.4 Fish and wildlife research, survey and management techniques

Northern Diamondback Terrapin

- 3.5.4.3 Investigate alternative saltmarsh mosquito control methods that may produce benefits for coastal marsh dependent SGCN wildlife, including but not limited to high-marsh nesting birds and migrating shorebirds and landbirds.
- 3.5.4.5 Develop and implement strategies to combat the impacts of diseases/pathogens impacting SGCN and/or their habitats, track disease occurrences and monitor/research impacts to SGCN populations and their habitats.
- 3.5.4.9 Conduct studies to evaluate the impacts of roads on SGCN and develop, implement and conduct studies to evaluate the effectiveness of methods to reduce road mortality of wildlife (e.g. wildlife underpasses, road closures).
- 3.5.4.11 Develop aquaculture practices in the Delaware Bay that are compatible with the recovery of SGCN.
- 3.5.4.12 Investigate and develop strategies to reduce "by-catch" of SGCN and other non-target species. Present findings and strategies to NJ DEP and conservation organizations for review and possible implementation. Develop a database documenting by-catch for use in management planning decisions.
- 3.5.4.13 Develop/improve strategies to restrict human activity (e.g., recreational, maintenance work, etc.) from sensitive habitats/areas such as avian nesting sites, reptile and amphibian breeding areas (nesting or gestation/birthing and breeding pools, respectively), and bat hibernacula, and federal buffers for marine mammals. Methods may include, but are not limited to, managing the landscape to deter access, diverting recreational and other activities from sensitive areas during critical periods through permit processes or blocking access (trails, roads, etc.), posting (if appropriate), increasing law enforcement presence, conducting management activities at appropriate times to avoid disturbance and/or harm to wildlife (e.g., habitat management, beach raking, etc.), and decreasing noise and light pollution.
- 3.5.4.14 Develop and implement agreements, and update existing agreements, with government agencies regarding the protection of critical SGCN habitats (e.g., significant breeding populations of beach nesting birds, colonial waterbird nesting areas, bat colonies, etc.).
- 3.5.4.15 Investigate the success of management strategies used to protect and/or enhance SGCN populations and when appropriate, aid in identifying failures/resource problems and issues, and developing new strategies.
- 3.5.4.16 Use data regarding SGCN population numbers/trends and demography, on-going threats, habitat changes, etc. to determine if directed management efforts are needed to reach or maintain viable population levels and develop the necessary management strategies.
- 3.5.4.17 Investigate new, non-invasive techniques for SGCN population evaluation through literature review, expert opinion, trial studies (if low risk), etc.
- 3.5.4.18 Investigate the effectiveness of survey techniques through selected "ground truthing" and literature and peer review in order to increase efficacy of survey, minimize surveyor bias and error, and increase accuracy of trend data.
- 3.5.4.19 Develop reliable, standardized survey and monitoring protocols for SGCN species, for which none currently exist, and their habitats.
- 3.5.4.21 Develop BMPs to address problematic species and diseases of unknown origin.
- 3.5.4.23 Reduce the impacts of entrainment, impingement and thermal discharge at power plants by working with conservation partners, academia, etc. to ensure that best available technologies are utilized wherever possible.

4 Education

4.1 Educator/Instructor training

4.1.1 Aquatic resource education

- 4.1.1.1** Provide educational resources and training programs to teachers in aquatic resource education that includes information regarding climate change and sea-level rise for incorporation into the class curriculum and/or as the focus of school field trips.
- 4.1.1.2** Provide educational resources and training programs to teachers in aquatic resource education that includes information regarding how coastal stabilization negatively impacts wildlife by preventing natural processes for incorporation into the class curriculum and/or as the focus of school field trips.

5 Facilities and Areas

5.15 Wildlife Management Areas

5.15.6 Roads

- 5.15.6.2** Clearly post areas/trails where vehicle access is not permitted.

6 Land and Water Rights Acquisition and Protection

6.0 Acquisition and protection strategies

6.0.0 Combined acquisition and protection strategies

- 6.0.0.2** Enhance and increase the effective size of SGCN habitats by protecting adjacent habitats that contribute to the overall size of the "core" area and/or provide a natural buffer, enhancing the suitability of the core area for SGCN, and/or connect conserved SGCN habitats through an appropriate combination of fee title, non-fee title and landowner agreements.
- 6.0.0.3** Secure and protect riparian and floodplain habitats, inland wetland habitats (marsh, vernal pool, fen, emergent shrubland, forest), and other aquatic habitats (including open waters) and/or biologically appropriate buffers to minimize degradation through an appropriate combination of fee title, non-fee title and landowner agreements.
- 6.0.0.5** Secure and protect critical coastal habitats (beach/dune, scrub-shrub, forest, wetland, marsh, and marine and estuarine habitats) that provide nesting, migrating and wintering areas for SGCN birds, fish and other coastal SGCN through an appropriate combination of fee title, non-fee title and landowner agreements.
- 6.0.0.8** Secure and protect scrub-shrub habitats for SGCN through an appropriate combination of fee title, non-fee title and landowner agreements.

6.3 Conservation area designation

6.3.0 Conservation area designation strategies

- 6.3.0.2** Enhance and increase the effective size of SGCN habitats by protecting adjacent habitats that contribute to the overall size of the "core" area and/or provide a natural buffer, enhancing the suitability of the core area for SGCN and/or connect conserved SGCN habitats through conservation area designations.
- 6.3.0.3** Increase the protection of riparian and floodplain habitats, inland wetland habitats (marsh, vernal pool, fen, emergent shrubland, forest), and other aquatic habitats (including open waters) and/or biologically appropriate buffers to minimize degradation through conservation area designations.
- 6.3.0.5** Promote the protection of critical coastal habitats (beach/dune, scrub-shrub, forest, wetland, marsh, and marine and estuarine habitats) that provide nesting, migrating and wintering areas for SGCN birds, fish and other coastal SGCN through conservation area designations.
- 6.3.0.8** Promote the protection of scrub-shrub habitats for SGCN through conservation area designations.

- 6.3.0.9 Promote the protection of critical marine habitats for SGCN through conservation area designations.

7 Law Enforcement

7.1 Law enforcement

7.1.3 Sub-national Level

- 7.1.3.1 Enforce slow wake zones and marine conservation area regulations to protect aquatic vegetation.
- 7.1.3.2 Increase the number of law enforcement officers tending to wildlife issues to a reasonable number to sufficiently cover the State and marine waters.

7.1.4 Scale Unspecified

- 7.1.4.1 Improve enforcement of policies and/or regulations that promote the reduction of run-off and point and non-point source pollution into NJ's aquatic systems (streams, rivers, lakes/ponds, bays, ocean, wetlands, etc.).
- 7.1.4.3 Increase law enforcement presence proximate to sensitive areas [e.g., avian nesting sites, in particular rookeries, and reptile and amphibian breeding areas (nesting or gestation/birthing and breeding pools, respectively)] to deter human activity and subsequent disturbance to SGCN.
- 7.1.4.4 Improve enforcement of policies/regulations aimed at protecting and preserving critical coastal and marsh habitats, and secure mitigation for losses that create an environmental benefit.
- 7.1.4.5 Enforce current policies and/or regulations to increase the ability to protect and preserve coastal habitats (beach/dune, scrub-shrub, forest, wetland, marsh, marine and estuarine habitats) that provide nesting, migrating, and wintering areas for SGCN birds, fish and other coastal SGCN, and implement and enforce amended policies/regulations.
- 7.1.4.6 Recruit law enforcement to assist in the protection and enhancement of SGCN populations, in particular endangered species, through improved awareness of species through trainings, partnerships, and other methods. Information should include but is not limited to: 1) Issues concerning illegal collection of reptiles, 2) Persecution of rare snakes, 3) Illegal recreational activities on public lands (e.g., off-road vehicles) and their impact on wildlife, 4) Identification of sensitive areas, critical sites and/or "hot-spots" for collection.
- 7.1.4.7 Increase law enforcement presence to enforce regulations governing recreational activities (e.g., the use of personal watercraft and off road vehicles, caving, rock climbing, etc.) on conserved lands and within other sensitive habitats, and discourage activities that cause harm or disturbance to vegetation, wetlands, fish and wildlife.
- 7.1.4.9 Implement policies that improve and secure habitat connections between conserved SGCN habitats.
- 7.1.4.10 Implement policies that promotes expanding acreages and enhances the effective size of SGCN habitats by providing biologically appropriate buffers of native habitat surrounding SGCN habitats.
- 7.1.4.11 Implement and enforce policies/regulations that will increase the ability to protect and preserve coastal habitats (beach/dune, scrub-shrub, forest, wetland, marsh, and marine and estuarine habitats) that provide nesting, migrating, and wintering areas for SGCN birds, fish and other coastal and aquatic SGCN.
- 7.1.4.12 Implement policies and/or regulations that protect significant natural and/or unique communities in perpetuity.

- 7.1.4.16 Implement policies that protect and restore riparian areas.
- 7.1.4.17 Improve the enforcement of policies and/or regulations that protect wetlands, riparian and floodplain areas, and aquatic habitats (including open waters).
- 7.1.4.20 Implement policies and/or regulations with the objective of reducing "by-catch" of SGCN and other non-target species.
- 7.1.4.23 Implement policies that minimize wildlife road mortality.
- 7.1.4.26 Educate law enforcement personnel that there may be unauthorized research projects taking place and to encourage them to investigate any activities that appear to be harmful to wildlife.

8 Outreach

8.1 Partner/stakeholder engagement

8.1.0 Partner/stakeholder engagement strategies

- 8.1.0.1 Coordinate research efforts among government agencies, non-government conservation partners and other stakeholders to investigate the impacts of aquaculture on migratory shorebirds, waterfowl, finfish, shellfish and other SGCN and their habitats, to determine relative effects of farming locations and aquaculture techniques, and to evaluate management actions to minimize such impacts.
- 8.1.0.2 Develop a team of personnel from government entities, conservation organizations and other stakeholders engaged in oil/gas spill response for marine and freshwater habitats to develop a feasible plan for oil spill response and/or to amend NJ's current oil spill response plan that clearly outlines each organizations responsibilities and an assessment and location list of available equipment for boom deployment during oil spills.
- 8.1.0.3 Develop an outreach team of personnel from government entities, conservation organizations and other stakeholders to work together to collaboratively use social media campaigns to grow a constituency of NJ residents who have an elevated ecological and climate consciousness.
- 8.1.0.5 Engage government agencies, conservation partners and other stakeholders in discussions focused on establishing a long-term monitoring program for submerged aquatic vegetation distribution throughout Barnegat, Little Egg Harbor and Great Bay.
- 8.1.0.6 Engage government agencies, conservation partners and other stakeholders in discussions focused on sharing information regarding coastal and marine critical wildlife habitats, developing comprehensive mapping to assist in reducing impacts of energy production activities, and establishing a long-term monitoring program to update the data. Ensure this information is available to appropriate personnel for planning or response measures.
- 8.1.0.7 Engage government agencies, conservation partners and other stakeholders to collaboratively develop and implement an extensive educational/outreach program targeting coastal boating and recreation communities about eelgrass/widgeongrass, their impacts on marine environments, and the value, fragility and location of submerged aquatic vegetation beds and habitats.
- 8.1.0.11 Engage government agencies, conservation partners and other stakeholders to collaboratively develop and implement an extensive educational/outreach program targeting sportsmen's organizations and fisheries, as well as public constituents, addressing the unintended effects abandoned fishing gear, tackle and crab pots can have on wildlife, and promote the collection and/or reporting of abandoned items and their locations.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need
Northern Diamondback Terrapin

- 8.1.0.12 Engage government agencies, conservation partners and other stakeholders to collaboratively develop and implement an extensive educational/outreach program targeting sportsmen's organizations and fisheries, as well as public constituents, addressing the unintended effects fishing gear and tackle can have on wildlife.
- 8.1.0.16 Engage local governments in discussions regarding the importance of them adopting/passing ordinances which require assessing and addressing secondary impacts (i.e., ancillary prescribed burns, trespassers, ORV use, mosquitoes, deer, buffers) on biological resources when revising planning/zoning documents or granted site plan/subdivision approvals.
- 8.1.0.18 Engage NJDOT, NJ Transit Authority and other road management entities, wildlife conservation organizations/agencies (e.g., Division of Fish and Wildlife, New Jersey Conservation Foundation, Conserve Wildlife Foundation of NJ), and communities and citizens in discussions regarding the importance of and methods to enhance habitat connectivity, and work together to develop feasible strategies for ensuring that wildlife can disperse naturally and safely across roads and similar barriers to terrestrial and/or aquatic habitats.
- 8.1.0.19 Engage government agencies, conservation partners and other stakeholders to collaboratively develop a list of important projects, targeting SGCN and/or their habitat, as a guide for graduate student research. Distribute the list and contact information to all State colleges and universities.
- 8.1.0.20 Organize a small focal group of government and non-government agencies/organizations responsible for decisions regarding beach/dune management to share and coordinate their goals so that comprehensive planning can attempt to meet all needs.
- 8.1.0.21 Work with government agencies and environmental educators to develop educational resources and training programs, educate the public on the devastation human-subsidized and/or overabundant, native species cause to local nesting species, and provide expert guidance on how residents can help alleviate this threat.
- 8.1.0.22 Work with government agencies and environmental educators to develop educational resources and training programs, educate the public on the devastation invasive species cause to native nesting species, and provide expert guidance on how residents can help alleviate this threat.
- 8.1.0.23 Work with the NJ Division of Fish and Wildlife's Bureau of Marine Fisheries, local recreational and commercial fisheries associations, and fishers to develop a process that encourages fishermen to report the number and location of lost pots to the appropriate state agency/agencies at the end of the harvest season.
- 8.1.0.24 Engage government agencies, conservation partners and other stakeholders in constructive dialogue regarding the importance of providing and methods to provide technical support for carrying out restoration and management practices aimed at increasing structural habitat diversity.
- 8.1.0.25 Provide technical support to public landowners and land managers for carrying out restoration and management practices aimed at increasing structural habitat diversity.
- 8.1.0.30 Encourage government agencies and conservation partners to advise members of the relevant scientific community of the need for specific studies, reports or investigations targeting the data-deficiency regarding SGCN and/or their habitats.
- 8.1.0.31 Encourage government agencies, conservation partners and other stakeholders to work together to create GIS mapping for marine wildlife and habitat to assist in reducing impacts of energy production activities. Ensure this information is available to appropriate personnel for planning or response measures.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need
Northern Diamondback Terrapin

- 8.1.0.33 Engage government agencies, conservation partners and other land managers, communities, landowners, and commercial and industrial stakeholders in discussions regarding the importance of protecting and methods to protect priority wetlands beyond the levels afforded through regulation by maintaining and/or restoring optimal biological buffers around wetlands.
- 8.1.0.34 Work with the NJ Education Association and Department of Education to design curriculum and outdoor experimental learning opportunities, and provide training to teachers on implementation of these activities.
- 8.1.0.36 Reduce "by-catch" of SGCN and other non-target species by enlisting voluntary cooperation to use exclusion devices, appropriate trap sizes, etc. through education and outreach.
- 8.1.0.37 Enlist landowners and NJ citizens in the protection of and survey efforts for SGCN, in particular rare species, by increasing enrollment in landowner incentives, forest stewardship, backyard habitat management and wildlife-related volunteer programs.
- 8.1.0.40 Encourage researchers, land managers, naturalists and enthusiasts to follow proper procedures for the coordination and/or permitting of research/management activities involving wildlife and sensitive habitats, and discourage activities that alter vegetation or wetlands, or cause harm or disturbance to wildlife.
- 8.1.0.41 Engage beach-owning entities (e.g., government, non-government and non-profit organizations, and landowners) in a constructive dialogue to develop guidelines for management of beach/dune communities and to ensure that each group is educated and aware of the needs of the other groups.
- 8.1.0.42 Engage citizens, wildlife observers and photographers through discussions and distributable information regarding the importance of and encouraging implementing responsible and ethical behavior when observing wildlife by developing an alliance of wildlife photographers and widely circulating recommendations on how to reduce impact.
- 8.1.0.47 Form cooperative partnerships with energy companies to facilitate habitat creation and enhancement away from and outside of project areas, the restoration of appropriate habitats within project areas (e.g., rights-of-way could benefit butterflies and some bird species), and to identify seasonal timing of activities that would minimize impacts to wildlife.
- 8.1.0.49 Reduce the impacts of entrainment, impingement and thermal discharge at power plants by working with conservation partners, academia, etc. to ensure that best available technologies are utilized wherever possible.

8.3 WSFR program/subprogram outreach

8.3.0 WSFR program/subprogram outreach strategies

- 8.3.0.1 Utilize WSFR grant funds, in combination with alternate funding sources as needed, to implement a scientific data-driven, extensive educational/outreach program targeting sportsmen's organizations and fisheries, as well as public constituents, addressing the potential impacts of over-harvesting wildlife can have on the ecological system and to promote "sustainable harvest".
- 8.3.0.2 Utilize WSFR grant funds, in combination with alternate funding sources as needed, to implement an extensive educational/outreach program consisting of displays, fliers, list-serve mailings, Facebook posts and speaking engagements with sportsmen's organizations and fisheries, as well as public constituents, addressing the unintended effects fishing gear and tackle can have on non-target species.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need
Northern Diamondback Terrapin

- 8.3.0.4 Utilize WSFR grant funds, in combination with alternate funding sources as needed, to implement an extensive educational/outreach program consisting of displays, fliers, list-serve mailings, Facebook posts and speaking engagements with sportsmen's organizations and fisheries addressing the unintended effects abandoned fishing gear, tackle and crab pots can have on wildlife.
- 8.3.0.7 Develop and provide (or otherwise make publicly available) educational programs and/or materials that describe the negative impacts of off-road vehicles and watercraft use in and adjacent to critical SGCN habitats, and the importance of confining such activities to more appropriate locations and/or seasons.
- 8.3.0.8 Develop and provide (or otherwise make publicly available) educational programs and/or materials to educate recreationists and encourage landowners to eliminate garbage in the vicinity of suitable wildlife habitat, in particular SGCN habitat. Information should include the detrimental impacts garbage may have on various wildlife species.
- 8.3.0.9 Develop and provide (or otherwise make publicly available) educational programs and/or materials to enlist landowners and land managers to include only native plants in landscaping and restoration projects. Provide information to assist them in detecting problematic establishment of invasive, non-indigenous plants.
- 8.3.0.10 Develop and provide (or otherwise make publicly available) educational programs and/or materials to educate landowners and NJ citizens on threats to fish and wildlife (including marine animals).
- 8.3.0.12 Promote awareness of WSFR (Wildlife and Sportfish Restoration) Outreach/Awareness grants, an important funding source for conservation among hunters and anglers as well as the general public.
- 8.3.0.13 Conduct an educational campaign to encourage observer ethics and respect for wildlife and natural habitat.
- 8.3.0.14 Develop an educational outreach program using a variety of media to ensure maximizing the distribution of information, in particular targeting sportsmen's organizations and fisheries, regarding the unintended effects abandoned fishing gear, tackle and crab pots can have on wildlife, including non-target species.
- 8.3.0.15 Develop an educational outreach program for citizens regarding: 1) The impacts to wildlife as a result of plastic bags entering aquatic and marine systems, 2) The importance of decreasing the amount of plastic shopping bags in circulation, 3) The need for businesses to voluntarily charge for bags or reimburse people for using their own non-plastic bags, and 4) The need for their assistance through public pressure on legislators and government to pass legislation that that limits the amount of plastic shopping bags in circulation.
- 8.3.0.16 Develop an educational outreach program using a variety of media to ensure maximizing the distribution of information, in particular targeting sportsmen's organizations and fisheries, promoting "catch and release" and the impacts excessive harvests can have on wildlife populations.
- 8.3.0.18 Develop an Eelgrass/Widgeon Grass education and mapping program to educate coastal boating and recreation communities about the value, fragility and location of submerged aquatic vegetation beds and habitats.
- 8.3.0.19 Develop an educational outreach program for the public on the devastating effects predators can have on native nesting wildlife.
- 8.3.0.20 Develop an educational outreach program for landowners, particularly those in the coastal and bay areas, boaters, and the general public with information about the negative impacts on marine wildlife and habitats, and steps they can implement to reduce these impacts.

Northern Diamondback Terrapin

- 8.3.0.21 Develop an educational outreach program for the general public, in particular those within and adjacent to coastal and riparian areas on the realities of sea-level rise to help citizens living in these areas understand how this will affect them, how coastal stabilization negatively impacts wildlife by preventing natural processes, and how their decisions impact species.
- 8.3.0.22 Post signage in sensitive coastal habitats (e.g., bird and Diamondback Terrapin nesting areas) to educate the boating community on responsible use of these areas.
- 8.3.0.23 Develop an educational outreach program for coastal municipalities and residents to promote an understanding of the benefits of soft structures over hard structures for shoreline stabilization.
- 8.3.0.29 Develop educational outreach programs for local decision-makers, land developers, landowners and citizens about the importance of maintaining a vegetative buffer along riparian and aquatic habitats to intercept storm water runoff and minimize soil erosion.
- 8.3.0.32 Develop an educational outreach program for landowners and citizens on the threats that herbicides and pesticides pose to aquatic systems and wildlife, and to promote safer usage of such products.

9 Planning

9.1 Land use planning

9.1.0 Land use planning strategies

- 9.1.0.1 Develop smart-growth plans and critical habitat designations that consider SGCN life history requirements and habitat needs, connectivity and health of those habitats, and minimizes human-associated disturbances to those habitats and SGCN inhabiting them.
- 9.1.0.2 Develop town plans that avoid impacts to SGCN species and their habitats.
- 9.1.0.3 Develop a plan that directs the creation of impervious surfaces away from and to minimize impacts on aquatic systems and critical terrestrial habitats. The plan should also include strategies to increase the resiliency of aquatic and critical terrestrial habitats to threats and stressors that would impact the reproduction and survival of wildlife.
- 9.1.0.8 Develop a plan that focuses on strategies for oil pipelines to avoid sensitive habitats that would be highly impacted by oil spills.
- 9.1.0.15 Develop a plan to minimize fragmentation of terrestrial and aquatic habitats by roads.
- 9.1.0.17 Develop a plan to minimize nutrient and effluent loads from aquaculture practices.
- 9.1.0.22 Incorporate habitat connectivity and preservation of natural areas into state and local land-use policy and the environmental review process to minimize the impacts of transportation and service corridors on fish and wildlife and their habitats.
- 9.1.0.23 Develop a plan to mitigate the effects of transportation barriers by using CHANJ products.
- 9.1.0.26 Develop a plan to minimize any adverse impacts of aquaculture farming techniques and structures on freshwater and intertidal habitats.
- 9.1.0.28 Develop and coordinate state, regional and local plans for suitable lot layout and landscaping to minimize human-wildlife conflicts that also incorporates habitat connectivity and preservation of natural areas.
- 9.1.0.29 Provide GIS or related data, maps, resource inventories, as well as related training, pertaining to the SWAP and it's recommended conservation actions for use or consideration by State, County or municipal planning agencies.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need
Northern Diamondback Terrapin

- 9.1.0.30 Incorporate habitat connectivity and preservation of natural areas into state and local land-use policy and the environmental review process to minimize habitat fragmentation and other related threats associated with development.
 - 9.1.0.31 Develop wetland restoration plans that consider the life history and needs of wildlife occupying targeted habitats.
 - 9.1.0.32 Incorporate aquatic habitat connectivity and water quality/effluent standards into local and state aquaculture plans and BMPs.
 - 9.1.0.33 Review the species, threats, action successes, and habitats, and work with partners to revise the 2017 State Wildlife Action Plan for the 2025 resubmittal.
 - 9.2 Organizational strategic and CMS planning
 - 9.2.1 Organizational strategic and operational planning
 - 9.2.1.1 Identify and codify legal ORV access areas on state lands.
 - 9.3 Species and habitat management planning
 - 9.3.1 Species management planning
 - 9.3.1.3 Develop a management plan to restrict human activity (e.g., recreational, maintenance work, etc.) from sensitive habitats/areas such as avian nesting sites, reptile and amphibian breeding areas (nesting or gestation/birthing and breeding pools, respectively), and bat hibernacula, and federal buffers for marine mammals.
 - 9.3.1.4 Develop town plans that avoid impacts to SGCN species and their habitats.
 - 9.3.1.5 Develop response plans to address disease outbreaks within wildlife populations, in particular SGCN.
 - 9.3.1.6 Amend NJ's current oil spill response plan to 1) expand the geographic area addressed, 2) expand the targeted species impacted and in need of recovery, and 3) revise current and integrate new actions into the plan as needed.
 - 9.3.1.7 Develop a rapid response plan for various scenarios (e.g., insect infestations destroying native habitat, wildlife disease) to be implemented upon exotic pathogen introduction or incident.
 - 9.3.1.9 Develop a management plan incorporating the effects of pesticides, herbicides and other biological controls on SGCN and their critical and supporting habitats.
 - 9.3.1.10 Develop a management plan to combat the impacts of diseases/pathogens impacting SGCN and/or their habitats.
 - 9.3.1.13 Develop a management plan to ensure SGCN populations' persistence based on long-term monitoring of resident and migratory SGCN populations and their habitats.
 - 9.3.1.15 Develop a plan to minimize the impacts of oil spills on wildlife and their habitats.
 - 9.3.1.16 DOD and appropriate state agencies work together to improve DOD Integrated Natural Resource Management Plans (INRMP) to develop strategies to minimize or eliminate disturbances to all SGCN (i.e., beyond their federal requirements) during military activities and to improve SGCN habitat and presence.
 - 9.3.2 Listed species recovery planning
 - 9.3.2.1 Develop proactive species recovery plans for all endangered and threatened species including guidance and objectives pertaining to critical and supporting habitat to meet and maintain recovery goals.
 - 9.3.3 Habitat management planning

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Northern Diamondback Terrapin

- 9.3.3.2 Develop a management plan for using mined sand or dredged material to improve habitat for wildlife, particularly for spawning horseshoe crabs and migrating shorebirds.
- 9.3.3.4 Create habitat restoration plans to repair marshes and associated beaches damaged by salt hay farm/dike abandonment for all bay shore areas currently degraded.
- 9.3.3.6 Develop a management plan for maintaining and enhancing healthy, SGCN-associated terrestrial and aquatic habitats and associated riparian habitats, and to minimize (if not avoid) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
- 9.3.3.8 Develop a management plan to combat the impacts of diseases/pathogens impacting SGCN and/or their habitats.
- 9.3.3.9 Develop a response plan to outbreaks using BMPs to control infestations and limit their spread in a way that avoids excessive harm to non-target species.
- 9.3.3.10 Develop a management plan to ensure SGCN populations' persistence based on long-term monitoring of resident and migratory SGCN populations and their habitats.
- 9.3.3.11 Develop town plans that avoid impacts to SGCN species and their habitats.
- 9.3.3.12 Develop a management plan using engineering standards that embrace both shore protection/resiliency and habitat creation for shorebirds, horseshoe crabs and other coastal species along the Atlantic and Delaware Bay coasts.
- 9.3.3.13 Develop a management plan that will establish/improve habitat resilience (e.g., shorelines of the coast and Delaware Bay, forested habitats of the Pinelands and Skylands) that benefits wildlife inhabiting these areas and prevents or ameliorates near-term impacts of climate change throughout the State, but in particular within the coastal and Delaware Bay areas.
- 9.3.3.14 Develop a management plan using aquaculture practices in coastal areas that are compatible with the recovery of SGCN.
- 9.3.3.15 Develop a management plan incorporating the effects of pesticides, herbicides and other biological controls on SGCN and their critical and supporting habitats.
- 9.3.3.16 Develop a management plan to restrict human activity (e.g., recreational, maintenance work, etc.) from sensitive habitats/areas such as avian nesting sites, reptile and amphibian breeding areas (nesting or gestation/birthing and breeding pools, respectively), and bat hibernacula, and federal buffers for marine mammals.
- 9.3.3.18 In cooperation with species and habitat experts, develop management plans for significant natural and/or unique communities, in particular those supporting SGCN, and provide the information to the landowners/managers (federal, state and local government agencies or non-government organization) for review and implementation.
- 9.3.3.19 Develop management plans for SGCN inhabiting permanently protected natural lands using available baseline and population trend data.
- 9.3.3.21 Develop a rapid response plan for various scenarios (e.g., insect infestations destroying native habitat, wildlife disease) to be implemented upon exotic pathogen introduction or incident.
- 9.3.3.22 Create management plans to minimize and/or prevent wildlife road mortality that will incorporate wildlife passages in conjunction with barrier fencing and, where possible, seasonal closures. Aquatic-associated passages must avoid disturbance to the natural streambeds and riparian habitat, permit high volumes of water to flow freely, and provide adequate travel corridors for terrestrial wildlife, while maintaining stream flow for fish passage. Bridges that span rivers and streambeds and include floodplain habitat on either side of the span to provide travel corridors for terrestrial wildlife are preferred over culverts.

- 9.3.3.24 Develop a plan to improve the enforcement of policies and/or regulations that protect wetlands, riparian and floodplain areas, and aquatic habitats (including open waters).
- 9.3.3.25 Develop a habitat management plan focused on areas important to near-shore, coastal species (e.g., herring, sturgeon, terrapin, nesting birds) that prioritizes these areas to direct resources to minimize the impacts of sea-level rise, flooding and storms (including extreme rain events) such as increased erosion of beach, mudflat and marsh habitats, and the increased risk of saltwater intrusion into freshwater habitats. Gather "best information" for spatial modeling of anticipated habitat shifts from sea-level rise, flooding, etc.
- 9.3.3.28 Develop a plan to minimize the impacts of oil spills on wildlife and their habitats.
- 9.3.3.29 Develop habitat management plans aimed at reducing or eliminating negative impacts of ORVs.
- 9.3.3.31 Using data from baseline inventory and monitoring of all current marsh islands and their vulnerability to inundation as a result of sea level rise, create a plan to delineate each island's ideal fit for habitat management (e.g., restoration, hasting, dredging). Planning will factor in criteria to designate which islands should be maintained or restored, and which will be passively allowed to submerge.
- 9.3.3.35 Incorporate habitat connectivity, preservation of natural areas, and the implementation of BMPs into state and local land-use policy environmental review process and energy development plans to minimize habitat fragmentation and related threats associated with solar farms and altered habitats.
- 9.3.3.36 Integrate plans for properly located and timed habitat restoration and management along transportation, energy and service corridors to minimize risks to and benefit wildlife.

11 Technical Assistance

11.1 Environmental review

11.1.1 Review of proposed projects

- 11.1.1.1 Use Biotics database and Landscape Project Mapping in regulatory reviews to ensure protection by applicable laws and regulations.
- 11.1.1.2 Develop smart-growth plans and critical habitat designations that consider SGCN life history requirements and habitat needs, connectivity and health of those habitats, and minimize human-associated disturbances to those habitats and the SGCN inhabiting them.
- 11.1.1.3 Government organizations to thoroughly review wetland restoration plans, applying the most current science for wildlife, habitats and aquatic systems, to assess the impacts to resident and migratory wildlife occupying the targeted habitats.
- 11.1.1.4 Incorporate habitat connectivity and preservation of natural areas into state and local land-use policy and the environmental review process to minimize habitat fragmentation and related threats associated with development.
- 11.1.1.5 Incorporate habitat connectivity and preservation of natural areas into state and local land-use policy and the environmental review process to minimize the impacts of transportation and service corridors on fish and wildlife and their habitats.
- 11.1.1.6 Review all projects to be conducted in or adjacent to coastal wetlands and marshes, and provide recommendations on how to best avoid or reduce human disturbance at nesting areas (for example, timing restrictions) and actions not permitted.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need
Northern Diamondback Terrapin

- 11.1.1.7 Review proposed construction or other work projects and permit applications, provide recommendations on how to best avoid disturbing sensitive species, and identify actions not permitted.
- 11.1.1.8 Review proposed research projects and permit applications, provide recommendations on how to best avoid disturbing sensitive species, and identify actions not permitted.
- 11.1.1.9 Review strategies for creating or enhancing connectivity (e.g., installing appropriately-sized wildlife passages) between wetlands to allow wildlife to disperse naturally and safely.
- 11.1.1.10 Use CHANJ mapping in reviews of proposed energy, mining, transportation and utility service companies/agencies' projects to attempt to maintain habitat connectivity and reduce fragmentation, and identify potential impacts of the projects.
- 11.1.1.12 Use the best available science (species data, habitat present, site layout options, etc.) when conducting regulatory reviews of proposed solar farm projects to reduce habitat fragmentation and minimize impacts on wildlife.

11.1.2 Review of proposed policies and plans

- 11.1.2.1 Develop smart-growth plans and critical habitat designations that consider SGCN life history requirements and habitat needs, connectivity and health of those habitats, and minimize human-associated disturbances to those habitats and the SGCN inhabiting them.
- 11.1.2.2 Government organizations to thoroughly review wetland restoration plans, applying the most current science for wildlife, habitats and aquatic systems, to assess the impacts to resident and migratory wildlife occupying the targeted habitats.
- 11.1.2.3 Incorporate aquatic habitat connectivity and water quality/effluent standards into the environmental review process to help establish policies and plans that minimize the impact of aquaculture on fish and wildlife.
- 11.1.2.4 Review strategies for creating or enhancing connectivity (e.g., installing appropriately-sized wildlife passages) between wetlands to allow wildlife to disperse naturally and safely.

11.2 Technical assistance

11.2.0 Assorted technical assistance strategies

- 11.2.0.1 Provide technical support to private and public landowners and land managers for carrying out restoration and management practices aimed at increasing structural habitat diversity.
- 11.2.0.2 Provide technical support to public and private landowners and land managers for controlling invasive, native and non-native plant species in order to increase structural habitat diversity.
- 11.2.0.3 Develop state, regional and local BMPs that focus on minimizing habitat fragmentation and human-wildlife conflicts associated with development. Make information available to land developers and private and public landowners for implementation.
- 11.2.0.5 Provide educational resources, training programs, and expert guidance to private and public landowners and land managers on the threats that herbicides and pesticides pose to aquatic systems and wildlife, and to promote safer usage of such products.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need
Northern Diamondback Terrapin

- 11.2.0.6 Provide educational resources, training programs, and on-the-ground guidance to energy, mining, transportation, and utility service agencies/companies and their project and resource managers on habitat creation, enhancement and restoration within and adjacent to project areas, as well as away from and outside of project areas (depending on the target species), by managing vegetation for a variety of species and that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife. Wind farms should address both terrestrial bound and low-flying species. Examples of habitat management include, but are not limited to, integrating short and tall grasses, specific host plants, brush piles, water sources/wetlands, shrubby areas, nesting areas and no-mow set-asides.
- 11.2.0.7 Provide educational resources, training programs, and on-the-ground guidance to energy, mining, transportation, and utility service agencies/companies and their project and resource managers on the importance of maintaining habitat connectivity, minimizing fragmentation, and the use of CHANJ products to help them target areas for such planning.
- 11.2.0.8 Provide educational resources, training programs, and on-the-ground guidance to public and private landowners and land managers on habitat creation and enhancement strategies that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife.
- 11.2.0.9 Provide educational resources, training programs, and on-the-ground guidance to municipalities, land developers, and other land managers and private landowners about the importance of leaving vegetation in place, especially along riparian areas and wildlife movement corridors.
- 11.2.0.10 Provide technical support to private landowners, consultants, and land managers to create customized management plans based on location and SGCN.
- 11.2.0.14 Provide educational resources and technical support to public and private landowners and land managers to promote the protection of wetlands, riparian and floodplain areas, and aquatic habitats (including open waters), and to enhance or restore biologically appropriate buffers.
- 11.2.0.15 Provide educational resources, training programs, and on-the-ground guidance to municipalities, land developers, and other land managers and landowners about the importance of retaining and in an effort to protect, create, enhance and/or restore vegetation along aquatic habitats.
- 11.2.0.19 Provide educational resources and technical support to public and private landowners and land managers to promote the protection and/or enhancement of scrub-shrub habitats for SGCN.
- 11.2.0.20 Provide educational resources and technical support to public and private landowners and land managers to promote the protection and/or enhancement of critical coastal habitats (beach/dune, scrub-shrub, forest, wetland, marsh, and marine and estuarine habitats) that provide nesting, migrating and wintering areas for SGCN birds, fish and other coastal SGCN.
- 11.2.0.23 Provide educational resources and technical support to public and private landowners and land managers of lands adjacent to SGCN habitats to promote the protection and/or enhancement of those adjacent habitats to increase the overall size of the "core" area and/or provide a natural buffer, enhancing the suitability of the core area for SGCN, and that connect conserved SGCN habitats.
- 11.2.0.24 Provide educational resources, training programs, and expert guidance to public and private landowners and land managers on how to manage vegetated roadside areas (e.g., mowing, brush-hogging, etc.) on a schedule that avoids peak activity periods for wildlife and therefore, minimizes harm.

Northern Diamondback Terrapin

- 11.2.0.25 Provide educational resources, training programs, and on-the-ground guidance to resource managers regarding the assessment of and addressing secondary impacts (i.e. ancillary prescribed burns, trespassers, ORV use, mosquitoes, deer, buffers) related to residential and commercial development.
- 11.2.0.26 Make educational resources available to the public that encourage researchers to seek out guidance prior to finalizing proposals and submitting State permit applications to reduce potential impacts on sensitive species.
- 11.2.0.27 Provide educational resources and presentations to coastal municipalities and residents to promote the understanding of the benefits of soft structures over hard structures for shoreline stabilization.

11.2.1 With individuals and groups involved in resource management decision making

- 11.2.1.1 Engage partners and stakeholders in constructive dialogue regarding the importance of providing and methods to provide technical support for carrying out restoration and management practices aimed at increasing structural habitat diversity.
- 11.2.1.2 Provide professional training and technical assistance tools (e.g., mapping, guidance documents, justification, etc.) to agencies/divisions/programs within and outside of the NJ DEP regarding the SWAP, and the conservation actions recommended therein to help facilitate SWAP implementation.
- 11.2.1.4 Provide educational resources, training programs, and on-the-ground guidance to dredging companies and resource managers on habitat creation and enhancement away from and outside of shipping lanes, and to identify seasonal timing of activities that would minimize impacts to wildlife and their habitats.
- 11.2.1.5 Provide educational resources, training programs, and on-the-ground guidance to municipalities, state and federal agency resource managers on tasks such as writing and integrating Beach Management Plans into other management documents.
- 11.2.1.6 Provide educational resources, training programs, and on-the-ground guidance to resource agencies prior to project initiation to ensure wildlife and their habitats are protected to the highest degree possible during construction, and provisions are in place for post-construction habitat use.

