SHEILA Y. OLIVER  
*Lt. Governor*

CATHERINE R. MCCABE  
*Commissioner*

March 28, 2019

Dear Interested Party:

The Department of Environmental Protection (Department) has finalized the following documents for the administration of the Federal Fiscal Year (FFY) 2018/State Fiscal Year (SFY) 2019 and FFY2019/SFY2020 Clean Water State Revolving Fund (CWSRF) and Drinking Water State Revolving Fund (DWSRF):

<b>Clean Water State Revolving Fund (CWSRF) Program</b>
Final Federal Fiscal Year 2018/ State Fiscal Year 2019 Intended Use Plan
Final Federal Fiscal Year 2019/ State Fiscal Year 2020 Intended Use Plan
<b>Drinking Water State Revolving Fund (DWSRF) Program</b>
Final Federal Fiscal Year 2018/ State Fiscal Year 2019 Intended Use Plan
Final Federal Fiscal Year 2019/ State Fiscal Year 2020 Intended Use Plan

The Intended Use Plans (IUPs) must be developed by the Department, undergo a public participation process and be approved by the US Environmental Protection Agency (USEPA) for the Department to be awarded its capitalization grants used to finance water infrastructure projects.

The FFY2018 CWSRF and DWSRF IUPs were proposed in November 2017 with a 30-day comment period. No changes were made to the Clean Water SRF program, from those described in the proposed FFY2018 IUP. The financing packages for Drinking Water State Revolving Funds projects originally published in the Proposed FFY2018 IUP (November 2017), were re-proposed with amendments in September 2018. In December 2018, the DWSRF FFY2018 IUP was revised to incorporate supplemental amendments based on comments received in October 2018, along with publication of the proposed FFY2019 IUP. No further changes have been made as a result of comments received on the supplemental amendments (December 2018).

The FFY2019/SFY2020 CWSRF IUP was proposed in December 2018 and has been finalized in a separate document and posted on the Department's website with the documents identified above.

The Final documents (including the Final FFY19 CWSRF IUP) are posted on the Department's web site at <http://www.nj.gov/dep/dwq/cwpl.htm>.

If you have any questions regarding the Final DWSRF or CWSRF IUP, please contact the following Department staff below:

Division of Water Quality

# NEW JERSEY'S WATER BANK FINANCING PROGRAM

*Final Clean Water Intended Use Plan for Federal Fiscal  
Year 2019 (and State Fiscal Year 2020)*

New Jersey Department of Environmental Protection  
Water Resource Management  
Division of Water Quality  
Municipal Finance and Construction Element

March 2019

*FINAL CLEAN WATER INTENDED USE PLAN FOR FEDERAL FISCAL YEAR 2019  
(AND STATE FISCAL YEAR 2020)*

The Clean Water Intended Use Plan (IUP) document must be developed annually, undergo a public comment period and be approved by the US Environmental Protection Agency (USEPA) for the State to qualify for State Revolving Fund (SRF) capitalization grants to support the New Jersey Water Bank. This IUP provides information on how funds, available through the Water Bank, will be used to provide financial assistance for clean water projects and identifies State policies governing loan awards.

**For SFY20, the Clean Water IUP includes changes to the NJ Department of Environmental Protection (“Department” or “NJDEP”) and NJ Infrastructure Bank (I-Bank) loan shares for every project category eligible for clean water funds resulting in slightly higher interest rates. Although the Program will continue to offer competitive loan rates, the decreased Department share in each project loan will enable the Program to fund more projects in support of the Water Bank’s long-term viability.**

**In addition, the Department plans to utilize any unallocated principal forgiveness funds carried over at the end of SFY19 as principal forgiveness in SFY20 for categories set forth in this IUP (including Combined Sewer Overflow (CSO) – Green Infrastructure, Barnegat Bay, Coastal Water Quality Restoration and Small System Asset Management Plans) and supplement those principal forgiveness funds with approximately \$16 million projected to be available under the FFY19 CWSRF grant from USEPA with \$6M for CSO-Green Infrastructure projects and \$10M for CSO-Grey Infrastructure projects.**

## EXECUTIVE SUMMARY

Protecting and enhancing New Jersey’s water quality and water infrastructure is vital to the State’s health and economy. While often taken for granted, significant planning and investment is required to sustain and improve New Jersey’s aging infrastructure systems. That cost often exceeds the capabilities of local sewer utilities. New Jersey’s Water Bank is a permanent low-cost financing program available for an extensive range of water quality infrastructure projects. The Water Bank administers New Jersey’s Clean Water SRF (CWSRF) and Drinking Water SRF (DWSRF) under the federal Clean Water Act and Safe Drinking Water Act, respectively.

“NJ Water Bank is a partnership to... provide low-cost financing for the design, construction, and implementation of projects that help to protect, maintain and improve water quality.”

Established in 1988, the Water Bank is a partnership between the NJDEP and the I-Bank to provide low-cost financing for the design, construction, and implementation of projects that help to protect, maintain and improve water quality. It is a revolving/self-perpetuating loan program, in that SRF loan repayments are committed to finance future projects in perpetuity.

The priorities and policies of the Water Bank are established through this IUP. Clean Water projects eligible for financing include a wide variety of wastewater treatment works, stormwater management, land acquisition, and landfill activities. In SFY20, the Program will continue to offer very attractive low-cost financing packages, including principal forgiveness (or grant-like funding) and low interest loans for high priority projects. For SFY20, the Water Bank CWSRF base program will consist of 50% funding from the I-Bank at market rate and 50% funding from the DEP at 0% interest with opportunities for principal forgiveness. Prior to long-term funding, projects are encouraged to seek a short-term loan from the I-Bank for activities from planning through construction completion.

## WHAT'S NEW IN 2019!

The Water Bank made several changes to the program in recent years and is continuing to support those changes. However, the Program has insufficient funds to continue to provide the very generous financing packages offered in prior years.

For SFY20, the Clean Water IUP includes changes to the Department and I- Bank loan shares for every project category eligible for clean water funds. Although this will result in slightly higher interest rates for projects financed in SFY20, the changes allow the Program to still offer competitive loan rates and ensure long-term viability for the Water Bank.

### SFY20 FUNDING PACKAGES (LONG-TERM LOANS)

Clean Water Categories	DEP Interest Free Share	I-Bank Market Rate Share
CSO Abatement Projects*	75%	25%
All Other Water Quality Projects (Base CWSRF)	50%	50%
Brownfield Redevelopment (Conduit Projects)	25%	75%

\*Costs in excess of \$10 million for CSO Abatement Projects will be financed under the Base CWSRF package.

### SFY20 PRINCIPAL FORGIVENESS (PF) OPPORTUNITIES

Clean Water PF	Principal Forgiveness Share	Principal Forgiveness Cap	Projected Amount of PF Available
Small System Asset Management Plan Development	100%	\$100,000	\$1.5M
CSO – Green Infrastructure	50%	\$3M	\$12M
Coastal Community Water Quality Restoration	50%	\$2.5M	\$5M
Barnegat Bay Stormwater/NPS	50%	\$2M	\$6M
CSO-Abatement	50%	\$1M	\$10M

## PROGRAM GOALS

**Short-term:** Provide funding to needed, construction ready, highly-ranked water quality improvement projects.

**Long-term:**

- Provide capital for water and wastewater infrastructure renewal to protect public health and the environment for multiple generations of New Jersey citizens;
- Continue serving as the Garden State’s premier source of environmental infrastructure financing through self-sustaining, efficient and transparent programs;
- Establish and efficiently manage a permanent source of funding for clean water and drinking water infrastructure projects;
- Provide project financing at a much lower cost than program participants could achieve individually thereby passing substantial savings on to New Jersey taxpayers and rate payers; and
- Increase access to capital markets for those participants that find it difficult or expensive on their own, due to lower credit ratings or a lack of familiarity with debt financing.

**Passaic Valley Sewerage  
Commission Interceptor Slip  
Lining**

## BORROWER ELIGIBILITY

The following project sponsors are eligible to receive Water Bank financing provided they satisfy the I-Bank and/or State of New Jersey’s creditworthiness standards:

### Clean Water Borrowers

Owners of publicly-owned treatment works (towns, boroughs, municipal utilities authorities, counties, regional water authorities, other local government units, etc.) with projects to that help protect, maintain or improve water quality are eligible for participation in the Water Bank. Private entities are eligible through public conduit borrowers. Project sponsor eligibility has also been expanded to private colleges and universities that are interested in sponsoring nonpoint source pollution projects.

## Project Eligibility

### Wastewater

Most projects associated with sewage collection, treatment, or disposal are eligible for financing, including correction of inflow/infiltration problems, sludge management and CSOs. Eligible projects include:

- Secondary and advanced wastewater treatment
- Well Sealing, Water Meters (publicly sponsored)
- Flood resiliency
- Sludge handling facilities
- Infiltration and inflow (I/I) correction
- Interceptors, pumping stations and force mains
- Sewer system rehabilitation
- New collection systems
- Correction of CSOs
- Solutions for malfunctioning septic systems
- Wastewater reuse and conservation projects
- Emergency Repair Projects to replace, in kind, the failure of an essential portion of a wastewater system that will disrupt service for a minimum of 24 hours total and/or poses a substantial threat to the public health, safety, and welfare

**Bayonne MUA Wind Turbine for a Pump Station**

For information regarding permitting, see:

[NJPDDES Additional Information](http://www.nj.gov/dep/dwq/njpdcs.htm) (www.nj.gov/dep/dwq/njpdcs.htm)

[NJDEP Treatment Works Approval program](http://www.nj.gov/dep/dwq/forms_twa.htm) (www.nj.gov/dep/dwq/forms\_twa.htm)

[NJDEP Land Use Program](http://www.nj.gov/dep/landuse) (www.nj.gov/dep/landuse)

### Stormwater

Eligible projects include construction, expansion or replacement of stormwater management systems, including the following:

- Non-point Source Pollution/Stormwater management
- Construction of regional basins
- Major stormwater system rehabilitation
- Replacement of existing storm drains
- Rehabilitation of tide gates
- Extension of outfall points
- Runoff control (manure/feedlots and stream bank stabilization/ restoration)
- Stream/lake embankment restoration
- Salt dome construction

**Old Bridge MUA Laurence Harbor Bulkhead and Walkway**

For additional information, see:

[NJDEP Stormwater Links](http://www.nj.gov/dep/dwq/fd.htm) (www.nj.gov/dep/dwq/fd.htm)

## Green Infrastructure

Green projects are clean water projects that incorporate green infrastructure and water or energy efficiency improvements (those that reduce greenhouse gas emissions, for example). Green infrastructure includes such practices as replacing existing pavement with porous pavement, utilizing bioretention, renewable energy, constructing green roofs, creating rain gardens, and other practices that restore natural hydrology and treat stormwater runoff through infiltration into the subsoil, treatment by vegetation or soil, or stored for reuse.

For additional information, see:

[Green Infrastructure in New Jersey](http://www.nj.gov/dep/gi/index.html) (www.nj.gov/dep/gi/index.html)

[NJDEP Sustainability and Green Energy Guidance](http://www.nj.gov/dep/sage/so-guidancedocs.html)

(www.nj.gov/dep/sage/so-guidancedocs.html)

**Hoboken City Green Infrastructure**

## Brownfields Redevelopment

The cleanup of abandoned and contaminated industrial sites is eligible for financing if a local or county government assumes the repayment obligation for the loan. The Water Bank will finance the removal of contaminated soil, site-capping and the installation of stormwater controls.

Returning Brownfield sites to productive use protects and improves water quality and preserves open space. Every acre of Brownfield redevelopment spares 4.5 acres of pristine land from development. Brownfield redevelopment also boosts local tax revenue, creates jobs, revitalizes New Jersey's cities and towns, and improves the quality of life for area residents.

The Water Bank provides loans to municipalities, counties and public authorities to support a wide range of cleanup and remediation activities necessary to restore the Brownfield site for re-use.

For additional information, see:

[NJDEP Site Remediation Links](http://www.nj.gov/dep/srp/) (www.nj.gov/dep/srp/)

## Landfills

Landfills construction activities that have a water quality benefit are eligible for Water Bank financing. Examples include:

- New Landfills (Water quality/protection aspects)

- Capping systems
- Liners
- Leachate collection systems
- Treatment systems
- Sewer connections
- Barge shelters
- Containment booms
- Litter fences
- Gas collection and treatment systems
- Monitoring wells
- Reclamation or reduction activities

**Camden County Phoenix Park**

### Land Preservation

The Water Bank provides financing for the preservation of open space and farmland given the water quality benefit achieved through such acquisitions. The Program funds preservation with regard to properties protecting stream headwaters and corridors, wetlands, and aquifer recharge areas. Financing for land is compatible with the Green Acres Program, the Garden State Preservation Trust, and Open Space programs financed by local and county Open Space taxes.

Although lands purchased through the Water Bank for preservation as part of Open Space cannot be developed, they may be used for passive recreational activities, such as hiking, fishing and horseback riding. Placement of conservation easements on funded parcels is a requirement, which assures that the water quality benefits are preserved in perpetuity.

The Water Bank will coordinate with the Green Acres Program, when appropriate, to maximize a community's limited open space funds for land acquisition. Through this partnership, municipalities can receive additional resources to facilitate the purchase of larger and/or more expensive parcels.

For additional information, see:

[NJDEP Green Acres Program](http://www.nj.gov/dep/greenacres/) (www.nj.gov/dep/greenacres/)

### Equipment

Equipment that provides a water quality benefit can be financed under the Water Bank, including but not limited to:

- Street sweepers
- Generators
- Sewer flushing and cleaning equipment
- Dump trucks
- Crawler loaders
- Skimmer boats
- Aquatic weed harvesters
- Outfall netting

**Passaic Valley Sewerage Commission  
Electrical Substation**

### Security Monitoring

Projects designed to improve security at otherwise funding-eligible wastewater facilities are eligible, including but not limited to:

- Fencing
- Lighting
- Motion detectors
- Cameras
- Secure doors
- Alternative auxiliary power sources

### Miscellaneous Allowable Costs

Additional costs that are eligible within a project include:

- Road repaving
- Utility relocation
- Site grading
- Purchasing land to utilize for stormwater management

**North Wildwood Sewer, Storm and Street Restoration**

### Asset Management Plans and Long-Term CSO Control Plans:

Projects to develop and implement asset management plans (AMP), CSO long-term control plans, and water loss prevention plans are eligible for financing. The AMP loans must be rolled into a Water Bank capital improvement project or repaid in 3 years. CSO long term control plans can receive loans up to 10 years.

[NJDEP Asset Management Program](http://www.nj.gov/dep/assetmanagement/) (www.nj.gov/dep/assetmanagement/)

[NJDEP Asset Management Guidance and Best Practice](http://www.nj.gov/dep/watersupply/pdf/guidance-amp.pdf)  
(www.nj.gov/dep/watersupply/pdf/guidance-amp.pdf)

### Planning & Design Loans:

The Program also offers loans to cover the costs associated with planning and design of a water infrastructure project. These are short-term loans and currently being offered at 0% interest. Eligible costs include engineering fees, surveys, environmental or geological studies, and other costs related to project plan preparation. The loans must be rolled into an Water Bank capital improvement project or repaid in 3 years.

### Principal Forgiveness Funds

The Department expects to use the maximum amount available for principal forgiveness utilizing SRF monies subject to federal restrictions. In addition to the SRF, the Department may increase any amounts identified in the IUP reserved for PF and adjust any caps if additional SRF or non-SRF funds (including Natural Resource Damages (NRD) recovered by the State and Corporate Business Tax (CBT) diesel funds) to supplement principal forgiveness or low-cost loan funding. In addition, the Department may bank any non-SRF financing towards future State Match requirements subject to EPA approval.

### Asset Management for Small Systems

The Water Bank will continue to offer 100% principal forgiveness to small wastewater systems (those that serve 10,000 or fewer people) to develop and implement asset management programs. DEP expects to make SRF or non-SRF funds available in the form of principal forgiveness through the Water Bank and cap the amount at \$100,000 per applicant. A total of approximately \$1.5 million in principal forgiveness funds is expected to be available for this purpose in SFY20. A capital

improvement project is expected from the creation of the asset management program. Larger systems are eligible for short-term, interest-free loans, for AMP development with a capital improvement project. The Department reserves the right to use these funds to hire a contractor to provide technical services to small communities for asset management.

### Coastal Community Water Quality Restoration

The Water Bank will continue to offer up to 50% principal forgiveness for capital improvement projects that will eliminate, prevent or reduce occurrences of shellfish bed or beach closings due to the presence of pathogens. Projects would eliminate such potential sources as failing on-site wastewater systems and cross-connections between storm sewers and sanitary sewers. Project costs up to \$5 million would receive 50% principal forgiveness, 25% DEP interest-free, and 25% I-Bank market rate financing. Project costs exceeding \$5 million are eligible for the Base CWSRF structure. \$2.5 million in principal forgiveness has been committed towards Cumberland County Improvement Authority to resolve failing septic systems and prevent shellfish bed closures in Downe Township, limited to Fortescue and Gandys Beach. A total of \$5 million in principal forgiveness funds was reserved last year. Any amounts that remain unobligated at the end of SFY19, continue to be available for these purposes in SFY20.

### Green Infrastructure – CSO Sewershed

The DEP is reserving funds and providing principal forgiveness loans for CSO abatement projects utilizing green practices (such as green roofs, rain gardens, porous pavement, and other activities that maintain and restore natural hydrology by treating stormwater runoff through infiltration into the subsoil, treatment by vegetation or soil, or stored for reuse). Projects are eligible for up to 50% principal forgiveness, 25% DEP interest free and 25% I-Bank market rate financing. A total of approximately \$12 million in principal forgiveness funds is anticipated to be available to provide principal forgiveness loans for CSO-Green Infrastructure in SFY20. There is a \$3 million cap of principal forgiveness per applicant in SFY20. Department funding at 75% with an interest free loan mixed with I-Bank funding at market rate will be provided for costs for project costs between \$6 million and \$10 million. Costs above \$10 million will be financed through the base CWSRF rate.

### Grey Infrastructure – CSO Sewershed

The DEP is reserving funds and providing principal forgiveness loans for CSO abatement projects. Projects are eligible for up to 50% principal forgiveness, 25% DEP interest free and 25% I-Bank market rate financing. A total of approximately \$10 million in principal forgiveness funds is anticipated to be available for CSO abatement projects in SFY20. There is a \$1 million cap of principal forgiveness per applicant in SFY20. Department funding at 75% with an interest free loan mixed with I-Bank funding at market rate will be provided for costs for project costs between \$2 million and \$10 million. Costs above \$10 million will be financed through the base CWSRF rate.

### Barnegat Bay

Approximately \$6 million in principal forgiveness funds is reserved for stormwater and non-point source pollution management projects in the Barnegat Bay Watershed. 50% principal forgiveness will be offered with a \$2 million limit on principal forgiveness per sponsor and awarded on a first come basis. The remaining project amount will be financed equally with a DEP interest-free and I-Bank market rate financing.

### Sandy Relief

Sandy Relief funds remain available for clean water facilities that were damaged by Superstorm Sandy and are constructing repairs or resiliency to prevent future damage to a treatment facility or

water system from a similar event. Resiliency projects include elevating critical infrastructure, flood walls, backup power sources and more. Sandy Relief funds were made available in a one-time installment and offered while funds remain. As such, the Water Bank will continue to accept submittals under the Sandy Relief program, which includes a principal forgiveness component of approximately 19% of the allowable costs. If all of the Sandy Relief funds are awarded in SFY19, new submittals will be eligible under the Base SRF loan structure.

## Financing Options

At the time a project is at or near construction completion, long-term financing will be issued. The Water Bank offers the following low interest financing options for eligible projects in SFY20.

### CSO Abatement Projects

When the PF funds allocated to CSO projects in SFY20 are no longer available, the CWSRF funding package for CSO abatement projects consists of 75% DEP interest-free and 25% I-Bank market rate financing for the first \$10 million in allowable costs. Costs in excess of \$10 million will be financed under the Base CWSRF financing package below.

### Base CWSRF

The Base CWSRF funding package for SFY20 consists of 50% DEP interest-free and 50% I-Bank market rate financing for the allowable project costs.

### Brownfield Redevelopment (Public Private Partnership)

Brownfield redevelopment by private entities is eligible for a funding package of 25% DEP and 75% I-Bank financing. Private entities must have a public conduit that will sponsor the project.

### SAIL Program

The Statewide Assistance Infrastructure Loan (SAIL) program is a disaster relief loan program designed for project sponsors that anticipate receiving FEMA or other federal disaster relief grants. The SAIL program's goal is to provide timely and cost-effective funds, in advance of federal reimbursements, in order to expedite and support the impacted communities' recovery and rebuilding of environmental infrastructure. SAIL finances projects within a declared disaster area to rebuild water systems directly impacted by a declared disaster as well as costs associated with improving the resiliency of Clean Water and Drinking Water systems, regardless of direct disaster impact.

### Short-Term (ST) Loans

All CW projects are encouraged to secure short-term loans at the time of execution of an engineering design contract for the entirety of the project (planning, design, and construction). Funding will be committed upon certification of each operable segment and satisfaction of the program's credit worthiness standards. Such loans are variable rate loans, currently at 0% interest, for terms of up to 5 full fiscal years.

## NOTEWORTHY PROGRAM FEATURES

### Application

All applications are submitted on the H2LOans website ([h2loans.com](http://h2loans.com)). To create an H2LOans account, the project sponsor's authorized official will need to call the I-Bank at 609-219-8601 for security reasons. The authorized official can then designate a project manager (authorized representative) to submit required

information. Application deadlines have been removed and rolling applications are being accepted any time of the year.

[H2LOans Tutorial Video](https://www.youtube.com/watch?v=UgDDV_SvgL0) ([https://www.youtube.com/watch?v=UgDDV\\_SvgL0](https://www.youtube.com/watch?v=UgDDV_SvgL0))

### Loan Awards

Loan awards for new projects will be made in SFY20 in accordance with [N.J.A.C. 7:22-3, 4, and 5.9](#) (<http://www.nj.gov/dep/dwq/722.htm>). The loan term will generally be 30 years and in some project circumstances, the Water Bank may consider loan terms of up to 45 years for clean water projects. In either case, the loan term cannot exceed the useful life of the project.

Local government units are required to meet the technical, administrative, and environmental provisions of the rules of DEP and the I-Bank ([N.J.A.C. 7:22-3, 4, 5, 8, 9, and 10](#) <http://www.nj.gov/dep/dwq/722.htm>). Disbursement and loan repayment provisions must be consistent with the rules.

### Pre-award Approvals/Emergency Projects

Eligible projects can qualify to receive pre-award approvals if the requirements of the rules ([N.J.A.C. 7:22-3.32 and 4.32](#) <http://www.nj.gov/dep/dwq/722.htm>) are met and if executed contracts to implement the project have been received by DEP.

### DEP & I-Bank Fee

In accordance with the USEPA Policy on Fees Charged on Assistance Provided Under the SRF Programs, states must disclose information regarding the assessment and use of any fees associated with SRF activities that are passed on to the program participants. In New Jersey, DEP reserves 0.5% of the CWSRF loan portfolio to cover a portion of the administrative costs of the program. In addition, the annual legislation for the SFY 2006 Program established a "Department Loan Origination Fund" that is administered by the I-Bank. DEP now has a stable fixed fee of 2% of the participant's loan amount. No SRF funding is involved in DEP's loan origination fee. DEP's loan origination fee is not included in the principal amount of the CWSRF loan and is accounted for separately.

The I-Bank's loan is issued at the same market interest rate as the I-Bank obtains from the sale of its bonds. Rather than bonding for the eligible closing costs associated with each financing, the I-Bank charges the borrowers a one-time charge of 0.1% of the principal I-Bank loan amount to partially cover the costs associated with that particular series' bond issuance expenses. These costs include such activities as: bond counsel, financial advisor, rating agencies, printing and publishing of the Notice of Sale, the Preliminary Official Statement, the Official Statement, and other costs related to the I-Bank's bond sale. In addition, the I-Bank charges an annual administrative fee of 0.3% of the I-Bank's bond principal loan amount to cover the balance of the closing cost and the annual operating expenses associated with the operations of the I-Bank and the on-going costs associated with the loan servicer and Trustees. The I-Bank's annual administrative fee is not included in the principal amount of the loan and is held in an account outside of the SRF. Any changes to the I-Bank's fee annual structure are subject to all applicable approvals and publication in the SFY 2020 Financial Plan in May of 2019.

### Sources and Use of Funds

The Table below represents estimated amounts available from prior program years and anticipated uses for the SFY19 and SFY20 Water Bank Financing Program:

#### **SFY 2019 Financing Program**

**Anticipated Sources:**

Funds Available from prior years	\$588 M
Repayments from prior years' loans	\$110 M
<u>FFY 2018 CWSRF Grant</u>	<u>\$ 60 M</u>
Subtotal	\$758 M
Anticipated I-Bank Share	\$125 M
Funds held by I-Bank for Short-term (ST) Loan Payments	\$300 M

**Total Program Sources: \$1,183 M**

**Anticipated Uses:**

Projects Financed with ST Loans	\$450 M
Projects Eligible to be Financed with ST Loans	\$350 M
Future Projects that may be approved in SFY19	\$150 M

Total Program Uses: \$950 M

**SFY 2020 Financing Program****Anticipated Sources:**

Funds Available from prior years	\$233 M
Repayments from prior years' loans	\$120 M
<u>FFY 2019 CWSRF Grant</u>	<u>\$ 60 M</u>
Subtotal	\$413 M

**Total Program Sources: \$413 M**

**Anticipated Uses:**

Projects to be Financed in the SFY 2020 Program	\$400 M
---	---------

**Financial Relationships between the CWSRF and the DWSRF**

The federal Safe Drinking Water Act Amendments of 1996 offer states the flexibility to meet the funding needs for drinking water and wastewater facilities by transferring funds from one SRF program to the other. Annually, an amount up to 33% of the Drinking Water SRF Capitalization Grant may be transferred from the CWSRF program to the DWSRF program, or vice versa. The USEPA has issued guidance that would allow utilization of transfer credits and transfer of funds on a net basis (i.e., funds could be moved in both directions), provided that the final transferred amount does not exceed the authorized ceiling.

The SRF program evaluates funds available to determine if adequate monies are available to be used for clean water projects in the current fiscal year. In addition, the type and number of DWSRF projects are reviewed and a determination is made on the need of the funds to be transferred from the CWSRF accounts to the DWSRF accounts or vice-versa. DEP reserves the right to transfer funds from the CWSRF to the DWSRF (or vice-versa) each fiscal year to the extent allowed by law, including Sandy SRF funds.

While all projects that meet the program requirements and are ready to proceed have been able to receive a CWSRF loan in the past, the ability of the program to continue to finance all qualifying projects in the future

is uncertain because of a steady increase in program demand over the last several years. As such, if the Department determines that there is a shortage of available funds, the Department will utilize the remaining funds for high priority projects in accordance with the existing ranking methodology.

In addition to the potential transfer of funds between the CWSRF and DWSRF, DEP is continuing its policy to cross-collateralize the DWSRF with the CWSRF. This feature results in significant savings to project sponsors. This benefits the drinking water project sponsors since there is a large source of revenue available via the CWSRF repayments to cover possible loan defaults. Under the EPA-approved procedures associated with cross-collateralization, a temporary transfer of funds between the two SRFs may occur as if necessary to cover the default of a loan repayment or other financial obligation. DEP and the I-Bank would take steps to collect any obligations resulting from a loan default and reimburse the appropriate drinking water or clean water account.

### Additional SRF Provisions:

Programmatic requirements are listed below. It is anticipated that these provisions will be maintained in a subsequent federal reauthorization act or federal policy. If substantial changes in the Act necessitate DEP's revision of the FFY 2019 document, additional public participation efforts will be conducted.

1. The schedule of state capitalization grant payments, jointly agreed upon by the administrator of the EPA and each state, is based upon the state's IUP.
2. States are required to deposit in the SRF, from state monies, an amount equal to at least 20% of the total amount of all capitalization grants made to the state.
3. Monies in the SRF may be used to provide loans at or below market interest rate, for terms not greater than 30 (or 45) years or the useful life, whichever is less. Repayments must begin no later than one year after completion of the project and must be credited to the SRF (principal and interest). The recipient of a loan must establish a dedicated source of repayments.
4. The SRF regulations identify earning interest as an allowable use of SRF funds. The Department is considering investing CWSRF funds into an account that would be dedicated to finance high priority drinking water projects in NJ and is evaluating the benefits and consequences of taking such action.
5. The Department may, based on the availability of funds, establish a deminimus reserve (up to \$5 million) utilizing CWSRF funds to support CSO and/or stormwater management activities associated with a co-funded transportation project financed through the I-Bank.
6. The Department also administers the Pinelands Infrastructure Trust Financing Program and the Department is planning to capture any eligible wastewater projects and utilize State Bond funds from the Pinelands Program as credit towards the State Match requirement or future State Match requirements.
7. The Water Bank is investigating opportunities to create a linked deposit program to finance individual septic system (on-site disposal system) repairs, rehabilitation or replacement. This program is in its early stages of development.

# **RESPONSE DOCUMENT FOR THE FFY2019 PRIORITY SYSTEM, INTENDED USE PLAN AND PROJECT PRIORITY LIST**

The Clean Water Act and its amendments require the United States Environmental Protection Agency (USEPA) and the states to provide for and encourage public participation in the development and implementation of the federally supported Clean Water State Revolving Fund (SRF) Program. In New Jersey, the SRF is a component of the Environmental Infrastructure Financing Program (EIFP) that provides financing for a wide variety of water supply, wastewater, stormwater and nonpoint source pollution control projects. The requirements for public participation activities also apply to the development and/or major revision(s) of the State's Priority System, Intended Use Plan and Project Priority List.

This response document addresses the comments received during the public participation process for the FFY2019 Proposed Priority System, Intended Use Plan and Project Priority List issued in December 2018.

## Public Participation Processes

On December 19, 2018 the New Jersey Department of Environmental Protection (Department) issued a notice regarding the availability of the FFY2019 Proposal document to potential applicants and other interested parties to seek public input. On January 9, 2019, the Department held the public hearing at the offices of the New Jersey Environmental Infrastructure Trust located in Lawrence Township, New Jersey. Three people from outside the Department attended the hearing, but no one commented on the Clean Water proposal. Transcripts of the January 9 hearing are available from the transcription services (Guy J. Renzi & Associates of Trenton, NJ) to any interested person or organization upon request. In addition, copies of the transcripts may be reviewed at the MF&CE's offices in Trenton.

One written letter was received prior to the January 19, 2019 close of comment period. The written comments, submitted in accordance with the deadlines, have been considered in the preparation of the final FFY 2019 IUP. The written comments were received on January 18, 2019 from the Association of Environmental Authorities.

## **SUMMARY OF PUBLIC ISSUES AND RESPONSES**

### COMMENT

The Association of Environmental Authorities (AEA) congratulated the Program: *on changes in the past few years that have focused on efficiency and on responding to the needs of borrowers. We also appreciate that, in the course of promoting its financing programs, the I-Bank has raised*

*overall awareness about the importance of investment in clean water infrastructure. Many AEA members have been able to take advantage of the more attractive interest-rate packages offered in the last few years. This has been good for their ratepayers.*

#### COMMENT

The AEA commented on the Program revising the financing package from 75% to 50% interest free loans. The Association points out that borrowing from the Program will be more expensive and sponsors may be forced to extend the timing of capital projects to stretch resources thus slowing the construction of critical water infrastructure.

*The AEA acknowledges: As everyone involved in the wastewater sector in New Jersey is aware, funding needs outstrip the funds available. AEA members recognize that those constraints have necessitated the return to the 50/50 split. Even so, I-Bank rates are attractive and remain the lower cost option.*

#### RESPONSE

The Program has been forced to adjust loan rates in recognition of concerns that the program faces a potential shortage of available funds to meet projected future needs at the current rates. Although this will result in slightly higher interest rates for projects proceeding in SFY 20, the changes allow the Program to still offer competitive loan rates and at the same time ensure the long-term viability for the Program.

In addition, the Program plans to utilize any unallocated principal forgiveness funds carried over at the end of SFY19 for their intended categories (including Combined Sewer Overflow (CSO) – Green Infrastructure, Barnegat Bay, Coastal Water Quality Restoration and Small System Asset Management plans) and supplement those principal forgiveness funds with approximately \$16 million projected to be available under the FFY19 CWSRF grant from USEPA with \$6M for CSO-Green Infrastructure projects and \$10M for CSO-Grey Infrastructure projects.

The Program plans to evaluate resources each year going forward and when feasible adjust loan percentages to provide borrowers with the best rates possible.

#### COMMENT

The AEA made two recommendations for modifying the on-line estimator tool on the I-Bank website used for making calculations to comply with the WISE Act:

- 1) We respectfully request that the estimator page language be modified to explain that local units obtaining estimates may not actually have the option of borrowing from the I-Bank because of funding constraints;*
- 2) We also recommend the WISE Act calculator tool itself be modified to more accurately reflect certain "soft" costs associated with I-Bank borrowing, linked to its federal funding, that are not associated with other financing. These costs are for additional processing work, insurance, and other contract requirements. If recognized and accounted for in the*

*WISE Act calculator, the resulting estimate would be more accurate and would allow for a more balanced comparison to the cost of other financing alternatives.*

**RESPONSE**

Comments on improvements that can help borrower's make the best decisions toward meeting their infrastructure needs are always welcome. The Program will evaluate the suggestions and seek to upgrade the on-line estimator where possible.

# APPENDIX 1: CLEAN WATER PRIORITY SYSTEM RANKING

## METHODOLOGY

### **I. Project Priority List — General Information**

Clean water projects must be listed on the Project Priority List in order to be considered eligible for financial assistance under the CWSRF. The Priority List identifies the estimated total eligible building costs under the appropriate project category. Except for certain project types, the figure under the "Total Eligible Project Cost" includes the estimated total eligible building costs, the related costs for construction services (i.e., administrative, legal, engineering, inspection, one-year start-up services, etc.), the actual or estimated planning and/or design costs, 3% for the recipient's administrative costs, and a 5% contingency cost. The figure under the "Total State Amount" column represents 100% of the estimated total eligible project costs.

DEP has established a rolling application process and will update and post the Priority List up to four times during a fiscal year. The Department expects to notify potential borrowers and other interested parties upon each posting of an amendment to the Priority List on the DEP and I-Bank websites.

### **II. Ranking Methodology**

DEP ranks all projects on the basis of the total number of ranking points each project receives and places the projects on the Priority List according to their ranking. The ranking system gives highest priority to projects that address discharges of raw, diluted, or inadequately treated sewage to the state's waters during wet weather, including projects to abate CSOs and projects to address sanitary sewer systems that overflow. CSO abatement projects are expensive and are usually located in financially distressed urban areas, making cost a serious concern. Discharges from combined sewer systems and sanitary sewer overflows can impair water uses.

DEP's Priority List provides a strategic foundation for structural changes and includes objectives to implement projects that will help to protect, maintain and improve water quality in and around the Barnegat Bay, while also determining the best long-term approach for restoring the ecological health of Barnegat Bay. To support these efforts to improve the water quality of the Bay, the project ranking methodology for the FFY 2019 Financing Program provides an additional 300 priority points to nonpoint source and stormwater runoff control projects that are intended to benefit the Barnegat Bay. The additional 300 points will be assigned to wastewater reuse projects that are intended to offset the loss of freshwater flows caused by the regionalization of sewage treatment plants and the use of ocean outfalls.

#### **A. Sustainable Community Planning Activities**

The purpose of the provisions in this section is to encourage and facilitate implementation of environmentally sustainable practices at the local government level. Prudent environmental planning that incorporates sustainability measures is necessary to achieve cost-effective and environmentally sound water quality improvement within the watershed. Additional priority points will be awarded to projects located in or benefiting municipalities that have implemented programs and actions that go beyond compliance with existing regulatory requirements and incorporate the planning strategies discussed below.

**Sustainable Community Planning:** Sustainable communities develop and adopt master plans and ordinances that improve the overall quality of life for citizens of today as well as future generations by

planning within natural resource capacity constraints and providing for a healthy economy, environment and society. Projects located in or benefiting municipalities where sustainable community strategies have been developed and master plans and/or ordinances adopted will be awarded an additional 100 priority points. These strategies/ordinances must include, but are not limited to, the following:

- A plan to reduce water consumption and increase water efficiency and re-use;
- Policies that require consideration of green design in municipal construction projects and redevelopment projects, such as green roofs, green streets, tree filters, rain gardens, rain barrels, porous pavements, etc.

Green design principles include green building practices that increase energy and water efficiency; use renewable energy; use environmentally friendly building materials that are made with recycled materials, are durable, sustainability harvested or produced locally; improve indoor air quality; and makes appropriate site selection and minimizes site disturbance to reduce environmental impacts.

**B. Project Discharge Category Points**

All projects receive ranking points based on the project discharge category. In case of multiple purpose proposals, projects qualify for the discharge category that represents the major scope of the project. If a project has aspects that can be described by more than one category, the project may be broken into separate projects. Tables IA and IB show the project discharge categories and their corresponding ranking points.

<b>Table IA. Ranking Points Related to Project Discharge Category For Wastewater Treatment Facilities</b>		
<b>Project Discharge Category</b>	<b>Description</b>	<b>Points</b>
Combined Sewer Overflow (CSO) & Sanitary Sewer Overflow (SSO)	Combined sewer system (CSS) rehabilitation/repair, the construction of treatment and/or storage facilities within CSS, at discharge locations or at STPs that reduce or eliminate CSOs, or the separation of combined sewer systems by the consolidation and elimination or sealing of CSO discharge points. Projects that implement corrective measures to fix overloaded conveyance systems that experience chronic overflows.	600
Sewage Treatment Plant (STP) Improvements	STP improvements include upgrades or other improvements to a treatment process or the elimination of an existing STP and the connection to an alternative treatment facility to meet applicable treatment levels and the purchase and installation of security and energy efficiency measures at the STP.	500
Sanitary Sewer System Rehabilitation	Wide variety of corrective measures to sanitary sewer collection and conveyance systems that do not experience chronic overflows, such as the rehabilitation, repair, or replacement of sanitary sewers, pump stations, interceptors, or the purchase of equipment to properly maintain the sanitary sewer system.	450
	Projects involving the construction of facilities to manage sludge from STPs or from potable water treatment	350

Sludge Treatment/Disposal Facilities	activities, such as the installation of dewatering equipment, the implementation of land application or composting activities or improvements or repairs to sludge incinerators.	
Wastewater Reuse	The construction of facilities that promote the reclamation of water for beneficial reuse such as the use of treated effluent for agricultural or other purposes and/or construction of conveyance and distribution systems to allow for reuse activities.	300
Septic System Repair/Replacement	Projects that involve repairs, improvements, and/or replacement of individual or small community, on-site septic systems.	275
New Systems	The expansion of a STP's treatment capacity, and the construction of new facilities to provide collection, conveyance or treatment of sanitary sewage.	250

Projects that implement green infrastructure, water or energy efficiency improvements (including projects that are designed to reduce greenhouse gas emissions) will receive an additional 50 priority points if the green components represent a significant amount of the overall project activities.

<b>Table IB. Ranking Points Related to Project Categories for Stormwater and Nonpoint Source Pollution Management Facilities</b>		
<b>Project Category</b>	<b>Description</b>	<b>Points</b>
Stormwater Management and other NPS activities	The construction or rehabilitation of stormwater basins, sewer systems or storm drains, the extension of outfall pipes, green roofs, blue roofs, green streets, tree filters, rain gardens, rain barrels, porous pavement or the purchase of maintenance equipment (such as street sweepers, aquatic weed harvesters and skimmer boats). Projects that stabilize streambanks, restore lakes or address runoff from salt storage facilities and the implementation of measures to address pollution concerns from agricultural cropland activities and manure runoff management and feedlot operations.	225
Landfill Closure, Open Space Land Acquisition and Conservation and Well Sealing	The implementation of measures to prevent and control pollutants from entering groundwater at non-operating landfill sites that are publicly owned and at abandoned well locations. Open space land acquisition and conservation projects that help to protect or maintain water quality.	150
Landfill Construction and Remedial Action Activities	The construction of facilities to collect, convey and/or treat leachate and runoff from new publicly-owned landfill cells or from publicly-owned contaminated sites.	75
Projects sponsored by	Environmental infrastructure projects where a developer, LLC, partnership or other private party is involved in the project; landfill closure measures and remedial action activities where the project site is privately owned. If a	50

Conduit Borrowers/ Private Activity	local government unit that sponsors a project on behalf of a private entity commits to providing a general obligation pledge (including its unlimited taxing power) or municipal guarantee as security for the DEP and I-Bank loans, the project is considered exempt from the conduit financing classification and corresponding funding limitations.	
--	--	--

### C. Water Use/Water Quality Points

Points are awarded based on the designated water uses of the receiving water as well as the existing water quality conditions in comparison to the ambient water quality standards. The assignment of points for “public nuisance” is given to on-site system projects where failures have been identified. Table II below shows the breakdown of the ranking points for water use; in general, the highest values are given for projects that discharge to water bodies with potable, recreational, and fishing uses.

Water Use		Basis/Description	Points
Public Potable Water Supply		Wastewater treatment plant discharges likely to have adverse impacts on an existing downstream potable surface water supply intake. Projects are evaluated based on relative distance between STP discharge and public potable water intake locations.	200
Recreation (“Primary Contact”)		Waters with bathing areas monitored routinely as public beaches as well as the Delaware River upstream of Trenton (north of East Bridge Street at the Lower Trenton Bridge).	125
Fishing	Shellfish	State water bodies that are designated as shellfish growing waters by <i>N.J.A.C. 7:12</i> .	125
	Trout	State freshwater bodies designated for trout production or maintenance by the NJ Water Quality Standards ( <i>N.J.A.C. 7:9B</i> ).	75
	Non-trout	State freshwater classifications not designated trout production or maintenance by <i>N.J.A.C. 7:9B</i> (see Trout description above), including all Delaware River freshwater zones above mile-point 85 as defined by the Delaware River Basin Commission.	25
Public Nuisance		Indirect water use impacts; applies to areas with identified on-site wastewater treatment system failures.	50
Agriculture		Surface water for agricultural use, such as irrigation and farm ponds, based on Department diversion permit (permits required for >70 gal/min diversion).	25
Industry		Surface water known to be used for industrial use such as cooling.	25

Table III shows the points for not meeting or marginally meeting certain water quality parameters. The points reflect the impact the parameters have on meeting the state’s goal to protect and enhance surface water resources, quality criteria, and designated water uses. The magnitude of the contribution that

municipal sewerage facilities have on each of the conditions is reflected in the points awarded under these categories.

Nutrients reflect the presence of phosphorus/phosphates and nitrates/nitrites in a water body. Excessive nutrient levels in freshwater streams and lakes may result a decrease in water quality and an increase in treatment costs. Points are given for nutrients only if the surface waters involved significantly impact existing potable water reservoirs, surface water impoundments or lakes, public bathing areas, or shellfish growing waters. Since there are no nutrient standards for coastal and estuarine waters, no points were assigned for discharges to those water bodies.

Points for toxics address the relative magnitude of ammonia, metals, pesticides, and organic chemicals in the water body. Toxics were given lower points since in most cases the significant contributions of toxic substances come from industrial sources that are better controlled through pretreatment and are only incidentally abated by municipal treatment facilities. In the case of the toxicity of ammonia, municipal facilities are usually the main source, but the most significant impact is associated with streams designated for trout production/maintenance, which already receive a high number of points under the water use category.

<b>Table III. Ranking Points Related to Water Quality</b>				
<b>Water Quality</b>		<b>Points for Water Quality that</b>		
		<b>Meet</b>	<b>Marginally Meet</b>	<b>Do Not Meet</b>
<b>The Water Quality Standard*</b>				
<b>Parameter</b>	Dissolved Oxygen	0	50	100
	Fecal Coliform	0	50	100
<b>Parameter</b>	Nutrients	0	25	50
<b>Category</b>	Toxics	0	25	50

\*The Surface Water Quality Standard for the applicable parameter or category.

#### D. Smart Growth Approvals

DEP seeks to coordinate and enhance the efforts to encourage smart growth through the implementation of the State Development and Redevelopment Plan. DEP assigns ranking points to projects that serve municipalities that have been approved under the Center Designation or Plan Endorsement Process.

For a project serving more than one municipality, the points were included for ranking purposes if the designated center or the endorsed plan is a significant component of the overall project. For further information regarding the State Development and Redevelopment Plan, contact the Office of Planning Advocacy in the New Jersey Department of State at (609) 292-7156.

<b>Table IV. Ranking Points Related to State Planning Commission Approvals</b>	
<b>Community Type</b>	<b>Points</b>
Urban Centers and Complexes	50
Regional Centers	25
Existing Designated Towns	15
Existing Villages	10
Hamlets	5

Projects located in or benefiting areas designated as Brownfield Development Areas, Transfer of Development Rights receiving areas or Transit Villages receive 10 points, so that these projects will rank higher than similar projects that are not located in, or provide benefit to, these smart growth areas.

#### E. Population Points

Projects are assigned points based on the population of the area served by the project. One point is given for every 1 million people living year-round in the project area. Thus, if projects have the same number of ranking points after having received all eligible points, population points become the tiebreaker, with higher priority given to the project serving the larger population.

### Priority Growth Investment Areas

Core criteria for a Priority Growth Investment Area includes being within one or more of the areas identified in Table 1 and within the regional planning entity areas described below.

#### **Table 1: Growth Areas**

1. Former State Plan Policy Map Metropolitan Planning Areas (PA 1) and Nodes
2. Unexpired Commission Approved Centers, Urban Complexes and other areas designated for development or redevelopment as the result of the Commission formally endorsing municipal or county plans
3. Municipally Designated Transfer of Development Rights "Receiving Areas"
4. Municipally Designated "Urban Enterprise Zones"
5. Opportunity Zones
6. Municipally Designated "Areas in Need of Redevelopment" or "Areas in Need of Rehabilitation"
7. Approved "Foreign Trade Zones"
8. Land within Higher Education Campuses suitable for development / redevelopment
9. NJDOT Certified Transit Villages
10. "Urban Transit Hubs" as defined by Economic Development Authority's Urban Transit Hub Tax Credit Program
11. Land owned by the New Jersey Sports and Exposition Authority
12. Commission approved requests for additional areas, for example, sites that have been historically utilized for large-scale commercial, research or industrial uses, that meet Commission requirements may be submitted for inclusion by a county with the support of relevant municipalities and, if relevant, the advice and consent of a regional planning entity. If a county declines to serve this role, requests will be accepted by a municipality or other appropriate entity.

#### **Regional Planning Entities**

As the Act requires, this Plan must treat land within the jurisdiction of a regional planning entity based on the adopted plans and regulations of that entity. As such, the following areas are recognized as Priority Growth Investment Areas:

##### *New Jersey Sports and Exposition Authority (formerly Meadowlands Commission)*

- Lands identified for development and/or redevelopment within the "Land Use Map and Map of the Meadowlands District Master Plan" and the "Hackensack Meadowlands District Official Zoning Map" as amended and supplemented

*Pinelands Commission*

- Lands identified by the Comprehensive Management Plan (CMP) as amended and supplemented as a "Regional Growth Area," a "Town" and developed sections of a "Military and Federal Installation Area"

*Highlands Council*

- Planning Area / Areas Not Conformed - Default to Table 1
- Planning Area / Areas in Conformance – Highlands Council Designated Centers and Redevelopment Areas

*Fort Monmouth Economic Revitalization Planning Authority or its successor:*

- Lands identified for development and/or redevelopment within the "Fort Monmouth Reuse and Redevelopment Plan" as amended and supplemented

## APPENDIX 2: CLEAN WATER AFFORDABILITY CRITERIA

Section 603(i)(2) of WRRDA requires States to develop affordability criteria that will assist in identifying applicants that would have difficulty financing projects without additional subsidization. The law requires that states establish affordability criteria by September 30, 2015 after providing notice and an opportunity for public comment; which is being accomplished through this new feature of NJ's CW Intended Use Plan.

Section 603(i)(2)(A) of WRRDA requires that states base their criteria on:

- income;
- unemployment data;
- population trends; and
- other data determined relevant by the State.

In New Jersey, those applicants where the following income, unemployment data, and population trends exist, based upon the sources below for each factor, are considered to have satisfied the State's CWSRF affordability criteria:

- Median household income of \$90,000 or more;
- County-wide unemployment of 5% or lower; and
- Population trend of 2% or higher.

Applicants that do not meet the specifications above do not meet the State's CWSRF Affordability Criteria.

WRRDA allows states to provide additional subsidization to eligible recipients for the following:

- To benefit a municipality that meets the State's affordability criteria as established under the FWPCA section 603(i)(2);10;
- To benefit a municipality that does not meet the State's affordability criteria but seeks additional subsidization to benefit individual ratepayers in the residential user rate class; or
- To implement a process, material, technique, or technology that addresses water or energy efficiency goals; mitigates stormwater runoff; or encourages sustainable project planning, design, and construction.

NOTE: MHI (2009-2013) and Population Trend Data (percent change - April 1, 2010 to July 1, 2014) is from <https://www.census.gov/quickfacts/NJ> . County Unemployment data is from [http://lwd.dol.state.nj.us/labor/lpa/content/maps/laus\\_month.pdf](http://lwd.dol.state.nj.us/labor/lpa/content/maps/laus_month.pdf) .

**Service Area**

Camden County

**Need for Project**

Green infrastructure will reduce the potential for stormwater to enter the Camden City combined sewer system which will reduce combined sewage flooding and overflow to the Delaware River.

**Project Description**

The project consists of constructing pervious surfaces, including green infrastructure and playing fields, in the area of what is currently Campbell's Field in Camden City including green infrastructure and playing fields. The increase in pervious surfaces will allow less stormwater to enter the Camden City combined sewer system and therefore will aid in limiting combined sewage flooding.

Combined Sewer Overflow (CSO) - Green Infrastructure

**Priority List Rank**

2

**County**

Camden

**Existing Population**

513,657

**Service Area**

Separation and improvements to Camden's combined sewer system will reduce the potential of combined sewage flooding in Camden. Green infrastructure will also reduce the potential for combined sewage flooding, as well as improve quality of life for Camden's residents. Creation of a new waterfront park will also improve quality of life for Camden's residents

**Need for Project**

Improvements to Camden's combined sewer system and green infrastructure will reduce the potential of combined sewage flooding and overflows into the Delaware River and its tributaries. The creation of the North Camden Waterfront Park will improve water quality by eliminating contaminated soil runoff into the Delaware River

**Project Description**

separation of combined sewers in Camden City, implementation of green infrastructure projects and creation of a new riverfront park. Elimination of stormwater from Camden City's combined sewer system will reduce pumping and treatment requirements, thereby reducing energy consumption and energy costs

**Service Area**

Camden City

**Need for Project**

Upgrading Camden City's dilapidated combined sewer system and also keeping stormwater out of the combined sewer system will reduce the potential for combined sewage flooding and combined sewage overflows

**Project Description**

The purpose of the project is to construct green infrastructure projects, and also grey infrastructure upgrades, in Camden City to reduce the potential for combined sewage flooding and combined sewage overflows. The project will also reduce energy usage as pumping and treatment of stormwater will be reduced correspondingly.

**Service Area**

The service areas for this project are Camden and Gloucester Cities

**Need for Project**

Due, in part, to CSOs, the Cooper River, Newton Creek and Delaware River have the following water quality based needs. Cooper River (Below Rt 130) - Does not support: Aquatic Life, Fish Consumption, Primary Contact Recreation Newton Creek (LDVR - Kaighn Ave to LT Creek) - Does not support: Aquatic Life, Fish Consumption, Primary Contact Recreation, Public Water Supply Delaware River (Zone 3) - Does not support - Fish Consumption,

**Project Description**

The Long Term Control Plan (LTCP) is a system wide evaluation of the sewage infrastructure, and the hydraulic relationship between the sewers, precipitation, treatment capacity and overflows in Camden and Gloucester Cities. As part of the LTCP, Camden and Gloucester Cities and the CCMUA must evaluate alternatives that will reduce or eliminate the discharges, and develop a plan and implementation schedule to do so. LTCPs are created to identify the most cost-effective manner to regulate CSOs to meet water quality standards.

**Project Name, Number**

Camden County Municipal Utilities Authority  
S340640-15  
Combined Sewer Overflow (CSO) - Green Infrastructure

**Priority List Rank**

9

**County**

Camden

**Existing Population**

508,932

**Service Area**

The Camden County MUA's service area consists of all of Camden County. This project is located in Camden City, one of Camden County's 37 municipalities

**Need for Project**

Camden City's combined sewer system overflows into the Delaware River, or floods the streets, parks and homes of Camden's residents. These green and grey infrastructure projects will reduce the amount of storm water that enters the system and improve the resiliency and capacity of Camden's system, thereby reducing the potential for flooding and overflows

**Project Description**

(Carryover SFY2015) - The scope of the project includes the construction of 10 new rain gardens in the City, replacing deteriorating combined sewer pipes in some of the roadways in the City and remediation & construction of second and final phase of Phoenix Park to control storm water and improve water quality in the City.

Sewage Treatment Plant (STP) - Improvement/Upgrade

**Priority List Rank**

10

**County**

Union

**Existing Population**

250,000

**Service Area**

The service area is primarily sections of Union County and half of Woodbridge which is in Middlesex County. The municipalities in Union County that are served include: Clark, Cranford, Garwood, Kenilworth, Mountainside, Rahway, Roselle Park, Scotch Plains Springfield, Westfield, Winfield, a section of Farwood and several streets in Linden.

