

HENRY B. KÜMMEL, State Geologist C.C. VERMEULE, Topographer

ORIGINAL SURVEY 1882
PRINCIPAL FEATURES REVISED 1903

ATLAS SHEET No.23

NOTE. The curved lines are level lines drawn on the earth's surface. All points through which any given line passes are at the same level and their height above mean sea level is shown by the figures on the line. The rise or fall from any line to the next is, as the figures will show, 10 or 20 feet. Figures not on any line show the actual elevation of the surface at a point indicated by a small cross. Figures on blue ground indicate the depth of water at mean low tide. North of the State line for the areas not contoured data have been taken from the U.S.G.S. sheets.

Scale: 1 mile to an inch

Contour interval 10, 20, and 50 feet