100 Law and Policy

100. Legislation

100.1.3 Sub-national Level

- 100.1.3.1 Develop laws and policies to increase protection and biological buffers of wetlands.
- 100.1.3.2 Develop policies for wetland restoration plans that consider life history requirements and needs of wildlife occupying targeted habitats.
- 100.1.3.3 Initiate legislative action to establish an annual budgetary line item designating funds to support programs focused on long-term research and monitoring of wildlife diseases.
- 100.1.3.4 Initiate legislative action to establish an annual budgetary line item designating funds to support programs and monitoring stations throughout Barnegat, Little Egg Harbor and Great Bay focused on long-term monitoring of submerged aquatic vegetation, both native and exotic species.

100.1.4 County and Local

- 100.1.4.2 Secure and increase the effective size of SGCN habitats and connect conserved SGCN habitats through local ordinances.

Northern Diamondback Terrapin

- 100.1.4.3 Expand the acreages and enhance the effective size of SGCN habitats by protecting adjacent habitats that contribute to the overall size of the "core" area and/or provide a natural buffer, enhancing the suitability of the core area for SGCN through local ordinances.
- 100.1.4.4 Secure wetlands, riparian and floodplain areas, and aquatic habitats (including open waters) and biologically appropriate buffers through local ordinances.
- 100.1.4.8 Secure critical coastal habitats (beach/dune, scrub-shrub, forest, wetland, marsh, and marine and estuarine habitats) that provide nesting, migrating and wintering areas for SGCN birds, fish and other coastal SGCN through local ordinances.
- 100.1.4.11 Secure riparian areas through local ordinances.
- 100.1.4.12 Secure scrub-shrub habitats for SGCN through local ordinances.
- 100.1.4.14 Adopt/pass local ordinances which require assessing and addressing secondary impacts (i.e. ancillary prescribed burns, trespassers, ORV use, mosquitoes, deer, buffers) on biological resources when revising planning/zoning documents or granted site plan/subdivision approvals.
- 100.1.4.15 Incorporate habitat connectivity and the preservation of natural areas into state and local land-use policy and the environmental review process to minimize habitat fragmentation and related threats associated with development.

100.1.5 Scale Unspecified

- 100.1.5.1 Develop laws and policies to increase protection and biological buffers of wetlands.
- 100.1.5.2 Develop policies for wetland restoration plans that consider life history requirements and needs of wildlife occupying targeted habitats.
- 100.1.5.3 Incorporate aquatic habitat connectivity and water quality/effluent standards into state/local policy to minimize the impact of aquaculture on fish and wildlife.
- 100.1.5.4 Incorporate habitat connectivity and preservation of natural areas into state and local land-use policy and the environmental review process to minimize the impacts of transportation and service corridors on fish and wildlife and their habitats.

100. State Regulations

100.3.0 Regulatory initiatives for species and habitat protection

- 100.3.0.1 Develop (and/or improve) policies and/or regulations that will promote the reduction of run-off and point and non-point source pollution into NJ's aquatic systems (streams, rivers, lakes/ponds, bays, ocean, wetlands, etc.).
- 100.3.0.2 Improve policies/regulations aimed at protecting and preserving critical coastal and marsh habitats and securing mitigation for losses that create an environmental benefit.
- 100.3.0.4 Promote policies and regulations that support marine conservation zone designations in suitable areas identified through research and literature.
- 100.3.0.5 Develop policies that will promote improved and secure habitat connections between conserved SGCN habitats.
- 100.3.0.6 Develop policies that will promote expanding acreages and enhancing the effective size of SGCN habitats by providing biologically appropriate buffers of native habitat surrounding SGCN habitats.
- 100.3.0.7 Amend current policies and/or regulations to increase the ability to protect and preserve coastal habitats (beach/dune, scrub-shrub, forest, wetland, marsh, and marine and estuarine habitats) that provide nesting, migrating, and wintering areas for SGCN birds, fish and other coastal and aquatic SGCN.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need
Northern Diamondback Terrapin

- 100.3.0.8 Develop policies and/or regulations with the objective of protecting significant natural and/or unique communities in perpetuity.
- 100.3.0.9 Secure mitigation that creates an environmental benefit for losses of SGCN and their habitats.
- 100.3.0.13 Develop policies that will promote protecting and restoring riparian areas.
- 100.3.0.14 Develop policies and/or regulations that increase the protective buffers of wetlands, riparian and floodplain areas, and aquatic habitats (including open waters) to biologically appropriate distances to benefit SGCN that rely upon these habitats and improve the function of the [associated] aquatic systems.
- 100.3.0.15 Develop policies that promote protecting and restoring scrub-shrub habitats to benefit shrub-dependent SGCN.
- 100.3.0.17 Develop and implement policies and/or regulations with the objective of reducing "by-catch" of SGCN and other non-target species.
- 100.3.0.18 Develop policies for conserved lands that prohibit planting and supports the control of non-native vegetation and invasive, native vegetation.
- 100.3.0.21 Develop policies that minimize wildlife road mortality through: 1) Requiring the integration of wildlife passages into all new and repaired roads, in particular those areas that will connect SGCN habitats, 2) Requiring current fish/wildlife passages be improved and maintained in perpetuity, 3) Supporting seasonal road closures, in particular for unimproved roads, 4) Supporting projects that work to improve connectivity of SGCN habitats such as land conservation through acquisition or other means.
- 100.3.0.23 Review existing CAFRA regulations and ensure that the Coastal Zone Management Rules (NJAC 7:7E) adequately address mitigation that creates an environmental benefit for losses of SGCN and their habitats.
- 100.3.0.26 Adopt regulations requiring the combined sewer overflow alternative analyses required by regulation address potential impacts to wildlife in watercourses or receiving water bodies.
- 100.3.0.27 Amend harvest, license and/or permit requirements to incorporate guidance regarding the use of gear and/or tackle and current best practices to minimize bycatch or entanglement of non-target species.
- 100.3.0.28 Amend harvest, license and/or permit requirements to require mandatory reporting by permittees/licensees of lost harvest gear, by-catch and, entanglement of non-target species.
- 100.3.0.29 Amend harvest, license and/or permit requirements to incorporate the exclusion devices and/or to require trap/pot designs with a quick-corrode feature which would render the device ineffective upon short-term sustained submersion.
- 100.3.0.30 Amend the NJ Bureau of Marine Fisheries commercial licensing and harvest reporting system to require fishermen to report the number and location of lost pots to the appropriate state agency/agencies at the end of the harvest season.
- 100.3.0.37 Develop a law and/or policy that requires NJ DEP to continue to address and correct the allowable combined sewer overflow inputs of solid waste into the marine environment to minimize harm to wildlife and their habitats.
- 100.3.0.38 Develop laws and/or policies to ensure appropriate and obligated financial compensation to NJDEP's Office of Natural Resource Restoration (and similar groups) for the purpose of marine habitat enhancement and wildlife research, and mitigation efforts address the disturbance of subtidal shallows and/or impacts to habitat and water quality from pollution.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need
Northern Diamondback Terrapin

- 100.3.0.39 Develop laws and/or policies to ensure appropriate financial and obligated compensation to NJDEP's Office of Natural Resource Restoration (and similar groups) for the purpose of marine habitat enhancement and wildlife research, and mitigation efforts address the impacts of invasive, non-native aquatic plant species establishing themselves or thriving as a result of illegal actions.
- 100.3.0.40 Develop laws and/or policies to require vegetative buffers of native plants on preserved farmland and state lands with agricultural leases or agreements.
- 100.3.0.41 Explore all State regulatory requirements for mitigation, restoration, habitat management, etc. to ensure they prohibit the use of specified invasive or other problematic plant species.
- 100.3.0.42 Fully adopt the former Storm water Management Rules' 300ft buffer requirements into the Flood Hazard Area Control Act Rules.
- 100.3.0.43 Identify and address (amend) regulatory impediments to beneficial habitat management.
- 100.3.0.44 Incorporate requirements for technical support and funding for mitigation or restoration efforts so as to be consistent with existing regulations.
- 100.3.0.46 Investigate and/or develop inter-agency Memorandum of Agreements to share common data stored or managed in program-specific databases.
- 100.3.0.47 Investigate regulatory options available to direct the location of aquaculture activities in Aquaculture Development Zone 4 (Delaware Bay area) in a manner which minimizes the loss of wildlife habitats and adverse impacts to the environment.
- 100.3.0.49 Review existing CAFRA regulations and ensure that the Coastal Zone Management Rules (NJAC 7:7E) adequately address the issue of disturbance to habitat or species as a result of human activities (e.g., construction, bridge maintenance, road work, etc.).
- 100.3.0.50 Retain endangered, threatened and special concern wildlife and habitat protection measures in the Water Quality Management Program Rules.
- 100.3.0.52 Revise existing and/or incorporate new State land use regulations that specifically address the impacts of new or expanded energy sitings and facilities.
- 100.3.0.53 Revise existing and/or incorporate new State land use regulations that specifically address the impacts of new or expanded rights-of-way corridors associated with energy transport/transmission.
- 100.3.0.57 Develop regulations that when implemented will improve and secure habitat connections between conserved SGCN habitats.
- 100.3.0.58 Develop regulations that when implemented will promote the expansion of acreages and enhancement of the effective size of SGCN habitats by providing biologically appropriate buffers of native habitat surrounding SGCN habitats.
- 100.3.0.59 Develop regulations that when implemented will increase the ability to protect and preserve coastal habitats (beach/dune, scrub-shrub, forest, wetland, marsh, and marine and estuarine habitats) that provide nesting, migrating, and wintering areas for SGCN birds, fish and other coastal and aquatic SGCN.
- 100.3.0.60 Develop regulations that when implemented will protect significant natural and/or unique communities in perpetuity.
- 100.3.0.64 Develop regulations that when implemented will protect and restore riparian areas.
- 100.3.0.65 Develop regulations that when implemented will protect and restore scrub-shrub habitats to benefit shrub-dependent SGCN.
- 100.3.0.66 Develop regulations with the objective of reducing "by-catch" of SGCN and other non-target species.

100.3.0.69 Develop regulations that when implemented will minimize wildlife road mortality.

100.3.0.72 Develop regulations that require permit applicants and/or review agencies to assess the cumulative and synergistic effects of a proposed project (i.e., "secondary effects"), both over time and over a larger spatial scale than the site itself.

100. State Agency Policy Integration

100.4.0 Policy initiatives for species and habitat protection

100.4.0.1 Create any necessary policy changes (including those to incentive programs) to encourage the integration of SWAP actions associated with GGCN priority habitats as a deliberative factor in agencies' actions (e.g., environmental and land management review processes, land acquisition and management).

100.4.0.3 Develop policies for mandatory buffer strips on preserved farmlands and state-owned agricultural lands.

100.4.0.4 Create a policy that requires the use of wildlife habitat and corridor mapping products for both regulatory use when conducting project reviews and planning/siting new or expanded rights-of-way projects.

100.4.0.5 Create a policy that requires an initial and subsequent updates of a comprehensive marine submerged aquatic vegetation mapping for use by NJ DEP's coastal regulatory program.

100.4.0.7 Develop a law and/or policy that requires NJ DEP to continue to address and correct the allowable combined sewer overflow inputs of solid waste into the marine environment to minimize harm to wildlife and their habitats.

100.4.0.8 Develop a white paper addressing the impacts that existing, new or expanded rights-of-way have upon wildlife, wildlife habitats and habitat connectivity.

100.4.0.10 Develop laws and/or policies to ensure appropriate and obligated financial compensation to NJDEP's Office of Natural Resource Restoration (and similar groups) for the purpose of marine habitat enhancement and wildlife research, and mitigation efforts address the disturbance of subtidal shallows and/or impacts to habitat and water quality from pollution.

100.4.0.11 Develop laws and/or policies to ensure appropriate financial and obligated compensation to NJDEP's Office of Natural Resource Restoration (and similar groups) for the purpose of marine habitat enhancement and wildlife research, and mitigation efforts address the impacts of invasive, non-native aquatic plant species establishing themselves or thriving as a result of illegal actions.

100.4.0.13 Develop policies for different circumstances (e.g., roadsides and medians, riparian, aquatic and terrestrial habitats) that outline appropriate habitat/vegetation management strategies and schedules to minimize risks to and benefit wildlife.

100.4.0.16 Develop policies to implement habitat management strategies that will increase the structural diversity surrounding areas used for energy, mining, and transportation and service corridors which include but are not limited to the presence of short and tall grasses, specific host plants, brush piles, water sources/wetlands, shrubby areas, nesting areas, and no-mow set-

100.4.0.17 Develop policies to implement habitat management strategies, including prescribed burns, that will increase the structural diversity on preserved farmlands, state-owned agricultural lands, forests, parks and wildlife management areas, and any conserved lands purchased with the assistance of Green Acres and Federal Land & Water Conservation Fund monies to control and reduce the impacts of invasive, non-native species in order to increase structural habitat diversity.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need
Northern Diamondback Terrapin

- 100.4.0.18 Develop policies to minimize the extent of infrastructure associated with energy and service corridors or areas (e.g., wind and solar farms, pipelines, utility lines) and that require the implementation of habitat management strategies that will increase the structural diversity in the area including (e.g., the presence of short and tall grasses, specific host plants, brush piles, water sources/wetlands, shrubby areas, nesting areas, and no-mow set-asides).
- 100.4.0.19 Develop regulations that will minimize the creation of new barriers, remove or replace current barriers with appropriately-sized systems to accommodate wildlife dispersal, and to minimize road widening and traffic volume increases within critical wildlife habitat areas.
- 100.4.0.20 Develop state regulations that require energy developers and utility service companies to implement habitat management strategies that will increase the structural diversity of the habitat, minimize habitat fragmentation and commercial infrastructure, and minimize the loss, alteration and/or degradation of the habitat and adjacent lands when working on preserved farmlands, state-owned agricultural lands, forests, parks and wildlife management areas, and any conserved lands purchased with the assistance of Green Acres and Federal Land & Water Conservation Fund monies.
- 100.4.0.21 Ensure that Section 303(d) of the Clean Water Act and applicable State statutory/regulatory requirements for surface water pollutant budgets are being met by monitoring and enforcing regulatory Total Maximum Daily Load (TMDL) targets established within regional Water Quality Management Plans.
- 100.4.0.22 Work with NJ DEP's Division of Land Use Regulation to ensure protection of listed species and their habitats during stream cleaning events.
- 100.4.0.25 Develop policies that require permit applicants and/or review agencies to assess the cumulative and synergistic effects of a proposed project (i.e., "secondary effects"), both over time and over a larger spatial scale than the site itself.

Northern Red Salamander

Focal species that comprise this Conservation Target:

Northern Red Salamander

Threats and Action Drivers associated with this Conservation Target:

1 Residential and Commercial Development

1.1 Housing and Urban Areas

1.1.1 Land conversion from natural habitat to urban and other residential areas (Avg. Score: 2.00)
(large and small scale)

NJ Specific Threats: 1.1.1.1 Fragments terrestrial and aquatic habitats making the area unsuitable for area-sensitive species and inhibit dispersal of animals, reducing gene flow.
1.1.1.2 Loss, alteration and/or degradation of habitat.
1.1.1.3 Lot layout, design and/or landscaping may create conditions that increase wildlife-human conflict.
1.1.1.4 Increased risk of vehicle strikes/mortality to terrestrial-bound and some bird species.
1.1.1.5 Impervious surfaces can lead to a decrease in water recharge.
1.1.1.6 Impervious surfaces can cause an increased risk of floods, flash floods and storm damage that degrade terrestrial and aquatic habitats.

1.2 Commercial and Industrial Areas

1.2.1 Land conversion from natural habitat to commercial or industrial areas (Avg. Score: 1.00)
(large and small scale)

NJ Specific Threats: 1.2.1.1 Fragments terrestrial and aquatic habitats making the area unsuitable for area-sensitive species and inhibit dispersal of animals, reducing gene flow.
1.2.1.2 Loss, alteration and/or degradation of habitat.
1.2.1.3 Lot layout, design and/or landscaping may create conditions that increase wildlife-human conflict.
1.2.1.4 Increased risk of vehicle strikes/mortality to terrestrial-bound and some bird species.
1.2.1.5 Impervious surfaces can lead to a decrease in water recharge.
1.2.1.6 Impervious surfaces can cause an increased risk of floods, flash floods and storm damage that degrade terrestrial and aquatic habitats.

1.3 Tourism and Recreational Areas

1.3.1 Land conversion from natural habitat to recreation or tourism areas (large (Avg. Score: 1.00)
and small scale)

NJ Specific Threats: 1.3.1.1 Fragments terrestrial and aquatic habitats making the area unsuitable for area-sensitive species and inhibit dispersal of animals, reducing gene flow.
1.3.1.2 Loss, alteration and/or degradation of habitat.
1.3.1.3 Lot layout, design and/or landscaping may create conditions that increase wildlife-human conflict.
1.3.1.4 Impervious surfaces can lead to a decrease in water recharge.
1.3.1.5 Impervious surfaces can cause an increased risk of floods, flash floods and storm damage that degrade terrestrial and aquatic habitats.

2 Agriculture and Aquaculture

2.1 Annual and Perennial Crops (non-timber)

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Northern Red Salamander

2.1.1 Shifting Agriculture (Avg. Score: 1.00)

NJ Specific Threats: 2.1.1.3 Conversion of agricultural landscape that results in increased erosion, runoff, and chemical and thermal pollution decreases the landscape's ability to buffer aquatic systems from various forms of terrestrial degradation.

2.1.2 Small-holder Farming (Avg. Score: 1.00)

NJ Specific Threats: 2.1.2.2 Fragments terrestrial and aquatic habitats.

2.1.3 Agro-industry (Avg. Score: 1.00)

NJ Specific Threats: 2.1.3.2 Fragments terrestrial and aquatic habitats.

2.2 Wood and Pulp Plantations

2.2.1 Small Holder (Avg. Score: 2.00)

NJ Specific Threats: 2.2.1.1 Conversion of native forests to plantations decreases the habitat quality for forest-dependent species.

2.2.1.2 Tree harvesting can cause direct mortality to wildlife, especially if done during peak activity periods or vulnerable life stages (e.g., denning, nesting, gestation/birthing, basking, roosting, pre-volancy, etc.).

2.2.2 Agro-industry Plantations (Avg. Score: 1.00)

NJ Specific Threats: 2.2.2.1 Conversion of native forests to plantations decreases the habitat quality for forest-dependent species.

2.2.2.2 Tree harvesting can cause direct mortality to wildlife, especially if done during peak activity periods or vulnerable life stages (e.g., denning, nesting, gestation/birthing, basking, roosting, pre-volancy, etc.).

2.3 Livestock Farming and Ranching

2.3.2 Small-holder Grazing (Avg. Score: 1.00)

NJ Specific Threats: 2.3.2.3 Conversion of natural stream buffers into pastures decreases the landscape's ability to buffer aquatic systems from various forms of terrestrial degradation.

2.3.2.4 Livestock allowed to wade into waterbodies trample and degrade aquatic habitats.

2.3.3 Agro-industry Grazing (Avg. Score: 1.00)

NJ Specific Threats: 2.3.3.3 Conversion of natural stream buffers into pastures decreases the landscape's ability to buffer aquatic systems from various forms of terrestrial degradation.

2.3.3.4 Livestock allowed to wade into waterbodies trample and degrade aquatic habitats.

3 Energy Production and Mining

3.1 Oil and Gas Facilities and Pipelines

3.1.1 Distribution processes of petroleum and other liquid hydrocarbons (Avg. Score: 2.00)

NJ Specific Threats: 3.1.1.1 Fragments terrestrial and aquatic habitats.

3.1.1.2 Loss, alteration and/or degradation of habitat.

3.1.1.3 Increased risk of oil spills.

3.1.1.5 Increased vehicular and ship traffic associated with construction and operations, and therefore an increased risk of wildlife mortality from strikes.

3.1.2 Natural gas distribution processes (Avg. Score: 2.00)

NJ Specific Threats: 3.1.2.1 Fragments terrestrial and aquatic habitats.

3.1.2.2 Loss, alteration and/or degradation of habitat.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Northern Red Salamander

3.1.2.3 Increased risk of gas leaks and explosions.

3.1.2.5 Increased vehicular and ship traffic associated with construction and operations, and therefore an increased risk of wildlife mortality from strikes.

3.2 Mining and Quarrying

3.2.2 Surface Mining - Rock Quarry (and sand quarries) (Avg. Score: 1.00)

NJ Specific Threats: 3.2.2.1 Fragments terrestrial and aquatic habitats.

3.2.2.2 Loss, alteration and/or degradation of terrestrial and aquatic habitats.

3.2.2.3 Increased risk of vehicle strikes/mortality to wildlife.

3.3 Renewable Energy

3.3.1 Wind Power (Avg. Score: 1.00)

NJ Specific Threats: 3.3.1.2 Fragments terrestrial habitats.

3.3.1.3 Loss, alteration and/or degradation of habitat.

3.3.1.4 Increased commercial infrastructure.

3.3.2 Solar Power (Avg. Score: 1.00)

NJ Specific Threats: 3.3.2.1 Fragments terrestrial habitats.

3.3.2.2 Loss, alteration and/or degradation of habitat.

3.3.2.3 Increased commercial infrastructure.

3.4 Conventional Power Plants

3.4.0 Conventional Power Plants (Avg. Score: 1.00)

NJ Specific Threats: 3.4.0.2 Loss, alteration and/or degradation of habitat due to new or the expansion of current facilities.

3.4.0.3 Alteration of the temperature, pH and/or hydrology of aquatic ecosystems change plant communities and can harm wildlife and/or impact their behavior and survivorship.

4 Transportation and Service Corridors

4.1 Roads and Railroads

4.1.1 Land conversion from natural habitat to roads and railroads (large and small scale) (Avg. Score: 1.00)

NJ Specific Threats: 4.1.1.1 Fragments terrestrial and aquatic habitats making the landscape unsuitable for area-sensitive species and inhibiting dispersal of non-volant animals, reducing gene flow.

4.1.1.2 Loss, alteration and/or degradation of habitat associated with road and railroad construction and maintenance, and degradation of adjacent habitats.

4.1.2 Movement of cars and other vehicles on roads and railroads (large and small scale) (Avg. Score: 1.00)

NJ Specific Threats: 4.1.2.1 Increased vehicle traffic increases the risk of wildlife mortality from strikes.

4.2 Utility and Service Lines

4.2.1 Land conversion from natural habitat to utility and other service lines (large and small scale) or communication towers and associated access roads (Avg. Score: 2.00)

NJ Specific Threats: 4.2.1.1 Fragments terrestrial and aquatic habitats making the landscape unsuitable for area-sensitive species, inhibiting dispersal of non-volant animals, reducing gene flow, and creating barriers to fish when service line-associated roads cross streams (e.g., bridges, culverts, fords, etc.).

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Northern Red Salamander

4.2.1.2 Loss, alteration and/or degradation of habitat associated with rights-of-way construction and maintenance, and degradation of adjacent habitats.

4.2.1.4 Lines that cross or run parallel to streams result in a loss or reduction of vegetated riparian buffers and streamside shading, affecting water quality and in-stream habitat for aquatic biota.

4.2.2 Management of rights-of-way or communication tower facilities and/or their associated access roads (Avg. Score: 2.00)

NJ Specific Threats: 4.2.2.1 Improper or poorly scheduled vegetation management can cause direct mortality to and may reduce productivity of wildlife.

5 Biological Resource Use

5.1 Hunting and Collecting Terrestrial Animals

5.1.1 Intentional Use (Avg. Score: 1.00)

NJ Specific Threats: 5.1.1.1 Illegal collection of wildlife can have detrimental impacts on populations.

5.1.2 Unintentional effects (Avg. Score: 1.00)

NJ Specific Threats: 5.1.2.2 Disruption of normal wildlife behavior.

5.2 Gathering Terrestrial Plants

5.2.3 Control (Avg. Score: 1.00)

NJ Specific Threats: 5.2.3.3 Removal of riparian or near-stream vegetation alters water quality and in-stream habitat for aquatic organisms by reducing streamside shading, increasing bank erosion, and affecting the natural filtering ability of trees, shrubs, and grasses.

5.3 Logging and Wood Harvesting

5.3.1 Intentional Use (subsistence/small scale) (Avg. Score: 1.00)

NJ Specific Threats: 5.3.1.1 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN may fragment their terrestrial habitats.

5.3.1.2 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN may cause the loss, alteration and/or degradation of wildlife habitat.

5.3.1.3 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN and unsustainable forestry practices may increase soil erosion, impacting SGCN habitats.

5.3.1.4 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN and unsustainable forestry practices may increase the risk of invasive species establishment, impacting SGCN habitats.

5.3.1.5 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN and unsustainable forestry practices may decrease structural diversity and biomass leading to reduced biodiversity and ecological integrity.

5.3.2 Intentional Use (large scale) (Avg. Score: 2.00)

NJ Specific Threats: 5.3.2.1 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN may fragment their terrestrial habitats.

5.3.2.2 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN may cause the loss, alteration and/or degradation of wildlife habitat.

5.3.2.3 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN and unsustainable forestry practices may increase soil erosion, impacting SGCN habitats.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Northern Red Salamander

5.3.2.4 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN and unsustainable forestry practices may increase the risk of invasive species establishment, impacting SGCN habitats.

5.3.2.5 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN and unsustainable forestry practices may decrease structural diversity and biomass leading to reduced biodiversity and ecological integrity.

5.3.3 Unintentional effects (subsistence/small scale) (Avg. Score: 1.00)

NJ Specific Threats: 5.3.3.1 Direct mortality of wildlife, direct loss of suitable habitats (roost, foraging, shelter, etc.), and can disrupt sensitive species, decreasing the likelihood of success and/or reproduction.

5.3.3.2 Poorly planned/implemented tree harvesting adjacent to waterways and vernal pools can lead to increased water temperatures, soil erosion and sedimentation, and reduces the potential for woody debris within the aquatic system, leading to negative impacts on wildlife.

5.3.4 Unintentional effects (large scale) (Avg. Score: 2.00)

NJ Specific Threats: 5.3.4.1 Direct mortality of wildlife, direct loss of suitable habitats (roost, foraging, shelter, etc.), and can disrupt sensitive species, decreasing the likelihood of success and/or reproduction.

5.3.4.2 Extensive infrastructure and larger equipment requirements present a potential risk of direct injury/mortality to wildlife.

5.3.4.3 Poorly planned/implemented tree harvesting adjacent to waterways and vernal pools can lead to increased water temperatures, soil erosion and sedimentation, and reduces the potential for woody debris within the aquatic system, leading to negative impacts on wildlife.

5.3.4.4 Infrastructure and/or equipment use may result in subtle changes to drainage patterns, adversely affecting vernal pool and wetland hydrology.

5.3.4.5 Lack of appropriate, sustainable forest management can lead to a decrease in forest habitat diversity, degraded habitat for many forest species, the loss of habitat for early-successional species, and/or the loss of unique habitats for species that need canopy breaks and multi-aged tree composition to fulfill various life history requirements.

5.4 Fishing and Harvesting of Aquatic Resources

5.4.1 Intentional Use (subsistence/small scale) (Avg. Score: 1.00)

NJ Specific Threats: 5.4.1.4 Illegal collection of aquatic and semi-aquatic wildlife can have detrimental impacts on populations.

5.4.2 Intentional Use (large scale) (Avg. Score: 1.00)

NJ Specific Threats: 5.4.2.4 Illegal collection of aquatic and semi-aquatic wildlife can have detrimental impacts on populations.

6 Human Intrusions and Disturbance

6.1 Recreational Activities

6.1.1 Off-road vehicles (motorized and non-motorized) (Avg. Score: 1.00)

NJ Specific Threats: 6.1.1.1 Inappropriate use of off-road vehicles creates new roads/trails which fragments habitat.

6.1.1.2 Inappropriate use of off-road vehicles can degrade terrestrial and aquatic habitat and reduce the suitability of adjacent habitats for wildlife.

6.1.1.3 Increased risk of harassment that results in a change in wildlife behavior and/or direct mortality from vehicle strikes.

6.1.1.6 Off-road vehicles can be a mechanism of transference of wildlife diseases and invasive plant species if gear and apparel are not properly sanitized between sites.

6.1.5 Wildlife observation and photography (Avg. Score: 1.00)

NJ Specific Threats: 6.1.5.1 Improperly conducted recreational activities may disrupt normal wildlife behaviors which can result in reduced reproductive success or survival, abandonment of critical sites, etc.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need
Northern Red Salamander

- 6.1.5.2 Participants may introduce wildlife diseases and invasive plant species when gear and apparel is not properly sanitized between sites.

6.2 Military Exercises

6.2.1 Military exercises (Avg. Score: 1.00)

- NJ Specific Threats:** 6.2.1.1 Military testing and training exercises may inflict disturbance and potential physical harm to wildlife.
- 6.2.1.3 Lack of opportunity for non-federal wildlife managers to influence activities on military bases may result in detrimental impacts to SGCN and/or missed opportunities to engage in projects that benefit SGCN.

6.3 Work and Other Activities

6.3.1 Unauthorized research projects at significant habitats (Avg. Score: 2.00)

- NJ Specific Threats:** 6.3.1.1 Participants may introduce wildlife diseases and invasive plant species when gear and apparel is not properly sanitized between sites.
- 6.3.1.2 Accidental trampling of nests, eggs/egg masses, and unseen individuals may impact reproductive success or cause direct mortality to SGCN.

6.3.2 Authorized research projects at significant habitats (Avg. Score: 2.00)

- NJ Specific Threats:** 6.3.2.2 Participants may introduce wildlife diseases and invasive plant species when gear and apparel is not properly sanitized between sites.
- 6.3.2.3 Accidental trampling of nests, eggs/egg masses, and unseen individuals may impact reproductive success or cause direct mortality to SGCN.

6.3.3 Other "work" unrelated to research (Avg. Score: 1.00)

- NJ Specific Threats:** 6.3.3.1 Construction projects may disrupt normal wildlife behavior which can result in reduced reproductive success or survival, abandonment of critical sites, etc. (e.g., bridge-nesting birds).
- 6.3.3.4 Workers may introduce wildlife diseases and invasive plant species when gear and apparel is not properly sanitized between sites.

7 Natural Systems Modifications

7.1 Fire and Fire Suppression

7.1.1 Increase in Fire Frequency/Intensity (Avg. Score: 1.00)

- NJ Specific Threats:** 7.1.1.1 Increase in frequency and intensity of wild fires as a result of droughts and heat waves drying out vegetation and litter.
- 7.1.1.2 Increase in frequency of wild fires as a result of illegal activities.
- 7.1.1.3 Unnatural fire regimes occurring as a result of military exercises.

7.1.2 Suppression of Fire Frequency/Intensity (Avg. Score: 1.00)

- NJ Specific Threats:** 7.1.2.1 Shift in vegetative communities as a result of suppression of natural fires.

7.2 Dams and Water Management/Use

7.2.1 Abstraction of Surface Water (domestic use) (Avg. Score: 2.00)

- NJ Specific Threats:** 7.2.1.1 Changing water levels due to water body drawdowns (legal and illegal) may lower dissolved oxygen levels, increase water temperatures, expose wildlife to predation, and increase exposure to winter temperatures, altering wildlife behavior and survival.
- 7.2.1.2 Controlled water releases and/or improper water level management of water bodies may alter downstream dissolved oxygen levels, water temperatures, sediment deposition, and flow rates, altering wildlife behavior and survival.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Northern Red Salamander

7.2.1.3 Channelization alters water volume and flow rates, removes aquatic vegetation and coarse, woody debris, and eliminates shallow water habitats.

7.2.1.5 Abstraction of surface water may deplete upland mesic habitats of water needed by plants and wildlife.

7.2.2 Abstraction of Surface Water (commercial use) (Avg. Score: 2.00)

NJ Specific Threats: 7.2.2.1 Channelization alters water volume and flow rates, removes aquatic vegetation and coarse, woody debris, eliminates shallow water habitats, and disrupts/removes stream bottom habitat.

7.2.2.2 Changing water levels due to water body drawdowns (legal and illegal) may lower dissolved oxygen levels, increase water temperatures, expose wildlife to predation, and increase exposure to winter temperatures, altering wildlife behavior and survival.

7.2.2.3 Controlled water releases and/or improper water level management of water bodies may alter downstream dissolved oxygen levels, water temperatures, sediment deposition, and flow rates, altering wildlife behavior and survival.

7.2.2.5 Abstraction of surface water may deplete upland mesic habitats of water needed by plants and wildlife.

7.2.3 Abstraction of Surface Water (agricultural use) (Avg. Score: 2.00)

NJ Specific Threats: 7.2.3.1 Controlled water releases and/or improper water level management of water bodies may alter downstream dissolved oxygen levels, water temperatures, sediment deposition, and flow rates, altering wildlife behavior and survival.

7.2.3.2 Channelization alters water volume and flow rates, removes aquatic vegetation and coarse, woody debris, and eliminates shallow water habitats.

7.2.3.5 Changing water levels due to water body drawdowns (legal and illegal) may lower dissolved oxygen levels, increase water temperatures, expose wildlife to predation, and increase exposure to winter temperatures, altering wildlife behavior and survival.

7.2.3.6 Abstraction of surface water may deplete upland mesic habitats of water needed by plants and wildlife.

7.2.5 Abstraction of Ground Water (domestic use) (Avg. Score: 2.00)

NJ Specific Threats: 7.2.5.1 Heavy withdrawal of ground water for domestic use may lower water tables and alter the hydrology of freshwater wetlands and headwater streams, including tributaries, seepages and vernal pools.

7.2.6 Abstraction of Ground Water (commercial use) (Avg. Score: 2.00)

NJ Specific Threats: 7.2.6.1 Heavy withdrawal of ground water for industrial and commercial use may lower water tables and alter the hydrology of freshwater wetlands and headwater streams, including tributaries, seepages and vernal pools.

7.2.7 Abstraction of Ground Water (agricultural use) (Avg. Score: 2.00)

NJ Specific Threats: 7.2.7.1 Heavy withdrawal of ground water for agricultural use may lower water tables and alter the hydrology of freshwater wetlands and headwater streams, including tributaries, seepages and vernal pools.

7.2.9 Small Dams (Avg. Score: 3.00)

NJ Specific Threats: 7.2.9.1 Alter the physical, chemical and biological stream environment, causing changes in substrate composition, flow rates, dissolved oxygen, and water temperatures.

7.2.9.3 Dams act as a barrier to movement, limiting the ability of aquatic or semi-aquatic wildlife to move safely between habitats.

7.2.10 Large Dams (Avg. Score: 3.00)

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Northern Red Salamander

- NJ Specific Threats:** 7.2.10.1 Alter the physical, chemical and biological stream environment, causing changes in substrate composition, flow rates, dissolved oxygen, and water temperatures.
- 7.2.10.3 Dams act as a barrier to movement, limiting the ability of aquatic or semi-aquatic wildlife to move safely between habitats.

7.2.11 Dams (size unknown) (Avg. Score: 3.00)

- NJ Specific Threats:** 7.2.11.1 Alter the physical, chemical and biological stream environment, causing changes in substrate composition, flow rates, dissolved oxygen, and water temperatures.
- 7.2.11.3 Dams act as a barrier to movement, limiting the ability of aquatic or semi-aquatic wildlife to move safely between habitats.

7.2.12 Culverts (Avg. Score: 2.00)

- NJ Specific Threats:** 7.2.12.1 Improper design, placement, installation and maintenance of culverts and other stream crossing structures can impede or prevent the movements of terrestrial organisms and can restrict or limit stream flow, impeding the movement of aquatic organisms along riparian corridors.

7.2.13 Stream Burial (Avg. Score: 3.00)

- NJ Specific Threats:** 7.2.13.1 Eliminates riparian habitats.
- 7.2.13.2 Eliminates in-stream habitat and water resources for wildlife.
- 7.2.13.3 Alters the hydrology and quality of downstream aquatic and riparian habitats.

7.3 Other Ecosystem Modifications

7.3.2 Inappropriate timing of mowing (Avg. Score: 1.00)

- NJ Specific Threats:** 7.3.2.1 Increased risk of direct mortality and/or reduced productivity of wildlife, as well as reduced use by migrating species.

7.3.3 Removal of coarse woody debris (streams, forests, scrub-shrub habitats) (Avg. Score: 1.00)

- NJ Specific Threats:** 7.3.3.1 Decreases the available detritus that normally accumulates behind and within stream obstructions, minimizing or eliminating food sources and shelters for fishes, invertebrates and amphibians.
- 7.3.3.2 Decreases habitat and/or corridor suitability due to limited or absent shelter and foraging habitat.
- 7.3.3.3 Removal of dead trees (snags), large felled logs (i.e., those > 12" dbh), and other downed woody material diminishes nesting, roosting, and sheltering options for wildlife, and increases the ease at which deer can browse regenerating vegetation.
- 7.3.3.4 Decreases available basking, shelter, and foraging habitats.

7.3.5 Poor habitat management (Avg. Score: 1.00)

- NJ Specific Threats:** 7.3.5.1 Improper or poorly scheduled maintenance of man-made corridors (e.g., roadsides and medians) can cause direct mortality to and may reduce productivity of wildlife.
- 7.3.5.2 Shifting from natural vegetation to lawns can cause increased temperatures of local aquatic systems making them unsuitable (or less suitable) for aquatic species' reproduction and survival.
- 7.3.5.3 Vegetation clearing removes terrestrial and riparian corridors for animal movement, shelter, and resting areas.
- 7.3.5.4 Vegetation clearing or inappropriate alteration adjacent to aquatic habitats threatens aquatic species by degrading habitat and water quality (altering temperature and dissolved oxygen, increasing siltation and desiccation, etc.).
- 7.3.5.5 Habitat management that alters or removes vegetation without implementing long-term management increases the risk of invasive and exotic plants establishing themselves, outcompeting native vegetation.