**Need for Project**

Not applicable. This project is not related to water quality.

**Project Description**

This project consists of a number of miscellaneous projects. One element is to make modifications to the controls in order to allow for black start of the Cogeneration Engines. Another major element is installation of a redundant electric distribution bus. This application is also for installation of heat exchangers that would allow for recovery of exhaust heat from the Cogeneration Engines for use in the plant hot water loop. The last components of this loan application consist of two flood proofing elements. Specifically they consist of installing flood proof doors on the Administration Building in order to prevent flooding of the building basement and the installation of a tide gate or check valve in order to prevent the backflow of water from the Rahway River through the plants emergency outfall. In addition this project includes the repair of an existing centrifuge and installation of another centrifuge.

**Service Area**

The RVSA member communities are Clark Cranford Garwood Kenilworth Mountainside Rahway Roselle Park Scotch Plains Springfield Westfield and Woodbridge. In addition the Authority serves Winfield Park through an agreement with Clark and also serves a section of Fanwood and a section of Linden.

**Need for Project**

The project is needed in order to make the WWTP more energy efficient and reliable to reduce the possibility of loss of power causing sanitary sewer overflows and/or the bypassing of wastewater treatment which would result in the discharge of raw wastewater to the Rahway River.

**Project Description**

This project includes construction of a waste receiving station and digester installation of a plant hot water heat exchanger on the cogeneration engine exhaust LED lighting for the plant digester gas fired boilers installation of a 750-800 KW CHP engine and installation of an adsorption chiller.

S340547-15  
Sewage Treatment Plant (STP) - Improvement/Upgrade

**Priority List Rank**

13

**County**

Union

**Existing Population**

196,000

**Service Area**

The Rahway Valley Sewerage Authority (RVSA) is a wastewater treatment authority that processes wastewater from 11 member communities and 3 additional non-member communities. The RVSA eleven member municipalities are the Township of Clark, Township of Cranford, Borough of Garwood, Borough of Kenilworth, Borough of Mountainside, City of Rahway, Borough of Roselle Park, Township of Scotch Plains, Township of Springfield, and Town of Westfield all of which are in Union County and the Township of Woodbridge in Middlesex County. The RVSA serves the Township of Winfield through an agreement with the Township of Clark. While Scotch Plains, Roselle Park and Woodbridge are member municipalities, the RVSA does not serve these communities in their entirety. A very small portion of Fanwood is served through an agreement with the Township of Scotch Plains and the Authority also serves a very small portion of Linden.

**Need for Project**

Not Applicable. This project is not related to a water quality-based need.

**Project Description**

This project consists of constructing a trucked-in waste receiving station and includes construction of a equalization/blend tank with metering pumps for feeding of liquid waste to existing anaerobic digesters. The addition of liquid waste will result in an increase in digester gas production which will be used to fuel existing cogeneration engines. The electric generated will reduce the plants electrical consumption and recovery of waste heat will be used to heat the anaerobic digesters and plant hot water loop thereby decreasing the need for purchase and use of utility energy.

**Project Name, Number**

Raritan Borough  
S340781-04  
Sanitary Sewer System Rehabilitation

**Priority List Rank**

17

**County**

Somerset

**Existing Population**

5,990

**Service Area**

Raritan Borough

**Need for Project**

Many of the sewers in the Borough of Raritan are at least 75 years old and have never been rehabilitated. The infiltration/inflow (I/I) resulting from sewer pipe decay is estimated at 40-50 percent of the total flow from the Borough. This condition results in raw sewage overflows which adversely impact the Raritan River by contributing to the elevated nutrient and bacteriological levels in the River which is classified as FW2-NT. Toxic levels marginally meet existing standards. The River is used as an industrial water supply and as a potable water supply for the Elizabethtown Water Company.

**Project Description**

The project will include rehabilitating a portion of the existing 20 miles of sewers or replacing that which is beyond repair. It may also be necessary to replace some of the undersized sewers with larger ones. This rehabilitation work will eliminate the sewage overflows from this system and reduce excessive flow into the Somerset-Raritan Valley Sewerage Authority (SRVSA) plant.

**Service Area**

THE CITY OF NEWARK SERVED BY THE COMBINED SEWER SYSTEM IN THE EAST WARD.

**Need for Project**

DURING WET WEATHER, THE COMBINATION OF STORM WATER AND WASTE WATER IN THE CSS MAY EXCEED THE CAPACITY OF THE SYSTEM. THE EXCESS FLOW (i.e., CSO), IS DISCHARGED DIRECTLY TO A WATERWAY THROUGH THE PERMITTED OUTFALLS. SINCE CSO DISCHARGES INCLUDE RAW SEWAGE, THEY WILL CONTAIN A COMBINATION OF UNTREATED HUMAN WASTE AND COMMERCIAL AND INDUSTRIAL POLLUTANTS. THE PURPOSE OF THE PROJECT IS TO IMPROVE THE EXISTING DRAINAGE SYSTEM WITHIN TWO DRAINAGE AREAS THAT ARE HYDRAULICALLY CONNECTED TO A CSS TO ADDRESS SAFETY, TRAFFIC IMPEDIMENT AND WATER QUALITY CONCERNS. THE REDUCTION IN PEAK FLOW RUNOFF BY IMPLEMENTING GI WILL ASSIST IN IMPROVING WATER QUALITY.

**Project Description**

Drainage Improvements are proposed at South Street and Adams Street, as well as along Miller Street to Avenue C. At South Street and Adams Street the proposed design will incorporate roadway reconstruction, resurfacing, sidewalk, curb and ADA curb ramp improvements, new drainage inlets, manholes and pipes to alleviate flooding. Sewer separation is proposed along Adams Street. No new outfalls are proposed. At Miller Street, the proposed design includes installation of new inlets, manholes, pipes and a pump station to alleviate flooding at the end of Avenue C to redirect flow and not separate. Green Infrastructure (GI) is also proposed at both of these locations.

**County**

Essex

**Existing Population**

277,140

**Service Area**

The pilot project will serve the Clinton Hill neighborhood within Newark's South Ward. However, the impact of reducing CSOs through green stormwater infrastructure will eventually be felt throughout the City of Newark, particularly in the major portions of the city served by the Combined Sewer System.

**Need for Project**

Storm water management through green infrastructure is needed to improve water quality in the Passaic River, which experiences frequent overflow instances from the 17 CSO outlets within Newark. Green infrastructure projects not only reduce volume during peak storm events, thus reducing the likelihood of CSOs, they also filter pollutants from the stormwater before it reaches the treatment plant.

**Project Description**

At this site the existing concrete traffic triangle will be removed replaced and expanded with permeable surfaces that promote groundwater recharge. Approximately 195 square feet of pervious pavers will be installed adjacent to Clinton Ave that will capture and infiltrate stormwater runoff. A paved gathering space and sidewalk adjacent to Badger Ave will be comprised of approximately 1000 square feet of pervious concrete that will capture and infiltrate stormwater runoff. A 1005 square foot stormwater planter along with three curb cut inlets will be installed that will intercept treat and filter stormwater runoff from portions of Clinton Ave and West Alpine St. The remainder of the site will be de-paved and planted with various shrubs and trees. This project is intended as the first of many green infrastructure projects designed to divert stormwater within the CSS area and reduce incidence of CSOs.

Stormwater Management - Green Infrastructure

**Priority List Rank**

18

**County**

Essex

**Existing Population**

277,140

**Service Area**

Based on the 2010 U.S. Census, there are 277,138 people (92,303 households) residing in the City of Newark. The population density was 11,458 people per square mile. The racial makeup of the City was 26.3 percent (72,887) White, 52.4 percent (145,220) Black or African American, 0.6 percent (1,663) Native American, 1.6 percent (4,434) Asian, and 3.8 percent (10,531) from two or more races. Hispanics or Latinos of any race were 33.8 percent (93,148) of the population. The Newark Bay Treatment Plant serves more than 1.4 million residents in the Passaic Valley Service District including The City of Newark. This includes residents of 48 municipalities in Bergen, Essex, Hudson, Union, and Passaic Counties.

**Need for Project**

The City of Newark consists of large areas of impervious cover that generate large volumes of stormwater runoff. These projects will serve to manage stormwater runoff from impervious areas reducing the pressure on Newark's combined sewer system and a reduction of nonpoint source pollution into the Lower Passaic River and Newark Bay which is listed on the NJ 303(d) list of impaired water bodies.

**Project Description**

This application is for the construction of four (4) green stormwater infrastructure projects in the City of Newark. These projects will reduce stormwater runoff in the City of Newark's neighborhoods that flow directly into the existing sewer system. These projects include porous pavements, rain gardens, stormwater planters, and tree trenches that will manage runoff from rooftops and parking areas.

**Service Area**

Borough of Oakland

**Need for Project**

The area is currently served by septic systems and some small package treatment plants. As treatment requirements increase from Level 4 to Level 5 the plants will be unable to meet their effluent requirements. Ground and surface waters (Ramapo River FW2-NT) are used for recreation as well as a potable water source and are being degraded by the failure of existing disposal facilities.

**Project Description**

The proposed project includes the construction of a wastewater treatment plant interceptor sewer and collection system. The proposed interceptor sewer and collection system will convey all flows from the six (6) wastewater treatment plants (that will be abandoned) to the proposed wastewater treatment plant.

**County**

Sussex

**Existing Population**

14,320

**Service Area**

The study area consists of that portion of Sparta Township (48) which is situated within the Upper Wallkill River Basin. On-site rehabilitation in conjunction with a Septic System Management District would consider the entire Township as a

**Need for Project**

All existing point source discharges must be addressed. Should these discharges remain in existence they must be upgraded to meet the effluent limitations needed to protect existing water quality. In cases of discharge to the Wallkill River (FW2-TM) (Plaza and H.S. 1 and 2 plants) advanced wastewater treatment will be required to diminish any impacts to Franklin Pond a downstream potable water source for Franklin Borough. Primary contact recreation is also adversely impacted by these discharges. The Wallkill river marginally meets standards for fecal coliform nutrients and toxics. In addition the failure rate for individual septic systems is averaging about 3 per year. Many of the existing systems (e.g. cesspool) cannot meet the minimum requirements for subsurface disposal and must be replaced. Sewage Treatment Flow Effluent Plant (STP) Name (mgd) Reported BOD Reported SS (NJPDES ) Design Present mg/l mg/l Plaza STP (NJ0027057) AST-90 .030 .040 91.3 12.6 86.0 23.3 Board of Ed.- Alpine School (NJ0027065) AST-95 .027 .008 97 7.4 93 16 Board of Ed.- H.S. **Project Description**

A likely alternative for wastewater disposal in Sparta Township is on-site rehabilitation in conjunction with initiation of septic management district planning. Therefore the major scope of work for this project would include the upgrading of all existing point source discharges to acceptable treatment levels. This would preclude development of any future point source discharges in Sparta Township for the 20 year planning period.

**Need for Project**

The City has identified a need to replace the existing inoperative pneumatic air ejector pump station with a new station utilizing submersible pumps.

**Project Description**

This task involves the replacement of the existing can lift station located at Broadway and Morgan Boulevard. The existing lift station is inoperable and requires frequent jetting/vacuuming. The proposed scope of work includes removal of existing sewer lift station installation of new station reconnection/replacement of force main and installation of safety equipment.

**Service Area**

City of Camden (various)

**Need for Project**

The age and poor condition of the system has resulted significant infiltration and inflow problems, sewer cave-ins, sewer backups and flooding. These conditions pose a hazard to the public and increase liability risk to the City of Camden. The situation that forces the City not only to repair numerous sewer collapses a year, but also to repair the street and the nearby utilities. The number of collapsed sewers continues to increase, and the repair costs are higher than they should be due to the sudden nature of these occurrences. Some sewers are too fragile to clean and evaluate, and therefore need to be replaced.

**Project Description**

Furnish and install approximately 112,700 linear feet of PVC and reinforced concrete gravity combined and separate sanitary sewer ranging in size from 12- inch diameter to 60-inch diameter, and install approximately 2,310 linear feet of cured in place pipe liner

**County**

Camden

**Existing Population**

77,344

**Service Area**

Camden, New Jersey is located directly across the Delaware River from Philadelphia, Pennsylvania. The 2010 United States Census, the city had a population of 77,344. According to the US Census Bureau, the city total area is 10.341 square miles, including 8.921 square miles of land and 1.420 square miles of water

**Need for Project**

The area (basins C10 and C11) located between Delaware Avenue and the Delaware River have experienced frequent and significant flooding events along the waterfront area. As a result, the impacted drainage areas experience significant flooding and sewage backup which pose a hazard to the public and increase liability risk to the City of Camden. Based on preliminary assessment, the options recommended to address the flooding are (1) rehabilitation of Arch Street PS, (2) inspection/cleaning/upgrade of existing interceptor pipe running from Arch St PS to CCMUA, and (3) disconnect Pine St PS interceptor from the Delaware River Interceptor System and install of a new direct interceptor pipe from the Pine St Pump Station to CCMUA, to alleviate this flooding thereby mitigating public exposure to the hazardous environmental conditions caused by said flooding.

**Project Description**

Project involves (1) rehabilitation of Arch Street PS, (2) inspection/cleaning/upgrade of existing interceptor pipe running from Arch St PS to CCMUA, and (3) disconnect Pine St PS interceptor from the Delaware River Interceptor System and install of a new direct interceptor pipe from the Pine St Pump Station to CCMUA, to alleviate sewer backup and street flooding.

77,344

**Service Area**

Camden, NJ is located in Camden County directly across the Delaware River from Philadelphia, Pennsylvania. According to the United States Census Bureau, the city had a total area of 10.341 square miles (26.784 km<sup>2</sup>), including 8.921 square miles (23.106 km<sup>2</sup>) of land and 1.420 square miles (3.677 km<sup>2</sup>) of water (13.73%).

**Need for Project**

The combined sewer outfalls are blocked/obstructed primarily due to sediment build up resulting in an inability of the system to operate as designed (i.e., inability of combined sewage to drain from the Camden collection system). The condition of these structures has resulted significant environmental problems including overloading of interceptor system and treatment facility, sewer backups and street flooding. These conditions pose a hazard to the public and increase liability risk to the City of Camden.

**Project Description**

The project involves the cleaning/dredging and rehabilitation of fifteen (15) combined sewer outfalls and ten (10) storm sewer outfalls to restore the aforementioned systems to their intended design capacity and operability.

Combined Sewer Overflow (CSO) - Traditional Infrastructure

**Priority List Rank**

31

**County**

Camden

**Existing Population**

77,344

**Service Area**

The City of Camden is located in Camden County, New Jersey directly across the Delaware River from Philadelphia, Pennsylvania. According to the United States Census Bureau, the city had a total area of 10.341 square miles. The wastewater collection system serves the entire population for the City of Camden and is comprised almost entirely of combined sewers (i.e., sewers conveying both sewage and stormwater runoff in the same pipe). According to available records there is approximately 150 miles of combined sewers of which approximately ninety-three (93%) was installed prior to 1930. There also is approximately 25 mile of sanitary sewers and 5 miles of storm sewers. Currently, the City has eight (8) sewer pumping stations and approximately twenty-eight (28) regulator structures and twenty-two (22) combined sewer outfalls.

**Need for Project**

The sewer outfalls covered under this project are not functioning properly (i.e., as designed) due to sediment buildup and varying degrees of deterioration/disrepair. The reported obstructions of combined sewer overflow pipes at their points of discharge result in the inability of combined sewage to drain from the Camden collection system; thereby contributing to street flooding and potentially over-loading interceptor sewer conveyance and wastewater treatment plant capacities. All of the mechanical regulators are also not functioning properly which contributes to the aforementioned problems.

**Project Description**

The project involves the rehabilitation of the approximately 28 regulator chambers at various locations within the City of Camden.

**Project Description**

(Carryover SFY2015) - The proposed repairs for the intersection of Trumbull Street and Sixth Street are intended to limit the roadway flooding to maintain passable travel lanes. Inlets will be installed at the intersection several feet off the curb allowing the existing drainage system to function during smaller storms. When the capacity of the existing storm inlets is exceeded excess stormwater will flow into the new inlets. Piping connecting the inlets will direct flow to a watertight 1.5 million gallon concrete vault which will store the flow below grade rather than allowing the surface to flood. The concrete vault will consist of modular precast concrete unit to maximize the volume the entire structure will be wrapped in an impermeable pond liner. It will extend under Block 7 Lot 1227 as well as under Bond Street and will be rated for traffic loads. The exiting business on Block 7 Lot 1227 will be acquired and demolished. The vault will be equipped with a small pumping station. A level sensor will be installed in the combined sewer. When the water level in the sewer has receded the level sensor will activate the pumps and the tank will be emptied into the combined sewer and the flow treated at the Joint Meeting of Essex and Union County WWTP. The pump is capable of dewatering the vault in one day and it is intended that the tank will be emptied within two days of a storm event allowing one day for the water level in the combined sewer to recede. The existing roads and curbing will be restored. Block 7 Lot 1227 will be converted into a passive park for the enjoyment of the residents. This project will also serve as a test case for installing Green Stormwater Infrastructure. A bioswale will be installed on the northeast side of Trumbull Street a rain garden will be installed in the proposed park and if possible tree boxes will be installed along Bond Street.

**Need for Project**

Upgrading Camden County's wastewater treatment plant will enable it to optimize its water quality performance and thereby minimize adverse impact from the plant effluent upon the Delaware River. In addition, these improvements will significantly improve the plant's resiliency and also reduce the plant's carbon footprint as well.

**Project Description**

The CCMUA operates an 80 MGD wastewater treatment plant in Camden City the Delaware No. 1 WPCF. The CCMUA is proposing several upgrades to the wastewater treatment plant to (1) improve/sustain optimal wastewater performance (2) improve resiliency and (3) reduce the plant's carbon footprint. The most significant project is construction of a sludge digester at the wastewater treatment plant which would reduce the sludge generated at the plant by about 50% thereby reducing odor potential and generate sufficient biogas to generate about 50% of the electricity needed to run the plant. Thus the projects will render the plant more resilient and significantly reduce the carbon footprint of the facility.

**Need for Project**

The MCUA treatment plant currently discharges its treated effluent into the Raritan Bay (SE-1) through a submerged outfall constructed in 1958. Despite the initiation of secondary treatment in 1978 this discharge acting in conjunction with various other discharges serves to degrade the water quality of the Bay. Fecal coliform and toxics standards are in violation while DO levels are marginally acceptable. This water quality degradation ultimately limits the use of the Bay for its intended uses of shellfish harvesting and primary contact recreation.

**Project Description**

This project entails the construction of an extended outfall to discharge to the Raritan Bay. The point of discharge will be determined to maximum diffusion and dilution. When this project is constructed the Bay should be able to be utilized for its intended uses.

**Service Area**

The Woodcliff WWTF treats sewage from portions of North Bergen and Guttenberg. The service area encompasses approximately 1.15 square miles (734 acres). A map depicting this service area has been included as Attachment 5 to the Planning Document. Although the Woodcliff WWTF only treats sewage from a portion of North Bergen, all customers within North Bergen are billed for the operation and maintenance of the facility. Therefore, the borrower population for this project includes all of North Bergen and all of Guttenberg.

**Need for Project**

The WWTF has recently been the site of a large rehabilitation project, during which several other items were noted as requiring minor to significant rehabilitation and/or replacement work. The project will ensure that this facility continues to meet or exceed all relevant New Jersey Department of Environmental Protection regulations. In addition, the Woodcliff WWTF is part of the NBMUAs CSO system and this project will allow the continued CSO system treatment.

**Project Description**

During a recent rehabilitation project at the NBMUA's Woodcliff WWTF several other items were noted as requiring minor to significant rehabilitation and/or replacement work. These items include replacement of primary clarifier equipment, repairing the leaking sludge storage tank, replacement of the lamella-type secondary clarifiers, improvements to ensure compliance with the NJDEP's permit limitations for Whole Effluent Toxicity, evaluation and possible upgrades of the existing sludge dewatering facilities, and replacing the chemical feed systems and controls.

Hoboken City  
S340635-08  
Combined Sewer Overflow (CSO) - Green Infrastructure

**Priority List Rank**

41

**County**

Hudson

**Existing Population**

50,005

**Service Area**

As its name entails, the Southwest Resiliency Park is located in the southwest quadrant of Hoboken. The Site is bounded by NJ Transit's Hudson Bergen Light Rail Transit tracks and the Palisades Cliffs in Jersey City to the west, Observer Highway and the Hoboken Business Center to the south, Harrison Street and the Southwest Resiliency Park on Block 12 (phase I) to the east and Academy Bus and Paterson St. to the north. The resiliency park will capture stormwater run-off from the immediate vicinity.

**Need for Project**

Hoboken's combined sewer system is operated by the North Hudson Sewerage Authority. All stormwater in the southwest quadrant of Hoboken flows into the combined sewer system contributing to CSO events. The southwest neighborhood is also at a relatively low point (+2' elevation). During high tides and rain events, the neighborhood experiences urbanized on-street flooding and sewer back-ups. By eliminating the impervious parking lot on block 10 and installing green infrastructure, the city anticipates reducing CSO events, stormwater run-off, non-point source pollution and urbanized flooding.

**Project Description**

The City of Hoboken seeks a low interest loan to implement phase II of Southwest Resiliency Park. The Southwest Resiliency Park (phase 1) was a one acre parking lot which will be transformed into an urban oasis using green infrastructure (rain gardens, bioswales, tree pits, porous pavers and subsurface chambers) to detain approximately 10,939 cubic feet of stormwater and keep it out of the combined sewer system during rain events. Phase II will expand the park westward by financing the acquisition of Block 10 (Lots 1-7 and 30-36). In addition, the City seeks financing for planning and design to engage in a robust public planning process to develop concept and schematic designs, engineering plans, specifications and estimates, as well as to obtain necessary permits and approvals (deleted Block 9 and lot 37 from Block 10 according to the email from Stephen Marks dated 5/15/17).

Sanitary Sewer System - New

**Priority List Rank**

43

**County**

Sussex

**Existing Population**

15,888

**Service Area**

Borough of Hopatcong

**Need for Project**

This project is necessary to protect the waters of Lake Hopatcong (FW2-TM) a potable water supply source. Wastewater treatment methods in Hopatcong Borough consist of individual on-site systems. There are reported septic system failures which have been determined to adversely affect fishable (trout) and primary contact recreation uses of the lake. Water quality does not meet standards for dissolved oxygen and nutrients and marginally meet standards for fecal coliform and toxics. Nutrient inputs from existing septic systems would continue to be a major source of excessive aquatic plant and algae growth even if all systems were operating properly. The project is needed to eliminate septic systems in the densely developed portion of the watershed.

**Project Description**

The proposed project includes the installation of a collection and conveyance system to connect approximately 609 homes to the Musconetcong Sewerage Authority's STP which will treat the new flows from the Borough of Hopatcong.

Combined Sewer Overflow (CSO) - Traditional Infrastructure

**Priority List Rank**

44

**County**

Passaic

**Existing Population**

146,753

**Service Area**

Service area includes a school, commercial and industrial businesses, and some residential properties.

**Need for Project**

Project objective is to separate the CSO to reduce burden on the treatment facility and to construct a storm sewer system to alleviate local flooding.

**Project Description**

There is a limited storm sewer system that is currently connected to the sanitary sewer on W. Railway Avenue. However, approximately 90% of the road does not include any storm water collection system and as such the area; which includes a school, commercial and industrial businesses, and some residential properties, are subject to frequent flooding. In consideration of the chronic flooding, it is economically prudent to construct a storm sewer system to alleviate the flooding that impacts the local business and the well being of the school and residential public. It is proposed to disconnect the storm sewers inlets from the existing sanitary sewer and to construct a new storm sewer system for the full length of W. Railway Avenue and to connect to a County storm sewer system on Crooks Avenue at the Paterson/Clifton boundary.

**Project Name, Number**

Pennsauken Township  
S340349-03  
Combined Sewer Overflow (CSO) - Traditional Infrastructure

**Priority List Rank**

47

**County**

Camden

**Existing Population**

34,740

**Service Area**

Township of Pennsauken

**Need for Project**

A portion of Pennsauken Township is served by combined storm and sanitary sewers. During high intensity rainfalls the capacity of the system is exceeded resulting in sanitary sewer overflows into homes streets and waterways. The existing situation results in sewage discharges to the Back Channel of the Delaware River near the Cooper River. Public water supply shellfish agricultural and industrial water uses are adversely impacted. Water quality in the area of the discharge marginally meets standards for dissolved oxygen nutrients and toxics.

**Project Description**

The project involves the construction of a large diameter storm sewer along Browning Avenue from Route 130Madison Avenue to the Delaware River to prevent flow from entering the combined sewer system and the Camden City system stormwater detention facilities to detain stormwater prior to its entering the combined system the separation of the sanitary and storm sewer systems in portions of the Township and the enlargement of the existing storm sewer system to handle a greater capacity.

Hudson

**Existing Population**

247,597

**Service Area**

The JCMUA service area consists of approximately 6,500 acres with a 2010 census population of 247,597. Some flow from Union City, North Bergen and Bayonne flows into the system. The total flow discharged to PVSC by the Jersey City sewer system is approximately 54 MGD.

**Need for Project**

This project will carry out sewer rehabilitation work included in the Consent Decree between JCMUA and USEPA. The Project will consist of three contracts. Contract 1A will remove blockage and conduct emergency repairs for approximately 17,000 linear feet of existing combined sewers with the goal of the restoring the capacity of the existing sewers. Contract 1B will include replacement of sections of sewers that were determined to be beyond repair under Contract 1A. Contract 2 will replace approximately 11,500 linear feet of existing combined sewers which have been identified through detailed video inspection. Under its Combined Sewer System Capacity and Condition Assessment Study, the Authority has implemented an extensive program to inspect and evaluate its sewer system in order to identify actions needed to address structural and functional issues. The sewers scheduled to be addressed under this improvements project were initially evaluated under Phases 3 and 4 of the Capacity and Co

**Project Description**

(Carryover SFY2015) - The Project will consist of three contracts. **Service Area**

The Sewer Service area for this project is in the vicinity of Sixth Street in Jersey City in Hudson County.

**Need for Project**

This project is needed to correct a serious problem with silt damming the Sixth Street Combined Sewer Outfall preventing the discharge of wet weather flows, which causes the flows to back up into the combined sewer system creating flooding conditions.

**Project Description**

(Carryover SFY2015) - The proposed project includes the extension of the Sixth Street Combined Sewer Outfall. The outfall will be extended 1300 linear feet into the Hudson River where it will be submerged on timber pipe cradles to prevent the pipe from floating. A tide flex valve will also be installed to prevent backflow from the river.

**Priority List Rank**

48

**County**

Hudson

**Existing Population**

247,597

**Service Area**

The service area tributary to the project includes the residential area known as Country Village which is approximately 35 acres. Country Village is bounded on the West by State Highway Route 440, on the East by Sycamore Road, on the North by Pinecrest Road and to the South by the municipal border with Bayonne. It also includes the Mina Drive subdrainage area which consists of 192 acres and a majority of which is residential.

**Need for Project**

The sewage collection system in Jersey City is mostly combined. The system carries away the sanitary sewage on a daily basis and handles most storm flow adequately. Recently heavy rains experienced during periods of high tide have resulted in street and building flooding. The residents of this area have experienced many backups and suffered property loss and have voiced their concern about possible health hazards created by these backups. In an attempt to abate/resolve some of the flooding issues the JCMUA is proposing to install submersible pumps downstream of the nets in the netting facility. The pumps will facilitate pumping the water out which would normally be gravity fed into the receiving waterway but is hindered due to high tide conditions.

**Project Description**

**Service Area**

Jersey City Kearny Secaucus

**Need for Project**

The combined sewer overflows in the planning area discharge to the Hackensack and Hudson Rivers and Upper New York Bay. The designated uses for these waters include secondary contact recreation propagation and maintenance of fish and wildlife populations the migration of anadromous fish industrial water supply and other reasonable uses. The water quality is defined as poor due to the presence of high concentrations of indicator organisms such as fecal coliforms and toxic substances and the observation of depressed levels of dissolved oxygen. The unsatisfactory water quality has been attributed to high pollutant loadings from inadequately treated municipal and industrial effluents combined sewer overflows and non-point sources.

**Project Description**

The proposed project includes construction of a grit chamber on the interceptor just downstream of the CSO regulator to collect and remove inorganic material that could potentially clog the interceptor and cause DWOs. The MUA also proposes to construct a new pump station sewer line and force main to handle sanitary flows while separating out the stormwater flow.

**Project Description**

(Carryover SFY2015) - The recommended alternative calls for isolating the flooding area from the CSO outfall by rerouting the existing outfall through an industrial property to Progress Street and reconnecting to the existing outfall on Progress Street. The local drainage that connected to the outfall will be connected to an existing storm sewer on Dowd Avenue. Additional protection against high water levels in the great ditch will be provided by using box culverts in the Progress Street right-of-way to provide storage for excess runoff low areas. Flow into the box culverts will be controlled by a weir and tide gates which will allow stormwater to drain until the tail water becomes too high at which point the stormwater will overtop the weir and enter the storage conduit. The netting facility adjacent to Dowd Avenue will have its walls extended vertically to contain any potential overflows. The cost of the recommended plan is \$3.3M and greatly reduces the frequency of flooding matching the temporary condition that allowed for reasonable operation of the local businesses.

City of Elizabeth - Clarkson Avenue, South Pearl Street, Pearl Street, Bridge Street, Rahway Avenue and Elizabethtown Plaza

**Need for Project**

Increase carrying capacity in the combined sewer system, reduce CSO events and convey more wet weather flows to Trenton Avenue Pump Station for conveyance to Joint Meeting of Essex and Union Counties Wastewater Treatment Facilities.

**Project Description**

(Carryover SFY2015) - The purpose of the project is to increase the wet weather capacity of the Western Interceptor in order to accommodate new development projects along Elizabethtown Plaza. This is achieved by replacing the existing combined sewer with larger diameter conduit from Clarkson Avenue South Pearl Street Pearl Street to Rahway Avenue and Elizabethtown Plaza.

**Service Area**

Camden County

**Need for Project**

The main purpose of the project is to reduce the energy costs and corresponding carbon footprint of the treatment plant. However the replacement of old outdated equipment with newer generation equipment will increase the reliability of the treatment plant with a correspondingly positive impact on water quality of the Delaware River.

**Project Description**

The proposed improvements include upgrades to four existing raw sewage pumps including replacement of existing motors, replacement of existing variable speed drives and replacement pump casings and rotating assemblies. The work also includes furnishing and installing a related new power distribution system with outdoor transformers, indoor motor control centers, underground duct work and various site and utility work at the CCMUA wastewater treatment plant.

**Need for Project**

The EPA CSO Control Policy requires that all CSO discharge points come into compliance with water quality standards and that all CSO permittees undertake the development and implementation of a CSO Long Term Control Plan. The Authority's existing CSO Permit required the development of a plan for disinfection of CSO discharges. In the development of the plan it was recognized that there is very little information on the use and effectiveness of various treatment and disinfection methods for CSO discharges and it was stated that pilot testing needed to be undertaken. The information developed from this project will provide valuable data for the evaluation and implementation of treatment and disinfection of CSO discharges and will be valuable to any and all permittees with CSOs.

**Project Description**

Project will include pilot testing of various means of treatment and disinfection of CSO discharges at the Oak Street Pumping Station and CSO Outfall Serial No. 001005. Project will include modifications to the existing piping and possible re-activation of one or more primary settling basins from the old primary STP which has been decommissioned but not eliminated in addition to provisions of other chemical feed and treatment technologies.

The Bergen Avenue Pumping Station will serve the western portion of the KMUA Meadowlands Sewer District. The pumping station will collect leachate from the Keegan Landfill and serve existing development. The Harrison Avenue Force Main will serve the Bergen Avenue Pumping Station and the proposed MSLA 1-D Landfill Pumping Station which will allow for the closure of the landfill.

**Project Description**

The construction of the Bergen Avenue Pumping Station includes construction of a control and generator building a triplex wet well manholes sewage grinder manhole two metering vaults a valve chamber installation of a flow meter a sewage grinder site piping an instrumentation shelter and three submersible pumps. The Harrison Avenue Force Main project includes placing approximately 7600 linear feet of 8 diameter HDPE pipe from the future Bergen Avenue Pumping Station to the existing Harrison Avenue Pumping Station. The other portion of the project includes installing approximately 200 linear feet of 6 HDPE pipe from the new MSLA 1-D Pumping Station to a tie-in point with the Harrison Avenue Force Main.

**Need for Project**

This project addresses an immediate public health threat that is currently present in the Town due to the devastation of Superstorm Sandy which has resulted in three sewage pumping stations being placed out of service as well as the remaining 6 storm and sanitary stations operating at limited capacity.

**Project Description**

This project addresses the rehabilitation and hardening of the towns existing stormwater and sanitary pumping station infrastructure at 9 existing stations that have been damaged by Superstorm Sandy. All 9 stations will not only be restored but also improved to meet all current codes and standards set by state and federal regulation.

Stormwater Management

**Priority List Rank**

65

**County**

Hudson

**Existing Population**

40,684

**Service Area**

The service area consists of the drainage area bounded by Wilson Avenue on the north, Dukes Street on the south, Devon Street on the west and Bergen Avenue and the Erie Lackawanna Railroad (Newark and Hudson Branch) on the east. Herein, we will refer to this area as the Dead Horse Creek Watershed. The area west of Schuyler Avenue is predominantly comprised of residential dwellings whereas the low lying area east of Schuyler Avenue is a blend of residential, commercial, warehousing and industrial establishments. This service area is generally considered to be fully developed with little green space remaining and little space for above ground detention storage.

**Need for Project**

The area of Dukes Street, in the vicinity of Schuyler Avenue in the Town of Kearny, continually experiences significant drainage problems. The area frequently floods during and after heavy rainfall events causing undue burden to the residential community west of Schuyler Avenue as well as a blend of commercial, warehousing, and industrial establishments in the low lying area east of Schuyler Avenue.

**Project Description**

The proposed project includes construction of a new stormwater pumping station at Dukes Street tide gate replacement at Franks Creek rehabilitation of stormwater pump stations at Harrison Ave. Garfield Ave. and John Hay.

**Service Area**

Guttenberg

**Need for Project**

The combined sewer overflow in the planning area discharges to the Hudson River. The designated water uses for the Hudson River include secondary contact recreation propagation and maintenance of fish and wildlife populations the migration of anadromous fish industrial water supply and other reasonable uses. The water quality has been defined as poor due to the presence of high concentrations of indicator organisms such as fecal coliforms and toxic substances and the observation of depressed levels of dissolved oxygen.

**Project Description**

The proposed project involves the construction of solidsfloatables control measures at the combined sewer overflow point located off River Road which discharges to the Hudson River.

**Project Name, Number**

Carneys Point Sewerage Authority  
S340502-09  
Sewage Treatment Plant (STP) - Improvement/Upgrade

**Priority List Rank**

71

**County**

Salem

**Existing Population**

8,049

**Service Area**

CPTSA sewer service area serves approximately 2,123 residences and 134 businesses within Carneys Point Township and Oldmans Township. At an average rate of 2.58 persons per household (U.S. Census Bureau 2012-2016), the estimated population served by CPTSA is 5,477. Please refer to the sewer service map in the reports and maps section for further details.

**Need for Project**

This project is being undertaken in order to protect and enhance existing sanitary sewer infrastructure within the CPTSA service area. Failing to maintain current infrastructure will only serve to increase the risk of future service interruption. The reconstruction of existing wastewater treatment plant infrastructure will serve to protect local water quality from disturbances related to failure of the existing tertiary treatment systems. Overall the proposed work will enable CPTSA to keep the wastewater treatment plant infrastructure in good operating condition and to facilitate its continuing efforts to provide sanitary sewer service for its residents, businesses, and industry. In addition it will enable the CPTSA to eliminate the sodium hypochlorite disinfection, which will provide a benefit to the Delaware River ecosystem.

**Project Description**

This project is being completed to upgrade and replace the existing tertiary sand filters and UV disinfection system at the Carneys Point Township Sewerage Authority wastewater treatment plant located at Cleveland Ave and E Street in Carneys Point, NJ. The existing sand filters will be demolished in order to provide sufficient space to install the proposed tertiary disc filters and UV system. The existing UV equipment will be disassembled and removed from the site. On site piping will be reconfigured to support the proposed equipment. Since the existing equipment is at the end of its service life, our office estimates that replacement of both tertiary treatment systems will provide the greatest cost savings in the long term, including costs saved by discontinuing operation of the existing sodium hypochlorite disinfection system.

**Project Name, Number**

Perth Amboy City  
S340435-17  
Stormwater Management - Green Infrastructure

**Priority List Rank**

74

**County**

Middlesex

**Existing Population**

52,682

**Service Area**

The project area is a street within a residential neighborhood that extends between the City's downtown train station and the Raritan River waterfront. Given that this corridor connects so many of the City's assets, we expect the impact of this project to be Citywide.

**Need for Project**

Perth Amboy must find ways to manage our storm water in order to minimize the frequency and severity of our combined sewer outfalls. This project includes several green infrastructure techniques that will assist in capturing stormwater and divert it from our combined sewer system such as vegetated bioswales fed by graded crosswalks and several additional street trees.

**Project Description**

The Second Street Corridor Project is a street improvement project that will include elements to increase pedestrian safety and manage stormwater runoff. The concept includes pedestrian bumpouts with vegetated bioswales that can collect runoff from the street at four three-way intersections that are along Second Street. Additionally, it features pitched grade to feed these bioswales all along the street to collect and channel stormwater runoff from both the street and sidewalks. These curb extensions can create high visibility crosswalks with marked pedestrian crossings and a raised surface that will further channel runoff to the bioswales. Another primary component of this project are enhanced sidewalks, approximately ten to fifteen feet in width, which could be designed with pervious pavement.

Sewage Treatment Plant (STP) - Improvement/Upgrade

**Priority List Rank**

N/A

**County**

Monmouth

**Existing Population**

30,719

**Service Area**

The LBSA service area covers approximately 5.36 square miles in central eastern Monmouth County, New Jersey. The area is bounded by the Ocean to the east; Monmouth Beach and Oceanport to the north; Oceanport, West Long Branch and Ocean Township to the west; and Ocean Township and Deal to the south. The land area breakdown contained in each of the municipalities included within the LBSA Wastewater Management Plan (WMP) area is as follows: the City of Long Branch (5.10 square miles), the Borough of West Long Branch (0.2565 square miles), and the Borough of Monmouth Beach (0.0011 square miles). The City of Long Branch is the only "participating" municipality. The small areas of the other two municipalities are "customers" of LBSA.

**Need for Project**

The wastewater treatment plant improvement projects will improve performance, efficiency, and extend the life expectancy of the various components.

**Project Description**

This loan application comprises two projects, including 1) WWTP Hot Water Piping System and Final Settling Tank Mechanical Improvements Project: the replacement of and modification to the existing underground hot water piping system providing hot water supply and return services. Then abandon in place water supply and return services from the Plant Control Building to Sludge Handling Building. The Final Settling Tank sludge collector drives will then be replaced with modern and separate drive systems for sludge long collectors and sludge cross collectors as required; and, 2) Sludge Holding System Improvements Project: improvements to the sludge holding tank and piping system. This entails demolition of internal installations, then a rehabilitation of the tank chamber interior as required for new operation. A Sludge Mixing System will be installed within the proposed Sludge Holding Tank along with a new cover over the tank, vent system, and Sludge Transfer Pump and Pump Controls.

**Service Area**

Jefferson Township (Musconetcong River Basin)

**Need for Project**

Existing on-site systems are failing and may eventually lead to serious health hazards throughout this part of the Township. The failures are occurring because of certain soils limitations shallow depth to bedrock high water tables and steep slopes. Repairs have been attempted but with few successful results. A large number of on-site systems border Lake Hopatcong (FW2-TM) a potable water supply and Lake Shawnee (FW2-TM). These waters are fishable (trout) and primary recreation quality. This portion of Jefferson Township contains a package sewage treatment plant servicing the Consolidated School. This system provides secondary treatment and discharge into tributaries of Lake Hopatcong. Water quality marginally meets standards for fecal coliform and toxics. Nutrient and D.O. levels violate existing standards. Sewage Treatment Flow Effluent Plant (STP) Name (mgd) Reported BOD Reported SS (NJPDES ) Design Present mg/l mg/l Consolidated School Secondary (NJ0021091) 0.0075 0.01156 97.8 4.35 96.2 4.85 If the plan to connect into the Musconetcong Sewer Authority (MSA) is implemented this sewage treatment plant will also connect into the MSA.

**Project Description**

This project includes the construction of a collection system for the Musconetcong River Basin portion of Jefferson which may also include an interceptor pump station and force main. Also a septic system management plan will be recommended for the remaining portion of the Township.

**Service Area**

Blairstown Township

**Need for Project**

Portions of Blairstown have documented septic failure which may eventually lead to health problems. It was determined that the fecal coliform count violates the water quality standards and marginally meets standards for nutrients and toxics. At present there are two privately owned and operated STPs in the study area. At the time the regional facilities become available the existing plants will tie into it. North Warren Regional High School is occasionally in noncompliance with their NJPDES permit requirements which indicates inadequate secondary treatment. Primary contact recreation and agricultural water use are adversely impacted. This project is proposed in order to meet the stringent requirements established for the receiving waters. **Service Area**

The proposed clarifier improvements will be completed at the Central Water Pollution Control Facility (CWPCF) and the Southern Water Pollution Control Facility (SWPCF). The Central Service Area (CSA) is depicted in Figure 3. The Central Service Area (CSA) provides service to the municipalities of Barnegat, Beachwood, Berkeley, Brick (barrier island portion), Toms River, Island Heights, Lacey, Lakehurst, Lavallette, Manchester, Mantoloking, Ocean, Ocean Gate, Pine Beach, Seaside Heights, Seaside Park, and South Toms River. The CSA is comprised of the CWPCF, 19 pumpstations, 76 miles of forcemain and gravity interceptors and is rated at 32 mgd. The Southern Service Area (SSA) provides service to the municipalities of Barnegat Light, Beach Haven, Eagleswood, Harvey Cedars, Little Egg Harbor, Long Beach, Ship Bottom, Stafford, Surf City, and Tuckerton. The SSA is comprised of the SWPCF, 13 pumpstations, 42 miles of forcemain and gravity interceptors and is rated at 20 mgd.

**Need for Project**

This project includes the rehabilitation of Primary Clarifier PC-2 and PC-4 at the CWPCF and Primary Clarifier PC-2 and PC-3 and Final Clarifier FC-4 at the SWPCF. Since being placed into operation, these clarifiers have been subjected to the corrosive and destructive elements associated with the treatment of wastewater. The mechanical components, structural steel and concrete walls and floors shows signs of degradation and are need of repair. The operation of the two secondary treatment wastewater treatment plans requires the proper operation of the primary and secondary clarifiers. The clarifiers are currently reaching the end of their useful life and are in need of rehabilitation to ensure the continued efficient treatment of raw wastewater. The proposed improvements will include the rehabilitation of all concrete surfaces, the installation of stainless steel mechanical components and all associated equipment.

**Project Description**

Clarifiers PC-2 and PC-4 at the CWPCF and Primary Clarifiers-2 and 3 and Final Clarifier FC-4 at the SWPCF. Since being placed into service these clarifiers have been subjected to the corrosive and destructive elements associated with the treatment of wastewater. The mechanical components structural steel and concrete walls and floors show signs of degradation and are in need of repair or replacement. The new mechanical components will be fabricated with stainless steel with an operating life in excess of twenty-five years.

The BRSA owns and operates a wastewater collection and treatment system that conveys and treats on average 8 million gallon per day (MGD) of wastewater from three (3) member municipalities, including Hazlet Township, Holmdel Township and Union Beach Borough, and five (5) customer municipalities consisting of Aberdeen Township, Keansburg Borough, Keyport Borough, Matawan Borough, and a portion of Marlboro Township known as Morganville. These communities represent a combined current serviced population of approximately 90,000 people.

**Need for Project**

Work is intended to restore and protect equipment and facilities impacted by Hurricane Sandy to enable the treatment plant to continue operations under future similar flood events.

**Project Description**

This project application includes work at the Bayshore Regional Sewerage Authority's (BRSA) Water Pollution Control Plant associated with the permanent restoration and mitigation of the existing Blower Building No. 1 and existing Blower Building No. 2, as well as the permanent restoration and mitigation of treatment plants power distribution system.

The BRSA owns and operates a wastewater collection and treatment system that conveys and treats on average 8 million gallon per day (MGD) of wastewater from three (3) member municipalities, including Hazlet Township, Holmdel Township and Union Beach Borough, and five (5) customer municipalities consisting of Aberdeen Township, Keansburg Borough, Keyport Borough, Matawan Borough, and a portion of Marlboro Township known as Morganville. A list of municipalities and a map of the overall service area are included in the Project Report.

**Need for Project**

The purpose of this work is two-fold : to return the Facilities (BRSA's Water Pollution Control Plant, remote meter chambers and pump stations) to pre-storm design condition, and to protect the Facilities from incurring the damages associated with a future flood event of equivalent or greater magnitude than Hurricane Sandy, therefore both restoration and mitigation measures are included in our estimated costs. These measures require the restoration of numerous components throughout the Facilities that have yet to be fully repaired, as well as the protection of all critical structures and aspects of the wastewater treatment process. These projects are intended to maintain proper operations and maintenance of the Facilities as required by regulations, thereby preventing improperly treated wastewater discharges from the Facilities caused by equipment failures, power outages and flooding, to enter the nearby wetlands and surface waters .

**Project Description**

(Carryover SFY2015) - This project application includes work at the Bayshore Regional Sewerage Authoritys (BRSA) Water Pollution Control Plant associated with the permanent restoration and mitigation of the existing Blower Building No. 1 and existing Blower Building No. 2 as well as the permanent restoration and mitigation of treatment plants power distribution system.

The SSA is comprised of the SWPCF, 13 pumpstations, 42 miles of forcemain and gravity interceptors and is rated at 20 mgd.

**Need for Project**

This project includes the rehabilitation of Primary Clarifier PC-1 and PC-3 and Final Clarifier FC-8 at the CWPCF and Primary Clarifier PC-1 and PC-4 and Final Clarifier FC-3 at the SWPCF. Since being placed into operation these clarifiers have been subjected to the corrosive and destructive elements associated with the treatment of wastewater. The mechanical components structural steel and concrete walls and floors shows signs of degradation and are in need of repair. The operation of the two secondary treatment wastewater treatment plans requires the proper operation of the primary and secondary clarifiers. The clarifiers are currently reaching the end of their useful life and are in need of rehabilitation to ensure the continued efficient treatment of raw wastewater. The proposed improvements will include the rehabilitation of all concrete surfaces and the installation of stainless steel mechanical components and all associated equipment.

**Project Description**

This clarifier project is a continuation of an on-going effort to maintain and rehabilitate the assets of the Authority. This project concerns the rehabilitation of Primary Clarifiers PC-1 and PC-3 and Final Clarifier FC-8 at the CWPCF and Primary Clarifiers PC1 and PC-4 and Final Clarifier FC-3 at the SWPCF. Since being placed into service, these clarifiers have been subjected to the corrosive and destructive elements associated with the treatment of wastewater. The mechanical components, structural steel and concrete walls and floors show signs of degradation and are in need of repair or replacement. The new mechanical components will be fabricated with stainless steel with an operating life in excess of twenty-five years.

Wastewater Treatment Project

**Project Description**

(Carryover SFY2015) - The ACUA is developing a project to protect certain facilities within the treatment plant site from potential storm surge water from hurricane type events similar to the Super Storm Sandy. The intent of this project would be to provide portable open trailer mounted pumps to be able to pump out facilities at the plant construct permanent sump areas within existing building structures to be able to pump out storm surge and to raise the treatment plant access road elevation to above flood level.

Combined Sewer Overflow (CSO) - Traditional Infrastructure

**Priority List Rank**

86

**County**

Hudson

**Existing Population**

194,440

**Service Area**

Guttenberg Hoboken Union City Weehawken West New York (HCUA Planning Area III)

**Need for Project**

The combined sewer overflows in the planning area discharge to the Hudson River. The designated water uses for the Hudson River include secondary contact recreation propagation and maintenance of fish and wildlife populations the migration of anadromous fish industrial water supply and other reasonable uses. The water quality has been defined as poor due to the presence of high concentrations of indicator organisms such as fecal coliforms and toxic substances and the observation of depressed levels of dissolved oxygen. The unsatisfactory water quality has been attributed to the continuous diversion of dry and wet weather sanitary sewer flows to the river. The combined sewer system which is 100 years old contains collapsing sewer lines and regulators and tide gates that are deteriorated and stuck. This condition has resulted in diversions of sewage flows to the river and intrusion of tidal flows into the system and treatment works.

**Project Description**

The construction of in-line storage facilities utilizing existing sewers is planned for Hoboken. In West New York the construction of swirl concentrators is proposed. Studies indicate that facilities to abate pollution in Union City and Weehawken would not be cost effective. Although this project has not been formally adopted by HCUA studies indicate that this work is the most cost effective solution to pollution abatement. The rehabilitation of tide gates and regulation in Hoboken Weehawken and Union City has been funded under Marine CSO funds. However the major portion of the project in this planning area has not been funded.

Sewage Treatment Plant (STP) - Improvement/Upgrade

**Priority List Rank**

87

**County**

Monmouth

**Existing Population**

127,000

**Service Area**

The plant serves wastewater needs of six member municipalities, Fair Haven, Little Silver, Monmouth Beach, Oceanport, Shrewsbury, West Long Branch, and six customer towns: Red Bank, Eatontown, Rumson, Sea Bright, Shrewsbury Township and Tinton Falls, and two military bases. The map of the service area is included as Exhibit 3 of the Planning Document.

**Need for Project**

The goals of this project are to: Enable two (2) BFPs to operate concurrently in order to reduce the current operating schedule from seven (7) days per week three (3) shifts per day to five (5) days per week three (3) shifts per day. This will result in a savings on the current operating costs. Rehabilitate or replace system components nearing the end of their useful life. Enhance operational flexibility and reliability.

**Project Description**

The following improvements are proposed as part of this project: 1. Replace BFP No. 2 with a unit identical to BFP No. 1. 2. Replace the existing sludge cake bin and Schwing pump with a higher capacity bin and pump, and procure an "on the shelf" spare pump. 3. Install a sludge mixing system in Sludge Storage Tank No. 1 that is of the same type that presently exists in Sludge Storage Tank No. 2. 4. Replace gear type polymer pumps with progressive cavity type pumps. 5. Implement sludge cake flow metering.

**Service Area**

The service area for Two Rivers Water Reclamation Authority (TRWRA) includes its 6 member communities (Fair Haven, Little Silver, Monmouth Beach, Oceanport, Shrewsbury Borough, and West Long Branch), as well as, 6 customer communities including Rumson, Sea Bright, Shrewsbury Township, Tinton Falls, Eatontown and Red Bank. All communities are located within Monmouth County.

**Need for Project**

TRWRA's existing infrastructure is in need of rehabilitation and/or replacement. Existing components are nearing their life expectancy and in some cases in danger of imminent failure. Portions of the interceptor system being rehabilitated as part of Contract 169 are located in easement areas in forested/vegetative areas and various water bodies. Catastrophic failure of these components may result into spillage onto surrounding communities and environmentally sensitive areas impacting the health and safety of its member and customer communities.

**Project Description**

TRWRA proposes several contracts for improvements to its WWTP. Contract 183 Plant RAS Rehabilitation includes removal/replacement of existing Return Activated Sludge (RAS) piping located throughout the WWTP, as well as, installation of new magnetic flow meters and other appurtenances. Lastly, TRWRA proposes various electrical upgrades at its WWTP including new PLCs, VFDs and other miscellaneous electrical work.

**Project Name, Number**

Linden Roselle Sewer Authority  
S340299-04  
Interconnection

**Priority List Rank**

91

**County**

Union

**Existing Population**

60,000

**Service Area**

The planning area includes the City of Linden and the Borough of Roselle

**Need for Project**

The Authority is required to complete a rehabilitation program to eliminate discharge points 003 and 004 and a sewer separation program to eliminate discharge points 001 and 002 as per the Part IIIb Special Conditions of the existing grant No. C340299-01. These discharges affect the quality of the Rahway River (SE-3). Fishable non-trout and industrial water uses are presently impacted due to fecal coliform toxics and DO (marginal) levels being unacceptable.

**Project Description**

The project is for the construction of relief sewers to enable the LRSA to eliminate discharge points 003 and 004 in the City of Linden. Elimination of these discharge points will improve water quality in the receiving stream. The alignment of relief sewers falls within the Wheeler Park Easement. This project requires the approval from Green Acres.

Stormwater Management - Green Infrastructure

**Priority List Rank**

92

**County**

Hudson

**Existing Population**

50,005

**Service Area**

The project serves to reduce the volume of stormwater entering the combined sewer system owned and operated by the North Hudson Sewerage Authority, which is subject to an individual CSO permit from NJDEP. Therefore, the service area for the project includes the immediate areas surrounding the 4 right of way green infrastructure installations that will experience reduced localized street flooding during rainfall events, as well as the City of Hoboken and the greater NHSA service area that will benefit from improved water quality.

**Need for Project**

The combined sewer system in Hoboken is overtaxed during rainfall events, resulting in CSO events up to five times per month. NHSA is developing a Long Term Control Plan to reduce CSO events and improve water quality, as required by its individual CSO permit from NJDEP. These right of way green infrastructure sites will benefit CSO-reduction efforts because they allow for the capture of local street drainage during a rainfall event through a porous pavement surface and existing roadway curb gutter, store the rainfall runoff volume in a subsurface detention tank during the peak of the storm, and then discharge through a pipe with a backflow preventer into the combined sewer system. CSO reduction will improve water quality by preventing the discharge of untreated combined sewage into the Hudson River.

