

An illustration of a lake scene. At the top, two storm drains are shown: one on the left with a grey cover and one on the right with a grey pipe. Water is flowing from the right drain into the lake. The lake is filled with various pieces of trash: a blue plastic bottle, a purple bottle, a blue plastic bag, a pink bottle, a green and white plastic bottle, and a blue and white plastic bottle. The lake is surrounded by green hills and has several types of aquatic plants, including seaweed and tall grasses. The sky is a light blue color.

LITTER LIVES IN OUR LAKES

Rain washes pollutants into storm drains and directly into our lakes, rivers, and the ocean.

So, what can you do? Recycle and dispose of your trash properly.