Northern Red Salamander

- 7.3.5.6 Habitat management, including that which occurs on public and private lands, that does not consider timing and species' behaviors can result in the direct mortality and/or alteration or loss of habitat.
- 7.3.5.7 Improperly planned habitat management and/or mitigation efforts along roadsides and within the medians can attract wildlife and increase the risk of vehicle strikes.
- 7.3.5.9 Channelization alters water volume and flow rates, removes aquatic vegetation and coarse, woody debris, eliminates shallow water habitats, and disrupts/removes stream bottom habitat.
- 7.3.5.10 Ditching, draining and filling of marshes and wetlands eliminates habitat and degrades the remaining surrounding areas for wildlife.
- 7.3.5.12 Lack of diversity in age structure and composition of vegetation due to lack of natural disturbances and/or vegetation management.
- 7.3.5.14 Intentional felling and removal of dead standing trees or snags eliminates resting, nesting or feeding habitat, and precludes the snags eventual contribution to coarse woody debris and forest floor structure and habitat.

8 **Invasive and Other Problematic Species, Genes and Diseases**

8.1 Invasive Non-native/ Alien Species/ Diseases

8.1.1 Unspecified Species (Avg. Score: 2.00)

- NJ Specific Threats:**
- 8.1.1.1 Displace or outcompete native species for resources.
 - 8.1.1.2 Alters, degrades and/or reduces the structural diversity of the natural composition of the landscape, including aquatic systems.
 - 8.1.1.3 Invasive, non-native insects can damage native vegetation at a large scale, leading to die-offs, altering the ecological community.
 - 8.1.1.4 Invasive, non-native animals increase the risk of predation on native animals and/or herbivory on native vegetation.
 - 8.1.1.5 Invasive, non-native animals and plants increase the risk of introduction and transference of diseases
 - 8.1.1.6 Invasive, non-native plants may create physical barriers for some species.

8.1.2 Invasive non-native aquatic animals (Avg. Score: 1.00)

- NJ Specific Threats:**
- 8.1.2.2 Displace or out-compete native species for resources (food, shelter), alter the composition of the native landscapes/aquatic systems, diminishing habitat suitability and reducing ecological integrity of natural communities, and may introduce disease into a population.

8.1.3 Invasive non-native aquatic plants (Avg. Score: 1.00)

- NJ Specific Threats:**
- 8.1.3.1 Displace or out-compete native species for resources (food, light, shelter), alter the composition of the native landscapes/aquatic systems, diminish habitat suitability and reduce ecological integrity of natural communities, and may introduce disease into a population.

8.1.4 Invasive non-native terrestrial/wetland animals (Avg. Score: 1.00)

- NJ Specific Threats:**
- 8.1.4.1 Displace or out-compete native species for resources (food, shelter), alter the composition of the native landscapes/aquatic systems, diminish habitat suitability and reduce ecological integrity of natural communities, and may introduce disease into a population.
 - 8.1.4.2 Free-roaming and feral domestic animals such as cats and dogs causes direct mortality of wildlife and disturbance to wildlife breeding and resting areas.

8.1.5 Invasive non-native terrestrial/wetland plants (Avg. Score: 1.00)

- NJ Specific Threats:**
- 8.1.5.1 Displace or out-compete native species for resources (food, light, shelter), alter the composition of the native landscapes/aquatic systems, diminish habitat suitability and reduce ecological integrity of natural communities, and may introduce disease into a population.

8.1.6 Invasive non-native fungal/bacterial diseases (Avg. Score: 2.00)

Northern Red Salamander

NJ Specific Threats: 8.1.6.1 The introduction of non-native fungal and bacterial diseases threatens native populations and ecosystems.

8.2 Problematic Native Species/Diseases

8.2.1 Unspecified Species (Avg. Score: 1.00)

NJ Specific Threats: 8.2.1.1 Overabundant native insects can damage native vegetation at a large scale, leading to die-offs, altering the ecological community.

8.2.1.2 Invasive pathogens and insects may increase in range and abundance as limiting factors (such as temperature) are altered as a result of climate change.

8.2.1.3 Invasive, native species can out-compete non-invasive species for resources (food, light, shelter), leading to the demise of some species populations.

8.2.1.4 Human-subsidized native species can become overabundant, increasing predation on other native wildlife and/or altering the ecological community.

8.4 Problematic Species/Diseases of Unknown Origin

8.4.1 Unspecified Species (Avg. Score: 1.00)

NJ Specific Threats: 8.4.1.1 Non-native or poorly understood diseases and parasites could potentially impact native animals.

8.5 Viral/Prion-induced Diseases

8.5.1 Unspecified Species (Disease) (Avg. Score: 1.00)

NJ Specific Threats: 8.5.1.1 There is a large knowledge gap regarding the existence of, or potential for, other diseases impacting native wildlife.

8.5.2 Named Species (Disease) (Avg. Score: 1.00)

NJ Specific Threats: 8.5.2.1 Diseases such as West Nile Virus, arenavirus, sudden oak death, Avian Influenza, and snake fungal disease cause morbidity or mortality to native populations.

8.6 Diseases of Unknown Cause

8.6.0 Unknown Diseases (Avg. Score: 1.00)

NJ Specific Threats: 8.6.0.1 Diseases yet to be identified by pathologists and virologists cause decreased fitness or mortality to native populations.

9 Pollution

9.1 Domestic and Urban Waste Water

9.1.1 Sewage (Avg. Score: 2.00)

NJ Specific Threats: 9.1.1.1 Degradation of aquatic and marine water quality and habitats by changing turbidity, flow and water chemistry.

9.1.1.2 Leads to increased eutrophication and algae blooms that result in oxygen depletion.

9.1.1.3 Contaminants in sewage treatment effluents and Combined Sewer Overflows can cause developmental and behavioral abnormalities and reproductive failure in wildlife.

9.1.2 Run-off (Avg. Score: 1.00)

NJ Specific Threats: 9.1.2.1 Chemical fertilizers and nutrient run-off changes the pH in streams and ponds and causes eutrophication in inland waters and estuaries, which can make habitat unsuitable for specialist species and increase the risk of invasive and generalist species.

9.1.2.2 Contaminants degrade aquatic and marine water quality and can bioaccumulate in benthic organisms, threatening wildlife by causing developmental and behavioral abnormalities and reproductive failure.

Northern Red Salamander

- 9.1.2.3 Contaminants from road runoff (oil, sediment, salt, etc.) impact native vegetation and the species that rely upon them, degrade water quality in aquatic systems, and can injure or kill the aquatic and semi-aquatic species that rely upon them.

9.2 Industrial and Military Effluents

9.2.1 Oil Spills (Avg. Score: 1.00)

NJ Specific Threats: 9.2.1.1 Oil spills render resting, breeding and foraging habitats temporarily unavailable to wildlife, altering normal wildlife behavior.

9.2.1.2 Oil spills have long term effects on habitats and damage ecological processes that can cause local wildlife population declines and impaired foraging or reproduction.

9.2.1.3 Oil spills cause external oiling of wildlife and ingestion of oil, both of which can injure or kill wildlife.

9.2.2 Seepage from Mining (Avg. Score: 1.00)

NJ Specific Threats: 9.2.2.1 Contaminants from mining degrade water quality in aquatic systems, and can injure or kill the aquatic and semi-aquatic species that rely upon them.

9.2.3 Other (Avg. Score: 1.00)

NJ Specific Threats: 9.2.3.1 Point and nonpoint source pollution such as polychlorinated biphenyls (PCBs), pesticides, heavy metals, and endocrine disrupting compounds (EDC's) into freshwater and marine systems pose threats to wildlife through direct contact and/or ingestion, and to aquatic species and their predators through bioaccumulation, impacting the reproductive success and neurological function of many avian and fish species.

9.2.3.2 Chemical spills have long term effects on habitats and damage ecological processes that can cause local wildlife population declines and impaired foraging or reproduction.

9.2.3.3 Chemical spills may render resting, breeding and foraging habitats temporarily unavailable to wildlife, altering normal wildlife behavior.

9.2.4 Other: Hydrofracturing (Avg. Score: 1.00)

NJ Specific Threats: 9.2.4.1 Contaminants from hydrofracturing degrade water quality in aquatic systems, and can injure or kill the aquatic and semi-aquatic species that rely upon them.

9.2.4.2 Uncontrolled effluents escaping from hydrofracturing facilities can cause injury to wildlife and alter normal behaviors.

9.2.5 Other: Industrial toxic settling ponds (Avg. Score: 1.00)

NJ Specific Threats: 9.2.5.1 Surficial or open industrial effluent ponds can cause injury or death to wildlife that become exposed through ingestion or submersion.

9.3 Agricultural and Forestry Effluents

9.3.1 Nutrient Loads (Avg. Score: 2.00)

NJ Specific Threats: 9.3.1.1 Chemical fertilizers and nutrient run-off changes the pH in streams, ponds and wetlands and causes eutrophication in inland waters and estuaries, which can make habitat unsuitable for specialist species and increase the risk of invasive and generalist species.

9.3.1.2 Animal waste degrades terrestrial and aquatic habitats, especially streams, ponds and wetlands, resulting in eutrophication, which disrupts oxygen and nutrient balances, and causes injury and mortality to aquatic organisms.

9.3.1.4 Conversion of low-intensity agriculture to intensive agriculture (e.g., tree nursery, row crop) degrades wetland and aquatic habitats with runoff, increasing sediment and nutrient loads and pH.

9.3.1.5 Conversion of native forests to plantations degrades wetland and aquatic habitats through increased runoff.

9.3.2 Soil Erosion and Sedimentation (Avg. Score: 2.00)

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Northern Red Salamander

NJ Specific Threats: 9.3.2.1 Soil erosion, sedimentation and destruction of streambanks and riparian buffers degrade waters making them unsuitable for riparian-dependent wildlife.

9.3.2.3 Conversion of native forests to plantations degrades wetland and aquatic habitats through increased sedimentation.

9.3.3 Herbicides and Pesticides (Avg. Score: 2.00)

NJ Specific Threats: 9.3.3.1 Pesticides degrade terrestrial and aquatic habitats, especially streams, ponds and wetlands. Aquatic wildlife are particularly sensitive to these contaminants, which can cause developmental and behavioral abnormalities and reproductive failure. Some contaminants may bioaccumulate in predatory fish and birds and disrupt reproduction.

9.3.3.3 Use of pesticides can directly harm non-target species through direct contact and/or by reducing and/or contaminating their food supply.

9.3.4 Other (Avg. Score: 2.00)

NJ Specific Threats: 9.3.4.1 Spills, leaks or discharges of fuel, oil or other contaminant fluids from machinery or equipment used in the normal course of agricultural or forestry activities can degrade or destroy adjacent aquatic and terrestrial habitats and/or cause harm to non-target species (plants and animals).

9.3.5 Control of insect pests and plants leading to mortality of non-target species (Avg. Score: 2.00)
not associated with agriculture

NJ Specific Threats: 9.3.5.1 Use of pesticides, insecticides, and/or herbicides can directly harm non-target species, such as amphibians and beneficial invertebrates through direct contact and/or by reducing and/or contaminating their food supply.

9.3.5.4 Improper use of current insecticides, such as those containing esfenvalerate, prallethrin, or piperonyl butoxide, or past use of pesticides containing chlordane still present in the soils, are toxic to various wildlife species, and can cause injury, mortality, or other effects that impair population viability.

9.3.5.5 Use of pesticides and herbicides can minimize the abundance of food sources for native wildlife populations.

9.4 Garbage and Solid Waste

9.4.1 Direct hazards to wildlife (Avg. Score: 1.00)

NJ Specific Threats: 9.4.1.2 Garbage and solid waste destroys natural habitats and obstructs wildlife movements.

9.5 Air-Bourne Pollutants

9.5.1 Acid Rain (Avg. Score: 2.00)

NJ Specific Threats: 9.5.1.1 Causes acidification of water bodies, resulting in changes to aquatic and marine communities and reducing biodiversity, and creating conditions that are unsuitable for some aquatic (freshwater and marine) and semi-aquatic species that are sensitive to pH shifts.

9.5.1.2 Leaches calcium from the soils which in turn reduces the availability of prey, particularly calcium-rich prey such as snails.

9.5.4 Other (Avg. Score: 1.00)

NJ Specific Threats: 9.5.4.1 Dust and/or airborne sedimentation from construction sites, agricultural operations or related earth disturbances can introduce mineral or organic sediments into adjacent wildlife habitats, degrading their quality and suitability for wildlife short-term and/or long-term.

9.5.6 Herbicides and Pesticides (Avg. Score: 2.00)

NJ Specific Threats: 9.5.6.1 May result in injury or direct mortality of non-target species.

9.6 Excess Energy

9.6.2 Thermal Pollution (Avg. Score: 1.00)

Northern Red Salamander

NJ Specific Threats: 9.6.2.2 Water temperature changes to aquatic systems can deter or preclude use by SGCN (e.g., alter habitat suitability for wildlife species, reduce prey base) or present stressors that are harmful if not fatal to wildlife.

11 Climate Change and Severe Weather

11.1 Habitat Shifting or Alteration

11.1.0 Macro- and Micro-Climate Alterations (Avg. Score: 1.00)

NJ Specific Threats: 11.1.0.1 Alters native terrestrial and aquatic habitats at the macro- and micro-climate levels that can affect suitability for wildlife, in particular specialist species.

11.2 Droughts

11.2.1 Droughts (Avg. Score: 2.00)

NJ Specific Threats: 11.2.1.1 Contribute to hardened soils, decreasing water recharge during rains and increasing the likelihood of flash floods during storms.

11.2.1.2 Lead to lower groundwater levels and therefore, less available water for people and habitats.

11.2.1.3 Loss, alteration and/or degradation of terrestrial and aquatic habitats.

11.2.1.6 Increased desiccation risk for amphibians and altered wetland hydrology for critical habitats including breeding pools.

11.3 Temperature Extremes

11.3.1 Temperature extremes (Avg. Score: 2.00)

NJ Specific Threats: 11.3.1.1 Increasing temperatures may cause habitat loss and degradation by desiccating and/or raising the temperatures of small wetlands and streams leading to the loss of freshwater mussels and other aquatic species and species reliant upon these habitats.

11.3.1.2 Increased temperatures can negatively impact wetland, riverine, lacustrine and vernal pool-associated or -dependent wildlife by reducing flows, increasing water temperatures, lowering water levels and causing premature drying of vernal habitats.

11.3.1.4 Extremely low temperatures and/or extensive periods of unseasonably low temperatures during critical life history stages (e.g., hibernation, gestation/nesting) can alter animals' behaviors and decrease survivorship.

11.4 Storms and Flooding

11.4.1 Storms and flooding (Avg. Score: 1.00)

NJ Specific Threats: 11.4.1.1 Extreme storms and flooding events threaten aquatic and marine wildlife through habitat degradation and alteration, including alterations to off-shore or back-bay benthic conditions, damage to submerged aquatic vegetation (SAV), increased turbidity, altered water chemistry, and potentially displacement of aquatic and marine wildlife.

11.4.1.4 Flood events alter river or stream morphology, benthic conditions and habitat availability for wildlife, cause bank erosion, and deposit sediments in floodplain wetlands altering wildlife habitat.

11.4.2 Increased rainfall (Avg. Score: 1.00)

NJ Specific Threats: 11.4.2.1 Extreme rain events threaten aquatic wildlife through habitat degradation and alteration, including alterations to benthic conditions, damage to submerged aquatic vegetation (SAV), increased turbidity, altered water chemistry, and potentially displacement of aquatic wildlife.

11.4.2.2 Extreme rain events can damage wildlife nesting and resting habitats, including impacts to avian eggs and chick and small mammal survivorship.

11.4.2.3 More frequent rain events can alter terrestrial and wetland vegetation communities as well as wetland hydrology, shifting wildlife community use.

11.6 Phenology Shifting or Alteration

11.6.2 Phenology shifts related to predator-prey ecology (Avg. Score: 1.00)

NJ Specific Threats: 11.6.2.1 Alters inter-specific relationships (e.g., competition, parasitism, predation) of wildlife, ultimately leads to detrimental impacts on the ecological system.

11.6.2.2 Shifts timing of species migration, breeding and hibernation, and available food resources, causes redistribution of species, or mortality for species that are unable to relocate due to their already isolated habitat or limited mobility.

11.6.3 Phenology shifts related to species redistribution (Avg. Score: 1.00)

NJ Specific Threats: 11.6.3.1 Shifts in timing of species migration, breeding and hibernation, and available food resources, as a result of wildlife range shifts driven by climate change.

12 Resource Management Needs

12.1 Resource information collection needs

12.1.1 Lack of initial baseline inventory (Avg. Score: 2.00)

NJ Specific Threats: 12.1.1.1 Lack of information regarding the distribution, connectivity and quality of SGCN habitats throughout the State, and where habitat enhancement/restoration will benefit SGCN and other wildlife.

12.1.1.2 Lack of information regarding the population dynamics and trends, habitat requirements and dispersal distances of the various age classes, and survivorship of SGCN throughout the State.

12.1.2 Lack of up-to-date existing information (Avg. Score: 2.00)

NJ Specific Threats: 12.1.2.1 Lack of (routine, regular, ongoing) surveys/assessments that provide up-to-date information regarding population trends or health, and/or status of fish, wildlife and/or their habitats.

12.1.3 Need to answer research question (Avg. Score: 2.00)

NJ Specific Threats: 12.1.3.1 There are significant knowledge gaps regarding distribution, dispersal, diseases, population trends, etc. of SGCN.

12.1.4 Need to develop new technique (Avg. Score: 2.00)

NJ Specific Threats: 12.1.4.1 Improve and evaluate survey methods for SGCN and their habitats; alter as needed.

12.3 Regulatory Reform

12.3.0 State Regulatory Reforms (Avg. Score: 1.00)

NJ Specific Threats: 12.3.0.6 Certain geographic or habitat features, such as vernal pools and headwater wetlands or streams, may be too small, mischaracterized, or misidentified to benefit from regulatory protection.

12.3.0.7 Activities that threaten SGCN, their food sources, and/or habitats are often regulated separately and without consideration for the cumulative and synergistic effects over time or over a larger spatial scale. Therefore, regulations can fail to protect SGCN populations over time.

12.3.0.10 Land use regulatory processes pertaining to habitat creation, enhancement or restoration projects can be costly and/or burdensome, precluding or discouraging the development or implementation of conservation projects.

12.4 Internal Policy & Procedures Reform

12.4.0 State Policy and Procedure Reform (Avg. Score: 1.00)

NJ Specific Threats: 12.4.0.1 A species-by-species management focus as opposed to ecological systems and biodiversity generally has greater opportunity for unintended consequences for other species and may be less efficient in developing appropriate management actions.

12.4.0.2 Policies and procedures for lands management that lack consideration of the impacts of activity timing can result in unintended impacts to wildlife during vulnerable periods.

Northern Red Salamander

- 12.4.0.7 Land preservation contracts, easements, etc. that do not contain prescriptive language or flexibility allowing for habitat management can result in unsuitable habitat conditions and biodiversity declines for SGCN.

14 **Education/ Outreach Needs**

14.1 Education needs

- 14.1.1 Need for improved knowledge of fish and wildlife and their habitats (Avg. Score: 2.00)

- NJ Specific Threats:** 14.1.1.1 Lack of understanding of the importance of various SGCN habitats, their connectivity to similar habitats, and how planning decisions impact their quality and the wildlife that depend upon them.
- 14.1.1.2 Lack of general knowledge of SGCN life histories and vulnerabilities as they relate to land management practices.
- 14.1.1.3 Lack of understanding of the need to manage both natural and anthropogenic (e.g., yards, lawns, hayfields, etc.) habitats to minimize impacts or increase benefits to SGCN and their habitats.

14.2 Outreach needs

- 14.2.1 Need to improve specific understanding of agency/organization goals, objectives and ongoing wildlife conservation actions (Avg. Score: 2.00)

- NJ Specific Threats:** 14.2.1.1 Need to develop greater understanding of and support for efforts implemented to enhance SGCN habitat and biodiversity through various forest management practices.
- 14.2.1.2 Need to develop greater understanding of and support for efforts implemented to enhance SGCN habitat and biodiversity through various aquatic and riparian management practices.
- 14.2.1.5 Need to develop greater understanding of and support for efforts implemented to enhance SGCN habitat and biodiversity through various wetland management practices.

15 **Administrative Needs**

15.2 Organizational/program planning needs

- 15.2.3 Need for multi-state, regional and landscape scale planning (Avg. Score: 1.00)

- NJ Specific Threats:** 15.2.3.1 State governance and financial structures can sometimes inhibit conservation planning and implementation at the regional and landscape-scales that are often more effective at setting priorities and meeting species and habitat conservation goals and objectives.

Actions to address the Threats and Action Drivers associated with this Conservation Target:

1 Coordination and Administration

1.2 Incentives

1.2.1 Incentives

- 1.2.1.2 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to private and public landowners and land managers to increase the effective size of SGCN habitats by protecting/restoring adjacent habitats that contribute to the overall size of the "core" area and/or provide a natural buffer, enhancing the suitability of the core area for SGCN, and/or connect conserved SGCN habitats.
- 1.2.1.4 Secure and promote the protection, restoration, and/or development of old-growth forest stands with large trees, in particular those within large, contiguous forest tracts through incentive programs.
- 1.2.1.5 Secure and promote the protection/restoration of critical SGCN forested habitat and minimize forest edge to benefit interior forest and disturbance-sensitive SGCN through incentive programs.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Northern Red Salamander

- 1.2.1.6 Secure and promote the protection/restoration of riparian and floodplain habitats, inland wetland habitats (marsh, vernal pool, fen, emergent shrubland, forest), and other aquatic habitats (including open waters) and/or biologically appropriate buffers through incentive programs.
- 1.2.1.7 Secure and promote the protection/restoration of fish SGCN habitats by protecting lands adjacent to fish SGCN habitats and/or aquatic systems feeding into such habitats through incentive programs.
- 1.2.1.8 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to municipalities, land developers, and other land managers to retain and/or enhance native vegetation adjacent to aquatic habitats, and along riparian areas and wildlife movement corridors.
- 1.2.1.10 Coordinate across government agencies and non-government organizations to maximize the availability of and enrollment in existing landowner incentive programs (e.g., "farm bill," partners, etc.) to maintain and/or improve habitat.
- 1.2.1.11 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to public and private landowners and managers, including but not limited to government and non-government agencies/organizations, energy, mining, and transportation and utility service companies/agencies, to minimize commercial infrastructure and impervious surfaces, and to improve wildlife habitats, limit fragmentation, reduce elements which would exacerbate mortality, and/or implement activities/restoration that would create new or improved corridor habitat and/or increase connectivity, and to increase structural habitat diversity through the implementation of a variety of vegetation management practices that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting), and to minimize (if not avoid) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
- 1.2.1.12 Create incentives (non-monetary and/or monetary) for land developers to redevelop abandoned areas (e.g., shopping centers, office complexes) to minimize the loss of natural habitats and reduce the extent of impervious surfaces as part of new construction to increase water recharge in those areas.
- 1.2.1.13 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to land developers to minimize the impacts of new residential and commercial developments on SGCN and their habitats.
- 1.2.1.14 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to NJ landowners and land managers (including farmers, foresters and developers) for reducing or eliminating the use of herbicides and pesticides, and implementing more ecologically safe strategies when using such products.
- 1.2.1.16 Create incentives (non-monetary and/or monetary) within State regulations (mitigations requirements or credit, BMP satisfaction, etc.) to promote the use of retailers who refrain from selling specified invasive or other problematic plant species.
- 1.2.1.18 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to public and private landowners and land managers to control and reduce the impacts of invasive, native and non-native species in order to increase structural habitat diversity.

Northern Red Salamander

- 1.2.1.20 Coordinate across government agencies and non-government organizations to create or expand upon tax-based incentive programs available to private, agricultural, commercial, industrial or governmental landowners and land managers to include or provide for incentives for the maintenance and/or improvement to existing habitat via the endorsement of wildlife-related BMP's.
- 1.2.1.23 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to private and public landowners and land managers to provide cost shares and/or plan approvals for management based on management approaches and prescriptions.
- 1.2.1.25 Create incentives (non-monetary and/or monetary) within State regulations to assist and programs to deliver those incentives to aquaculture growers to relocate, for example, from intertidal to subtidal lease areas through buyouts of leases or microloans, and/or promoting on-lease conservation measures used by aquaculture growers (such as the implementation of conservation easements, use of living shorelines, incorporation of BMPs for habitat protection, etc.) for maintaining and enhancing healthy, SGCN-associated terrestrial and aquatic habitats and associated riparian habitats, and to minimize (if not avoid) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity
- 1.2.1.26 Develop a new funding source, targeting natural resource damages monies, mitigation monies or other available sources, to fund new or existing landowner incentive programs.

2 Direct Management of Natural Resources

2.2 Dam and barrier removal

2.2.1 Culvert work

- 2.2.1.1 Replace existing barriers to wildlife movement with and/or install appropriately-sized systems to accommodate wildlife dispersal.

2.3 Fire management

2.3.3 Prescribed burning

- 2.3.3.1 Evaluate different management techniques of prescribed burns that might be used to mimic the historic role of fire and other natural disturbances in shaping an ecosystem.
- 2.3.3.2 Conduct prescribed burning in Northern New Jersey forests to maintain and regenerate a mosaic of upland forest habitats.
- 2.3.3.3 Conduct prescribed burning to improve wildlife habitat.

2.8 Invasive species control

2.8.0 Invasive species control strategies and implementation

- 2.8.0.4 Implement control/management strategies to reduce the impacts and/or limit the distribution of invasive, native and non-native species (wildlife and plants) that pose threats to native wildlife or communities. Encourage the implementation of biological and mechanical removal/control. When chemical control is used, encourage low-volume, targeted application using NJDEP-approved chemicals in accordance with the specific instructions for that chemical. Follow BMPs to maximize the effectiveness of the strategies while avoiding excessive harm to non-target species.

- 2.8.0.5 Implement biologically safe and appropriate control/management strategies, and where appropriate, eradication strategies to reduce the impacts and/or limit the distribution of invasive and/or non-native plant species within or near aquatic systems using methods that will provide the most protection to the aquatic and riparian ecological system, and minimize disturbance to the soil and wildlife. Encourage the implementation of biological and mechanical removal/control. When chemical control is used, encourage low-volume, targeted application using NJDEP-approved chemicals in accordance with the specific instructions for that chemical.
- 2.8.0.6 Implement long-term management of invasive and/or non-native plants to help maintain functioning ecological systems and biological diversity, and to enhance travel corridors. Encourage the implementation of biological and mechanical removal/control. When chemical control is used, encourage low-volume, targeted application using NJDEP-approved chemicals in accordance with the specific instructions for that chemical.

2.10 Planting/seeding

2.10.0 Planting/seeding strategies for terrestrial or aquatic habitat creation or restoration

- 2.10.0.1 Prevent or ameliorate near-term impacts of climate change throughout the State by developing, implementing and monitoring/evaluating habitat management strategies that will establish/improve habitat resilience (e.g., shorelines of the coast and Delaware Bay, forested habitats of the Pinelands and Skylands) that benefits wildlife inhabiting these areas, in particular within the coastal and Delaware Bay areas.
- 2.10.0.4 Restore and/or enhance suitable travel corridors connecting conserved habitats for SGCN by restoring unsuitable (or less optimal) habitats.
- 2.10.0.5 Implement habitat restoration and/or enhancement activities that include the creation of vegetative buffers between sensitive habitats (e.g., aquatic systems) and human-inhabited areas (e.g., residences, parks, etc.) and that is conducted during appropriate timing to avoid sensitive periods (e.g., nesting, denning, roosting) while minimizing (if not avoiding) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
- 2.10.0.6 Expand the acreages and enhance the effective size of SGCN habitats by restoring adjacent, less optimal or unsuitable, habitats.
- 2.10.0.7 Restore/reclaim and enhance degraded rare species habitats through strategic revegetation and management efforts for documented/target SGCN.
- 2.10.0.8 Protect significant natural and/or unique communities by implementing best management practices when conducting habitat restoration strategies.
- 2.10.0.9 Restore and/or enhance riparian and floodplain habitats, inland wetland habitats (marsh, vernal pool, fen, emergent shrubland, forest), and other aquatic habitats (including open waters) and/or biologically appropriate buffers to minimize degradation, alteration and/or changes in hydrology and subsequent disturbances to and behavioral changes of wildlife (e.g., restoring biologically appropriate buffers, revegetation or restoration efforts, etc.).
- 2.10.0.12 Create and/or maintain scrub-shrub habitats through revegetation efforts with little to no impact on forested, wetland and grassland habitats to maintain populations of shrub-dependent SGCN.
- 2.10.0.14 Implement best management practices (BMPs), protective strategies and guidelines for restoring and enhancing healthy, SGCN-associated habitats while minimizing (if not avoiding) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.

Northern Red Salamander

- 2.10.0.15 Restore and/or enhance terrestrial and aquatic habitats proximate to but not adjacent to roads and other transportation corridors for terrestrial-bound SGCN species whose behavior (i.e., dispersal across roads) may be altered by doing so, and therefore decrease road mortality of such species (e.g., amphibians, snakes, turtles, small mammals).
- 2.10.0.21 Restore and/or enhance understory habitats that suppress invasive species and provide critical resources and enhance sheltering, foraging, and nesting cover for wildlife.
- 2.10.0.22 Restore and/or enhance terrestrial and aquatic habitats to promote the regeneration of native vegetation and enhance structural diversity to benefit SGCN (e.g., vegetative buffers of aquatic systems, allow coarse, woody debris to remain in terrestrial, aquatic and riparian habitats to provide shelter, riparian stabilization and necessary microclimates, plant native trees, shrubs and grasses, etc.).
- 2.10.0.24 Use NJ's CHANJ mapping and guidance to establish vegetation and enhance or create corridors between fragmented habitats with similar vegetation, slope, soils, structure, etc. to ensure vegetative integrity is maintained to allow wildlife to safely disperse, and corridors are buffered with natural habitats to minimize disturbance to wildlife within the corridors.
- 2.10.0.25 Enhance SGCN fish habitats through aquatic and riparian vegetation restoration.

2.11 Vegetation management

2.11.0 Vegetation management strategies for terrestrial or aquatic habitat creation or restoration

- 2.11.0.1 Conduct vegetation management in native terrestrial and aquatic habitats to provide suitable and appropriately sized areas to improve ecological diversity.
- 2.11.0.2 Conduct vegetation management in native terrestrial and aquatic habitats to provide suitable and appropriately sized areas for target SGCN and/or species groups; management should complement rare species needs in a targeted area.
- 2.11.0.3 Create suitable travel corridors connecting and increasing the effective size of conserved habitats for SGCN by restoring unsuitable (or less optimal) habitats through vegetation management.
- 2.11.0.4 Implement vegetation management strategies that consider appropriate timing to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife, particularly SGCN.
- 2.11.0.5 Expand the acreages and enhance the effective size of SGCN habitats by restoring adjacent, less optimal or unsuitable, habitats through vegetation management.
- 2.11.0.6 Reclaim degraded rare species habitats by conducting vegetation management needed to restore habitat value for the documented/target SGCN.
- 2.11.0.7 Protect significant natural and/or unique communities by implementing best management practices through vegetation management.
- 2.11.0.8 Maintain, enhance and/or restore biologically appropriate buffers for SGCN-inhabited/used freshwater wetlands through vegetation management.
- 2.11.0.13 Implement best management practices (BMPs), protective strategies, and guidelines for vegetation management to maintain and enhance healthy, SGCN-associated habitats while minimizing (if not avoiding) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
- 2.11.0.14 Conduct vegetation management adjacent to roads for SGCN species whose behavior (i.e., dispersal across roads) may be altered by doing so, and therefore decrease road mortality of such species (e.g., amphibians, snakes, turtles, small mammals).

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need
Northern Red Salamander

- 2.11.0.16 Prevent or ameliorate near-term impacts of climate change throughout the State by developing, implementing and monitoring/evaluating habitat management strategies that will establish/improve habitat resilience (e.g., shorelines of the coast and Delaware Bay, forested habitats of the Pinelands and Skylands) that benefits wildlife inhabiting these areas, in particular within the coastal and Delaware Bay areas.
- 2.11.0.18 Implement forest management/silvicultural strategies that promote the development of new old-growth forests and/or minimize the loss of old-growth forest stands with large trees and within large, contiguous tracts.
- 2.11.0.20 Create and/or maintain scrub-shrub habitats through management efforts with little to no impact on forested, wetland and grassland habitats to maintain populations of shrub-dependent SGCN.
- 2.11.0.21 Minimize the degradation, alteration and/or changes in hydrology of wetlands, riparian and floodplain areas, and aquatic habitats (including open waters) and subsequent disturbances to and behavioral changes of wildlife by maintaining or enhancing these areas and biologically appropriate buffers through habitat management and/or revegetation or restoration efforts.
- 2.11.0.23 Implement appropriate habitat management actions in areas where natural disturbances, such as wildfire, have been precluded.
- 2.11.0.24 Conduct vegetation management adjacent to aquatic habitats following BMPs to enhance habitat for target shrub- or young forest-dependent SGCN while minimizing negative impacts to other SGCN.
- 2.11.0.25 Conduct vegetation management along access roads following BMPs to enhance habitat for target shrub- or young forest-dependent SGCN while minimizing negative impacts to other SGCN.
- 2.11.0.26 Conduct vegetation management along roadsides and medians, avoiding peak activity periods for wildlife, that enhances wildlife dispersal naturally and safely across roads and similar barriers to/between terrestrial and/or aquatic habitats.
- 2.11.0.27 Conduct vegetation management for target shrub- or young forest-dependent SGCN following BMPs to minimize the risk of the establishment of invasive and non-native plants.
- 2.11.0.28 Conduct vegetation management in agricultural areas following BMPs to enhance habitat for target shrub- or young forest-dependent SGCN while minimizing negative impacts to other SGCN.
- 2.11.0.29 Conduct vegetation management on transportation and service corridors (i.e., rights-of-way) following BMPs to enhance habitat for target shrub- or young forest-dependent SGCN while minimizing negative impacts to other SGCN.
- 2.11.0.31 In areas where vegetative communities are shifting due to fire suppression and controlled burns are not feasible, manage vegetation to improve wildlife habitat.
- 2.11.0.32 Increase structural habitat diversity around and when feasible, within agricultural landscapes by managing vegetation for a variety of species, in particular, those farms that have removed scrub-shrub habitat and/or fragmented forests, and by implementing ecologically best practices (e.g., no-till farming, maintaining hedgerows, buffer set-asides, etc.).
- 2.11.0.33 Increase structural habitat diversity by implementing long-term vegetation management to minimize the potential for the establishment of invasive and/or non-native plants that may outcompete native vegetation.

Northern Red Salamander

- 2.11.0.34 Increase structural habitat diversity by managing residential, commercial and recreational areas' landscapes for a variety of species. For example, integrate short and tall grasses, specific host plants, brush piles, water sources/wetlands, shrubby areas, nesting areas and no-mow set-asides.
- 2.11.0.35 Increase structural habitat diversity by managing vegetation adjacent to aquatic habitats in a manner that provides a buffer from runoff and erosion and a microclimate to stabilize seasonal temperatures to benefit a variety of aquatic and semi-aquatic species.
- 2.11.0.36 Increase structural habitat diversity by managing vegetation for a variety of species and considering their life history requirements (e.g., travel corridors, shelter, resting and breeding areas) to minimize the risk of harm.
- 2.11.0.37 Increase structural habitat diversity by minimizing the removal of coarse, woody debris in terrestrial, aquatic and riparian habitats which benefits wildlife.
- 2.11.0.38 Increase structural habitat diversity in and around horse/livestock farms by managing vegetation for a variety of species, in particular, in and around farms that have fragmented forests, and by implementing ecologically best practices (e.g., do not permit overgrazing, do not allow livestock to wade in waterbodies).
- 2.11.0.39 Increase structural habitat diversity in and around solar farms by managing vegetation for a variety of species and that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife. For example, integrate short and tall grasses, specific host plants, brush piles, water sources/wetlands, shrubby areas, nesting areas and no-mow set-asides.
- 2.11.0.40 Increase structural habitat diversity surrounding areas used for energy, mining, and transportation and service corridors by managing vegetation for a variety of species and that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife. For example, integrate short and tall grasses, specific host plants, brush piles, water sources/wetlands, shrubby areas, nesting areas and no-mow set-asides, and avoid managing habitat during the breeding seasons for ground-nesting birds, reptiles, amphibians and small mammals.
- 2.11.0.41 Increase structural habitat diversity through the implementation of a variety of vegetation management practices such as prescribed burns (either increasing or decreasing their frequency depending on the site and objective), plantings, etc. that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife.
- 2.11.0.42 Increase structural habitat diversity within wind farms for terrestrial bound and low-flying species and around wind farms for other wildlife by managing vegetation for a variety of species and that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife.
- 2.11.0.43 Manage forests to increase variation in age structure and composition using BMPs that promote and maintain functioning ecological forest-based systems and biological diversity.
- 2.11.0.45 Regularly and/or rotationally create young forest habitat in targeted areas to maintain and regenerate a mosaic of upland forest habitats that will benefit shrub- and young forest-dependent species.

2.13 Wildlife damage management

2.13.0 Nuisance fish and wildlife damage

- 2.13.0.8 Implement and assess management strategies to control and reduce the impacts of detrimental species and diseases that pose threats to native wildlife or communities.