**Project Description**

Four right-of-way green infrastructure facilities recommended by the NJDEP Rebuild by Design Hudson River project will be installed on street segments that are adjacent to water main upgrades. As coded in the Rebuild by Design Hudson River Environmental Impact Statement and Feasibility Study, these are: T2-MON, T5-JEF, T1-GAR, and TD8-GAR. Collectively, these green infrastructure measures will detain up to 10,000 gallons of stormwater from entering the combined sewer system during rainfall events.

Combined Sewer Overflow (CSO) - Green Infrastructure

**Priority List Rank**

92

**County**

Hudson

**Existing Population**

50,005

**Service Area**

City of Hoboken

**Need for Project**

The use of green infrastructure best management practices (BMPs), which reduce immediate dependence on drainage to the combined sewer, may reduce the occurrence of untreated combined sewer outflow events and control adverse effects of runoff.

**Project Description**

Hoboken faces major challenges related to stormwater management which includes (a) flooding on low-lying areas during storm events (b) reliance upon a combined sewer outflow (CSO) system that treats both sewerage and stormwater (c) discharge of untreated combined stormwater and sewerage during major storm events (d) susceptibility to tidal flooding due to elevation and proximity to the Hudson River. Stormwater collection along Washington Street contributes to heavy stormwater concentration into the CSO which in turn contributes to untreated outflows. Unmanaged runoff from (or traversing) Washington Street may contribute to flooding in low-lying areas of the City. The use of green infrastructure best management practices (BMPs) which reduce immediate dependence on drainage to the combined sewer may reduce the occurrence of untreated combined sewer outflow events and control adverse effects of runoff.

Stormwater Management - Green Infrastructure

**Priority List Rank**

92

**County**

Hudson

**Existing Population**

50,005

**Service Area**

The service area is a 1.4 acre property in Southwest Hoboken, currently an asphalt parking lot, that will be transformed into a public park with green infrastructure.

**Need for Project**

The proposed design for Block 12 Park in Southwest Hoboken addresses current flooding issues through green infrastructure and underground retention. Hoboken's combined sewer system collects both sanitary and stormwater flows, a condition which diminishes water quality and leads to flooding. During wet weather, excess water bypasses the waste water treatment plant and flows out of combined sewer overflows (CSO), directly into the Hudson River. During high tide, the CSOs can become submerged, preventing the excess water from discharging. When the collection system reaches capacity, water cannot flow in and this causes local flooding. Block 12 lies in an area suitable to store and slowly discharge stormwater. The site is currently 90% impervious, but it has the potential to collect and store stormwater from a 100-year storm. The site presents an ideal opportunity to combine green infrastructure and water retention with the creation of a public open space.

**Project Description**

The new Block 12 Public Park in Southwest Hoboken will address current flooding issues with green infrastructure and an underground retention system designed to handle a 10-year storm. The stormwater design combines passive rainwater collection with permeable paving rain gardens and bioswales with subsurface storage beneath the park. On the perimeter curb-side infiltration basins will filter and delay street runoff. All of the pavements within the park will be permeable so that the first rainfall will be absorbed within the pavement. The paved areas will be pitched towards rain gardens so the next increment of rain will be held above the surface of the rain gardens and slowly absorbed. Subterranean storage chambers located in the zone between the park pavement and the water table will collect overflow from the rain garden and any drain inlets within the park. The stored rainwater will slowly be released greatly reducing the peak flow to the City's sewer system.

**Service Area**

The BASF park will provide open space opportunities for the City of Hoboken, and surrounding communities. North Hudson Sewerage authority serves Union City, West New York, Weehawken and the City of Hoboken. The sub-surface storage component of the project has the ability to serve the H5 and H7 catchment areas of the NHSA combined sewer system. Additionally, the sub-surface component will serve the North End Redevelopment area, which is bounded by 17th Street to the North, 14th Street to the South, Park Ave to the east, and the Palisades to the west.

**Need for Project**

The proposed design for the BASF Park in Northwest Hoboken addresses current flooding issues through green infrastructure and underground retention. Hoboken's combined sewer system collects both sanitary and stormwater flows, a condition which diminishes water quality and leads to flooding. During wet weather, excess water bypasses the water treatment plant and flows out of combined sewer overflows (CSO) directly into the Hudson River. During high tide, the CSOs can become submerged, preventing the excess water from discharging. When the collection system reaches capacity, water cannot flow in and this causes local flooding. The BASF Park lies in an area suitable to store and slowly discharge stormwater. The site is currently 50% impervious, but it has the potential to collect and store stormwater from a larger collection area, prone to severe flooding. The site presents an ideal opportunity to combine green infrastructure and with water retention to improve water quality.

**Project Description**

The Northwest Resiliency Park (former BASF Property) is a multi-phase project that includes the acquisition, environmental investigation, design, planning, and construction of a 5.418 acre park in Northwest Hoboken. The project will serve a number of different purposes including but not limited to on-grade stormwater detention through green infrastructure, on-grade public park and open space, and sub-surface stormwater quantity and quality treatment. The sub-surface stormwater storage will be designed to receive approximately 1 million gallons of stormwater flows from a new high-level storm sewer system designed by the North Hudson Sewerage Authority (NHSA), treat for water quality, and either reuse for irrigation or pump to discharge through the existing NHSA outfall. The surface green infrastructure and on-site stormwater management measures will be designed to manage all stormwater falling on-site and on adjacent roadways to accommodate up to a 10 year, 12 hour rain event. The public park has been designed through a community planning process to include a multi-purpose athletic field, play areas, trees, lowland rain gardens, a central civic terrace, ice rink/fountain, and open space. The asphalt cap that currently serves as an engineering control pursuant to the approved Remedial Action Work Plans will be replaced with site specific engineering controls comprised of soil, visual and engineered barriers, and pavements. The property address is located at 1113-1131 Madison Street, Block 103 Lot 7 (1.148 acres) and 1201 Madison/1200 Adams Street, Block 107 Lot 1 (4.27 acres).

Sanitary Sewer System Rehabilitation

**Priority List Rank**

98

**County**

Bergen

**Existing Population**

24,860

**Service Area**

Village of Ridgewood

**Need for Project**

An Infiltration/Inflow (I/I) analysis has been completed which documents the existence of excessive I/I within the service area. An additional study will be undertaken to further define the quantity of excessive I/I that can be cost-effectively removed from this system. This project is needed to eliminate periodic overflow causing discharge of untreated sewage into the HoHoKus and Diamond Brooks (FW2-NT previously FW-2) which is adversely affecting the quality of these waterways and posing a potential public health problem. The brooks have fishing and industrial uses. The affected waterways do not meet standards for fecal coliform and toxics and marginally meet the dissolved oxygen standard.

**Project Description**

The proposed project will consist of 820 feet of gravity sewers and 8400 feet of force main. Three pumping stations will be modified - Ridgewood Lawns P.S. Bellair Road P.S. and Andover P.S. These mechanical improvements will enable the pump stations to handle additional sewage flows previously bypassed. These improvements are currently being designed.

**Project Name, Number**

Cliffside Park Borough  
S340847-04  
Combined Sewer Overflow (CSO) - Traditional Infrastructure

**Priority List Rank**

99

**County**

Bergen

**Existing Population**

23,594

**Service Area**

The service area is the combined sewer portion of Cliffside Park that is tributary to Fort Lee, which is a CSO community.

**Need for Project**

To eliminate the CSO portion of Cliffside Park that is tributary to Fort Lee.

**Project Description**

The proposed project includes the separation of combined sewers within the Section I sewer service area. The project will include the installation of approximately 3800 LF of 15 1900 LF of 18 1100 LF of 24 and 800 LF of 30 diameter pipes. Also manholes inlets and appurtenances will be installed and roof leaders will be disconnected and reconnected to the storm system.

Sewage Treatment Plant (STP) - Improvement/Upgrade

**Priority List Rank**

103

**County**

Morris

**Existing Population**

16,710

**Service Area**

Jefferson Township

**Need for Project**

The need for the development of a wastewater management plan for the Township of Jefferson has resulted from problems being experienced with existing on-site disposal systems. These systems are adversely affecting fishable trout and primary contact recreation waters and the limited ability of four small treatment plants to provide adequate treatment. Fecal coliform and toxics levels are marginally acceptable and nutrients levels are totally unacceptable. Also the sludge generated is being stored in an old tank on-site at the White Rock Lake STP which is an unsatisfactory sludge disposal method. The receiving stream is a tributary of Mitt Pond which ultimately flows in the Boonton reservoir. High and Middle School discharges to Russia Brook (FW2-TM). Sewage Treatment Flow Effluent Plant (STP) Name (mgd) Reported BOD Reported SS (NJPDES ) Design Present mg/l mg/l High and Middle School (secondary) 0.28 Not Available 99.6 5.96 99.9 7.15 White Rock Lake (AWT) (NJ0026867) 0.155 0.0621 98.7 6.375 95.7 5.0

**Project Description**

Jefferson Township performed a 201 Study for portions of Jefferson which lie both in the Rockaway Basin and Upper Musconetcong Basin (See C340747-05 for description of the Musconetcong plan). The proposed plan for Rockaway consists of expansion and upgrading of the existing White Rock Lake STP to 250000 gpd and using the oxidation ditch process. Wastewater from the Cozy Lake Lake Swannomoa and the White Rock Lake areas would be treated there. The proposed facility would include a pumping station force main interceptor and collection system.

**Service Area**

(Project name: Stormwater Green Infrastructure - Street Cleaning for Clean Water) Jersey City DPW cleans 220.59 miles of municipal roads using mechanical and air street sweepers all year-round. Main thoroughfares are swept six times a week both sides on alternating days; while secondary roads are swept four times a week on alternating days. DPW street sweepers operate in densely populated neighborhoods that include six wards (A-F) with high volume of pedestrian and vehicular traffic. The greatest beneficiary of having street sweeping it helps water quality and street sweepers, particularly the vacuum models, remove fine particles and contaminants that would otherwise wash in to the storm sewers such as leaves and litter. The older models are less efficient and consequently have an influence on water quality and the environment.

**Need for Project**

Jersey City is part of a coastal peninsula and includes tidally influenced watershed: the Hackensack Watershed, the Passaic River, the Rahway River/Arthur Kill/Kill Van Kull. DPW all year-round street sweeping prevented a total 3465.45 tonnage of debris in 2015-2016 to entering storm drains reaching our local waterways.

**Project Description**

(Project name: Stormwater Infrastructure-Street Sweeping for Clean Water) The proposed project is to phased out the older models of street sweepers that are less efficient and consequently have an influence on water quality and the environment. Street sweeping is one method to prevent dirt and grit pollution from entering storm drains and reaching our local waterways. The newer sweepers will enhance the effectiveness of sweeping by reducing street-dirt yield. DPW proposed to purchase (6) RAVO 5ISeries Tier 3 Engine @ \$252,087.00 per vehicle with extended 5 year warranty included and (1) vacuum high pressure sewer cleaning trucks & associated equipment @ \$455,000.00 per vehicle. In addition, DPW proposed to purchase (7) sidewalk sweepers - Tennant ATL 4300 Diesel (Kubota D1105) @ \$41,631.36 per vehicle.

200,000

**Service Area**

The North Hudson Sewerage Authority serves as a regional conveyance, transmission, treatment and disposal authority for wastewater generated in the municipalities of Hoboken, Union City, Weehawken, and West New York.

**Need for Project**

As part of the New Jersey Pollutant Discharge Elimination System (NJPDDES) permit for the NHSA Adams Street Wastewater Treatment Plant, the NHSA must implement measures that will capture, remove, and prevent the discharge of Solids and Floatables which can not pass through a bar screen having a bar spacing of 0.5 inches from all CSO points. The NHSA has negotiated an Administrative Consent Order (ACO) with the New Jersey Department of Environmental Protection for implementation of the Solids and Floatables Control Program. The W1234 outfall is the final remaining outfall within the S/F Control Program that requires a Solids/Floatables Screening Facility.

**Project Description**

(Carryover SFY2015) - The proposed project includes construction of an end-of-pipe solids and floatables screening facility. Including in the project is a pier structure to facilitate access and maintenance of facility.

S340952-24  
Sanitary Sewer System Rehabilitation

**Priority List Rank**

106

**County**

Hudson

**Existing Population**

200,000

**Service Area**

The Adams Street plant treats all of the sewage generated within the City of Hoboken, approximately 83% of the sewage generated in Weehawken and approximately 45 percent of that generated in Union City.

**Need for Project**

Existing sewers are currently undersized, causing local street flooding.

**Project Description**

The existing sewers located on Hamilton Avenue and JFK Boulevard are currently undersized. The proposed project would enable the combined sewer pipe located on JFK Boulevard between Hamilton Avenue and Parkview Avenue to accommodate a 1-year storm. The proposed project would require installing approximately 920 lf of new 27 combined sewer on Hamilton Avenue and 1120 lf of 48 pipe on JFK Boulevard. Installing the larger pipe would prevent the need to upgrade the pipe again.

**Service Area**

City of Hoboken and portions of the Township of Weehawken Union City and West New York

**Need for Project**

The proposed replacement and upgrade projects are required to maintain the current reliability and operability of the existing wastewater collection system.

**Project Description**

The pumps at the 5th Street Pump Station clog frequently particularly after storm events which affect the reliable pumping of sewage through this station. An analysis was conducted to evaluate the potential screeninggrinding technologies which would help protect the pumps from clogging. Evaluation indicated that the ABS contrablock pump offers the best combination of minimum installation costs and the highest potential for reduced operational issues. Therefore the 5th Street Pump Station Contrablock Pump Replacement project is conducted to replace the existing pumps at the 5th street pump station with the ABS contrablock pumps.

Combined Sewer Overflow (CSO) - Traditional Infrastructure

**Priority List Rank**

121

**County**

Hudson

**Existing Population**

11,660

**Service Area**

Portions of North Bergen (Area III)

**Need for Project**

North Bergen Area III is serviced by the Woodcliff STP. A portion of this district is currently unsewered and contains malfunctioning septic systems. Sanitary connections have been made to an existing storm water system resulting in discharge of untreated sewage to the Hudson River. This discharge impacts industrial water use and freshwater-nontrot uses as well as contributing to fecal coliform violations. The Hillcrest pumping station contains an overflow and requires rehabilitation.

**Project Description**

A new sanitary sewer collection system will be constructed to convey flows from the unsewered areas. The illegal connections will be corrected and the flow collected for treatment. Sewage will be transported to the Woodcliff STP or to a neighboring facility for treatment. The Hillcrest Pumping Station will also be rehabilitated.

**Need for Project**

N/A

**Project Description**

The Riverside Primary Digester Mixing System project consists of adding a recirculating jet mixing system to the existing primary anaerobic sludge digester. The project will include the abandonment of the current gas recirculation mixing system, installing new chopper type centrifugal pumps and jet mixing nozzles within the tank, interconnecting piping, electrical controls, and a new flare. As part of the project, the digester will need to be drained and cleaned.

**Service Area**

The proposed project is to reduce the flood damages risk and vulnerability and to enhance the resiliency to a future disaster at the Second Street Pump Station located at 2 Second Street, Perth Amboy, New Jersey, Middlesex County. Only the residents of the City of Perth Amboy will benefit from this project.

**Need for Project**

The proposed improvements will reduce the possibility of flood damages to the pump station and therefore reducing the discharge of raw sewerage into the Raritan Bay.

**Project Description**

The proposed project will include at a minimum the relocation of offices to a second floor mezzanine replacement of 3 existing pumps with dry pit submersible pumps relocate all essential electrical equipment to a new electrical room on the second floor mezzanine modify the bar screenswet well room to flood protected it from external flood waters and sewer system surcharging relocate boiler system and water heater to second floor mezzanine miscellaneous dry flood proofing of building openings provide new stand by generator with acoustical enclosure to be installed on a new elevated concrete slab and provide heating and ventilation for new electrical room and boiler room and second floor mezzanine.

Sewage Treatment Plant (STP) - Improvement/Upgrade

**Priority List Rank**

130

**County**

Passaic

**Existing Population**

25,850

**Service Area**

West Milford Township

**Need for Project**

The project is intended to correct deficiencies noted in Administrative Consent Orders being issued by the NJDEP. The treatment plants to be improved discharge either to small streams that are upstream from primary recreation areas and drinking water intakes or to groundwater. The discharge violations currently being experienced impair these water bodies.

**Project Description**

The proposed project includes replace the Olde Milford STP with new facilities to provide advanced treatment in accordance with its NJPDES permit. Renovate the two disposal fields at the Bald Eagle STP. Rehabilitate rapid media filters at two STPs. Installation of influent grinder at the Highview STP and an odor control system at the Crescent Park STP. Rehabilitate generators at various STPs and pumping stations throughout the town.

**Service Area**

The service area for JCMUA is coterminous with the City of Jersey City boundary line.

**Need for Project**

The existing facilities are part of JCMUA's combined sewer system and were severely damaged during Superstorm Sandy resulting in failure of all three pumping stations during the storm event. All three facilities service the waterfront section of Jersey City in the Port Jersey/Port Liberte areas and are directly adjacent to the Upper New York Bay. Proposed improvements are intended to make the existing pumping stations and its equipment more resilient against future storm events.

**Project Description**

We would like to pursue CBDG Funds. JCMUA proposes various mechanical, electrical and structural improvements to three (3) existing sub-pumping stations that were severely damaged during Superstorm Sandy. Proposed improvements are intended to repair and/or replaced damaged equipment/structures and make the pumping facilities more resilient during future storm events. Improvements include pump replacement, emergency generator replacement, and storm hardening of the critical equipment at each facility. This work includes construction of elevated platforms for the generator and electrical equipment, structural modifications to the dry well manways to raise them up to the new platform elevations, relocation of critical equipment and installation of water tight hatches.

**Project Name, Number**

Jersey City Municipal Utilities Authority  
S340928-24  
Combined Sewer Overflow (CSO) - Traditional Infrastructure

**Priority List Rank**

132

**County**

Hudson

**Existing Population**

247,597

**Service Area**

The Jersey City Municipal Utilities Authority service area consists of approximately 6,500 acres with a 2014 population estimate per the United States Census Bureau of 262,146 persons (2010 United States Census population of 247,597 persons). Two regional pump stations, associated with east side and west side of the City respectively, convey a total of approximately 54 million gallons per day (MGD) of wastewater to the Passaic Valley Sewerage Commission treatment plant in Newark, NJ. The proposed project involves the rehabilitation of particular combined sewer segments located throughout the municipality. The majority of the sewers within the City are combined sewers and most are estimated to be over eighty years old.

**Need for Project**

The Authority plans to implement the improvements identified for this project to restore the structural condition and hydraulic capacity of the targeted combined sewers. The project is needed to prevent the continued deterioration and eventual failure of the sewers, which would result in the backup and discharge of raw sewage that would create a public health hazard to the residents, workers, and institutions in the areas served. Such a discharge would also further degrade the already impaired water quality of the CSO receiving waters, such as the Hackensack River, Newark Bay, and Hudson River. The project also addresses requirements of a Consent Decree with the USEPA and the NJPDES Combined Sewer Management permit.

**Project Description**

The City of Jersey City is pursuing green infrastructure projects in the City to reduce the combined sewer impacts to the community. These projects are not to exceed \$1,000,000.00. This project involves the rehabilitation of existing combined sewer mains and associated manholes, inlets, and appurtenances owned and operated by the Jersey City Municipal Utilities Authority located throughout the municipality of Jersey City (Hudson County, NJ). Under the proposed project, approximately 7,400 linear feet of existing combined sewer mains will be repaired by the method of cured-in-place pipe (CIPP) lining, including associated sewer cleaning, internal television inspection, pipeline sealing, and other appurtenant work. The Phase 1-2 Sewer Rehabilitation Project also proposes to replace approximately 7,000 linear feet of existing combined sewers with pipes of essentially the same internal dimensions and capacity of existing sewers that have been determined to be beyond repair.

This project will be located on various roads within Jersey City, with all work taking place within the City's existing right-of-ways. All work will also be in existing asphalt paved roadways.

**Need for Project**

This project is required to improve the combined sewer system by removing the infiltration/exfiltration.

**Project Description**

As part of the capital improvements required to maintain their combined sewer system, the Jersey City Municipal Utilities Authority is proposing to remove and replace or rehabilitate by trenchless technology approximately 13,126 linear feet of sewer mains. This project will also include removal and replacement of associated manholes, storm inlets, sanitary sewer laterals and restorations.

**Service Area**

This project involves the removal and replacement or rehabilitation of existing combined sewer mains on various roadways within the City of Jersey City. The work will take place within existing paved roadways within the City's right-of-ways. The roads are both in residential and commercial areas.

**Need for Project**

This project is required to improve the combined sewer system by reducing the amount of infiltration/exfiltration by installing new watertight pipes and manholes.

**Project Description**

As part of a capital improvements program, the Jersey City Municipal Utilities Authority intends on replacing approximately 28,757 linear feet of various size combined sewer mains, including manholes, sewer laterals and storm water inlets. In addition, the project will also include the rehabilitation of approximately 1,036 linear feet of combined sewer main using trenchless technology including the rehabilitation of manholes.

Urban

**Need for Project**

To lessen CSO water outflows.

**Project Description**

Sections of deteriorating sidewalk will be removed and replaced with pervious surfaces that will recharge groundwater. Two existing downspouts will be directed into six pre-cast downspout planter boxes. The planter boxes will be equipped with perforated underdrains that will discharge to approximately 1760 square feet of pervious concrete sidewalk that will intercept treat and filter stormwater runoff from the rooftop. Portions of parking lot will be removed and replaced with permeable surfaces that promote groundwater recharge. Approximately 8540 square feet of porous asphalt parking spaces will be installed to intercept treat and filter stormwater runoff from the parking lot. Two rain gardens totaling 480 square feet will be installed in front of the building to capture stormwater runoff from the adjacent parking lot. Additionally three rain gardens totaling 1200 square feet will be installed along New Jersey 440 to intercept treat and filter stormwater runoff from a portion of the roadway.

Somerset

**Existing Population**

149,063

**Service Area**

Branchburg Township, Bridgewater Township, Hillsborough Township, Manville Borough, Raritan Borough, Somerville Borough, Warren Township and portions of Greenbrook via Warren.

**Need for Project**

These treatment plant improvements are necessary to replace aging equipment and infrastructure for the continued uninterrupted operation of the Somerset Raritan Valley Sewerage Authority's (SRVSA) regional wastewater treatment plant. Interruptions to wastewater treatment plant operations could potentially result in discharge of partially- or un-treated wastewater that would negatively impact surface water quality. These treatment plant improvements will help to minimize such treatment plant interruptions and aid in treatment plant operations that will be beneficial to maintaining water quality of the surrounding water bodies, including the Raritan River.

**Project Description**

Description: This project includes the planning, design and construction of various treatment plant rehabilitation improvements at the Somerset Raritan Valley Sewerage Authority's (SRVSA's) regional wastewater treatment plant located in Bridgewater, Somerset County, New Jersey. These will include the following: 1. Replacement of an existing flat roof that has reached the end of its useful life with a new pitched roof structure on the Headworks Building. 2. Replacement of two existing grit collection systems in the Headworks Building that have reached the end of their useful life with two new grit collection systems. 3. Rehabilitation of existing plant-wide electrical systems, including motor control centers, conduits and conductors, as well as indoor and outdoor facility lighting that have reached the end of their useful life with new electrical systems. 4. Remediation of asbestos containing materials in Building 600 and Building 603

Sewage Treatment Plant (STP) - New

**Priority List Rank**

142

**County**

Somerset

**Existing Population**

117,000

**Service Area**

The SRVSA provides service to the Township of Bridgewater, Township of Branchburg, the Township of Hillsborough, the Borough of Manville, the Borough of Raritan, the Borough of Somerville (Somerville), the Township of Warren, and portions of the Township of Green Brook. Combined, all municipalities contribute to a service area of over 67 square miles.

**Need for Project**

In the event of a major storm, the Somerset Raritan Valley Sewerage Authority's (SRVSA) interceptor system becomes surcharged due to excessive infiltration/inflow, also known as I/I, from its member municipalities' sewer collection systems. Given these conditions, wastewater from the Borough of Somerville escapes from its sanitary sewer system as an overflow. Preliminary analysis estimates prepared by SRVSA's engineers indicate that overflows are occurring during these excessive wet weather events upwards of several times each year.

**Project Description**

This project includes the design and construction of a treatment facility to capture and treat sanitary sewer overflows and safely discharge the treated water into the Raritan River. The proposed Storm Control Treatment Facility (SCTF) will eliminate discharge of raw sewage at its source properly treat the overflows and relieve wet weather flow to the SRVSAs plant in a cost-effective manner. The SCTF will generally consist of coarse and fine screening clarification filtration and disinfection.

**Project Description**

This project is to provide a cost effective regional sewerage system for the Southwest Branch Rancocas Creek drainage basin. Implementation of the project will accomplish the attainment of water quality in area streams the prevention of health hazards and the protection of the environment. Presently the facility planning effort is evaluating the various alternatives which will accommodate the required levels of treatment necessary to alleviate the pollution problem. The alternatives which can be implemented are land disposal discharge to the confluence of the Southwest Branch or discharge at the present location. The ultimate sludge disposal will be incorporated into the on-going countywide sludge and septage management plan recommendations.

**Service Area**

The City of Millville is a community located in the central portion of Cumberland County. The WWTP is the only public owned treatment works within the bounds of the City limits. The City of Millville service area contains all of the area bounded by the official City limits. Of the 44 square miles that make up the City of Millville, approximately 13 square miles are serviced by the wastewater collection system. The collection system consists of approximately 90 miles of sewer mains ranging in size from 8 to 30 inches in diameter and 20 pump stations of varying capacities. The Millville treatment plant is located on an approximate 4 acre portion of Block 546, Lot 36 situated on the eastern side of the Maurice River, approximately 1.3 miles below the New Jersey State Highway Route 49 bridge crossing in the center of this urban area.

**Need for Project**

Upgrade existing clarifiers - updraft of the sludge blanket due to density currents coupled with poor settling sludge quality Third secondary clarifier - to complete upgrades to the ex. clarifiers, and comply with discharge requirements. RAS Pumps - pumps oversized RAS Piping - mods for add'l flexibility RAS Chlorination - reduce frothing which causes slippery foam. Walkway from Splitter Box to Aeration Tank - Allow staff to move btwn locations Auto Cleaned Strainer - ex. strainer clogs overnight causing pump failure Rotary Presses - ex. presses produce solids content well below what is desired by disposal outlets. DumpsterVeyor - staff manually distributes sludge in dumpsters. Sludge Process Building - roof leaks, masonry cracked, reduce energy costs Foam Skimmer - frothing in aeration tanks UV Disinfection - old technology and is failing resulting in fecal coliform violations Check valves on Odor Control - air in ductwork reverses from the building to Odor control

**Project Description**

(Carryover SFY2015) - Upgrade existing clarifiers - install density current baffles seal cracks in launders third secondary clarifier - construct add'l clarifier RAS Pumps - install smaller pumps RAS Piping - Modify ex. RAS piping RAS Chlorination System - Install new sodium hypochlorite system Walkway from Splitter Box to Aeration Tank - construct walkway Auto Cleaned Strainer for Utility Water System - install new strainer Rotary Presses - replace with rotary presses DumpsterVeyor - install track-mounted container Sludge Process Building - new roof repair masonry consolidate sludge rooms Foam Skimmer - Install surface skimmer system UV Disinfection System - install new UV system and inlet chamber Check Valve on Odor Control System - install new check valve.

Edgewater Borough the majority of Cliffside Park and portions of Fort Lee

**Need for Project**

The proposed project will serve a dual purpose. The project will improve the overall quality of the Authoritys effluent and also improve the method by which the effluent is discharged into the Hudson River.

**Project Description**

The proposed project includes installation of an automated filtering system to remove particles 20 microns or larger and an extension of the treatment facilities outfall pipe further into the Hudson River to provide an adequate mixing zone.

Based on NJPDES Permit (NJ0027561) issued December 30 2005 with an effective date of March 1 2006. Current plant flow 0.045 MGD with Design Flow of 0.065MGD. Project is needed to meet new effluent limits imposed by permit (Deadline for meeting limits - February 2011). In particular new effluent limits for phosphorus (Existing limit - 1.0 mg/liter Proposed Limit - 0.5 mg/liter ) copper (No existing limit - Proposed 14.4 micrograms/liter) and bromodichloromethane (No Existing Limit - Proposed 1.1 micrograms/liter). Current plant is not capable of meeting proposed limits. Permit limits are currently being adjudicated through the formal appeals process. Settlement discussions with NJDEP are on going with a reasonable expectation for a settlement agreement. Deadline for compliance is likely to be extended beyond February 2011. Sewage Treatment Flow Effluent Plant (STP) Name (mgd) Reported BOD Reported SS (NJPDES ) Design Present mg/l mg/l Delaware Township MUA (Secondary) (NJ0020290) .027 Not Avail-able 93 13 87.3 16.9

**Project Description**

Upgrade of existing Wastewater Treatment facility to meet new NJPDES permit limits. Project is located in Delaware Township Hunterdon County in the Village of Sergeantsville. The facility currently serves the Village Residences an Elementary & Middle School (K- 8th) and a small commercial center. Stream discharge is to Rose Creek (tributary to Wickecheoke Creek).

**Service Area**

The Township of Delran wastewater system serves all of the Township as well as approximately 10 users in Moorestown Township.

**Need for Project**

Sand Filter Improvements- The Township's Wastewater Treatment Plant includes an existing traveling bridge sand filter installed in 1994 as part of a plant upgrading. The plant staff has indicated that the existing unit is hydraulically inefficient and its rehabilitation or replacement has been identified as a priority project in the Township Sewer Utility Capital Improvement Program. Retrofitting the existing filter unit with similar technology will be considered as will replacement of the unit with a different technology. This improvement will not increase the capacity of the wastewater treatment plant. Fifth Street Pump Station Improvements- An evaluation of the Fifth Street Pump Station found it to be in need of varying degrees of improvement and it has been identified as a priority project in the Township Sewer Utility Capital Improvement Program. These improvements will not increase the capacity of the pump station.

**Project Description**

The proposed project will involve the improvements to the sand filter at the Townships existing Wastewater Treatment Plant.

PVSC serves 48 municipalities in parts of Bergen, Hudson, Essex, Passaic and Union Counties.

**Need for Project**

The project is to reconstruct PVSC's preliminary treatment processes to continue to maintain its ability to remove debris and grit from the wastewater flow. It is also one component of the PVSC's treatment plant improvements to increase its ability to treat wet weather flows to reduce CSOs. This project will also raise all equipment to higher elevations, reducing the risk of flood damage.

**Project Description**

This Headworks Reconstruction Project includes, but is not limited to, construction of a new Grit and Screenings Building, including the reconstruction of the grit sumps, installation of grit pumps, cyclone degritters, screw type classifiers, conveyors, screenings compactors and expansion of the existing bar screens. The project also includes improvements to all electrical, hvac and auxiliary equipment. The improvements also includes a new grit and screenings unloading stations.

PVSC serves 48 municipalities in parts of Bergen, Hudson, Essex, Union and Passaic Counties.

**Need for Project**

PVSC is constructing Flood Walls to protect the treatment plant during extreme weather events. As a result, the stormwater collection systems within the Flood Wall need to be redesigned and reconstructed to include stormwater pumping stations to prevent flooding from within the Flood Walls.

**Project Description**

In order to mitigate against future storm rain events and remove the water within the new flood wall, three pumping stations will be constructed. The pump stations will be provided on the east (2 No.) and west (1 No.) side of the treatment plant. Each pumping station will consist of pile supported reinforced concrete structures, mechanical pumps and electrical equipment.

PVSC serves 48 municipalities in parts of Bergen, Hudson, Essex, Union and Passaic Counties.

**Need for Project**

PVSC is constructing a Stand By Power Generating Station to provide continuous operation of the Wastewater Treatment Plant in the event of loss of utility power.

**Project Description**

In order to mitigate the possibility of the loss of power to the PVSC facility and the prevention of another regional bio solids treatment and disposal crisis, PVSC proposes to build a standby power generating facility to provide power for the entire wastewater treatment plant (WWTP). The standby power plant will enable the PVSC to continue operations during a grid power outage. PVSC would no longer need to rely on the local power utility for sustained operation. This project consists of the construction of a powerhouse building that will include three (3) gas turbines with ancillary support equipment with the capabilities of generating 34 megawatts of electricity.

**Project Name, Number**

Passaic Valley Sewerage Commission  
S340689-39  
Sewage Treatment Plant (STP) - Improvement/Upgrade

**Priority List Rank**

152

**County**

Essex

**Existing Population**

1,490,904

**Service Area**

PVSC serves 48 municipalities in parts of Bergen, Essex, Hudson, Passaic and Union Counties.

**Need for Project**

The inner lining of the Heat Treatment Plant Supernatant Return pipe line was in disrepair and removed. The pipeline requires a new lining and/or coating for use within the treatment plant for various purposes including, but not limited to, biological waste activated sludge conveyance and biosolids treatment return liquids conveyance. These processes are required to continue secondary treatment and biosolids treatment operations at the PVSC facility.

**Project Description**

The Passaic Valley Sewerage Commission utilizes the Zimpro Process to stabilize their sludge. After stabilization, the sludge is sent to Sludge Decant Tanks. The supernatant from the decant tanks is sent to their Oxygenation Tanks and/or the Supernatant Treatment Plant for further treatment via a 20-inch pipeline. The pipe was lined with a polyethylene liner that failed. The liner was removed under a separate project. PVSC is now looking to coat the interior of the pipe with a new coating system to extend the life of the pipeline. A pilot study was performed of various coating systems and one was identified as suitable.

**Need for Project**

Proper Operation and Maintenance of infrastructure is an important factor in providing sewage conveyance and treatment processes in compliance with NJPDES permit requirements. The NJDEP has required as part of its CSO Permit requirements that an Asset Management Plan for PVSC's infrastructure be in place by July 1, 2016.

**Project Description**

The project includes the development of an Asset Management Plan for the PVSC Collection System and Treatment Plant.

PVSC serves 48 municipalities in parts of Bergen, Essex, Hudson, Passaic and Union Counties.

**Need for Project**

PVSC is making improvements to its Headworks Grit and Screenings Facility which require an electrical upgrade to support. Additionally, the substation has exceeded its useful life and is in need of replacement. The substation is required to maintain operation of the treatment plant.

**Project Description**

The work under this project is construction of a new Substation M adjacent to the area occupied by the Grit and Screenings and the Incinerator Buildings at the east end of the grit channels. The project will also include the relocation of PVSC's Emergency Generator. The project includes new ductbank and manhole system to augment and replace the existing Substation M power supply and distribution system. To accommodate the new substation the existing access roads will be removed or relocated and new parking areas will also be constructed.

**Need for Project**

As a result of Superstorm Sandy, PVSC's treatment plant was inundated with salt water. The flooding damage requires the replacement of the electrical cabling, switchgears and the replacement and relocation of motor control centers plantwide to maintain treatment plant operations.

**Project Description**

This project includes the replacement and relocation of electrical switchgear and MCCs throughout the wastewater treatment plant that were damaged due to flooding from Superstorm Sandy. The work includes, but is not necessarily limited to, furnishing and installing new switchgear, MCCs, electrical panels and other devices, conduit wiring, prefabricated electrical houses, foundations, access platforms, site work and associated work.

**Service Area**

PVSC serves 48 municipalities in parts of Bergen, Essex, Hudson, Passaic and Union Counties.

**Need for Project**

PVSC's final clarifiers are part of its secondary treatment process. In order to maintain secondary treatment operations, it needs to perform concrete and expansion joint repairs to its twelve (12) final clarifier tanks.

**Project Description**

This project involves concrete rehabilitation and protective coating of the final clarifiers at the PVSC treatment facility. The concrete surfaces are significantly deteriorated and the concrete rehabilitation and application of a protective coating to cover over 200,000 square feet of walls, concrete columns and miscellaneous areas will allow this significant asset to be utilized well into the future. The work involves surface preparation, concrete lining and resurfacing of all surfaces and epoxy coating of pre-approved and demonstrated products. All expansion and construction joints will be replaced in all twelve (12) final clarifiers. Concrete repairs to walkways and stairs are also included in this project. Influent sluice gates will be installed in each of the twelve (12) final clarifiers as well.

PVSC serves 48 municipalities in parts of Bergen, Hudson, Essex, Union and Passaic Counties.

**Need for Project**

PVSC is constructing Flood Walls along the perimeter of the Wastewater Treatment Plant to protect the plant during extreme weather events.

**Project Description**

The PVSC proposes construction of a flood wall at its 140+ acre regional wastewater treatment facility located at 600 Wilson Avenue, Newark, New Jersey. The purpose of the project is to mitigate against the future risk of storm damage and consequent risk of service disruption. The New Jersey Department of Environmental Protection (NJDEP) has identified the PVSC facility as a critical component of New Jersey's infrastructure and has recommended that the facility be protected from similar events. Recent guidance issued by the NJDEP calls for the protection of wastewater treatment plants as critical infrastructure to the 500-year or 0.2% annual chance storm event consistent with Presidential executive orders. The flood wall will allow PVSC to keep the facility in operation. PVSC, through the New Jersey Office of Emergency Management, requested public assistance funding from the Department of Homeland Security, FEMA for the proposed project.

Sewage Treatment Plant (STP) - Improvement/Upgrade

**Priority List Rank**

162

**County**

Essex

**Existing Population**

1,350,000

**Service Area**

PVSC provides wastewater treatment and bio solids management services for 1.4 million residents, over 5,000 commercial entities and 200 significant industrial users within its service area. The PVSC's service area (District) encompasses approximately 155 square miles and includes 48 municipalities in parts of Bergen, Essex, Hudson, Passaic and Union Counties. In addition, PVSC provides bio solids (sludge) management and Liquid Waste Acceptance (LWA) services to out-of-District municipal and industrial entities that transport non hazardous liquid wastes to the PVSC Plant by truck or barge. PVSC's hauled wastes also include potable water sludge from New Jersey and New York. In total, PVSC treats nearly 25% of the State of New Jersey's wastewater and/or sludge and approximately 15% of the sludge generated in New York City, which represents a service population of over 3.4 million residents.

**Need for Project**

Superstorm Sandy caused the PVSC's treatment plant facility to suffer catastrophic physical damages causing a protracted loss of treatment capability. Severe negative regional environmental and economic impacts occurred as a result of the plant's loss of function. Floodwaters entered the Plant's process galleries and utility/infrastructure tunnel system, damaging cabling, process equipment, dewatering pumps, maintenance equipment, mechanical equipment, process transmission piping, electrical equipment, and control equipment. Following the storm, the salt water tidal surge and sewage mixture was trapped in the lower levels of the Plant for more than 10 days before it could be completely pumped out. PVSC is planning on completing the utility tunnel bulkheads in order to limit damage with major equipment and allow continued access to important sections of the tunnel system.

**Project Description**

The project scope is to furnish all labor materials and equipment and other facilities required to segment the utility tunnel system by the installation of watertight doors in bulkhead walls at various locations within the tunnel and to install watertight doors at access locations to process areas. The scope also includes HVAC work to provide ventilation to the segmented areas and associated electrical and above grade site work.

PVSCs treatment plant buildings equipment and electrical systems were severely damaged due to flooding of its utility tunnels and galleries from Super Storm Sandy. To prevent a future similar event this project will raise the tunnel system sump pump control panels above ground which will be accessible to connect generators in the event of a power outage. In addition bulkheads will be installed to provide the ability to isolate sections of the tunnels and galleries to contain floodwaters.

**Project Description**

This project includes improvements to the PVSCs sump pump systems to raise the control control panels above ground to prevent possible future flood damage and to allow for generator connections in the event of a power failure to allow for the ability to maintain operation of the facilities sump pump systems. The project also includes the installation of bulkheads in areas of the tunnels to provide the ability to isolate sections of the tunnels and galleries.

Passaic Valley Sewerage Commission  
S340689-25  
Decentralized Wastewater (or Septic) System Repair/Replacement

**Priority List Rank**

162

**County**

Essex

**Existing Population**

1,350,000

**Service Area**

48 municipalities in portions of Bergen, Essex, Hudson, Passaic and Union Counties.

**Need for Project**

PVSC's Administration Building was severely damaged due to flooding as a result of Superstorm Sandy. The damage to the administration building included, but is not limited to, all of its communication and business systems. It is necessary to rebuild the Administration Building and its systems in a more resilient manner to ensure continued operation of the treatment plant in future events.

**Project Description**

(Carryover SFY2015) - Rehabilitation of the PVSC Administration Building due to flooding damage as a result of Superstorm Sandy.

Sewage Treatment Plant (STP) - Improvement/Upgrade

**Priority List Rank**

162

**County**

Essex

**Existing Population**

1,350,000

**Service Area**

PVSC provides wastewater treatment and bio solids management services for 1.4 million residents, over 5,000 commercial entities and 200 significant industrial users within its service area. The PVSC's service area (District) encompasses approximately 155 square miles and includes 48 municipalities in parts of Bergen, Essex, Hudson, Passaic and Union Counties. See Table 1-1 included in the Planning Document for more information. In addition, PVSC provides bio solids (sludge) management and Liquid Waste Acceptance (LWA) services to out-of-District municipal and industrial entities that transport non-hazardous liquid wastes to the PVSC Plant by truck or barge. PVSC's hauled wastes also include potable water sludge from New Jersey and New York. In total, PVSC treats nearly 25% of the State of New Jersey's wastewater and/or sludge and approximately 15% of the sludge generated in New York City, which represents a service population of over 3.4 million residents.

**Need for Project**

Superstorm Sandy caused the PVSC's treatment plant facility to suffer catastrophic physical damages causing a protracted loss of treatment capability. Severe negative regional environmental and economic impacts occurred as a result of the plant's loss of function. Floodwaters entered the Plant's process galleries and utility/infrastructure tunnel system, damaging cabling, process equipment, dewatering pumps, maintenance equipment, mechanical equipment, process transmission piping, electrical equipment, and control equipment. Following the storm, the salt water tidal surge and sewage mixture was trapped in the lower levels of the Plant for more than 10 days before it could be completely pumped out. PVSC is planning on installing the generator provisions in order to ensure that temporary power can be provided to proposed sump pumps throughout the utility/infrastructure tunnel system, basements and galleries in the event of another catastrophic storms.

**Project Description**

In order to ensure that the sump pumps and dewatering pumps located throughout the utility tunnels galleries and basements at the PVSC Wastewater Treatment Plant will be capable of continued operation should flooding conditions occur again (as they did with Superstorm Sandy) this project proposes to provide a stand-by power electrical system setup where a roll-in stand-by generator system (brought to certain locations) which can be tied into temporary stand-by power electrical distribution to power sump pumps and de-watering pumps located in tunnels basements and galleries throughout the PVSC facility. The stand-by generator systems equipment (generators automatic transfer switches electrical panel boards controls etc.) will be located above elevation 13 in order to install them above the flood plain. To accomplish this electrical equipment will be located outside of building walls or indoor electrical room at or above elevation 13.

The municipalities of Absecon Atlantic City Brigantine Egg Harbor City Egg Harbor Township Galloway Hamilton Linwood Longport Margate Northfield Pleasantville Somers Point and Ventnor.

**Need for Project**

Improvements to the STP are needed to ensure operational reliability and component integrity. Certain process equipment must be replaced or improved. The existing discharge to the Atlantic Ocean has the potential to adversely impact shellfish and recreational uses.

**Project Description**

The project involves (1) installation of new variable speed drive units to replace existing single speed drive units controlling 500hp effluent pumps allowing the equalization basin to be taken off line for maintenance and cleaning (2) installation of a new bar screen and conveyor system to reduce rags and solids from passing through the process system (3) installation of a CEMDAS system to monitor the sludge furnace emission levels of oxygen and carbon-dioxide (4) replacement of the centrifuge back drive units with new units and a control panel for automatic torque control for higher efficiency (5) replacement of Dezurik valves to prevent leaking and the cross contamination of processes (6) installation of a supervisor computer and data acquisition system (SCATA) to electronically optimize unit processes (7) replacement and relocation of the plant washdown pumps and (8) sludge hopper enlargement. This project also includes minor necessary improvements to ensure operational reliability.

Sewage Treatment Plant (STP) - Improvement/Upgrade

**Priority List Rank**

173

**County**

Bergen

**Existing Population**

75,000

**Service Area**

The Authority's service area includes 11 municipalities including the Borough's of Allendale, Ho-Ho-Kus, Midland Park, Ramsey and Waldwick. Partially served are the municipalities of Mahwah, Wyckoff, Saddle River, Upper Saddle River, Franklin Lakes and Ridgewood.

**Need for Project**

The Wastewater Treatment Plant Improvements Project mitigates bottlenecks in systems which support the main wastewater treatment processes. An overflow or surcharge in any of these processes has the potential for sludge, grease, ash or other materials to reach the Ho-Ho-Kus Brook, which is located directly downstream from the existing unit processes. In addition, these processes support the primary treatment function of the plant. Bottlenecks in the processes can negatively impact the overall treatment capacity of the plant.

**Project Description**

The Authority proposes various improvements to its existing treatment processes at its Sewage Treatment Plant. Proposed improvements include the separation of the primary sludge and waste activated sludge (WAS) streams and installation of a disk thickener to treat the WAS. Installation of an automated system to remove the grease in the grease/scum pit, installation of larger pumps, piping and associated force main in the existing dewatering well, and construction of a new mechanical drying equipment for the existing ash tank.

**County**

Bergen

**Existing Population**

75,000

**Service Area**

The Authority's service area includes 11 municipalities including the Borough's of Allendale, Ho-Ho-Kus, Midland Park, Ramsey and Waldwick. Partially served are the municipalities of Mahwah, Wyckoff, Saddle River, Upper Saddle River, Franklin Lakes and Ridgewood.

**Need for Project**

Proposed improvements and upgrades to the Authority's waste activated sludge and aeration system are proposed to replace inefficient and high-energy consuming equipment in order to improve the plant's solids handling train which is integral to the Authority's overall treatment process and quality of its effluent that discharges into the Ho-Ho-Kus Brook.

**Project Description**

The Authority is proposing various improvements to its waste activated sludge and aeration systems including replacement of 2 existing aeration blowers with a new energy-efficient units, installation of all necessary PLCs and modification to existing MCCs, repair of the existing air distribution piping in the aeration tanks, demolition of four waste activated sludge (WAS) pumps and installation of six new WAS pumps (including one standby), and replacement of all associated piping.

**Need for Project**

The project proposed no changes to the existing treatment process but seeks to install solar photovoltaic facilities to meet the electric demands of the facilities.

**Project Description**

The project is for the construction of a 2.5 megawatt photovoltaic generation system at the East Windsor Municipal Utilities Authority Pollution Control Facility located on Millstone Rd. in East Windsor N.J. The project includes solar arrays current inverters wiring metering controls and miscellaneous appurtenances. This will allow the plant to operate on 100 of photovoltaic generation power.

**Service Area**

Gibbstown - Greenwich Township

**Need for Project**

The Gibbstown plant is discharging to Wiggins Pond a tributary of the Delaware River. The effluent is not in compliance with the permit requirements. Due to the stringent effluent limitations as established by the Department discontinuation of the discharge to Wiggins Pond has become necessary. Wiggins Pond (SE-2) is a non-trout stream with severe violations of fecal coliform and marginal violations of D.O. and toxics. Wiggins Pond supports industrial water use. Also there exists a major problem due to the presence of high-strength chemical wastes. The plant also receives intermittent discharges of slaughtering wastes from a local butchery. The combined effect of these wastes tend to upset the biological processes. Sewage Treatment Flow Effluent Plant (STP) Name (mgd) Reported BOD Reported SS (NJPDES ) Design Present mg/l mg/l Gibbstown(Secondary)(NJ0030333) 1.0 0.77 92.2 19.8 89 25.7

**Project Description**

The project consists of upgrading the existing Gibbstown plant by using the oxidation ditch process and construction of an outfall for direct effluent discharge to the Delaware River. It also includes the construction of influent and effluent pump stations and force mains.

**Service Area**

The project will directly impact the drainage area between 10th Street and 7th Street east of Bay Avenue to the Bayfront. Additionally, this area is the main business district of the municipality and the continued instances of flooding are negatively affecting local commerce and tourism to the area.

**Need for Project**

At the present time, rain and flood waters from the Bay are deposited on the local streets where pollutants contaminate the water prior to it being drained back to the Manahawkin Bay. As part of the proposed project herein, two (2) manufactured treatment devices (MTD) will be installed. MTD's are proprietary stormwater treatment systems used to address the stormwater quality impacts of land development. Since this project is receiving New Jersey Environmental Infrastructure Financing Program (NJEIFP) funding, the MTD's will either be NJCAT verified and NJDEP certified or installed using the NJEIFP MTD Funding Policy.

**Project Description**

Applicant proposes to remove existing storm pipe and replace with approximately 4000 LF of new 18" HDPE pipe as well as install two (2) stormwater pumps at 7th Street and 10th Street along with two (2) manufactured treatment devices and inline tide valves.

**County**

Hudson

**Existing Population**

247,597

**Service Area**

Jersey City is the second largest city in the State of New Jersey with a population of approximately 260,000 persons. The project generally consists of the replacement of 240 LF of the 54" brick siphon and sanitary sewer from the intersection of Pine and Ash Street across the Conrail Tracks to a downstream manhole. In addition, the project will include the cleaning and lining of approximately 600 LF of existing sewer main along Pine Street.

**Need for Project**

The replacement of this portion of the 54" diameter brick sewer will reduce the risk of future failure of the pipe and the discharge of raw sewage into waterways.

**Project Description**

The project generally consists of the replacement of an existing 54" brick siphon that crosses below the Conrail tracks in the area of Pine Street in Jersey City. An internal inspection of the brick siphon revealed that the interior is deteriorating and in need of immediate replacement as it has reached the end of its useful life. The 54" brick pipe will be replaced with approximately 160 LF of 54" diameter centrifugally cast fiberglass reinforced polymer mortar (CCFRPM) pipe in a 72" steel casing installed via trenchless installation beneath the railroad tracks. An additional 75 LF of CCFRPM pipe will be installed by open-cut and approximately 600 LF of upstream sewer pipe will be cleaned and lined.

**Service Area**

Jersey City is the second largest city in the State of New Jersey with a population of approximately 260,000 persons. The project described in this report consists of force main replacement in the area along the New Jersey Transit Light Rail bounded by West Side Avenue to the west, and Martin Luther King Drive to the east.

**Need for Project**

The replacement of the portion of 54" diameter force main will reduce the risk of future failure of the pipe and the discharge of raw sewage into waterways.

**Project Description**

The JCMUA has undertaken an analysis of pipe replacement needs in the 54 inch PCCP force main. The analysis included internal inspections using acoustic leak and gas pocket detection, electromagnetic inspection and internal video television inspection. Upon television inspection, hydrogen sulfide eroded the inner core of the PCCP, exposing the steel cylinder. The structural deterioration of the inner core identifies the priority areas for the replacement of the force main. The JCMUA proposes to replace approximately 2,800 lf of the 54" diameter force main in the deteriorated areas. The Project described in this report is considered by the JCMUA as the highest priority.

**Need for Project**

The overall sewer replacement project will permit the completion of a ongoing chromium remediation project to occur and also replace a portion of the 100 year old pipe of questionable integrity, avoiding potential sewage spills.

**Project Description**

Replacement of 1,100 linear feet of an existing 96-inch diameter steel combined sewer on Carteret Avenue between Garfield Avenue and Pacific Avenue to permit the completion of a chromium remediation project.

Anticipated Recipient:	Jersey City Municipal Utilities Authority

Combined Sewer Overflow (CSO) - Traditional Infrastructure

**Priority List Rank**

181

**County**

Hudson

**Existing Population**

247,597

**Service Area**

The Jersey City sewer system services an area of 6,500 acres with a population of approximately 247,597 (2010 Census). Additional flow is accepted from parts of Union City, North Bergen and Bayonne.

**Need for Project**

Deterioration and eventual failure of the existing infrastructure resulting in the backup and overflow of raw sanitary sewage and storm water that would create a health hazard for residents, workers and transients in the area served by the sewer system and in the waters receiving the discharge from the collapsed sewer. No action would also be contrary to the Consent Decree that the JCMUA has entered into with the USEPA.

**Project Description**

The JCMUA plans to implement the replacement of approximately 85 sewer pipes with pipes of the same diameter which the JCMUAs Phase V of Combined Sewer and Condition Assessment Study identified as in imminent danger of collapse and the repair of approximately 89 sewer pipes that are in imminent danger of collapse based upon results of JCMUAs Phase V of Combined Sewer and Condition Assessment Study.

Jersey City is the second largest city in the State of New Jersey with a population of approximately 250,000 persons. The selected plan will include the replacement of approximately 182 LF of 8" pipe, 135 LF of 10" pipe, 1730 LF of 12" pipe, 830 LF of 15" pipe, 4563 LF of 18" pipe, 100 LF of 20" pipe, 1790 LF of 24" pipe, 300 LF of 27" pipe, 460 LF of 30" pipe, 560 LF of 54" pipe, and 200 LF of 27"x 20" pipe. These areas of the sewer system have been identified as nearing the end of their useful lives. Manholes, sending and receiving pits, excavation, backfill, and restoration are also included in construction.

**Need for Project**

N/A

**Project Description**

5B Sewer - There are approximately 38 locations throughout the city where the sewer main is to be replaced based on earlier CCTV work completed by the JCMUA and an assessment of the sewer condition. The total length of sewer mains for replacement is approximately 10,850 FT.

