(Version 3.0) available

[SRRA]: Updated Extractable Petroleum Hydrocarbon calculator (Version 3.0) available

The New Jersey Department of Environmental Protection (NJDEP) announces that the online Extractable Petroleum Hydrocarbon (EPH) Calculator has been updated to Version 3.0 (October 18, 2017) from Version 2.0 (August 9, 2010).

Version 3.0 corrects an error in Version 2.0 that would display a pop-up message stating, "The default EPH soil remediation criterion for residential #2 fuel oil/diesel fuel oil is 5,100 mg/kg." This message was displayed only when a limited set of EPH concentrations were entered that resulted in a calculated EPH soil remediation criterion of 5,100 mg/kg. This pop-up message will no longer appear in Version 3.0.

To download the updated EPH calculator, go to either [www.nj.gov/dep/srp/guidance/rs/](http://www.nj.gov/dep/srp/guidance/rs/), or download directly from this link: [www.nj.gov/dep/srp/guidance/srra/eph\\_calculator.xls](http://www.nj.gov/dep/srp/guidance/srra/eph_calculator.xls).