2.14 Wildlife disease management

2.14.0 Wildlife disease strategy development and investigation

- 2.14.0.1 Investigate diseases/pathogens impacting SGCN and/or their habitats.
- 2.14.0.2 Develop and implement strategies to combat the impacts of diseases/pathogens impacting SGCN and/or their habitats, track disease occurrences and monitor/research impacts to SGCN populations and their habitats.
- 2.14.0.3 Protect SGCN from exotic pathogen introduction or incident through implementation of a "rapid response plan"; DFW to give priority attention to these species in planning and/or implementing a response.
- 2.14.0.4 Conduct long-term monitoring of diseases in vulnerable wildlife to determine the magnitude of exposure within populations and around the State, the impacts to those species, in particular SGCN, and investigate the feasibility of mitigating for such impacts.
- 2.14.0.5 Assess the impacts of diseases on the life cycles of wildlife.

3 Data Collection and Analysis

3.0 General fish and wildlife research, survey or monitoring

3.0.0 Research, survey or monitoring - general fish and wildlife needs

- 3.0.0.1 Conduct long-term monitoring of resident and migratory SGCN populations using standardized survey protocols to determine the variables that may impact their long-term persistence in the State (e.g., population viability, distribution, dispersal, home range and habitat use, travel corridors, food availability, vulnerability to pollutants and disease, etc.). Compile this information to determine the likely causes of population declines and to understand metapopulation dynamics. Provide data to NJ DEP for integration into the Biotics database, Landscape Project and permitting review processes.
- 3.0.0.2 Identify (through literature searches, review of available data, enlistment of habitat and/or species experts, etc.) where data gaps exist regarding SGCN distribution, and their critical and supportive habitats. Conduct surveys using standardized survey protocols to acquire baseline data, and provide the data to NJ DEP for integration into the Biotics database, Landscape Project Map and permitting review processes.
- 3.0.0.3 Gather baseline data on SGCN inhabiting permanently protected natural lands regarding their distribution and population (e.g., abundance, dispersal, demography including productivity and survival, etc.), and identify (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) critical and supporting habitats within those landscapes.
- 3.0.0.4 Conduct long-term studies on SGCN inhabiting permanently protected natural lands to develop population trend data and changes in demography, and to determine if critical and/or supporting habitats are limited or changing; i.e., diminishing in value, acreage or connectivity.
- 3.0.0.5 Gather baseline data on resident and migratory SGCN (in particular migratory species for which New Jersey habitats are significant), terrestrial, freshwater and marine species, regarding the location and condition of their critical and supporting habitats (e.g., foraging, roosting, nesting/breeding, stopover, migration paths, etc.), and population demography (e.g., productivity, survival, dispersal). Compile this information into a database that includes descriptions of the conditions of the habitats and species, and a GIS component of the locations of these important habitats. Provide data to NJ DEP for integration into the Biotics database, Landscape Project and permitting review processes.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need
Northern Red Salamander

- 3.0.0.6 Conduct long-term studies on resident and migratory SGCN to determine if there are changes to the populations' demography (productivity, survival, dispersal) and/or to their critical and/or supporting habitats (i.e., diminishing in value, acreage or connectivity, etc.), in particular changes that would not maintain SGCN at viable levels for species populations. Update data and GIS maps; provide updated information to NJ DEP for integration into the Biotics database, Landscape Project and permitting review processes.
- 3.0.0.7 Collect baseline data to document species distributions, in particular SGCN, and current habitat for future analysis of possible distribution shifting as a result of habitat shifting or alteration associated with climate change impacts.
- 3.0.0.8 Conduct long-term studies and compare baseline metrics of documented species distributions and associated habitats to identify possible species and/or habitat shifting or alteration associated with climate change impacts.
- 3.0.0.9 Identify SGCN (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) whose populations are thought to be limited due wholly or in part to a lack of (or contaminated) food resources, and compile/collect and evaluate data/information regarding potential management strategies to improve the availability of such SGCN's food resources.
- 3.0.0.10 Conduct long-term studies to evaluate the effectiveness of management strategies implemented to enhance food/prey availability for SGCN [whose populations are thought to be limited due wholly or in part to a lack of (or contaminated) food resources] through studies that investigate the populations and health of the food resources as well as the target SGCN. Revise management strategies as needed and continue to monitor the effectiveness of the efforts.
- 3.0.0.11 Develop, implement and evaluate the effectiveness of town plans that avoid impacts to SGCN species and their habitats.
- 3.0.0.13 Investigate the effects of pesticides, herbicides and other biological controls on SGCN and their critical and supporting habitats. Evaluate and modify management practices as appropriate.
- 3.0.0.14 Identify areas with invasive, aquatic plants and animals and collect a detailed baseline assessment of the species' status and distribution. Solicit volunteers from organizations such as the New Jersey Invasive Species Strike Team to support this effort. Researchers and contractors performing Forest Stewardship Inventories and/or Plans on state lands should report invasive plant species through the New Jersey Invasive Species Strike Team phone application.
- 3.0.0.19 Identify the presence and status (e.g., functioning, structure, slated for removal, etc.) of existing dams and culverts within and/or that may impact SGCN and their habitats, and create a database that includes a GIS component identifying the locations of such structures and their status. Share this information with appropriate organizations and/or agencies evaluating the benefits and risks of such structures on SGCN and their habitats.
- 3.0.0.20 Once baseline data identifying and describing the status of existing dams and culverts have been gathered, conduct evaluations at a variety of sites to determine whether the benefits of culvert and dam creation or removal outweigh the risks to SGCN species and their habitats, and if other variables/conditions specific to individual sites/locations result in a different outcome. Identify and target appropriate dams and culverts for removal and/or reconstruction to minimize harm to SGCN species and their habitats.
- 3.0.0.22 Develop, implement and evaluate the success of a habitat improvement and restoration program to restore cold-water fish habitat, ecosystems and populations.

Northern Red Salamander

- 3.0.0.23 Identify (through wildlife and aquatic system surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) and research water quality parameters for all [types of] aquatic systems for various SGCN populations.
- 3.0.0.24 Identify (through aerial and topographic maps), and confirm through field surveys, potential vernal pools using standard protocols. Provide confirmed vernal pool locations (and when possible, a description of the pools condition) and species' presence data to NJ DEP for integration into the Biotics database, Landscape Project and permitting review processes.
- 3.0.0.26 Conduct studies to evaluate the effectiveness of proactive species recovery plans for all endangered and threatened species including objectives and guidance pertaining to and the condition/status of critical and supporting habitats.
- 3.0.0.27 Evaluate the effectiveness of strategies to restrict human activity (e.g., recreational, maintenance work, etc.) from sensitive habitats/areas such as avian nesting sites, reptile and amphibian breeding areas (nesting or gestation/birthing and breeding pools, respectively), and bat hibernacula, and federal buffers for marine mammals through research and monitoring. Develop and provide NJ DEP and other appropriate governing agencies/commissions a summary of findings and recommendations to improve such efforts.

3.2 Research, survey or monitoring - fish and wildlife populations

3.2.0 Data deficiency

- 3.2.0.1 Division of Fish and Wildlife should maintain a robust, up-to-date database and mapping of species occurrences.
- 3.2.0.2 Conduct species status assessments using the Delphi Technique and review of available data and literature on fish and wildlife (including marine animals) to maintain accurate legal status categorization of native wildlife.
- 3.2.0.3 Survey for and monitor populations of freshwater aquatic focal SGCN to assess the populations' demography, trends, condition, distribution, etc.
- 3.2.0.4 Conduct long-term monitoring of the impacts of contaminants to vulnerable wildlife to determine the magnitude of exposure within populations and around the State, the impacts to those species, in particular SGCN, and investigate the feasibility of mitigating for such impacts. Maintain records on exposure of vulnerable wildlife to environmental toxins (such as flame retardants and endocrine disruptors), so that sources may be identified and controlled or eliminated.
- 3.2.0.5 Prevent or ameliorate near-term impacts of climate change throughout the State by developing, implementing and monitoring/evaluating habitat management strategies that will establish/improve habitat resilience (e.g., shorelines of the coast and Delaware Bay, forested habitats of the Pinelands and Skylands) that benefits wildlife inhabiting these areas, in particular within the coastal and Delaware Bay areas.
- 3.2.0.6 Develop, implement and conduct studies to evaluate the effectiveness of methods implemented to reduce road mortality of wildlife (e.g. wildlife underpasses, road closures).
- 3.2.0.7 Track (via a database that includes a GIS component) and research problematic species and diseases to determine their distribution, impacts on SGCN wildlife/wildlife communities, and develop potential control measures.
- 3.2.0.8 Implement and conduct long-term monitoring of control measures aimed at minimizing the impacts of problematic species and/or diseases to evaluate the effectiveness of such efforts and to identify and incorporate additional strategies as appropriate.
- 3.2.0.10 Evaluate the effectiveness of sanitation/decontamination protocols in minimizing the transference of wildlife diseases and invasive plant species.

Northern Red Salamander

- 3.2.0.11 Investigate the impacts of ORV use as a mechanism to spread wildlife diseases and invasive plant species to native wildlife and habitats. Integrate this information when mapping undeveloped roads and trails to identify potentially sensitive areas in northern NJ forests.
 - 3.2.1 Abundance determination
 - 3.2.1.1 Identify (through literature searches, review of available data, enlistment of habitat and/or species experts, etc.) population abundance and trends for SGCN using standardized survey protocols. Provide data to NJ DEP for integration into the Biotics database, Landscape Project Map and permitting review processes.
 - 3.2.1.2 Conduct wildlife surveys on resident and migratory SGCN regarding their population abundance and trends.
 - 3.2.2 Age, size and sex structure
 - 3.2.2.1 Conduct wildlife surveys on resident and migratory SGCN regarding their survivorship.
 - 3.2.3 Baseline inventory
 - 3.2.3.7 Identify roads or portions of roads, paved or unimproved (through site surveys, land use/land cover assessments and analyses, review of available data, enlistment of species experts, etc.) with high incidences of road mortality and/or presence of snakes, turtles, medium-sized and large mammals. Conduct assessments of the roads and incorporate information into a database that includes descriptions (e.g., qualifiers to help prioritize the roads' risk to wildlife) and a GIS component of the locations of such areas. Share this information with appropriate organizations and/or agencies working to implement measures (e.g., wildlife passages, road closures) to minimize the risk to these species.
 - 3.2.7 Population assessment
 - 3.2.7.1 Conduct species status assessments using the Delphi Technique and review of available data and literature on fish and wildlife (including marine animals) to maintain accurate legal status categorization of native wildlife.
 - 3.2.7.2 Conduct studies to evaluate the effectiveness of proactive species recovery plans for all endangered and threatened species to meet and maintain recovery goals.
- 3.3 Research, survey or monitoring - habitat
 - 3.3.1 Baseline inventory
 - 3.3.1.1 Conduct habitat assessments of significant natural and/or unique communities to identify threats to native terrestrial and aquatic habitats through systematic monitoring, review of available data, enlistment of habitat management and/or species experts, etc. Incorporate findings into a database that includes descriptions/qualifiers of the habitats, identifies and values/qualifies the threats, and includes a GIS component of the locations of the assessed areas. Share this information with landowners/managers (e.g., federal, state and local government agencies or non-government organization).
 - 3.3.1.2 Identify (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) resident and migratory SGCN habitats. Investigate their suitability for the various life history requirements of the species that dependent upon them to determine the ability for maintaining applicable SGCN populations in perpetuity.
 - 3.3.1.4 Identify (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) and investigate the suitability of corridors that connect large, contiguous tracts of similar habitats to increase their effective size (i.e., forest with forest, grassland with grassland, wetlands with wetlands, etc.) for dependent SGCN.

Northern Red Salamander

- 3.3.1.5 Identify areas (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) where habitat restoration and/or enhancement would benefit wildlife SGCN.
- 3.3.1.6 Identify areas (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) that could, through revegetation and/or enhancement efforts, become suitable travel corridors connecting and increasing the effective size of conserved habitats for SGCN.
- 3.3.1.7 Map and prioritize existing and potential areas for early succession forest management. Share the results with state, county and municipal planners.
- 3.3.1.8 Assess the availability and suitability of forest habitats for SGCN species (particularly reptiles and amphibians, birds, pollinators, and tiger beetles) in southern forests since Superstorm Sandy.
- 3.3.1.17 Identify and map undeveloped roads and trails in all conserved forests, and create a database of locations. Integrate information regarding potentially sensitive areas.
- 3.3.1.18 Conduct an assessment using available data regarding SGCN population numbers/trends and demography, on-going threats, habitat changes, etc. to determine if directed management efforts are needed to reach or maintain viable population levels.
- 3.3.1.19 Identify and codify legal ORV access areas on state (and if appropriate, other conserved) lands. Provide GIS mapping to the landowner for potential use in directing such recreational activities.
- 3.3.1.20 Identify areas (through surveys/studies, literature searches, review of available data, enlistment of habitat management and/or species experts, etc.) where invasive, non-indigenous plants and animals are either already established or are becoming established. Create a system for reporting and qualifying new locations of invasive species and for prioritizing areas for control measures according to the potential level of impact on the ecosystem and SGCN and the likelihood of success. Researchers and contractors encountering invasive plant species while performing plant and/or forest inventories on state or other conserved lands and/or private lands should report invasive plant species through the New Jersey Invasive Species Strike Team phone application.
- 3.3.1.24 Conduct regular investigations of SGCN habitat health and biodiversity on public and private lands to identify locations in need of revegetation, reduction of over-abundant, native wildlife and/or exotic species, conservation focal areas requiring limitations on human activity, etc.

3.3.2 Monitoring

- 3.3.2.2 Conduct long-term monitoring of resident and migratory SGCN habitats using standardized survey protocols to determine changes in habitat quality/suitability and threats (e.g., habitat loss and degradation, increased edge habitat, water quality) and other variables that may impact their long-term persistence in the State and to provide information needed for determining causes of population declines and understanding metapopulation dynamics.
- 3.3.2.3 Continue to update wildlife and habitat databases and revise models of critical SGCN habitats using the most current data available and where lacking, develop new SGCN and/or habitat models as data on species habitat requirements and applicable GIS data layers become available.
- 3.3.2.4 Protect water quality and aquatic-dependent species by appropriately designating Category 1 waters and enforcing protective regulations. Seek appropriate classifications for stream segments based on Endangered and Threatened Status and/or the Index of Biotic Integrity (IBI) results that do not fulfill Category One requirements.

Northern Red Salamander

- 3.3.2.5 Conduct long-term monitoring of water quality of SGCN aquatic habitats (and aquatic systems feeding into those habitats) to evaluate protection and management efforts to reduce, if not eliminate, chemical contamination, siltation, eutrophication, and other forms of pollution/contamination of aquatic systems.
- 3.3.2.9 Investigate the effectiveness of various silviculture techniques for enhancing forests for forest-dependent SGCN.
- 3.3.2.10 Evaluate the efficacy and success of different management techniques (e.g., ecologically-based forestry activities, prescribed burns) that might be used to mimic the historic role of fire and other natural disturbances in shaping an ecosystem.
- 3.3.2.13 Evaluate the effectiveness of management strategies (e.g., timing restrictions for mowing, cooperative agreements with utility companies for maintenance of rights-of-ways) that maintain and enhance large existing areas of grassland in perpetuity. Focus on habitat patches that can be managed to enhance the total size of suitable grassland habitat and create interspersed early-successional habitat.
- 3.3.2.14 Research and evaluate the effectiveness of water quality management practices on water-dependent and semi-dependent SGCN, particularly those practices associated with permitting or mitigation actions.
- 3.3.2.15 Investigate the effectiveness of management techniques implemented to eliminate invasive terrestrial and aquatic plant species on private and public lands, and/or within sensitive and/or important habitats for SGCN.
- 3.3.2.16 Evaluate the effectiveness of best management practices (BMPs), protective strategies, and guidelines for maintaining and enhancing healthy, SGCN-associated terrestrial and aquatic habitats and associated riparian habitats, and to minimize (if not avoid) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.

3.5 Techniques development

3.5.3 Habitat restoration methods

- 3.5.3.1 Work with land management agencies to determine the appropriate actions needed to restore/reclaim degraded habitat for the documented/target SGCN.
- 3.5.3.3 Develop/improve management techniques that might be used to mimic the historic role of fire and other natural disturbances in shaping an ecosystem.
- 3.5.3.8 Develop best management practices (BMPs), protective strategies, and guidelines for maintaining and enhancing healthy, SGCN-associated terrestrial and aquatic habitats and associated riparian habitats, and to minimize (if not avoid) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
- 3.5.3.9 Develop strategies to combat the impacts of diseases/pathogens impacting SGCN and/or their habitats.
- 3.5.3.11 Develop strategies to protect native terrestrial and aquatic habitats and dependent SGCN species from the identified threats.
- 3.5.3.14 Develop aquaculture practices in the coastal areas that are compatible with the recovery of SGCN.
- 3.5.3.15 Modify management practices based on the effects of pesticides, herbicides and other biological controls on critical and supporting SGCN habitats.

Northern Red Salamander

- 3.5.3.16 Develop/improve strategies to restrict human activity (e.g., recreational, maintenance work, etc.) from sensitive habitats/areas such as avian nesting sites, reptile and amphibian breeding areas (nesting or gestation/birthing and breeding pools, respectively), and bat hibernacula, and federal buffers for marine mammals. Methods may include, but are not limited to, managing the landscape to deter access, diverting recreational and other activities from sensitive areas during critical periods through permit processes or blocking access (trails, roads, etc.), posting (if appropriate), increasing law enforcement presence, conducting management activities at appropriate times to avoid disturbance and/or harm to wildlife (e.g., habitat management, beach raking, etc.), and decreasing noise and light pollution.
 - 3.5.3.20 Develop guidance on various silviculture techniques for enhancing forests for forest-dependent SGCN.
 - 3.5.3.21 Develop management techniques (e.g., ecologically-based forestry activities, prescribed burns) that might be used to mimic the historic role of fire and other natural disturbances in shaping an ecosystem.
 - 3.5.3.22 Identify (through surveys/studies, literature searches, review of available data, enlistment of habitat management and/or species experts, etc.) and modify management strategies (e.g., timing restrictions for mowing, cooperative agreements with utility companies for maintenance of rights-of-ways), based on research, that maintain and enhance large existing areas of grassland in perpetuity.
 - 3.5.3.23 Revise water quality management practices based on research on water-dependent and semi-dependent SGCN, particularly when associated with permitting or mitigation actions.
 - 3.5.3.24 Based on research, modify management techniques implemented to eliminate invasive terrestrial and aquatic plant species on private and public lands, and/or within sensitive and/or important habitats for SGCN.
 - 3.5.3.25 Use data regarding SGCN population numbers/trends and demography, on-going threats, habitat changes, etc. to develop the necessary management strategies to reach or maintain viable population levels.
- 3.5.4 Fish and wildlife research, survey and management techniques
 - 3.5.4.1 Develop studies to evaluate management strategies to improve the availability of prey/food resources for SGCN whose populations are thought to be limited due wholly or in part to a lack of (or contaminated) food resources. Monitor and investigate the management strategies over time to determine success and/or the need to revise methods.
 - 3.5.4.2 Develop, implement, monitor and evaluate management strategies to reduce the impacts of herbivory on native vegetation and the degradation of habitats supporting SGCN by invasive and/or native, over-abundant wildlife species including but not limited to mute swans, Canada geese, beaver and white-tailed deer.
 - 3.5.4.5 Develop and implement strategies to combat the impacts of diseases/pathogens impacting SGCN and/or their habitats, track disease occurrences and monitor/research impacts to SGCN populations and their habitats.
 - 3.5.4.9 Conduct studies to evaluate the impacts of roads on SGCN and develop, implement and conduct studies to evaluate the effectiveness of methods to reduce road mortality of wildlife (e.g. wildlife underpasses, road closures).

Northern Red Salamander

- 3.5.4.13 Develop/improve strategies to restrict human activity (e.g., recreational, maintenance work, etc.) from sensitive habitats/areas such as avian nesting sites, reptile and amphibian breeding areas (nesting or gestation/birthing and breeding pools, respectively), and bat hibernacula, and federal buffers for marine mammals. Methods may include, but are not limited to, managing the landscape to deter access, diverting recreational and other activities from sensitive areas during critical periods through permit processes or blocking access (trails, roads, etc.), posting (if appropriate), increasing law enforcement presence, conducting management activities at appropriate times to avoid disturbance and/or harm to wildlife (e.g., habitat management, beach raking, etc.), and decreasing noise and light pollution.
- 3.5.4.15 Investigate the success of management strategies used to protect and/or enhance SGCN populations and when appropriate, aid in identifying failures/resource problems and issues, and developing new strategies.
- 3.5.4.16 Use data regarding SGCN population numbers/trends and demography, on-going threats, habitat changes, etc. to determine if directed management efforts are needed to reach or maintain viable population levels and develop the necessary management strategies.
- 3.5.4.17 Investigate new, non-invasive techniques for SGCN population evaluation through literature review, expert opinion, trial studies (if low risk), etc.
- 3.5.4.18 Investigate the effectiveness of survey techniques through selected "ground truthing" and literature and peer review in order to increase efficacy of survey, minimize surveyor bias and error, and increase accuracy of trend data.
- 3.5.4.19 Develop reliable, standardized survey and monitoring protocols for SGCN species, for which none currently exist, and their habitats.
- 3.5.4.21 Develop BMPs to address problematic species and diseases of unknown origin.
- 3.5.4.22 Investigate the efficacy of implementing strategies to minimize or eliminate disturbances to all SGCN (i.e., beyond their federal requirements) during military activities.

5 Facilities and Areas

5.15 Wildlife Management Areas

5.15.6 Roads

- 5.15.6.1 Clearly post areas/roads where vehicle access is permitted.
- 5.15.6.2 Clearly post areas/trails where vehicle access is not permitted.

6 Land and Water Rights Acquisition and Protection

6.0 Acquisition and protection strategies

6.0.0 Combined acquisition and protection strategies

- 6.0.0.2 Enhance and increase the effective size of SGCN habitats by protecting adjacent habitats that contribute to the overall size of the "core" area and/or provide a natural buffer, enhancing the suitability of the core area for SGCN, and/or connect conserved SGCN habitats through an appropriate combination of fee title, non-fee title and landowner agreements.
- 6.0.0.3 Secure and protect riparian and floodplain habitats, inland wetland habitats (marsh, vernal pool, fen, emergent shrubland, forest), and other aquatic habitats (including open waters) and/or biologically appropriate buffers to minimize degradation through an appropriate combination of fee title, non-fee title and landowner agreements.
- 6.0.0.4 Secure and protect fish SGCN habitats by protecting lands adjacent to fish SGCN habitats and/or aquatic systems feeding into such habitats through an appropriate combination of fee title, non-fee title and landowner agreements.

Northern Red Salamander

- 6.0.0.6 Secure and protect old-growth forest stands with large trees and/or stands that are approaching or being actively managed for old growth forests, in particular those within large, contiguous forest tracts, through an appropriate combination of fee title, non-fee title and landowner agreements.
- 6.0.0.7 Secure and protect critical SGCN forested habitat and minimize forest edge to benefit interior forest and disturbance-sensitive SGCN through an appropriate combination of fee title, non-fee title and landowner agreements.
- 6.0.0.8 Secure and protect scrub-shrub habitats for SGCN through an appropriate combination of fee title, non-fee title and landowner agreements.

6.3 Conservation area designation

6.3.0 Conservation area designation strategies

- 6.3.0.2 Enhance and increase the effective size of SGCN habitats by protecting adjacent habitats that contribute to the overall size of the "core" area and/or provide a natural buffer, enhancing the suitability of the core area for SGCN and/or connect conserved SGCN habitats through conservation area designations.
- 6.3.0.3 Increase the protection of riparian and floodplain habitats, inland wetland habitats (marsh, vernal pool, fen, emergent shrubland, forest), and other aquatic habitats (including open waters) and/or biologically appropriate buffers to minimize degradation through conservation area designations.
- 6.3.0.6 Promote the protection of old-growth forest stands with large trees and/or stands that are approaching or being actively managed for old growth forests, in particular those within large, contiguous forest tracts, through conservation area designations.
- 6.3.0.7 Promote the protection of critical SGCN forested habitat and minimize forest edge to benefit interior forest and disturbance-sensitive SGCN through conservation area designations.
- 6.3.0.8 Promote the protection of scrub-shrub habitats for SGCN through conservation area designations.

6.4 Private lands agreements

6.4.0 Private land agreement strategies

- 6.4.0.1 Enter into private lands agreements to expand control burns on private lands, in particular those adjacent to conserved lands to improve SGCN habitats.

7 Law Enforcement

7.1 Law enforcement

7.1.3 Sub-national Level

- 7.1.3.2 Increase the number of law enforcement officers tending to wildlife issues to a reasonable number to sufficiently cover the State and marine waters.

7.1.4 Scale Unspecified

- 7.1.4.1 Improve enforcement of policies and/or regulations that promote the reduction of run-off and point and non-point source pollution into NJ's aquatic systems (streams, rivers, lakes/ponds, bays, ocean, wetlands, etc.).
- 7.1.4.3 Increase law enforcement presence proximate to sensitive areas [e.g., avian nesting sites, in particular rookeries, and reptile and amphibian breeding areas (nesting or gestation/birthing and breeding pools, respectively)] to deter human activity and subsequent disturbance to SGCN.

Northern Red Salamander

- 7.1.4.6 Recruit law enforcement to assist in the protection and enhancement of SGCN populations, in particular endangered species, through improved awareness of species through trainings, partnerships, and other methods. Information should include but is not limited to: 1) Issues concerning illegal collection of reptiles, 2) Persecution of rare snakes, 3) Illegal recreational activities on public lands (e.g., off-road vehicles) and their impact on wildlife, 4) Identification of sensitive areas, critical sites and/or "hot-spots" for collection.
- 7.1.4.7 Increase law enforcement presence to enforce regulations governing recreational activities (e.g., the use of personal watercraft and off road vehicles, caving, rock climbing, etc.) on conserved lands and within other sensitive habitats, and discourage activities that cause harm or disturbance to vegetation, wetlands, fish and wildlife.
- 7.1.4.9 Implement policies that improve and secure habitat connections between conserved SGCN habitats.
- 7.1.4.10 Implement policies that promotes expanding acreages and enhances the effective size of SGCN habitats by providing biologically appropriate buffers of native habitat surrounding SGCN habitats.
- 7.1.4.12 Implement policies and/or regulations that protect significant natural and/or unique communities in perpetuity.
- 7.1.4.14 Implement policies that protect existing and developing old-growth forest stands with large trees, in particular those within large, contiguous forest tracts.
- 7.1.4.15 Implement policies that preserve and protect critical SGCN forested habitat and minimize forest edge to benefit interior forest and disturbance-sensitive SGCN.
- 7.1.4.16 Implement policies that protect and restore riparian areas.
- 7.1.4.17 Improve the enforcement of policies and/or regulations that protect wetlands, riparian and floodplain areas, and aquatic habitats (including open waters).
- 7.1.4.19 Implement policies that protect and restore scrub-shrub habitats to benefit shrub-dependent SGCN.
- 7.1.4.23 Implement policies that minimize wildlife road mortality.
- 7.1.4.26 Educate law enforcement personnel that there may be unauthorized research projects taking place and to encourage them to investigate any activities that appear to be harmful to wildlife.

8 Outreach

8.1 Partner/stakeholder engagement

8.1.0 Partner/stakeholder engagement strategies

- 8.1.0.3 Develop an outreach team of personnel from government entities, conservation organizations and other stakeholders to work together to collaboratively use social media campaigns to grow a constituency of NJ residents who have an elevated ecological and climate consciousness.
- 8.1.0.4 Engage government agencies, conservation partners and other stakeholders in constructive dialogues encouraging them to influence policy change and the creation of incentives through a habitat bill and/or municipal ordinances for backyard habitat.
- 8.1.0.6 Engage government agencies, conservation partners and other stakeholders in discussions focused on sharing information regarding coastal and marine critical wildlife habitats, developing comprehensive mapping to assist in reducing impacts of energy production activities, and establishing a long-term monitoring program to update the data. Ensure this information is available to appropriate personnel for planning or response measures.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Northern Red Salamander

- 8.1.0.11 Engage government agencies, conservation partners and other stakeholders to collaboratively develop and implement an extensive educational/outreach program targeting sportsmen's organizations and fisheries, as well as public constituents, addressing the unintended effects abandoned fishing gear, tackle and crab pots can have on wildlife, and promote the collection and/or reporting of abandoned items and their locations.
- 8.1.0.12 Engage government agencies, conservation partners and other stakeholders to collaboratively develop and implement an extensive educational/outreach program targeting sportsmen's organizations and fisheries, as well as public constituents, addressing the unintended effects fishing gear and tackle can have on wildlife.
- 8.1.0.13 Engage DOD in a constructive dialogue regarding strategies to minimize disturbances to all SGCN (i.e., beyond their federal requirements) from forest management and other practices on their lands.
- 8.1.0.14 Engage DOD in a constructive dialogue regarding strategies to minimize or eliminate disturbances to all SGCN (i.e., beyond their federal requirements) during military activities.
- 8.1.0.15 Engage government agencies, conservation partners and other stakeholders in discussions encouraging and supporting the creation of laws and policies requiring vegetative buffers of native plants on preserved farmland and state lands with agricultural leases or agreements.
- 8.1.0.16 Engage local governments in discussions regarding the importance of them adopting/passing ordinances which require assessing and addressing secondary impacts (i.e., ancillary prescribed burns, trespassers, ORV use, mosquitoes, deer, buffers) on biological resources when revising planning/zoning documents or granted site plan/subdivision approvals.
- 8.1.0.17 Engage municipalities in constructive dialogue to identify and minimize destruction of areas prioritized for early succession forest management.
- 8.1.0.18 Engage NJDOT, NJ Transit Authority and other road management entities, wildlife conservation organizations/agencies (e.g., Division of Fish and Wildlife, New Jersey Conservation Foundation, Conserve Wildlife Foundation of NJ), and communities and citizens in discussions regarding the importance of and methods to enhance habitat connectivity, and work together to develop feasible strategies for ensuring that wildlife can disperse naturally and safely across roads and similar barriers to terrestrial and/or aquatic habitats.
- 8.1.0.19 Engage government agencies, conservation partners and other stakeholders to collaboratively develop a list of important projects, targeting SGCN and/or their habitat, as a guide for graduate student research. Distribute the list and contact information to all State colleges and universities.
- 8.1.0.21 Work with government agencies and environmental educators to develop educational resources and training programs, educate the public on the devastation human-subsidized and/or overabundant, native species cause to local nesting species, and provide expert guidance on how residents can help alleviate this threat.
- 8.1.0.22 Work with government agencies and environmental educators to develop educational resources and training programs, educate the public on the devastation invasive species cause to native nesting species, and provide expert guidance on how residents can help alleviate this threat.
- 8.1.0.24 Engage government agencies, conservation partners and other stakeholders in constructive dialogue regarding the importance of providing and methods to provide technical support for carrying out restoration and management practices aimed at increasing structural habitat diversity.
- 8.1.0.25 Provide technical support to public landowners and land managers for carrying out restoration and management practices aimed at increasing structural habitat diversity.

Northern Red Salamander

- 8.1.0.26 Coordinate across federal, state and local agencies and approved consulting foresters that provide financial, logistical or planning assistance to woodland landowners to adopt or endorse consistent best management practices concerning controlled burns to maintain and/or improve forested habitat for wildlife.
- 8.1.0.30 Encourage government agencies and conservation partners to advise members of the relevant scientific community of the need for specific studies, reports or investigations targeting the data-deficiency regarding SGCN and/or their habitats.
- 8.1.0.32 Work with NJ DEP's Water Management, other state agencies and watershed organizations to determine if mitigation is warranted at applicable power plants.
- 8.1.0.33 Engage government agencies, conservation partners and other land managers, communities, landowners, and commercial and industrial stakeholders in discussions regarding the importance of protecting and methods to protect priority wetlands beyond the levels afforded through regulation by maintaining and/or restoring optimal biological buffers around wetlands.
- 8.1.0.34 Work with the NJ Education Association and Department of Education to design curriculum and outdoor experimental learning opportunities, and provide training to teachers on implementation of these activities.
- 8.1.0.37 Enlist landowners and NJ citizens in the protection of and survey efforts for SGCN, in particular rare species, by increasing enrollment in landowner incentives, forest stewardship, backyard habitat management and wildlife-related volunteer programs.
- 8.1.0.38 Engage partners, stakeholders and land managers in constructive dialogue promoting forest stewardship for SGCN that use core forests and forested corridors.
- 8.1.0.40 Encourage researchers, land managers, naturalists and enthusiasts to follow proper procedures for the coordination and/or permitting of research/management activities involving wildlife and sensitive habitats, and discourage activities that alter vegetation or wetlands, or cause harm or disturbance to wildlife.
- 8.1.0.42 Engage citizens, wildlife observers and photographers through discussions and distributable information regarding the importance of and encouraging implementing responsible and ethical behavior when observing wildlife by developing an alliance of wildlife photographers and widely circulating recommendations on how to reduce impact.
- 8.1.0.44 Engage conservation partners, stakeholders, government agencies and other land stewards in constructive dialogues encouraging their inclusion of controlled burns in forest and other stewardship plans.
- 8.1.0.47 Form cooperative partnerships with energy companies to facilitate habitat creation and enhancement away from and outside of project areas, the restoration of appropriate habitats within project areas (e.g., rights-of-way could benefit butterflies and some bird species), and to identify seasonal timing of activities that would minimize impacts to wildlife.

8.3 WSFR program/subprogram outreach

8.3.0 WSFR program/subprogram outreach strategies

- 8.3.0.7 Develop and provide (or otherwise make publicly available) educational programs and/or materials that describe the negative impacts of off-road vehicles and watercraft use in and adjacent to critical SGCN habitats, and the importance of confining such activities to more appropriate locations and/or seasons.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need
Northern Red Salamander

- 8.3.0.8 Develop and provide (or otherwise make publicly available) educational programs and/or materials to educate recreationists and encourage landowners to eliminate garbage in the vicinity of suitable wildlife habitat, in particular SGCN habitat. Information should include the detrimental impacts garbage may have on various wildlife species.
- 8.3.0.9 Develop and provide (or otherwise make publicly available) educational programs and/or materials to enlist landowners and land managers to include only native plants in landscaping and restoration projects. Provide information to assist them in detecting problematic establishment of invasive, non-indigenous plants.
- 8.3.0.10 Develop and provide (or otherwise make publicly available) educational programs and/or materials to educate landowners and NJ citizens on threats to fish and wildlife (including marine animals).
- 8.3.0.12 Promote awareness of WSFR (Wildlife and Sportfish Restoration) Outreach/Awareness grants, an important funding source for conservation among hunters and anglers as well as the general public.
- 8.3.0.13 Conduct an educational campaign to encourage observer ethics and respect for wildlife and natural habitat.
- 8.3.0.15 Develop an educational outreach program for citizens regarding: 1) The impacts to wildlife as a result of plastic bags entering aquatic and marine systems, 2) The importance of decreasing the amount of plastic shopping bags in circulation, 3) The need for businesses to voluntarily charge for bags or reimburse people for using their own non-plastic bags, and 4) The need for their assistance through public pressure on legislators and government to pass legislation that limits the amount of plastic shopping bags in circulation.
- 8.3.0.19 Develop an educational outreach program for the public on the devastating effects predators can have on native nesting wildlife.
- 8.3.0.24 Develop educational outreach programs for local decision-makers, land developers, landowners and citizens about lawn alternatives and the importance of natural vegetation and "edge" habitats on developed properties.
- 8.3.0.25 Develop educational outreach programs for landowners, nurseries and the general public regarding the negative impacts of invasive and non-native plants on our natural communities.
- 8.3.0.26 Develop educational outreach programs for private and public landowners and land managers regarding the importance of and how to manage core forests and forested corridors in a way that will be beneficial for SGCN, particularly endangered, threatened and special concern species.
- 8.3.0.27 Develop educational outreach programs for public and private landowners and land managers regarding the importance of structural habitat diversity, methods to increase diversity, and/or incentive programs available to increase habitat diversity.
- 8.3.0.29 Develop educational outreach programs for local decision-makers, land developers, landowners and citizens about the importance of maintaining a vegetative buffer along riparian and aquatic habitats to intercept storm water runoff and minimize soil erosion.
- 8.3.0.30 Develop educational outreach programs for private and public landowners, as well as schools, regarding the benefits and creation of backyard habitats for wildlife.
- 8.3.0.32 Develop an educational outreach program for landowners and citizens on the threats that herbicides and pesticides pose to aquatic systems and wildlife, and to promote safer usage of such products.