**Project Name, Number**

Jersey City Municipal Utilities Authority  
S340928-34  
Sanitary Sewer System Rehabilitation

**Priority List Rank**

181

**County**

Hudson

**Existing Population**

247,597

**Service Area**

Jersey City is located in south central Hudson County and has a land area of 14.79 square miles. The rapidly growing population is estimated at 264,290 . This represents an increase of about 6.7 percent from the 2010 population of 247,597 . The city is bounded by the Hackensack River and Newark Bay to the west, the City of Bayonne to the south, the City of Hoboken to the north, and the Hudson River to the east. Land use within the project area is categorized as urban residential, high density or multiple dwelling, commercial/services, railroads, industrial, other urban or built-up land, and mixed urban or built-up land.

**Need for Project**

It is essential the aging infrastructure be replaced or rehabilitated. The selected sanitary sewers have significant damage and deterioration, as was determined through a televised inspection of the sewers. Without action, there is the potential for collapse of these existing sewer mains which would leave all the associated residents without sewer service. Additionally, infiltration of groundwater into the sewers reduces capacity of all downstream pipes, which may restrict or prohibit future development. The added flow caused by infiltration and inflow also causes a burden on the receiving treatment plant. Rehabilitation of these sewer mains, as opposed to replacing the mains outright, will mitigate inflow and infiltration while limiting negative impact to the community.

**Project Description**

This project consists of the rehabilitation of approximately 1,335 linear feet (L.F.) of existing sanitary sewer main at four (4) locations in Jersey City, Hudson County, New Jersey. 1. Pacific Avenue; 2. Halladay Street; 3. Pine Street and Suydam Avenue; and 4. Grand Street. The selected sections of sewer main have shown increased deterioration due to the close proximity to New Jersey Transit railways. Rehabilitation of the sewer mains will be performed utilizing trenchless technology.

**Service Area**

The BCUA's Service Area consists of forty-seven municipalities and a portion of five non-member municipalities. The thirty-eight municipalities entirely served by the BCUA WWTP include Bergenfield, Bogota, Carlstadt, Closter, Demarest, Dumont, Emerson, Edgewater, Englewood, Englewood Cliffs, Fairview, Harrington Park, Haworth, Hillsdale, Leonia, Little Ferry, Maywood, Montvale, Moonachie, New Milford, Northvale, Norwood, Old Tappan, Oradell, Palisades Park, Paramus, Park Ridge, Ridgefield, Ridgefield Park, River Edge, River Vale, Rochelle Park, Teaneck, Tenafly, Teterboro, Westwood, Woodcliff Lake and Wood-Ridge. The eight municipalities partially served by the BCUA WWTP include Cliffside Park, East Rutherford, Fort Lee, Hackensack, Hasbrouck Heights, Rutherford, South Hackensack and Washington Township. The five nonmember municipalities partially served by the BCUA WWTP include Alpine, Lodi, Lyndhurst, North Bergen, and Ridgewood. Portions of Cliffside Park, Fort Lee, Hackensack.

**Need for Project**

Several improvements were identified from an evaluation to increase the volatile solids reduction, reduce sludge volume, and maximize biogas production. The recommended improvements to be implemented are adding 3 sludge pre-heating heat exchangers, each rated at 3.0 MBtu/hr, including adding a 1,800 gpm sludge recirculation pump, with grinder and VFDs; replacing 4 external heat exchangers and one internal heat piping system with 5 new external heat exchangers, replacing existing mixers with new mixers, cleaning 5 tanks, conducting structural inspection, replacing 4 digester centrifugal sludge recirculation pumps with positive displacement sludge pumps with; adding 1 positive displacement sludge transfer pump adding two 400 scfm variable speed gas compressor system with cooling to convey biogas to Cogen Engines; providing new natural gas feed line to the existing CoGen engines and various other improvements.

**Project Description**

The sludge digester improvements are located within the Little Ferry Water Pollution Control Facilities, located at Little Ferry, NJ.

The five nonmember municipalities partially served by the BCUA WWTP include Alpine, Lodi, Lyndhurst, North Bergen, and Ridgewood. Portions of Cliffside Park, Fort Lee, Hackensack.

**Need for Project**

The BCUA intends to conduct a plant-wide facility assessment of the Little Ferry Water Pollution Control Facility (WPCF) and offsite pump stations to identify capital needs of antiquated equipment and/or process improvements. The assessment will be used to plan capital financing with emphasis to repair/replace critical assets. The preliminary findings indicate capital improvements to the components of the aeration tanks, bar screen, and Harrington Park Actuators .

**Project Description**

Conduct a plant-wide facility assessment of the Little Ferry Water Pollution Control Facility and offsite pump stations and identify areas in need of improvements.

**Need for Project**

To maintain continuous pumping stations and Plant operations during extreme weather events, improvements to the building roofs, windows , and access roads are needed to protect critical assets. Some of the critical assets are located at offsite pump stations, switchgear building, screening buildings, and other buildings with critical assets as well as Sludge Holding tanks access road.

**Project Description**

With extreme weather events over recent years, infrastructure protecting critical asset has deteriorated and needs improving.

**Need for Project**

The proposed project includes raising metering chambers above the design flood elevation (DFE) or making them submersible. Electrical and instrumentation assets that can be relocated above the DFE will be replaced and raised at SB No.'s 1 & 2. To make the stations more resilient, the project also includes Dry Flood Proofing of walls, installation of flood resistant doors or barricades for the entrance and garage doors and the installation of a flood wall along the exterior of the SB's.

The five nonmember municipalities partially served by the BCUA WWTP include Alpine, Lodi, Lyndhurst, North Bergen, and Ridgewood. Portions of Cliffside Park, Fort Lee, Hackensack, Ridgefield

**Need for Project**

The proposed project includes dry flood proofing wall apertures that are considered potential sources of water infiltration, where appropriate, raising of grating wall height and air intakes, and installation of flood resistant doors or barricades at entrances. Installation of flood walls along the exterior of buildings and installation of submarine doors are also proposed. Holes and the inside of conduits, as well as the conduit or pipe penetration, through walls, ceilings, and floors, as appropriate, will be sealed. Attempts will also be made to seal any significant cracks that are identified. Electrical assets and instrumentation will be raised above the design flood elevation (DFE). Assets that cannot be raised will be replaced with submersible units or placed in NEMA 6 enclosures. For Grit Building No. 2 new electrical and instrumentation assets will be installed in NEMA 4X enclosures above the DFE. Wiring and conduit will be replaced with materials rated for wet locations.

**Project Description**

The proposed project includes various repairs at the Little Ferry Water Pollution Control Facility due to damage from Superstorm Sandy. The scope includes repairs to equipment in the following areas Main Pump Station Substations Conveyance Disinfection Primary Sludge Removal Blowers Grit Removal Secondary Sludge Pumping Stations Sludge Processing Control Building Administrative Building Operations and Support Security entrance and Pump Station.

**Need for Project**

This project protects high value power supply assets and protects the plant power supply using a Biogas Powered Electric Microgrid (BPEMG). Power supply assets include the Switchgear (SG) Building, Vault, the CoGen Building, and the Main Substation. The project includes expansion of the CoGen facility; installation of a digester gas storage tank; modification of the blowers and aeration control system to increase energy efficiency and improve process control, and installation of a fats, oil and grease receiving and handling station to augment digester gas production.

**Priority List Rank**

197

**County**

Bergen

**Existing Population**

491,140

**Service Area**

The BCUA's Service Area consists of 47 municipalities and a portion of five non-member municipalities. The thirty-eight municipalities entirely served by the BCUA WWTP include Bergenfield, Bogota, Carlstadt, Closter, Demarest, Dumont, Emerson, Edgewater, Englewood, Englewood Cliffs, Fairview, Harrington Park, Haworth, Hillsdale, Leonia, Little Ferry, Maywood, Montvale, Moonachie, New Milford, Northvale, Norwood, Old Tappan, Oradell, Palisades Park, Paramus, Park Ridge, Ridgefield, Ridgefield Park, River Edge, River Vale, Rochelle Park, Teaneck, Tenafly, Teterboro, Westwood, Woodcliff Lake and Wood-Ridge. The eight municipalities partially served by the BCUA WWTP include Cliffside Park, East Rutherford, Fort Lee, Hackensack, Hasbrouck Heights, Rutherford, South Hackensack and Washington Township. The five nonmember municipalities partially served by the BCUA WWTP include Alpine, Lodi, Lyndhurst, North Bergen, and Ridgewood. Portions of Cliffside Park, Fort Lee, Hackensack, Ridgefield

**Need for Project**

The proposed project includes various repairs at the Little Ferry Water Pollution Control Facility due to damage from Superstorm Sandy. The scope includes repairs to equipment in the following areas: Main Pump Station, Substations, Conveyance, Disinfection, Primary Sludge Removal, Blowers, Grit Removal, Secondary Sludge Pumping Stations, Sludge Processing, Control Building, Administrative Building, Operations and Support, Security entrance and Pump Station.

**Project Description**

The proposed project includes dry flood proofing wall apertures that are considered potential sources of water infiltration where appropriate raising of grating wall height and air intakes and installation of flood resistant doors or barricades at entrances. Installation of flood walls along the exterior of buildings and installation of submarine doors are also proposed. Holes and the inside of conduits as well as the conduit or pipe penetration through walls ceilings and floors as appropriate will be sealed. Attempts will also be made to seal any significant cracks that are identified. Electrical assets and instrumentation will be raised above the design flood elevation (DFE). Assets that cannot be raised will be replaced with submersible units or placed in NEMA 6 enclosures. For Grit Building No. 2 new electrical and instrumentation assets will be installed in NEMA 4X enclosures above the DFE. Wiring and conduit will be replaced with materials rated for wet locations.

**Need for Project**

During significant rainfall events, the BCUA and its 47 member municipalities experience high flows in sanitary sewers and Water Pollution Control Facility (WPCF) mainly due to rain-induced infiltration/inflow (RII/I) from municipal sanitary sewers and private building sewer connections (PBSC). This excessive RII/I has caused sanitary sewer overflows (SSO) which is a public health and safety concern. In order for the BCUA to provide capacity for its member municipalities and to reduce RII/I and eliminate SSOs, the BCUA has undertaken this project to remediate the problem.

**Project Description**

The project will include cleaning of approximately 200000 lf of 8 to 24 inch diameter sewer video inspection during significant rain events of approximately 150000 lf of 8 to 24 inch diameter sewer. Based on the results the BCUA will implement a Fix It remedy that will include the following sealing of sanitary sewer joints in pipe ranging in size from 8-inch to 24-inch diameter grouting of manhole leaks rehabilitation by partial or complete cured-in-place-pipe (CIPP) lining of sewers ranging in size from 8-inch to 24-inch diameter rehabilitation by CIPP lining of 4 to 6 inch PBSCs repair by partial or complete excavation and replacement of 8-inch to 24-inch diameter sewers repair of pipe defects by excavation and installation of repair clamps for 8-inch to 24-inch diameter sewers replacement of defective branch connections by excavation and replacement repair of 4-inch to 6-inch defective PBSCs by excavation and replacement replacement of severely damaged and leaking manholes installation of rain barrels where roof leaders are connected to the sanitary sewer system installation of splash pads where roof leaders are disconnected redirection of sump pumps that are currently discharging into the sanitary sewer system disconnection and redirection to the storm sewer system of prohibited roof leaders and foundation drains which are currently discharging into sanitary sewers and installation of 6-inch to 8-inch clear water systems to collect sump pump clear water flow which currently discharge into sanitary sewers where there is no storm sewer system.

**Need for Project**

Currently treated wastewater from the Edgewater WPCF is discharged from the existing 42-inch diameter outfall at the shoreline of the Hudson River. During periods of low water the river bottom is exposed and the effluent flows over the tidal mud flats before reaching the receded river level. At high tide the outfall is submerged. This condition limits the amount of dilution of the effluent with the receiving waters. In order to provide adequate dilution of the effluent and achieve permit limits for ammonia copper and zinc an extension of the outfall to the deeper waters of the Hudson River is required before the NJPDES permit expires on August 31 2014.

**Project Description**

The proposed project includes extension of the outfall at the Edgewater Municipal Utility Authority to the deeper waters of the Hudson River.

**Need for Project**

Based on findings from an evaluation of the existing five anaerobic sludge digesters performed by Alaimo Group, several improvements were identified to increase the volatile solids reduction, reduce sludge volume, and maximize biogas production which serves as the fuel source for the aeration blowers, cogeneration engines, and hot water boilers. The recommended improvements consist of adding new sludge preheating heat exchangers, new digester membrane gas storage units, digester gas compressors, hot water pump, temperature monitoring equipment, and flow meters as well as replacing existing digester sludge recirculation pumps.

**Project Description**

(Carryover SFY2015) - The proposed project includes various improvements at the Little Ferry Water Pollution Control Facility. The improvements include a new centralized polymer building a new clarified effluent water system sludge digester system improvements and second phase security improvements. The project also includes construction of two biogas storage tanks including gas bag steel tank foundation piles valve vault site work instrumentation and electrical work.

**Need for Project**

These capital improvements are necessary to replace and/or elevate aging equipment and infrastructure for the continued uninterrupted operation of the Linden Roselle Sewerage Authority's (LRSA) wastewater treatment plant. Interruptions to wastewater treatment plant operations, such as due to equipment malfunction, flooding or power outages, could potentially result in discharge of partially- or un-treated wastewater that would negatively impact surface water quality. These capital improvements will help to minimize such treatment plant interruptions and aid in treatment plant operations that will be beneficial to maintaining water quality of the surrounding water bodies, including the Arthur Kill.

**Project Description**

Five separate projects: Flood Hardening Raising/ replacing transformers, flood protection measures around electrical switchgear, generators and equipment, adding flood doors at several facilities, wrapping buildings with dry flood-proofing, relocating electrical conduits. Gravity Thickener Upgrade Replace sludge collection mechanism in the gravity thickener and replace the cover over the thickener. Screening Conveyance Provide automated screenings conveyors at Screen House to convey to grade, the screenings removed from the WW process eliminating the manual handling of the screenings containers. UV Disinfection Facility Upgrade UV disinfection facility upgrade and elevate outside the flood elevation; relocate existing electrical motor control center from basement to above the flood elevation. Electrical Switchgear/ Automatic Transfer Switch Replace electrical switchgear; provide automatic transfer switch to switch the facilities to emergency power during power outages.

The Lambertville Municipal Utilities Authority (LMUA) Wastewater Management Plan (WMP) Planning Area includes portions of the following Hunterdon County municipalities: City of Lambertville Borough of Stockton Pursuant to an Agreement dated July 19, 1965 (amended August 4, 1980 and January 5, 1982, and July 6, 1995), the LMUA also provides service to the BCW&SA which is wholly contained in the State of Pennsylvania.

**Need for Project**

Water quality will be improved as a result of this project because potential wastewater discharges will be minimized or eliminated through the replacement and rehabilitation of wastewater treatment plant (WWTP) equipment and infrastructure that has reached the end of its useful life. In addition, WWTP service interruptions will be minimized and WWTP operations will be optimized.

**Project Description**

Roof replacements, purchase of replacement clarifier mechanisms, rehabilitation of chemical building, repavement of plant area and access road, and repair of drain lines in control building and BFP building

This project will improve sampling during facility discharge events improve operations and maintenance of the facility and improve site safety and security.

**Project Description**

The proposed project includes demolish existing delapidated building and construction of a new 24 x 40 single story operations building.

**Need for Project**

The plant operators have struggled recently to meet the requirements of the NJPDES permit. The improvements will provide increased capability for the operators to make process adjustments in response to changes in the influent wastewater flow and loadings. Replacement of the 50 year old sludge handling equipment will free up manpower for other tasks that improve effluent quality and allow for the disposal of all the biosolids from the plant at the Burlington County Co-Composting facility.

**Project Description**

Replace the existing surface aerators with a diffused aeration system and dissolve oxygen control logic. Provide capability to use back third of aeration tanks as anoxic zone to encourage denitrification. Replace the existing Somat presses and dissolved air flotation thickener with a rotating sludge thickener and a rotary fan press. Provide odor control equipment for all sludge handling equipment certain process building interior spaces. Replace pumps and piping and rehabilitate control building where required.

**Need for Project**

Although the Commission already has qualifying back-up for power outages through 2 PSEG sub-stations this CHP Facility will make the Commission wholly independent from utility outages thereby allowing the Commission to continue processing sewerage materials under all power conditions including that of a grid black-out. This would prevent the flow of untreated materials in those power challenged situations. The CHP Facility would allow the Commission to increase power to meet all demand during wet weather flow periods. The CHP Facility should result in operational efficiencies including cost savings in electricity heating and cooling so that the Commission can undertake other priority list projects through the Trust Program.

**Project Description**

The proposed project includes installation of a Combined Heat and Power Facility to be located on Commission property.

**Need for Project**

PVSC currently accepts sludge from the Bergen County Utilities Authority (BCUA) for treatment. Maintenance dredging is required to continue to accept the BCUA sludge. Dewatering the BCUA sludge at PVSC reduces nitrogen loadings to the Hackensack River. This project will also make improvements to PVSCs plant wide fire alarm system.

**Project Description**

The proposed project includes improvements to the plant wide fire alarm system. PVSCs docks require maintenance dredging to continue to bring sludges by barge from the Bergen County Utilities Authority and New York City.

**Project Name, Number**

Roxbury Township  
S340381-07  
Sewage Treatment Plant (STP) - Improvement/Upgrade

**Priority List Rank**

212

**County**

Morris

**Existing Population**

23,324

**Service Area**

The areas of the Township of Roxbury in which the project is located are within existing residential and commercial areas and are accessible by highways such as Route 80, Route 10, and Route 46. The project sites consist of land use associated with residential, public and commercial/industrial development and are currently fully developed. At the present time, the WPCP services a population of approximately 15,425 people. The existing facility currently treats an average flow of 1.75 million gallons per day (mgd) and was designed to treat an average annual flow of 2.0 mgd.

**Need for Project**

The Township of Roxbury intends to improve the resiliency of the existing facilities by replacing equipment which has reached the end of its useful life and installing new facilities with the capability to provide a more robust treatment during extreme wet weather events. Some of the critical equipment at the Ajax Terrace WCP (RBCs and Main Pump Station Pumps) has aged and is in need of renewal, replacement or upgrade. Similarly the Highland Manor pumps and associated pipe is in poor conditions and must be rehabilitated in order to ensure and maintain reliable pumping operation, both now and in the future.

**Project Description**

This project is for the improvements at the Ajax Terrace Water Pollution Control Plant and Highlands Manor Pump Station (HMPS) facilities, located in the Township of Roxbury, Morris County, New Jersey. At the Ajax Terrace WPCP proposed work will include replacement of eight (8) RBC units. Due to the age and deteriorating function of the existing MPS equipment, the Township intends to replace the existing pumps and ancillary systems new equipment to improve operational efficiency and reliability. The proposed dry submersible pumps will protect against dry well flooding and eliminate the need for the intermediate shafts and bearings and the seal water system, which will also reduce maintenance requirements. Monorails and hoists are also proposed for easier and safer removal of pumps when service is needed. At HMPS, the project will provide new submersible pumps to the existing wet well and modify the structure so that confined space entries are no longer required for routine operations.

Upgrades to the Filter and Residuals Building located at the Town of Clinton Waste Water Treatment Plant, which serves as the point of treatment for all/part of 5 municipalities.

**Need for Project**

Replacement of fine screen filters, sludge press and building related items in order to operate the sewage treatment plant.

**Project Description**

The removal and replacement of the building outer metal skin and insulation, removal and replacement of all overhead and access doors, removal and replacement of most of the structural support girts, column footing anchor bolt and baseplate replacement, and painting minor site work consisting of a 36x18 stone parking area, minor site paving and restoration. The work also includes electrical and mechanical upgrades to the sludge press and fine screen filter room with removal and replacement of blowers, heaters, lighting and electric and controls in order to conform to the latest explosion proof code Class I Div I Group D. A separate building will be constructed in order to house the electrical panels and controls. The work also includes replacement of the sludge belt press, polymer feed, 4 fine screen filters, and conveyors for both sludge and fine screen filter screenings. Other misc. mechanical, piping, pipe supports weir boxes, and miscellaneous metal work will be completed.

**Need for Project**

JMEUC operates a 75 mgd secondary sewage treatment plant. Due to recent experience with unreliable electric service which resulted in violations JMEUC proposes to install an on-site co-generation facility to ensure plant reliability.

**Project Description**

The proposed project includes installation of a co-generation power plant which will serve as the primary power source at the JMEUC facilities.

**Need for Project**

This project is an extension of the anaerobic digester project which will be funded through the NJEIT as part of the 2016 funding cycle. Biogas from the digesters will be collected, processed and used for fuel in a combustion engine for energy generation to power the entire wastewater treatment facility. Constructing anaerobic digesters with combine heat and power generation from the digester gas will have an accumulated economic benefit, estimated to be in excess of \$50M over the next twenty years.

**Project Description**

This project consists of a combined heat and power cogeneration system for the anaerobic digesters and is an extension of the anaerobic digester project which will be funded through the NJEIT as part of the 2016 funding cycle. As part of this project, biogas generated through the digestion process will be collected, processed through a gas conditioning system and used for fuel in a combustion engine that will be linked to 1000kw power generating units. Energy generated by the system will be utilized to power the wastewater treatment facility. With implementation of this process, GCUA anticipates being close to net zero energy status. Construction of the system will include engine-cogenerating "sets", including the associated operations building, biogas conditioning system with the associated building and a gas storage tank.

**Service Area**

The Service Area for this project is the Ocean Acres development in Stafford Township.

**Need for Project**

This project will consist of the construction of one secondary water quality basin for the Ocean Acres development downstream of the existing Neptune Basin. The secondary water quality basin will allow additional opportunity for nitrogen, total suspended solids and phosphorous reduction. Additionally, the new basin will collect additional petroleum hydrocarbons, and dissolved organic chemicals prior to discharge into the Barnegat Bay.

**Project Description**

(Carryover SFY2015) - The proposed project includes the construction and/or retrofit of one or more stormwater basins to improve its ability to remove nitrogen.

Sewage Treatment Plant (STP) - Improvement/Upgrade

**Priority List Rank**

227

**County**

Monmouth

**Existing Population**

1,828

**Service Area**

The entire Borough of Allentown.

**Need for Project**

The existing Wastewater Treatment Plant (WWTP) is in a condition which requires either a replacement or elimination of the WWTP. NJDEP has cited that the existing trickling filter is not operating correctly and is undersized. The arm mechanism for the trickling filter is not operating correctly and requires replacement. Presently there is only one trickling filter, therefore inspection of the internal condition of the bottom filter plate and concrete structure has not been evaluated but it is expected that it requires extensive repair. The trickling filter is also undersized, so a second filter is needed. This would be difficult due to the confined site and wetlands constrictions. The WWTP often meets the discharge requirements of the NJPDES permit, but in the past 2 years has had multiple violations. The Borough realizes it needs to eliminate the violations at the WWTP and wants to decrease the cost of operation and maintenance.

**Project Description**

The Borough of Allentown owns and operates a Wastewater Treatment Plant (WWTP), which discharges effluent to Doctor's Creek. The WWTP presently requires improvements and repairs. The Borough is proposing to replace the existing WWTP with a more efficient activated sludge plant. Once completed and operational, the existing WWTP will be decommissioned and demolished.

Sewage Treatment Plant (STP) - Improvement/Upgrade

**Priority List Rank**

228

**County**

Mercer

**Existing Population**

80,000

**Service Area**

The project will service our member municipalities: Princeton, West Windsor Township, South Brunswick Township, Pennington Borough, Hopewell Borough, Hopewell Township

**Need for Project**

The project components (pumps) are used to convey dewatered sludge from our belt filter presses, sludge receiving bins and sludge storage hopper for incineration of SBRSA's sludge in addition to the sludge from approximately 30 small to midsize wastewater treatment plants.

**Project Description**

The project involves the replacement of seven existing dewatered sludge pumps with seven new dewatered sludge pumps and the replacement of the live bottom feed screws and drives for the sludge cake receiving bins. The pumps are essential for SBRSA to process/incinerate our sludge from our River Road, Hopewell and Pennington WWTPs as well as the liquid and cake sludge that SBRSA receives from approximately 30 small to midsize wastewater treatment plants.

**Service Area**

Townships of Manalapan and Marlboro the Borough of Englishtown and a portion of the Township of Freehold

**Need for Project**

The proposed project is needed to reduce the amount of electricity consumed at the plant. Continued operation using grid power would require a continued reliance on non-renewable energy sources. The project will reduce the production of greenhouse gases which are a by-product of burning fossil fuels. It will also reduce the cost of plant operation while providing a positive impact on our environment.

**Project Description**

The WMUA proposes installation of a new photovoltaic (PV) solar array system in two areas the north and south sections of the plant. The purpose of the project is to alleviate the electricity demand from the power plant during its operation. The PV array proposed in the south runs along the southern border of the site adjacent to Pine Brook and the area to the north is the existing site presently utilized by the WMUA for construction staging. The proposed solar array will cover approximately 146300 sq. ft. of land. As proposed the solar array will produce a total of 2 Mw of electricity and will offset approximately 13 to 12 of the current energy used by the plant.

**Need for Project**

The project will reduce the GTMUAs reliance on public electric supply and in turn fossil fuels. The solar array will supply power to the Authority facilities that handle the operations and maintenance for the MUA.

**Project Description**

The GTMUA Sewer System Rehabilitation Project consists of a single project as delineated in this planning document. All aspects of the components will be located within the boundary of GTMUAs current Gloucester Township service area and collection system. The project consists of the installation of a 175kW Solar Array to supply power to the MUA facilities. The project will include the necessary site work and installation of solar hardware to connect to the existing Authority buildings. The solar array will supply power to the Authority facilities that handle the operations and maintenance for the MUA. The proposed project objectives are to maintain permit compliance and increase operational efficiencies thereby enhancing the integrity of the overall wastewater collection system.

**Need for Project**

Stormwater runoff is the most common way that nonpoint source pollution reaches local rivers creeks and other water ways including Barnegat Bay. If the runoff is not absorbed by soil and vegetation or by other measures rainwater carries chemicals nutrients sediments and other forms of nonpoint source pollution into surface waters.

**Project Description**

The proposed project includes the retrofitting of four stormwater basins to subsurface gravel wetlands to improve their ability to remove nitrogen.

**Need for Project**

The existing tertiary filters were constructed in 1989 and are reaching the end of their useful life. The filters can get overwhelmed during periods of high flows and require increasing amounts of backwash water in order to maintain the required effluent quality. It is expected that the disc filters will reduce energy and backwash water requirements while improving effluent quality.

**Project Description**

Convert the existing mixed media, traveling bridge tertiary filters to rotating disc filters.

235

**County**

Morris

**Existing Population**

7,870

**Service Area**

Jefferson Township (Rockaway River Basin)

**Need for Project**

Some of the on-site systems that exist in the Rockaway River Basin of Jefferson Township have documented repeated failures. Most of the systems are failing due to shallow depth to bedrock high water tables and steep slopes. Rehabilitation has been attempted on some systems but the results have been generally unsuccessful. Trout fishing and primary contact recreation uses of Russia Brook (FW2-TM) are adversely impacted due to the unacceptable levels of nutrients and marginally acceptable levels of toxics and fecal coliform. These facilities may pose serious health hazards in the future for the township if not corrected.

**Project Description**

This project includes the design and construction of a local wastewater system for the Rockaway River Basin portion of Jefferson Township. The recommended wastewater management plan for this portion of Jefferson Township consists of two major parts 1) centralized sewer service for Cozy Lake Lake Swannanoa and White Pine Lake area in the Rockaway Basin and 2) Septic Management for the remaining portions.

4,041

**Service Area**

Complete replacement of the sanitary sewers, storm sewers and reconstruction of roadways within the following locations: 5th Ave (Beach Creek to Central Ave), including the street end bulkhead and boat ramp; 6th Ave (New Jersey Ave to Central Ave); 7th Ave (Central Ave to Surf Ave); 8th Ave (New Jersey Ave to Surf Ave); 9th Ave (Central Ave to Surf Ave); 14th Ave (Central Ave to Surf Ave); 15th Ave (Surf Ave to Ocean Ave); 16th Ave (Delaware Ave to New York Ave); 17th Ave (New York Ave to New Jersey Ave); 12th, 13th, 14th, & 15th Avenues (Hoffman Canal to Delaware Ave), including the street end bulkheads; Hoffman Alley (12th Ave to 15th Ave; Delaware Ave (12th Ave to 18th Ave); Central Ave (5th Ave to 6th Ave); New York Ave (5th Ave to 7th Ave); New York Ave (16th Ave to 17th Ave); the Boardwalk Storm Sewer System between 16th Ave and 26th Ave, including replacement of the Boardwalk between 22nd Ave and 26th Ave; and the Beach Outfall near 21st Avenue.

**Need for Project**

The project will dramatically improve resiliency in the existing sanitary sewer and storm sewer systems to mitigate flooding and system backup caused by failure of said systems. The project will minimize the potential for these systems to fail under both normal day to day operations as well as in storm events thereby preventing water quality impact to the open waters adjacent to the City on both the Ocean and Bay sides of the municipality.

**Project Description**

Complete replacement of the sanitary sewers and reconstruction of roadways within the following locations: 5th Ave (Beach Creek to Central Ave), including the street end bulkhead and boat ramp; 6th Ave (New Jersey Ave to Central Ave); 7th Ave (Central Ave to Surf Ave); 8th Ave (New Jersey Ave to Surf Ave); 9th Ave (Central Ave to Surf Ave); 14th Ave (Central Ave to Surf Ave); 15th Ave (Surf Ave to Ocean Ave); 16th Ave (Delaware Ave to New York Ave); 17th Ave (New York Ave to New Jersey Ave); 12th, 13th, 14th, & 15th Avenues (Hoffman Canal to Delaware Ave); Hoffman Alley (12th Ave to 15th Ave; Delaware Ave (12th Ave to 18th Ave); Central Ave (5th Ave to 6th Ave); New York Ave (5th Ave to 7th Ave); New York Ave (16th Ave to 17th Ave).

**Project Name, Number**

Seaside Park Borough  
S344200-02  
Stormwater Management - Green Infrastructure

**Priority List Rank**

237

**County**

Ocean

**Existing Population**

2,263

**Service Area**

The service area of this project encompasses the area east NJ State Highway 35 "Oceanside". And will consist of three parking lots with current methods to help alleviate contaminants in the storm runoff and decrease the carbon footprint of the entire site which serves as the main parking lot for the Townships which in the summer months is filled to capacity daily.

**Need for Project**

The newly constructed parking lot will utilize underground storage recharge structures which will help eliminate runoffs high in organic and inorganic compounds, thus helping to reduce addition of artificial or natural substances, such as nitrates and phosphates, through fertilizers or sewage, that flow into the Barnegat Bay Watershed which contributes to eutrofication. The newly constructed parking lot will utilize underground storage recharge structures which will help eliminate runoffs high in organic and inorganic compounds, thus helping to reduce the addition of artificial or natural substances, such as nitrates and phosphates, through fertilizers or sewage, which contributes to eutrofication. The lighting system will utilize highefficient, low energy lighting which will power LED lighting set on a timer to reduce the amount of electricity that is required to power these light structures.

**Project Description**

The work on this project consists of the installation an underground storm water recharge system capable of handling a two year storm (which will reduce the amount of discharge into the Barnegat Bay and Atlantic Ocean) high efficiency lighting system electric car charging stations and the repaving of the parking lots to still serve the original intended purpose of the proposed area and to promote better drainage of the site. All work will be designed and constructed to utilize the current green technologies to help eliminate the carbon footprint that tourist areas leave with the increase in population of the summer months. The area sees a tenfold increase in population in the summer months which is why this project is beneficial for the Borough and the environment.

Sanitary Sewer System - New

**Priority List Rank**

238

**County**

Monmouth

**Existing Population**

1,920

**Service Area**

Howell Township

**Need for Project**

The Freewood Acres section of Howell Township is currently relying on on-site septic disposal systems for the treatment of wastewater. Many of these existing systems provide inadequate treatment which has resulted in the degradation of Aldrich Lake. Aldrich Lake experiences high fecal coliform toxics and nutrients concentrations. Consequently trout fishing primary contact recreation and farming are impacted.

**Project Description**

Preliminary investigations indicate that a collection system will need to be constructed in the planning area. The collection system will be connected via an interceptor into the Manasquan River Regional Sewerage Authority conveyance system for treatment and disposal.

Bay Head Borough

**Need for Project**

Stormwater runoff is the most common way that nonpoint source pollution reaches local rivers creeks and other water ways including Barnegat Bay. If the runoff is not absorbed by soil and vegetation or by other measures rainwater carries chemicals nutrients sediments and other forms of nonpoint source pollution into surface waters. Installation of pervious surface will allow all stormwater to enter the ground.

**Project Description**

The proposed project includes installation of approximately 20000sqft of permeable subsurface and pavers to an existing packed gravel parking lot.

Bergen County Utilities Authority  
S340386-13  
Sewage Treatment Plant (STP) - Improvement/Upgrade

**Priority List Rank**

240

**County**

Bergen

**Existing Population**

491,140

**Service Area**

The BCUA's Service Area consists of 47 municipalities and a portion of five non-member municipalities. The thirty-eight municipalities entirely served by the BCUA WWTP include Bergenfield, Bogota, Carlstadt, Closter, Demarest, Dumont, Emerson, Edgewater, Englewood, Englewood Cliffs, Fairview, Harrington Park, Haworth, Hillsdale, Leonia, Little Ferry, Maywood, Montvale, Moonachie, New Milford, Northvale, Norwood, Old Tappan, Oradell, Palisades Park, Paramus, Park Ridge, Ridgefield, Ridgefield Park, River Edge, River Vale, Rochelle Park, Teaneck, Tenafly, Teterboro, Westwood, Woodcliff Lake and Wood-Ridge. The eight municipalities partially served by the BCUA WWTP include Cliffside Park, East Rutherford, Fort Lee, Hackensack, Hasbrouck Heights, Rutherford, South Hackensack and Washington Township. The five nonmember municipalities partially served by the BCUA WWTP include Alpine, Lodi, Lyndhurst, North Bergen, and Ridgewood. Portions of Cliffside Park, Fort Lee, Hackensack, Ridgefield

**Need for Project**

Due to circumstances beyond its control, the BCUA is no longer capable of implementing its current compliance plan for copper, ammonia nitrogen and zinc by extending the existing Edgewater WPCF outfall to provide sufficient dilution on or before May 2015. The BCUA proposes to eliminate the existing surface water discharge including the bypass of secondary treatment in favor of a pump station and force main that diverts its service area to the Little Ferry WPCF for treatment offers the following advantages: resolution of the impediments to improving the quality of the discharge to the Hudson River from the Edgewater WPCF and reduction of the cost to the customers of the BCUA for wastewater treatment. Furthermore the diversion would reduce the diversion of fresh water from the Hackensack River; would further the state initiative of consolidation to reduce the cost of local government and would not harm the water quality in the Hackensack River.

**Project Description**

The proposed project includes consolidation of the Edgewater/Little Ferry service areas by converting the Edgewater WPCF to a pumping station and diverting its service area to the Little Ferry WPCF.

**Service Area**

The Joint Meeting's system serves an area of approximately 65 square miles. Wastewater is collected from the Joint Meeting's eleven members, one customer, and seven other communities. Member (owner) communities include all or portions of: East Orange, Hillside, Irvington, Maplewood, Millburn, Newark, Roselle Park, South Orange, Summit, Union and West Orange. The City of Elizabeth is served as a customer by the Joint Meeting. Joint Meeting's service and planning area's outer boundaries of its Wastewater Management Plan (WMP) are essentially the same, with the exception of the Borough of New Providence, the City of Summit and the Township of Berkeley Heights. New Providence owns and operates a wastewater treatment plant that receives all of the flow originating in New Providence and small sections of Summit and Berkeley Heights. The maximum allowable flow to be pumped from the New Providence plant to the Joint Meeting plant, via Summit's conveyance system, is 3.0 MGD.

**Need for Project**

The purpose of the proposed Waste Gas Burner Upgrades is to reduce maintenance and increase reliability of the waste gas burner system as well as to install new enclosed flares that meet current NJDEP air quality permitting requirements. The purpose of the proposed Miscellaneous Building Rehabilitation is to perform repairs on various structures throughout the plant to reduce the potential for structural and architectural failures which could pose safety hazards. The purpose of the proposed New Primary Tunnel Building Construction is to eliminate the permit required confined space and to replace severely corroded piping within the existing Primary Tunnel. The tunnel limits access to piping and equipment for maintenance or replacement and can become a safety hazard to plant personnel.

**Project Description**

Capital Improvement Projects 2019 consisting of the three following projects: Waste Gas Burner Upgrades - replacement of the existing waste gas burners at the Digester Building and Sludge Storage Tanks with state-of-the-art enclosed flares to meet current air emission permitting requirements. Miscellaneous Building Rehabilitation - Rehabilitation of various structures including concrete repairs and/or reconstruction in the Screen House, Old Chlorine Building, Chlorination Building, Aeration Gallery and Waste Gas Building; replacement of brick veneer panels and supporting walls on the Dewatering Building; replacement of the coping and brick facade on the Sludge Storage Tanks. New Primary Tunnel Building Construction - Construction of a new building adjacent to the existing Primary Tunnel at the influent end of the Primary Settling Tanks to eliminate the permit required confined space and replace severely corroded piping in the tunnel and installation of new primary sludge pumps.

**Project Name, Number**

South Orange Village (JMEUC) Township  
S340686-09F  
Sewage Treatment Plant (STP) - Improvement/Upgrade

**Priority List Rank**

446

**County**

Union

**Existing Population**

450,000

**Service Area**

The Joint Meeting's system serves an area of approximately 65 square miles. Wastewater is collected from the Joint Meeting's eleven members, one customer, and seven other communities. Member (owner) communities include all or portions of: East Orange, Hillside, Irvington, Maplewood, Millburn, Newark, Roselle Park, South Orange, Summit, Union and West Orange. The City of Elizabeth is served as a customer by the Joint Meeting. Joint Meeting's service and planning area's outer boundaries of its Wastewater Management Plan (WMP) are essentially the same, with the exception of the Borough of New Providence, the City of Summit and the Township of Berkeley Heights. New Providence owns and operates a wastewater treatment plant that receives all of the flow originating in New Providence and small sections of Summit and Berkeley Heights. The maximum allowable flow to be pumped from the New Providence plant to the Joint Meeting plant, via Summit's conveyance system, is 3.0 MGD.

**Need for Project**

The purpose of the proposed Waste Gas Burner Upgrades is to reduce maintenance and increase reliability of the waste gas burner system as well as to install new enclosed flares that meet current NJDEP air quality permitting requirements. The purpose of the proposed Miscellaneous Building Rehabilitation is to perform repairs on various structures throughout the plant to reduce the potential for structural and architectural failures which could pose safety hazards. The purpose of the proposed New Primary Tunnel Building Construction is to eliminate the permit required confined space and to replace severely corroded piping within the existing Primary Tunnel. The tunnel limits access to piping and equipment for maintenance or replacement and can become a safety hazard to plant personnel.

**Project Description**

Capital Improvement Projects 2019 consisting of the three following projects: Waste Gas Burner Upgrades - replacement of the existing waste gas burners at the Digester Building and Sludge Storage Tanks with state-of-the-art enclosed flares to meet current air emission permitting requirements. Miscellaneous Building Rehabilitation - Rehabilitation of various structures including concrete repairs and/or reconstruction in the Screen House, Old Chlorine Building, Chlorination Building, Aeration Gallery and Waste Gas Building; replacement of brick veneer panels and supporting walls on the Dewatering Building; replacement of the coping and brick facade on the Sludge Storage Tanks. New Primary Tunnel Building Construction - Construction of a new building adjacent to the existing Primary Tunnel at the influent end of the Primary Settling Tanks to eliminate the permit required confined space and replace severely corroded piping in the tunnel and installation of new primary sludge pumps.

The maximum allowable flow to be pumped from the New Providence plant to the Joint Meeting plant, via Summit's conveyance system, is 3.0 MGD.

**Need for Project**

The purpose of the proposed project is to reduce the impact that natural disasters like Hurricane Sandy could have on the facility in the future and to avoid loss of wastewater service. The proposed project is needed to incorporate resiliency to minimize potential future facility failures, service interruptions and/or loss of service, and to minimize future damages to the critical facility's infrastructure. In addition, the proposed project will decrease the risk for release of untreated sewage into the environment, thereby protecting public health and natural resources.

**Project Description**

The Flood Mitigation Project will make the Joint Meeting's facility better able to withstand flooding and other natural disasters. Onsite investigations, reports, environmental assessments and beneficial cost analyses established the need for the construction of the project, including a perimeter floodwall with automatic flood gates; an effluent pumping station to discharge plant effluent against a tidal and storm surge; two (2) storm water pumping stations; and upgrades to the Co-Generation Facility to provide the additional power required.

**Project Name, Number**

Irvington (JMEUC) Township  
S340686-09D  
Sewage Treatment Plant (STP) - Improvement/Upgrade

**Priority List Rank**

242

**County**

Union

**Existing Population**

450,000

**Service Area**

The Joint Meeting's system serves an area of approximately 65 square miles. Wastewater is collected from the Joint Meeting's eleven members, one customer, and seven other communities. Member (owner) communities include all or portions of: East Orange, Hillside, Irvington, Maplewood, Millburn, Newark, Roselle Park, South Orange, Summit, Union and West Orange. The City of Elizabeth is served as a customer by the Joint Meeting. Joint Meeting's service and planning area's outer boundaries of its Wastewater Management Plan (WMP) are essentially the same, with the exception of the Borough of New Providence, the City of Summit and the Township of Berkeley Heights. New Providence owns and operates a wastewater treatment plant that receives all of the flow originating in New Providence and small sections of Summit and Berkeley Heights. The maximum allowable flow to be pumped from the New Providence plant to the Joint Meeting plant, via Summit's conveyance system, is 3.0 MGD.

**Need for Project**

The purpose of the proposed Waste Gas Burner Upgrades is to reduce maintenance and increase reliability of the waste gas burner system as well as to install new enclosed flares that meet current NJDEP air quality permitting requirements. The purpose of the proposed Miscellaneous Building Rehabilitation is to perform repairs on various structures throughout the plant to reduce the potential for structural and architectural failures which could pose safety hazards. The purpose of the proposed New Primary Tunnel Building Construction is to eliminate the permit required confined space and to replace severely corroded piping within the existing Primary Tunnel. The tunnel limits access to piping and equipment for maintenance or replacement and can become a safety hazard to plant personnel.

**Project Description**

Capital Improvement Projects 2019 consisting of the three following projects: Waste Gas Burner Upgrades - replacement of the existing waste gas burners at the Digester Building and Sludge Storage Tanks with state-of-the-art enclosed flares to meet current air emission permitting requirements. Miscellaneous Building Rehabilitation - Rehabilitation of various structures including concrete repairs and/or reconstruction in the Screen House, Old Chlorine Building, Chlorination Building, Aeration Gallery and Waste Gas Building; replacement of brick veneer panels and supporting walls on the Dewatering Building; replacement of the coping and brick facade on the Sludge Storage Tanks. New Primary Tunnel Building Construction - Construction of a new building adjacent to the existing Primary Tunnel at the influent end of the Primary Settling Tanks to eliminate the permit required confined space and replace severely corroded piping in the tunnel and installation of new primary sludge pumps.

Sewage Treatment Plant (STP) - Improvement/Upgrade

**Priority List Rank**

252

**County**

Hunterdon

**Existing Population**

1,500,000

**Service Area**

The Round Valley Reservoir is part of Raritan Basin System, which provides the basic source of raw water supply to a number of public and private water utilities serving more than 1,500,000 people in central New Jersey. It is located in Clinton Township, Hunterdon County and is filled by pumping with water from the South Branch of the Raritan River via the Authority-owned South Branch Pumping Station. Water is released into the South Branch of the Rockaway Creek, a tributary to the main stem of the Raritan River or water is released to the South Branch of the Raritan River. The released water helps to maintain minimum passing flows in the South Branch and main stem Raritan River.

**Need for Project**

The integrity of the structures in the Spruce Run-Round Valley Reservoir system is integral to compliance with the requirement to maintain minimum passing flows in the Raritan River at 3 locations. Passing flows maintained by releases from the outlet structures at Round Valley and Spruce Run maintain ecological health of the river. Permitted discharges from downstream wastewater treatment plants also rely on these passing flows, therefore, the reservoir structures protect water quality. Catastrophic failure of these structures would result in the inundation of many downstream land uses including critical wastewater infrastructure. Refurbishing the structures now will provide long term risk reduction and increased resiliency for vital downstream infrastructure including water and wastewater treatment plants. Engineering design standards have advanced since the structures were designed and built.

**Project Description**

Decrease seepage by grouting at abutments; enhance, replace and/or install additional filters and drainage improvement features (chimney drain); install and improve instrumentation; flatten slopes to increase stability; remove and replace previous repairs to south structure; reestablish survey monumentation; install and improve security cameras; repair leak near the invert of the south tower; replace 10-inch pipe connecting force main and south valve vault; study, repair, replace and/or abandon low-level valve release; full inspection of all reservoir structures; rehabilitation of pumps #4, #5, #7, and #8 at South Branch Pumping Station; refill reservoir by pumping.

**Project Name, Number**

Howell Township  
S344040-02  
Sanitary Sewer System - New

**Priority List Rank**

254

**County**

Monmouth

**Existing Population**

51,075

**Service Area**

The service area for the project is the Freewood Acres section in Howell Township. Howell Township is located in south central Monmouth County and with a land area of 62.10 square miles and a population of approximately 51,198. The project will serve all commercial and residential properties on Route 9 north and south between Georgia Tavern Road/Hulses Corner Road and White Street. Residential properties will include all portions of Freewood Acres on the east and west side of Route 9. The east side will include Wilentz Avenue, Windeler Road between Georgia Tavern Road and the Board of Education property, Georgia Tavern Road from just east of Helen Avenue to Route 9 and all interior portions of the Acres. The west side will include Hulses Corner Road from Route 9 to Smith Street and all interior portions of the Acres. Water bodies and streams within the project area include two streams that flow into Snipes Creek, which leads to Aldrich Lake, and the Metedeconk River watershed.

**Need for Project**

The project will rectify the issue of failing septic systems within the project area. There are two Category 1 streams in Freewood Acres that flow into Snipes Creek, which leads to Aldrich Lake. The lake currently has very low oxygen attributed directly to the failing septic systems. The Metedeconk River watershed, and subsequently the Barnegat Bay, is also directly impacted by the septic systems in Freewood Acres, which is documented in the Metedeconk River Watershed Protection and Watershed Restoration Plan.

**Project Description**

This is a project to extend sanitary sewer service to the Freewood Acres section of the Township of Howell and along US Hwy 9 (Route 9) corridor, north of Freewood Acres. Residents of this area currently rely on a combination of wells and septic systems. The project will address ongoing issues that involve failing septic systems and noxious odors in Freewood Acres. The project will also provide a public sanitary sewer system for the commercial properties along Route 9.

**Need for Project**

The Parsippany-Troy Hills wastewater treatment plant treats sanitary sewer discharges prior to surface water discharge. This proposed project is intended to reduce the Townships reliance on conventional electric power generation methods by substituting a sustainable alternative source of power for the treatment plant which will result in environmental benefits not only in improved water quality but also improving air quality and less reliance on natural resources.

**Project Description**

The proposed project includes design and construction of a photovoltaic power system to provide energy to the wastewater treatment plant.

Provides Electricity to the Busch and Livingston Campus along with High temperature Hot water to the Busch Campus for Heating. It serves over 8.5 million square feet of space. Spaces include classrooms, lecture halls, laboratories and research

**Need for Project**

The project will save 8 million gallons per year of potable water

**Project Description**

Replacement of the power generating turbines with increased capacity and other related equipment upgrades will cost \$30 M. As a result, a conservative estimate of energy cost savings will be \$1 M per year, and Market Participation credits will provide rebates of \$1.86 M, for an effective savings of \$2.86 M in 2016 dollars. New technology will result in a 50% decrease in emissions and elimination of water usage, saving 8 M gallons of water per year.

**Service Area**

This project will benefit all users of the recreation facilities at Boyer Avenue as well as the rate payers of the sanitary sewer system and wastewater treatment facility.

**Need for Project**

The Boyer Avenue site is currently approved to treat 1.6 MGD of treated wastewater effluent. The currently approved land application method is rapid infiltration utilizing the five existing on-site slit trenches. It is the Town's objective to maximize the on-site recharge and disposal of the treated effluent at this facility. Therefore, utilizing the recreation fields as means of infiltration will meet this objective.

**Project Description**

(Carryover SFY2015) - The Boyer Avenue facility is currently irrigated using potable quality water from the Town's water system resulting in substantial seasonal demands. Hammonton proposes to install overland effluent recharge and underground drip irrigation systems. This project will allow the Town to meet the requirements of the NJDEP Wastewater Discharge Permit and the Pinelands Commission directive to maximize on-site recharge. The project will also allow the Town to conserve potable water.

**Service Area**

The drainage improvements proposed impact the Mystic Island section of the Township between Radio Road and the end of the cul-de-sac at Twin Lakes Boulevard.

**Need for Project**

The proposed work is necessary to improve the existing storm drainage infrastructure that is mostly comprised of corrugated metal pipe (CMP) approximately 40 to 50 years old that is deteriorating and undersized to handle the contributing drainage flow. Water quality will be impacted through the potential reduction of sediment and other particulates that would normally accumulate in area properties and roadways after storm events and then drain into the existing collection system, which would ultimately be discharged into uncoded tributaries that feed Big Creek, a Category 1 waterbody according to the NJDEPs Digital GeoWeb Data. Big Creek flows into the Great Bay, which is part of the Mullica Watershed Management Area, and is adjacent to the Barnegat Bay Watershed Management Area.

**Project Description**

The Township proposes to remove the existing stormwater drainage collection system, which consists of approximately 6,826 linear feet of drainage pipe, 83 inlets, 4 manholes, and 290 linear feet of bulkhead at 13 outfall locations. The Township will replace the above items with a new reconfigured stormwater drainage collection system, which will consist of 8,915 linear feet of new drainage pipe, 112 new inlets, 4 new manholes, 12 new inline check valves, 290 linear feet of new bulkhead at 13 outfall locations, and the restoration of paved and un-paved areas.

**Need for Project**

NJDEP has included a condition in the NJPDES permit requiring the AWWTP to monitor and record the levels of bromodichloromethane in its Discharge Monitoring Report (DMR). Though no violations are to be levied at this time, limits of bromodichloromethane were established. If these limits are exceeded, the Borough needs to provide a plan addressing the steps that need to be taken to meet the requirements in the next permit renewal. The major source of bromodichloromethane in wastewater is the addition of chlorine prior to discharge from the AWWTP. The Borough is considering replacing the current chlorine disinfection system with an ultra violet disinfection system to greatly reduce or possibly eliminate the potential production of bromodichloromethane.

**Project Description**

The existing chlorine contact chambers will be replaced by the UV disinfection system. Since there are two chambers the conversion will be completed in two phases. This will allow for continuing disinfection while the first chamber is modified to accept the UV unit. Once completed the second chlorine contact chamber will be modified to accept the second UV disinfection unit. When completed the AWWTP will not be utilizing chlorine for disinfection and the possibility of producing Bromodichloromethane will be eliminated.

**Need for Project**

The digester is used for holding, blending and digesting bio-solids. Currently, the digestion time is insufficient to meet the needs of the system. Construction of a second anaerobic digester will allow for longer detention time which will result in an increase of solids content and biogas creation and decrease in organic matter that will need to be processed. The second digester will decrease upkeep costs, increase system efficiency and allow continuous use of the system during maintenance and repairs.

**Project Description**

The Borough is proposing the construction of a second anaerobic digester. This will allow longer detention time for the solids sent to the digester thus allowing for extended digestion time and an increase of solids content. This will be a benefit to the Borough and their treatment and disposal of biosolids. This also provides for duplicity of treatment for the maintenance and upkeep of each digester. The Borough proposes to construct a second anaerobic digester on-site to provide not just duplicity but to allow for extended detention time for increased digestion and percent solids.

**Need for Project**

Barnegat Bay has been classified as highly eutrophic by both state and federal authorities. This eutrophication which continues to threaten ecological health of the Bay is particularly the result of excessive pollutant loading. Total suspended solids have been identified as one of the primary pollutants that can adversely affect the quality of water in the Bay. Reductions in the amount of total suspended solids floatables and other harmful pollutants delivered to the Bay by streams and waterways are primary objectives of both the Barnegat Bay Partnership and the New Jersey Department of Environmental Protections (NJDEP) Barnegat Bay Initiative. The need for the proposed project is evident in the fact that it is intended to reduce stormwater-borne total suspended solids and floatables from a highly developed drainage areas that discharge directly into the Barnegat Bays stream network.

**Project Description**

Construction of a regional automated truck wash for use by County Departments and municipalities. Currently there are no privately operated truck wash facilities in the County and only two public facilities which are both located in the northern part of the County. This facility would serve the needs of the southern part of the County. Recycling of the washwater will be incorporated into the design.

**Service Area**

The service area consists of the drainage area that discharges to each individual outfall. The service area is mainly comprised of County roads and residential neighborhoods. The drainage area acreage has been provided in the Environmental Planning Document.

**Need for Project**

The water quality need for this project is to remove total suspended solids and float-able pollutants from the storm water system prior to discharging runoff into the Toms River in an effort to improve the water quality of Barnegat Bay.

