

STATE OF NEW JERSEY  
 DEPARTMENT OF CONSERVATION AND DEVELOPMENT  
 ATLAS SHEET No. 36

SHEET 36  
 DIVISION OF GEOLOGY AND TOPOGRAPHY  
 HENRY B. KÜMMEL, State Geologist

ORIGINAL SURVEY, 1883-4  
 PRINCIPAL FEATURES REVISED, 1916, 1933  
 EDITION OF 1934

NOTE—The curved lines are level lines drawn on the earth's surface. All points through which any given line passes are at the same level and their height above some one level is shown by the figures on the line. The rise or fall from any level to the next is, as the figures will show, not uniform. The lines are drawn with a small interval. The dotted line shows the actual elevation of the surface at a point indicated by a small cross. The dotted line on the low ground shows lines of equal depth of water, and the figure accompanying shows depth at mean or half tide.

ORIGINAL SURVEY AND REVISIONS TO 1916 MADE UNDER  
 DIRECTION OF C. C. VERMEULE, TOPOGRAPHER, REVISION OF 1933  
 BY L. P. FLUMMER, TOPOGRAPHER, ENGINEER

The shore lines of 50m water, and the delineation are in part from the  
 United States Coast and Geodetic Survey.  
 The beaches were revised in 1927 except around TUCKER ISLAND and  
 BRIGANTINE INLET which were completed in 1924. ABSECON  
 INLET was revised in 1933.  
 Note: Railroads now known as PENNSYLVANIA-READING SEASHORE LINES
