Administrative Guidance - contamination that is suspected to be unrelated to a known discharge undergoing remediation

The New Jersey Department of Environmental Protection (Department) is announcing the availability of administrative guidance for use by Licensed Site Remediation Professionals and Subsurface Evaluators when encountering contamination that is suspected to be unrelated to a known discharge undergoing remediation. The administrative guidance identifies steps to follow when contamination is encountered on or off the site undergoing remediation as well as situations involving residential unregulated heating oil underground storage tanks.

The guidance is located in the Site Remediation Guidance Library on the Department's Site Remediation Program (SRP) webpage www.nj.gov/dep/srp/guidance/, under [Administrative Guidance](#).