**Project Description**

Manufactured Treatment Devices will be installed within existing storm water systems immediately upstream of various outfalls along the north side of the Toms River and along lagoons and tributaries to Barnegat Bay.

**Need for Project**

The project is needed to (1) enable compliance with the future stringent effluent limitation for total phosphorus and thereby improve water quality and (2) to enhance the reliability of performance and compliance and thereby protect water quality.

**Project Description**

This project consists of upgrades to enable compliance with a future more stringent effluent limitation for phosphorus by the addition of a chemical storage and feed system automate the biological nutrient removal process and thereby minimize chemical consumption implement additional SCADA improvement to enhance monitoring and control modify and improve return and waste sludge pumping systems implement oxidation ditch structural and mechanical improvements and add effluent filtration to enhance the overall reliability of compliance.

Sewage Treatment Plant (STP) - Improvement/Upgrade

**Priority List Rank**

277

**County**

Monmouth

**Existing Population**

65,923

**Service Area**

The WMUA provides sewage disposal services to the Townships of Manalapan and Marlboro, the Borough of Englishtown and a portion of the Township of Freehold.

**Need for Project**

The improvements proposed under WMUAs capital work program are largely necessitated to maintain continued operation of the existing treatment process and to minimize the possibility of potential failure of treatment plant components. Failure of treatment plant components would result in a violation of the WMUAs New Jersey Pollutant Discharge Elimination System (NJPDES) permit and may also potentially result in sewage spills and/or surcharge of the system, causing a hazard to the adjacent Pine Brook.

**Project Description**

WMUA proposes various improvements to several treatment unit processes under the proposed Pine Brook Sewage Treatment Plant Improvements Project. These include improvements to its raw sewage pumping station; replacement of its existing plastic lined equalization basin with a new concrete tank; replacement of its six (6) pressure filter tank vessels; improvements to its existing digester building HVAC equipment; and replacement of its existing digester system piping and valving.

**Project Name, Number**

Landis Sewerage Authority  
S340461-05  
Sewage Treatment Plant (STP) - Improvement/Upgrade

**Priority List Rank**

279

**County**

Cumberland

**Existing Population**

54,780

**Service Area**

City of Vineland part of Franklin Township and part of Pittsgrove Township

**Need for Project**

Facility was previously upgraded under a federal Construction Grant as Project No. C340461-02-2 and TWA SO-8-86-6073 without grit and scum removal. Under existing conditions the influent flow is pumped twice and this is inefficient. The project will result in one central pumping facility with gritscum removal which will improve the operational reliability of downstream treatment units.

**Project Description**

Construction of four (4) 60-inch diameter open flight screw pumps (archimedes screw) for a design flow of 12.2 MGD and peak of 24.3 MGD. Each screw capacity will be 8.1 MGD with one unit as standby. Due to the efficiency of the screw pump estimated power savings would be \$10000yr. Metering will be by two Parshall flumes chart recorded and mechanical barscreens. The gritgrease removal system will consist of a 3.2 x 36 meter grease removal channel and a 3.4 x 36 meter grit removal channel with the associated mechanical and aeration systems. A biofilter will be constructed to control odors from the proposed enclosed screw pumps as well as the headworks facility.

**Project Name, Number**

Lacey Township  
S344140-02  
Stormwater Management

**Priority List Rank**

N/A

**County**

Ocean

**Existing Population**

28,273

**Service Area**

The population served by the project is the Township of Lacey, a 98.53 square mile coastal town in Ocean County, New Jersey. The southeasterly portion of the Township will benefit from the project, as measures will be implemented to replace aging infrastructure. The project is located on public property in a man-made lagoon. The project site is located between Yacht Basin Plaza North and Yacht Basin Plaza South and east of Lakeside Drive East, with the surrounding land uses being a mix of commercial and residential. The marina is located at the northern edge of a peninsula between the North Branch of the Forked River (north) and Middle Branch of the Forked River (south).

**Need for Project**

There are signs of erosion landward along the bulkhead, sinkholes form and cause safety hazards. The DPW routinely fills in the sinkholes to maintain public safety and structural integrity of the bulkhead and roadway. This erosion impacts the stability of the existing stormwater infrastructure and the surrounding area. Reconstruction of the bulkhead will rectify a safety and structural stability issue and eliminate the pollution and sedimentation caused by the breaches through the existing bulkhead. Elevation of the bulkhead will mitigate flooding in the project area. Due to local geography and proximity to the ocean, Lacey is susceptible to coastal flooding. The adjacent streets are some of the lowest road elevations in the Township. The project will tie into a similar bulkhead along Lakeside Drive East being replaced under a separate project. The project will also assist in reducing float-able pollutants, which is a result of bulkhead erosion, being discharged into the river.

**Project Description**

This is a Stormwater Management Green Infrastructure project that impacts the Barnegat Bay Watershed. There is also a resiliency component to the project. The project includes bulkhead reconstruction and elevation, and stormwater conveyance improvements. The new bulkhead will be elevated from the existing conditions, providing a resiliency component to the project by reducing nuisance flooding of the marina area and adjacent residential neighborhoods. Stormwater conveyance infrastructure in the project area will be retrofitted and/or replaced to improve quality of runoff and reduce backflow from the lagoon. The plan also calls for elevation of the surrounding roads and utility infrastructure (power supply, potable water), further enhancing the resiliency aspect of the project. The Township is also considering improvements to the restroom building parking area across Yacht Basin Plaza South from the Marina.

Stormwater Management

**Priority List Rank**

284

**County**

Ocean

**Existing Population**

11,045

**Service Area**

Borough of Beachwood

**Need for Project**

The Borough is located on the Toms River which discharges directly into the Barnegat Bay. The runoff from the Beachwood Beach outfall consists of storm water from the wooded and paved areas in the drainage area. The catch basins upstream of the outfall do not have the capability to reduce suspended solids. The hydrodynamic separator is the logical BMP at this location due to the close proximity of the drainage area to the river and the lack of space in this developed area to provide a storm water management basin or other facility to intercept and treat solids, sediments and other pollutants. Evidence of a water quality based need for measures to reduce non-point pollution in Beachwood Borough is provided by the results of testing for water quality at the Beachwood beaches. In many cases the water quality of many beaches is adversely impacted by contaminated storm water runoff. Information published by the National Resources Defense Council in Testing the Waters, 2010 listed the Beachwood Beach West in a list of 15 beaches in the nation with more than 25 samples exceeding the EPAs Single Sample Maximum Standards for designated beach areas each year, 2006- 2009. In 2009 alone, of 47 samples at the Beachwood Beach west, the EPA maximum standards were exceeded over 50% of the time. The outfall is located near the Borough beach and serves as the discharge point for the associated parking area . The drainage is 4.65 acres and includes paved areas.

**Project Description**

The proposed project includes relocating existing outfall pipe #1 and #2 and installing lift station (pump station) to accommodate the outfall relocation in order improve water quality and stormwater flooding.

**Service Area**

The service area that will be affected by Phases I, II, and III of this project is the North western portion of the City of Wildwood. This includes water service areas that are north of Park Boulevard and west of Cedar Avenue. Phases 1, 2, and 3 will collectively include the replacement of sanitary sewer main on the following streets: Cresse Avenue Hildreth Avenue Bennett Avenue Leaming Avenue Hand Avenue Taylor Avenue Andrews Avenue Burk Avenue Montgomery Avenue Baker Avenue Roberts Avenue Garfield Avenue Lincoln Avenue Mediteranean Avenue Susquehanna Avenue Hudson Avenue. They will also collectively include the replacement of storm water pipe on the following streets: Cresse Avenue Hildreth Avenue Bennett Avenue Leaming Avenue Hand Avenue Taylor Avenue Andrews Avenue Burk Avenue Lincoln Avenue Niagara Avenue Susquehanna Avenue Hudson Avenue. Additionally, the proposed storm water pump station (Phase 2) is located adjacent to Susquehanna Avenue and Taylor Avenue.

**Need for Project**

The purpose of this project is to replace the City's aged sanitary sewer main system in phases, as well as install storm water piping and pump stations. The sanitary sewer work will serve as a rehabilitation of the existing system by replacing sanitary main in the areas indicated in the service area description, so to properly maintain the City's existing system. The storm water work will serve as construction of new piping and pump stations which will serve the purpose of alleviating the severe flooding this portion of the island experiences, as well as being a measure to improve the infiltration due to flooding. Both purposes would greatly improve public safety.

**Project Description**

The City of Wildwood is proposing to replace the outdated sanitary sewer, water and storm drainage systems throughout the City in a seven (7) phase plan. The proposed sanitary sewer work will be primarily to update the currently outdated/ failing system. The proposed water work will include the replacement of water main and services that are also currently outdated and failing. The proposed storm drainage work will include the installation of new storm water pipe throughout various areas of the City where it does not currently exist, as well as the construction of three (3) storm water pump stations. Each of the seven (7) phases will involve either milling and overlaying or full-depth reconstruction of the affected roadways as well. This application is being submitted to request a loan for the clean water-related (sanitary sewer and storm water) portion of Phases 1 - 3 of this seven (7) phase plan.

**Service Area**

Little Silver Lake drains an approximate 250 acre watershed which include a state highway and several county roads. Improvement of the drainage will effect the area and the traveling public that utilizes the roadway network in the area.

**Need for Project**

Dredging the lake will remove the sediments that have accumulated for decades within the lake as well as decaying organic matter that might be present. The dredging will improve the depth at the inflow of the lake and improve circulation thereby benefiting water quality.

**Project Description**

Dredging of Little Silver Lake to remove accumulated sediments and storm sediments from the lake. In addition, reconstruct the existing failing bulkhead at the west end of the lake and replace the dilapidated weir structure that serves to regulate the lake water surface elevation. Finally provide for the installation of self regulating tide gates to provide resiliency and storm protection from higher tide events.

**Need for Project**

Stormwater runoff is the most common way that nonpoint source pollution reaches local rivers creeks and other water ways including Barnegat Bay. If the runoff is not absorbed by soil and vegetation or by other measures rainwater carries chemicals nutrients sediments and other forms of nonpoint source pollution into surface waters.

**Project Description**

The proposed project includes the construction and/or retrofit of one or more stormwater basins to improve its ability to remove nitrogen. Also included in the project is the purchase of a tow-behind leaf vacuum and manufactured treatment devices.

The Borough of Roosevelt.

**Need for Project**

The controls for the STP were installed in the early 1990s and utilize mercury switches and outdated level controls. The technology has changed and the existing equipment and controllers are difficult to replace and locate each time they need to be replaced. The replacement of the controls has become a necessity for the proper and efficient operation of the STP.

**Project Description**

The Borough STP control system utilizes mercury switches and mercury controls. Replacement of parts has become difficult and the components are in need of repairs and improvements. The Borough has decided to undertake the replacement of the STP controls with present technology and equipment.

292

**County**

Monmouth

**Existing Population**

882

**Service Area**

The entire Borough of Roosevelt.

**Need for Project**

The concrete structure for the trickling filters has deteriorated and is in a condition where they must be replaced. The mechanical equipment including nozzles and the plastic media are past their useful life and they must be replaced to operate the WWTP to meet permit conditions. It is in the best interest of the Borough to replace the trickling filters with either new units or utilize an alternate method of either an attached growth or suspended growth process. Due to limited space, the project will be phased to keep one trickling filter online while the second is taken offline and demolished. Once the first unit is replaced, the second unit will be taken offline and it will be replaced.

**Project Description**

The existing trickling filters at the Borough of Roosevelt's Wastewater Treatment Plant (WWTP) are at a point of requiring replacement. The concrete structures have developed structural cracks and the filter plate has deteriorated to the point that aggregate (stones) from the concrete are entering the recirculating pumps and causing damage to the impellers and clogging of the pumps. Due to the age and use of existing trickling filters, the plastic media is failing and the mechanical equipment is operating poorly and the nozzles are clogging. The trickling filters will be replaced with Rotating Biological Contractors (RBC) or other attached growth process to replace them. This will require a project performed in phases as only one trickling filter can be taken out of service and demolished at a time to allow for construction of the RBC. In addition, the recirculation pumps will be replaced, the pump chamber modified to allow for new pumps, and to replace outdated controls.

S340421-03  
Sewage Treatment Plant (STP) - Improvement/Upgrade

**Priority List Rank**

N/A

**County**

Hunterdon

**Existing Population**

1,500,000

**Service Area**

The Round Valley Reservoir is part of Raritan Basin System, which provides the basic source of raw water supply to a number of public and private water utilities serving more than 1,500,000 people in central New Jersey. It is located in Clinton Township, Hunterdon County and is filled by pumping with water from the South Branch of the Raritan River via the Authority-owned South Branch Pumping Station. Water is released into the South Branch of the Rockaway Creek, a tributary to the main stem of the Raritan River or water is released to the South Branch of the Raritan River. The released water helps to maintain minimum passing flows in the South Branch and main stem Raritan River.

**Need for Project**

The integrity of the structures in the Spruce Run-Round Valley Reservoir system is integral to compliance with the requirement to maintain minimum passing flows in the Raritan River at 3 locations. Passing flows maintained by releases from the outlet structures at Round Valley and Spruce Run maintain ecological health of the river. Permitted discharges from downstream wastewater treatment plants also rely on these passing flows, therefore, the reservoir structures protect water quality. Catastrophic failure of these structures would result in the inundation of many downstream land uses including critical wastewater infrastructure. Refurbishing the structures now will provide long term risk reduction and increased resiliency for vital downstream infrastructure including water and wastewater treatment plants. Engineering design standards have advanced since the structures were designed and built.

**Project Description**

Decrease seepage by grouting at abutments; enhance, replace and/or install additional filters and drainage improvement features (chimney drain); install and improve instrumentation; flatten slopes to increase stability; remove and replace previous repairs to south structure; reestablish survey monumentation; install and improve security cameras; repair leak near the invert of the south tower; replace 10-inch pipe connecting force main and south valve vault; study, repair, replace and/or abandon low-level valve release; full inspection of all reservoir structures; rehabilitation of pumps #4, #5, #7, and #8 at South Branch Pumping Station; refill reservoir by pumping.

The released water helps to maintain minimum passing flows in the South Branch and main stem Raritan River.

**Need for Project**

The integrity of the structures in the Spruce Run-Round Valley Reservoir system is integral to compliance with the requirement to maintain minimum passing flows in the Raritan River at 3 locations. Passing flows maintained by releases from the outlet structures at Round Valley and Spruce Run maintain ecological health of the river. Permitted discharges from downstream wastewater treatment plants also rely on these passing flows, therefore, the reservoir structures protect water quality. Catastrophic failure of these structures would result in the inundation of many downstream land uses including critical wastewater infrastructure. Refurbishing the structures now will provide long term risk reduction and increased resiliency for vital downstream infrastructure including water and wastewater treatment plants. Engineering design standards have advanced since the structures were designed and built.

**Project Description**

Decrease seepage by grouting at North and South Dam abutments; enhance, replace and/or install additional filters and drainage improvement features (chimney drain) on downstream side of dams; install and improve instrumentation; flatten downstream slopes to increase stability of dams; remove and replace previous repair to South Dam; repair leak near the invert of the South Dam Tower; replace 10-inch pipe connecting force main and South Dam valve vault; study, repair, replace and/or abandon low-level valve release at South Dam; full inspection and repairs to all existing reservoir structures; rehabilitation of pumps #4, #5, #7, and #8 at South Branch Pumping Station; refill reservoir by pumping; dredging of inlet channel at South Dam Tower.

**Need for Project**

The ACUAs regional collection system has 20 pumping stations throughout the county. These pump stations are often housed at the sites of former municipal treatment works facilities that were in operation prior to the regionalization of the county system in 1978. The ACUAs pump stations require significant amounts of energy to send the wastewater collected in the local municipal sewer systems throughout the eastern portion of Atlantic County to the ACUA treatment plant in Atlantic City. The ACUA believes that the installation of solar photovoltaic electric generation system (PV System) at these pump stations can provide a considerable benefit to the system ratepayers. By installing PV Systems at the pump stations the ACUA would see significant savings in its electricity bills at the pumping stations. These savings will ultimately be passed along to the systems ratepayers.

**Project Description**

The proposed project includes the installation of solar photovoltaic generation at 8 of ACUAs pump stations.

**Service Area**

The Authority's service area includes 11 municipalities including the Borough's of Allendale, Ho-Ho-Kus, Midland Park, Ramsey and Waldwick. Partially served are the municipalities of Mahwah, Wyckoff, Saddle River, Upper Saddle River, Franklin Lakes and Ridgewood.

**Need for Project**

The Security System Upgrades Project is a result of needs identified through a security audit performed to assess vulnerabilities at the Authority's sewage treatment plant and pump stations, all of which are located adjacent to various water bodies that could be impacted should failure occur.

**Project Description**

This project includes implementation of various safety and security measures at the Authority's sewage treatment plant and pump stations. Proposed improvements include the repair and/or replacement of fencing, installation of bollards around critical structures, enhancing the existing Intrusion Detection System, adding and/or relocating security cameras and installing new door hardware.

**County**

Hudson

**Existing Population**

40,684

**Service Area**

The KMUA service area within the project limits includes the South Kearny section of Town. There are no residential connection to their system, KMUA serves 63 industrial/commercial customers. The project area begins with the Kearny Point Pumping Station which is located approximately 1,000 feet North of the confluence of the Passaic and Hackensack Rivers. The project area then continues North on Central Avenue and ends at Pennsylvania Avenue. The project area consists of land use associated with transportation and commercial/industrial uses and is currently fully developed. The project is necessary to provide adequate wastewater service in order to promote and achieve the objectives for redevelopment in accordance with State Smart Growth Initiatives.

**Need for Project**

For Central Ave & Pennsylvania Ave, The seven leaking sanitary sewer defects are recommended for chemical grouting, sewer repair by chemical grout injection, replacement of app The five identified manhole defects have been recommended for grouting and patching. It is also recommended to perform blockage removal of the forty-six sewers with a combined length of approximately 18,000 FT to remove the debris estimated within these sewers to achieve the design flow rates and velocities. For KMUAs Kearny Point Pumping Station, two chain and flight type grit collector mechanisms (one for each channel) will be installed in-kind as duplicates. The option of using corrosion resistant material for the new chain and flights will also be reviewed. The chain and flight equipment will consist of the following: Sprockets, Bearings, Scarpers, Drive Chain Guards, Hardware and Anchors, Shear Pin Limit Switch, Shafting, Drive Chain, Return tracks and track brackets, Proportional weirs

**Project Description**

The proposed project involves the rehabilitation of the Central Avenue and Pennsylvania Avenue Sewers in the City of Kearny, Hudson County. The Central Avenue Sanitary Sewer Inspection and Condition Assessment Study as well as separate CCTV inspections performed on Pennsylvania Avenue identified various sewers to be targeted for heavy blockage removal, additional CCTV inspection and pipe and joint sealing, as well as manhole and pipe repairs and the replacement of an ACP and VCP pipe section along Pennsylvania Avenue. At KMUA's Kearny Point Pump Station, the mechanical components of the existing grit collector system in the wet well are no longer operational due to corrosion. This portion of the project involves engineering design and construction phase services for the in-kind replacement of the chains and flights. With this project, KMUA will be reducing the I&I that enters the system and is conveyed to PVSC which is a CSO system.

**Need for Project**

While the CCMUAs Sicklerville sewage treatment plant does meet its NJPDES permit limits the permit limits exceed the normal standards required for discharges into the groundwater of the Pinelands National Reserve because the plant happens to be just outside the Pinelands area. Thus the plant is discharging compliant treated sewage into the groundwaters of the PNR at levels that are much higher than the normal Pinelands limits. This project will result in the elimination of the CCMUAs Sicklerville sewage treatment plant which currently discharges treated sewage into the groundwaters of the Great Egg Harbor River and the Pinelands National Reserve. This project will eliminate this discharge and convey the flow to the CCMUAs Delaware No.1 WPCF for treatment.

**Project Description**

The proposed project includes instalation of aproximately 7200 feet of 8 and 15 inch PVC sanitary sewer gravity pipe.

The sanitary and storm sewer systems are over 80 years old and have deteriorated to point where City has between 3 to 5 major sewer repairs per year at a cost of \$10-15000 each. There are numerous offset joints and cracks in both systems resulting in exfiltration into surrounding soils. Project is intended to replace or reline these systems to mitigate infiltration/inflow (sanitary & storm) sedimentation (storm sewers) and exfiltration (sanitary & storm).

**Project Description**

The project involves replacement or relining of storm and sanitary sewers in the Springwood Avenue Redevelopment Area and adjacent streets. In addition the upgrade of the storm sewer system in the Central Business District (CBD) Redevelopment Area is part of the loan request.

**Service Area**

The service area for this project is the Drakewick neighborhood, consisting of 104 households. Drakewick is located on the eastern side of Mendham Township.

**Need for Project**

The project is focused on repairing existing effluent disposal systems associated with a wastewater discharge. The project is needed to protect public health and the environment.

**Project Description**

Project consists of the "in-kind" replacement of the Mendham East Wastewater Treatment Facility's lower effluent disposal system. Existing lower effluent disposal systems are in a state of hydraulic failure and require complete replacement. Repair will be based on removing and legally disposing the existing effluent disposal system and replacing with an in-kind replacement with no expansion. This work will be performed under a change order to the Mendham East Wastewater Treatment Facility contract that received a CLP in the amount of \$2,295,125 under Project Number S340477-01 in April 2017. The project is focused on repairing existing effluent disposal systems associated with a wastewater discharge. The project is needed to protect public health and the environment.

**Service Area**

The Service area for the WWTF is located in East Mendham and includes the Drakewick Condominium Association area of the Township. This association includes the Condominium buildings located off of Devonshire lane as well as the single family homes on Devonshire Lane, Walsingham Road, Trimmingham Court, Langford Drive, Wainwright Road, Pender Hill Road, Knapton Hill Road, Govenors Drive and Olmstead Lane. There are a total of 104 residential units connected to the facility.

**Need for Project**

Based upon a review of past historical DMR data for the facility, the existing wastewater treatment facility is very inefficient in how treatment is performed and therefore is proposed to be replaced. The break-point chlorination system is antiquated technology which is labor intensive to run and uses large volumes of corrosive and dangerous chemicals. Because of this, the treatment system does not always meet groundwater quality standards. Pollutant concentrations, which have adversely affected the condition of the effluent disposal system (it has already needed to be replaced) can also negatively impact groundwater quality. The new biological treatment system proposed is based on best available wastewater treatment technology and with proper operation will be capability of meeting NJ DEP discharge permit limits, thereby improving groundwater quality at the site and surround watershed area.

**Project Description**

The conversion of the existing break point chlorination STP to a more conventional biological treatment process would reduce total energy consumption at the STP in several ways. First, as the existing plant uses liquid chlorine to physically oxidize the raw waste, this process requires a lot of energy, has a very large carbon footprint and is very inefficient. In addition, all the pumps, blowers and motors at the facility are not premium efficiency rated as they were installed in 1987. The upgrade will reduce total energy consumption because large volumes of chlorine will no longer be needed in the treatment process (thereby saving almost 45,000 pounds per year of greenhouse gas emissions related to the chlorine generation alone). In addition all the new process motors will be premium efficiency motors, thereby reducing the electrical demand at the facility related to the pumps, air blowers and motors.

**County**

Monmouth

**Existing Population**

30,719

**Service Area**

The LBSA service area covers approximately 5.36 square miles in central eastern Monmouth County, New Jersey. The area is bounded by the Ocean to the east; Monmouth Beach and Oceanport to the north; Oceanport, West Long Branch and Ocean Township to the west; and Ocean Township and Deal to the south. The land area breakdown contained in each of the municipalities included within the LBSA Wastewater Management Plan (WMP) area is as follows: the City of Long Branch (5.10 square miles), the Borough of West Long Branch (0.2565 square miles), and the Borough of Monmouth Beach (0.0011 square miles). The City of Long Branch is the only "participating" municipality. The small areas of the other two municipalities are "customers" of LBSA.

**Need for Project**

The purpose of the project is to improve effluent quality during peak flow periods, reduce the potential for sewage exfiltration and reduce maintenance and operating problems and costs. The project will also reduce inflow and infiltration and reduce the need for emergency repairs. In addition to addressing environmental issues, operating and maintenance should be improved. The I/I study and associated collection system improvements portion of the overall project will be LBSA's fifth Inflow and Infiltration (I/I) Remediation Project within the past 25 years. The Hoey Avenue pump station and force main improvements will improve reliability, efficiency and operations. Replacement of the force main will avoid the possibility of a failure of the existing pipe, which would be costly and create a major disruption of service.

**Project Description**

This loan application comprises three projects, including: 1) Inflow/Infiltration (I/I) Study and Rehabilitation Project: the evaluation of inflow and infiltration, flow metering, sewer cleaning, television inspection and collection system rehabilitation/replacement. A report will be prepared after completion of the system evaluation documenting findings and recommendations; 2) Hoey Avenue Pump Station Force Main Replacement Project: the replacement of the existing 3,850 LF of 14 force main. The main will be rerouted to stay within the public right-of-way. Upgrades of the pump station are also proposed; 3) Sanitary Sewer Railroad Crossing Investigation/Rehabilitation Project: the evaluation and possible rehabilitation of the railroad/sewer crossings. Design for rehabilitation of pipe at the crossings will be performed based upon the recommendations from the Inspection Reports generated by TV inspections.

Metuchen Borough  
S340360-02  
Sanitary Sewer System Rehabilitation

**Priority List Rank**

323

**County**

Middlesex

**Existing Population**

13,574

**Service Area**

The pump station serves the entire Borough of Metuchen as all flow generated within the Borough flows through the station. It also serves a small portion of adjoining Edison Township.

**Need for Project**

The pump station collects and pumps wastewater generated within the service area to an interceptor that carries the flow to the Middlesex County Utilities Authority in Sayreville for treatment. The station contains much of the original equipment and facilities from its construction in the mid-1950's and it is becoming more difficult to maintain and may experience a higher probability of failure. Failure of the station would result in the spilling of wastewater into the surrounding environment.

**Project Description**

The project will rehabilitate the existing Metuchen Jersey Avenue Sewage Pump Station, including the replacement of the existing sewage pumps; electrical supply and distribution systems; wetwell level and pump control system; improvements to the ventilation systems and building work that includes restoration and protective coating of concrete surfaces in the wetwell, replacement of exterior windows and the construction of separation walls within the building. The new pumps will be selected to maximize their efficiency, decreasing electric consumption when compared to the existing 50 year old pumps and motors.

Street & Utility Reconstruction as follows: Surf Ave. between 1st & 11th Aves.; Ocean Ave. between 2nd & 18th Aves.; Beachfront storm sewer between 4th & 15th Aves.; 7th, 8th, & 12th Aves. between Surf Ave. & JFK Blvd.; 4th Ave. between Ocean Ave. & JFK Blvd.

**Need for Project**

Aside from interruption in proper function and flow of the sanitary system, another potential problem associated with the damaged and deteriorated sewer mains is the potential for the contamination of surface waters. When blockage occurs from infiltration of sand and/or collapse of the system due to the damage of the pipe joints, sewer vents back up resulting in spillage through the sanitary cleanouts located behind the curb and also possibly the manholes in the street. This spillage could run into the storm sewer system which discharges into the coastal waters. It is also possible the sanitary sewage could exfiltrate from the sewer mains and, if in close proximity to a storm sewer, infiltrate into the storm sewer which again discharges into coastal waters.

**Project Description**

North Wildwood City

**Need for Project**

The sanitary sewer lines are over 60 years old. Many leaking joints have caused sinkhole problems accelerated street deterioration and results in excessive infiltration and inflow into the City's sewer system. The sewage has the potential to pollute surface water through exfiltration of the sanitary system combined with infiltration into the storm sewer system which discharges to the back bay.

**Project Description**

The proposed project involves reconstruction and replacement of sewer mains manholes and sewer laterals in a forty block area of the City.

**Need for Project**

The West Wildwood sewer collection system is possibly subjected to excessive amounts of infiltration/inflow. Extensive use of six inch diameter pipes very flat slopes high groundwater grease and detergent buildups as well as sand infiltration all contribute to the excessive I.

**Project Description**

The rehabilitation measures proposed in alleviating the excessive I and unclogging the system include cleaning internal inspection repair and/or replacement of damaged or deteriorated sewer pipe manholes and house laterals.

**Need for Project**

Rehabilitation of an existing pumping station that has reached the end of its useful life.

**Project Description**

The project includes the rehabilitation of an existing sanitary sewer pumping station. The contents of the existing wet well will be demolished and the concrete surfaces rehabilitated. A new grinder and two submersible pumps will be installed in the wet well. The existing Controls Building will be demolished and a new Controls Building will be constructed on the site. The Controls Building will house new electrical and control equipment. In addition, approximately 250 feet of existing force main will be replaced in-kind.

**Need for Project**

The renovation of this pump station is required due to the age (over 30 years) of the pump station and the existing design. The existing design uses a dry well system for the pumps which requires confined space entry and makes routine maintenance very difficult. The proposed design will utilize a submersible pump arrangement will be a more reliable and easily maintained system.

**Project Description**

The Georgetown Boulevard Sewage Pump Station is located on Georgetown Boulevard just west of the intersection of Georgetown Boulevard and Route 9 in Barnegat Township Ocean County. The Georgetown Boulevard Sewage Pump Station Upgrade will consist of converting the existing wet well/dry well type pump station into a submersible type pump station utilizing new submersible pumps installed in the existing wet well. The existing dry well will be abandoned in place. A new valve chamber with bypass connection will be provided adjacent to the wet well. The existing diesel fire generator at the site is in excess of 30 years old. The existing generator will be replaced with a natural gas fired generator. The generator and all electrical including motor control center pump control panel alarm system and automatic transfer switch will be installed within a new decorative block building. In addition a chemical feed system for odor control will be installed within the new generator building.

S340579-03  
Sanitary Sewer System Rehabilitation

**Priority List Rank**

334

**County**

Ocean

**Existing Population**

20,065

**Service Area**

The portion of the sanitary sewer system that the LEHMUA owns and operates is like most Towns in Ocean County and Southern Monmouth County. The owner of the sanitary system is responsible for the conveyance of waste to a connection point with the Ocean County Utilities Authority (OCUA). Undermost conditions the waste is fed down a Township road till it intersects a county road where it ties into the sanitary main owned by the OCUA where it continues to an OCUA plant for treatment. The Authority owns, operates and maintains a sanitary sewer collection system that presently serves 8,614 active residential and 221 commercial customer accounts for a total of 8,835 customer accounts.

**Need for Project**

The LEHMUA had multiple pipe collapses in the past 8 - 10 years, and emergency repairs were required to fix them. The material and age of the pipes require cautious working skill to avoid further damage when repairs are made. The collapse of the mains cause sewer blockages and backups of the main that could expose the residents to raw sewer inside their properties, of in the roads.

**Project Description**

The proposed work includes the installation of approximately 5,000 linear feet (LF) of new 8-inch diameter PVC sanitary sewer main, 165 lateral sanitary sewer connections (funded to the cleanout), and 15 new sanitary sewer manholes.

**Project Name, Number**

Little Egg Harbor Municipal Utilities Authority  
S340579-02  
Sanitary Sewer System Rehabilitation

**Priority List Rank**

334

**County**

Ocean

**Existing Population**

20,065

**Service Area**

The portion of the sanitary sewer system that the LEHMUA owns and operates is like most Towns in Ocean County and Southern Monmouth County. The owner of the sanitary system is responsible for the conveyance of waste to a connection point with the Ocean County Utilities Authority (OCUA). Undermost conditions the waste is fed down a Township road till it intersects a county road where it ties into the sanitary main owned by the OCUA where it continues to an OCUA plant for treatment. The Authority owns, operates and maintains a sanitary sewer collection system that presently serves 8,614 active residential and 221 commercial customer accounts for a total of 8,835 customer accounts.

**Need for Project**

The LEHMUA had multiple pipe collapses in the past 8 - 10 years, and emergency repairs were required to fix them. The material and age of the pipes require cautious working skill to avoid further damage when repairs are made. The collapse of the mains cause sewer blockages and backups of the main that could expose the residents to raw sewer inside their properties, of in the roads.

**Project Description**

Originally, the proposed work included installation of approximately 6,300 LF of new 8-inch diameter PVC sanitary sewer main, 30 LF of new 18-inch diameter PVC sanitary sewer main, approximately 745 LF of new 6-inch diameter ductile iron sanitary sewer force main pipe, 200 lateral sanitary sewer connections, and 41 sanitary sewer manholes. Little Egg Harbor Municipal Utilities Authority now proposes to include approximately 60 LF of additional sewer piping that will run perpendicular to the proposed new water main in Twin Lakes Boulevard and Lake Champlain Drive. Each of the new pipes will extend from the sewer mains approximately 60 LF down each side street. The proposed changes to the sanitary sewer main scope of work includes the installation of approximately 38 additional new manholes, 33 new 8-inch to 18-inch Hymax couplings, approximately 2,700 LF of additional new 8-inch diameter PVC sanitary sewer mains, approximately 1,170 LF of additional new 18-inch diameter PVC sanitary sewer mains, and all associated fittings and appurtenances. The new 18-inch diameter PVC sanitary sewer main mentioned above will replace approximately 930 LF of existing 12-inch diameter PVC piping.

Sanitary Sewer System Rehabilitation

**Priority List Rank**

336

**County**

Burlington

**Existing Population**

16,896

**Service Area**

The station accepts flow from an 18-inch diameter gravity trunk sewer that conveys wastewater flows generally from portions of Delran Township east of Route 130 and south of Chester Avenue. Flow from the Township's Waters Edge and Summerhill Pump Stations are also tributary to the Clay Street Pump Station.

**Need for Project**

The purpose of the proposed project is to increase the reliability of the sewage pumping station and reduce the level of maintenance required to keep the pump station operational. The removal of the underground dry well will eliminate the extensive confined space safety procedures required to operate and maintain the pump station. The condition of the dry well also creates a potential hazard for maintenance personnel. New submersible pumps will replace existing worn pumps which were installed in 1993. Odor and corrosion control is needed to increase the operational life of equipment and structures.

**Project Description**

The improvements proposed to the Township's Clay Street Pump Station include converting the existing station to a submersible type station whereby new submersible sewage pumps on rails will be installed in the existing wet well which will be rehabilitated. A hoist will be provided so that the new pumps can be lifted out of the wet well from above. All electrical equipment and controls will be located above ground in an existing fiberglass building. A new precast concrete valve vault, a comminutor to replace the existing screening basket and a Bioxide odor control system will be installed as well. Also, the southwest corner of the pump station site will be stabilized to maintain the existing fence line, rough grading in the gravel driveway area will be performed to eliminate ponding and the existing manhole frame and cover in the driveway will be raised to meet the new grade. In addition, the force main discharge manhole will be replaced.

**Service Area**

The Township of Delran wastewater system serves all of the Township as well as approximately 10 users in Moorestown Township.

**Need for Project**

Sand Filter Improvements- The Township's Wastewater Treatment Plant includes an existing traveling bridge sand filter installed in 1994 as part of a plant upgrading. The plant staff has indicated that the existing unit is hydraulically inefficient and its rehabilitation or replacement has been identified as a priority project in the Township Sewer Utility Capital Improvement Program. Retrofitting the existing filter unit with similar technology will be considered as will replacement of the unit with a different technology. This improvement will not increase the capacity of the wastewater treatment plant. Fifth Street Pump Station Improvements- An evaluation of the Fifth Street Pump Station found it to be in need of varying degrees of improvement and it has been identified as a priority project in the Township Sewer Utility Capital Improvement Program. These improvements will not increase the capacity of the pump station.

**Project Description**

The proposed project will involve the improvements to the Fifth Street Pump Station.

Sanitary Sewer System Rehabilitation

**Priority List Rank**

567

**County**

Sussex

**Existing Population**

15,888

**Service Area**

The Hopatcong Sewer Department provides sanitary sewer service in the Borough of Hopatcong. The customers are primarily residential except for municipal facilities, schools and some small businesses. The sanitary sewer system does not serve the entire Borough. The system presently has approximately 3,000 active accounts. Assuming 3 persons per account, the system supplies approximately 9,000 persons, or 63 percent of the total population. Residents not connected to the municipal sanitary sewer system have septic systems. The homeowners frequently turn to the municipal sanitary sewer system when their septic systems fail.

**Need for Project**

Wastewater system Asset Management Plans are important for municipalities to drive the inspection, maintenance, repair of and renewal of their infrastructure consistent with regulatory standards. The Asset Management Plan will fully document the overall condition and operation of the wastewater system and identify the priority and budgetary costs of future capital investments. The Asset Management Plan will evaluate the physical, demographic, renewal (replacement or rehabilitation), regulatory, operational efficiency, safety, and security planning drivers to identify capital investment needs into the future (15 years).

**Project Description**

The Borough of Hopatcong wishes to create and implement a Sanitary Sewer System Asset Management Plan through funding available from the (CW) Asset Management Plan Development; for Small CW Systems; populations <10,000. The Borough of Hopatcong (the Borough) owns, operates, and maintains a sanitary sewerage distribution system which benefits approximately 9,000 residents through approximately 3,000 connections. The Borough's sanitary sewer system consists of transmission mains, force mains, low pressure sewers, lateral connections, and pumping stations. The Borough wishes to report upon sound fundamentals in the planning, operation, maintenance, and reinvestment of its sanitary sewer system to assure a reliable sanitary sewer system to its customers, and potential customers. The Borough proposes to proceed with the following program of activities at this time: 1. Preparation of a Sanitary Sewer System Asset Management Plan 2. Geographic Information System (GIS) Update

**Need for Project**

The existing VCP (Clay) sewer transmission lines are experiencing excessive infiltration and inflow. This is increasing the treatment costs at the Wastewater Treatment Plant and causing overflows.

**Project Description**

The proposed 15-inch sanitary sewer line will help remediate the infiltration/inflow situation by preventing the leakage of groundwater into the collection system and therefore reducing the treatment costs at the plant as well as the transmission lines maintenance costs. This will also increase the capacity of the collection system. The existing deteriorated lines will be capped and abandoned.

**Service Area**

Borough of Manasquan

**Need for Project**

The air release valve assemblies are located on an existing 30-inch diameter DIP wastewater force main which conveys an average of 5 MGD. The force main has been in continuous operation for almost 25 years. In accordance with NJDEP requirements to evaluate the integrity of existing wastewater infrastructure the MRRSA conducted inspections of the air release valve assemblies and discovered significant corrosion. If any of these air release valve assemblies were to fail there would be a significant untreated wastewater discharge within the vicinity of an environmentally sensitive area and a commercial corridor. Replacement is necessitated to avoid failure of the force main at these locations. The MRRSA has no other means of conveying wastewater flow from the Upper Manasquan Pump Station.

**Project Description**

The project involves the replacement of three (3) existing air release valve assemblies on the 30-inch diameter Upper Manasquan Force Main within the Township of Howell. Line stops will be implemented to isolate the force main so that the air release assemblies can be replaced. Inspections of the existing air release assemblies have revealed significant corrosion and replacement is necessary to avoid failure of the force main at these three (3) locations. All work is to be performed within the previously disturbed right-of-way of Casino Drive and NJSH Route 9.

Tuckerton Borough  
S340034-03  
Sanitary Sewer System Rehabilitation

**Priority List Rank**

344

**County**

Ocean

**Existing Population**

3,347

**Service Area**

The project will effect the 118 residential properties located on Heron Rd. The Borough of Tuckerton is located with the Southern Service area for Ocean County Utilities Authority. The Borough is bordered by Little Egg Harbor Twp. to the North, South and West and by the Barnegat Bay to the East. The sewer flows by gravity to the Tuckerton Beach Pump Station located on S. Green St..

**Need for Project**

The proposed project is to replace old terracotta sewer mains which show signs of cracks, breaks, spalls and settlement and which contributes to the increased cost due to infiltration. The system was cleaned and video inspected to confirm the extent and need for replacement.

**Project Description**

The project consist of the replacement of the existing sanitary sewer mains, manholes and service laterals located within on Heron Road, which is located in the Tuckerton Beach section of the Borough.

Avalon Borough

**Need for Project**

Infiltration/Inflow (I/I) studies conducted have revealed that the Borough Sanitary Sewer System is possibly subject to excessive I/I. Sanitary sewer lines are in excess of 80 years old. The leaking joints have caused sinkhole problems accelerated street deterioration and excessive infiltration/inflow. Additional work is needed on the stormwater sewer system as well.

**Project Description**

The Borough proposes to replace the existing deteriorated sanitary sewer lines service laterals and storm sewer lines including refurbishing approximately 500 sanitary sewer manholes relining the influent sewer line at the 23rd Street Pump Station replacing sanitary lines on Heron Drive Pelican Drive and the Business District replacing storm lines in the Business District and relocate 11th Street Pump Station and stormwater outfall.

**Service Area**

Portions of Montclair Township Sanitary Sewer Collection System portions of sub-areas G, H, J, L, M, N, S, U, and V.

**Need for Project**

N/A

**Project Description**

The Township of Montclair Sewer Authority will rehabilitate approximately 19,700 linear feet of sanitary sewer collection mains. Portions of the existing collection system are deteriorated and subject to inflow and infiltration (I&I) resulting in loss of sewage to the environment and admission of groundwater and stormwater to the system. The MSA has planned for the repair of the affected sewers to assure that wastewater is safely conveyed through the sewers to the regional wastewater treatment facility.

**Need for Project**

This project is needed because inflowinfiltration of the 75 year old or older sanitary sewer piping systems and interconnection storm water overflows allow sanitary sewer to flow into the Rahway River untreated especially during storm events. The river is the drinking water source downstream for Rahway. This is required to minimize the risk of a system failure to assure proper functioning and to prevent backups.

**Project Description**

The proposed project includes reduction of inflowinfiltration into the Rahway River through elimination of 1200 linear feet of old 15 sanitary sewer main lining of 1200 linear feet of 8 pipe lining of 100 vertical feet of manhole and removing four storm water sanitary sewer cross connections.

**Service Area**

The project will serve the City of Pleasantville. Specifically, the sanitary sewer replacement projects are located on Collings Avenue, Decatur Avenue, Ansley Boulevard and Ridgewood Avenue. Also, sewage grinding systems are planned at the California Avenue and the Woodland Avenue pump stations.

**Need for Project**

The sewer service system in the described areas is old and in need of replacement. If replacement, the chance of leaking and contamination is reduced.

**Project Description**

This project includes the replacement of sanitary sewer lines on Collins Avenue, Decatur Avenue, Ansley Boulevard and Ridgewood Avenue. In addition it will include the installation of a sewage grinder system. at the Woodland Ave. and California Pump Station.

**Service Area**

City of South Amboy

**Need for Project**

The sewer systems in the City of South Amboy constructed prior to the use of secondary treatment methods did not set strict limits on the volume of infiltration and inflow within sanitary sewers since treatment costs were not greatly affected by these extraneous flows. However in recent years the construction costs of conveyance facilities coupled with rising treatment costs associated with secondary treatment methods have resulted in efforts to eliminate infiltration and inflow in areas where it is proven to be cost-effective.

**Project Description**

The proposed project is to provide II correction for South Amboys existing sewer system.

Decentralized Wastewater (or Septic) System Repair/Replacement

**Priority List Rank**

353

**County**

Middlesex

**Existing Population**

867,708

**Service Area**

The MCUA collects and treats on average 102 MGD of wastewater from 36 communities and supporting industries in Middlesex County and portions of Somerset and Union Counties. A list of municipalities and a map of the overall service area are included in the Project Report. The Main Trunk Sewer collects wastewater from Dunellen, Middlesex, Piscataway, and South Plainfield in Middlesex County, and Bound Brook, Bridgewater, Franklin, Green Brook, North Plainfield, and South Bound Brook in Somerset Counties.

**Need for Project**

The MCUA will be replacing and protecting major mechanical and electrical components at the Sayreville Pump Station through these Projects. The work will have no impact to surface waters. The restoration and mitigation measures proposed for these projects will significantly reduce the potential for adverse impacts from future failure of this pump station equipment following a similar storm event.

**Project Description**

(Carryover SFY2015) - The Project involves the restoration of mechanical HVAC and electrical equipment instrumentation and control equipment and building repairs for both the Sayreville Relief Pump Station and the Original Sayreville Pump Station facilities damaged by flood water from the Hurricane Sandy surge. The Project also involves the construction of a Flood Wall as a mitigation measure to protect the entire site from future flood events which will require the relocation of the present Main Electrical Substation and the Diesel Generator.

Refer to Figure 1 of the Environmental Planning Report.

**Need for Project**

Mitigation of risk of sanitary sewage overflows. Refer to Section 1 of the uploaded Project Report.

**Project Description**

(Carryover SFY2015) - The Project involves the permanent restoration of mechanical HVAC and electrical equipment instrumentation and control equipment and building repairs for the Edison Pump Station facilities damaged by flood water from the Hurricane Sandy storm surge. The Project also involves flood proofing the pump building generator and switchgear building and the tunnel access shaft located at the site.

Decentralized Wastewater (or Septic) System Repair/Replacement

**Priority List Rank**

353

**County**

Middlesex

**Existing Population**

867,708

**Service Area**

The MCUA collects and treats on average 102 MGD of wastewater from 36 communities and supporting industries in Middlesex County and portions of Somerset and Union Counties. A list of municipalities and a map of the overall service area are included in the Project Report. The Main Trunk Sewer collects wastewater from Dunellen, Middlesex, Piscataway, and South Plainfield in Middlesex County, and Bound Brook, Bridgewater, Franklin, Green Brook, North Plainfield, and South Bound Brook in Somerset Counties.

**Need for Project**

The MCUA will be rehabilitating a portion of its Main Trunk Sewer through this Project. There will be no impact to surface waters, however, the rehabilitation work will significantly reduce the potential for adverse impacts from the failure of old and deteriorated sanitary sewers.

**Project Description**

(Carryover SFY2015) - The MCUA is intending to rehabilitate a portion of the existing Main Trunk Sewer (MTS) located in Piscataway New Jersey using trenchless rehabilitation technologies. This is the second of seven (7) phases that are required to address deterioration within portions of the MTS constructed of Corrugated Metal Pipe (CMP) segments. This Phase will rehabilitate the CMP pipe segments that can carry up to 46 million gallons per day (MGD) of raw wastewater. The Project will include segmental sliplining of approximately 5900 feet of 60 CMP sewer pipe installed in the 1950s repair and restoration of manholes bypass of flows environmental protection and site restoration activities.

Ocean County Utilities Authority  
S340372-57  
Sanitary Sewer System Rehabilitation

**Priority List Rank**

358

**County**

Ocean

**Existing Population**

600,000

**Service Area**

The service area consists of Point Pleasant Beach Borough and is mainly comprised of single family dwellings located on 1/4 acre lots. The commercial area located along County Route 635 and the Point Pleasant Beach Boardwalk are also served by this interceptor. The service area is almost fully developed and the project area is located within improved rights-of-way.

**Need for Project**

The proposed rehabilitation work will address potential areas of infiltration along the 7,015 linear feet of interceptor and increase the useful life of the interceptor. Reducing infiltration into the interceptor will improve the quality of the raw wastewater, improve treatment and reduce the treated volume of wastewater.

**Project Description**

The Point Pleasant Beach Interceptor (NI-13) in the Northern Service Area was inspected in 2011 and found lengths in poor condition with lining and material loss. This project will include the rehabilitation of 1185 linear feet of 24-inch diameter pipe 2364 linear feet of 27-inch diameter pipe and 3466 linear feet of 30-inch diameter pipe for a total of approximately 7015 linear feet from the NI-13 MH 10-8 to NI-12 MH 13-2 utilizing cured-in-place (CIPP) technology and the rehabilitation of sanitary sewer manholes. This work is not anticipated to require any excavation or result in any permanent disturbance.

**Need for Project**

The purpose of this project is to provide additional emergency power generation sources for the Authority in the event of extensive and prolonged commercial power outages to ensure no interruptions in collection system operations are experienced and to minimize the possibility of raw sanitary sewage discharge to the Barnegat Bay.

**Project Description**

This project involves the procurement of one trailer mounted generator for use as emergency backup power for 38 of the forty (40) Authority pump stations located throughout Ocean County. The Authority is proposing to purchase a 500 kW diesel generator capable of providing electrical power during periods of commercial power outage.

S340325-04  
Sanitary Sewer System Rehabilitation

**Priority List Rank**

360

**County**

Monmouth

**Existing Population**

550,000

**Service Area**

MCBOA serves two customers, the Bayshore Regional Sewerage Authority (BRSA) and the Township of Middletown Sewerage Authority (TOMSA), which collectively serve most of the communities along the Bayshore. These communities include the Boroughs of Atlantic Highlands, Highlands, Keansburg, Keyport, Matawan, and Union Beach, as well as, the Townships of Aberdeen, Hazlet, Holmdel, Middletown and a portion of northern Marlboro that is located in the franchise area of the Western Monmouth Utilities Authority but is served by the BRSA.

**Need for Project**

MCBOA owns and operates approximately 72,000 LF of force main, which was constructed in the early 1970s out of PCCP ranging in size from 36-inch to 48-inch in diameter. Due to its large diameter and high internal pressure, failure of PCCP can be catastrophic impacting environmentally sensitive areas including shellfish beds, cause significant property damage, and pose a public safety risk. Since the late 1990's MCBOA has experienced several leaks and/or breaks that have resulted in shellfish bed closures and raised concerns with the potential for force main failure.

**Project Description**

MCBOA's Force Main Rehabilitation Project includes the rehabilitation and/or repair of its existing 14 mile pre-stressed concrete cylinder pipe (PCCP) force main where necessary. Improvements may include internal lining of the existing 36-inch to 48-inch force main, replacement of pipe or joint sections or other miscellaneous improvements.

**Need for Project**

The proposed project will restore the structural integrity and hydraulic capacity of approximately 1400 lin. ft. of 60-inch diameter reinforced concrete pipe that has become deteriorated due to the presence of hydrogen sulfide gas.

**Project Description**

The proposed project includes the cleaning and removal of debris from the pipe by-pass pumping installation of a 60-inch diameter cured-in-place liner TV inspection of the completed project and restoration of flow through the repaired pipe.

**Need for Project**

To eliminate excessive infiltration and inflow and to extend the useful life of the sewer.

**Project Description**

RVSA operates a 35 mgd secondary sewage treatment facility with a sewer configuration 300 miles in length. The II report indicates that the RVSA's sewer system is susceptible to an excessive II of 3 mgd which may be cost-effectively removed. This will be verified in the upcoming SSES phase. An Infiltration/Inflow correction program will follow thereafter.

**Need for Project**

These projects are needed to maintain reliable sewage conveyance. These projects will update existing facilities that are no longer reliable. Failure of the existing facilities will result in a large sewage spill.

**Project Description**

The Plainfield Area Regional Sewerage Authority proposes to construct a pump station to replace the Rock Avenue siphon in PlainfieldNorth Plainfield and convert one of the existing siphon barrels into a force main. The siphon was constructed circa 1913 and a portion was rebuilt in 1973. The siphon has become problematic and unreliable. The pump station will be sized for a peak flow of 7.0 MGD. One of the existing 20 CIP siphon barrels will be lined with 18 HDPE. The second contract will be to slipline 800 L.F. of 42 diameter RCP with 36 PVC liner. The existing pipe has extensive damage and is in danger of failure.

**Need for Project**

The Authority treats over 12 million gallons per day of sewage which approximates 4 billion gallons per year. All of the sewage treated by the Authority flows first to the Main Pump Station. The continuous operation of the Main Pump Station station is critical to the Authoritys ability to protect the environment.

**Project Description**

The proposed project includes replacement of the main pumping station.

**County**

Middlesex

**Existing Population**

99,585

**Service Area**

The Port Reading Interceptor has experienced odor and corrosion problems for many years. The 36" diameter reinforced concrete gravity sewer receives the majority of the flow from the Borough of Carteret by way of a 15,300 ft long, 27" diameter force main comprised of prestressed concrete cylinder pipe. The condition of this force main has deteriorated. Of the estimated 3.5 MGD dry weather flow in the Port Reading Interceptor, approximately 0.4 MGD of flow is contributed from the Cliff Road Pump Station through 1,200 ft of 12" diameter Ductile Iron force main. Virtually all of the concrete in Port Reading Interceptor above the waterline, as well as the manholes between the discharge of Carteret force main and the Woodbridge siphon are severely corroded due to the presence of hydrogen sulfide (H<sub>2</sub>S) and must be rehabilitated or replaced.

**Need for Project**

NONE

**Project Description**

The Port Reading Interceptor consists of a 36-inch Reinforced Concrete Pipe (RCP) approximate length of 3,594 ft from manhole M1 just downstream of the Carteret metering chamber to the Woodbridge Pumping Station influent manhole just upstream of the Grit Chamber (MH1). Segment 1 includes 16 gravity pipe sections and 17 MH (Interceptor Sewer System). The gravity line is capable of accommodating a 15.93 MGD peak wet weather flow rate. The Port Reading Interceptor carries 3.5 MGD dry weather flow and 11.0 MGD peak wet weather flow. The Borough of Carteret contributes approximately 86% of the flow and 98% of the sulfide to the Interceptor Sewer System. The project seeks to rehabilitate the sewer line and manholes to extend their service life cycle. The intent is: 1) Replace all sections of 36" RCP with direct buried 36" centrifugally cast fiberglass reinforced polymer pipe. 2) Replace 15 MH with PVC lined MH

The existing Segment 5 is 48-inch RCP pipe traveling approximately 5,050 feet from the Route 440 Siphon Outlet Chamber to the Smith Street Siphon Inlet Chamber. Flow from the Perth Amboy Metering Chamber enters the 48-inch Interceptor upstream of Maplewood Avenue.