9 Planning

9.1 Land use planning

9.1.0 Land use planning strategies

- 9.1.0.1** Develop smart-growth plans and critical habitat designations that consider SGCN life history requirements and habitat needs, connectivity and health of those habitats, and minimizes human-associated disturbances to those habitats and SGCN inhabiting them.
- 9.1.0.2** Develop town plans that avoid impacts to SGCN species and their habitats.
- 9.1.0.3** Develop a plan that directs the creation of impervious surfaces away from and to minimize impacts on aquatic systems and critical terrestrial habitats. The plan should also include strategies to increase the resiliency of aquatic and critical terrestrial habitats to threats and stressors that would impact the reproduction and survival of wildlife.
- 9.1.0.5** Develop a plan that directs the creation or expansion of energy or utility rights-of-way in a manner that minimizes the impacts on critical forested habitats and the wildlife community.
- 9.1.0.6** Develop a plan that directs the creation or expansion of roads and railroads or the re-establishment of abandoned railroads within and adjacent to critical forested habitats in a manner that minimizes the impacts on critical forested habitats and the wildlife community.
- 9.1.0.7** Develop a plan that directs the maintenance of or new channelization of forested streams and rivers in a manner that minimizes impacts of the aquatic ecological system and adjacent forest
- 9.1.0.8** Develop a plan that focuses on strategies for oil pipelines to avoid sensitive habitats that would be highly impacted by oil spills.
- 9.1.0.9** Develop a plan that focuses on strategies to minimize the creation of renewable energy farms (e.g., solar, wind) and related infrastructures within and their impacts on forested habitats and the wildlife community.
- 9.1.0.10** Develop a plan that focuses on strategies to minimize the impacts of mining on critical forested habitats.
- 9.1.0.11** Develop a plan that focuses on strategies to minimize the impacts of power plants on critical forested habitats and the wildlife community.
- 9.1.0.13** Develop a plan to minimize agriculture that would result in groundwater withdrawal in critical forested areas.
- 9.1.0.14** Develop a plan to minimize development that would result in groundwater withdrawal in critical forested areas.
- 9.1.0.15** Develop a plan to minimize fragmentation of terrestrial and aquatic habitats by roads.
- 9.1.0.16** Develop a plan to minimize new lawns and preserve natural vegetation within and adjacent to critical forest areas.
- 9.1.0.17** Develop a plan to minimize nutrient and effluent loads from aquaculture practices.
- 9.1.0.18** Develop a plan to minimize the effects of road widening and traffic volume increases within critical wildlife habitat areas using CHANJ products.
- 9.1.0.19** Develop a plan to minimize the extent of impervious surfaces as part of new construction to increase water recharge in those areas.
- 9.1.0.20** Develop a plan to minimize the impacts of existing agricultural properties adjacent to and the conversion of forest habitats (terrestrial and aquatic, within or adjacent to critical forests) to agriculture, grazing areas/livestock farms, and plantations.
- 9.1.0.21** Develop a plan to minimize the use of any-sized dam in critical forested areas.
- 9.1.0.22** Incorporate habitat connectivity and preservation of natural areas into state and local land-use policy and the environmental review process to minimize the impacts of transportation and service corridors on fish and wildlife and their habitats.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need
Northern Red Salamander

- 9.1.0.23 Develop a plan to mitigate the effects of transportation barriers by using CHANJ products.
- 9.1.0.24 Develop a plan to prevent livestock from entering water bodies in critical forested habitats.
- 9.1.0.25 Develop a plan to prevent the conversion of forested stream buffers to pastures in critical forested habitats.
- 9.1.0.27 Develop a plan to use wildlife-appropriate culverts in critical forested areas.
- 9.1.0.28 Develop and coordinate state, regional and local plans for suitable lot layout and landscaping to minimize human-wildlife conflicts that also incorporates habitat connectivity and preservation of natural areas.
- 9.1.0.29 Provide GIS or related data, maps, resource inventories, as well as related training, pertaining to the SWAP and it's recommended conservation actions for use or consideration by State, County or municipal planning agencies.
- 9.1.0.30 Incorporate habitat connectivity and preservation of natural areas into state and local land-use policy and the environmental review process to minimize habitat fragmentation and other related threats associated with development.
- 9.1.0.31 Develop wetland restoration plans that consider the life history and needs of wildlife occupying targeted habitats.
- 9.1.0.32 Incorporate aquatic habitat connectivity and water quality/effluent standards into local and state aquaculture plans and BMPs.
- 9.1.0.33 Review the species, threats, action successes, and habitats, and work with partners to revise the 2017 State Wildlife Action Plan for the 2025 resubmittal.

9.2 Organizational strategic and CMS planning

9.2.1 Organizational strategic and operational planning

- 9.2.1.1 Identify and codify legal ORV access areas on state lands.

9.3 Species and habitat management planning

9.3.1 Species management planning

- 9.3.1.3 Develop a management plan to restrict human activity (e.g., recreational, maintenance work, etc.) from sensitive habitats/areas such as avian nesting sites, reptile and amphibian breeding areas (nesting or gestation/birthing and breeding pools, respectively), and bat hibernacula, and federal buffers for marine mammals.
- 9.3.1.4 Develop town plans that avoid impacts to SGCN species and their habitats.
- 9.3.1.5 Develop response plans to address disease outbreaks within wildlife populations, in particular SGCN.
- 9.3.1.7 Develop a rapid response plan for various scenarios (e.g., insect infestations destroying native habitat, wildlife disease) to be implemented upon exotic pathogen introduction or incident.
- 9.3.1.9 Develop a management plan incorporating the effects of pesticides, herbicides and other biological controls on SGCN and their critical and supporting habitats.
- 9.3.1.10 Develop a management plan to combat the impacts of diseases/pathogens impacting SGCN and/or their habitats.
- 9.3.1.13 Develop a management plan to ensure SGCN populations' persistence based on long-term monitoring of resident and migratory SGCN populations and their habitats.
- 9.3.1.14 Create species management plans that will promote the protection and where appropriate, the development of old-growth forest stands with large trees, in particular those within large, contiguous forest tracts.

Northern Red Salamander

- 9.3.1.16 DOD and appropriate state agencies work together to improve DOD Integrated Natural Resource Management Plans (INRMP) to develop strategies to minimize or eliminate disturbances to all SGCN (i.e., beyond their federal requirements) during military activities and to improve SGCN habitat and presence.
 - 9.3.2 Listed species recovery planning
 - 9.3.2.1 Develop proactive species recovery plans for all endangered and threatened species including guidance and objectives pertaining to critical and supporting habitat to meet and maintain recovery goals.
 - 9.3.3 Habitat management planning
 - 9.3.3.6 Develop a management plan for maintaining and enhancing healthy, SGCN-associated terrestrial and aquatic habitats and associated riparian habitats, and to minimize (if not avoid) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
 - 9.3.3.7 Develop a management plan to reduce the impacts of herbivory on native vegetation and the degradation of habitats supporting SGCN by invasive and/or native, over-abundant wildlife species including but not limited to mute swans, Canada geese, beaver and white-tailed deer.
 - 9.3.3.8 Develop a management plan to combat the impacts of diseases/pathogens impacting SGCN and/or their habitats.
 - 9.3.3.9 Develop a response plan to outbreaks using BMPs to control infestations and limit their spread in a way that avoids excessive harm to non-target species.
 - 9.3.3.10 Develop a management plan to ensure SGCN populations' persistence based on long-term monitoring of resident and migratory SGCN populations and their habitats.
 - 9.3.3.11 Develop town plans that avoid impacts to SGCN species and their habitats.
 - 9.3.3.15 Develop a management plan incorporating the effects of pesticides, herbicides and other biological controls on SGCN and their critical and supporting habitats.
 - 9.3.3.16 Develop a management plan to restrict human activity (e.g., recreational, maintenance work, etc.) from sensitive habitats/areas such as avian nesting sites, reptile and amphibian breeding areas (nesting or gestation/birthing and breeding pools, respectively), and bat hibernacula, and federal buffers for marine mammals.
 - 9.3.3.18 In cooperation with species and habitat experts, develop management plans for significant natural and/or unique communities, in particular those supporting SGCN, and provide the information to the landowners/managers (federal, state and local government agencies or non-government organization) for review and implementation.
 - 9.3.3.19 Develop management plans for SGCN inhabiting permanently protected natural lands using available baseline and population trend data.
 - 9.3.3.21 Develop a rapid response plan for various scenarios (e.g., insect infestations destroying native habitat, wildlife disease) to be implemented upon exotic pathogen introduction or incident.
 - 9.3.3.22 Create management plans to minimize and/or prevent wildlife road mortality that will incorporate wildlife passages in conjunction with barrier fencing and, where possible, seasonal closures. Aquatic-associated passages must avoid disturbance to the natural streambeds and riparian habitat, permit high volumes of water to flow freely, and provide adequate travel corridors for terrestrial wildlife, while maintaining stream flow for fish passage. Bridges that span rivers and streambeds and include floodplain habitat on either side of the span to provide travel corridors for terrestrial wildlife are preferred over culverts.

Northern Red Salamander

- 9.3.3.23 Create forest management plans that will promote the protection and/or development of old-growth forest stands with large trees, in particular those within large, contiguous forest tracts.
- 9.3.3.24 Develop a plan to improve the enforcement of policies and/or regulations that protect wetlands, riparian and floodplain areas, and aquatic habitats (including open waters).
- 9.3.3.27 Develop a management plan to expand breeding habitat and connectivity for tiger salamanders and other obligate vernal pool breeders.
- 9.3.3.29 Develop habitat management plans aimed at reducing or eliminating negative impacts of ORVs.
- 9.3.3.32 DOD and appropriate state agencies work together to improve DOD Integrated Natural Resource Management Plans (INRMP) to develop strategies to minimize or eliminate disturbances to all SGCN (i.e., beyond their federal requirements) during military activities and to improve SGCN habitat and presence.
- 9.3.3.34 Include controlled burn prescriptions in forest and stewardship plans to improve wildlife habitat.
- 9.3.3.35 Incorporate habitat connectivity, preservation of natural areas, and the implementation of BMPs into state and local land-use policy environmental review process and energy development plans to minimize habitat fragmentation and related threats associated with solar farms and altered habitats.
- 9.3.3.36 Integrate plans for properly located and timed habitat restoration and management along transportation, energy and service corridors to minimize risks to and benefit wildlife.

11 Technical Assistance

11.1 Environmental review

11.1.1 Review of proposed projects

- 11.1.1.1 Use Biotics database and Landscape Project Mapping in regulatory reviews to ensure protection by applicable laws and regulations.
- 11.1.1.2 Develop smart-growth plans and critical habitat designations that consider SGCN life history requirements and habitat needs, connectivity and health of those habitats, and minimize human-associated disturbances to those habitats and the SGCN inhabiting them.
- 11.1.1.3 Government organizations to thoroughly review wetland restoration plans, applying the most current science for wildlife, habitats and aquatic systems, to assess the impacts to resident and migratory wildlife occupying the targeted habitats.
- 11.1.1.4 Incorporate habitat connectivity and preservation of natural areas into state and local land-use policy and the environmental review process to minimize habitat fragmentation and related threats associated with development.
- 11.1.1.5 Incorporate habitat connectivity and preservation of natural areas into state and local land-use policy and the environmental review process to minimize the impacts of transportation and service corridors on fish and wildlife and their habitats.
- 11.1.1.7 Review proposed construction or other work projects and permit applications, provide recommendations on how to best avoid disturbing sensitive species, and identify actions not permitted.
- 11.1.1.8 Review proposed research projects and permit applications, provide recommendations on how to best avoid disturbing sensitive species, and identify actions not permitted.
- 11.1.1.9 Review strategies for creating or enhancing connectivity (e.g., installing appropriately-sized wildlife passages) between wetlands to allow wildlife to disperse naturally and safely.

Northern Red Salamander

11.1.1.10 Use CHANJ mapping in reviews of proposed energy, mining, transportation and utility service companies/agencies' projects to attempt to maintain habitat connectivity and reduce fragmentation, and identify potential impacts of the projects.

11.1.1.11 Use the best available science (species data, habitat present, site layout options, etc.) when conducting regulatory reviews of proposed offshore energy projects relating to drilling, extraction and distribution of petroleum and gas products to reduce habitat destruction and minimize impacts on wildlife.

11.1.1.12 Use the best available science (species data, habitat present, site layout options, etc.) when conducting regulatory reviews of proposed solar farm projects to reduce habitat fragmentation and minimize impacts on wildlife.

11.1.1.13 Use the best available science (species data, habitat present, wind farm layout options, wind blade impacts on migratory species, location of migration routes, etc.) when conducting regulatory reviews of proposed wind farm projects to minimize impacts on migratory and resident wildlife and reduce habitat fragmentation.

11.1.2 Review of proposed policies and plans

11.1.2.1 Develop smart-growth plans and critical habitat designations that consider SGCN life history requirements and habitat needs, connectivity and health of those habitats, and minimize human-associated disturbances to those habitats and the SGCN inhabiting them.

11.1.2.2 Government organizations to thoroughly review wetland restoration plans, applying the most current science for wildlife, habitats and aquatic systems, to assess the impacts to resident and migratory wildlife occupying the targeted habitats.

11.1.2.3 Incorporate aquatic habitat connectivity and water quality/effluent standards into the environmental review process to help establish policies and plans that minimize the impact of aquaculture on fish and wildlife.

11.1.2.4 Review strategies for creating or enhancing connectivity (e.g., installing appropriately-sized wildlife passages) between wetlands to allow wildlife to disperse naturally and safely.

11.2 Technical assistance

11.2.0 Assorted technical assistance strategies

11.2.0.1 Provide technical support to private and public landowners and land managers for carrying out restoration and management practices aimed at increasing structural habitat diversity.

11.2.0.2 Provide technical support to public and private landowners and land managers for controlling invasive, native and non-native plant species in order to increase structural habitat diversity.

11.2.0.3 Develop state, regional and local BMPs that focus on minimizing habitat fragmentation and human-wildlife conflicts associated with development. Make information available to land developers and private and public landowners for implementation.

11.2.0.5 Provide educational resources, training programs, and expert guidance to private and public landowners and land managers on the threats that herbicides and pesticides pose to aquatic systems and wildlife, and to promote safer usage of such products.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need
Northern Red Salamander

- 11.2.0.6 Provide educational resources, training programs, and on-the-ground guidance to energy, mining, transportation, and utility service agencies/companies and their project and resource managers on habitat creation, enhancement and restoration within and adjacent to project areas, as well as away from and outside of project areas (depending on the target species), by managing vegetation for a variety of species and that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife. Wind farms should address both terrestrial bound and low-flying species. Examples of habitat management include, but are not limited to, integrating short and tall grasses, specific host plants, brush piles, water sources/wetlands, shrubby areas, nesting areas and no-mow set-asides.
- 11.2.0.7 Provide educational resources, training programs, and on-the-ground guidance to energy, mining, transportation, and utility service agencies/companies and their project and resource managers on the importance of maintaining habitat connectivity, minimizing fragmentation, and the use of CHANJ products to help them target areas for such planning.
- 11.2.0.8 Provide educational resources, training programs, and on-the-ground guidance to public and private landowners and land managers on habitat creation and enhancement strategies that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife.
- 11.2.0.9 Provide educational resources, training programs, and on-the-ground guidance to municipalities, land developers, and other land managers and private landowners about the importance of leaving vegetation in place, especially along riparian areas and wildlife movement corridors.
- 11.2.0.10 Provide technical support to private landowners, consultants, and land managers to create customized management plans based on location and SGCN.
- 11.2.0.11 Provide educational resources, training programs, and on-the-ground guidance to private and public landowners and land managers on the benefits of and for creating young forest and early succession habitat for SGCN.
- 11.2.0.12 Provide educational resources and technical support to public landowners and land managers for managing grasslands for grassland-dependent species.
- 11.2.0.13 Provide educational resources and technical support to public landowners, private landowners with sufficient acreage, and land managers to promote the protection and/or development of old-growth forest stands with large trees, in particular those within large, contiguous forest tracts.
- 11.2.0.14 Provide educational resources and technical support to public and private landowners and land managers to promote the protection of wetlands, riparian and floodplain areas, and aquatic habitats (including open waters), and to enhance or restore biologically appropriate buffers.
- 11.2.0.15 Provide educational resources, training programs, and on-the-ground guidance to municipalities, land developers, and other land managers and landowners about the importance of retaining and in an effort to protect, create, enhance and/or restore vegetation along aquatic habitats.
- 11.2.0.16 Provide educational resources and technical support to public and private landowners and land managers to promote the protection of critical SGCN forested habitat and minimize forest edge to benefit interior forest and disturbance-sensitive SGCN.
- 11.2.0.18 Provide educational resources and technical support to public and private landowners and land managers to promote the protection of lands adjacent to fish SGCN habitats and/or aquatic systems feeding into such habitats.

Northern Red Salamander

- 11.2.0.19 Provide educational resources and technical support to public and private landowners and land managers to promote the protection and/or enhancement of scrub-shrub habitats for SGCN.
- 11.2.0.22 Provide educational resources, training programs, and expert guidance to public and private landowners and land managers about lawn alternatives and the importance of natural vegetation and "edge" habitats on developed properties.
- 11.2.0.23 Provide educational resources and technical support to public and private landowners and land managers of lands adjacent to SGCN habitats to promote the protection and/or enhancement of those adjacent habitats to increase the overall size of the "core" area and/or provide a natural buffer, enhancing the suitability of the core area for SGCN, and that connect conserved SGCN habitats.
- 11.2.0.24 Provide educational resources, training programs, and expert guidance to public and private landowners and land managers on how to manage vegetated roadside areas (e.g., mowing, brush-hogging, etc.) on a schedule that avoids peak activity periods for wildlife and therefore, minimizes harm.
- 11.2.0.25 Provide educational resources, training programs, and on-the-ground guidance to resource managers regarding the assessment of and addressing secondary impacts (i.e. ancillary prescribed burns, trespassers, ORV use, mosquitoes, deer, buffers) related to residential and commercial development.
- 11.2.0.26 Make educational resources available to the public that encourage researchers to seek out guidance prior to finalizing proposals and submitting State permit applications to reduce potential impacts on sensitive species.
- 11.2.1 With individuals and groups involved in resource management decision making
 - 11.2.1.1 Engage partners and stakeholders in constructive dialogue regarding the importance of providing and methods to provide technical support for carrying out restoration and management practices aimed at increasing structural habitat diversity.
 - 11.2.1.2 Provide professional training and technical assistance tools (e.g., mapping, guidance documents, justification, etc.) to agencies/divisions/programs within and outside of the NJ DEP regarding the SWAP, and the conservation actions recommended therein to help facilitate SWAP implementation.
 - 11.2.1.3 Provide educational resources, training programs, and on-the-ground guidance to DOD to improve DOD Integrated Natural Resource Management Plans (INRMP) to develop and implement forest management and other practices that minimize disturbances to SGCN (i.e., beyond their federal requirements).
 - 11.2.1.6 Provide educational resources, training programs, and on-the-ground guidance to resource agencies prior to project initiation to ensure wildlife and their habitats are protected to the highest degree possible during construction, and provisions are in place for post-construction habitat use.
- 11.2.2 With private landowners
 - 11.2.2.1 Provide technical support to farming operations and woodland landowners on ways to decrease clean farming (edge-to-edge) practices and create ecotones to benefit bobwhite and other species dependent on early successional habitat.

100 Law and Policy

100. Legislation

100.1.3 Sub-national Level

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need
Northern Red Salamander

- 100.1.3.1 Develop laws and policies to increase protection and biological buffers of wetlands.
- 100.1.3.2 Develop policies for wetland restoration plans that consider life history requirements and needs of wildlife occupying targeted habitats.
- 100.1.3.3 Initiate legislative action to establish an annual budgetary line item designating funds to support programs focused on long-term research and monitoring of wildlife diseases.

100.1.4 County and Local

- 100.1.4.2 Secure and increase the effective size of SGCN habitats and connect conserved SGCN habitats through local ordinances.
- 100.1.4.3 Expand the acreages and enhance the effective size of SGCN habitats by protecting adjacent habitats that contribute to the overall size of the "core" area and/or provide a natural buffer, enhancing the suitability of the core area for SGCN through local ordinances.
- 100.1.4.4 Secure wetlands, riparian and floodplain areas, and aquatic habitats (including open waters) and biologically appropriate buffers through local ordinances.
- 100.1.4.5 Secure SGCN-inhabited/used freshwater wetlands and biologically appropriate buffers through local ordinances.
- 100.1.4.7 Secure vernal pools and biologically appropriate buffers through local ordinances.
- 100.1.4.9 Secure existing and developing old-growth forest stands with large trees, in particular those within large, contiguous forest tracts, through local ordinances.
- 100.1.4.10 Secure critical SGCN forested habitat and minimize forest edge to benefit interior forest and disturbance-sensitive SGCN through local ordinances.
- 100.1.4.11 Secure riparian areas through local ordinances.
- 100.1.4.12 Secure scrub-shrub habitats for SGCN through local ordinances.
- 100.1.4.13 Encourage municipal laws regulating domestic pets that may predate on wildlife.
- 100.1.4.14 Adopt/pass local ordinances which require assessing and addressing secondary impacts (i.e. ancillary prescribed burns, trespassers, ORV use, mosquitoes, deer, buffers) on biological resources when revising planning/zoning documents or granted site plan/subdivision approvals.
- 100.1.4.15 Incorporate habitat connectivity and the preservation of natural areas into state and local land-use policy and the environmental review process to minimize habitat fragmentation and related threats associated with development.

100.1.5 Scale Unspecified

- 100.1.5.1 Develop laws and policies to increase protection and biological buffers of wetlands.
- 100.1.5.2 Develop policies for wetland restoration plans that consider life history requirements and needs of wildlife occupying targeted habitats.
- 100.1.5.3 Incorporate aquatic habitat connectivity and water quality/effluent standards into state/local policy to minimize the impact of aquaculture on fish and wildlife.
- 100.1.5.4 Incorporate habitat connectivity and preservation of natural areas into state and local land-use policy and the environmental review process to minimize the impacts of transportation and service corridors on fish and wildlife and their habitats.

100. State Regulations

100.3.0 Regulatory initiatives for species and habitat protection

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Northern Red Salamander

- 100.3.0.1 Develop (and/or improve) policies and/or regulations that will promote the reduction of run-off and point and non-point source pollution into NJ's aquatic systems (streams, rivers, lakes/ponds, bays, ocean, wetlands, etc.).
- 100.3.0.5 Develop policies that will promote improved and secure habitat connections between conserved SGCN habitats.
- 100.3.0.6 Develop policies that will promote expanding acreages and enhancing the effective size of SGCN habitats by providing biologically appropriate buffers of native habitat surrounding SGCN habitats.
- 100.3.0.8 Develop policies and/or regulations with the objective of protecting significant natural and/or unique communities in perpetuity.
- 100.3.0.9 Secure mitigation that creates an environmental benefit for losses of SGCN and their habitats.
- 100.3.0.11 Develop policies that will ensure the protection and/or development of old-growth forest stands with large trees, in particular those within large, contiguous forest tracts.
- 100.3.0.12 Develop policies that promote the preservation and protection of critical SGCN forested habitat and minimize forest edge to benefit interior forest and disturbance-sensitive SGCN.
- 100.3.0.13 Develop policies that will promote protecting and restoring riparian areas.
- 100.3.0.14 Develop policies and/or regulations that increase the protective buffers of wetlands, riparian and floodplain areas, and aquatic habitats (including open waters) to biologically appropriate distances to benefit SGCN that rely upon these habitats and improve the function of the [associated] aquatic systems.
- 100.3.0.18 Develop policies for conserved lands that prohibit planting and supports the control of non-native vegetation and invasive, native vegetation.
- 100.3.0.20 Develop policies and/or regulations that prohibit the presence of managed cat colonies and trap, neuter and release programs in or near critical wildlife habitats.
- 100.3.0.21 Develop policies that minimize wildlife road mortality through: 1) Requiring the integration of wildlife passages into all new and repaired roads, in particular those areas that will connect SGCN habitats, 2) Requiring current fish/wildlife passages be improved and maintained in perpetuity, 3) Supporting seasonal road closures, in particular for unimproved roads, 4) Supporting projects that work to improve connectivity of SGCN habitats such as land conservation through acquisition or other means.
- 100.3.0.26 Adopt regulations requiring the combined sewer overflow alternative analyses required by regulation address potential impacts to wildlife in watercourses or receiving water bodies.
- 100.3.0.31 Create or expand tax-based incentive programs available to private, agricultural, commercial, industrial or governmental landowners and land managers to include or provide for incentives for the maintenance and/or improvement to existing habitat via the endorsement of wildlife-related BMPs.
- 100.3.0.41 Explore all State regulatory requirements for mitigation, restoration, habitat management, etc. to ensure they prohibit the use of specified invasive or other problematic plant species.
- 100.3.0.42 Fully adopt the former Storm water Management Rules' 300ft buffer requirements into the Flood Hazard Area Control Act Rules.
- 100.3.0.43 Identify and address (amend) regulatory impediments to beneficial habitat management.
- 100.3.0.44 Incorporate requirements for technical support and funding for mitigation or restoration efforts so as to be consistent with existing regulations.

Northern Red Salamander

- 100.3.0.45 Increase the controlled burn season to focus on restoring vegetative communities.
- 100.3.0.46 Investigate and/or develop inter-agency Memorandum of Agreements to share common data stored or managed in program-specific databases.
- 100.3.0.48 Propose new State law or regulation mandating that a State-level "development impact fee" be assessed on all new development approved by municipalities (via the Municipal Land Use Law processes), and dedicate such monies to the development and implementation of regional Habitat Conservation Plans (or existing plans/programs serving the same regional function).
- 100.3.0.50 Retain endangered, threatened and special concern wildlife and habitat protection measures in the Water Quality Management Program Rules.
- 100.3.0.52 Revise existing and/or incorporate new State land use regulations that specifically address the impacts of new or expanded energy sitings and facilities.
- 100.3.0.53 Revise existing and/or incorporate new State land use regulations that specifically address the impacts of new or expanded rights-of-way corridors associated with energy transport/transmission.
- 100.3.0.57 Develop regulations that when implemented will improve and secure habitat connections between conserved SGCN habitats.
- 100.3.0.58 Develop regulations that when implemented will promote the expansion of acreages and enhancement of the effective size of SGCN habitats by providing biologically appropriate buffers of native habitat surrounding SGCN habitats.
- 100.3.0.60 Develop regulations that when implemented will protect significant natural and/or unique communities in perpetuity.
- 100.3.0.62 Develop regulations that when implemented will protect existing old-growth forest stands with large trees and/or stands that are being actively managed for old growth forests, in particular those within large, contiguous forest tracts.
- 100.3.0.63 Develop regulations that when implemented will preserve and protect critical SGCN forested habitat and minimize forest edge to benefit interior forest and disturbance-sensitive SGCN.
- 100.3.0.64 Develop regulations that when implemented will protect and restore riparian areas.
- 100.3.0.65 Develop regulations that when implemented will protect and restore scrub-shrub habitats to benefit shrub-dependent SGCN.
- 100.3.0.67 Develop regulations for lighting of/on tall structures that will minimize harm to and/or disorientation of wildlife, and enforce within state, county and local permitting processes.
- 100.3.0.68 Develop regulations that when implemented will prohibit the presence of managed cat colonies and trap, neuter and release programs in or near critical wildlife habitats.
- 100.3.0.69 Develop regulations that when implemented will minimize wildlife road mortality.
- 100.3.0.72 Develop regulations that require permit applicants and/or review agencies to assess the cumulative and synergistic effects of a proposed project (i.e., "secondary effects"), both over time and over a larger spatial scale than the site itself.

100. State Agency Policy Integration

100.4.0 Policy initiatives for species and habitat protection

- 100.4.0.1 Create any necessary policy changes (including those to incentive programs) to encourage the integration of SWAP actions associated with SGCN priority habitats as a deliberative factor in agencies' actions (e.g., environmental and land management review processes, land acquisition and management).

Northern Red Salamander

- 100.4.0.2 Create a policy that requires the NJ DEP to incorporate scientific information regarding climate change and sea level rise (e.g., predictions, habitat management/acquisition efforts to enhance resilience to inundation) on their websites and to work with other government entities, conservation organizations and other stakeholders to work together to collaboratively use social media campaigns to grow a constituency of NJ residents who have an elevated ecological and climate consciousness.
- 100.4.0.4 Create a policy that requires the use of wildlife habitat and corridor mapping products for both regulatory use when conducting project reviews and planning/siting new or expanded rights-of-way projects.
- 100.4.0.8 Develop a white paper addressing the impacts that existing, new or expanded rights-of-way have upon wildlife, wildlife habitats and habitat connectivity.
- 100.4.0.9 Develop and implement policies to minimize the removal of coarse, woody debris in terrestrial, aquatic and riparian habitats in order to benefit wildlife.
- 100.4.0.13 Develop policies for different circumstances (e.g., roadsides and medians, riparian, aquatic and terrestrial habitats) that outline appropriate habitat/vegetation management strategies and schedules to minimize risks to and benefit wildlife.
- 100.4.0.16 Develop policies to implement habitat management strategies that will increase the structural diversity surrounding areas used for energy, mining, and transportation and service corridors which include but are not limited to the presence of short and tall grasses, specific host plants, brush piles, water sources/wetlands, shrubby areas, nesting areas, and no-mow set-
- 100.4.0.17 Develop policies to implement habitat management strategies, including prescribed burns, that will increase the structural diversity on preserved farmlands, state-owned agricultural lands, forests, parks and wildlife management areas, and any conserved lands purchased with the assistance of Green Acres and Federal Land & Water Conservation Fund monies to control and reduce the impacts of invasive, non-native species in order to increase structural habitat diversity.
- 100.4.0.18 Develop policies to minimize the extent of infrastructure associated with energy and service corridors or areas (e.g., wind and solar farms, pipelines, utility lines) and that require the implementation of habitat management strategies that will increase the structural diversity in the area including (e.g., the presence of short and tall grasses, specific host plants, brush piles, water sources/wetlands, shrubby areas, nesting areas, and no-mow set-asides).
- 100.4.0.19 Develop regulations that will minimize the creation of new barriers, remove or replace current barriers with appropriately-sized systems to accommodate wildlife dispersal, and to minimize road widening and traffic volume increases within critical wildlife habitat areas.
- 100.4.0.20 Develop state regulations that require energy developers and utility service companies to implement habitat management strategies that will increase the structural diversity of the habitat, minimize habitat fragmentation and commercial infrastructure, and minimize the loss, alteration and/or degradation of the habitat and adjacent lands when working on preserved farmlands, state-owned agricultural lands, forests, parks and wildlife management areas, and any conserved lands purchased with the assistance of Green Acres and Federal Land & Water Conservation Fund monies.
- 100.4.0.21 Ensure that Section 303(d) of the Clean Water Act and applicable State statutory/regulatory requirements for surface water pollutant budgets are being met by monitoring and enforcing regulatory Total Maximum Daily Load (TMDL) targets established within regional Water Quality Management Plans.
- 100.4.0.22 Work with NJ DEP's Division of Land Use Regulation to ensure protection of listed species and their habitats during stream cleaning events.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Northern Red Salamander

- 100.4.0.25 Develop policies that require permit applicants and/or review agencies to assess the cumulative and synergistic effects of a proposed project (i.e., "secondary effects"), both over time and over a larger spatial scale than the site itself.

Pine Barrens Snakes

Focal species that comprise this Conservation Target:

Corn Snake

Northern Pine Snake

Northern Scarlet Snake

Threats and Action Drivers associated with this Conservation Target:

1 Residential and Commercial Development

1.1 Housing and Urban Areas

1.1.1 Land conversion from natural habitat to urban and other residential areas (large and small scale) (Avg. Score: 2.67)

NJ Specific Threats: 1.1.1.1 Fragments terrestrial and aquatic habitats making the area unsuitable for area-sensitive species and inhibit dispersal of animals, reducing gene flow.
1.1.1.2 Loss, alteration and/or degradation of habitat.
1.1.1.3 Lot layout, design and/or landscaping may create conditions that increase wildlife-human conflict.
1.1.1.4 Increased risk of vehicle strikes/mortality to terrestrial-bound and some bird species.
1.1.1.6 Impervious surfaces can cause an increased risk of floods, flash floods and storm damage that degrade terrestrial and aquatic habitats.

1.2 Commercial and Industrial Areas

1.2.1 Land conversion from natural habitat to commercial or industrial areas (large and small scale) (Avg. Score: 2.67)

NJ Specific Threats: 1.2.1.1 Fragments terrestrial and aquatic habitats making the area unsuitable for area-sensitive species and inhibit dispersal of animals, reducing gene flow.
1.2.1.2 Loss, alteration and/or degradation of habitat.
1.2.1.3 Lot layout, design and/or landscaping may create conditions that increase wildlife-human conflict.
1.2.1.4 Increased risk of vehicle strikes/mortality to terrestrial-bound and some bird species.
1.2.1.6 Impervious surfaces can cause an increased risk of floods, flash floods and storm damage that degrade terrestrial and aquatic habitats.

1.3 Tourism and Recreational Areas

1.3.1 Land conversion from natural habitat to recreation or tourism areas (large and small scale) (Avg. Score: 1.00)

NJ Specific Threats: 1.3.1.1 Fragments terrestrial and aquatic habitats making the area unsuitable for area-sensitive species and inhibit dispersal of animals, reducing gene flow.
1.3.1.2 Loss, alteration and/or degradation of habitat.
1.3.1.3 Lot layout, design and/or landscaping may create conditions that increase wildlife-human conflict.
1.3.1.5 Impervious surfaces can cause an increased risk of floods, flash floods and storm damage that degrade terrestrial and aquatic habitats.

2 Agriculture and Aquaculture

2.1 Annual and Perennial Crops (non-timber)

2.1.1 Shifting Agriculture (Avg. Score: 2.00)

NJ Specific Threats: 2.1.1.1 Conversion of low-intensity agriculture to intensive agriculture (e.g., tree nursery, row crop) degrades habitat, especially for early-successional species.

Pine Barrens Snakes

2.1.2 Small-holder Farming (Avg. Score: 1.00)

- NJ Specific Threats:** 2.1.2.1 Conversion of low-intensity agriculture to intensive agriculture (e.g., tree nursery, row crop) degrades habitat, especially for early-successional species.
- 2.1.2.2 Fragments terrestrial and aquatic habitats.
- 2.1.2.4 Agricultural practices (e.g., mechanized, row-crop agriculture) can cause direct mortality to wildlife when harvesting takes places.

2.1.3 Agro-industry (Avg. Score: 2.00)

- NJ Specific Threats:** 2.1.3.1 Conversion of low-intensity agriculture to intensive agriculture (e.g., tree nursery, row crop) degrades habitat, especially for early-successional species.
- 2.1.3.2 Fragments terrestrial and aquatic habitats.
- 2.1.3.3 Agricultural practices (e.g., mechanized, row-crop agriculture) can render lands unsuitable for most wildlife due to soil degradation and erosion.

2.2 Wood and Pulp Plantations

2.2.1 Small Holder (Avg. Score: 2.00)

- NJ Specific Threats:** 2.2.1.1 Conversion of native forests to plantations decreases the habitat quality for forest-dependent species.
- 2.2.1.2 Tree harvesting can cause direct mortality to wildlife, especially if done during peak activity periods or vulnerable life stages (e.g., denning, nesting, gestation/birthing, basking, roosting, pre-volancy, etc.).

2.2.2 Agro-industry Plantations (Avg. Score: 2.00)

- NJ Specific Threats:** 2.2.2.1 Conversion of native forests to plantations decreases the habitat quality for forest-dependent species.
- 2.2.2.2 Tree harvesting can cause direct mortality to wildlife, especially if done during peak activity periods or vulnerable life stages (e.g., denning, nesting, gestation/birthing, basking, roosting, pre-volancy, etc.).

2.3 Livestock Farming and Ranching

2.3.2 Small-holder Grazing (Avg. Score: 1.00)

- NJ Specific Threats:** 2.3.2.1 Inappropriately located, newly created horse/livestock farms may fragment forest habitats.

2.3.3 Agro-industry Grazing (Avg. Score: 2.00)

- NJ Specific Threats:** 2.3.3.1 Inappropriately located, newly created horse/livestock farms may fragment forest habitats.

3 Energy Production and Mining

3.1 Oil and Gas Facilities and Pipelines

3.1.1 Distribution processes of petroleum and other liquid hydrocarbons (Avg. Score: 2.00)

- NJ Specific Threats:** 3.1.1.1 Fragments terrestrial and aquatic habitats.
- 3.1.1.2 Loss, alteration and/or degradation of habitat.
- 3.1.1.3 Increased risk of oil spills.
- 3.1.1.4 Increased noise pollution.
- 3.1.1.5 Increased vehicular and ship traffic associated with construction and operations, and therefore an increased risk of wildlife mortality from strikes.
- 3.1.1.6 Increased risk of collision between marine mammals, sea turtles and fish and the marine-based structures/facilities.

3.1.2 Natural gas distribution processes

(Avg. Score: 2.00)

- NJ Specific Threats:** 3.1.2.1 Fragments terrestrial and aquatic habitats.
- 3.1.2.2 Loss, alteration and/or degradation of habitat.
- 3.1.2.3 Increased risk of gas leaks and explosions.
- 3.1.2.4 Increased noise pollution.
- 3.1.2.5 Increased vehicular and ship traffic associated with construction and operations, and therefore an increased risk of wildlife mortality from strikes.
- 3.1.2.6 Increased risk of collision between marine mammals, sea turtles and fish and the marine-based structures/facilities.

3.2 Mining and Quarrying

3.2.2 Surface Mining - Rock Quarry (and sand quarries)

(Avg. Score: 2.00)

- NJ Specific Threats:** 3.2.2.1 Fragments terrestrial and aquatic habitats.
- 3.2.2.2 Loss, alteration and/or degradation of terrestrial and aquatic habitats.
- 3.2.2.3 Increased risk of vehicle strikes/mortality to wildlife.

3.3 Renewable Energy

3.3.1 Wind Power

(Avg. Score: 2.00)

- NJ Specific Threats:** 3.3.1.2 Fragments terrestrial habitats.
- 3.3.1.3 Loss, alteration and/or degradation of habitat.
- 3.3.1.4 Increased commercial infrastructure.

3.3.2 Solar Power

(Avg. Score: 3.00)

- NJ Specific Threats:** 3.3.2.1 Fragments terrestrial habitats.
- 3.3.2.2 Loss, alteration and/or degradation of habitat.
- 3.3.2.3 Increased commercial infrastructure.

3.4 Conventional Power Plants

3.4.0 Conventional Power Plants

(Avg. Score: 1.00)

- NJ Specific Threats:** 3.4.0.2 Loss, alteration and/or degradation of habitat due to new or the expansion of current facilities.

4 Transportation and Service Corridors

4.1 Roads and Railroads

4.1.1 Land conversion from natural habitat to roads and railroads (large and small scale) (Avg. Score: 3.00)

- NJ Specific Threats:** 4.1.1.1 Fragments terrestrial and aquatic habitats making the landscape unsuitable for area-sensitive species and inhibiting dispersal of non-volant animals, reducing gene flow.
- 4.1.1.2 Loss, alteration and/or degradation of habitat associated with road and railroad construction and maintenance, and degradation of adjacent habitats.
- 4.1.1.3 Re-establishment of abandoned railroad lines may displace wildlife, in particular, less mobile species using the area to fulfill critical life history requirements.
- 4.1.1.4 Re-establishment of abandoned railroad lines may increase the risk of direct mortality on wildlife.

4.1.2 Movement of cars and other vehicles on roads and railroads (large and small scale) (Avg. Score: 3.00)

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Pine Barrens Snakes

NJ Specific Threats: 4.1.2.1 Increased vehicle traffic increases the risk of wildlife mortality from strikes.

