

STATE OF NEW JERSEY
 DEPARTMENT OF CONSERVATION AND DEVELOPMENT
 ATLAS SHEET No. 36

DIVISION OF GEOLOGY AND WATERS
 HENRY B. KÜMMEL, State Geologist

ORIGINAL SURVEY 1883-4; REVISION, 1916
 C. C. VERMEULE, Topographer

NOTE. The curved lines are level lines drawn on the earth's surface. All points through which they pass are at the same level and their height above mean sea level is shown by the figures on the line. The rise or fall from any line to the next is as the figures will show ten feet with some feet omitted in Cape May County. Figures not on any line show the level elevation of the surface at a point indicated by a small cross. The dotted lines on the blue ground are lines of equal depth of water, and the figures accompanying show depth at mean or high tide.

The shore lines of tidal waters, and the interpolation are in part from the United States Coast and Geodetic Survey.
 The highways, railroads and some other details were revised in 1916.