**Need for Project**

None

**Project Description**

The Keasbey Interceptor Segment Five consists of a 48-inch Reinforced Concrete Pipe (RCP) (approximate length of 4,545 feet from the Route 440 Siphon Outlet Chamber to the Smith Street Siphon Inlet Chamber located in the Township of Woodbridge. Segment Five includes 21 gravity pipe sections, (20) manholes, the Route 440 Siphon Outlet Chamber, and the Smith Street Siphon Inlet Chamber (Interceptor Sewer System). Flow from the City of Perth Amboy (C/PA) is pumped to the Perth Amboy Metering Chamber and then flows by gravity to the Segment Five Interceptor sewer system upstream of Maplewood Avenue. The Interceptor Sewer System carries 16.1 MGD dry weather flow and 38.1 MGD peak wet weather flow. Overall, Segment Five was found to be in a highly deteriorated condition due to hydrogen sulfide corrosion. Based on these condition assessments, various alternatives were examined for the rehabilitation and the mitigation of odors and corrosion for the Interceptor Sewer System.

**Need for Project**

The proposed projects will provide the continuing operation of the wastewater conveyance system into the future and avoid potential sewage discharges to surface water from aging infrastructure.

**Project Description**

The proposed project includes various projects to clean inspect maintain and repair the Hamilton Township sewage treatment system at various locations around the Township.

Anticipated Recipient:	Hamilton Township

**Need for Project**

The concrete trunk sewers are over 50 years old and suffer from hydrogen sulfide damage. They will collapse sometime in the next 50 years if not repaired resulting in the overflow of raw sewage into the environment and buildings within Hamilton Township.

**Project Description**

The proposed project includes rehabilitation of sanitary sewers that are over 50 years old. Most of the pipes involved are concrete trunks 48 inches in diameter or less. All the associated man holes structures and some adjacent contributory pipes will also be refurbished. Total length of pipe involved is about one half mile. The majority will be lined. Some spot repairs or pipe replacement may be needed. The pipes involved are mostly under Newkirk Avenue and Wert Avenue in Hamilton Township.

**Project Description**

(Carryover SFY2015) - The design of a permanent gravity sewer connection of the Park section sewers which previously crossed under Route I-287 and connected to the Jersey City Trunk Sewer (JCTS) just upstream of the river crossing. The new gravity sewer will extend the existing sewer along Morris Avenue and connect to the existing JCTS on the west side of Route I-287. The construction of a pumping station located upstream of the washout on Monroe Street will discharge into a 12 force main located along Lincoln Street which will connect to the existing JCTS downstream of the washed out river crossing. In addition gravity sewers will be constructed on Monroe St and Forbush St to provide service to the properties that were discharging into the now abandon portion of the JCTS. The Authority also proposes to rehabilitate approximately 4400 lf of Jersey City Trunk Sewer will remain in service receiving wastewater flow from the new Lincoln Street force main.

**Service Area**

This project will serve the residents of the Boroughs of Franklin Lakes Ramsey Upper Saddle River Saddle River Allendale Waldwick Midland Park and Hohokus and the Townships of Mahwah and Wyckoff.

**Need for Project**

An Infiltration/Inflow (I/I) analysis has concluded that excessive I/I exists within the Authority's sewer system. Additional studies will be required to further define the quantity of excessive I/I and to propose an Infiltration/Inflow correction program to eliminate a portion of the excessive I/I.

**Project Description**

This proposed project will consist of an Infiltration/Inflow correction program to remove a portion of the excessive I/I. This project is presently in the planning stage.

**Project Name, Number**

Toms River Municipal Utilities Authority  
S340145-05  
Sanitary Sewer System Rehabilitation

**Priority List Rank**

531

**County**

Ocean

**Existing Population**

91,239

**Service Area**

The Toms River Municipal Utilities Authority (TRMUA) serves approximately 43,000 customers throughout Toms River, Ocean County, New Jersey. Toms River has a population of 90,463 with a density of 2,323 people/sq. mile of land area (Data from hometownlocator.com as of Jul 2018). The median household income in 2018 was \$77,971 (hometownlocator.com). The TRMUA collects wastewater from the Twp of Toms River and portions of the surrounding communities of Lavallette, Island Heights, Berkeley Township, Manchester Township, Brick Township and Jackson Township, through an infrastructure consisting of: approximately 430 miles of gravity sewer mains and collectors; over 9,600 manholes; 20 pump stations and force mains. The collected wastewater is conveyed to the Ocean County Utilities Authority (OCUA) Central Plant for treatment and subsequent disposal. The TRMUA (fka DSA, DMUA) was established in 1949 and has been providing public sanitary sewer service to its patrons for 69 years.

**Need for Project**

Although the TRMUA has rigorous preventative maintenance programs, regular ongoing studies & inspections have revealed that continuing maintenance and upgrades/rehabilitations are necessary. In this regard the TRMUA has had a Capital Improvement Program (CIP). The goal of the CIP is to ensure that the TRMUA infrastructure is to provide efficient operations while preventing catastrophic failures which could result in a detriment to the surrounding water bodies which are contributory to the Barnegat Bay. The CIP is a result of thorough Infrastructure Inspection and Analysis. Since the TRMUA began aggressive rehabilitation of pipes and manholes beginning in the year 2010, the metered treatment flows have been consistently below the average from previous decades. The reduction has been approximately 400 MG/Yr.

**Project Description**

Dig/Replace Pipe [Contract SRDR-01-19]: Rehabilitate via excavation, removal/replacement of approximately 30 separate locations of different Pipe sections, which suffer from sags, offset joints, etc, and are not conducive to trenchless rehabilitation. Lakehurst Rd Force Main & Foster Rd Pipe Replacement [Contract SRDR-02-19]: Lakehurst Rd: Installation of approximately 550 LF of four-inch diameter (4" ) HDPE, and a separate alignment of approximately 800 LF of four-inch diameter (4" ) HDPE to replace/supplement one (1) existing alignment of 2,400 LF of eight- inch diameter (8" , circa 1965), The two (2) new, Force Mains will serve not only as supplemental/backup to the existing Force Main, but also as a means to inspect the conditions of each Force Main. Foster Rd: Replace/abandon sagged, 150 LF of sixteen-inch diameter (16" , circa 1968) gravity pipe with PVC Sewer/Manhole Rehabilitation [Contract SR-01-19]: Rehabilitate several pipes/manholes, via Cured-In-Place Lining

**Service Area**

The Toms River Municipal Utilities Authority (TRMUA) serves approximately 43,000 customers throughout Toms River, Ocean County, New Jersey. Toms River has a population of 90,463 with a density of 2,323 people/sq. mile of land area (2010 Census Data). The median household income in 2018 was \$77,971 (hometownlocator.com). The TRMUA collects wastewater from the Twp of Toms River and portions of the surrounding communities of Lavallette, Island Heights, Berkeley Township, Manchester Township, Brick Township and Jackson Township, through an infrastructure consisting of: approximately 430 miles of gravity sewer mains and collectors; over 9,600 manholes; 20 pump stations and force mains. The collected wastewater is conveyed to the Ocean County Utilities Authority (OCUA) Central Plant for treatment and subsequent disposal. The TRMUA (fka DSA, DMUA) was established in 1949 and has been providing public sanitary sewer service to its patrons for 69 years.

**Need for Project**

The TRMUA aggressively inspects interior conditions of approximately 430 miles of gravity sewer mains for purposes of determining necessary pipe repairs/replacements, etc. The current TV Inspection Truck has outlived its useful life and a replacement is needed to effectively continue the uninterrupted assessments of the aging infrastructure. PS 10 has an existing natural gas-powered emergency generator that is at, or nearing, the end of its useful life. In recent years, the existing generator has been utilized during significant storms and heavy winds, due to power losses. It has been determined that the existing stationary, standby generator should be replaced soon, in order to maintain uninterrupted sanitary sewer service. PS 16 is TRMUAs largest pump station, processing ~ 1.2 MGD, and it has been determined that the existing influent channel comminutors are nearing the end of their useful lives. New comminutors/grinders are now desired to promote a smoother influent flow.

**Project Description**

Purchase of (i) One Closed Circuit TV, San Sewer Pipe Inspection Truck, (ii) One NatGas-powered emergency generator (and installation) for PS 10, (iii) Two Comminutors/Dimminutors/Grinders (and installation) for PS 16

**Existing Population**

78,802

**Service Area**

The Southern Service Area (SSA) is depicted in Figures 1 and 2. The SSA provides service to the municipalities of Barnegat Light, Beach Haven, Eagleswood, Harvey Cedars, Little Egg Harbor, Long Beach, Ship Bottom, Stafford, Surf City, and Tuckerton. The Authority's SSA is comprised of the SWPCF located in Stafford Township, 13 pump/lift stations, 15 miles of force main, and 27 miles of gravity interceptors. The SWPCF was placed into operation in 1977, provides secondary treatment, and is rated at a capacity of 20 MGD. Effluent is discharged into the Atlantic Ocean through an outfall diffuser located approximately 6,000 feet from the shore of Ship Bottom Beach in accordance with NJPDES Permit No. NJ0026018.

**Need for Project**

The Interceptor Rehabilitation project is intended to provide improved effluent quality through improvements to the structural integrity of the influent conveying system as well as improvements to the reliability of these facilities. All improvements will increase the useful life of the facilities. Failure to implement the improvements could result in a spill of raw wastewater, which is not acceptable.

**Project Description**

The Manahawkin Interceptor, SI-4 is primarily a 24 inch diameter gravity interceptor located along east bound Rte. 72 in Stafford Township, New Jersey, in the Authority's Southern Service Area. It was installed in 1977 using Pre-stressed Concrete Cylinder Pipe (PCCP). SI-4 conveys wastewater flow from an area beginning at the municipal boundary between Stafford Township and Barnegat Township (west of the Garden State Parkway, Exit 63) and discharges into the SI-2 Interceptor near the intersection of Route 9 and Rt. 72. Cured-in-place pipe technology (CIPP) will be used to rehabilitate approximately 2,139 linear feet of 24-inch diameter PCCP in SI-4 from MH 10-6 to MH 12-2 (See Figure No. 4). This work will also include the rehabilitation of manholes, as required. The CIPP lining will require bypassing of flows while the CIPP liner is installed, and portions of the bypass pipe require minor excavation of existing roads to temporarily bury the bypass pipe.

Two Rivers Water Reclamation Authority  
S340117-09  
Sanitary Sewer System Rehabilitation

**Priority List Rank**

N/A

**County**

Monmouth

**Existing Population**

78,413

**Service Area**

The service area for Two Rivers Water Reclamation Authority (TRWRA) includes its 6 member communities (Fair Haven, Little Silver, Monmouth Beach, Oceanport, Shrewsbury Borough, and West Long Branch), as well as, 6 customer communities including Rumson, Sea Bright, Shrewsbury Township, Tinton Falls, Eatontown and Red Bank. All communities are located within Monmouth County.

**Need for Project**

TRWRA's existing infrastructure is in need of rehabilitation and/or replacement. Existing components are nearing their life expectancy and in some cases in danger of imminent failure. Portions of the interceptor system being rehabilitated as part of Contracts 169A and 169B are located in easement areas in forested/vegetative areas and various water bodies. Catastrophic failure of these components may result into spillage onto surrounding communities and environmentally sensitive areas impacting the health and safety of its member and customer communities.

**Project Description**

TRWRA proposes three separate contracts for improvements to its collection system and pumping infrastructure. Contracts 169A and 169B, Interceptor Rehabilitation, includes cleaning and internal inspection of 16,000 LF of pipe ranging in size from 18 to 42 inches. Other work included in these contracts includes rehabilitation of approximately 2,500 LF of existing pipe using cured in place liners or other trenchless methods, and manhole lining. Contract 155A, Pump Station Rehabilitation, includes various electrical and mechanical upgrades to its existing Pump Station No. 12. Upgrades include new electrical service, new pump station controllers, VFDs, SCADA, odor control and other miscellaneous equipment.

**Service Area**

Service area consists of Brick Township.

**Need for Project**

The proposed sanitary sewer manhole rehabilitation and replacement is required to improve structural stability, reduce the need for emergency repairs of manhole failures, alleviate potential clogging of sanitary sewer pipe with debris from the deteriorated manholes and prevent from potential infiltration and inflow into the deteriorated manholes.

**Project Description**

The project scope will include rehabilitation and replacement of 74 sanitary sewer manholes in various locations of Brick Township. The manholes show signs of deterioration from moderate to severe. Manholes showing signs of severe deterioration are slated to be replaced, and manholes showing signs of moderate deterioration are slated to be lined with cured-in-place liner. A table detailing the proposed sanitary sewer manhole replacement and lining locations, numbers and sizes is included in the Planning Document.

**Service Area**

The project service area is located within the public right-of-ways with the Township of Brick, along Cartagena Drive, Alhama Drive, Cadiz Drive, Valencia Drive, and Monterey Drive.

**Need for Project**

The existing water infrastructure is considered under this loan application. The Asset Management Plan (AMP) recommends the replacement of the sanitary sewer mains to meet the public sewer utility standards for the reliable service.

**Project Description**

The proposed project includes a sanitary sewer main replacement of approximately 6,350 linear feet (LF) along Cartagena Drive, Alhama Drive, Cadiz Drive, Valencia Drive, and Monterey Drive, located within the Baywood Section of the Township of Brick, to reinforce the collection system. This replacement includes the installation of 8 and 10 inch polyvinyl chloride (PVC) pipe that consists of site clearing, service laterals, man hole replacement, site restoration, curb to curb paving and related appurtenances. This project was planned as a direct result of the Township's ongoing Water and Sewer System Asset Management plans and will be bid out as a single CONTRACT to coincide with the water main replacement project in the Baywood Section.

**Need for Project**

The proposed pump station rehabilitation is required to improve pump station effectiveness and efficiency, standardization of equipment and method of operation, provide better access for maintenance, reduce the need to enter confined spaces and perform upgrades for code compliance.

**Project Description**

The Project generally consists of the rehabilitation of nine (9) wastewater pump stations; Lanes Mill Wastewater Pump Station, Pine Meadows Wastewater Pump Station, Riviera Drive Wastewater Pump Station, Sloping Hill Wastewater Pump Station, Cape Breton Wastewater Pump Station, Sea View Village Wastewater Pump Station, Burnt Tavern Manor Wastewater Pump Station, Green Briar II Wastewater Pump Station and Laurel Brook Wastewater Pump Station. The rehabilitation includes converting six (6) dry well/wet well type pump station to submersible type pump stations, converting one (1) eject type pump station to submersible type pump station and replacing existing submersible pumps at two (2) pump stations.

Northwest Bergen County Utilities Authority  
S340700-18  
Sanitary Sewer System Rehabilitation

**Priority List Rank**

191

**County**

Bergen

**Existing Population**

75,000

**Service Area**

The NBCUA provides sanitary sewer service to eleven member municipalities in the northwest section of Bergen County including Allendale, Ho-Ho-Kus, Midland Park, Ramsey and Waldwick, as well as, portions of Mahwah, Wyckoff, Saddle River, Upper Saddle River, Franklin Lakes and Ridgewood.

**Need for Project**

The majority of the NBCUA's interceptor system was constructed in the late 1960's and 1970's and system components are nearing their life expectancy. In recent years, the NBCUA has experienced some failures in their system. The NBCUA's system traverses throughout 11 municipalities in the northwest section of Bergen County most of which travels through easement areas in forested/vegetative land adjacent to wetlands and various water bodies. A catastrophic failure of the system may result in spillage into adjacent communities and environmentally sensitive areas impacting the health and safety of its member customers.

**Project Description**

The Authority proposes to rehabilitate two (2) sewer sections of the Trunk Sewer East Interceptor located in an easement area that runs parallel to Franklin Turnpike from Stone Ridge Lane to just south of Rosencrantz Place in the Borough of Ho-Ho-Kus. Work includes cleaning and slip lining approximately 675 lineal feet (LF) of 30" RCP sanitary sewer pipe and miscellaneous site improvements to restore the project site to its original condition. Additionally, as part of the finance application, the Authority proposes to purchase an automated and portable manhole scanner and operating system, the CleverScan Scanning System by EnviroSight; a mobile mounted sewer camera; and a truck mounted combination sewer cleaner to assist in the evaluation and assessment of their existing interceptor mains and manholes.

**Service Area**

The Authority's service area includes 11 municipalities including the Borough's of Allendale, Ho-Ho-Kus, Midland Park, Ramsey and Waldwick. Partially served are the municipalities of Mahwah, Wyckoff, Saddle River, Upper Saddle River, Franklin Lakes and Ridgewood.

**Need for Project**

The Authority's four main pump stations range in age from 35 to 45 years old. The Pump Station Upgrades, is required as various components of each station are nearing or have surpassed its life expectancy and for improved reliability and parts availability purposes. The building and site upgrades are required to protect critical control and pumping equipment within the pump station buildings from potential water damage. Failure of this infrastructure would cause backups and potential spillage onto adjacent water bodies.

**Project Description**

The Authority proposes various mechanical, electrical and structural improvements to four existing pumping stations including Midland Park PS, Ho-Ho-Kus PS, Darlington PS, and Goffle Rd PS. Improvements include pump replacement, VFD and electrical equipment replacement, roof and grading modifications, as well as other miscellaneous improvements.

**Project Name, Number**

Northwest Bergen County Utilities Authority  
S340700-19  
Sanitary Sewer System Rehabilitation

**Priority List Rank**

N/A

**County**

Bergen

**Existing Population**

75,000

**Service Area**

The NBCUA provides sanitary sewer service to eleven member municipalities in the northwest section of Bergen County including Allendale, Ho-Ho-Kus, Midland Park, Ramsey and Waldwick, as well as, portions of Mahwah, Wyckoff, Saddle River, Upper Saddle River, Franklin Lakes and Ridgewood.

**Need for Project**

The majority of the NBCUA's interceptor system was constructed in the late 1960's and 1970's and system components are nearing their life expectancy. In recent years, the NBCUA has experienced some failures in their system. The NBCUA's system traverses throughout 11 municipalities in the northwest section of Bergen County most of which travels through easement areas in forested/vegetative land adjacent to wetlands and various water bodies. A catastrophic failure of the system may result in spillage into adjacent communities and environmentally sensitive areas impacting the health and safety of its member customers.

**Project Description**

The proposed project includes assessment and rehabilitation/repair of the Authority's existing interceptor system based on the criticality of each system component. The existing interceptor mains and manholes are being internally investigated and/or televised to identify potential defect areas and evaluate their feasibility for rehabilitation or repair based on the quantity of flow through the defect, accessibility to the defect and expected life span. Based on the system evaluation, interceptor mains and manholes selected will be rehabilitated or repaired under multiple contracts either using chemical grouting, internal coating systems, Cured-In-Place Pipe (CIPP) lining, sliplining, spiral wound pipe and/or replaced using trenchless or conventional methods.

Northwest Bergen County Utilities Authority  
S340700-14  
Sanitary Sewer System Rehabilitation

**Priority List Rank**

389

**County**

Bergen

**Existing Population**

75,000

**Service Area**

The Authority's service area includes 11 municipalities including the Borough's of Allendale, Ho-Ho-Kus, Midland Park, Ramsey and Waldwick. Partially served are the municipalities of Mahwah, Wyckoff, Saddle River, Upper Saddle River, Franklin Lakes and Ridgewood.

**Need for Project**

The Midland Park Force Main Project, is needed to provide redundancy for the existing 20-inch diameter force main that is over 5,000 feet long. The pump station operates under high head and therefore upstream sections of the force main are subject to high pressure. Any failure of the force main would require pump station shut down for repair of the force main. The Midland Park Pump Station wet well has limited storage capacity and trucking of the sewage during this shutdown would likely not be able to keep up with the high flow coming into the station. As a result, overflows could occur at the pump station which would result in significant environmental impacts due to the stations location adjacent to the Goffle Brook.

**Project Description**

This project consists of installation of 5,000 feet of 20-inch force main along the same route of the existing force main. This parallel force main will be used as a backup to the existing force main and will be used in the future if the existing force main fails or needs to be shut down for service and/or replacement.

**Project Name, Number**

Woodbridge Township  
S340433-04  
Sanitary Sewer System Rehabilitation

**Priority List Rank**

394

**County**

Middlesex

**Existing Population**

69,830

**Service Area**

Woodbridge Township Sewaren and Keasby sections

**Need for Project**

The sewer systems in the Sewaren and Keasby sections constructed prior to the use of secondary treatment methods did not set strict limits on the volume of infiltration and inflow within sanitary sewers since treatment costs were not greatly affected by these extraneous flows. In recent years however the construction costs of conveyance facilities coupled with rising treatment costs associated with secondary treatment methods have resulted in efforts to eliminate infiltration and inflow in areas where it is proven to be cost-effective.

**Project Description**

The proposed project is an Infiltration/Inflow Correction program for Woodbridges existing sewer system within the Sewaren and Keasby sections. The Sewaren sewer system serves Avenel Port Reading Sewaren and Woodbridge proper. Its drainage area encompasses 6090 acres and contains 89.9 miles of sanitary sewer. The Woodbridge Interceptor (approximately parallel to the Woodbridge River) serves a majority of the system. The Keasby sewerage system serves Fords Hopelawn and Keasby. Its drainage area encompasses 2389 acres and contains 30.2 miles of sanitary sewer.

The WMUA provides sewage disposal services to the Townships of Manalapan and Marlboro, the Borough of Englishtown and a portion of the Township of Freehold.

**Need for Project**

The existing Pine Brook Interceptor was originally constructed in the 1960's and due to existing capacity and surcharge concerns it is necessary to replace this 16" diameter section with new 24" diameter PVC to match the upstream and downstream pipe sections of the interceptor to minimize service disruption and/or potential failure which may impact area residents.

**Project Description**

The WMUA proposes to replace approximately 2,000 lineal feet (LF) of 16" diameter gravity sewer main, also known as the Pine Brook Interceptor, located along Tarrytown Road in Manalapan Township with new 24" diameter PVC gravity sewer main, as well as, associated manholes and sanitary lateral connections up to the cleanout at the curb.

65,923

**Service Area**

The WMUA provides sewage disposal services to the Townships of Manalapan and Marlboro, the Borough of Englishtown and a portion of the Township of Freehold.

**Need for Project**

The existing Route 79 Pump Station and force main was originally constructed in 1968 and expanded in 1980. The age of the buried steel cans and equipment is in excess of 30 years and is a concern for potential failure given the facility's proximity to Big Brook. The existing force main is undersized with velocities in excess of 8 feet per second resulting in almost 120 feet of friction head loss.

**Project Description**

The WMUA proposes to reconstruct the Route 79 Pump Station and replace the station's existing force main discharge piping located along Route 79. The proposed improvements will include demolition of the existing pump station facilities and installation of a new wet well with submersible type pumps, electrical equipment and controls building, valve chamber and emergency generator. Additionally, the existing 8" force main will be replaced with a new 12" force main to be installed along Route 79 from the pump station to its existing discharge location.

Sanitary Sewer System Rehabilitation

**Priority List Rank**

400

**County**

Camden

**Existing Population**

64,634

**Service Area**

The project's service area is the entire Authority's collection system.

**Need for Project**

The vector truck and new communications do not affect water quality. New slip lining improves water quality by reducing the amount of inflow and infiltration entering the system.

**Project Description**

The project will consist of three components. The first is the supply and delivery of a new vector truck for cleaning and jetting the sewer lines. The second component is a new communication system for the pump stations monitoring and control. The third is sanitary sewer system rehabilitation utilizing slip lining technologies.

**Need for Project**

The Authority has an on-going program to eliminate sources of excessive I<sub>l</sub> in their sewer system. The project is needed due to the deterioration of the structural integrity of the sewers. In addition the Rams Field and Farrington Pump Stations are old and need to be rehabilitated and upgraded to ensure proper operation to facilitate routine maintenance and to control odors.

**Project Description**

The project includes the relining of problem sewer mains throughout the Township and the rehabilitation of two pump stations including the installation of comminutors with submersible motors and carbon filters for odor controls. A new bypass chamber will be installed in one pump station.

The West Branch Interceptor is a major source of SSO discharging into an environmentally sensitive area along Fairway Drive East. Overflows from manholes occur during moderate to heavy rainstorms and discharge sewage into freshwater wetlands and state open waters i.e. West Branch of the Elizabeth River. Sewer backups into residential basements occur along Fairway Drive South and Evergreen Parkway causing a serious public health risk.

**Project Description**

The project includes replacement of 2350 linear feet of 24-inch sanitary sewer along Fairway Drive East in the Township of Union Union County. The project also includes the elimination of a siphon beneath the West Branch of the Elizabeth River to be replaced with an armored ductile iron pipe installed at the invert of the channel.

**Need for Project**

A sewer system evaluation survey recently performed by Elson T. Killam Associates for the Passaic Valley Sewerage Commissioners service area found excessive Infiltration/Inflow (II) in this municipality's sewer system. Raw sewage overflows were reported to have occurred on area streets.

**Project Description**

This project consists of the removal and replacement of numerous sections of sanitary sewer piping of varying diameters throughout the City Limits. The City maintains an inventory of deficient areas which note deficiencies relating to alignment extraneous inflow through joints and cracked pipe sections broken pipe sections and manholes which have out lived their service life. The City has identified these areas for point repairs in kind replacement and trenchless lining after conducting extensive televising and cleaning operations over the past five-year period as part of their Sewer O & M Contract. The City also desires to acquire a JetVacuum Truck.

**County**

Passaic

**Existing Population**

49,550

**Service Area**

Township of Wayne

**Need for Project**

This project is for the minor rehabilitation of the Townships existing sewer system. A sewer system evaluation survey concluded that approximately 1.5 million gallons per day (MGD) of excessive InfiltrationInflow could be removed from the system cost- effectively. This project would ensure the removal of the 1.5 MGD by the accomplishment of this rehabilitation work.

**Project Description**

The proposed Phase I project (C340393-06) is to rehabilitate portions of the existing sewer system in the area of Pines Lake and Packanack Lake. The work for Phase I includes inversion lining of 3160 linear feet (LF) of sewer pipe replacement of approximately 5130 LF of sewer pipe grouting and air testing and rehabilitation of 11 manholes. Phase II investigations (C340393-07) will be required to eliminate all excessive infiltrationinflow for other portions of the existing sewer system.

South Monmouth Regional Sewer Authority  
S340377-05  
Sanitary Sewer System Rehabilitation

**Priority List Rank**

413

**County**

Monmouth

**Existing Population**

49,000

**Service Area**

The service area for the Authority includes the municipalities of Belmar, Brielle, Lake Como, Manasquan, Sea Girt, Spring Lake, Spring Lake Heights and approximately 70% of the Township of Wall.

**Need for Project**

During Superstorm Sandy, the existing Belmar Pump Station was damaged structurally, mechanically and electrically and rendered inoperable. Due to its proximity to the Atlantic Ocean and climate change challenges predicted for the Borough of Belmar, the Authority proposes various storm proofing improvements to ensure continued operation of the existing pump station during weather related emergencies.

**Project Description**

The Authority proposes various mechanical structural and electrical improvements to its existing Belmar Pump Station. Improvements include replacement of the existing pumping equipment with new dry pit submersibles construction of a new below ground grinder chamber and demolition of the existing pump station building as well as installation of internal bracing of the below ground walls. Additionally the Authority proposes to install a mobile enclosure that would house the critical electrical and control equipment required to operate the pump station.

**Need for Project**

As a result of the systems age and deteriorated conditions of the ACP lining the pipes will reduce I&I into the collection sewer system and decrease operations and maintenance costs. Reconstruction of an existing pump station facility will help comply with NJDEPOSHA requirements and facilitate maintenance and increase systems reliability.

**Project Description**

The proposed project includes rehabilitation of approximately 2900 LF of existing ACP collections sewer by way of lining to provide improved sanitary sewer reliability reduce I&I into the collection sewer system and decrease operations and maintenance costs as a result of the systems age. The project also includes reconstruction of an existing pump station and removal of the existing Welsh Pump Station to convey sewage by way of gravity.

**Project Description**

(Carryover SFY2015) - The Egg Harbor Township Municipal Utilities Authority (EHTMUA) proposes the construction of a new wet well structure and control building for the FAA Pump Station Reconstruction Project. A new duplex pumping system with control system and motor starters shall be provided. The improvements include approximately 140 linear feet of new eight-inch force main that will connect into the existing force main. The upgrades will also involve the provision of a cellular base remote telemetry system a diesel powered backup pumping unit and redundant control system.

**Need for Project**

To reduce elevated levels of bacteria in stormwater discharges to coastal waters.

**Project Description**

To eliminate cross-connections between sanitary and storm sewers by replacing portions of sewers sealing manholes and sealing leaks. To eliminate interconnections due to leaks flows or overflows from the sanitary sewer system.

Anticipated Recipient:	Winslow Township

**Service Area**

Winslow Township is a relatively large municipality (58.19 square miles) which is part of the Camden County Wastewater Management Plan (CCWMP) Area and the proposed rehabilitation projects are all within the boundary limits of the CCWMP existing Sewer Service Area (SSA).

**Need for Project**

Winslow Township Department of Municipal Utilities has a contractual obligation to provide sanitary sewer service and conveyance services to its service area, and to make capital improvements as necessary to fulfill that obligation. In order to continue to provide sanitary sewer service, the proposed rehabilitation projects (CIPP lining, spot repairs, and manhole replacements) are necessary to keep the system functioning properly and in good working order.

**Project Description**

This project involves various improvements to the Township's sanitary sewer infrastructure. Improvements include the lining of approximately 2,500 LF of existing sanitary sewer pipe (Asbury Place - 375 LF; Lehigh Manor Drive - 450 LF; Primrose Gate - 1,675 LF), the replacement of approximately 105 LF of existing sanitary sewer pipe (Eastmont Lane - 25 LF; Evergreen Avenue - 80 LF), and the replacement of approximately 2 existing sanitary sewer manholes (South Cedarbrook Road - 1 unit; Thousand Oaks - 1 unit).

Anticipated Recipient:	Montclair Township

Montclair Township  
S340837-03  
Sanitary Sewer System Rehabilitation

**Priority List Rank**

424

**County**

Essex

**Existing Population**

37,669

**Service Area**

The MSA service area (a.k.a. the "planning area") includes all of Montclair Township, Essex County, New Jersey. The Township of Montclair covers a geographic area of 6.16 square miles. The Township is situated on the east-facing slope of the first Watchung Mountain and is bounded to the north by Clifton and Little Falls in Passaic County, to the south by the Township of Orange (Essex County), to the east and northeast by Bloomfield, Glen Ridge and East Orange (all Essex County), and to the south and west-northwest by Verona (Essex County), Cedar Grove (Passaic County), West Orange and Orange (both Essex County).

**Need for Project**

Portions of the existing collection system are deteriorated and subject to inflow and infiltration resulting in loss of sewage to the environment and admission of groundwater to the system. The sewer mains in the system are largely constructed of vitrified clay pipe and most are over one hundred years old. Specific areas have been identified as the target area for the collection system rehabilitation program. These areas have been selected due to the high frequency of repairs, high maintenance requirements and observed infiltration and inflow in the system. The VCP sewer piping can further deteriorate and collapse, with near complete occlusion and associated sewage backups disrupting normal flow. These conditions would hazard public and environmental health, and would require greater disruption for emergency excavation and repairs than would a planned approach using CIPP technology.

**Project Description**

The Township of Montclair Sewer Authority will rehabilitate approximately 16000 linear feet of sanitary sewer collection mains. Portions of the existing collection system are deteriorated and subject to inflow and infiltration (I&I) resulting in loss of sewage to the environment and admission of groundwater and stormwater to the system. The MSA has planned for the repair of the affected sewers to assure that wastewater is safely conveyed through the sewers to the regional wastewater treatment facility.

**Service Area**

City of Orange

**Need for Project**

A sewer system evaluation survey recently performed by Killam Associates for the City of Orange recommended that the combined sanitarystorm sewer systems should be eliminated by internally sealing the overflow weirs in the combination sanitarystorm sewer manholes. In conjunction with sealing the overflows a program of sewer pipe rehabilitation should be undertaken to reduce infiltration and sewer surcharging conditions.

**Project Description**

A phased program of sewer system rehabilitation to eliminate sanitary sewer overflows to the Wigwam Brook is being undertaken by the City. The first phase of this program will include sealing the overflow weirs in 21 combination sanitarystorm sewer manholes replacement of approximately 250 linear feet of 15 and 18 sewer pipe and sealing underdrain access openings in 20 manholes. The second phase includes replacing approximately 245 linear feet of sewer pipe and slip lining approximately 830 linear feet of pipe. The third phase includes eliminating a bend in the interceptor sewer by constructing a new manhole.

**Service Area**

The Township of Ocean Sewerage Authority provides sanitary sewage service to the Township of Ocean, the Boroughs of Allenhurst, Deal and Interlaken and the Village of Loch Arbour.

**Need for Project**

Proposed improvements are necessary at both pump stations (Asbury Avenue and Longview) to maintain the existing facilities in operating condition and resilient against severe storm events that may potentially impact their operation in the future. Both sites are also adjacent to wetland and/or streams and failure would impact these environmentally sensitive areas.

**Project Description**

The Authority proposes various mechanical, electrical, structural and site improvements to two (2) existing sanitary sewage pumping stations, Asbury Avenue Pump Station and the Longview Pump Station. Improvements include conversion of both of the existing dry well/wet well units to submersible pumping facilities with a new valve chamber and installation of new 10'x12' prefabricated enclosures to house the electrical and control equipment. At the Asbury Avenue Pump Station other improvements include access ladder and hatch replacement, repair to the existing perimeter fencing and upgrade to the existing bypass connection. At the Longview Pump Station other improvements include installation of a bypass connection, replacement of the check valves, and installation of site lighting.

**Project Name, Number**

Ocean Township Sewer Authority  
S340750-13  
Sanitary Sewer System Rehabilitation

**Priority List Rank**

430

**County**

Monmouth

**Existing Population**

29,551

**Service Area**

The Township of Ocean Sewerage Authority provides sanitary sewage service to the Township of Ocean, the Boroughs of Allenhurst, Deal and Interlaken and the Village of Loch Arbour.

**Need for Project**

The existing sanitary sewer collection system along Berkeley Avenue, Lincoln Drive and Lakeview Avenue is corroding/deteriorating and in need of rehabilitation and/or replacement where needed. Due to its close proximity to Deal Lake, the potential for failure would be catastrophic to the adjacent water body.

**Project Description**

The Authority proposes to repair and rehabilitate the existing 8" sanitary sewer collection system along Berkeley Avenue, Lakeview Avenue and Lincoln Drive from Berkeley Avenue to Park Place. Improvements include lining of approximately 3,000 lineal feet (LF) of 8" pipe, lining of 15 manholes, 5 trenchless spot repairs and approximately 50 LF of 8" pipe replacement.

**Need for Project**

The MUAs sanitary sewer system is subject to excessive amounts of inflow and infiltration causing sewage to overflow in the collection system during wet weather periods.

**Project Description**

The purpose of the project is to reduce rainfall-induced surcharging of the collection system. The project involves replacement of existing pipes with PVC piping.

**Service Area**

Township of Ocean

**Need for Project**

The Township of Ocean Sewerage Authority owns and maintains a siphon that crosses Deal Lake. The Authority's system maps indicate the 6 and 8 pipes are cast iron and are from a manhole on Hetrick Point Road in the Wanamassa section of Ocean Township to a manhole located in the backyard of a residence located along Windermere Avenue in the Borough of Interlaken. As a minimum the Authority checks the flow in the manhole downstream of the siphon weekly to confirm flow across Deal Lake. On Monday morning March 28 the flow through the downstream manhole was greatly reduced. The Authority placed dye in both the 6 and 8 pipes and determined flow was entering the lake. The Authority installed a bypass pump system that is pumping flow to a manhole located on Wickapecko Drive. The bypass system includes three pumps and over 3500 ft of temporary piping installed along narrow streets with houses located close to the road.

**Project Description**

The proposed project includes replacement of the 6 and 8 siphon pipes that cross Deal Lake.

Decentralized Wastewater (or Septic) System Repair/Replacement

**Priority List Rank**

433

**County**

Monmouth

**Existing Population**

27,291

**Service Area**

The Authority serves the Township of Ocean, the Boroughs of Allenhurst, Deal and Interlaken and the Village of Loch Arbour.

**Need for Project**

The Authority proposes the improvements to upgrade the existing pump station to handle actual flows coming into the pump station particularly during storm events. Surcharging of the station could potentially result in sewage backup onto the adjacent Deal Lake. Additionally, improvements are being proposed to improve the resiliency of the pump station, which was impacted by Sandy, against future storm events.

**Project Description**

(Carryover SFY2015) - The proposed project includes reconstruction of the Interlaken Pump Station to raise the building to prevent future flooding.

Decentralized Wastewater (or Septic) System Repair/Replacement

**Priority List Rank**

433

**County**

Monmouth

**Existing Population**

27,291

**Service Area**

The Service Area of the Township of Ocean Sewerage Authority is comprised of the Township of Ocean, and the customer communities of the Borough of Allenhurst, the Borough of Deal, the Borough of Interlaken and the Village of Loch Arbour.

**Need for Project**

For Project No. 1, the configuration of the existing Logan Road and Rt 35 sanitary sewer causes frequent blockages and the manhole is not accessible because of the Rt 35 travel lane. In the Roseld Avenue area, the Wickapecko pump station force main discharges into shallow manholes along Roseld Avenue that surcharge during high flows. Lastly, in the Wanamassa, West Allenhurst and Deal Park area, existing manholes are extremely old and during heavy rain events result in increased flows to the plant. For Project No. 2, the Township still contains a considerable amount of orangeburg pipe laterals from the property line to the main in the Wanamassa area which is brittle and deteriorating causing sewage backups and spills.

**Project Description**

(Carryover SFY2015) - The proposed improvement is to install a new sanitary sewer pipe across Route 35. The proposed configuration would remove the sharp bend from the manhole and have manholes moved from the travel lane of Route 35. Roseld Avenue Sanitary Sewer - The proposed improvement is to extend the existing Wickapecko pump station force main so it discharges to the gravity sewer system along Roseld Avenue downstream of the shallow manholes. Interlaken Pump Station - The proposed improvement will include replacing the three existing pumps building upgrades pump control upgrades and replacing 400 lf of the existing force main.

Bergenfield Borough  
S340378-02  
Sanitary Sewer System Rehabilitation

**Priority List Rank**

436

**County**

Bergen

**Existing Population**

26,247

**Service Area**

Borough of Bergenfield

**Need for Project**

The project is needed to help reduce the Boroughs current II issues. Inflow and Infiltration contribute to sanitary sewer overflow conditions as well as surcharge of the system. Due to the influx of additional unanticipated flow the sanitary sewer system becomes overloaded and fails due to capacity constraints. By repairing the worst section of the system as noted from Borough inspections and maintenance programs this will be a significant first step in reducing II in the Borough of Bergenfield.

**Project Description**

The Borough in an effort to combat an ever-growing Inflow and Infiltration (II) problem with its sanitary sewer system intends to rehabilitate approximately 10000 to 12000 linear feet of existing vitrified clay sanitary sewer main which is approximately 80 years old. The Borough plans to use trenchless technology specifically Cast-In-Place-Pipe (CIPP) slip-lining to reestablish the integrity of the sanitary sewer main specified. The Borough is comprised of approximately 300000 linear feet of piping and this represents approximately 5 of the total piping deemed most urgent through the Boroughs preventative maintenance and inspection program. In addition to the piping rehabilitation the Borough plans to rehabilitate approximately 30 manhole structures by means of repairing larger cracks with cementitious repair mortars followed by epoxy coating of the interior of the structures. It is assumed that II in the sanitary manholes contribute up to approximately 30 of the II problems faced by the Borough. The final facet of the project includes the furnishing and installing of approximately 30 area velocity flow meters throughout the Borough to implement a flow monitoring program in an effort to continually pinpoint areas throughout the Borough which require addition rehabilitation work.

**Need for Project**

The Bergen County Utilities Authority conducted an Infiltration/Inflow (I/I) analysis and sewer system evaluation survey which concluded that excessive I/I existed in the sewer system. The correction of this I/I will be cost-effective and result in the improved operation of a 13.8 MGD pump station used for the conveyance of sewage from the Joint Meeting STP to the Bergen County Utilities Authority system. Water Quality violations are currently experienced for dissolved oxygen, fecal coliform and toxics standards due to the raw discharges of the existing Triboro Joint Meeting Treatment plant into the Hackensack River (SE-2).

**Project Description**

The project will consist of rehabilitation work to remove a portion of the excessive I/I. The rehabilitation project may include repair and/or grouting of sewers and joints, sealing manholes, repair/replacement of defective manhole covers and other standard rehabilitation measures. This project will also eliminate sewerage system overflows.

Anticipated Recipient:	Ridgewood Village

**Service Area**

CI-1A is located in the South Seaside Park portion of Berkeley Township, Ocean County. SI-11 is located in the Holgate Section of Long Beach Township, Ocean County. Use of cured-in-place technology will be used to rehabilitate: for CI-1A, approximately 3,630 linear feet of 18-inch diameter PCCP pipe from MH 19-5 to CPS-3; approximately 4,880 linear feet of 24-inch diameter PCCP pipe from MH 15-5 to MH 12-2; approximately 3,370 linear feet of 30-inch diameter PCCP from MH 12-2 to MH 12-1, MH 10-5 to MH 9-1D, MH I-2 to CPS-2 and CPS-2 to MH 8-3; and for SI-11 approximately 315 linear feet of 16-inch diameter PCCP pipe from MH 25-6 to 25-1; and approximately 465 linear feet of 20-inch diameter PCCP pipe from MH 25-1 to SPS-10. This work will also include the rehabilitation of manholes, as required. The Authority does not anticipate that any excavation work will be required for this project.

**Need for Project**

The inspections of the CI-1A interceptor were completed in 2000 and 2010 and portions were found to be in poor condition. This project presents the most cost effective alternative and is designed to protect the integrity of the existing collection system for wastewater conveyance. The Authority's intent is to improve the conveyance system reliability and thus improve the operation of collection facilities to continue to meet the discharge limits and prevent system failures that could result in spills. The construction of the interceptor improvements should provide a higher degree of reliability in the Authority's capability collecting and conveying wastewater.

**Project Description**

The use of Cured-In-Place-Pipe technology to rehabilitate the South Island Beach Interceptor (CI-1A) in the Central Service Area and South Island Interceptor (SI-11) in the Southern Service Area Included in the project for CI-1A is approximately 3,630 linear feet of 18-inch diameter pipe; 4,880 linear feet of 24-inch diameter pipe; and 3,370 linear feet of 30-inch diameter pipe; and for SI-11 is approximately 315 linear feet of 16-inch diameter pipe and 465 linear feet of 20-inch diameter pipe. Total length of this project is approximately 12,660 linear feet. Rehabilitation of interior surfaces of all manholes within the limit of the project is included.

**Need for Project**

The proposed project will remove an existing inverted siphon which clogs regularly causing significant sewage backups. The sanitary relining will eliminate inflow and infiltration of groundwater into the system and leakage of sewage out of the system. The project also proposes locking watertight frames and covers to protect the system which is located in the floodplain.

**Project Description**

The proposed project includes lining of antiquated lines. All sewer manholes inlets services piping and other appurtenances will be replaced to promote full functioning sewer systems. Locking watertight frames and covers will be installed.

**Service Area**

Sewer service area of Vernon Township MUA.

**Need for Project**

A good asset management plant for the sewer system in this are is crucial to the health and safety of the population.

**Project Description**

The proposed project is to develop an Asset management Plan for the Stone Hill Pump Station (PS) and the Stone Hill PS and Sand Hill PS Force Mains owned by the Vernon Twp. and operated by Vernon Township Municipal Utility Authority(VTMUA). Project will apply for the loan forgiveness program available for \$100,000 with this loan. Please note that as directed; given the VTMUA does not have ownership of the Sewer assets(that belongs to the Township of Vernon), the VTMUA is applying for the Loan under its own and the Township of Vernon is listed as a Collaborator. When the application for the execution of the project is made the Township of Vernon will make the application and the VTMUA will be listed as a Collaborator on their application. Furthermore uploaded with this application as instructed will be a letter from the Township stating their support for the Loan Application and their intention of filing the application for the execution of the project.

**Service Area**

The tributary area of Raritan Road Pump Station is located in the southwestern portion of Scotch Plains. The drainage area covers approximately 2,160 acres which drains to the Raritan Road Pump Station. The area tributary to Lamberts Mill Road Pump Station is located in the southeastern portion of the Township of Scotch Plains. The drainage area that is tributary to the station within the Township of Scotch Plains is approximately 530 acres. In addition, there are approximately 60 acres within the Town of Westfield that are tributary to this facility.

**Need for Project**

Existing equipment is at the end of its useful life. Renewal of this pumping asset is critical to maintain sewer service to the municipality to avoid station failure and mitigate the potential for a sewage spill. The need is the same for the electrical, mechanical and piping systems.

**Project Description**

Rehabilitation of 2 existing raw sewage pump stations to replace pumping equipment, piping, electrical panels, instrumentation and HVAC components that are at the end of their useful life.

**Need for Project**

The proposed equipment and pipe improvements are necessary to address aging and undersized infrastructure to minimize potential future failures and eliminate surcharging of the system. The Roosevelt Avenue Pump Station and trunkline are adjacent to the Arthur Kill which is classified as a saline estuarine (SE3) waterway and the Noes Creek which would adversely be impacted if the improvements are not undertaken.

**Project Description**

The proposed project includes upgrades to the existing Roosevelt Avenue Pump Station and trunkline. Upgrades include new pumps new odor and corrosion system control and replacement of approximately 2500 linear feet of 15 inch pipe with 21 inch PVC to increase capacity to handle the periodic high flows and minimize surcharging of the system.

Burlington

**Existing Population**

22,594

**Service Area**

The service area affected by this project includes several apartment and condominium complexes, single family residential neighborhoods and numerous commercial businesses, restaurants and a medical facility. The population service by the portion of the system to be rehabilitated is approximately 4500 residents.

**Need for Project**

The project will be addressing existing water infiltration problems in the sanitary sewer system by sealing leaking service lateral connections and lining sewer manholes. This will also help limit effects of water infiltration into the system during heavy rain/ flooding events.

**Project Description**

The Township proposes to continue the rehabilitation of existing Asbestos Cement sanitary Sewer Mains in various areas of the Township. Manhole rehabilitation and lateral sealing will also be performed.

Sanitary Sewer System Rehabilitation

**Priority List Rank**

450

**County**

Hunterdon

**Existing Population**

22,500

**Service Area**

Flemington Borough

**Need for Project**

The existing sewer is currently located under the athletic field at HCRHS. As part of an artificial turf field renovation project, a video inspection was performed. During a recent video inspection, a significant break was discovered and also it was noted that a section of the cast iron pipe has considerable tuberculation. An effort to repair and rehabilitate this section of sewer would require substantial disturbance to the field's substructure and also when the proposed field renovations are complete this portion of the sewer would be inaccessible.

**Project Description**

The proposed project includes the relocation of the existing sewer located under the HCRHS Football field. Work includes the installation of 4 manholes and approximately 770 lf of SDR 35 pipe. Also included is the abandonment of two existing manholes and 750 lf of 18 clay pipe.

**Service Area**

City of Clifton

**Need for Project**

The purchase of the above reference equipment is to meet state regulated mandates associated with the Stormwater Management Program as well as provide the borough with the means to clear blockage and back-ups of their existing sanitary and storm sewer areas reducing the potential for adjacent stream and/or water body areas contamination.

**Project Description**

The Borough of South Plainfield is proposed to purchase of new mobile combination sewer and catch basin cleaning machine. The apparatus will be capable of high pressure water cleaning of sanitary sewer or storm sewer drain lines while simultaneously removing debris from a manhole or catch basin with a Three Stage Fan air compressor vacuum system in order to minimize the adverse impact of stormwater runoff on water quality.

**Service Area**

West Deptford Township is located in Gloucester County, New Jersey. The Township was incorporated in 1871 and is a suburban municipality which borders the Delaware River. The Township covers over 17 square miles. Adjacent municipalities include Gloucester City to the north, Westville and Brooklawn Boroughs to the northeast, Deptford Township, Woodbury City, and Woodbury Heights to the east, Mantua and East Greenwich Townships to the south, Paulsboro to the southwest, and National Park Borough to the west.

**Need for Project**

Replacing these two 40-50 year pump stations will limit possible future failures and prevent discharge to groundwater. The new systems will have emergency generators to make sure they continue to operate during power outages.

**Project Description**

Replacement of Pump Station #4 (a.k.a. Red Bank) and Pump Station #6 (a.k.a. Queen Street)

Hazlet Township

**Need for Project**

The Townships sanitary sewer system is subject to inflow and infiltration causing sewage to back up in the collection system. A 30 year old pump station must be replaced.

**Project Description**

The proposed project includes an infiltrationinflow correction program and replacement of a pump station.

Roselle Borough  
S340332-02  
Sanitary Sewer System Rehabilitation

**Priority List Rank**

461

**County**

Union

**Existing Population**

21,085

**Service Area**

The lining of sanitary sewers will occur in the western portion of Roselle Borough in the vicinity of surface stormwater drainage. It is the experience of the Borough Engineer that lining sanitary sewers located near surface stormwater drainage is effective in reducing I/I.

**Need for Project**

This project will reduce I/I into the sanitary sewer system and prevent downstream sewer overflows. This will increase water quality by preventing the untreated discharge of sanitary sewerage into stormwater systems.

**Project Description**

The Borough of Roselle proposes to perform sanitary sewer system improvements to sanitary sewer mains which will include the cleaning television inspection and lining of approximately 3.5 miles of sanitary sewer pipe. The bulk of the sanitary sewer system consists of terra cotta or clay pipe that will be inspected and lined. The Borough of Roselle desires to decrease the amount of I/I that enters the system by utilizing cured-in-place (CIP) lining techniques for the majority of the project where improvements are warranted. Where lining is not an option due to pipe section collapses in-kind sanitary sewer pipe replacement within the existing trench box shall be performed. Sanitary manhole rehabilitation is anticipated in order to stabilize structures where needed.

Sanitary Sewer System Rehabilitation

**Priority List Rank**

462

**County**

Middlesex

**Existing Population**

20,709

**Service Area**

Borough of Carteret

**Need for Project**

The project is needed to help reduce the Boroughs current II issues. Inflow and Infiltration contribute to sanitary sewer overflow conditions as well as surcharge of the system. Due to the influx of additional unanticipated flow the sanitary sewer system becomes overloaded and fails due to capacity constraints. By repairing the worst section of the system as noted from Borough inspections and maintenance programs this will be a significant first step in reducing II in the Borough.

**Project Description**

The Borough in an effort to combat an ever-growing Inflow and Infiltration (II) problem with its sanitary sewer system intends to rehabilitate approximately 10000 to 12000 linear feet of existing vitrified clay sanitary sewer main which is approximately 80 years old.

**County**

Gloucester

**Existing Population**

19,638

**Service Area**

West Deptford Township

**Need for Project**

The three existing pump stations are submarine style stations that were built in the early 1970s. The stations are proposed be replaced with suction lift stations to remove the need for Township workers to enter confined spaces for maintenance work that becomes increasingly necessary as the stations age. The new stations would have backup generators where none currently exist. Currently extended power outages cause failures of the station and create a backup of sewage to the local residents.

**Project Description**

Replace existing pump station number one located at Grove and Cumberland pump station number six located at the corner of Prince and Linden and pump station ten located on the north side of Crown Point Road west of its intersection with Church Street.

**Need for Project**

Upgrading the equipment in the pump stations will greatly reduce the chance of a sewage overflow and potential water contamination. In-line storm sewer and sanitary pipe improvements would reduce all types of inflowinfiltration increasing system capacity. Outfall improvements will reduce erosion and stream degradation.

**Project Description**

This proposed proposed project includes upgrades to two sanitary pumping stations and one storm sewer station. The project also includes storm and sewer pipe rehabilitaion and outfall improvements.

Dumont Borough  
S340922-01  
Sanitary Sewer System Rehabilitation

**Priority List Rank**

470

**County**

Bergen

**Existing Population**

17,710

**Service Area**

Dumont

**Need for Project**

The existing Sanitary Sewer System serves the Borough of Dumont and is approximately 65 years old. Treatment of the wastewater collected is provided by the Bergen County Utilities Authority at the Little Ferry Treatment Plant. Field investigations and existing records available at the Department of Public Works of the Borough of Dumont reveal that the condition of the sanitary sewer system is substandard. There are many sections of this mostly clay pipe system that have been troublesome resulting in frequent blockages and requiring significant efforts and time by the Department of Public Works to clear the lines. These blockages and problems are caused mainly by undersized piping cracking of pipes root intrusion offset joints and inadequate slopes. The purpose of the program to rehabilitate the Sanitary Sewer System is to correct these problem areas and also to decrease the amount of infiltration into the system.

**Project Description**

The areas of the system requiring rehabilitation were selected based on the problems incurred as recorded in the Department of Public Works files and past field investigations. The proposed scope of work will be carried out in four (4) phases over a 4-year period. The first phase will cover the southwest quadrant of the Borough where the system connects up with Bergen County Utilities Authority's System the second phase will cover the northwest quadrant the third phase the southwest quadrant and the fourth and final phase the northeast quadrant.