4.2 Utility and Service Lines

4.2.1 Land conversion from natural habitat to utility and other service lines (large (Avg. Score: 2.00)
and small scale) or communication towers and associated access roads

NJ Specific Threats: 4.2.1.1 Fragments terrestrial and aquatic habitats making the landscape unsuitable for area-sensitive species, inhibiting dispersal of non-volant animals, reducing gene flow, and creating barriers to fish when service line-associated roads cross streams (e.g., bridges, culverts, fords, etc.).

4.2.1.2 Loss, alteration and/or degradation of habitat associated with rights-of-way construction and maintenance, and degradation of adjacent habitats.

4.2.2 Management of rights-of-way or communication tower facilities and/or (Avg. Score: 2.00)
their associated access roads

NJ Specific Threats: 4.2.2.1 Improper or poorly scheduled vegetation management can cause direct mortality to and may reduce productivity of wildlife.

5 Biological Resource Use

5.1 Hunting and Collecting Terrestrial Animals

5.1.1 Intentional Use (Avg. Score: 3.00)

NJ Specific Threats: 5.1.1.1 Illegal collection of wildlife can have detrimental impacts on populations.

5.1.3 Persecution/Control (Avg. Score: 2.33)

NJ Specific Threats: 5.1.3.1 Wanton killing of perceived dangerous and/or undesirable animals.

5.2 Gathering Terrestrial Plants

5.2.2 Unintentional effects (Avg. Score: 1.00)

NJ Specific Threats: 5.2.2.1 Stepping on nests or young/hatchling animals.

5.2.3 Control (Avg. Score: 0.33)

NJ Specific Threats: 5.2.3.2 Clearing of scrub-shrub vegetation [and snags] diminishes cover and nesting habitat.

5.3 Logging and Wood Harvesting

5.3.1 Intentional Use (subsistence/small scale) (Avg. Score: 1.00)

NJ Specific Threats: 5.3.1.1 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN may fragment their terrestrial habitats.

5.3.1.2 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN may cause the loss, alteration and/or degradation of wildlife habitat.

5.3.1.5 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN and unsustainable forestry practices may decrease structural diversity and biomass leading to reduced biodiversity and ecological integrity.

5.3.2 Intentional Use (large scale) (Avg. Score: 2.00)

NJ Specific Threats: 5.3.2.1 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN may fragment their terrestrial habitats.

5.3.2.2 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN may cause the loss, alteration and/or degradation of wildlife habitat.

5.3.2.5 Forestry and/or logging practices that are poorly planned/implemented or planned without consideration for SGCN and unsustainable forestry practices may decrease structural diversity and biomass leading to reduced biodiversity and ecological integrity.

5.3.3 Unintentional effects (subsistence/small scale) (Avg. Score: 2.00)

NJ Specific Threats: 5.3.3.1 Direct mortality of wildlife, direct loss of suitable habitats (roost, foraging, shelter, etc.), and can disrupt sensitive species, decreasing the likelihood of success and/or reproduction.

5.3.4 Unintentional effects (large scale) (Avg. Score: 2.00)

NJ Specific Threats: 5.3.4.1 Direct mortality of wildlife, direct loss of suitable habitats (roost, foraging, shelter, etc.), and can disrupt sensitive species, decreasing the likelihood of success and/or reproduction.

5.3.4.2 Extensive infrastructure and larger equipment requirements present a potential risk of direct injury/mortality to wildlife.

5.3.4.5 Lack of appropriate, sustainable forest management can lead to a decrease in forest habitat diversity, degraded habitat for many forest species, the loss of habitat for early-successional species, and/or the loss of unique habitats for species that need canopy breaks and multi-aged tree composition to fulfill various life history requirements.

6 Human Intrusions and Disturbance

6.1 Recreational Activities

6.1.1 Off-road vehicles (motorized and non-motorized) (Avg. Score: 2.00)

NJ Specific Threats: 6.1.1.1 Inappropriate use of off-road vehicles creates new roads/trails which fragments habitat.

6.1.1.2 Inappropriate use of off-road vehicles can degrade terrestrial and aquatic habitat and reduce the suitability of adjacent habitats for wildlife.

6.1.1.3 Increased risk of harassment that results in a change in wildlife behavior and/or direct mortality from vehicle strikes.

6.1.1.4 Increased noise pollution.

6.1.1.6 Off-road vehicles can be a mechanism of transference of wildlife diseases and invasive plant species if gear and apparel are not properly sanitized between sites.

6.1.5 Wildlife observation and photography (Avg. Score: 1.67)

NJ Specific Threats: 6.1.5.1 Improperly conducted recreational activities may disrupt normal wildlife behaviors which can result in reduced reproductive success or survival, abandonment of critical sites, etc.

6.1.5.2 Participants may introduce wildlife diseases and invasive plant species when gear and apparel is not properly sanitized between sites.

6.1.7 Other (Avg. Score: 2.00)

NJ Specific Threats: 6.1.7.2 Human presence in sensitive areas may introduce wildlife diseases or pathogens into the system.

6.2 Military Exercises

6.2.1 Military exercises (Avg. Score: 2.00)

NJ Specific Threats: 6.2.1.1 Military testing and training exercises may inflict disturbance and potential physical harm to wildlife.

6.2.1.3 Lack of opportunity for non-federal wildlife managers to influence activities on military bases may result in detrimental impacts to SGCN and/or missed opportunities to engage in projects that benefit SGCN.

6.3 Work and Other Activities

6.3.1 Unauthorized research projects at significant habitats (Avg. Score: 2.00)

NJ Specific Threats: 6.3.1.1 Participants may introduce wildlife diseases and invasive plant species when gear and apparel is not properly sanitized between sites.

6.3.1.2 Accidental trampling of nests, eggs/egg masses, and unseen individuals may impact reproductive success or cause direct mortality to SGCN.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Pine Barrens Snakes

- 6.3.1.3 Activities conducted without proper precautions may disturb and disrupt normal wildlife behaviors, which may impact reproductive success or survival, cause abandonment of critical sites, etc.

6.3.2 Authorized research projects at significant habitats (Avg. Score: 2.00)

- NJ Specific Threats:** 6.3.2.2 Participants may introduce wildlife diseases and invasive plant species when gear and apparel is not properly sanitized between sites.

- 6.3.2.3 Accidental trampling of nests, eggs/egg masses, and unseen individuals may impact reproductive success or cause direct mortality to SGCN.

- 6.3.2.4 Activities conducted without proper precautions may disturb and disrupt normal wildlife behaviors, which may impact reproductive success or survival, cause abandonment of critical sites, etc.

6.3.3 Other "work" unrelated to research (Avg. Score: 1.00)

- NJ Specific Threats:** 6.3.3.1 Construction projects may disrupt normal wildlife behavior which can result in reduced reproductive success or survival, abandonment of critical sites, etc. (e.g., bridge-nesting birds).

- 6.3.3.4 Workers may introduce wildlife diseases and invasive plant species when gear and apparel is not properly sanitized between sites.

7 Natural Systems Modifications

7.1 Fire and Fire Suppression

7.1.1 Increase in Fire Frequency/Intensity (Avg. Score: 2.00)

- NJ Specific Threats:** 7.1.1.1 Increase in frequency and intensity of wild fires as a result of droughts and heat waves drying out vegetation and litter.

- 7.1.1.2 Increase in frequency of wild fires as a result of illegal activities.

- 7.1.1.3 Unnatural fire regimes occurring as a result of military exercises.

- 7.1.1.4 Lack of diversity in age structure and composition of vegetation due to expansive, frequent fires.

7.1.2 Suppression of Fire Frequency/Intensity (Avg. Score: 2.67)

- NJ Specific Threats:** 7.1.2.1 Shift in vegetative communities as a result of suppression of natural fires.

- 7.1.2.2 Lack of diversity in age structure and composition of vegetation due to the suppression of fire.

7.2 Dams and Water Management/Use

7.2.12 Culverts (Avg. Score: 1.00)

- NJ Specific Threats:** 7.2.12.1 Improper design, placement, installation and maintenance of culverts and other stream crossing structures can impede or prevent the movements of terrestrial organisms and can restrict or limit stream flow, impeding the movement of aquatic organisms along riparian corridors.

7.3 Other Ecosystem Modifications

7.3.2 Inappropriate timing of mowing (Avg. Score: 2.00)

- NJ Specific Threats:** 7.3.2.1 Increased risk of direct mortality and/or reduced productivity of wildlife, as well as reduced use by migrating species.

7.3.3 Removal of coarse woody debris (streams, forests, scrub-shrub habitats) (Avg. Score: 1.33)

- NJ Specific Threats:** 7.3.3.2 Decreases habitat and/or corridor suitability due to limited or absent shelter and foraging habitat.

- 7.3.3.3 Removal of dead trees (snags), large felled logs (i.e., those > 12" dbh), and other downed woody material diminishes nesting, roosting, and sheltering options for wildlife, and increases the ease at which deer can browse regenerating vegetation.

- 7.3.3.4 Decreases available basking, shelter, and foraging habitats.

7.3.4 Lack of natural disturbance patterns or ecosystem functions due to species loss (Avg. Score: 1.00)

NJ Specific Threats: 7.3.4.5 The lack of forest disturbance minimizes the diversity of herbaceous vegetation and other shrubs and trees that need a lot of sunlight to grow.

7.3.5 Poor habitat management (Avg. Score: 3.00)

NJ Specific Threats: 7.3.5.1 Improper or poorly scheduled maintenance of man-made corridors (e.g., roadsides and medians) can cause direct mortality to and may reduce productivity of wildlife.

7.3.5.3 Vegetation clearing removes terrestrial and riparian corridors for animal movement, shelter, and resting areas.

7.3.5.5 Habitat management that alters or removes vegetation without implementing long-term management increases the risk of invasive and exotic plants establishing themselves, outcompeting native vegetation.

7.3.5.6 Habitat management, including that which occurs on public and private lands, that does not consider timing and species' behaviors can result in the direct mortality and/or alteration or loss of habitat.

7.3.5.7 Improperly planned habitat management and/or mitigation efforts along roadsides and within the medians can attract wildlife and increase the risk of vehicle strikes.

7.3.5.12 Lack of diversity in age structure and composition of vegetation due to lack of natural disturbances and/or vegetation management.

7.3.5.14 Intentional felling and removal of dead standing trees or snags eliminates resting, nesting or feeding habitat, and precludes the snags eventual contribution to coarse woody debris and forest floor structure and habitat.

7.3.5.15 Lack of funding, incentives, or technical guidance resources to proactively manage land to benefit SGCN wildlife.

8 Invasive and Other Problematic Species, Genes and Diseases

8.1 Invasive Non-native/ Alien Species/ Diseases

8.1.1 Unspecified Species (Avg. Score: 1.00)

NJ Specific Threats: 8.1.1.1 Displace or outcompete native species for resources.

8.1.1.2 Alters, degrades and/or reduces the structural diversity of the natural composition of the landscape, including aquatic systems.

8.1.1.3 Invasive, non-native insects can damage native vegetation at a large scale, leading to die-offs, altering the ecological community.

8.1.1.4 Invasive, non-native animals increase the risk of predation on native animals and/or herbivory on native vegetation.

8.1.1.5 Invasive, non-native animals and plants increase the risk of introduction and transference of diseases

8.1.1.6 Invasive, non-native plants may create physical barriers for some species.

8.1.4 Invasive non-native terrestrial/wetland animals (Avg. Score: 1.00)

NJ Specific Threats: 8.1.4.1 Displace or out-compete native species for resources (food, shelter), alter the composition of the native landscapes/aquatic systems, diminish habitat suitability and reduce ecological integrity of natural communities, and may introduce disease into a population.

8.1.4.2 Free-roaming and feral domestic animals such as cats and dogs causes direct mortality of wildlife and disturbance to wildlife breeding and resting areas.

8.1.5 Invasive non-native terrestrial/wetland plants (Avg. Score: 1.00)

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Pine Barrens Snakes

NJ Specific Threats: 8.1.5.1 Displace or out-compete native species for resources (food, light, shelter), alter the composition of the native landscapes/aquatic systems, diminish habitat suitability and reduce ecological integrity of natural communities, and may introduce disease into a population.

8.1.6 Invasive non-native fungal/bacterial diseases (Avg. Score: 1.00)

NJ Specific Threats: 8.1.6.1 The introduction of non-native fungal and bacterial diseases threatens native populations and ecosystems.

8.2 Problematic Native Species/Diseases

8.2.1 Unspecified Species (Avg. Score: 1.00)

NJ Specific Threats: 8.2.1.1 Overabundant native insects can damage native vegetation at a large scale, leading to die-offs, altering the ecological community.

8.2.1.2 Invasive pathogens and insects may increase in range and abundance as limiting factors (such as temperature) are altered as a result of climate change.

8.2.1.4 Human-subsidized native species can become overabundant, increasing predation on other native wildlife and/or altering the ecological community.

8.2.2 Named Species (Avg. Score: 1.00)

NJ Specific Threats: 8.2.2.2 Human-subsidized native species can become overabundant, increasing predation on other native wildlife and/or altering the ecological community.

8.4 Problematic Species/Diseases of Unknown Origin

8.4.1 Unspecified Species (Avg. Score: 1.00)

NJ Specific Threats: 8.4.1.1 Non-native or poorly understood diseases and parasites could potentially impact native animals.

8.4.2 Named Species (Avg. Score: 2.00)

NJ Specific Threats: 8.4.2.2 Diseases of unknown origin, such as snake fungal disease and Ranavirus, can cause significant mortality among native animal populations.

8.5 Viral/Prion-induced Diseases

8.5.1 Unspecified Species (Disease) (Avg. Score: 1.00)

NJ Specific Threats: 8.5.1.1 There is a large knowledge gap regarding the existence of, or potential for, other diseases impacting native wildlife.

8.5.2 Named Species (Disease) (Avg. Score: 2.00)

NJ Specific Threats: 8.5.2.1 Diseases such as West Nile Virus, arenavirus, sudden oak death, Avian Influenza, and snake fungal disease cause morbidity or mortality to native populations.

8.6 Diseases of Unknown Cause

8.6.0 Unknown Diseases (Avg. Score: 1.00)

NJ Specific Threats: 8.6.0.1 Diseases yet to be identified by pathologists and virologists cause decreased fitness or mortality to native populations.

9 **Pollution**

9.2 Industrial and Military Effluents

9.2.1 Oil Spills (Avg. Score: 1.00)

NJ Specific Threats: 9.2.1.1 Oil spills render resting, breeding and foraging habitats temporarily unavailable to wildlife, altering normal wildlife behavior.

9.2.1.2 Oil spills have long term effects on habitats and damage ecological processes that can cause local wildlife population declines and impaired foraging or reproduction.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Pine Barrens Snakes

9.2.1.3 Oil spills cause external oiling of wildlife and ingestion of oil, both of which can injure or kill wildlife.

9.2.3 Other (Avg. Score: 1.00)

NJ Specific Threats: 9.2.3.2 Chemical spills have long term effects on habitats and damage ecological processes that can cause local wildlife population declines and impaired foraging or reproduction.

9.2.3.3 Chemical spills may render resting, breeding and foraging habitats temporarily unavailable to wildlife, altering normal wildlife behavior.

9.2.4 Other: Hydrofracturing (Avg. Score: 1.00)

NJ Specific Threats: 9.2.4.2 Uncontrolled effluents escaping from hydrofracturing facilities can cause injury to wildlife and alter normal behaviors.

9.2.5 Other: Industrial toxic settling ponds (Avg. Score: 1.00)

NJ Specific Threats: 9.2.5.1 Surficial or open industrial effluent ponds can cause injury or death to wildlife that become exposed through ingestion or submersion.

9.3 Agricultural and Forestry Effluents

9.3.2 Soil Erosion and Sedimentation (Avg. Score: 1.00)

NJ Specific Threats: 9.3.2.2 Soil erosion and sedimentation limit the re-establishment of plants needed by terrestrial wildlife as cover and a food base.

9.3.3 Herbicides and Pesticides (Avg. Score: 1.00)

NJ Specific Threats: 9.3.3.2 Use of rodenticides can cause secondary actions of injury and death to animals in the course of scavenging.

9.3.3.3 Use of pesticides can directly harm non-target species through direct contact and/or by reducing and/or contaminating their food supply.

9.3.5 Control of insect pests and plants leading to mortality of non-target species not associated with agriculture (Avg. Score: 1.00)

NJ Specific Threats: 9.3.5.1 Use of pesticides, insecticides, and/or herbicides can directly harm non-target species, such as amphibians and beneficial invertebrates through direct contact and/or by reducing and/or contaminating their food supply.

9.3.5.4 Improper use of current insecticides, such as those containing esfenvalerate, prallethrin, or piperonyl butoxide, or past use of pesticides containing chlordane still present in the soils, are toxic to various wildlife species, and can cause injury, mortality, or other effects that impair population viability.

9.3.5.5 Use of pesticides and herbicides can minimize the abundance of food sources for native wildlife populations.

9.4 Garbage and Solid Waste

9.4.1 Direct hazards to wildlife (Avg. Score: 1.00)

NJ Specific Threats: 9.4.1.1 Wildlife may ingest garbage causing choking or impingement in the digestive system, or they may become physically entangled in it (e.g., plastic or abandoned fish nets); conditions that make them unable to feed or drink, cause them to suffocate or drown, or otherwise restrict the animal's movement making them more susceptible to predators, starvation or injury.

9.4.1.2 Garbage and solid waste destroys natural habitats and obstructs wildlife movements.

9.5 Air-Bourne Pollutants

9.5.6 Herbicides and Pesticides (Avg. Score: 2.00)

NJ Specific Threats: 9.5.6.1 May result in injury or direct mortality of non-target species.

9.6 Excess Energy

Pine Barrens Snakes

9.6.3 Noise Pollution

(Avg. Score: 1.00)

NJ Specific Threats: 9.6.3.1 Acute and chronic noise pollution in and adjacent to terrestrial and aquatic (marine and freshwater) environments could disrupt normal behaviors of wildlife such as migration, communication, feeding, eluding predators, resting and breeding, etc.

11 Climate Change and Severe Weather

11.1 Habitat Shifting or Alteration

11.1.0 Macro- and Micro-Climate Alterations

(Avg. Score: 1.00)

NJ Specific Threats: 11.1.0.1 Alters native terrestrial and aquatic habitats at the macro- and micro-climate levels that can affect suitability for wildlife, in particular specialist species.

11.3 Temperature Extremes

11.3.1 Temperature extremes

(Avg. Score: 2.00)

NJ Specific Threats: 11.3.1.4 Extremely low temperatures and/or extensive periods of unseasonably low temperatures during critical life history stages (e.g., hibernation, gestation/nesting) can alter animals' behaviors and decrease survivorship.

11.4 Storms and Flooding

11.4.2 Increased rainfall

(Avg. Score: 2.00)

NJ Specific Threats: 11.4.2.2 Extreme rain events can damage wildlife nesting and resting habitats, including impacts to avian eggs and chick and small mammal survivorship.

11.4.2.3 More frequent rain events can alter terrestrial and wetland vegetation communities as well as wetland hydrology, shifting wildlife community use.

11.6 Phenology Shifting or Alteration

11.6.2 Phenology shifts related to predator-prey ecology

(Avg. Score: 1.00)

NJ Specific Threats: 11.6.2.1 Alters inter-specific relationships (e.g., competition, parasitism, predation) of wildlife, ultimately leads to detrimental impacts on the ecological system.

11.6.2.2 Shifts timing of species migration, breeding and hibernation, and available food resources, causes redistribution of species, or mortality for species that are unable to relocate due to their already isolated habitat or limited mobility.

11.6.3 Phenology shifts related to species redistribution

(Avg. Score: 1.00)

NJ Specific Threats: 11.6.3.1 Shifts in timing of species migration, breeding and hibernation, and available food resources, as a result of wildlife range shifts driven by climate change.

11.6.3.2 Shifts in nesting times or egg incubation durations can limit nest success and longterm populations.

12 Resource Management Needs

12.1 Resource information collection needs

12.1.1 Lack of initial baseline inventory

(Avg. Score: 2.67)

NJ Specific Threats: 12.1.1.1 Lack of information regarding the distribution, connectivity and quality of SGCN habitats throughout the State, and where habitat enhancement/restoration will benefit SGCN and other wildlife.

12.1.1.2 Lack of information regarding the population dynamics and trends, habitat requirements and dispersal distances of the various age classes, and survivorship of SGCN throughout the State.

12.1.2 Lack of up-to-date existing information

(Avg. Score: 3.00)

NJ Specific Threats: 12.1.2.1 Lack of (routine, regular, ongoing) surveys/assessments that provide up-to-date information regarding population trends or health, and/or status of fish, wildlife and/or their habitats.

12.1.3 Need to answer research question

(Avg. Score: 3.00)

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Pine Barrens Snakes

NJ Specific Threats: 12.1.3.1 There are significant knowledge gaps regarding distribution, dispersal, diseases, population trends, etc. of SGCN.

12.1.4 Need to develop new technique (Avg. Score: 2.00)

NJ Specific Threats: 12.1.4.1 Improve and evaluate survey methods for SGCN and their habitats; alter as needed.

12.3 Regulatory Reform

12.3.0 State Regulatory Reforms (Avg. Score: 1.00)

- NJ Specific Threats:** 12.3.0.1 Regulatory habitat protections within state land use regulations are spatially limited to specific geographic areas (e.g., Pinelands, Coastal Area) or geographic features (e.g., wetlands, streams) and so fail to protect critical habitats that exist outside of these regulated areas.
- 12.3.0.3 Lack of a licensing program and standards for NJ Nuisance Wildlife Control Operators (NWCs) leads to inadequate controls over handling of wildlife and lack of reporting of non-game/SGCN species (and all wildlife) encountered in nuisance situations.
- 12.3.0.7 Activities that threaten SGCN, their food sources, and/or habitats are often regulated separately and without consideration for the cumulative and synergistic effects over time or over a larger spatial scale. Therefore, regulations can fail to protect SGCN populations over time.
- 12.3.0.9 Prescribed burns implemented by the NJ Forest Fire Service are constrained by State air quality regulations to a timeframe where seasonal weather conditions are less than ideal for effective burning. As a result, the Forest Fire Service is limited in the number of overall prescribed burns it can implement to restore habitat for wildlife.
- 12.3.0.10 Land use regulatory processes pertaining to habitat creation, enhancement or restoration projects can be costly and/or burdensome, precluding or discouraging the development or implementation of conservation projects.

12.4 Internal Policy & Procedures Reform

12.4.0 State Policy and Procedure Reform (Avg. Score: 1.00)

- NJ Specific Threats:** 12.4.0.1 A species-by-species management focus as opposed to ecological systems and biodiversity generally has greater opportunity for unintended consequences for other species and may be less efficient in developing appropriate management actions.
- 12.4.0.2 Policies and procedures for lands management that lack consideration of the impacts of activity timing can result in unintended impacts to wildlife during vulnerable periods.
- 12.4.0.3 Lack of internal understanding regarding beneficial habitat impacts of storm events leads to policies and practices that reverse or decrease such beneficial effects (e.g., beach-filling, shoreline hardening, "hazard" tree and log removal from forests, etc.
- 12.4.0.5 Bureau of Forest Fire Management policy has traditionally implemented prescribed burns on State lands for the sole purpose of public safety (i.e., addressing hazard fuel reduction), missing opportunities to burn in a manner that would additionally manage habitat for ecological diversity.
- 12.4.0.7 Land preservation contracts, easements, etc. that do not contain prescriptive language or flexibility allowing for habitat management can result in unsuitable habitat conditions and biodiversity declines for SGCN.

14 Education/ Outreach Needs

14.1 Education needs

14.1.1 Need for improved knowledge of fish and wildlife and their habitats (Avg. Score: 2.00)

NJ Specific Threats: 14.1.1.1 Lack of understanding of the importance of various SGCN habitats, their connectivity to similar habitats, and how planning decisions impact their quality and the wildlife that depend upon them.

14.1.1.2 Lack of general knowledge of SGCN life histories and vulnerabilities as they relate to land management practices.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Pine Barrens Snakes

- 14.1.1.3 Lack of understanding of the need to manage both natural and anthropogenic (e.g., yards, lawns, hayfields, etc.) habitats to minimize impacts or increase benefits to SGCM and their habitats.

14.2 Outreach needs

- 14.2.1 Need to improve specific understanding of agency/organization goals, objectives and ongoing wildlife conservation actions (Avg. Score: 2.00)

NJ Specific Threats: 14.2.1.1 Need to develop greater understanding of and support for efforts implemented to enhance SGCM habitat and biodiversity through various forest management practices.

15 Administrative Needs

15.2 Organizational/program planning needs

- 15.2.3 Need for multi-state, regional and landscape scale planning (Avg. Score: 1.00)

NJ Specific Threats: 15.2.3.1 State governance and financial structures can sometimes inhibit conservation planning and implementation at the regional and landscape-scales that are often more effective at setting priorities and meeting species and habitat conservation goals and objectives.

Actions to address the Threats and Action Drivers associated with this Conservation Target:

1 Coordination and Administration

1.2 Incentives

1.2.1 Incentives

- 1.2.1.2 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to private and public landowners and land managers to increase the effective size of SGCM habitats by protecting/restoring adjacent habitats that contribute to the overall size of the "core" area and/or provide a natural buffer, enhancing the suitability of the core area for SGCM, and/or connect conserved SGCM habitats.
- 1.2.1.4 Secure and promote the protection, restoration, and/or development of old-growth forest stands with large trees, in particular those within large, contiguous forest tracts through incentive programs.
- 1.2.1.5 Secure and promote the protection/restoration of critical SGCM forested habitat and minimize forest edge to benefit interior forest and disturbance-sensitive SGCM through incentive programs.
- 1.2.1.8 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to municipalities, land developers, and other land managers to retain and/or enhance native vegetation adjacent to aquatic habitats, and along riparian areas and wildlife movement corridors.
- 1.2.1.9 Develop a new funding source, targeting natural resource damages monies, mitigation monies or other available sources, to fund new or existing Forestry Stewardship Programs.
- 1.2.1.10 Coordinate across government agencies and non-government organizations to maximize the availability of and enrollment in existing landowner incentive programs (e.g., "farm bill," partners, etc.) to maintain and/or improve habitat.

Pine Barrens Snakes

- 1.2.1.11 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to public and private landowners and managers, including but not limited to government and non-government agencies/organizations, energy, mining, and transportation and utility service companies/agencies, to minimize commercial infrastructure and impervious surfaces, and to improve wildlife habitats, limit fragmentation, reduce elements which would exacerbate mortality, and/or implement activities/restoration that would create new or improved corridor habitat and/or increase connectivity, and to increase structural habitat diversity through the implementation of a variety of vegetation management practices that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting), and to minimize (if not avoid) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
- 1.2.1.12 Create incentives (non-monetary and/or monetary) for land developers to redevelop abandoned areas (e.g., shopping centers, office complexes) to minimize the loss of natural habitats and reduce the extent of impervious surfaces as part of new construction to increase water recharge in those areas.
- 1.2.1.13 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to land developers to minimize the impacts of new residential and commercial developments on SGCN and their habitats.
- 1.2.1.18 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to public and private landowners and land managers to control and reduce the impacts of invasive, native and non-native species in order to increase structural habitat diversity.
- 1.2.1.19 Create incentives for federal, state and local agencies and approved consulting foresters that provide financial, logistical or planning assistance to farmers, woodland landowners, and private landowners to adopt and/or endorse consistent BMPs concerning controlled burns to maintain and/or improve wildlife habitat.
- 1.2.1.20 Coordinate across government agencies and non-government organizations to create or expand upon tax-based incentive programs available to private, agricultural, commercial, industrial or governmental landowners and land managers to include or provide for incentives for the maintenance and/or improvement to existing habitat via the endorsement of wildlife-related BMP's.
- 1.2.1.23 Create incentives (non-monetary and/or monetary) for and programs to deliver those incentives to private and public landowners and land managers to provide cost shares and/or plan approvals for management based on management approaches and prescriptions.
- 1.2.1.26 Develop a new funding source, targeting natural resource damages monies, mitigation monies or other available sources, to fund new or existing landowner incentive programs.
- 1.2.1.28 Create incentives to implement dynamic forest disturbance patterns, using tools such as fire, flooding, and silviculture, to support the full life cycle requirements of forest and early successional wildlife species.

2 Direct Management of Natural Resources

2.2 Dam and barrier removal

2.2.1 Culvert work

- 2.2.1.1 Replace existing barriers to wildlife movement with and/or install appropriately-sized systems to accommodate wildlife dispersal.

2.3 Fire management

Pine Barrens Snakes

2.3.2 Fuel reduction

2.3.2.1 Prevent wildfires by reducing natural fuel (e.g., leaf litter).

2.3.3 Prescribed burning

2.3.3.1 Evaluate different management techniques of prescribed burns that might be used to mimic the historic role of fire and other natural disturbances in shaping an ecosystem.

2.3.3.3 Conduct prescribed burning to improve wildlife habitat.

2.8 Invasive species control

2.8.0 Invasive species control strategies and implementation

2.8.0.4 Implement control/management strategies to reduce the impacts and/or limit the distribution of invasive, native and non-native species (wildlife and plants) that pose threats to native wildlife or communities. Encourage the implementation of biological and mechanical removal/control. When chemical control is used, encourage low-volume, targeted application using NJDEP-approved chemicals in accordance with the specific instructions for that chemical. Follow BMPs to maximize the effectiveness of the strategies while avoiding excessive harm to non-target species.

2.8.0.5 Implement biologically safe and appropriate control/management strategies, and where appropriate, eradication strategies to reduce the impacts and/or limit the distribution of invasive and/or non-native plant species within or near aquatic systems using methods that will provide the most protection to the aquatic and riparian ecological system, and minimize disturbance to the soil and wildlife. Encourage the implementation of biological and mechanical removal/control. When chemical control is used, encourage low-volume, targeted application using NJDEP-approved chemicals in accordance with the specific instructions for that chemical.

2.8.0.6 Implement long-term management of invasive and/or non-native plants to help maintain functioning ecological systems and biological diversity, and to enhance travel corridors. Encourage the implementation of biological and mechanical removal/control. When chemical control is used, encourage low-volume, targeted application using NJDEP-approved chemicals in accordance with the specific instructions for that chemical.

2.10 Planting/seeding

2.10.0 Planting/seeding strategies for terrestrial or aquatic habitat creation or restoration

2.10.0.1 Prevent or ameliorate near-term impacts of climate change throughout the State by developing, implementing and monitoring/evaluating habitat management strategies that will establish/improve habitat resilience (e.g., shorelines of the coast and Delaware Bay, forested habitats of the Pinelands and Skylands) that benefits wildlife inhabiting these areas, in particular within the coastal and Delaware Bay areas.

2.10.0.2 Improve the availability of prey/food resources through terrestrial and aquatic plantings and habitat restoration for SGCN populations, in particular for those populations thought to be limited due wholly or in part to a lack of (or contaminated) food resources, and for migratory species (birds, bats, invertebrates).

2.10.0.3 Restore and/or enhance habitats to benefit urban-associated SGCN.

2.10.0.4 Restore and/or enhance suitable travel corridors connecting conserved habitats for SGCN by restoring unsuitable (or less optimal) habitats.

Pine Barrens Snakes

- 2.10.0.5 Implement habitat restoration and/or enhancement activities that include the creation of vegetative buffers between sensitive habitats (e.g., aquatic systems) and human-inhabited areas (e.g., residences, parks, etc.) and that is conducted during appropriate timing to avoid sensitive periods (e.g., nesting, denning, roosting) while minimizing (if not avoiding) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity
- 2.10.0.6 Expand the acreages and enhance the effective size of SGCN habitats by restoring adjacent, less optimal or unsuitable, habitats.
- 2.10.0.7 Restore/reclaim and enhance degraded rare species habitats through strategic revegetation and management efforts for documented/target SGCN.
- 2.10.0.8 Protect significant natural and/or unique communities by implementing best management practices when conducting habitat restoration strategies.
- 2.10.0.9 Restore and/or enhance riparian and floodplain habitats, inland wetland habitats (marsh, vernal pool, fen, emergent shrubland, forest), and other aquatic habitats (including open waters) and/or biologically appropriate buffers to minimize degradation, alteration and/or changes in hydrology and subsequent disturbances to and behavioral changes of wildlife (e.g., restoring biologically appropriate buffers, revegetation or restoration efforts, etc.).
- 2.10.0.10 Minimize the loss of important habitats (e.g., coastal scrub-shrub and grassy habitats, high and low marsh habitats, etc.) that provide nesting, migrating, and wintering areas for SGCN birds and other coastal and marsh-dependent species through habitat restoration efforts.
- 2.10.0.12 Create and/or maintain scrub-shrub habitats through revegetation efforts with little to no impact on forested, wetland and grassland habitats to maintain populations of shrub-dependent SGCN.
- 2.10.0.14 Implement best management practices (BMPs), protective strategies and guidelines for restoring and enhancing healthy, SGCN-associated habitats while minimizing (if not avoiding) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
- 2.10.0.15 Restore and/or enhance terrestrial and aquatic habitats proximate to but not adjacent to roads and other transportation corridors for terrestrial-bound SGCN species whose behavior (i.e., dispersal across roads) may be altered by doing so, and therefore decrease road mortality of such species (e.g., amphibians, snakes, turtles, small mammals).
- 2.10.0.21 Restore and/or enhance understory habitats that suppress invasive species and provide critical resources and enhance sheltering, foraging, and nesting cover for wildlife.
- 2.10.0.22 Restore and/or enhance terrestrial and aquatic habitats to promote the regeneration of native vegetation and enhance structural diversity to benefit SGCN (e.g., vegetative buffers of aquatic systems, allow coarse, woody debris to remain in terrestrial, aquatic and riparian habitats to provide shelter, riparian stabilization and necessary microclimates, plant native trees, shrubs and grasses, etc.).
- 2.10.0.24 Use NJ's CHANJ mapping and guidance to establish vegetation and enhance or create corridors between fragmented habitats with similar vegetation, slope, soils, structure, etc. to ensure vegetative integrity is maintained to allow wildlife to safely disperse, and corridors are buffered with natural habitats to minimize disturbance to wildlife within the corridors.

2.11 Vegetation management

- 2.11.0 Vegetation management strategies for terrestrial or aquatic habitat creation or restoration

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Pine Barrens Snakes

- 2.11.0.1 Conduct vegetation management in native terrestrial and aquatic habitats to provide suitable and appropriately sized areas to improve ecological diversity.
- 2.11.0.2 Conduct vegetation management in native terrestrial and aquatic habitats to provide suitable and appropriately sized areas for target SGCN and/or species groups; management should complement rare species needs in a targeted area.
- 2.11.0.3 Create suitable travel corridors connecting and increasing the effective size of conserved habitats for SGCN by restoring unsuitable (or less optimal) habitats through vegetation management.
- 2.11.0.4 Implement vegetation management strategies that consider appropriate timing to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife, particularly SGCN.
- 2.11.0.5 Expand the acreages and enhance the effective size of SGCN habitats by restoring adjacent, less optimal or unsuitable, habitats through vegetation management.
- 2.11.0.6 Reclaim degraded rare species habitats by conducting vegetation management needed to restore habitat value for the documented/target SGCN.
- 2.11.0.7 Protect significant natural and/or unique communities by implementing best management practices through vegetation management.
- 2.11.0.13 Implement best management practices (BMPs), protective strategies, and guidelines for vegetation management to maintain and enhance healthy, SGCN-associated habitats while minimizing (if not avoiding) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
- 2.11.0.14 Conduct vegetation management adjacent to roads for SGCN species whose behavior (i.e., dispersal across roads) may be altered by doing so, and therefore decrease road mortality of such species (e.g., amphibians, snakes, turtles, small mammals).
- 2.11.0.16 Prevent or ameliorate near-term impacts of climate change throughout the State by developing, implementing and monitoring/evaluating habitat management strategies that will establish/improve habitat resilience (e.g., shorelines of the coast and Delaware Bay, forested habitats of the Pinelands and Skylands) that benefits wildlife inhabiting these areas, in particular within the coastal and Delaware Bay areas.
- 2.11.0.18 Implement forest management/silvicultural strategies that promote the development of new old-growth forests and/or minimize the loss of old-growth forest stands with large trees and within large, contiguous tracts.
- 2.11.0.19 Implement forest management/silviculture strategies that enhance and maintain critical core forests as appropriate for targeted species (e.g., for many SGCN forest birds, "core" forest would include the forest area >90 meters from the forest edge), in perpetuity, to benefit interior forest and disturbance-sensitive SGCN.
- 2.11.0.20 Create and/or maintain scrub-shrub habitats through management efforts with little to no impact on forested, wetland and grassland habitats to maintain populations of shrub-dependent SGCN.
- 2.11.0.23 Implement appropriate habitat management actions in areas where natural disturbances, such as wildfire, have been precluded.
- 2.11.0.25 Conduct vegetation management along access roads following BMPs to enhance habitat for target shrub- or young forest-dependent SGCN while minimizing negative impacts to other SGCN.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Pine Barrens Snakes

- 2.11.0.26 Conduct vegetation management along roadsides and medians, avoiding peak activity periods for wildlife, that enhances wildlife dispersal naturally and safely across roads and similar barriers to/between terrestrial and/or aquatic habitats.
- 2.11.0.27 Conduct vegetation management for target shrub- or young forest-dependent SGCN following BMPs to minimize the risk of the establishment of invasive and non-native plants.
- 2.11.0.28 Conduct vegetation management in agricultural areas following BMPs to enhance habitat for target shrub- or young forest-dependent SGCN while minimizing negative impacts to other SGCN.
- 2.11.0.29 Conduct vegetation management on transportation and service corridors (i.e., rights-of-way) following BMPs to enhance habitat for target shrub- or young forest-dependent SGCN while minimizing negative impacts to other SGCN.
- 2.11.0.31 In areas where vegetative communities are shifting due to fire suppression and controlled burns are not feasible, manage vegetation to improve wildlife habitat.
- 2.11.0.32 Increase structural habitat diversity around and when feasible, within agricultural landscapes by managing vegetation for a variety of species, in particular, those farms that have removed scrub-shrub habitat and/or fragmented forests, and by implementing ecologically best practices (e.g., no-till farming, maintaining hedgerows, buffer set-asides, etc.).
- 2.11.0.33 Increase structural habitat diversity by implementing long-term vegetation management to minimize the potential for the establishment of invasive and/or non-native plants that may outcompete native vegetation.
- 2.11.0.34 Increase structural habitat diversity by managing residential, commercial and recreational areas' landscapes for a variety of species. For example, integrate short and tall grasses, specific host plants, brush piles, water sources/wetlands, shrubby areas, nesting areas and no-mow set-asides.
- 2.11.0.36 Increase structural habitat diversity by managing vegetation for a variety of species and considering their life history requirements (e.g., travel corridors, shelter, resting and breeding areas) to minimize the risk of harm.
- 2.11.0.37 Increase structural habitat diversity by minimizing the removal of coarse, woody debris in terrestrial, aquatic and riparian habitats which benefits wildlife.
- 2.11.0.38 Increase structural habitat diversity in and around horse/livestock farms by managing vegetation for a variety of species, in particular, in and around farms that have fragmented forests, and by implementing ecologically best practices (e.g., do not permit overgrazing, do not allow livestock to wade in waterbodies).
- 2.11.0.39 Increase structural habitat diversity in and around solar farms by managing vegetation for a variety of species and that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife. For example, integrate short and tall grasses, specific host plants, brush piles, water sources/wetlands, shrubby areas, nesting areas and no-mow set-asides.
- 2.11.0.40 Increase structural habitat diversity surrounding areas used for energy, mining, and transportation and service corridors by managing vegetation for a variety of species and that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife. For example, integrate short and tall grasses, specific host plants, brush piles, water sources/wetlands, shrubby areas, nesting areas and no-mow set-asides, and avoid managing habitat during the breeding seasons for ground-nesting birds, reptiles, amphibians and small mammals.

