

WETLANDS AT WORK *in NJ*

Blue carbon helps
New Jersey be green! 

Blue carbon is carbon that is stored and sequestered in wetland ecosystems.

The carbon released by burning
1 BILLION
barrels of oil is sequestered by
wetlands each year.

(The Nature Conservancy)

New Jersey's own wooded
wetlands store as much as
**3.4 METRIC TONS
PER ACRE**
of blue carbon each year

 *NJ's wetland areas are roughly in grey*

In comparison...