**County**

Mercer

**Existing Population**

17,304

**Service Area**

The Hopewell Township Department of Public Works operates and maintains two (2) small public sanitary sewer conveyance systems which service approximately 1,905 customers within Brandon Farms and Princeton Farms developments. Brandon Farms sewerage system serves 1,686 residential dwellings, one (1) school and seven (7) commercial customers. No treatment is performed within this community and all sewerage is conveyed to Ewing Lawrence Sewerage Authority (ELSA). Princeton Farms sewerage system serves 211 residential dwelling customers. No treatment is performed within this community and all sewerage is conveyed to Stony Brook Regional Sewerage Authority (SBRSA). The Township plans for the repair deteriorated sewers to assure that wastewater is safely conveyed through the sewers to each respective regional wastewater treatment facility. A significant portion of the planning efforts will include the preparation of an Asset Management Plan (AMP) to identify critical areas for repair.

**Need for Project**

Portions of both existing collection system are deteriorated and subject to I&I resulting in loss of sewage to the environment and admission of groundwater and stormwater to the system. I&I has led to a notice of wet well overflow from the New Jersey Department of Environmental Protection (NJDEP) at the Princeton Farms location.

**Project Description**

The Hopewell Township Sewer Department operates and maintains two (2) small public sanitary sewer conveyance systems which service the Brandon Farms and Princeton Farms developments. Portions of both existing collection systems are deteriorated and subject to inflow and infiltration (I&I) resulting in loss of sewage to the environment and admission of groundwater and stormwater to the system. I&I has led to a notice of wet well overflow from the New Jersey Department of Environmental Protection (NJDEP) at the Princeton Farms location. The Township plans for the repair of deteriorated sewers to assure that wastewater is safely conveyed through the sewers to each respective regional wastewater treatment facility. As such, in addition to the rehabilitation, a significant portion of the planning efforts represent the creation and preparation of an Asset Management Plan (AMP) which the Township is seeking PF Grant monies to complete.

**Service Area**

This project's service area is Linden Lane between Nassau Street and Henry Avenue; the entire length of Spruce Street; and Maple Street from Spruce Street to the northern end.

**Need for Project**

By reducing the wastewater flow conveyed to the SBRSAs, the Princetons are helping to reduce the amount of flow treated at the SBRSAs River Road facility. In addition, the new infrastructure helps to prevent wastewater flow from ex-filtrating from the collection system. Overall, the rehabilitation of the collection system provides a water quality benefit to the area.

**Project Description**

This project provides for roadway, sanitary sewer, storm drainage, and pedestrian improvements on Linden Lane between Nassau Street and Henry Avenue; the entire length of Spruce Street; and Maple Street from Spruce Street to the northern end. The principal items of work consist of the following: 4,085 CY of excavation, unclassified; 11,595 CY of dense graded aggregate base course; 4,579 tons of HMA 19M64 base course; 1,460 tons of HMA 9.5M64 surface course; 655 LF of reinforced concrete storm pipe; 393 LF of PVC storm pipe; 4,804 LF of sanitary sewer pipe lining; 1,206 LF of PVC sanitary sewer pipe replacement; 4,687 LF of sanitary sewer pipe lateral replacement; 3,255 SY of concrete sidewalk ADA curb ramps and driveway aprons; 2,029 LF of concrete vertical curb; traffic markings; permanent signage; tree removal and other related miscellaneous work. The estimated construction cost is \$3,271,398.00 of which \$2,221,574.00 is eligible.

**Service Area**

This project's service area is the entire length of Bank Street from Nassau Street to Chamber Street.

**Need for Project**

By reducing the wastewater flow conveyed to the SBRSA, Princeton is helping to reduce the amount of flow treated at the SBRSA's River Road facility. In addition, the new infrastructure helps to prevent wastewater flow from exfiltrating from the collection system. Overall, the rehabilitation of the collection system provides a water quality benefit to the area.

**Project Description**

Sanitary sewer mains in the road and under sidewalk will be rehabilitated by means of pipe replacement, spot repair, and / or pipe lining. Sewer laterals will be replaced by pipe bursting or open excavation. New laterals may be installed for duplexes currently using a combined lateral. New storm sewer piping will be installed under sidewalks to an existing underground storm sewer, which will be rehabilitated. Sidewalks will be reconstructed with tinted concrete. The 12' 18" wide road will be reconstructed with new aggregate subbase and full depth pavement, as the sewer construction will damage all existing pavement. Curb will be replaced with granite curb and concrete curb. A tinted concrete raised crosswalk, flanked on both sides by 4 cobbles, will be constructed at the south end of the project. New trees with iron tree grates may be added. Pavement striping and markings and signage will be replaced. The total estimated project cost is \$1,559,668 of which \$988,974 is eligible.

**Service Area**

The Warren County-Lopatcong Creek Sewerage Authority is retaining a spot on the Priority List for rehabilitation of the local collection systems within their 201 Facilities Planning Area. The planning area lies in the Delaware Watershed and includes Alpha Borough and Lopatcong Pohatcong Harmony and Greenwich Townships.

**Need for Project**

Sanitary collection systems currently serve Alpha Lopatcong and Pohatcong. The existing Phillipsburg plant (NJ0024716) presently treats domestic and industrial waste from the above municipalities. Constructed in 1950 - 1951 with a design capacity of 3.5 MGD the plant provides secondary treatment by means of an activated sludge process. Present flows average slightly over 2.1 MGD but peak conditions can result in flows over 6.0 MGD which lead to a by-pass of the plant and direct discharge of untreated effluent into the Lopatcong Creek FW2-TM (tributary to Delaware River). There also are known cross connection between the storm and sanitary sewerage systems. These raw discharges result in frequent violations of fecal coliform standards and marginal degradation from nutrient and toxic impacts. An II analysis included in the facilities plan concluded infiltration to be non-excessive but recommended a Sewer System Evaluation Survey (SSES \$26000) to study the removal of excessive inflow and the elimination of the system by-passes.

**Project Description**

The proposed SSES will refine the conclusions of the II analysis and make recommendations for II correction. The project will allow for the construction and implementation of the cost effective rehabilitation measures. This will result in the abatement of the raw sewage by-pass problem presently experienced both in the collection systems and at the plant.

Bernards Township

**Need for Project**

There is excessive infiltration/inflow in the existing collection system which can be cost-effectively removed by I/I correction. However the operation of the treatment plant will not be affected by the excessive I/I.

**Project Description**

The proposed project involves I/I correction of the existing sewer system through a cleaning TVing air testing and grouting program. To correct the inflow problems the project will also include manhole cover replacement and will address illegal connections.

**Project Name, Number**

Mantua Township MUA  
S340514-03  
Sewage Treatment Plant (STP) - Improvement/Upgrade

**Priority List Rank**

593

**County**

Gloucester

**Existing Population**

15,217

**Service Area**

The Township population is 15,217 residents, based on the 2010 census. The sanitary sewer collection system is owned and maintained by the Mantua Township Municipal Utilities Authority (MTMUA). Sanitary sewer generated by the Township is conveyed to the Gloucester County Utility Authority (GCUA) for treatment.

**Need for Project**

This project is being undertaken in order to protect and enhance existing sanitary sewer infrastructure within the MTMUA service area. Failing to maintain the current infrastructure will only serve to increase the risk of future service interruption. The replacement of existing sanitary sewer infrastructure will serve to protect local water quality from disturbances related to chemical leaching and accidental discharges from aging infrastructure. Overall the proposed work will enable MTMUA to keep the municipal infrastructure in good operating condition, reduce unscheduled maintenance, and improve system monitoring.

**Project Description**

The Mantua Township Municipal Utilities Authority (MTMUA) has been evaluating the water and sewer infrastructure within the Township in an effort to identify equipment and components that are aging and reaching the end of its life cycle. The Authority is looking to be proactive and has identified three (3) sanitary sewer projects that will lessen maintenance time / costs, improve safety and allow for improved system monitoring. The Royal Oaks PS Improvements consist of the reconfiguration of the the existing electrical system, standby power system, removal and replacement of duplex pump control panel, and complete installation of station bypass capabilities. In addition the installation of new grinder, new winch / davit equipment and upgrades to the existing communication / SCADA system for improved monitoring and control are being included within this project.

Sanitary Sewer System Rehabilitation

**Priority List Rank**

490

**County**

Middlesex

**Existing Population**

13,279

**Service Area**

Highland Park

**Need for Project**

The Borough of Highland Parks gravity sewers suffer from infiltration/inflow due in part to faulty joints cracked or collapsed pipes and leaky manholes. In addition some of the Boroughs sanitary sewers are located in high groundwater areas further increasing infiltration.

**Project Description**

The proposed project includes evaluation of the existing sanitary sewer mains through TV inspection. Pipes found to be in good condition shall be cleaned and have the joints grouted. Pipes with minor cracks will be grouted. Deteriorated manholes will be rehabilitated and have watertight covers installed.

**Need for Project**

An Infiltration/Inflow (I/I) analysis has concluded that the Townships sewer system exhibits excessive I/I. Additional studies are underway to further define this excessive I/I and to propose a sewer rehabilitation program.

**Project Description**

This proposed project will consist of minor rehabilitation work to remove a portion of the excessive I/I. Construction of an equalization basin for storage of inflow may be recommended depending upon the conclusion of the additional on-going studies.

**Need for Project**

An infiltrationinflow (II) analysis has concluded that excessive II exists in the sewer system. Additional studies will define this excess quantity and propose an II correction program to eliminate a portion of the excessive II.

**Project Description**

This project is for the II correction of the Townships sewer system. The project involves grouting of manholes raising and resetting manhole frames and covers internal pressure grouting of sewer joints excavation and removal of 2 storm sewer connections repair of one service connection and elimination of sump pumps roof leaders and yard drains. This II correction project does not affect the treatment system.

**Need for Project**

To eliminate excessive inflow into the sewer system.

**Project Description**

The Ajax Terrace sewage treatment plant has a sewer configuration 50 miles in length with a dry weather flow of 0.94 mgd. The infiltration has been determined to be nonexcessive. However excessive inflow does exist since the plant flow records indicated that the wet weather flows were as much as 4 times greater than the dry weather flows. Inflow investigation is presently underway to identify the locations magnitudes and causes of this inflow problem. It is expected that a sewer system evaluation survey and ll correction program will follow.

Pump Stations

**County**

Essex

**Existing Population**

11,233

**Service Area**

Township of West Caldwell

**Need for Project**

While currently operating normally with no support for the pumping controls and software any failure will result in the manual operation of this station and the need for an emergency contract to bring this facility back on line. The installation of the grinder in the wet well headworks will reduce if not eliminate the current matting problem and subsequent pump clogging significantly extending the working life of the submersible pumps and extending the scheduled maintenance intervals of the pumps.

**Project Description**

The Kirkpatrick Sanitary pumps stations located on Kirkpatrick Drive near the intersection of Bloomfield Avenue and Passaic Avenue initially constructed in 1958 was last rehabilitated in 1990 and conveys approximately 1.3 MGD. The station controls and software installed in 1990 are no longer supported by the company that installed them. The Township needs to upgrade these outdated controls and software. The existing submersible pumps are not as efficient as the newer pump designs are now approaching the end of their design life at 20 years old and obtaining replacement parts is becoming more difficult and costly. The pumps have been rebuilt to various degrees several times since the 1990 rehabilitation work. Recently there have been conditions in the wet wells where the solids have been matting and causing subsequent pump clogs. The Township seeks to install a Muffin Monster grinder at the station headworks to address this matting problem.

**Project Name, Number**

Little Falls Township  
S340716-04  
Sanitary Sewer System Rehabilitation

**Priority List Rank**

500

**County**

Passaic

**Existing Population**

10,855

**Service Area**

Township of Little Falls

**Need for Project**

The Little Falls Collection System consists of approximately 120,000 linear feet of pipe in size from six to eighteen inches diameter. Eighty-nine percent of pipe is clay tile, ten percent is asbestos cement, and one percent is cast iron pipe. Interviews with the plant operator indicate that sewers in the western section of Little Falls surcharge and overflow during periods of heavy rain and high Passaic River levels. Overflows also occur at the Hopson Street Pumping Station, which receives sewage flow from the easterly section of Little Falls.

**Project Description**

This proposed project consists of a sewer system evaluation study utilizing manhole inspection, rainfall simulation, and T.V. inspection and the minor rehabilitation of the Townships existing sewer system to eliminate the portion of the I/I that is excessive.

**Project Name, Number**

Sayreville Borough  
S340326-04  
Sanitary Sewer System Rehabilitation

**Priority List Rank**

503

**County**

Middlesex

**Existing Population**

10,500

**Service Area**

Borough of Sayreville (Morgan and Melrose Sections)

**Need for Project**

The sewer systems in the Morgan and Melrose sections of Sayreville Borough constructed prior to the use of secondary treatment methods did not set strict limits on the volume of infiltration and inflow within sanitary sewers since treatment costs were not greatly affected by these extraneous flows. However in recent years the construction costs of conveyance facilities coupled with rising treatment costs associated with secondary treatment methods have resulted in efforts to eliminate infiltration and inflow in areas where it is proven to be cost-effective.

**Project Description**

The proposed project is to provide II correction for Sayrevilles existing system.

Most of the population of Pine Hill Borough has public sanitary sewer service with the exception of those located on Bramau Avenue, Bramau Court, New Freedom Road, Mohawk Avenue, and Weikel Avenue.

**Need for Project**

N/A

**Project Description**

This project will consist of two components. The first component is to update an existing aging pump station on Greenwood Avenue. The project includes the excavation and installation of a new wet well including all pumps controls and electrical panels and force main improvements. The proposed pump station will utilize submersible pumps. The existing pump station utilizes a drywell and pumps that are to be abandoned. The second component is the installation of a new force main connection from the Madison Avenue pump station to the recently installed Camden County Municipal Utilities Authority interceptor on Berlin-Cross Keys Road. The existing aging force main will be capped and abandoned.

**Service Area**

Emergency Generators are planned for the following locations: 1. Southend Sewer Lift Station, Harbor Beach Boulevard & Ocean Dr. East 2. A Station Sewer Lift Station, 100 Bayshore Avenue 3. Jenkins Parkway Sewer Pump Station, Jenkins Parkway & 11th Street North 4. Potable Well #4, 4201 Bayshore Avenue 5. Potable Well 5. 217 14th Street South 6. Potable Well #7, 203 Vernon Place 7. Evans Boulevard Stormwater Lift Station, Harbor Beach Boulevard at Ocean Dr. East 8. Caverly Drive Stormwater Pump Station, Sheridan Boulevard at Caverly Drive 9. Lincoln Drive Stormwater Pump Station, Lincoln Drive at Caverly Drive 10. Police/Fire/Emergency Medical Services, 1417 West Brigantine Avenue 11. City Hall, 1417 W Brigantine Avenue

**Need for Project**

It is critical that stormwater, sewer and water services be maintained during natural hazards. By providing Emergency Generators for these services the systems will be operational during extended storm periods. Natural hazards can result in an emergency condition for many days due to lack of electricity and other factors, and these pumps must continue to operate. . The proposed emergency generators will help the City to provide continued environmental services during and after future natural disasters and during power outages.

**Project Description**

(Carryover SFY2015) - The City of Brigantine is served by three sanitary sewer lift stations three potable wells and two stormwater pumps which all require Emergency Generators.

**Need for Project**

This project is necessary to eliminate excessive infiltration inflow (II) within the service area.

**Project Description**

The proposed project will replace sanitary sewer mains and manholes that have lost their structural integrity and/or contain severe sags. Other mains will be sliplined to reduce infiltration/inflow.

Sanitary Sewer System Rehabilitation

**Priority List Rank**

513

**County**

Atlantic

**Existing Population**

8,624

**Service Area**

The existing pump station is serving a large area within the City of Northfield, the current sewer flows area is generated by approximately 1,500,000 SF of commercial facilities and 956 homes at this time this station cant accommodate any additional flows. There is an approved multi family housing development that will add 256 homes to the demand; a portion of the multi housing development's units are designated to be affordable housing.

**Need for Project**

The pump station is running beyond its capacity, requires daily inspection to insure that it is functioning properly, this station was constructed more than 40 years ago with antiquated equipment and design. The major concern if the station should fail, it will be catastrophic for the residents and businesses in the area, and may affect the public safety and welfare of the residents and general public.

**Project Description**

The existing pump station is more than 40 years old consisting of a wet well and dry well, it is undersized based on the current flows, and no additional flows could be added at this time. We are proposing to rehab the existing station and eliminate the dry well and upgrad the wet well and eliminate any ground water intrusion; we will also replace the existing pumps with more efficient pumps.

Equipment Purchase (Clean Water)

**Priority List Rank**

513

**County**

Atlantic

**Existing Population**

8,624

**Service Area**

Both pieces of equipment will be used throughout the entirety of the City of Northfield and will benefit all residents and businesses equally.

**Need for Project**

Currently the Municipality does not have the manpower to efficiently maintain the storm water and sanitary sewer systems with the available equipment, nor in a timely manner. This purchase will help the Municipality in maintaining the storm water and sanitary sewer systems more efficiently and preventing inflow and infiltration, and will ensure compliance with the the NJDEP's MSRP rules and regulations.

**Project Description**

The City of Northfield has more than 40 miles of municipal roadways. Under current conditions, the Public Works Department staff utilizes two pieces of equipment (water jetter and vacuum) plus two trucks and 4 employees to clean the storm water system, which requires approximately 32 man hours to clean approximately 500' of storm pipe. With the proposed purchase of a complete system it will take one piece of equipment and 8 man hours to perform the same task. the second piece of equipment named in the project will be used by the Sanitary Sewer Operations Department; we are proposing the purchase of a Sanitary Sewer Crawler Camera with attachment to help prevent and minimize infiltration and inflow (I&I), inspect and maintain the existing sanitary sewer system throughout the municipality and to insure that the sewage flows are not contaminating the shallow ground water.

This will benefit all residents and businesses within the City of Northfield.

**Need for Project**

The asset management plan, will enable municipal officials to plan in a more cost effective manner and to anticipate future needs, including immediate remedial or preventive actions, to ensure that the needs of residents and businesses are met in the most cost effective way possible. Also this study will help in preventing any system failure or ground water contamination.

**Project Description**

The Municipality is in need of a comprehensive Sanitary Sewer Asset Management Plan which will serve to evaluate the existing system, which includes gravity sewer pipes, pump stations and force-mains. This study will enable municipal officials to plan in a more cost effective manner and to anticipate future needs, including remedial or preventive actions, to ensure that the needs of residents and businesses are met in the most cost effective way possible.

**Project Name, Number**

Carneys Point Sewerage Authority  
S340502-08  
Sanitary Sewer System Rehabilitation

**Priority List Rank**

520

**County**

Salem

**Existing Population**

8,049

**Service Area**

CPTSA sewer service area serves approximately 2,123 residences and 134 businesses within Carneys Point Township and Oldmans Township. At an average rate of 2.58 persons per household (U.S. Census Bureau 2012-2016), the estimated residential population served by CPTSA is 5,477 people. The Lafayette pump station serves approximately 100 residences within its capture area. Using the average rate of 2.58 persons per household, the proposed work will serve approximately 258 people. Please refer to the sewer service map in the reports and maps section for further details.

**Need for Project**

This project is being undertaken in order to protect and enhance existing sanitary sewer infrastructure within the CPTSA service area. Failing to maintain current infrastructure will only serve to increase the risk of future service interruption. The reconstruction of existing sanitary sewer infrastructure will serve to protect local water quality from disturbances related to failure of the existing pump station or sanitary sewer collection mains. Overall the proposed work will enable CPTSA to keep the sanitary sewer infrastructure in good operating condition and to facilitate its continuing efforts to provide sanitary sewer service for its residents, businesses, and industry. The Lafayette pump station is reaching the end of its service life cycle and the proposed project is necessary to maintain uninterrupted sanitary sewer service to the residents. This project could also be considered a green project since it will eliminate the electric and fuel usage of the pump station.

**Project Description**

This project is being completed to eliminate the need for an existing sanitary sewer lift station on Lafayette Road in Carneys Point Township. New sanitary sewer gravity mains will be constructed in order to redirect sanitary sewer flow downstream and allow the demolition and removal of an existing pumping station. We have estimated that removal of the pumping station will eliminate approximately \$950,000 in electricity, labor, maintenance & repairs over a 50 year period.

**Service Area**

Borough of North Haledon

**Need for Project**

The project is needed to continue to provide adequate pumpage of sanitary sewer effluent to the Passiac Valley Sewerage Authority treatment plant. The repairs to the concrete holding tank and walkways will help to ensure that leakage of sanitary sewerage is not permeated into the soil from existing cracks in the structure as well as ensure a safe working environment for sewer department personnel. The mechanical equipment replacement represents a move towards more efficient state-of-the-art equipment as well as replacement of current inoperable equipment. Finally the roof replacement represents an investment in protecting the existing and proposed replacement equipment within the existing pump station structure as well as providing a safe comfortable work location for the sewer department personnel.

**Project Description**

The Molly Ann Pump Station rehabilitation project consists of both structural repairs to the pump station building and reinforced concrete holding tanks as well as mechanical replacement of outdated and inoperable equipment. Specifically the project includes structural concrete crack repair to Holding Tank 3 and the catwalks and access landings to Holding Tank Nos 1-4 as well as the replacement of the original rubberized roof of the pump station building. In addition the project entails the replacement of the existing aerator units located in Holding Tank Nos 1-4 which have become inoperable and are in need of replacement. The project also includes the replacement of the three (3) existing vertical pumps with dry well submersible type due to advancements in technology and efficiency. All three new pump installations will be controlled by updated variable frequency drives (VFD).

Glen Ridge Borough  
S340861-04  
Sanitary Sewer System Rehabilitation

**Priority List Rank**

525

**County**

Essex

**Existing Population**

7,527

**Service Area**

The proposed project is located within the public right-of-ways of Glen Ridge Borough along various local and county roads. The project area consists of residential and commercial properties.

**Need for Project**

Portions of the existing collection system are deteriorated and subject to inflow and infiltration resulting in admission of groundwater to the system and loss of sewage to the environment. Specific areas have been identified as the target area for the collection system rehabilitation program. These areas have been selected due to the high frequency of repairs, high maintenance requirements and observed infiltration and inflow in the system.

**Project Description**

The Borough of Glen Ridge will evaluate and rehabilitate approximately 22,000 LF of sanitary sewer through a phased project approach dependent upon received building costs. Associated manholes will be rehabilitated as well to eliminate any potential hazards and water intrusion into the system. Portions of the existing collection system are deteriorated and subject to inflow and infiltration resulting in admission of groundwater to the system and loss of sewage to the environment. The Borough plans to repair the affected sewers to safely convey wastewater through the sewers to the regional wastewater treatment facility. As such, in addition to the rehabilitation and additional rehabilitation evaluations design phase of this project a significant portion of the planning efforts represent the creation and preparation of an AMP and implementation thereof. The Borough is interested to pursue the Principle Forgiveness that is available for small systems to cover the costs for the AMP.

**Need for Project**

Based on an infiltration/inflow analysis sponsored by the Somerset County Planning Board the Upper Raritan Watershed Wastewater Facilities Plan recommends a Sewer System Evaluation Survey (SSES) be performed on the Bernardsville sewer system.

**Project Description**

The SSES will include a physical survey of the Bernardsville sewer system including manhole inspections and flow inspection (measurement of sewage flows in isolated reaches of pipe) rainfall simulation and smoke testing building inspection of units suspected of contributing inflow to the sanitary sewers and television inspection. If correction in accordance with the recommendations of the SSES will follow.

Middlesex

**Existing Population**

6,520

**Service Area**

Borough of Dunellen

**Need for Project**

The majority of the sanitary sewer system of Dunellen was installed around 1915. The system consists of vitrified clay pipe which has been cracking and failing. Over the past four years the Borough has had to replace or reline several thousand feet of trunk line at a cost of almost \$1 million.

**Project Description**

The proposed project consists of relining or replacing all the trunk lines in the Borough upgrading and repair of Boroughs pump station upgrading and sealing manholes and televising and clean remaining system.

Monmouth

**Existing Population**

6,000

**Service Area**

Borough of Union Beach

**Need for Project**

The Boroughs sanitary sewer system is constantly inundated by groundwater and surface flooding due to its proximity to the shore. The Boroughs sanitary sewer study indicates that many sections of sewer pipe and manholes must be rehabilitated to reduce extraneous flows which are costly to treat.

**Project Description**

The proposed project involves rehabilitation by grouting lining repair and/or replacement of troubled sewer lines which are identified in the Boroughs II study.

**Need for Project**

The southern portion of the Townships sewage system drains to two pump stations. The sewage is then pumped to the Township of Phillipsburg sewage system for treatment. These two pump stations are over 20 years old and require extensive maintenance to keep them operable. The Township is planning to either upgrade these facilities or possibly construct an interceptor sewer to replace them. Also several sanitary sewers throughout the Township are in need of replacement. This project will address these known problem areas and provide the Township with a reliable system.

**Project Description**

The proposed project includes the construction of gravity sewers and a force main in conjunction with the upgrade or replacement of the Baltimore Street Pump Station. The likely plan is to eliminate the Baltimore Street PS and intercept its flow with a gravity sewer that will lead to the Morris Heights PS. The Morris Heights PS will either be expanded or eliminated and replaced by an interceptor that will connect to the Phillipsburg system. Additionally several pipes in the collection system will be replaced to improve problem areas.

**Need for Project**

The Joint Meeting has conducted an Infiltration/Inflow (I/I) analysis and concluded that excessive I/I exists in the sewer system. A sewer system evaluation survey has evaluated flow conditions and identified the sewer segments which are cost-effective to rehabilitate. Further sewer system evaluation work will propose an I/I correction program to reduce the excessive I/I flows.

**Project Description**

This proposed project will consist of an I/I correction program to remove a portion of the excessive I/I flows. This may include grouting of sewer joints sealing manholes repairs or replacement of defective manhole covers and other major rehabilitation measures such as removal and replacement of defective sewer pipes and relining of sewer pipes.

**Need for Project**

The Joint Meeting has conducted an Infiltration/Inflow (I/I) analysis and concluded that excessive I/I exists in the sewer system. A sewer system evaluation survey has evaluated flow conditions and identified the sewer segments which are cost-effective to rehabilitate. Further sewer system evaluation work will propose an I/I correction program to reduce the excessive I/I flows.

**Project Description**

This proposed project will consist of an I/I correction program to remove a portion of the excessive I/I flows. This may include grouting of sewer joints sealing manholes repairs or replacement of defective manhole covers and other minor rehabilitation measures.

**Need for Project**

The sewer main connecting the Township system to the Bergen County UA interceptor is forty years old and has been experiencing blockages due to deterioration. Two pump stations need to be upgraded to allow them to operate as originally intended.

**Project Description**

The proposed project includes the installation of a new trunk sewer main from the Townships main pump station to a Bergen County UA interceptor. The existing line will be abandoned in place. The Townships main pump station will have a second comminutor unit a backup sanitary sewer pump and a new pump control system installed. The Sprout Brook Pump Station will be upgraded by replacing the existing pumps motors and control system with new ones.

**Service Area**

Penns Grove Borough

**Need for Project**

This project is necessary to eliminate blocked sewer lines and excessive infiltration inflow (II) within the service area.

**Project Description**

The proposed project will replace sanitary sewer mains and manholes that have lost their structural integrity and/or contain severe sags. Other mains will be sliplined or replaced.

Roseland Borough  
S340361-01  
Sanitary Sewer System Rehabilitation

**Priority List Rank**

552

**County**

Essex

**Existing Population**

4,850

**Service Area**

Borough of Roseland

**Need for Project**

The excessive inflow and infiltration condition results in surcharging of the collection system. In addition the excess flow is being directed to the Caldwell STP and these additional volumes result in higher treatment costs to the Borough of Roseland.

**Project Description**

The Borough has conducted preliminary field investigations and determined that several residential neighborhoods are experiencing significant inflow infiltration problems. These impacted areas represent approximately twenty (20) percent of the utility users. The Borough will embark upon final studies to determine the exact location and magnitude of the problems. The rehabilitation work will include air testing and chemical grouting of approximately 8000 linear feet of sanitary sewer.

553

**County**

Gloucester

**Existing Population**

4,720

**Service Area**

Harrison Township

**Need for Project**

The sanitary sewer system is approximately 25 to 30 years old and was constructed of terra cotta pipe. A majority of these sewer mains are located in low lying areas adjacent to wetlands or streams. In addition the 11 pump stations are also 25 to 30 years old and are in need of rehabilitation to bring them up to current operational standards. Several of the pump stations do not have back-up emergency generators or other alternate power source.

**Project Description**

The Township will repair and/or replace those sections of the sewer system which experience problems. Also included is the necessary work to upgrade the existing pump stations to current standards.

Buena Borough Municipal Utilities Authority  
S340518-06  
Sanitary Sewer System Rehabilitation

**Priority List Rank**

6

**County**

Atlantic

**Existing Population**

4,603

**Service Area**

The project area includes 229 Wheat Road (Pump Station #1), 145 Wheat Road (Pump Station #2), and 421 Plymouth Road (Pump Station #3 and Wastewater Treatment Plant Grit System) in Buena Borough. All sites are on cleared grass lots owned by the Borough. The project will service the entire area of Buena Borough.

**Need for Project**

Due to aging components of the existing grit chamber, pump stations and pump station sites, improvements and upgrades are necessary to maintain operations and to continue operating within the New Jersey Pollutant Discharge Elimination System permit requirements. The added flow meters will be helpful to identify and quantify extraneous flows.

**Project Description**

This project consists of the planning, design and construction of various improvements to sanitary sewer pump stations 1, 2 and 3, including structural, mechanical and electrical component upgrades at each pump station; the installation of flow meters at each pump station; grit removal system upgrades at pump station 1; and all work and materials necessary therefor or incidental thereto.. Pump replacements with premium efficiency motors will result in energy savings.

Sanitary Sewer System Rehabilitation

**Priority List Rank**

555

**County**

Middlesex

**Existing Population**

4,430

**Service Area**

Sayreville Borough

**Need for Project**

The southern and western portions of the Morgan Section of the Borough of Sayreville are presently served by a series of six municipal pump stations and one privately owned pump station which convey the wastewater flow to the Middlesex County Utilities Authority's secondary treatment facility. The gravity collection system downstream of the discharge of a major basin pumping station is subject to surcharge to the point of overflow during dry weather peak flow periods. Anticipated growth in the area will additionally stress the already overloaded conveyance facilities.

**Project Description**

The proposed project calls for the construction of a gravity interceptor regional pump station and force main and the upgrading of four existing sub-regional pump stations. The wastewater flow will ultimately discharge directly to the Middlesex County Utilities Authority gravity sewer which runs parallel to the New York and Long Branch railroad.

**Service Area**

Sanitary improvements are proposed along Evergreen, Monmouth, Burlington, Pacific, Madison Avenues including portion of Bradley Boulevard. Stormwater improvements will include all 10 outfall into Sylvan Lake at the following intersections with Bradley Boulevard: Main Street, Pacific Avenue, Atlantic Avenue, Madison Avenue and Monmouth Avenue.

**Need for Project**

The Borough of Bradley Beach is requesting funding through the New Jersey Environmental Infrastructure Trust Finance Program (Trust) Clean Water State Revolving Fund for the State Fiscal Year 2016 loan program to improve its aged stormwater and sanitary infrastructure.

**Project Description**

The Borough is currently operating an aged sewer collection system and stormwater system constructed in the early 1900's. It is the Borough's desire to rehabilitate their infrastructure systems over time as funding is available. It is the intent of this application to address about 15% of the sanitary sewer system and approximately 90% of the stormwater infrastructure system to Sylvan Lake. This infrastructure rehabilitation project will address the sanitary sewer system as follows: - 9,500 linear feet of 8 inch diameter vitrified clay sewer mains with 8 inch diameter PVC mains. - Replace 34 brick manholes with precast concrete manholes - Replace 280, 4 inch diameter, sanitary sewer laterals with 4 inch diameter PVC laterals

Sanitary Sewer System Rehabilitation

**Priority List Rank**

559

**County**

Burlington

**Existing Population**

4,146

**Service Area**

The Borough provides sanitary sewer service to residents within the Medford Lakes Borough municipal boundary limits, as well as, parts of Medford Township, including the Medford Pines area and along Stokes Road, Chippingwood Court and Medford Lakes Road.

**Need for Project**

The proposed work is necessary to rehabilitate the existing deteriorating collection system located throughout the Boroughs Sewer Service Area. The existing system was originally constructed in the 1930s and last upgraded in the 1960s and 1970s. The rehabilitation and repair work proposed will minimize blockages and eliminate potential sewage spills in order to assure proper functioning of the system and minimize impact to adjacent environmentally sensitive areas including surrounding groundwater and adjacent water bodies.

**Project Description**

The Borough proposes to rehabilitate and repair its existing sanitary sewage collection system located throughout its service area. Work proposed includes lining of 110,000 lineal feet (LF) of sewer pipe; repair and/or replacement of 5,000 LF of sewer pipe; interior lining of approximately 500 manholes; repair and/or replacement of 20 manholes and testing and sealing of approximately 1,350 lateral connections.

**Service Area**

The Lambertville Municipal Utilities Authority (LMUA) Wastewater Management Plan (WMP) Planning Area includes portions of the following Hunterdon County municipalities: i,§ City of Lambertville i,§ Borough of Stockton Pursuant to an Agreement dated July 19, 1965 (amended August 4, 1980 and January 5, 1982, and July 6, 1995), the LMUA also provides service to the BCW&SA which is wholly contained in the State of Pennsylvania.

**Need for Project**

Water quality will be improved as a result of this project because potential sanitary sewer overflows or discharges will be minimized or eliminated through the use of new flood controls.

**Project Description**

Construction of new floodwall across the mouth of Swan Creek with floodgates built into the wall. The gates would be designed to be normally open to pass flows from Swan Creek and flows from the Canal spillway, and would close during Delaware River flood events preventing River flood waters from backing into the City via Swan Creek. A stormwater pump station would be constructed to convey residual stormwater flow from Swan Creek into the Delaware River when the gates are closed, while discharges from the Canal would be routed directly to the River. Also, the relocation of LMUA's Swan Street Pumping Station Force Main under the D&R Canal will involve installation of a new sewage force main via microtunneling from a point adjacent to the Swan Creek PS to a point where the new sewage force main will be reconnected to the existing sewage force main located to the south of the proposed floodgate structure. The existing Swan Street Pumping Station force main would be abandoned in place.

Hamburg Borough  
S340149-03  
Sanitary Sewer System Rehabilitation

**Priority List Rank**

N/A

**County**

Sussex

**Existing Population**

3,277

**Service Area**

The Hamburg Sewer Department provides sanitary sewer service in the Borough of Hamburg. The customers are primarily residential except for municipal facilities, schools and businesses. The sanitary sewer system serves the entire Borough, which is a population of approximately 3,200 people.

**Need for Project**

Wastewater system Asset Management Plans are important for municipalities to drive the inspection, maintenance, repair of and renewal of their infrastructure consistent with regulatory standards. The Asset Management Plan will fully document the overall condition and operation of the wastewater system and identify the priority and budgetary costs of future capital investments. The Asset Management Plan will evaluate the physical, demographic, renewal (replacement or rehabilitation), regulatory, operational efficiency, safety, and security planning drivers to identify capital investment needs into the future (15 years).

**Project Description**

The Borough of Hamburg wishes to create and implement a Sanitary Sewer System Asset Management Plan through funding available from the (CW) Asset Management Plan Development; for Small CW Systems; populations <10,000. The Borough owns, operates and maintains a sanitary sewerage distribution system which benefits approximately 3,000 residents through approximately 1,000 connections. The Borough's sanitary sewer system consists of transmission mains, force mains, lateral connections, and pumping stations. The Borough wishes to report upon sound fundamentals in the planning, operation, maintenance, and reinvestment of its sanitary sewer system to assure a reliable sanitary sewer system to its customers and potential customers. The Borough proposes to proceed with the following program at this time: 1. Preparation of a Sanitary Sewer System Asset Management Plan 2. Condition assessment of collection system (via flow metering & inspection) 3. Geographic Information System (GIS) Update

**Need for Project**

The Boroughs sanitary sewer system is subject to excessive amounts of inflow and infiltration causing sewage to overflow in the collection system and at the treatment plant site during wet weather periods. The Hickory Street Pump Station and the existing trunk sewer are not adequate to handle peak flows causing back-ups and overflows.

**Project Description**

The project includes replacement or relining of 8000 feet sewer lines construction of 10 new manholes sealing 110 existing manholes and inspection of another 5100 feet 0of sewer line. The Hickory Street Pump Station will be rehabilitated and upgraded and a new force main constructed to by-pass the existing trunk sewer.

Brant Beach Section of Long Beach Township between Ship Bottom and Beach Haven

**Need for Project**

Sanitary sewer pipes are deteriorated and cracking allowing for significant volumes of groundwater infiltration into the sewer conveyance system. This also allows sewer pipes to leak into the surrounding soil and water table. Therefore, old and deteriorating pipes should be replaced with PVC pipe.

**Project Description**

Remove and replace 12,000 LF of existing sanitary sewer mains, manholes, services and clean outs with the Brant Beach section of Long Beach Township

Anticipated Recipient:	Woodbury Heights Borough

Avon-By-The-Sea

**Need for Project**

An economic study of flow level with sewer improvements versus Township of Neptune Sewerage Authority current charges for flow indicates that flow levels may be in excess of contractual amounts. The excessive flow results in dilute flow into the treatment plant. This contributes to unwarranted costs and possible penalties for excessive flow. The original sewer system was constructed prior to 1920.

**Project Description**

The proposed project would reduce infiltration of groundwater into the existing sewer system and includes sleevinglining of the sanitary sewers grouting all connections to the trunk sewers repairing and replacing manholes and the replacement of the deteriorated sewer on Lincoln Lane.

Sussex

**Existing Population**

2,130

**Service Area**

The sewer force main sections to be repaired are 1,600 feet from station 16 to station 32 along the Sussex County MUA driveway, 200 feet from station 129 to station 131 along NJ State Highway Rt. 23, and 400 feet from station 268 to station 172 along NJ State Highway Rt. 23. Maps of the locations are provided in the attachments section.

**Need for Project**

The Sewer Force Main project does not involve any changes to the water quality-based need of the system.

**Project Description**

Sussex Borough can be described as a small mixed use community, both in terms of population and size. The Borough, which consists of .62 square miles, is located in the northeast quadrant of Sussex County New Jersey. With a population of 2,300 people and a median income of \$42,375, Sussex Borough is considered to be a small sewer system with low to moderate income residents. There are 3 force main locations that require constant repairs. They are 1) Along the Sussex County MUA Driveway, 2) Along NJ State Highway Rt. 23, and 3) A Second Location Along NJ State Highway Rt. 23. Maps of the 3 areas are in the attachment section. The purpose of this project is to permanently repair the force mains, reduce maintenance costs, and keep the system fully operational. The total project cost is \$400,000.

**Project Name, Number**

Peapack Gladstone Borough  
S340822-01  
Sanitary Sewer System Rehabilitation

**Priority List Rank**

582

**County**

Somerset

**Existing Population**

2,120

**Service Area**

Entire Borough of Peapack-Gladstone

**Need for Project**

The existing sewer system has excessive I<sub>2</sub>. Rehabilitation is necessary to remove excessive I<sub>2</sub> and to extend the useful life of the sewer system.

**Project Description**

The Borough has completed a TV & grouting program to reduce infiltration. The scope of the SSES will be reviewed after these measures are evaluated. The survey should consider inflow problems identified in subsystems 3, 4 and 5 which are defined in the original analysis (201 facilities plan).

**Project Name, Number**

Wyckoff Township  
S340738-03  
Sanitary Sewer System Rehabilitation

**Priority List Rank**

583

**County**

Bergen

**Existing Population**

1,900

**Service Area**

Township of Wyckoff

**Need for Project**

The area is served by on-site septic systems. The majority of these systems do not function satisfactorily primarily due to poor soil conditions and the age of the individual systems. Health records along with on-site inspections and surveys indicate failing septic systems are contributing to the degradation of HoHoKus Brook (FW2-NT) consequently impacting fishable non-trout and industrial uses. Water quality in the area does not meet standards for fecal coliform and toxics.

**Project Description**

Project is currently in the design stage and will involve construction of 71600 linear feet of lateral sewer and interceptors to replace septic systems. This project along with C340739-02 (collection system P.S.) and C340482-02 (pump station force main and interceptor) provides an integrated collection system for the Township. Flows will be conveyed to the Northeast Bergen County Utilities Authority interceptor sewer.

**Project Name, Number**

Allentown Borough  
S340567-04  
Sanitary Sewer System Rehabilitation

**Priority List Rank**

584

**County**

Monmouth

**Existing Population**

1,882

**Service Area**

Borough of Allentown

**Need for Project**

The Boroughs sanitary sewer system is subject to excessive amounts of inflow and infiltration causing sewage to overflow in the collection system and at the treatment plant site during wet weather periods. Allentowns wastewater treatment plant needs upgrades and replacement of deteriorated outdated equipment to improve removal efficacy and reduce the chance of surcharge or overflow.

**Project Description**

The purpose of the project is to reduce rainfall-induced surcharging of the collection system and sewage treatment plant. The project involves an infiltration/inflow correction program in conjunction with the replacement/rehabilitation of sections of the sewer system. Upgrade of the treatment plant would include electrical and control system replacement installation of a comminutor replacement of trickling filter media chemical feed systems modifications RBC reconstruction and other miscellaneous improvements.

**County**

Ocean

**Existing Population**

1,751

**Service Area**

Borough of Island Heights

**Need for Project**

The Borough of Island Heights provides sewage collection throughout the Borough. The sewage collection system is comprised of numerous small pump stations. The West End Avenue Pump Station (No. 2) must be renovated to meet the existing wastewater flow demands.

**Project Description**

This project is a continuation of Island Heights ongoing pump station renovation projects. Pump Station 2 - the West End Avenue Pump Station - is experiencing pumping equipment electrical and control failures requiring extensive maintenance by Borough Public Works personnel to keep operational and to prevent sewage backups and overflows. The project consists of pump and control replacement and electrical upgrades. The Borough is built out and the pump station renovations are for existing conditions and not to expand the service area.

Sanitary Sewer System Rehabilitation

**Priority List Rank**

588

**County**

Ocean

**Existing Population**

1,340

**Service Area**

Bay Head Borough

**Need for Project**

The Borough of Bay Head has an old sewerage collection system consisting of clay pipes and lead joints. Cracked pipes and weak joints lead to excessive infiltration/inflow to the existing sanitary sewers. During wet weather the infiltration/inflow to the system peaks at 0.8 mgd. It is cost effective to perform II correction as compared to transporting and treating these extraneous flows at the Ocean County Utilities Authority Wastewater Treatment Facility.

**Project Description**

At present the project is in Phase II of SSES. This consists of preparatory cleaning and internal TV inspection of 15281 linear feet and smoke testing of 29005 linear feet of sewer line. Dye water flooding and dye tracing will be done at the conclusion of smoke testing. In addition a pilot grouting program of the worst 10 lines will also be undertaken during this phase and the results so obtained will be used in the subsequent work in Phase 3 which will consist of the II correction of the remaining lines with excessive infiltration/inflow grouting of 17 leaking manholes and utilizing manhole inserts to eliminate inflow in 47 manholes. The II correction program will remove extraneous flow from this sewer system.

Various streets within the Borough of Ship Bottom east and west of Long Beach Blvd.

**Need for Project**

Sanitary sewer pipes are deteriorated and cracking allowing for significant volumes of groundwater infiltration into the sewer conveyance system. This also allows sewer pipes to leak into the surrounding soil and water table. Therefore, old and deteriorating pipes should be replaced with PVC pipe.

**Project Description**

Remove and replace 10,000 LF of existing sanitary sewer mains, manholes, services and clean outs with the Borough of Ship Bottom in various streets east and west of Long Beach Blvd.

**Need for Project**

Reduction in inflow and infiltration during precipitation events larger than a 2-year frequency and or during seasonal high groundwater elevations experienced from January to April each year. Reduced flows to Readington Lebanon Sewerage Authority Treatment plant.

**Project Description**

Over a 3 to 5 year period work on the entire LBSA sewer system to reduce infiltration and inflow issues that currently average about 35000 gpd in a system limited to 240000 gpd flow. Similar work in 1997 to 2000 provided for a recapture of over 30000 gpd. Work first to identify the sources of inflow and infiltration and then program a series of bids to respond to the most critical areas first and then to areas with lesser impact.

S340761-02  
Sanitary Sewer System Rehabilitation

**Priority List Rank**

592

**County**

Monmouth

**Existing Population**

850

**Service Area**

Borough of Roosevelt

**Need for Project**

The existing collection system serving the Borough of Roosevelt is very old and is subject to an extreme amount of I.I. Replacement of the existing sewers will eliminate a portion of excessive I.I. in approximately 22000 LF of collection system serving the Borough.

**Project Description**

The proposed project will consist of removal and replacement of the existing VTP sanitary lines with new PVC lines to provide for watertight joints and eliminate dips. Aged manholes and portions of house connections will be replaced. Certain manholes will be treated with a bonding agent to seal the internal walls.

Fieldsboro Borough  
S340522-01  
Sanitary Sewer System Rehabilitation

**Priority List Rank**

N/A

**County**

Burlington

**Existing Population**

540

**Service Area**

The project service area is the Borough of Fieldsboro, which is located in Burlington County, New Jersey, is a 0.269 square mile town along the Delaware River, and it shares its borders with Bordentown Township.

**Need for Project**

An Asset Management Plan is needed in order to create a comprehensive inventory of the system assets, evaluate their condition and prioritize and plan for projects in order to repair, maintain and improve the system to meet level of service goals. This process is essential for sustaining adequate sewer and stormwater systems and service for residents of Fieldsboro. In addition, planning appropriately and prioritizing projects may prevent costly emergency repairs and potential environmental hazards, including raw sewerage leaks.

**Project Description**

The scope of work will initially include the development of an Asset Management Plan for the Sanitary Sewer and Stormwater Systems for the Borough of Fieldsboro (Fieldsboro) The proposed Scope of Service includes five US EPA Asset Management components, including the work associated to complete each: 1. Asset Inventory/Mapping and Condition Assessment (Current GIS Contract); 2. Level of Service Goals; 3. Criticality/Prioritization Risk Assessment; 4. Life Cycle Costing; and 5. Long Term Funding Strategy. A subsequent capital construction project is anticipated to include improvements to the sanitary sewer system.

**Service Area**

PVSC serves 48 municipalities in parts of Bergen, Essex, Hudson, Passaic and Union Counties.

**Need for Project**

PVSC is a regional wastewater treatment plant that accepts non-hazardous liquid wastes by truck, barge and ships. PVSC utilizes its sludge storage tanks to accept municipal wastes by barge and ship for treatment. The tanks are in need of repairs and improvements in order to maintain their integrity and operate properly.

**Project Description**

The project includes improvements and rehabilitation of PVSC's Sludge Storage Tanks #1 and #2. The work includes, but is not necessarily limited to, recoating and repairing the interior of the tanks, removing the existing lead paint on the exterior of the tanks, recoating them, pump and well improvements and performing miscellaneous structural repairs. The project also includes the installation of new piping, valving and/or pumping as necessary to provide additional connections and process flexibility.

**Need for Project**

PVSC operates a 230 mgd secondary sewage treatment plant which produces 945000 dry poundsday of sludge which is currently dewatered and shipped to Texas. This interim sludge disposal alternative was implemented by the PVSC in order to enable the PVSC to cease the ocean dumping of sewage sludge as mandated by federal and state legislation. However this practice is costly and its future availability is uncertain.

**Project Description**

The proposed project would provide a long-term method for the disposal of sewage sludge. A Step 1 grant was awarded in January 1977 for a land-based sludge management study which recommended the implementation of a sludge disposal scheme consisting of a belt filter press for dewatering and incineration. The Sludge Management Plan dated June 1989 recommended a fluidized bed incinerator be constructed as a long-term plan. The PVSC will be required to appropriately update the Sludge Management Plan to ensure that adequate consideration of beneficial reuse alternatives has been included as required by the Departments White Paper on Beneficial Use of Sewage Sludge issued in November 1990.

**Need for Project**

The Passaic Valley Sewerage Commissioners are investigating improvements to their STP NJPDES No. NJ0021016. The high strength Zimpro sidestream is returned to the activated sludge treatment plant which leads to instability in the activated sludge process. Other improvements are needed to the the sludge processing equipment.

**Project Description**

The proposed project includes an anaerobic treatment system for the high strength Zimpro sidestream methane gas recovery and electrical generation facility and various improvements to the sludge processing equipment.

**Need for Project**

Installation of a sludge drying system for the dewatering of digested solids from the anaerobic digesters. The anaerobic digesters coupled with the proposed sludge drying system will take the place of Incinerator Nos. 1 and 2. With implementation of this process and through the use of combined heat and power, the GCUA anticipates being within 20% of net zero energy status.

**Project Description**

This project consists of the installation of a sludge drying system for the dewatering of digested solids from the anaerobic digesters. The proposed system will be utilized for a reduction in sludge weight and produce a Class A bio-solid, which will allow for beneficial-reuse as daily landfill cover. The anaerobic digesters and the proposed sludge drying system will take the place of Incinerator Nos. 1 and 2. Through the implementation of these processes and through the use of combined heat and power, the GCUA anticipates operating within 20% of net zero energy status.

The Authority sewer system serves Willingboro and Edgewater Park and Westampton. The Authority water system serves Willingboro and Westampton Township, Mt. Laurel Township and Eveshame (via Mt. Laurel).

**Need for Project**

To be determined after energy efficiency plan developed.

**Project Description**

Development of energy efficiency plan (a/k/a Energy Savings Improvement plan) and then implementation of plan for various clean water and drinking water projects. Investment grade energy audit underway. From this audit, energy savings plan will be prepared and submitted to BPU and independent 3rd party for verification. Expected projects include cogen improvements, solar facility re-commissioning, water meter change outs and addition of advanced meter infrastructure, and sludge drying facility improvements,

**County**

Monmouth

**Existing Population**

16,116

**Service Area**

Asbury Park City

**Need for Project**

The sludge generated at the City's wastewater treatment facilities is trucked to a landfill this is not a viable long term method for sludge disposal. Additional sludge is generated due to the secondary treatment facilities being completed.

**Project Description**

This project consists of land application of sludge.

**Service Area**

City of Long Branch West Long Branch (portion)

**Need for Project**

Long Branch Sewerage Authority is presently disposing of sludge by incineration however this is on a short term basis only. This project is necessary to identify a long term disposal alternative for disposal of the 1235 lbs. of sludge (dry weight basis) produced at the plant each day.

**Project Description**

The project report for this project is essentially complete and has recommended a long term sludge management plan which calls for in-vessel composting with distribution. After resolution of several minor issues the project report may be approved.

Deptford Twp., Woodbury City, Woodbury Hgts. Borough, Parts of E. Greenwich Twp., Elk Twp., and Monroe Twp.

**Need for Project**

The GCUA WWTP is currently permitted to treat 24.10 mgd. The average flow is 19.4 mgd and the maximum value is 25 mgd. This project will not affect the water quality, however is necessary to meet the air quality permit limits for the incinerator.

**Project Description**

(Carryover SFY2015) - The Authority is proposing to construct an adsorber immediately adjacent to Sewage Sludge Incinerator 2. These upgrades are proposed in order to meet new federal air emission limits. The improvements will provide removal of acid gases (HCl and SO<sub>2</sub>) and the removal of mercury dioxins and furans.

**Need for Project**

BCUA operates a 94 mgd secondary sewage treatment plant which produces 35 dry tons/day of anaerobically digested liquid sludge which is currently dewatered by Spectroserv Inc. in the Town of Kearny and shipped to Pennsylvania to be landfilled. This interim sludge disposal alternative was implemented by the BCUA in order to enable the Authority to cease the ocean dumping of sewage sludge as mandated by federal and state legislation. However this practice is costly and its future availability is uncertain.

**Project Description**

The BCUA has modified its Sludge Management Plan to include beneficial reuse of the sludge. The modified plan calls for the chemical stabilization of the sludge and use of the product as final cover of the landfills in the Meadowlands area. As required by the Judicial Consent Decree the BCUA is required to pursue its original plan of incineration until such time as the beneficial use plan is approved.

JMEUC operates a 75 mgd secondary sewage treatment plant which produces 35 dry tons per day of anaerobically digested sludge which is currently dewatered and shipped to Pennsylvania to be landfilled. This interim sludge disposal alternative was implemented by the JMEUC in order to enable the Authority to cease the ocean dumping of sewage sludge as mandated by federal and state legislation. However this practice is costly and its future availability is uncertain.

**Project Description**

The proposed project would provide a long-term method for the disposal of sewage sludge. A Step 1 grant was awarded in 1977 for a land-based sludge management study. The Land-Based Sludge Management Facilities Plan Update dated March 1989 recommended construction of a multiple hearth incinerator with a hot water generator Venturi scrubber impingement plate after cooler wet electrostatic precipitator induced draft fan regenerative after burner and a pneumatic dry ash system as the most cost-effective alternative. The JMEUC present plans are to abandon the original idea of sludge incineration and to pursue a beneficial reuse alternative utilizing a sludge drying process.

The Leachate Treatment Plant (LTP) expansion and upgrade is necessary to provide treatment and capacity for the wastewater to be generated through operation of the county co-composting facility. The existing LTP currently treats leachate and sanitary wastewater from the county landfill and associated support facilities at the county Resource Recovery Facilities Complex. In accordance with NJPDES Permit No. NJ0055395 issued October 23 1991 which provides the discharge requirements for the LTP expansion of the hydraulic design capacity of the plant from 50000 gpd to 130000 gpd average daily flow (ADF) on a monthly basis will allow for the treatment of wastewater to be generated from the previously funded co-composting facility operations (approximately 56000 gpd - monthly ADF Project No. S340818-03). Permitted capacity was increased from 28000 gpd to 130000 gpd (monthly ADF) under NJPDES No. NJ0055395.