Pine Barrens Snakes

- 2.11.0.41 Increase structural habitat diversity through the implementation of a variety of vegetation management practices such as prescribed burns (either increasing or decreasing their frequency depending on the site and objective), plantings, etc. that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife.
- 2.11.0.42 Increase structural habitat diversity within wind farms for terrestrial bound and low-flying species and around wind farms for other wildlife by managing vegetation for a variety of species and that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife.
- 2.11.0.43 Manage forests to increase variation in age structure and composition using BMPs that promote and maintain functioning ecological forest-based systems and biological diversity.
- 2.11.0.45 Regularly and/or rotationally create young forest habitat in targeted areas to maintain and regenerate a mosaic of upland forest habitats that will benefit shrub- and young forest-dependent species.

2.13 Wildlife damage management

2.13.0 Nuisance fish and wildlife damage

- 2.13.0.5 Investigate the impacts of human-subsidized and/or naturally occurring predator species on SGCN to assess the need for integrated wildlife damage management techniques (e.g., predator exclosures, fish blockages, electric fence, culls) and/or policy changes on state land management that minimize the impacts of human-subsidized predators.
- 2.13.0.8 Implement and assess management strategies to control and reduce the impacts of detrimental species and diseases that pose threats to native wildlife or communities.

2.14 Wildlife disease management

2.14.0 Wildlife disease strategy development and investigation

- 2.14.0.1 Investigate diseases/pathogens impacting SGCN and/or their habitats.
- 2.14.0.2 Develop and implement strategies to combat the impacts of diseases/pathogens impacting SGCN and/or their habitats, track disease occurrences and monitor/research impacts to SGCN populations and their habitats.
- 2.14.0.4 Conduct long-term monitoring of diseases in vulnerable wildlife to determine the magnitude of exposure within populations and around the State, the impacts to those species, in particular SGCN, and investigate the feasibility of mitigating for such impacts.
- 2.14.0.5 Assess the impacts of diseases on the life cycles of wildlife.

3 Data Collection and Analysis

3.0 General fish and wildlife research, survey or monitoring

3.0.0 Research, survey or monitoring - general fish and wildlife needs

- 3.0.0.1 Conduct long-term monitoring of resident and migratory SGCN populations using standardized survey protocols to determine the variables that may impact their long-term persistence in the State (e.g., population viability, distribution, dispersal, home range and habitat use, travel corridors, food availability, vulnerability to pollutants and disease, etc.). Compile this information to determine the likely causes of population declines and to understand metapopulation dynamics. Provide data to NJ DEP for integration into the Biotics database, Landscape Project and permitting review processes.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Pine Barrens Snakes

- 3.0.0.2 Identify (through literature searches, review of available data, enlistment of habitat and/or species experts, etc.) where data gaps exist regarding SGCN distribution, and their critical and supportive habitats. Conduct surveys using standardized survey protocols to acquire baseline data, and provide the data to NJ DEP for integration into the Biotics database, Landscape Project Map and permitting review processes.
- 3.0.0.3 Gather baseline data on SGCN inhabiting permanently protected natural lands regarding their distribution and population (e.g., abundance, dispersal, demography including productivity and survival, etc.), and identify (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) critical and supporting habitats within those landscapes.
- 3.0.0.4 Conduct long-term studies on SGCN inhabiting permanently protected natural lands to develop population trend data and changes in demography, and to determine if critical and/or supporting habitats are limited or changing; i.e., diminishing in value, acreage or connectivity.
- 3.0.0.5 Gather baseline data on resident and migratory SGCN (in particular migratory species for which New Jersey habitats are significant), terrestrial, freshwater and marine species, regarding the location and condition of their critical and supporting habitats (e.g., foraging, roosting, nesting/breeding, stopover, migration paths, etc.), and population demography (e.g., productivity, survival, dispersal). Compile this information into a database that includes descriptions of the conditions of the habitats and species, and a GIS component of the locations of these important habitats. Provide data to NJ DEP for integration into the Biotics database, Landscape Project and permitting review processes.
- 3.0.0.6 Conduct long-term studies on resident and migratory SGCN to determine if there are changes to the populations' demography (productivity, survival, dispersal) and/or to their critical and/or supporting habitats (i.e., diminishing in value, acreage or connectivity, etc.), in particular changes that would not maintain SGCN at viable levels for species populations. Update data and GIS maps; provide updated information to NJ DEP for integration into the Biotics database, Landscape Project and permitting review processes.
- 3.0.0.7 Collect baseline data to document species distributions, in particular SGCN, and current habitat for future analysis of possible distribution shifting as a result of habitat shifting or alteration associated with climate change impacts.
- 3.0.0.8 Conduct long-term studies and compare baseline metrics of documented species distributions and associated habitats to identify possible species and/or habitat shifting or alteration associated with climate change impacts.
- 3.0.0.11 Develop, implement and evaluate the effectiveness of town plans that avoid impacts to SGCN species and their habitats.
- 3.0.0.13 Investigate the effects of pesticides, herbicides and other biological controls on SGCN and their critical and supporting habitats. Evaluate and modify management practices as appropriate.
- 3.0.0.19 Identify the presence and status (e.g., functioning, structure, slated for removal, etc.) of existing dams and culverts within and/or that may impact SGCN and their habitats, and create a database that includes a GIS component identifying the locations of such structures and their status. Share this information with appropriate organizations and/or agencies evaluating the benefits and risks of such structures on SGCN and their habitats.

Pine Barrens Snakes

- 3.0.0.20 Once baseline data identifying and describing the status of existing dams and culverts have been gathered, conduct evaluations at a variety of sites to determine whether the benefits of culvert and dam creation or removal outweigh the risks to SGCN species and their habitats, and if other variables/conditions specific to individual sites/locations result in a different outcome. Identify and target appropriate dams and culverts for removal and/or reconstruction to minimize harm to SGCN species and their habitats.
- 3.0.0.26 Conduct studies to evaluate the effectiveness of proactive species recovery plans for all endangered and threatened species including objectives and guidance pertaining to and the condition/status of critical and supporting habitats.
- 3.0.0.27 Evaluate the effectiveness of strategies to restrict human activity (e.g., recreational, maintenance work, etc.) from sensitive habitats/areas such as avian nesting sites, reptile and amphibian breeding areas (nesting or gestation/birthing and breeding pools, respectively), and bat hibernacula, and federal buffers for marine mammals through research and monitoring. Develop and provide NJ DEP and other appropriate governing agencies/commissions a summary of findings and recommendations to improve such efforts.

3.2 Research, survey or monitoring - fish and wildlife populations

3.2.0 Data deficiency

- 3.2.0.1 Division of Fish and Wildlife should maintain a robust, up-to-date database and mapping of species occurrences.
- 3.2.0.4 Conduct long-term monitoring of the impacts of contaminants to vulnerable wildlife to determine the magnitude of exposure within populations and around the State, the impacts to those species, in particular SGCN, and investigate the feasibility of mitigating for such impacts. Maintain records on exposure of vulnerable wildlife to environmental toxins (such as flame retardants and endocrine disruptors), so that sources may be identified and controlled or eliminated.
- 3.2.0.5 Prevent or ameliorate near-term impacts of climate change throughout the State by developing, implementing and monitoring/evaluating habitat management strategies that will establish/improve habitat resilience (e.g., shorelines of the coast and Delaware Bay, forested habitats of the Pinelands and Skylands) that benefits wildlife inhabiting these areas, in particular within the coastal and Delaware Bay areas.
- 3.2.0.6 Develop, implement and conduct studies to evaluate the effectiveness of methods implemented to reduce road mortality of wildlife (e.g. wildlife underpasses, road closures).
- 3.2.0.7 Track (via a database that includes a GIS component) and research problematic species and diseases to determine their distribution, impacts on SGCN wildlife/wildlife communities, and develop potential control measures.
- 3.2.0.8 Implement and conduct long-term monitoring of control measures aimed at minimizing the impacts of problematic species and/or diseases to evaluate the effectiveness of such efforts and to identify and incorporate additional strategies as appropriate.
- 3.2.0.10 Evaluate the effectiveness of sanitation/decontamination protocols in minimizing the transference of wildlife diseases and invasive plant species.

3.2.1 Abundance determination

- 3.2.1.1 Identify (through literature searches, review of available data, enlistment of habitat and/or species experts, etc.) population abundance and trends for SGCN using standardized survey protocols. Provide data to NJ DEP for integration into the Biotics database, Landscape Project Map and permitting review processes.

Pine Barrens Snakes

- 3.2.1.2 Conduct wildlife surveys on resident and migratory SGCN regarding their population abundance and trends.
 - 3.2.2 Age, size and sex structure
 - 3.2.2.1 Conduct wildlife surveys on resident and migratory SGCN regarding their survivorship.
 - 3.2.3 Baseline inventory
 - 3.2.3.6 Investigate the feasibility and potential for success of conducting genetic rescue through translocation and/or reintroduction of animals into suitable habitat that was historically occupied to increase genetic diversity and reconnect isolated populations. Methods of investigation should include, but are not limited to, thorough literature reviews, expert opinions, identifying potential pitfalls (e.g., species' fidelity to their range or critical areas), and an examination of historic and current SGCN population distribution and suitable habitat availability.
 - 3.2.3.7 Identify roads or portions of roads, paved or unimproved (through site surveys, land use/land cover assessments and analyses, review of available data, enlistment of species experts, etc.) with high incidences of road mortality and/or presence of snakes, turtles, medium-sized and large mammals. Conduct assessments of the roads and incorporate information into a database that includes descriptions (e.g., qualifiers to help prioritize the roads' risk to wildlife) and a GIS component of the locations of such areas. Share this information with appropriate organizations and/or agencies working to implement measures (e.g., wildlife passages, road closures) to minimize the risk to these species.
 - 3.2.4 Food habits
 - 3.2.4.1 Monitor and investigate the populations and health of SGCN prey/food resources for those SGCN whose populations are thought to be limited due wholly or in part to a lack of food resources or toxins in food resources.
 - 3.2.5 Genetics
 - 3.2.5.1 Investigate the feasibility and potential for success of conducting genetic rescue through translocation and/or reintroduction of animals into suitable habitat that was historically occupied to increase genetic diversity and reconnect isolated populations. Methods of investigation should include, but are not limited to, thorough literature reviews, expert opinions, identifying potential pitfalls (e.g., species' fidelity to their range or critical areas), and an examination of historic and current SGCN population distribution and suitable habitat availability.
 - 3.2.7 Population assessment
 - 3.2.7.1 Conduct species status assessments using the Delphi Technique and review of available data and literature on fish and wildlife (including marine animals) to maintain accurate legal status categorization of native wildlife.
 - 3.2.7.2 Conduct studies to evaluate the effectiveness of proactive species recovery plans for all endangered and threatened species to meet and maintain recovery goals.
- 3.3 Research, survey or monitoring - habitat
 - 3.3.1 Baseline inventory

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Pine Barrens Snakes

- 3.3.1.1 Conduct habitat assessments of significant natural and/or unique communities to identify threats to native terrestrial and aquatic habitats through systematic monitoring, review of available data, enlistment of habitat management and/or species experts, etc. Incorporate findings into a database that includes descriptions/qualifiers of the habitats, identifies and values/qualifies the threats, and includes a GIS component of the locations of the assessed areas. Share this information with landowners/managers (e.g., federal, state and local government agencies or non-government organization).
- 3.3.1.2 Identify (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) resident and migratory SGCN habitats. Investigate their suitability for the various life history requirements of the species that dependent upon them to determine the ability for maintaining applicable SGCN populations in perpetuity.
- 3.3.1.4 Identify (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) and investigate the suitability of corridors that connect large, contiguous tracts of similar habitats to increase their effective size (i.e., forest with forest, grassland with grassland, wetlands with wetlands, etc.) for dependent SGCN.
- 3.3.1.5 Identify areas (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) where habitat restoration and/or enhancement would benefit wildlife SGCN.
- 3.3.1.6 Identify areas (through surveys/studies, literature searches, review of available data, enlistment of species experts, etc.) that could, through revegetation and/or enhancement efforts, become suitable travel corridors connecting and increasing the effective size of conserved habitats for SGCN.
- 3.3.1.7 Map and prioritize existing and potential areas for early succession forest management. Share the results with state, county and municipal planners.
- 3.3.1.8 Assess the availability and suitability of forest habitats for SGCN species (particularly reptiles and amphibians, birds, pollinators, and tiger beetles) in southern forests since Superstorm Sandy.
- 3.3.1.16 Gather "best information" for spatial modeling and update/create a current model/depiction of anticipated habitat shifts from sea-level rise, flooding, etc.
- 3.3.1.17 Identify and map undeveloped roads and trails in all conserved forests, and create a database of locations. Integrate information regarding potentially sensitive areas.
- 3.3.1.19 Identify and codify legal ORV access areas on state (and if appropriate, other conserved) lands. Provide GIS mapping to the landowner for potential use in directing such recreational activities.
- 3.3.1.20 Identify areas (through surveys/studies, literature searches, review of available data, enlistment of habitat management and/or species experts, etc.) where invasive, non-indigenous plants and animals are either already established or are becoming established. Create a system for reporting and qualifying new locations of invasive species and for prioritizing areas for control measures according to the potential level of impact on the ecosystem and SGCN and the likelihood of success. Researchers and contractors encountering invasive plant species while performing plant and/or forest inventories on state or other conserved lands and/or private lands should report invasive plant species through the New Jersey Invasive Species Strike Team phone application.
- 3.3.1.24 Conduct regular investigations of SGCN habitat health and biodiversity on public and private lands to identify locations in need of revegetation, reduction of over-abundant, native wildlife and/or exotic species, conservation focal areas requiring limitations on human activity, etc.

3.3.2 Monitoring

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Pine Barrens Snakes

- 3.3.2.1 Evaluate the effectiveness of forest management/silviculture strategies that enhance and maintain critical core forests as appropriate for targeted species (e.g., for many SGCN forest birds, "core" forest would include the forest area >90 meters from the forest edge), in perpetuity, to benefit interior forest and disturbance-sensitive SGCN through research and monitoring.
- 3.3.2.2 Conduct long-term monitoring of resident and migratory SGCN habitats using standardized survey protocols to determine changes in habitat quality/suitability and threats (e.g., habitat loss and degradation, increased edge habitat, water quality) and other variables that may impact their long-term persistence in the State and to provide information needed for determining causes of population declines and understanding metapopulation dynamics.
- 3.3.2.3 Continue to update wildlife and habitat databases and revise models of critical SGCN habitats using the most current data available and where lacking, develop new SGCN and/or habitat models as data on species habitat requirements and applicable GIS data layers become available.
- 3.3.2.8 Evaluate the effectiveness of current prescribed burning practices on Pinelands dependent species.
- 3.3.2.9 Investigate the effectiveness of various silviculture techniques for enhancing forests for forest-dependent SGCN.
- 3.3.2.10 Evaluate the efficacy and success of different management techniques (e.g., ecologically-based forestry activities, prescribed burns) that might be used to mimic the historic role of fire and other natural disturbances in shaping an ecosystem.
- 3.3.2.15 Investigate the effectiveness of management techniques implemented to eliminate invasive terrestrial and aquatic plant species on private and public lands, and/or within sensitive and/or important habitats for SGCN.
- 3.3.2.20 Once a system is developed for reporting and qualifying new locations of invasive species, develop, implement and monitor/evaluate invasive species removal strategies at identified locations. Priority should be given to those areas critical to SGCN and/or contain unique and/or rare plant communities supporting SGCN and/or other fish/wildlife species.

3.5 Techniques development

3.5.3 Habitat restoration methods

- 3.5.3.1 Work with land management agencies to determine the appropriate actions needed to restore/reclaim degraded habitat for the documented/target SGCN.
- 3.5.3.3 Develop/improve management techniques that might be used to mimic the historic role of fire and other natural disturbances in shaping an ecosystem.
- 3.5.3.7 Develop/improve forest management/silviculture strategies that enhance and maintain critical core forests as appropriate for targeted species (e.g., for many SGCN forest birds, "core" forest would include the forest area >90 meters from the forest edge), in perpetuity, to benefit interior forest and disturbance-sensitive SGCN through research and monitoring.
- 3.5.3.8 Develop best management practices (BMPs), protective strategies, and guidelines for maintaining and enhancing healthy, SGCN-associated terrestrial and aquatic habitats and associated riparian habitats, and to minimize (if not avoid) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
- 3.5.3.9 Develop strategies to combat the impacts of diseases/pathogens impacting SGCN and/or their habitats.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Pine Barrens Snakes

- 3.5.3.11 Develop strategies to protect native terrestrial and aquatic habitats and dependent SGCN species from the identified threats.
- 3.5.3.14 Develop aquaculture practices in the coastal areas that are compatible with the recovery of SGCN.
- 3.5.3.15 Modify management practices based on the effects of pesticides, herbicides and other biological controls on critical and supporting SGCN habitats.
- 3.5.3.16 Develop/improve strategies to restrict human activity (e.g., recreational, maintenance work, etc.) from sensitive habitats/areas such as avian nesting sites, reptile and amphibian breeding areas (nesting or gestation/birthing and breeding pools, respectively), and bat hibernacula, and federal buffers for marine mammals. Methods may include, but are not limited to, managing the landscape to deter access, diverting recreational and other activities from sensitive areas during critical periods through permit processes or blocking access (trails, roads, etc.), posting (if appropriate), increasing law enforcement presence, conducting management activities at appropriate times to avoid disturbance and/or harm to wildlife (e.g., habitat management, beach raking, etc.), and decreasing noise and light pollution.
- 3.5.3.19 Work with foresters to develop prescribed burning practices for Pinelands dependent species that increase or maintain habitat quality for these species in the Pinelands.
- 3.5.3.20 Develop guidance on various silviculture techniques for enhancing forests for forest-dependent SGCN.
- 3.5.3.21 Develop management techniques (e.g., ecologically-based forestry activities, prescribed burns) that might be used to mimic the historic role of fire and other natural disturbances in shaping an ecosystem.
- 3.5.3.24 Based on research, modify management techniques implemented to eliminate invasive terrestrial and aquatic plant species on private and public lands, and/or within sensitive and/or important habitats for SGCN.
- 3.5.3.25 Use data regarding SGCN population numbers/trends and demography, on-going threats, habitat changes, etc. to develop the necessary management strategies to reach or maintain viable population levels.
- 3.5.4 Fish and wildlife research, survey and management techniques
 - 3.5.4.1 Develop studies to evaluate management strategies to improve the availability of prey/food resources for SGCN whose populations are thought to be limited due wholly or in part to a lack of (or contaminated) food resources. Monitor and investigate the management strategies over time to determine success and/or the need to revise methods.
 - 3.5.4.5 Develop and implement strategies to combat the impacts of diseases/pathogens impacting SGCN and/or their habitats, track disease occurrences and monitor/research impacts to SGCN populations and their habitats.
 - 3.5.4.6 Investigate the feasibility of mitigating for the impacts of contaminants to vulnerable wildlife, particularly SGCN. Maintain records on exposure of vulnerable wildlife to environmental toxins (such as flame retardants and endocrine disruptors), so that sources may be identified and controlled or eliminated.
 - 3.5.4.7 Investigate the feasibility and potential for success of conducting genetic rescue through translocation and/or reintroduction of animals into suitable habitat that was historically occupied to increase genetic diversity and reconnect isolated populations. Methods of investigation should include, but are not limited to, thorough literature reviews, expert opinions, identifying potential pitfalls (e.g., species' fidelity to their range or critical areas), and an examination of historic and current SGCN population distribution and suitable habitat availability.

Pine Barrens Snakes

- 3.5.4.9 Conduct studies to evaluate the impacts of roads on SGCN and develop, implement and conduct studies to evaluate the effectiveness of methods to reduce road mortality of wildlife (e.g. wildlife underpasses, road closures).
- 3.5.4.13 Develop/improve strategies to restrict human activity (e.g., recreational, maintenance work, etc.) from sensitive habitats/areas such as avian nesting sites, reptile and amphibian breeding areas (nesting or gestation/birthing and breeding pools, respectively), and bat hibernacula, and federal buffers for marine mammals. Methods may include, but are not limited to, managing the landscape to deter access, diverting recreational and other activities from sensitive areas during critical periods through permit processes or blocking access (trails, roads, etc.), posting (if appropriate), increasing law enforcement presence, conducting management activities at appropriate times to avoid disturbance and/or harm to wildlife (e.g., habitat management, beach raking, etc.), and decreasing noise and light pollution.
- 3.5.4.14 Develop and implement agreements, and update existing agreements, with government agencies regarding the protection of critical SGCN habitats (e.g., significant breeding populations of beach nesting birds, colonial waterbird nesting areas, bat colonies, etc.).
- 3.5.4.15 Investigate the success of management strategies used to protect and/or enhance SGCN populations and when appropriate, aid in identifying failures/resource problems and issues, and developing new strategies.
- 3.5.4.16 Use data regarding SGCN population numbers/trends and demography, on-going threats, habitat changes, etc. to determine if directed management efforts are needed to reach or maintain viable population levels and develop the necessary management strategies.
- 3.5.4.17 Investigate new, non-invasive techniques for SGCN population evaluation through literature review, expert opinion, trial studies (if low risk), etc.
- 3.5.4.18 Investigate the effectiveness of survey techniques through selected “ground truthing” and literature and peer review in order to increase efficacy of survey, minimize surveyor bias and error, and increase accuracy of trend data.
- 3.5.4.19 Develop reliable, standardized survey and monitoring protocols for SGCN species, for which none currently exist, and their habitats.
- 3.5.4.21 Develop BMPs to address problematic species and diseases of unknown origin.
- 3.5.4.22 Investigate the efficacy of implementing strategies to minimize or eliminate disturbances to all SGCN (i.e., beyond their federal requirements) during military activities.

4 Education

4.1 Educator/Instructor training

4.1.0 Public education

- 4.1.0.1 Provide educational resources and training programs to private and public landowners, as well as schools, regarding the benefits and creation of backyard habitats for wildlife.

5 Facilities and Areas

5.15 Wildlife Management Areas

5.15.6 Roads

- 5.15.6.2 Clearly post areas/trails where vehicle access is not permitted.

6 Land and Water Rights Acquisition and Protection

6.0 Acquisition and protection strategies

6.0.0 Combined acquisition and protection strategies

Pine Barrens Snakes

- 6.0.0.1 Enhance and increase the effective size of critical migratory stopover habitats for songbirds, raptors, shorebirds, bats and invertebrates by securing adjacent habitats through an appropriate combination of fee title, non-fee title and landowner agreements.
- 6.0.0.2 Enhance and increase the effective size of SGCN habitats by protecting adjacent habitats that contribute to the overall size of the "core" area and/or provide a natural buffer, enhancing the suitability of the core area for SGCN, and/or connect conserved SGCN habitats through an appropriate combination of fee title, non-fee title and landowner agreements.
- 6.0.0.6 Secure and protect old-growth forest stands with large trees and/or stands that are approaching or being actively managed for old growth forests, in particular those within large, contiguous forest tracts, through an appropriate combination of fee title, non-fee title and landowner agreements.
- 6.0.0.7 Secure and protect critical SGCN forested habitat and minimize forest edge to benefit interior forest and disturbance-sensitive SGCN through an appropriate combination of fee title, non-fee title and landowner agreements.
- 6.0.0.8 Secure and protect scrub-shrub habitats for SGCN through an appropriate combination of fee title, non-fee title and landowner agreements.

6.3 Conservation area designation

6.3.0 Conservation area designation strategies

- 6.3.0.1 Promote the protection of critical migratory stopover habitats for songbirds, raptors, shorebirds, bats and invertebrates and enhance these lands by increasing the effective size through conservation area designations of stopover habitats and adjacent private lands.
- 6.3.0.2 Enhance and increase the effective size of SGCN habitats by protecting adjacent habitats that contribute to the overall size of the "core" area and/or provide a natural buffer, enhancing the suitability of the core area for SGCN and/or connect conserved SGCN habitats through conservation area designations.
- 6.3.0.6 Promote the protection of old-growth forest stands with large trees and/or stands that are approaching or being actively managed for old growth forests, in particular those within large, contiguous forest tracts, through conservation area designations.
- 6.3.0.7 Promote the protection of critical SGCN forested habitat and minimize forest edge to benefit interior forest and disturbance-sensitive SGCN through conservation area designations.
- 6.3.0.8 Promote the protection of scrub-shrub habitats for SGCN through conservation area designations.

6.4 Private lands agreements

6.4.0 Private land agreement strategies

- 6.4.0.1 Enter into private lands agreements to expand control burns on private lands, in particular those adjacent to conserved lands to improve SGCN habitats.

7 Law Enforcement

7.1 Law enforcement

7.1.3 Sub-national Level

- 7.1.3.2 Increase the number of law enforcement officers tending to wildlife issues to a reasonable number to sufficiently cover the State and marine waters.

7.1.4 Scale Unspecified

Pine Barrens Snakes

- 7.1.4.3 Increase law enforcement presence proximate to sensitive areas [e.g., avian nesting sites, in particular rookeries, and reptile and amphibian breeding areas (nesting or gestation/birthing and breeding pools, respectively)] to deter human activity and subsequent disturbance to SGCN.
- 7.1.4.6 Recruit law enforcement to assist in the protection and enhancement of SGCN populations, in particular endangered species, through improved awareness of species through trainings, partnerships, and other methods. Information should include but is not limited to: 1) Issues concerning illegal collection of reptiles, 2) Persecution of rare snakes, 3) Illegal recreational activities on public lands (e.g., off-road vehicles) and their impact on wildlife, 4) Identification of sensitive areas, critical sites and/or "hot-spots" for collection.
- 7.1.4.7 Increase law enforcement presence to enforce regulations governing recreational activities (e.g., the use of personal watercraft and off road vehicles, caving, rock climbing, etc.) on conserved lands and within other sensitive habitats, and discourage activities that cause harm or disturbance to vegetation, wetlands, fish and wildlife.
- 7.1.4.9 Implement policies that improve and secure habitat connections between conserved SGCN habitats.
- 7.1.4.10 Implement policies that promotes expanding acreages and enhances the effective size of SGCN habitats by providing biologically appropriate buffers of native habitat surrounding SGCN habitats.
- 7.1.4.12 Implement policies and/or regulations that protect significant natural and/or unique communities in perpetuity.
- 7.1.4.14 Implement policies that protect existing and developing old-growth forest stands with large trees, in particular those within large, contiguous forest tracts.
- 7.1.4.15 Implement policies that preserve and protect critical SGCN forested habitat and minimize forest edge to benefit interior forest and disturbance-sensitive SGCN.
- 7.1.4.19 Implement policies that protect and restore scrub-shrub habitats to benefit shrub-dependent SGCN.
- 7.1.4.22 Implement policies and/or regulations that prohibit the presence of managed cat colonies and trap, neuter and release programs in or near critical wildlife habitats.
- 7.1.4.23 Implement policies that minimize wildlife road mortality.
- 7.1.4.25 Encourage the enforcement of municipal laws regulating domestic pets that may predate on wildlife.
- 7.1.4.26 Educate law enforcement personnel that there may be unauthorized research projects taking place and to encourage them to investigate any activities that appear to be harmful to wildlife.

8 Outreach

8.1 Partner/stakeholder engagement

8.1.0 Partner/stakeholder engagement strategies

- 8.1.0.3 Develop an outreach team of personnel from government entities, conservation organizations and other stakeholders to work together to collaboratively use social media campaigns to grow a constituency of NJ residents who have an elevated ecological and climate consciousness.
- 8.1.0.4 Engage government agencies, conservation partners and other stakeholders in constructive dialogues encouraging them to influence policy change and the creation of incentives through a habitat bill and/or municipal ordinances for backyard habitat.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Pine Barrens Snakes

- 8.1.0.11 Engage government agencies, conservation partners and other stakeholders to collaboratively develop and implement an extensive educational/outreach program targeting sportsmen's organizations and fisheries, as well as public constituents, addressing the unintended effects abandoned fishing gear, tackle and crab pots can have on wildlife, and promote the collection and/or reporting of abandoned items and their locations.
- 8.1.0.13 Engage DOD in a constructive dialogue regarding strategies to minimize disturbances to all SGCN (i.e., beyond their federal requirements) from forest management and other practices on their lands.
- 8.1.0.14 Engage DOD in a constructive dialogue regarding strategies to minimize or eliminate disturbances to all SGCN (i.e., beyond their federal requirements) during military activities.
- 8.1.0.15 Engage government agencies, conservation partners and other stakeholders in discussions encouraging and supporting the creation of laws and policies requiring vegetative buffers of native plants on preserved farmland and state lands with agricultural leases or agreements.
- 8.1.0.16 Engage local governments in discussions regarding the importance of them adopting/passing ordinances which require assessing and addressing secondary impacts (i.e., ancillary prescribed burns, trespassers, ORV use, mosquitoes, deer, buffers) on biological resources when revising planning/zoning documents or granted site plan/subdivision approvals.
- 8.1.0.17 Engage municipalities in constructive dialogue to identify and minimize destruction of areas prioritized for early succession forest management.
- 8.1.0.18 Engage NJDOT, NJ Transit Authority and other road management entities, wildlife conservation organizations/agencies (e.g., Division of Fish and Wildlife, New Jersey Conservation Foundation, Conserve Wildlife Foundation of NJ), and communities and citizens in discussions regarding the importance of and methods to enhance habitat connectivity, and work together to develop feasible strategies for ensuring that wildlife can disperse naturally and safely across roads and similar barriers to terrestrial and/or aquatic habitats.
- 8.1.0.19 Engage government agencies, conservation partners and other stakeholders to collaboratively develop a list of important projects, targeting SGCN and/or their habitat, as a guide for graduate student research. Distribute the list and contact information to all State colleges and universities.
- 8.1.0.21 Work with government agencies and environmental educators to develop educational resources and training programs, educate the public on the devastation human-subsidized and/or overabundant, native species cause to local nesting species, and provide expert guidance on how residents can help alleviate this threat.
- 8.1.0.24 Engage government agencies, conservation partners and other stakeholders in constructive dialogue regarding the importance of providing and methods to provide technical support for carrying out restoration and management practices aimed at increasing structural habitat diversity.
- 8.1.0.25 Provide technical support to public landowners and land managers for carrying out restoration and management practices aimed at increasing structural habitat diversity.
- 8.1.0.26 Coordinate across federal, state and local agencies and approved consulting foresters that provide financial, logistical or planning assistance to woodland landowners to adopt or endorse consistent best management practices concerning controlled burns to maintain and/or improve forested habitat for wildlife.
- 8.1.0.30 Encourage government agencies and conservation partners to advise members of the relevant scientific community of the need for specific studies, reports or investigations targeting the data-deficiency regarding SGCN and/or their habitats.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Pine Barrens Snakes

- 8.1.0.34 Work with the NJ Education Association and Department of Education to design curriculum and outdoor experimental learning opportunities, and provide training to teachers on implementation of these activities.
- 8.1.0.37 Enlist landowners and NJ citizens in the protection of and survey efforts for SGCN, in particular rare species, by increasing enrollment in landowner incentives, forest stewardship, backyard habitat management and wildlife-related volunteer programs.
- 8.1.0.38 Engage partners, stakeholders and land managers in constructive dialogue promoting forest stewardship for SGCN that use core forests and forested corridors.
- 8.1.0.40 Encourage researchers, land managers, naturalists and enthusiasts to follow proper procedures for the coordination and/or permitting of research/management activities involving wildlife and sensitive habitats, and discourage activities that alter vegetation or wetlands, or cause harm or disturbance to wildlife.
- 8.1.0.42 Engage citizens, wildlife observers and photographers through discussions and distributable information regarding the importance of and encouraging implementing responsible and ethical behavior when observing wildlife by developing an alliance of wildlife photographers and widely circulating recommendations on how to reduce impact.
- 8.1.0.44 Engage conservation partners, stakeholders, government agencies and other land stewards in constructive dialogues encouraging their inclusion of controlled burns in forest and other stewardship plans.
- 8.1.0.47 Form cooperative partnerships with energy companies to facilitate habitat creation and enhancement away from and outside of project areas, the restoration of appropriate habitats within project areas (e.g., rights-of-way could benefit butterflies and some bird species), and to identify seasonal timing of activities that would minimize impacts to wildlife.

8.3 WSFR program/subprogram outreach

8.3.0 WSFR program/subprogram outreach strategies

- 8.3.0.6 Develop and provide (or otherwise make publicly available) educational programs and/or materials to enlist landowners, land managers and local communities to discourage the presence of managed cat colonies and trap, neuter and release programs in wildlife habitats.
- 8.3.0.7 Develop and provide (or otherwise make publicly available) educational programs and/or materials that describe the negative impacts of off-road vehicles and watercraft use in and adjacent to critical SGCN habitats, and the importance of confining such activities to more appropriate locations and/or seasons.
- 8.3.0.8 Develop and provide (or otherwise make publicly available) educational programs and/or materials to educate recreationists and encourage landowners to eliminate garbage in the vicinity of suitable wildlife habitat, in particular SGCN habitat. Information should include the detrimental impacts garbage may have on various wildlife species.
- 8.3.0.9 Develop and provide (or otherwise make publicly available) educational programs and/or materials to enlist landowners and land managers to include only native plants in landscaping and restoration projects. Provide information to assist them in detecting problematic establishment of invasive, non-indigenous plants.
- 8.3.0.10 Develop and provide (or otherwise make publicly available) educational programs and/or materials to educate landowners and NJ citizens on threats to fish and wildlife (including marine animals).

Pine Barrens Snakes

- 8.3.0.11 Develop and provide (or otherwise make publicly available) educational programs and/or materials to the public, wildlife-related professionals, foresters, etc., that describe the value of species that are often feared (e.g., snakes, bats, spiders, Allegheny woodrat) and/or deemed a "nuisance" (e.g., squirrel, deer, snapping turtle), and therefore, persecuted by people. Include information on tolerance, proper identification, eviction from human dwellings, how to minimize the animal's presence on the property, and/or how to live in harmony with the animal.
- 8.3.0.12 Promote awareness of WSFR (Wildlife and Sportfish Restoration) Outreach/Awareness grants, an important funding source for conservation among hunters and anglers as well as the general public.
- 8.3.0.13 Conduct an educational campaign to encourage observer ethics and respect for wildlife and natural habitat.
- 8.3.0.19 Develop an educational outreach program for the public on the devastating effects predators can have on native nesting wildlife.
- 8.3.0.24 Develop educational outreach programs for local decision-makers, land developers, landowners and citizens about lawn alternatives and the importance of natural vegetation and "edge" habitats on developed properties.
- 8.3.0.26 Develop educational outreach programs for private and public landowners and land managers regarding the importance of and how to manage core forests and forested corridors in a way that will be beneficial for SGCN, particularly endangered, threatened and special concern species.
- 8.3.0.27 Develop educational outreach programs for public and private landowners and land managers regarding the importance of structural habitat diversity, methods to increase diversity, and/or incentive programs available to increase habitat diversity.
- 8.3.0.30 Develop educational outreach programs for private and public landowners, as well as schools, regarding the benefits and creation of backyard habitats for wildlife.
- 8.3.0.31 Develop an educational outreach program for landowners and citizens on the secondary impacts of rodenticides on predators and scavengers.
- 8.3.0.32 Develop an educational outreach program for landowners and citizens on the threats that herbicides and pesticides pose to aquatic systems and wildlife, and to promote safer usage of such products.

9 Planning

9.1 Land use planning

9.1.0 Land use planning strategies

- 9.1.0.1 Develop smart-growth plans and critical habitat designations that consider SGCN life history requirements and habitat needs, connectivity and health of those habitats, and minimizes human-associated disturbances to those habitats and SGCN inhabiting them.
- 9.1.0.2 Develop town plans that avoid impacts to SGCN species and their habitats.
- 9.1.0.3 Develop a plan that directs the creation of impervious surfaces away from and to minimize impacts on aquatic systems and critical terrestrial habitats. The plan should also include strategies to increase the resiliency of aquatic and critical terrestrial habitats to threats and stressors that would impact the reproduction and survival of wildlife.
- 9.1.0.5 Develop a plan that directs the creation or expansion of energy or utility rights-of-way in a manner that minimizes the impacts on critical forested habitats and the wildlife community.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Pine Barrens Snakes

- 9.1.0.6 Develop a plan that directs the creation or expansion of roads and railroads or the re-establishment of abandoned railroads within and adjacent to critical forested habitats in a manner that minimizes the impacts on critical forested habitats and the wildlife community.
- 9.1.0.8 Develop a plan that focuses on strategies for oil pipelines to avoid sensitive habitats that would be highly impacted by oil spills.
- 9.1.0.9 Develop a plan that focuses on strategies to minimize the creation of renewable energy farms (e.g., solar, wind) and related infrastructures within and their impacts on forested habitats and the wildlife community.
- 9.1.0.10 Develop a plan that focuses on strategies to minimize the impacts of mining on critical forested habitats.
- 9.1.0.11 Develop a plan that focuses on strategies to minimize the impacts of power plants on critical forested habitats and the wildlife community.
- 9.1.0.15 Develop a plan to minimize fragmentation of terrestrial and aquatic habitats by roads.
- 9.1.0.16 Develop a plan to minimize new lawns and preserve natural vegetation within and adjacent to critical forest areas.
- 9.1.0.18 Develop a plan to minimize the effects of road widening and traffic volume increases within critical wildlife habitat areas using CHANJ products.
- 9.1.0.19 Develop a plan to minimize the extent of impervious surfaces as part of new construction to increase water recharge in those areas.
- 9.1.0.20 Develop a plan to minimize the impacts of existing agricultural properties adjacent to and the conversion of forest habitats (terrestrial and aquatic, within or adjacent to critical forests) to agriculture, grazing areas/livestock farms, and plantations.
- 9.1.0.22 Incorporate habitat connectivity and preservation of natural areas into state and local land-use policy and the environmental review process to minimize the impacts of transportation and service corridors on fish and wildlife and their habitats.
- 9.1.0.23 Develop a plan to mitigate the effects of transportation barriers by using CHANJ products.
- 9.1.0.27 Develop a plan to use wildlife-appropriate culverts in critical forested areas.
- 9.1.0.28 Develop and coordinate state, regional and local plans for suitable lot layout and landscaping to minimize human-wildlife conflicts that also incorporates habitat connectivity and preservation of natural areas.
- 9.1.0.29 Provide GIS or related data, maps, resource inventories, as well as related training, pertaining to the SWAP and its recommended conservation actions for use or consideration by State, County or municipal planning agencies.
- 9.1.0.30 Incorporate habitat connectivity and preservation of natural areas into state and local land-use policy and the environmental review process to minimize habitat fragmentation and other related threats associated with development.
- 9.1.0.33 Review the species, threats, action successes, and habitats, and work with partners to revise the 2017 State Wildlife Action Plan for the 2025 resubmittal.

9.2 Organizational strategic and CMS planning

9.2.1 Organizational strategic and operational planning

- 9.2.1.1 Identify and codify legal ORV access areas on state lands.

9.3 Species and habitat management planning

9.3.1 Species management planning

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Pine Barrens Snakes

- 9.3.1.3 Develop a management plan to restrict human activity (e.g., recreational, maintenance work, etc.) from sensitive habitats/areas such as avian nesting sites, reptile and amphibian breeding areas (nesting or gestation/birthing and breeding pools, respectively), and bat hibernacula, and federal buffers for marine mammals.
 - 9.3.1.4 Develop town plans that avoid impacts to SGCN species and their habitats.
 - 9.3.1.7 Develop a rapid response plan for various scenarios (e.g., insect infestations destroying native habitat, wildlife disease) to be implemented upon exotic pathogen introduction or incident.
 - 9.3.1.9 Develop a management plan incorporating the effects of pesticides, herbicides and other biological controls on SGCN and their critical and supporting habitats.
 - 9.3.1.10 Develop a management plan to combat the impacts of diseases/pathogens impacting SGCN and/or their habitats.
 - 9.3.1.13 Develop a management plan to ensure SGCN populations' persistence based on long-term monitoring of resident and migratory SGCN populations and their habitats.
 - 9.3.1.14 Create species management plans that will promote the protection and where appropriate, the development of old-growth forest stands with large trees, in particular those within large, contiguous forest tracts.
 - 9.3.1.16 DOD and appropriate state agencies work together to improve DOD Integrated Natural Resource Management Plans (INRMP) to develop strategies to minimize or eliminate disturbances to all SGCN (i.e., beyond their federal requirements) during military activities and to improve SGCN habitat and presence.
- 9.3.2 Listed species recovery planning
 - 9.3.2.1 Develop proactive species recovery plans for all endangered and threatened species including guidance and objectives pertaining to critical and supporting habitat to meet and maintain recovery goals.
- 9.3.3 Habitat management planning
 - 9.3.3.5 Develop a management plan using forest management/silviculture strategies that enhance and maintain critical core forests as appropriate for targeted species (e.g., for many SGCN forest birds, "core" forest would include the forest area >90 meters from the forest edge), in perpetuity, to benefit interior forest and disturbance-sensitive SGCN through research and monitoring.
 - 9.3.3.6 Develop a management plan for maintaining and enhancing healthy, SGCN-associated terrestrial and aquatic habitats and associated riparian habitats, and to minimize (if not avoid) incidental take of resident and migratory fish and wildlife and/or disturbance to them (in particular during breeding periods) on public and private lands for maintaining populations in perpetuity.
 - 9.3.3.7 Develop a management plan to reduce the impacts of herbivory on native vegetation and the degradation of habitats supporting SGCN by invasive and/or native, over-abundant wildlife species including but not limited to mute swans, Canada geese, beaver and white-tailed deer.
 - 9.3.3.8 Develop a management plan to combat the impacts of diseases/pathogens impacting SGCN and/or their habitats.
 - 9.3.3.10 Develop a management plan to ensure SGCN populations' persistence based on long-term monitoring of resident and migratory SGCN populations and their habitats.
 - 9.3.3.11 Develop town plans that avoid impacts to SGCN species and their habitats.

Pine Barrens Snakes

- 9.3.3.13 Develop a management plan that will establish/improve habitat resilience (e.g., shorelines of the coast and Delaware Bay, forested habitats of the Pinelands and Skylands) that benefits wildlife inhabiting these areas and prevents or ameliorates near-term impacts of climate change throughout the State, but in particular within the coastal and Delaware Bay areas.
- 9.3.3.15 Develop a management plan incorporating the effects of pesticides, herbicides and other biological controls on SGCN and their critical and supporting habitats.
- 9.3.3.16 Develop a management plan to restrict human activity (e.g., recreational, maintenance work, etc.) from sensitive habitats/areas such as avian nesting sites, reptile and amphibian breeding areas (nesting or gestation/birthing and breeding pools, respectively), and bat hibernacula, and federal buffers for marine mammals.
- 9.3.3.17 Develop a management plan for prescribed burning that will benefit Pinelands dependent species and increase or maintain habitat quality for these species in the Pinelands.
- 9.3.3.18 In cooperation with species and habitat experts, develop management plans for significant natural and/or unique communities, in particular those supporting SGCN, and provide the information to the landowners/managers (federal, state and local government agencies or non-government organization) for review and implementation.
- 9.3.3.19 Develop management plans for SGCN inhabiting permanently protected natural lands using available baseline and population trend data.
- 9.3.3.21 Develop a rapid response plan for various scenarios (e.g., insect infestations destroying native habitat, wildlife disease) to be implemented upon exotic pathogen introduction or incident.
- 9.3.3.22 Create management plans to minimize and/or prevent wildlife road mortality that will incorporate wildlife passages in conjunction with barrier fencing and, where possible, seasonal closures. Aquatic-associated passages must avoid disturbance to the natural streambeds and riparian habitat, permit high volumes of water to flow freely, and provide adequate travel corridors for terrestrial wildlife, while maintaining stream flow for fish passage. Bridges that span rivers and streambeds and include floodplain habitat on either side of the span to provide travel corridors for terrestrial wildlife are preferred over culverts.
- 9.3.3.23 Create forest management plans that will promote the protection and/or development of old-growth forest stands with large trees, in particular those within large, contiguous forest tracts.
- 9.3.3.29 Develop habitat management plans aimed at reducing or eliminating negative impacts of ORVs.
- 9.3.3.32 DOD and appropriate state agencies work together to improve DOD Integrated Natural Resource Management Plans (INRMP) to develop strategies to minimize or eliminate disturbances to all SGCN (i.e., beyond their federal requirements) during military activities and to improve SGCN habitat and presence.
- 9.3.3.34 Include controlled burn prescriptions in forest and stewardship plans to improve wildlife habitat.
- 9.3.3.35 Incorporate habitat connectivity, preservation of natural areas, and the implementation of BMPs into state and local land-use policy environmental review process and energy development plans to minimize habitat fragmentation and related threats associated with solar farms and altered habitats.
- 9.3.3.36 Integrate plans for properly located and timed habitat restoration and management along transportation, energy and service corridors to minimize risks to and benefit wildlife.

11 Technical Assistance

11.1 Environmental review

Pine Barrens Snakes

11.1.1 Review of proposed projects

- 11.1.1.1** Use Biotics database and Landscape Project Mapping in regulatory reviews to ensure protection by applicable laws and regulations.
- 11.1.1.2** Develop smart-growth plans and critical habitat designations that consider SGCN life history requirements and habitat needs, connectivity and health of those habitats, and minimize human-associated disturbances to those habitats and the SGCN inhabiting them.
- 11.1.1.4** Incorporate habitat connectivity and preservation of natural areas into state and local land-use policy and the environmental review process to minimize habitat fragmentation and related threats associated with development.
- 11.1.1.5** Incorporate habitat connectivity and preservation of natural areas into state and local land-use policy and the environmental review process to minimize the impacts of transportation and service corridors on fish and wildlife and their habitats.
- 11.1.1.7** Review proposed construction or other work projects and permit applications, provide recommendations on how to best avoid disturbing sensitive species, and identify actions not permitted.
- 11.1.1.8** Review proposed research projects and permit applications, provide recommendations on how to best avoid disturbing sensitive species, and identify actions not permitted.
- 11.1.1.10** Use CHANJ mapping in reviews of proposed energy, mining, transportation and utility service companies/agencies' projects to attempt to maintain habitat connectivity and reduce fragmentation, and identify potential impacts of the projects.
- 11.1.1.12** Use the best available science (species data, habitat present, site layout options, etc.) when conducting regulatory reviews of proposed solar farm projects to reduce habitat fragmentation and minimize impacts on wildlife.
- 11.1.1.13** Use the best available science (species data, habitat present, wind farm layout options, wind blade impacts on migratory species, location of migration routes, etc.) when conducting regulatory reviews of proposed wind farm projects to minimize impacts on migratory and resident wildlife and reduce habitat fragmentation.

11.1.2 Review of proposed policies and plans

- 11.1.2.1** Develop smart-growth plans and critical habitat designations that consider SGCN life history requirements and habitat needs, connectivity and health of those habitats, and minimize human-associated disturbances to those habitats and the SGCN inhabiting them.

11.2 Technical assistance

11.2.0 Assorted technical assistance strategies

- 11.2.0.1** Provide technical support to private and public landowners and land managers for carrying out restoration and management practices aimed at increasing structural habitat diversity.
- 11.2.0.2** Provide technical support to public and private landowners and land managers for controlling invasive, native and non-native plant species in order to increase structural habitat diversity.
- 11.2.0.3** Develop state, regional and local BMPs that focus on minimizing habitat fragmentation and human-wildlife conflicts associated with development. Make information available to land developers and private and public landowners for implementation.
- 11.2.0.4** Provide educational resources, training programs, and expert guidance to private and public landowners and land managers on the secondary impacts of rodenticides on predators and scavengers.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Pine Barrens Snakes

- 11.2.0.5 Provide educational resources, training programs, and expert guidance to private and public landowners and land managers on the threats that herbicides and pesticides pose to aquatic systems and wildlife, and to promote safer usage of such products.
- 11.2.0.6 Provide educational resources, training programs, and on-the-ground guidance to energy, mining, transportation, and utility service agencies/companies and their project and resource managers on habitat creation, enhancement and restoration within and adjacent to project areas, as well as away from and outside of project areas (depending on the target species), by managing vegetation for a variety of species and that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife. Wind farms should address both terrestrial bound and low-flying species. Examples of habitat management include, but are not limited to, integrating short and tall grasses, specific host plants, brush piles, water sources/wetlands, shrubby areas, nesting areas and no-mow set-asides.
- 11.2.0.7 Provide educational resources, training programs, and on-the-ground guidance to energy, mining, transportation, and utility service agencies/companies and their project and resource managers on the importance of maintaining habitat connectivity, minimizing fragmentation, and the use of CHANJ products to help them target areas for such planning.
- 11.2.0.8 Provide educational resources, training programs, and on-the-ground guidance to public and private landowners and land managers on habitat creation and enhancement strategies that also considers appropriate timing for such activities to avoid sensitive periods (e.g., nesting, denning, roosting) and minimize harm to wildlife.
- 11.2.0.9 Provide educational resources, training programs, and on-the-ground guidance to municipalities, land developers, and other land managers and private landowners about the importance of leaving vegetation in place, especially along riparian areas and wildlife movement corridors.
- 11.2.0.10 Provide technical support to private landowners, consultants, and land managers to create customized management plans based on location and SGCN.
- 11.2.0.11 Provide educational resources, training programs, and on-the-ground guidance to private and public landowners and land managers on the benefits of and for creating young forest and early succession habitat for SGCN.
- 11.2.0.13 Provide educational resources and technical support to public landowners, private landowners with sufficient acreage, and land managers to promote the protection and/or development of old-growth forest stands with large trees, in particular those within large, contiguous forest tracts.
- 11.2.0.16 Provide educational resources and technical support to public and private landowners and land managers to promote the protection of critical SGCN forested habitat and minimize forest edge to benefit interior forest and disturbance-sensitive SGCN.
- 11.2.0.19 Provide educational resources and technical support to public and private landowners and land managers to promote the protection and/or enhancement of scrub-shrub habitats for SGCN.
- 11.2.0.21 Provide educational resources and technical support to public and private landowners and land managers of lands adjacent to critical migratory stopover habitats for songbirds, raptors, shorebirds, bats and invertebrates to promote the protection and/or enhancement of those adjacent habitats to increase the effective size of the migratory habitat.
- 11.2.0.22 Provide educational resources, training programs, and expert guidance to public and private landowners and land managers about lawn alternatives and the importance of natural vegetation and "edge" habitats on developed properties.

Pine Barrens Snakes

- 11.2.0.23 Provide educational resources and technical support to public and private landowners and land managers of lands adjacent to SGCN habitats to promote the protection and/or enhancement of those adjacent habitats to increase the overall size of the "core" area and/or provide a natural buffer, enhancing the suitability of the core area for SGCN, and that connect conserved SGCN habitats.
 - 11.2.0.24 Provide educational resources, training programs, and expert guidance to public and private landowners and land managers on how to manage vegetated roadside areas (e.g., mowing, brush-hogging, etc.) on a schedule that avoids peak activity periods for wildlife and therefore, minimizes harm.
 - 11.2.0.25 Provide educational resources, training programs, and on-the-ground guidance to resource managers regarding the assessment of and addressing secondary impacts (i.e. ancillary prescribed burns, trespassers, ORV use, mosquitoes, deer, buffers) related to residential and commercial development.
 - 11.2.0.26 Make educational resources available to the public that encourage researchers to seek out guidance prior to finalizing proposals and submitting State permit applications to reduce potential impacts on sensitive species.
 - 11.2.0.29 Provide educational resources, training programs, and on-the-ground guidance to Nuisance Wildlife Control Operators (NWCs), conservation partners, and the public in conserving snake populations by advising proper removal from buildings, exclusion methods from buildings, and improving the public's understanding and acceptance of snakes.
- 11.2.1 With individuals and groups involved in resource management decision making
 - 11.2.1.1 Engage partners and stakeholders in constructive dialogue regarding the importance of providing and methods to provide technical support for carrying out restoration and management practices aimed at increasing structural habitat diversity.
 - 11.2.1.2 Provide professional training and technical assistance tools (e.g., mapping, guidance documents, justification, etc.) to agencies/divisions/programs within and outside of the NJ DEP regarding the SWAP, and the conservation actions recommended therein to help facilitate SWAP implementation.
 - 11.2.1.3 Provide educational resources, training programs, and on-the-ground guidance to DOD to improve DOD Integrated Natural Resource Management Plans (INRMP) to develop and implement forest management and other practices that minimize disturbances to SGCN (i.e., beyond their federal requirements).
 - 11.2.1.6 Provide educational resources, training programs, and on-the-ground guidance to resource agencies prior to project initiation to ensure wildlife and their habitats are protected to the highest degree possible during construction, and provisions are in place for post-construction habitat use.
- 11.2.2 With private landowners
 - 11.2.2.1 Provide technical support to farming operations and woodland landowners on ways to decrease clean farming (edge-to-edge) practices and create ecotones to benefit bobwhite and other species dependent on early successional habitat.

100 Law and Policy

100. Legislation

100.1.3 Sub-national Level

- 100.1.3.3 Initiate legislative action to establish an annual budgetary line item designating funds to support programs focused on long-term research and monitoring of wildlife diseases.

Pine Barrens Snakes

100.1.4 County and Local

- 100.1.4.1** Enhance critical migratory stopover habitats for songbirds, raptors, shorebirds, bats and invertebrates through the local ordinances of adjacent private lands to increase the effective size of the habitat.
- 100.1.4.2** Secure and increase the effective size of SGCN habitats and connect conserved SGCN habitats through local ordinances.
- 100.1.4.3** Expand the acreages and enhance the effective size of SGCN habitats by protecting adjacent habitats that contribute to the overall size of the "core" area and/or provide a natural buffer, enhancing the suitability of the core area for SGCN through local ordinances.
- 100.1.4.9** Secure existing and developing old-growth forest stands with large trees, in particular those within large, contiguous forest tracts, through local ordinances.
- 100.1.4.10** Secure critical SGCN forested habitat and minimize forest edge to benefit interior forest and disturbance-sensitive SGCN through local ordinances.
- 100.1.4.12** Secure scrub-shrub habitats for SGCN through local ordinances.
- 100.1.4.13** Encourage municipal laws regulating domestic pets that may predate on wildlife.
- 100.1.4.14** Adopt/pass local ordinances which require assessing and addressing secondary impacts (i.e. ancillary prescribed burns, trespassers, ORV use, mosquitoes, deer, buffers) on biological resources when revising planning/zoning documents or granted site plan/subdivision approvals.
- 100.1.4.15** Incorporate habitat connectivity and the preservation of natural areas into state and local land-use policy and the environmental review process to minimize habitat fragmentation and related threats associated with development.

100.1.5 Scale Unspecified

- 100.1.5.4** Incorporate habitat connectivity and preservation of natural areas into state and local land-use policy and the environmental review process to minimize the impacts of transportation and service corridors on fish and wildlife and their habitats.

100. State Regulations

100.3.0 Regulatory initiatives for species and habitat protection

- 100.3.0.3** Develop policies that will promote the long term protection of critical migratory stopover habitats for songbirds, raptors, shorebirds, bats and invertebrates.
- 100.3.0.5** Develop policies that will promote improved and secure habitat connections between conserved SGCN habitats.
- 100.3.0.6** Develop policies that will promote expanding acreages and enhancing the effective size of SGCN habitats by providing biologically appropriate buffers of native habitat surrounding SGCN habitats.
- 100.3.0.8** Develop policies and/or regulations with the objective of protecting significant natural and/or unique communities in perpetuity.
- 100.3.0.9** Secure mitigation that creates an environmental benefit for losses of SGCN and their habitats.
- 100.3.0.11** Develop policies that will ensure the protection and/or development of old-growth forest stands with large trees, in particular those within large, contiguous forest tracts.
- 100.3.0.12** Develop policies that promote the preservation and protection of critical SGCN forested habitat and minimize forest edge to benefit interior forest and disturbance-sensitive SGCN.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Pine Barrens Snakes

- 100.3.0.15 Develop policies that promote protecting and restoring scrub-shrub habitats to benefit shrub-dependent SGCN.
- 100.3.0.18 Develop policies for conserved lands that prohibit planting and supports the control of non-native vegetation and invasive, native vegetation.
- 100.3.0.20 Develop policies and/or regulations that prohibit the presence of managed cat colonies and trap, neuter and release programs in or near critical wildlife habitats.
- 100.3.0.21 Develop policies that minimize wildlife road mortality through: 1) Requiring the integration of wildlife passages into all new and repaired roads, in particular those areas that will connect SGCN habitats, 2) Requiring current fish/wildlife passages be improved and maintained in perpetuity, 3) Supporting seasonal road closures, in particular for unimproved roads, 4) Supporting projects that work to improve connectivity of SGCN habitats such as land conservation through acquisition or other means.
- 100.3.0.31 Create or expand tax-based incentive programs available to private, agricultural, commercial, industrial or governmental landowners and land managers to include or provide for incentives for the maintenance and/or improvement to existing habitat via the endorsement of wildlife-related BMPs.
- 100.3.0.32 Coordinate regulations across agencies to maximize availability of and enrollment in existing Forestry Stewardship Programs (e.g., "Woodland Stewards", Farm Bill, partners, etc.) to maintain and/or improve forest habitat.
- 100.3.0.36 Create legislation to limit the amount of plastic from shopping bags in circulation and re-instate incentives for citizens bringing their own shopping bag to grocery store.
- 100.3.0.40 Develop laws and/or policies to require vegetative buffers of native plants on preserved farmland and state lands with agricultural leases or agreements.
- 100.3.0.41 Explore all State regulatory requirements for mitigation, restoration, habitat management, etc. to ensure they prohibit the use of specified invasive or other problematic plant species.
- 100.3.0.43 Identify and address (amend) regulatory impediments to beneficial habitat management.
- 100.3.0.44 Incorporate requirements for technical support and funding for mitigation or restoration efforts so as to be consistent with existing regulations.
- 100.3.0.45 Increase the controlled burn season to focus on restoring vegetative communities.
- 100.3.0.46 Investigate and/or develop inter-agency Memorandum of Agreements to share common data stored or managed in program-specific databases.
- 100.3.0.48 Propose new State law or regulation mandating that a State-level "development impact fee" be assessed on all new development approved by municipalities (via the Municipal Land Use Law processes), and dedicate such monies to the development and implementation of regional Habitat Conservation Plans (or existing plans/programs serving the same regional function).
- 100.3.0.49 Review existing CAFRA regulations and ensure that the Coastal Zone Management Rules (NJAC 7:7E) adequately address the issue of disturbance to habitat or species as a result of human activities (e.g., construction, bridge maintenance, road work, etc.).
- 100.3.0.50 Retain endangered, threatened and special concern wildlife and habitat protection measures in the Water Quality Management Program Rules.
- 100.3.0.52 Revise existing and/or incorporate new State land use regulations that specifically address the impacts of new or expanded energy sitings and facilities.

Pine Barrens Snakes

- 100.3.0.53 Revise existing and/or incorporate new State land use regulations that specifically address the impacts of new or expanded rights-of-way corridors associated with energy transport/transmission.
- 100.3.0.54 Revise existing and/or incorporate new State land use regulations that specifically address the impacts of new or expanded surface mining areas.
- 100.3.0.57 Develop regulations that when implemented will improve and secure habitat connections between conserved SGCN habitats.
- 100.3.0.58 Develop regulations that when implemented will promote the expansion of acreages and enhancement of the effective size of SGCN habitats by providing biologically appropriate buffers of native habitat surrounding SGCN habitats.
- 100.3.0.60 Develop regulations that when implemented will protect significant natural and/or unique communities in perpetuity.
- 100.3.0.62 Develop regulations that when implemented will protect existing old-growth forest stands with large trees and/or stands that are being actively managed for old growth forests, in particular those within large, contiguous forest tracts.
- 100.3.0.63 Develop regulations that when implemented will preserve and protect critical SGCN forested habitat and minimize forest edge to benefit interior forest and disturbance-sensitive SGCN.
- 100.3.0.65 Develop regulations that when implemented will protect and restore scrub-shrub habitats to benefit shrub-dependent SGCN.
- 100.3.0.68 Develop regulations that when implemented will prohibit the presence of managed cat colonies and trap, neuter and release programs in or near critical wildlife habitats.
- 100.3.0.69 Develop regulations that when implemented will minimize wildlife road mortality.
- 100.3.0.71 Develop regulations for licensing, permitting, or certification of Nuisance Wildlife Control Operators (NWCOS) that handle removal/exclusion of protected wildlife, such as bats and snakes, to ensure that proper methods are followed and that occurrences are reported.
- 100.3.0.72 Develop regulations that require permit applicants and/or review agencies to assess the cumulative and synergistic effects of a proposed project (i.e., "secondary effects"), both over time and over a larger spatial scale than the site itself.
- 100.3.0.73 Develop regulations that would exempt the conversion of lawns to native vegetation (beneficial to wildlife) from local lawn ordinances.

100. State Agency Policy Integration

100.4.0 Policy initiatives for species and habitat protection

- 100.4.0.1 Create any necessary policy changes (including those to incentive programs) to encourage the integration of SWAP actions associated with SGCN priority habitats as a deliberative factor in agencies' actions (e.g., environmental and land management review processes, land acquisition and management).
- 100.4.0.2 Create a policy that requires the NJ DEP to incorporate scientific information regarding climate change and sea level rise (e.g., predictions, habitat management/acquisition efforts to enhance resilience to inundation) on their websites and to work with other government entities, conservation organizations and other stakeholders to work together to collaboratively use social media campaigns to grow a constituency of NJ residents who have an elevated ecological and climate consciousness.
- 100.4.0.3 Develop policies for mandatory buffer strips on preserved farmlands and state-owned agricultural lands.

Appendix J: Threats and Conservation Actions for the Focal Species of Greatest Conservation Need

Pine Barrens Snakes

- 100.4.0.4 Create a policy that requires the use of wildlife habitat and corridor mapping products for both regulatory use when conducting project reviews and planning/siting new or expanded rights-of-way projects.
- 100.4.0.8 Develop a white paper addressing the impacts that existing, new or expanded rights-of-way have upon wildlife, wildlife habitats and habitat connectivity.
- 100.4.0.9 Develop and implement policies to minimize the removal of coarse, woody debris in terrestrial, aquatic and riparian habitats in order to benefit wildlife.
- 100.4.0.12 Develop laws and/or policies to require vegetative buffers of native plants on preserved farmland and state lands with agricultural leases or agreements.
- 100.4.0.13 Develop policies for different circumstances (e.g., roadsides and medians, riparian, aquatic and terrestrial habitats) that outline appropriate habitat/vegetation management strategies and schedules to minimize risks to and benefit wildlife.
- 100.4.0.16 Develop policies to implement habitat management strategies that will increase the structural diversity surrounding areas used for energy, mining, and transportation and service corridors which include but are not limited to the presence of short and tall grasses, specific host plants, brush piles, water sources/wetlands, shrubby areas, nesting areas, and no-mow set-
- 100.4.0.17 Develop policies to implement habitat management strategies, including prescribed burns, that will increase the structural diversity on preserved farmlands, state-owned agricultural lands, forests, parks and wildlife management areas, and any conserved lands purchased with the assistance of Green Acres and Federal Land & Water Conservation Fund monies to control and reduce the impacts of invasive, non-native species in order to increase structural habitat diversity.
- 100.4.0.18 Develop policies to minimize the extent of infrastructure associated with energy and service corridors or areas (e.g., wind and solar farms, pipelines, utility lines) and that require the implementation of habitat management strategies that will increase the structural diversity in the area including (e.g., the presence of short and tall grasses, specific host plants, brush piles, water sources/wetlands, shrubby areas, nesting areas, and no-mow set-asides).
- 100.4.0.19 Develop regulations that will minimize the creation of new barriers, remove or replace current barriers with appropriately-sized systems to accommodate wildlife dispersal, and to minimize road widening and traffic volume increases within critical wildlife habitat areas.
- 100.4.0.20 Develop state regulations that require energy developers and utility service companies to implement habitat management strategies that will increase the structural diversity of the habitat, minimize habitat fragmentation and commercial infrastructure, and minimize the loss, alteration and/or degradation of the habitat and adjacent lands when working on preserved farmlands, state-owned agricultural lands, forests, parks and wildlife management areas, and any conserved lands purchased with the assistance of Green Acres and Federal Land & Water Conservation Fund monies.
- 100.4.0.25 Develop policies that require permit applicants and/or review agencies to assess the cumulative and synergistic effects of a proposed project (i.e., "secondary effects"), both over time and over a larger spatial scale than the site itself.

Timber Rattlesnake

Focal species that comprise this Conservation Target:

Timber Rattlesnake

Threats and Action Drivers associated with this Conservation Target:

1 **Residential and Commercial Development**

1.1 Housing and Urban Areas

1.1.1 Land conversion from natural habitat to urban and other residential areas (large and small scale) (Avg. Score: 3.00)

- NJ Specific Threats:**
- 1.1.1.1 Fragments terrestrial and aquatic habitats making the area unsuitable for area-sensitive species and inhibit dispersal of animals, reducing gene flow.
 - 1.1.1.2 Loss, alteration and/or degradation of habitat.
 - 1.1.1.3 Lot layout, design and/or landscaping may create conditions that increase wildlife-human conflict.
 - 1.1.1.4 Increased risk of vehicle strikes/mortality to terrestrial-bound and some bird species.
 - 1.1.1.5 Impervious surfaces can lead to a decrease in water recharge.
 - 1.1.1.6 Impervious surfaces can cause an increased risk of floods, flash floods and storm damage that degrade terrestrial and aquatic habitats.
 - 1.1.1.7 Impervious surfaces can cause an increase in temperatures of local aquatic systems making them unsuitable (or less suitable) for aquatic species' reproduction and survival.

1.2 Commercial and Industrial Areas

1.2.1 Land conversion from natural habitat to commercial or industrial areas (large and small scale) (Avg. Score: 3.00)

- NJ Specific Threats:**
- 1.2.1.1 Fragments terrestrial and aquatic habitats making the area unsuitable for area-sensitive species and inhibit dispersal of animals, reducing gene flow.
 - 1.2.1.2 Loss, alteration and/or degradation of habitat.
 - 1.2.1.3 Lot layout, design and/or landscaping may create conditions that increase wildlife-human conflict.
 - 1.2.1.4 Increased risk of vehicle strikes/mortality to terrestrial-bound and some bird species.
 - 1.2.1.5 Impervious surfaces can lead to a decrease in water recharge.
 - 1.2.1.6 Impervious surfaces can cause an increased risk of floods, flash floods and storm damage that degrade terrestrial and aquatic habitats.
 - 1.2.1.7 Impervious surfaces can cause an increase in temperatures of local aquatic systems making them unsuitable (or less suitable) for aquatic species' reproduction and survival.

1.3 Tourism and Recreational Areas

1.3.1 Land conversion from natural habitat to recreation or tourism areas (large and small scale) (Avg. Score: 1.00)

- NJ Specific Threats:**
- 1.3.1.1 Fragments terrestrial and aquatic habitats making the area unsuitable for area-sensitive species and inhibit dispersal of animals, reducing gene flow.
 - 1.3.1.2 Loss, alteration and/or degradation of habitat.
 - 1.3.1.3 Lot layout, design and/or landscaping may create conditions that increase wildlife-human conflict.
 - 1.3.1.4 Impervious surfaces can lead to a decrease in water recharge.

Timber Rattlesnake

1.3.1.5 Impervious surfaces can cause an increased risk of floods, flash floods and storm damage that degrade terrestrial and aquatic habitats.

1.3.1.6 Impervious surfaces can cause an increase in temperatures of local aquatic systems making them unsuitable (or less suitable) for aquatic species' reproduction and survival.

2 **Agriculture and Aquaculture**

2.1 Annual and Perennial Crops (non-timber)

2.1.1 Shifting Agriculture (Avg. Score: 2.00)

NJ Specific Threats: 2.1.1.1 Conversion of low-intensity agriculture to intensive agriculture (e.g., tree nursery, row crop) degrades habitat, especially for early-successional species.

2.1.1.3 Conversion of agricultural landscape that results in increased erosion, runoff, and chemical and thermal pollution decreases the landscape's ability to buffer aquatic systems from various forms of terrestrial degradation.

2.1.2 Small-holder Farming (Avg. Score: 1.00)

NJ Specific Threats: 2.1.2.2 Fragments terrestrial and aquatic habitats.

2.1.2.4 Agricultural practices (e.g., mechanized, row-crop agriculture) can cause direct mortality to wildlife when harvesting takes places.

2.1.3 Agro-industry (Avg. Score: 2.00)

NJ Specific Threats: 2.1.3.2 Fragments terrestrial and aquatic habitats.

2.1.3.3 Agricultural practices (e.g., mechanized, row-crop agriculture) can render lands unsuitable for most wildlife due to soil degradation and erosion.

2.2 Wood and Pulp Plantations

2.2.1 Small Holder (Avg. Score: 2.00)

NJ Specific Threats: 2.2.1.1 Conversion of native forests to plantations decreases the habitat quality for forest-dependent species.

2.2.1.2 Tree harvesting can cause direct mortality to wildlife, especially if done during peak activity periods or vulnerable life stages (e.g., denning, nesting, gestation/birthing, basking, roosting, pre-volancy, etc.).

2.2.2 Agro-industry Plantations (Avg. Score: 2.00)

NJ Specific Threats: 2.2.2.1 Conversion of native forests to plantations decreases the habitat quality for forest-dependent species.

2.2.2.2 Tree harvesting can cause direct mortality to wildlife, especially if done during peak activity periods or vulnerable life stages (e.g., denning, nesting, gestation/birthing, basking, roosting, pre-volancy, etc.).

2.3 Livestock Farming and Ranching

2.3.2 Small-holder Grazing (Avg. Score: 1.00)

NJ Specific Threats: 2.3.2.1 Inappropriately located, newly created horse/livestock farms may fragment forest habitats.

2.3.2.3 Conversion of natural stream buffers into pastures decreases the landscape's ability to buffer aquatic systems from various forms of terrestrial degradation.

2.3.2.4 Livestock allowed to wade into waterbodies trample and degrade aquatic habitats.

2.3.3 Agro-industry Grazing (Avg. Score: 2.00)

NJ Specific Threats: 2.3.3.1 Inappropriately located, newly created horse/livestock farms may fragment forest habitats.

Timber Rattlesnake

2.3.3.3 Conversion of natural stream buffers into pastures decreases the landscape's ability to buffer aquatic systems from various forms of terrestrial degradation.

2.3.3.4 Livestock allowed to wade into waterbodies trample and degrade aquatic habitats.

3 **Energy Production and Mining**

3.1 Oil and Gas Facilities and Pipelines

3.1.1 Distribution processes of petroleum and other liquid hydrocarbons (Avg. Score: 2.00)

- NJ Specific Threats:**
- 3.1.1.1 Fragments terrestrial and aquatic habitats.
 - 3.1.1.2 Loss, alteration and/or degradation of habitat.
 - 3.1.1.3 Increased risk of oil spills.
 - 3.1.1.4 Increased noise pollution.
 - 3.1.1.5 Increased vehicular and ship traffic associated with construction and operations, and therefore an increased risk of wildlife mortality from strikes.
 - 3.1.1.6 Increased risk of collision between marine mammals, sea turtles and fish and the marine-based structures/facilities.

3.1.2 Natural gas distribution processes (Avg. Score: 2.00)

- NJ Specific Threats:**
- 3.1.2.1 Fragments terrestrial and aquatic habitats.
 - 3.1.2.2 Loss, alteration and/or degradation of habitat.
 - 3.1.2.3 Increased risk of gas leaks and explosions.
 - 3.1.2.4 Increased noise pollution.
 - 3.1.2.5 Increased vehicular and ship traffic associated with construction and operations, and therefore an increased risk of wildlife mortality from strikes.
 - 3.1.2.6 Increased risk of collision between marine mammals, sea turtles and fish and the marine-based structures/facilities.

3.2 Mining and Quarrying

3.2.2 Surface Mining - Rock Quarry (and sand quarries) (Avg. Score: 2.00)

- NJ Specific Threats:**
- 3.2.2.1 Fragments terrestrial and aquatic habitats.
 - 3.2.2.2 Loss, alteration and/or degradation of terrestrial and aquatic habitats.
 - 3.2.2.3 Increased risk of vehicle strikes/mortality to wildlife.

3.3 Renewable Energy

3.3.1 Wind Power (Avg. Score: 2.00)

- NJ Specific Threats:**
- 3.3.1.2 Fragments terrestrial habitats.
 - 3.3.1.3 Loss, alteration and/or degradation of habitat.
 - 3.3.1.4 Increased commercial infrastructure.

3.3.2 Solar Power (Avg. Score: 3.00)

- NJ Specific Threats:**
- 3.3.2.1 Fragments terrestrial habitats.
 - 3.3.2.2 Loss, alteration and/or degradation of habitat.
 - 3.3.2.3 Increased commercial infrastructure.

3.4 Conventional Power Plants

3.4.0 Conventional Power Plants (Avg. Score: 3.00)

Timber Rattlesnake

NJ Specific Threats: 3.4.0.2 Loss, alteration and/or degradation of habitat due to new or the expansion of current facilities.

4 Transportation and Service Corridors

4.1 Roads and Railroads

4.1.1 Land conversion from natural habitat to roads and railroads (large and small scale) (Avg. Score: 3.00)

NJ Specific Threats: 4.1.1.1 Fragments terrestrial and aquatic habitats making the landscape unsuitable for area-sensitive species and inhibiting dispersal of non-volant animals, reducing gene flow.

4.1.1.2 Loss, alteration and/or degradation of habitat associated with road and railroad construction and maintenance, and degradation of adjacent habitats.

4.1.1.3 Re-establishment of abandoned railroad lines may displace wildlife, in particular, less mobile species using the area to fulfill critical life history requirements.

4.1.1.4 Re-establishment of abandoned railroad lines may increase the risk of direct mortality on wildlife.

4.1.2 Movement of cars and other vehicles on roads and railroads (large and small scale) (Avg. Score: 3.00)

NJ Specific Threats: 4.1.2.1 Increased vehicle traffic increases the risk of wildlife mortality from strikes.

4.2 Utility and Service Lines