**Project Description**

Expansion of the facility includes physical-chemical treatment units biological and physiochemical treatment units rapid sand filtration ultraviolet disinfection and a wastewater heating system.

Sludge Treatment/Disposal Facilities

**Priority List Rank**

612

**County**

Atlantic

**Existing Population**

163,667

**Service Area**

Several Municipalities in Atlantic County and Mercer County

**Need for Project**

The Authority has several goals for this project. First to diversify the Authority's method (by providing a back-up for the existing sludge incinerators) and increase capacity for the disposal of municipal wastewater sludge. The second goal relates to the Interdistrict Agreement by which the ACUA is required to accept up to 19000 tons per year of compostable material from Mercer County. Finally to meet the Authority's recycling goals large source separated generations of food waste within the county will be directed to the proposed facility.

**Project Description**

The Authority is planning to construct an Enclosed Composting Facility at the Environmental Park Site in Egg Harbor Township. The facility will process the following selective waste streams food waste municipal wastewater sludge vegetative waste and clean wood waste. These selective waste streams will produce a compost which can be used as a soil amendment. The proposed facility has an array of unique features to avoid the pitfalls of other composting facilities which have been forced to close due to mechanical and odor control problems. An integrated building ventilation system including a biofilter for odor control will be constructed. The facility will be totally enclosed and designed to handle 159 wet tons per day.

Sewage Treatment Plant (STP) - Improvement/Upgrade

**Priority List Rank**

613

**County**

Somerset

**Existing Population**

117,000

**Service Area**

The SRVSA provides service to the Township of Bridgewater, Township of Branchburg, the Township of Hillsborough, the Borough of Manville, the Borough of Raritan, the Borough of Somerville (Somerville), the Township of Warren, and portions of the Township of Green Brook. Combined, all municipalities contribute to a service area of over 67 square miles.

**Need for Project**

Recent USEPA regulations (40CFR60 subpart M) set strict limits for nine pollutants under section 129 of the clean air act: Cadmium, carbon monoxide, hydrogen chloride, lead, mercury, nitrogen oxides, particulate matter, sulfur dioxide, polychlorinated dibenzo-p-dioxins and polychlorinated dibenzofurans. In order for the SRVSA incinerators to meet these new low emission limits, it is necessary to significantly upgrade the Authority's air pollution control equipment. The proposed upgrade to Incinerator No. 2 is needed to provide continued reliable operation of SRVSA's sludge incinerator facilities, while improving energy efficiency through replacement of antiquated equipment with new energy efficient equipment. The present capacity of SRVSA's wastewater treatment plant will remain unchanged.

**Project Description**

The proposed rehabilitation of sludge incinerator 2 consists of a new secondary heat exchanger new scrubber system and new associated instrumentation and electrical systems. To meet new Federal air emission performance standards for existing sewage sludge incineration units (40 CFR Part 60 Subpart M) a new mercury control system will be installed which will clean the exhaust from sludge incinerator 2. This proposed project will not involve any changes or an increase to the present wastewater capacity of the WWTP. Additionally no adjustments to the permitted wastewater flow to the treatment plant under the SRVSA's existing NJPDES permit will be necessary.

**Service Area**

Mount Holly, Eastampton, Lumberton, Hainesport, part of Westampton

**Need for Project**

This is a sludge management project. The Mount Holly Sewerage Authority Wastewater Treatment Plant has been expanded and upgraded from 2.0 mgd to 5.0 mgd flow under USEPA/State project no. C340251 grant. The (201) Facilities Plan recommended that ultimate sludge disposal would be to a licensed landfill. Subsequent to the completion of this original facilities plan and the initiation of construction of the plant expansion, the State of New Jersey enacted new laws relative to the treatment and disposal of sludge. Accordingly, the Mount Holly Sewerage Authority was required to prepare a sludge management plan in accordance with the current state guidelines for the preparation of sludge management plans.

**Project Description**

The project consists of construction of sludge management facilities at the existing Mount Holly SA Sewage Treatment Plant site. This is a short term solution only. The ultimate sludge disposal will be incorporated into the on-going county-wide sludge and septage management plan recommendations. Mt. Holly will subsequently become a contingency back-up facility for sludge/septage treatment.

**County**

Hunterdon

**Existing Population**

6,100

**Service Area**

Milford Borough Holland Township

**Need for Project**

There is serious I<sub>1</sub> existing in the sanitary sewer lines in Holland Township which is causing noncompliance with the suspended solids limitations of the NJPDES permit during periods of excessive rain. In addition the Milford Borough Sewer Utility which is classified as a Category D facility does not have the capability of handling septage and must plan for accepting the septage generated in its service area. Furthermore alternatives to the treatment plants current method of disposing of liquid sludge at a Pennsylvania landfill must be evaluated since it is on a short term basis.

**Project Description**

This project will be classified as a complete wastewater treatment system which includes Holland Township and Milford Borough. The Facilities Plan will develop alternatives for sludge disposal and evaluate a septic management district. Also an I<sub>1</sub> and cost effectiveness analysis will be performed to determine the extent of excessive I<sub>1</sub> in the system.

Milltown Borough  
S340102-05  
Stormwater Management

**Priority List Rank**

620

**County**

Middlesex

**Existing Population**

6,893

**Service Area**

The Service Area for the Milltown Municipal Facility is the entire Borough of Milltown. The Borough of Milltown is located in the center of Middlesex County, NJ and is bordered by North Brunswick Township to the north and west, the Township of East Brunswick to the south and the Borough of South River to the east.

**Need for Project**

The project is required in order to mitigate flooding of the existing Municipal Public Works Garage by removing it from the flood plain. Given the fact that flood levels have reached historic highs at this location twice within five years, there is a concern that the same are being influenced by changes in upstream conditions resulting in increased flood levels and flood frequency in the area of the Borough. In order for the Borough Municipal Facility to be fully utilized and protected from physical and financial damages it is necessary to relocate the facility to an alternate location at a higher elevation. The proposed location for the new Municipal Facility is at an elevation approximately 18 feet higher than the existing Municipal Facility and is approximately 14 feet higher than the 500 year flood plain elevation and the measured flood elevation from Hurricane Irene, which will reduce the risk of flooding.

**Project Description**

The existing Municipal Public Works Garage is situated in the 100-year floodplain of the Lawrence Brook. Severe flooding of the Lawrence Brook during a storm in April 2007 and during Hurricane Irene in August 2011 inundated the area surrounding the facility and flooded the interior of the building with several feet of water, resulting in the need for repetitive replacement of equipment and materials as well as physical damage to the building that required mitigation. The purpose of this project is to relocate the Milltown Municipal Facilities for flood mitigation. The proposed improvements consist of reconstructing the Municipal Facility outside of the flood plain. The new Municipal Facility will include a Department of Public Works Building, a Salt House and other Borough offices including Operations and Emergency Management. It is anticipated that the Borough's Firehouse will also be relocated to the new site.

**Service Area**

Jersey City

**Need for Project**

The proposed project significantly reduces the amount of storm water flowing into the already burdened combined sewer system. Installation of low-flow water fixtures will help reduce the impact to the cities sewer system by 20.

**Project Description**

The proposed project includes installation of green roofs rainwater harveting technology a sub-surface detention system photovoltaic arrays and low-flow water fixtures.

**Project Name, Number**

West Milford Township  
S340701-10  
Decentralized Wastewater (or Septic) System Repair/Replacement

**Priority List Rank**

622

**County**

Passaic

**Existing Population**

25,850

**Service Area**

West Milford Township

**Need for Project**

The Township of West Milford utilizes individual subsurface sewage disposal systems and individual wells (95 on wells and septic) for their wastewater disposal and potable water supply. There is approximately 8517 (85.2 of residences) subsurface sewage disposal systems within the Township of West Milford. Taking a very conservative approach not counting commercial establishments each of these 8517 systems generate approximately 500 gallons of contaminated waste water per day that's a total of 4258500 gallons of contaminated water that enters into the water shed of West Milford. There is 4647 residences in LR zone (4663 w Class 15) 6463 residences in Highlands Open Water Protection Zone (300(tm) open water buffer) and 3319 residences within 300ft of water (2002lulc) (does not include wetlands streams). Many of these existing systems have malfunctioned even when the systems have been designed constructed and sited in accordance with applicable NJDEP standards largely due to lack of proper system management or improper operation poor soil conditions and maintenance. These malfunctions have been shown to adversely affect public health and welfare and the environment.

**Project Description**

The proposed project includes helping provide loans to families who are not able to pay for repair of there failing septic.

**Project Name, Number**

Manasquan Borough  
S340450-02  
Stormwater Management - Green Infrastructure

**Priority List Rank**

N/A

**County**

Monmouth

**Existing Population**

5,897

**Service Area**

The population served by the project is the Borough of Manasquan, a 1.38 square mile coastal town in Monmouth County, New Jersey. The planning area consists of the entire borough, which will benefit from the project as measures will be implemented to improve water quality and replace ageing infrastructure. The project is located at Borough-owned property known as Axel Carlson Park, which is bordered by Stockton Lake. Axel Carlson Park is a linear waterfront passive recreation area with shade trees, picnic tables, benches, trash receptacles, a park sign, and an asphalt path that abuts the bulkhead with Stockton Lake.

**Need for Project**

The purpose of the project is to improve the water quality of stormwater runoff being discharged into Stockton Lake that eventually leads to Barnegat Bay through the Glimmer Glass, Manasquan River, and Point Pleasant Canal. The water quality need for this project is to remove total suspended solids and float-able pollutants from the stormwater system prior to discharging runoff into Stockton Lake in an effort to improve the water quality of Barnegat Bay. Stormwater runoff is the most common way that nonpoint source pollution reaches local rivers, creeks and other waterways including Barnegat Bay. If the runoff is not absorbed by soil and vegetation or by other measures, rainwater carries chemicals, nutrients, sediments and other forms of nonpoint source pollution into surface waters. The existing bulkhead condition is also causing sediment to enter Stockton Lake. Holes in the bulkhead result in erosion behind the bulkhead causing sinkholes to form and sediment to spill freely.

**Project Description**

This is a Stormwater Management -- Green Infrastructure project that impacts the Barnegat Bay Watershed. There is also a resiliency component. The proposed project includes stormwater management and conveyance improvements to include the creation of a longitudinal bioretention swale with rain garden areas, installation of overflow bubbler inlets on outfall pipes to discharge the runoff into the bioretention swale, installation of structural and/or non-structural water quality treatment devices and measures on existing outfall pipes for surface water conveyance, installation of new outfall pipes as needed for positive drainage of the bioretention swale, and grading of the park property as needed. Also included is the reconstruction and elevation of approximately 1,400 linear feet of bulkhead and installation of a pervious pedestrian walkway and safety railing at the new bulkhead.

**County**

Salem

**Existing Population**

3,100

**Service Area**

Sections of both Alloway and Quinton Townships

**Need for Project**

The on-site septic systems in the proposed service area are malfunctioning and causing groundwater degradation. The area borders Elkington Lake and Laurel Lake as well as Alloway Lake and Alloway Creek. The existing systems are impacting fishable (non-trout) recreational industrial and agricultural uses of these waterbodies.

**Project Description**

The proposed project consists of the construction of force mains gravity sewers and pumping stations. The collected wastewater either will be conveyed to the Salem treatment plant or to a newly erected treatment plant within the service area which will be a part of this project.

Sanitary Sewer System - New

**Priority List Rank**

630

**County**

Atlantic

**Existing Population**

14,791

**Service Area**

SouthwestSoutheast portions of Hammonton

**Need for Project**

Residents in the area have expressed problems with failing septic systems and individual potable water supply well contamination. This project will also assist residents who have lost the use of their land due to the septic nitrate regulations of the Pinelands Commission. The increased amount of customers will assist the sewer user base and help to reduce the overall user cost for everyone on line.

**Project Description**

The project consists of replacement of existing sewer interceptors and the construction of new interceptors pump station force mains and sewer collection mains. Although the projects are not contiguous the type of work and benefits derived will be similar. The Southeast Hammonton area will consist of the placement of a 12 inch sanitary sewer trunk line within the rights-of-way of Thirteenth Street Egg Harbor Road and Fourteenth Street. Eight (8) inch collector sewer lines will be installed within the remaining roadways of this project area. The Southeast Hammonton area will consist of the placement of a 12 inch sanitary sewer trunk line within Park Avenue easement areas Grand Street and through a portion of the Fox Chase Development. A 10 line will be installed along Ninth Street and a portion of Tenth Street. The remaining streets in this area will be serviced with an 8 inch sanitary sewer. It is also anticipated that an upgrade of the existing pump station located on Park Avenue will have to be completed or a new station installed on Grand Street at the low point to service this area.

**Need for Project**

The Project will be a distribution system for the reuse of treated wastewater to end users within the MCUA Service Area. All treated wastewater conveyed to end user locations, which following its intended use requires disposal, will be redirected to the sanitary sewer for ultimate treatment by the MCUA. The Project will divert treated wastewater from being conveyed to receiving waters.

**Project Description**

The Project will involve the construction of a 15 MGD Pumping Station and appurtenances to convey treated wastewater from the Edward J. Patten Water Reclamation Center in Sayreville NJ to end user locations. The pumping station will be located at the wastewater treatment facility site. End users will construct and connect their conveyance piping to the pumping stations discharge pipe for transmission of the treated effluent to end use sites. Two electric power generation facilities have approached the MCUA for the use of treated wastewater for cooling purposes at their facilities.

**Service Area**

This project will serve various areas throughout the Township such as Ludlum Road Arbor Road Riverlawn Drive Riverdale Drive and Hoffman Grove area.

**Need for Project**

Many areas of the Township presently served by on-site systems have exhibited problems and/or malfunctions as evidenced by foul odors and numerous homeowner complaints thus causing a public nuisance. As determined by the soil conservation service these areas correspond to soils with severe limitations for on-site disposal.

**Project Description**

This project is for the construction of a sanitary sewer collection system within problem areas of the Township. All of the areas will tie into existing transmission lines for ultimate disposal at the Mountain View treatment plant.

**Service Area**

South Egg Harbor City

**Need for Project**

The present disposal system for the area is a septic system which is failing and may pose a threat to health and may also contaminate surface and groundwaters. The Pinelands Commission has recently adopted a new ordinance that affects this area. The zoning of the South Egg Harbor City Section of the Township reflects this change and conforms to the Pinelands comprehensive management plan.

**Project Description**

The proposed sanitary sewer extension project consists of approximately 60000 linear feet of 8-inch 10-inch or 12-inch diameter gravity sanitary sewer lines to service the existing population of the area. The system is designed to consist of 231 unsewered dwelling units ( 3.5 persons per dwelling unit). Two pumping stations will also be necessary. One is planned to be located along Pittsburg Avenue the other along Bella Donna Street. The wastewater flow from this area will be conveyed via the ACUA Pomona Pump Station to the ACUA Coastal Plant for secondary treatment with effluent discharge to the Atlantic Ocean.

Sanitary Sewer System - New

**Priority List Rank**

641

**County**

Monmouth

**Existing Population**

24,710

**Service Area**

Unsewered areas within the Township of Freehold

**Need for Project**

The construction of sanitary sewers will eliminate the use of existing failing on-site septic systems in developed portions of the Township.

**Project Description**

The proposed project consists of construction of approximately 24300 LF of gravity sewers two pump stations and related force mains and a low pressure sewer system to serve approximately 365 existing homes.

**Need for Project**

Failure of on-site sewage disposal systems within the township surrounding Victory Timber and Sunset Lakes have created a public nuisance and have contributed to water quality degradation in the area.

**Project Description**

The facilities plan recommends the construction of a collection system interceptor pump stations and force mains. Sewage will flow to GCUA for treatment and disposal.

South Brunswick Township  
S340897-01  
Sanitary Sewer System Rehabilitation

**Priority List Rank**

644

**County**

Middlesex

**Existing Population**

22,360

**Service Area**

This project will serve existing and new development along the Major Road area of the Township.

**Need for Project**

Approximately 36 homes are served by on-site systems a significant portion of which have exhibited problems and/or malfunctions thus causing a public nuisance. The Soil Conservation Service has determined that the Major Road area corresponds to soils with severe limitations for on-site disposal systems. South Brunswick Township will apply under the Public Health Hazard Bypass provisions of the priority system.

**Project Description**

The proposed project is for the construction of approximately 4500 feet of ten inch sewer line and 1450 feet of eight inch sewer line. The project also calls for the reconstruction of approximately 834 feet of the existing Town Center Sewer. Approximately 31 of the existing properties could make gravity connection to the sewer line and the other 5 homes would have to utilize small grinder pumps to tie into the proposed project.

**Need for Project**

An expansion of the collection system is needed to replace inadequate on-site systems which are malfunctioning and pose a potential health hazard to local residents by adversely impacting well waters.

**Project Description**

The proposed project involves the construction of lateral sewers and a pumping station to relieve malfunctioning septic systems. This project will provide a collection system for the remaining areas of the Township. These areas include areas 7 8 9 14 and 15-5 as identified in the amendment to the 1981 facilities plan (dated June 1 1990). Wastewater will be conveyed to the Parsippany-Troy Hills STP for treatment.

**Need for Project**

The tremendous rate of growth in the planning area coupled with an increasing number of septic tanks has placed a severe strain on the very permeable sandy soils to adequately treat the domestic wastes. Because of a generally high groundwater table and the high percentage of septic system failures pollution of the groundwater is suspected. The pollution to surface water in the planning area has already been documented in the Ocean County Areawide Water Quality Management Plan. The continuation of current septic tank problems poses a potential threat to the groundwater in the region. Therefore a proper sewage disposal system is necessary.

**Project Description**

Based upon economic environmental and engineering aspects the construction of the following collection system has been recommended Summit Park 13282 feet of gravity sewers Savannah Acres Low pressuregrinder pump system with 17085 feet of 2 PVC low-pressure piping Cedar Glen Homes 16000 feet of gravity sewers Richard and Whitney Estates 112 and 2 low-pressure sewers Cedar Glen West 3900 feet of 8 and 15 gravity sewers a pumping station and 8700 feet of 6 force main. The flow from the area will be conveyed to the Ocean County Utilities Authoritys Central Plant for treatment and disposal.

**Need for Project**

Some of the septic systems of the Township are malfunctioning and thus causing potential environmental or health hazard situations and creating a public nuisance.

**Project Description**

This project involves construction of a new sewerage system to serve twenty-two (22) homes in the Rocky LaneColumbia Road area of Basking Ridge. The system will consist of all gravity sewers with the exception of two properties which will require pumping to a pressure sewer. The wastewater will be conveyed to the 1.2 MGD capacity treatment plant.

**Service Area**

Franklin Township

**Need for Project**

The project area in Franklin Township consists of Franklinville Malaga and Newfield which are existing developments served by individual on-lot systems. There is public nuisance associated with these on-site disposal systems in the area.

**Project Description**

The selected plan of the GCUA Facilities Plan calls for the complete regionalization of the proposed sewer collection systems for Franklin Township and the Borough of Newfield with an interceptor system to convey wastewater to the Landis Sewerage Authority Plant for treatment and ultimate disposal. The selected plan basically involves the construction of three pump stations interceptors and force mains to convey the wastewater to the Landis SA plant.

**Service Area**

Borough of Oakland

**Need for Project**

The area is currently served by septic systems and some small package treatment plants. Existing disposal facilities result in a public nuisance as a result of high groundwater and impervious soils.

**Project Description**

The facilities plan recommends the design and construction of a gravity collection system for the majority of the developed areas of the Borough and interceptor sewers. This project involves the collection and interceptor sewers.

The

**Need for Project**

Vernon Township is comprised of clusters of lakeside communities (including Barry Lakes) that have developed from seasonal vacation homes to year-round dwellings. This fact coupled with the restrictions of small undersized lots located on soils with severe limitations for on-site systems has resulted in an overburdening of the soil stratum. This has led to an increasing number of septic system failures which previously had functioned satisfactorily. In addition a number of existing systems are known to be inadequate through design and/or installation deficiencies. This situation poses public health as well as nuisance problems to the Township. The needs of Vernon Township as identified under the Sussex County Step I Study (C340503-01) are to be resolved on a local level through this project.

**Project Description**

This project would implement the wastewater management recommendations of the Sussex County-Pochuck Facilities Plan on a local level. Collection low pressure and/or cluster systems may be involved in this project. On-site rehabilitation in conjunction with the establishment of a septic management district(s) may also be a viable alternative. The construction of this project should satisfy the wastewater needs of Vernon Township as well as maintaining water quality and safeguarding the public health.

**Need for Project**

This project is necessary for the construction of a sewer extension. This is the second phase of the Boroughs collection system project. The first phase (75130 l.f.) has already been constructed. In several instances septic systems have been malfunctioning creating potential health hazard situations and a public nuisance.

**Project Description**

This project involves the construction of 4251 linear feet of collector and interceptor sewer and a pump station which will convey wastewater to the proposed Wanaque Valley Regional Sewerage Authority treatment plant (0.68 MGD capacity). The planning work for the collection system needs to be addressed.

Township of Mahwah (Portion)

**Need for Project**

The area is currently served by septic systems failures appear to be contributing to the pollution of groundwater a potable water source. This could result in health problems in the community. The project would also convey wastewater from package plants in the Township. The water quality in the area marginally meets standards for fecal coliform and nutrients.

**Project Description**

The project involves construction of a collection system and interceptor to serve the Fardale Section of Mahwah Township. The wastewater will be conveyed through the Northwest Bergen County Utilities Authority interceptors and then to the treatment plant in Waldwick. The project report has not been submitted by the Township.

Upper Saddle River Borough  
S340909-01  
Sanitary Sewer System - New

**Priority List Rank**

659

**County**

Bergen

**Existing Population**

7,840

**Service Area**

Southwest portion of Upper Saddle River

**Need for Project**

Sanitary sewers from the commercial buildings in the southwest portion of Upper Saddle River drain into the Ramsey Brook Interceptor. The Ramsey Brook Interceptor was not originally designed to handle flow from the southwest portion of Upper Saddle River. As a result the line runs near capacity with some surcharging. Continuing commercial development in this area necessitates an alternate drainage source. Construction of a sanitary sewer collection system which would drain into the northwest Bergen Interceptor to serve both the expanding commercial and residential (currently served by septic system) communities in the southwest portion of Upper Saddle River has been proposed.

**Project Description**

Construction of a sanitary sewer collection system and interceptor. The sewer system would contain 9800 linear feet of 8-inch and 1000 linear feet of 10-inch diameter sanitary sewers.

**Project Name, Number**

Manchester Township  
S340650-05  
Pump Stations

**Priority List Rank**

661

**County**

Ocean

**Existing Population**

6,460

**Service Area**

Pine Lake Park area of Manchester Township

**Need for Project**

The tremendous rate of growth in the area coupled with an increasing number of septic tanks has placed a severe strain on the very permeable sandy soils to adequately treat the domestic wastewater. Because of a generally high groundwater table and the high percentage of septic system failures pollution of the groundwater and surface water is suspected. Also the current septic tank problems pose a potential threat to the health of local residents. Therefore a proper sewage disposal system is necessary.

**Project Description**

The project is for the construction of three pump stations and approximately 35 miles of force mains and gravity sewers with diameters ranging from 8 inches to 24 inches. The wastewater will be conveyed to the existing 42-inch diameter Union Branch Interceptor owned and operated by the Ocean County Utilities Authority (OCUA). The wastewater will be treated at the OCUAs Central Plant located in Bayville for secondary treatment with effluent disposal to the Atlantic Ocean.

**Need for Project**

The Gould town center area to be serviced relies on the discharge to groundwater through individual onsite septic systems that are close to 30 years old. As a result of aging and failing septic systems the project will provide a sanitary sewer extension to address groundwater quality standards.

**Project Description**

The proposed project includes the installation of 18000 linear feet of gravity sewer ranging in size from 8 to 12 inches and the upgrade or replacement of an existing pump station to eliminate the onsite systems.

Sanitary Sewer System - New

**Priority List Rank**

663

**County**

Bergen

**Existing Population**

6,120

**Service Area**

Borough of Carlstadt

**Need for Project**

There are malfunctioning and inadequate on-site systems which cause a public nuisance in unsewered areas of Carlstadt. Additionally a portion of Carlstadts sewered flows are currently conveyed to the RutherfordCarlstadts Joint Meeting STP for treatment prior to discharge to Berrys Creek (FW2-NTSE-2). This plant has been under a court order on consent to be abandoned in favor of regional treatment by the Bergen County Utilities Authority (BCUA). Existing water quality violates standards for dissolved oxygen fecal coliform and toxics.

**Project Description**

The facilities plan has evaluated alternative methods for the diversion of all or part of the flow from the Joint Meeting plant to the BCUA regional treatment facilities. The plan also identifies additional sanitary facilities needed to collect sewage in developed and developing areas of Carlstadt.

**Project Name, Number**

Mahwah Township  
S340737-01  
Decentralized Wastewater (or Septic) System Repair/Replacement

**Priority List Rank**

664

**County**

Bergen

**Existing Population**

6,000

**Service Area**

Mahwah Township (unsewered portion)

**Need for Project**

Facilities planning in Mahwah Township has identified areas of low density development which will remain unsewered for the planning period. However areas of soils with limitations to on-site disposal exist and on-site systems continue to fail in these areas. These malfunctions are considered to be public nuisances and must be addressed. It is therefore necessary to create a management program to address the correction of malfunctioning systems in unsewered areas.

**Project Description**

This project is still in the planning stages and the specifics of the septic management program to be adopted by the Township have not yet been determined. However at a minimum the program must provide for inspections of systems every three years.

**County**

Sussex

**Existing Population**

5,960

**Service Area**

Branchville Borough and sections of Frankford Township.

**Need for Project**

The service area is a clustered community which currently relies on on-site septic disposal systems for the treatment of wastewater. Many of these systems appear inadequate and are a public nuisance to the community. An on-going planning study was conducted under the Sussex County-Paulinskill planning grant (C340449-01) to determine the nature severity and extent of the wastewater disposal problems for the impacted areas.

**Project Description**

The proposed project includes the construction of a pump station and force main to convey flow to the wastewater treatment plant site construction of a treatment plant with the ability to treat effluent to Class II A groundwater standards with subsurface disposal of the treated effluent.

S340790-02  
Sanitary Sewer System Rehabilitation

**Priority List Rank**

667

**County**

Camden

**Existing Population**

5,550

**Service Area**

Berlin Township

**Need for Project**

At present there is no sewer service to the residents of Berlin Township. Well-drained sandy soils and a shallow groundwater table increase the possibility of contamination to ground waters by individual septic tank disposal systems. In addition contamination of the head waters of the Great Egg Harbor River (PL and FW2-NT) and nitrogen contamination of wells has been attributed to septic tank sources in Berlin Township. The systems are also creating a public nuisance.

**Project Description**

The proposed project consists of the construction of a new collection system of approximately 138774 linear feet and four pumping stations. The collection system will connect to the regional CCMUA pumping station.

Portion of the Township of Mahwah

**Need for Project**

The area is currently served by septic systems failures appear to be contributing to the pollution of groundwater a potable water source however this has yet to be documented. This could result in health problems in the community. The project would also convey wastewater from package plants in the Township.

**Project Description**

The project involves construction of collection system to serve Craigmere and Oak Hills sections of Mahwah Township. The wastewater will be conveyed through the Northwest Bergen County Sewer Authority interceptors and then to the treatment plant in Waldwick. The facilities plan work has not been submitted by the Township.

Sanitary Sewer System - New

**Priority List Rank**

674

**County**

Burlington

**Existing Population**

2,100

**Service Area**

Highly dispersed areas of Evesham Township including the Marlton Lakes area.

**Need for Project**

The Marlton Lakes area of Evesham Township has experienced on-site disposal problems for the past seven years. Monitoring of potable water wells has shown high nitrate readings and the lake has shown indications of eutrophication from elevated nitrate levels. Approximately 850 developed properties exist in the southern two thirds of the Township with about 40 concentrated in the Marlton Lakes area. A review of the more concentrated areas of development shows that on-site systems are located on Lakewood and Evesboro soils that have severe limitations for septic systems due to high permeability. Many homes in the highly dispersed areas of the Township have also experienced on-site disposal problems. In the northern portions of the Township outside of the existing sewer service areas many homes experiencing problems are located on Kresson and Marlton soils having severe limitation for on-site disposal due to poor permeability.

**Project Description**

The recommended plan for wastewater management for southern Evesham Township has been divided into two regions based primarily on the need for wastewater management and population density o Marlton Lakes Community Small DiameterSTEP sewer system with centralized wastewater treatment utilizing the Carrousel process followed by effluent disposal in a series of Rapid Infiltration basins. o Remainder of Southern Evesham Township Privately owned publicly managed septic system management district entailing periodic septic tank pump-out and septic system inspection. Pump-out and maintenancerepair costs would be the responsibility of the owner.

Sanitary Sewer System - New

**Priority List Rank**

675

**County**

Morris

**Existing Population**

1,700

**Service Area**

A portion of the Borough of Kinnelon

**Need for Project**

The Borough has proposed the construction of a collection system for a small area of the Borough where on-site disposal systems have been experiencing problems and have malfunctioned. Water quality standards are currently marginally meeting fecal coliform and nutrients.

**Project Description**

It is anticipated that this project will be for the construction of one pump station force main and approximately 48000 L.F. of gravity sewer. The Borough of Kinnelon has become a member of the Pequannock River Basin Regional Sewerage Authority (PRBRSA) (January 1 1991). The project would connect to a PRBRSA interceptor at the ButlerKinnelon boundary and all wastewater would be discharged to the Pequannock-Lincoln Park-Fairfield Sewerage Authority for treatment.

Hope Township  
S340872-01  
Sanitary Sewer System - New

**Priority List Rank**

676

**County**

Warren

**Existing Population**

1,660

**Service Area**

The study area for this project consists of Hope Township within the Pequest Basin.

**Need for Project**

The majority of the township is currently using cesspools as a means of on-site wastewater disposal. Failures of these systems have created potential health hazards. In the Silver Lake area the water table is high and wells are shallow. Cesspools and septic systems have been a public nuisance through surface failures and groundwater pollution. The septic malfunctions have been threatening the health and welfare of the local residents. Because of the existing small lot size soil limitations and lack of adequate planning for runoff management there is significant potential for future environmental and health problems within the community as well as problems of the degradation of water quality in Silver Lake.

**Project Description**

This project is still in early stage of planning and proposes small diameter gravity system connected to a community-based leaching field as an alternative solution to malfunctioning septic systems. Also included is a sub-surface drainage system to be installed to collect and divert high seasonal groundwater and run-off to protect the disposal bed from flooding.

Anticipated Recipient:	Pequannock Township

Sanitary Sewer System - New

**Priority List Rank**

677

**County**

Morris

**Existing Population**

1,340

**Service Area**

Pequannock Township

**Need for Project**

The project is needed to improve existing wastewater treatment practices through the elimination of approximately 490 on-site disposal systems in a residentialcommercial area and replacing them with a sanitary sewer system. The soils in this service area are classified by the Soil Conservation Service as severely limiting for on-site disposal. The average housing stock in this area is in excess of 35 years and health surveys have indicated an incidence of septic system malfunctions and shallow aquifer contamination. The proposed sewer system will provide the transmission facilities to convey the wastewater to the Pequannock Lincoln Park and Fairfield Park Sewerage Authority (TBSA) facilities for ultimate treatment.

**Project Description**

This Phase IV project will be an extension of the Phase III sanitary sewer system and will include the residential area known as the Village and the commercial areas on Route 23.

**Need for Project**

Failure of on-site sewage disposal systems within the Gardendale and Grenloch areas of Washington Township have created a public nuisance. Project is necessary to eliminate failing septic systems and to construct a sanitary sewer collection system to service several of the older developments within Washington Township.

**Project Description**

Construction of extensions to the existing sanitary sewer collection system. The extension to the Grenloch area collection system will consist of approximately 9895 linear feet (L.F.) of gravity main 1750 LF of 4 force main 1 pump station and all appurtenances along Park Avenue Lake Avenue Central Avenue Edgewater Avenue Milburn Avenue Arbutus Avenue and Woodbury-Turnersville Road. The extension to the East Gardendale area collection system will consist of approximately 10940 LF of 8 gravity main and all other appurtenances. The extension will include McKinley Avenue Garfield Avenue Myrtle Avenue Spruce Street Chestnut Street Lucust Street Pine Street Copper Street Hilbert Drive and Forrest Street. The extension to the Wilson Road area collection system will consist of approximately 2890 LF of 8 gravity main and all appurtenances. The Wilson Road area extension will include West End Avenue Salem Avenue Glen Avenue Wilson Road and Woodbury-Turnersville Road. All new flows are to be conveyed to and treated at the Gloucester County Utilities Treatment Plant.

**Service Area**

Holly OaksKnollwoods area of the Manchester Township

**Need for Project**

The tremendous rate of growth in the area coupled with an increasing number of septic tanks has placed a severe strain on the very permeable sandy soils to adequately treat the domestic wastewater. Because of a generally high groundwater table and the high percentage of septic system failures pollution of the groundwater and surface water is suspected. Also the current septic tank problems pose a potential threat to the health of local residents. Therefore a proper sewage disposal system is necessary.

**Project Description**

The project is for the construction of two pump stations and approximately 8 miles of force mains and gravity sewers with diameters ranging from 6 inches to 12 inches. The wastewater will be conveyed to the existing 42-inch diameter Union Branch Interceptor owned and operated by the Ocean County Utilities Authority (OCUA). The wastewater will be treated at the OCUA's Central Plant located in Bayville for secondary treatment with effluent disposal to the Atlantic Ocean.

Strathmere Section of Upper Township

**Need for Project**

This project is proposed for the elimination of public nuisance associated with ground and surface water pollution possibly resulting from malfunctioning individual on-site wastewater treatment systems. The Strathmere section of Upper Township is a recreational island community characterized by high summer population densities and high groundwater levels.

**Project Description**

Upper Township proposes the planning design and construction of a new sanitary sewage collection and interceptor system for the elimination of the existing improperly operating on-site systems. Wastes collected in this system will be pumped into the Avalon system for transmission to the proposed 7.67 mgd Seven MileMiddle regional treatment facility. The collection and treatment of wastes generated by the Strathmere section of Upper Township were included in the Seven MileMiddle regional plans.

**Project Name, Number**

Pequannock Township  
S340480-05  
Sanitary Sewer System Rehabilitation

**Priority List Rank**

681

**County**

Morris

**Existing Population**

860

**Service Area**

Pequannock Township

**Need for Project**

The project is needed to improve existing wastewater treatment practices through the elimination of on-site disposal systems in a residentialcommercial area and replacing them with a sanitary sewer system as well as for future growth. The soils in this service area are classified by the Soil Conservation Service as severely limiting for on-site disposal. The average housing stock in this area is in excess of 35 years and health surveys have indicated an incidence of septic system malfunctions and shallow aquifer contamination.

**Project Description**

This Phase III project will be an extension of the Phase I sanitary sewer system and will include the residential area between Greenwood Avenue and Pequannock Avenue and the commercial properties along the southern portion of Route 23. The proposed sewer system will provide the transmission facilities to convey the wastewater to the Pequannock Lincoln Park and Fairfield Park Sewerage Authority (TBSA) facilities for ultimate treatment.

**Service Area**

Branchville

**Need for Project**

The Branchville area is currently relying on on-site septic disposal systems for the treatment of wastewater. Many of these existing systems appear inadequate and are becoming a public nuisance.

**Project Description**

This project is part of a wastewater treatment system to be developed by the Sussex County Municipal Utilities Authority and consists of a proposed regional sewage treatment plant which will serve Frankford Township along with Branchville Borough. It includes the construction of a collection and interceptor system for the Branchville Borough area.

Village of Vincentown

**Need for Project**

The Village of Vincentown is primarily a residential area currently using individual on-site wastewater treatment disposal systems. A survey report was made by the Burlington County Health Department which showed that many of the systems are having serious problems.

**Project Description**

The topography of the area to be served (Village of Vincentown) is not steep sloped but with gently sloping grades. The major obstacles are three small streams which will be crossed by hanging insulated pipes on the existing bridges. 11200 L.F. 8 inch san. sewer pipe and 3800 L.F. force main will be installed. The project also entails 230 laterals 44 manholes and pavement restoration.

**Service Area**

Bartons Lake and Fawn Lake Villages in Shamong Township

**Need for Project**

The Fawn Lake and Bartons Lake areas of Shamong Township have been experiencing on-site disposal problems for the past ten years. Bartons Lake Village is a development of 77 homes adjacent to Indian Mills Lake. This development is experiencing failures due to high groundwater and soil constraints. The Fawn Lake Village is a mobile home park with approximately 114 units served by combined septic systems. Problems experienced in the development appear to be associated with undersized systems and soil constraints. The Fawn Lake Village is adjacent to Springers Brook a tributary of the Mullica River.

**Project Description**

The facilities plan indicates that two septic tank effluent collection systems which will convey partially treated wastewater to two community leachfields will be the most cost-effective solutions for the two problem areas.

690

**County**

Morris

**Existing Population**

180

**Service Area**

Pequannock Township - Pequannock Avenue from Newark-Pompton Turnpike to Route 23 and a portion of Madison Street

**Need for Project**

The project is needed to improve existing wastewater treatment practices through the elimination of on-site disposal systems which serve a residential area of 61 units and replacing them with a sanitary sewer system. The soils in this service area are classified by the Soil Conservation Service as severely limiting for on-site disposal. The average housing stock in this area is in excess of 50 years and health surveys have indicated an incidence of septic system malfunctions and shallow aquifer contamination.

**Project Description**

The proposed project includes the construction of approximately 320 linear feet of 8-inch diameter PVC sewer main and 2825 linear feet of 10-inch diameter sewer main and all necessary appurtenances to serve 61 properties. Also included in the project is a culvert crossing and the crossing of the City of Newark's twin water supply aqueducts. The proposed sewer system will provide the transmission facilities to convey the wastewater to the Pequannock Lincoln Park and Fairfield Park Sewerage Authority (TBSA) facilities for treatment.

**Project Name, Number**

Lincoln Park Borough  
S340594-02  
Sanitary Sewer System - New

**Priority List Rank**

691

**County**

Morris

**Existing Population**

140

**Service Area**

Borough of Lincoln Park (portion)

**Need for Project**

There are approximately 67 homes within the proposed service area (Jacksonville Road) which have experienced problems and/or failures with their individual disposal systems. This has created a public nuisance.

**Project Description**

This project is for the construction of a pump station force main interceptor and collector sewers for this service area. These facilities will convey the Boroughs wastewater to an existing interceptor of the Pequannock Fairfield and Lincoln Park Sewerage Authority (TBSA) for ultimate disposal at the existing TBSAs treatment plant. This project is presently in the facilities planning stage.

Anticipated Recipient:	Woodbridge Township

**Project Name, Number**

Woolwich Township  
S340432-01  
Sanitary Sewer System - New

**Priority List Rank**

693

**County**

Gloucester

**Existing Population**

10,200

**Service Area**

Woolwich Township is located in northwestern Gloucester County and is bounded by the Townships of Logan, Greenwich and East Greenwich on the north, Township of Harrison on the east, Township of South Harrison and Piles grove on the south, Township of Oldmans on the west and the Borough of Swedesboro in the center. The Township of Woolwich has an approved Wastewater Management Plan that includes the area to be served by this project within the sewer service area. Sanitary sewer service in Woolwich Township is provided by Aqua NJ. The Weatherby area of the Township has a sanitary sewer system that flows to LTMUA. There is also a small section of the Township that is serviced by Swedesboro.

**Need for Project**

The project will serve the TDR receiving area along Route 322. The area is currently serviced by septic systems. The new sewer force main and pump station will ensure future development is not serviced by septic. Otherwise development could result in negative impacts to water quality. Although the project impacts the TDR receiving area, the sending area will now be protected from future development and water quality issues that may have resulted from development in the sending area.

**Project Description**

The project serves a smart growth regional center and a TDR receiving area. This project consists of the extension of sanitary sewer service to residential and commercial properties within the TDR receiving area designated along Route 322 and commercial and industrial properties along Route 322. A gravity sewer extension will be installed within the Route 322 rights-of-ways and a sanitary pumping station will be located at the border of Woolwich and Logan Townships. A force main will extend along Route 322 and through an easement to convey the flows from the proposed Woolwich pump station to an existing LTMUA pump station which will convey the flow to the Water Reclamation Facility.

Excessive nutrients have led to the Newton Creek to become eutrophic which has manifested itself in algae blooms and algae mats. The algae blooms and mats have affected the dissolved oxygen levels in the creek. This project will address watershed and stormwater practices to positively affect external nutrient loading.

**Project Description**

The project consists of the dredging and bank stabilization of the Newton Creek from Saddler's Woods in Haddon Township to the White Horse Pike in Oaklyn including the Peter's Creek tributary. Dredging will improve the water quality of the Creek and bank stabilization efforts will aim to eliminate runoff into the Creek in order to maintain the water quality achieved by dredging.

**Need for Project**

Stormwater runoff is the most common way that nonpoint source pollution reaches local rivers creeks and lakes. Rainwater carries chemicals nutrients sediments and other forms of nonpoint source pollution into local streams if the water is not absorbed by soil and vegetation. The Townships goal with its stormwater management plan is to increase absorption of rainwater by soil and vegetation using mechanisms that reduce the velocity of flow and retain the water in natural areas. This will reduce the amount of pollutants being carried off to nearby watercourses and reduce flooding.

**Project Description**

The proposed project includes replacement of existing compacted gravel roads that currently have no stormwater management controls with pavement and specific stormwater controls both structural and nonstructural to properly control stormwater runoff and reduce nonpoint source pollution. Nonstructural management will include practices such as allowing stormwater to runoff roadways into vegetated areas as sheet flow where feasible directing runoff into vegetated swales where feasible and allowing stormwater that must be collected to bubble up through outlets and spread out as sheet flow runoff through vegetated filter strips and forested riparian buffers. Where it is not practical to utilize those nonstrucural practices stormwater will be collected and directed into an underground stormwater recharge system.

The Fisherman's Park Flood Gates provides an outlet for the Baltic Avenue Canal which drains an 815 acre area of Atlantic City that stretches from just south of the Atlantic City Expressway to the Absecon Inlet and the Bungalow Park Neighborhoods in Atlantic City. The planned Fisherman's Park Flood Gates are located at the intersection of Melrose Avenue and N. Rhode Island Avenue.

**Need for Project**

This system is designed to improve flood and storm water control in much of the City of Atlantic City. The project includes removal of existing flood walls and construction of 542 linear feet of new flood walls; construction of closed drainage culvert to replace open drainage culvert; construction of storm water control gates; and construction of new storm water pumping structure and piping.

**Project Description**

(Carryover SFY2015) - The proposed project involves repair and installation of floodwalls and floodgates. The project also includes reconstruction and elevation of roadway. These improvements will reduce flood damage to the City's infrastructure. This system is designed to improve and protect groundwater by providing well-designed stormwater systems. Hence this project will provide adequate environmental infrastructure to improve resiliency of Sandy damaged systems in future natural disasters.

**Need for Project**

This system is designed to improve and protect groundwater by capping historic fill and providing well-designed stormwater wastewater and water supply systems. This site will support a new business park and marina when completed.

**Project Description**

This project includes installing a fill material shore protection structure stormwater management site work sewer and water supply systems and soil erosion and sedimentation control systems at the planned Riverside Business Park. This project is designed to make the stormwater system more resilient and to protect public infrastructure and private investments in the area. This system is designed to improve and protect groundwater by capping historic fill and providing well-designed stormwater systems.

**Need for Project**

The proposed improvements will address existing roadway flooding and potential pavement deterioration soil erosion and also improve water quality in the Pine Lake via reduction in TSS and phosphorus removal.

**Project Description**

The project involves installation of six (6) subsurface recharge systems approximately 1600 linear feet of 36 perforated HDPE pipe within the Pine Lake Park area of the Town. The project also includes installation of 50 new inlet structures. The Town will also collect runoff from four dead end areas and redirect them into proposed treatment units prior to discharging into Pine Lake.

**Need for Project**

This project seeks to correct the ecological imbalances of the site through ecologically designed water management practices resulting in increased infiltration into the ground of clean water cleaner water throughout the site that is naturally cleansed through plant processes without the use of chemicals and a healthier minimized and controlled return of water to the Dead River. This project also seeks to create clean water from waste water through the use of constructed wetlands. Water exiting the system is recreational quality water before it is returned to the ecosystem therefore reducing site pollution. This project is in the planning area of the Highlands and as such seeks to contribute clean water to the eco-system.

**Project Description**

Mine Brook Road is an ecologically designed and agriculturally integrated residential development with 12 homes on Minebrook Road in Bernards Township in the Highlands Planning Area. The property is bounded by RT 287 to the north and west and the Dead River to the east. The entire property was design to be sustainable and water was a primary focus. The current conditions include high levels of runoff and low water infiltration to the soil. This is being addressed through a site-wide ecologically driven stormwater system that includes new constructed wetlands a habitat pond and vegetated swails throughout that cleanse water as it travels through the site so that all water returned to the ecosystem is clean water. We are also working with DEP to permit a new constructed wetland for the treatment of wastewater on the site. This system is similar to a constructed wetland wastewater treatment system that we built for the Willow School in Gladstone and we believe it will be the first one to serve a residential community in the state of NJ. Aside from water agriculture energy and other sustainability concerns are also featured very heavily in this project. Organic berries and fruits will be grown on site. Because this project is so forward thinking it helps to create green jobs that will push the green economy forward - these jobs are green design green construction organic farming (there will be farmers employed) and peripheral jobs for material creation.

Sanitary Sewer System - New

**Priority List Rank**

715

**County**

Middlesex

**Existing Population**

2,500

**Service Area**

Portions of Cranbury Township

**Need for Project**

Cranbury Township Planning Board recently changed their zoning on the east of Route 130 to permit 100 warehouse development. This has caused a dramatic increase in growth on the east side of Route 130 during the past year. The installation of the proposed sanitary system would benefit future development in the area east of 130. By diverting all flows presently directed to the Village Area Pump Station from the east side of Route 130 the Village Area Pump Station and force mains will have sufficient capacity for all projected flows west 130.

**Project Description**

The proposed project includes installation two new pump stations one at 1.75 MGD with 1700 LF of 12 force main the second at 3.75 MGD with 4000 LF of 16 force main.

Greenwich Township  
S340359-02  
Sanitary Sewer System - New

**Priority List Rank**

716

**County**

Warren

**Existing Population**

5,712

**Service Area**

The proposed service area is located in the hamlet of Stewartville, Greenwich Township ant the intersection of two county roads and a municipal road. The hamlet primarily consists of d single family and multi-family dwellings, commercial buildings and institutional buildings. Many of the lots are approximately one quarter acre in size. The community is served by a public waster supply.

**Need for Project**

Failing septic systems on small lots and the proximity to local streams

**Project Description**

The Township of Greenwich proposes to install a collector sewer in the vicinity of the Village of Stewartville. The project area is located in an existing approved sewer service area designated in the Township's Wastewater Management Plan (WMP). Dwellings and commercial establishments in the village are currently served by onsite sewage disposal system, many of which are cesspools. The proposed sewer extension is anticipated to be primarily a gravity system to be constructed within existing road right-of-ways and other easements as required. The gravity system would be routed to a proposed pump station adjacent to the Greenwich Township Middle School located on South Main Street. The proposed sewers would be located in the following streets and right-of-ways: Greenwich Street (County Route 638) North Main Street (County Route 637) South Main Street (County Route 637) Willow Grove Road Washington Street Water Tower Road

Sludge Treatment/Disposal Facilities

**Priority List Rank**

717

**County**

Burlington

**Existing Population**

358,290

**Service Area**

Several Municipalities in New Jersey

**Need for Project**

The State of New Jersey has mandated that all septic tank wastes (septage) be banned from disposal in unlined landfills as of March 15 1985. Subsequently as there are no adequate landfills in the County an agreement has been reached between Burlington County and the Mount Holly Sewerage Authority in which the latter would act as the lead agency to dispose of the Countys septage on an interim basis. However the Authoritys facility is not designed to accept septage and the septage management plan concluded that treatment plant modifications are necessary. Since there are no adequate means of septage disposal in the County initial investigations indicate that septage is being dumped illegally and in all likelihood is resulting in localized surface and ground water degradation.

**Project Description**

The proposed project will treat and dispose of all the septage generated in the County on a short term basis at relatively minor costs. The county-wide sludgeseptage study (C340818-01) will plan for septage disposal on a long-term basis. The latter study may conclude that the Authority should dispose of septage also for the long-term. The plans and specifications recently submitted will provide for the following 1. Screening and Grit Removal Equipment 2. Comminutor 3. Aerated Holding Tanks 4. Chlorination Equipment 5. Pumps 6. Odor Control 7. Prefabricated Structure

**Need for Project**

The Gloucester County Utilities Authority (GCUA) is presently disposing of sludge by incineration. The design capacity of the GCUA incinerator is inadequate to handle the 15 tons of sludge (dry weight basis) produced at the GCUA Regional Plant. As a result the Authority proposes to add another fluidized bed to the existing incinerator in order to increase its design capacity. The approved (201) Facilities Plan for the GCUA consolidated region calls for static pile composting as a long term sludge management alternative. Therefore the Authority may be required to amend the facilities plan should they intend to employ incineration as the most cost effective environmentally sound and implementable long term sludge management alternative.

**Project Description**

The project will consist of the addition of a fluidized bed to the existing incinerator of the GCUA Regional Plant for disposal of all the sludges produced in the GCUA-consolidated region.

**Service Area**

Bedminster Township Bernards Township Bernardsville Borough Branchburg Township Bridgewater Township Far Hills Borough Hillsborough Township Manville Borough Millstone Borough Montgomery Township Peapack Gladstone Borough Raritan Borough Rocky Hill Borough Somerville Borough Warren Township

**Need for Project**

Disposing of septage in unlined landfills was banned on March 15 1985 pursuant to amendments of the Solid Waste Management Act to prevent the danger of groundwater contamination. An alternative disposal method is the utilization of existing treatment facilities. Therefore the municipalities indicated above have been assigned to the Somerset-Raritan Valley SA treatment plant as designated in Appendix A of the Statewide Septage Management Plan. The present facilities at SRVSA for handling septage wastes are inadequate to handle the quantity and quality of wastes proposed to be accepted. This project is necessary to ensure that septage disposal for existing and future development is in conformance with said plan.

**Project Description**

This project is for the construction of septage facilities at the SRVSA plant so that it may dispose of the septage generated in Somerset County. The septage management plan recommends that the design capacity of the septage receiving station at the SRVSA plant be 28000 gallons per day. In addition the plan is addressing management and implementation considerations. The septage plan will provide SRVSA with a septage treatment and disposal method that will enable the Authority to accept all the wastes from its designated areas while also meeting its discharge requirements.

Construction of a new 18 PVC sanitary sewer pipe will greatly reduce the amount of infiltration/inflow from this area will increase the flow capacity and will remove an environmental concern that presently exists within the nature preserve.

**Project Description**

Project consists of the construction of a new 18 PVC sanitary sewer by relocating it along the northerly boundary of the Bonsal Nature Preserve. The existing pipe is undercapacity due to excess I&I and root intrusion and it presently within the Township of Montclair which traverses along the center of the nature preserve. The existing pipe would be abandoned with flowable fill and eliminates a potential environmental liability.

**Service Area**

Borough of Upper Saddle River

**Need for Project**

This project will allow for the elimination of existing septic systems located along the Route 17 corridor and open capacity in the Boroughs of Allendale and Ramsey reducing the potential of sewage backups into adjacent waterways.

**Project Description**

Construction of two regional pump stations and associated force mains along two areas of the Route 17 corridor and connection into the NBCUA Allendale Brook Interceptor and Ho-Ho-Kus Brook Interceptor. This project would also include minor modifications to existing sanitary sewer system to provide connections into the new pump stations.

**Need for Project**

Approximately 30 percent of County residents employ on-lot individual septic systems to treat their wastewater. Currently numerous problems exist with these systems as a result of their installation in inappropriate soils and due to inadequate design. This situation leads to nuisance conditions possibility of public health problems and localized groundwater quality degradation. The problems in Salem County are further aggravated by the lack of adequate facilities to accept and properly dispose of septage pumpouts. The State of New Jersey mandated that septage be banned from all but lined landfills with leachate control effective March 15 1985. There are no such facilities in the planning area. It is presumed that a good deal of illegal septage dumping is occurring in the County and that surface and groundwater quality degradation may result.

**Project Description**

The planning for this project is to provide two basic responses to the problem outlined above. The first response is to plan for the adequate treatment and disposal for all the septage generated within the County. The second is to develop an overall management system of the County where on-lot systems currently exist. These solutions would involve the application and innovation of advanced technologies to resolve these problems. The facilities plan will consist of the following components 1. County-wide Septage Disposal Plan 2. On-lot Septic Tank Management Plan 3. Environmental Analysis 4. Full-scale Public Participation Program. Implementation of the selected plan will resolve the problem indicated above in a cost-effective environmentally sound manner.

**Service Area**

Denville Township East Hanover Township Montville Township Mountain Lakes Borough Parsippany-Troy Hills Township

**Need for Project**

Disposal of septage in unlined landfills was prohibited effective March 15 1985 to prevent the danger of groundwater contamination. An alternative disposal method is to use existing treatment facilities. Therefore the municipalities indicated above have been assigned to the Parsippany-Troy Hills treatment plant as designated in Appendix A of the Statewide Septage Management Plan. The project is necessary to insure that septage disposal for existing and future development is in conformance with said plan. The Township of Parsippany-Troy Hills is in the last stages of completing the construction of a 16 mgd advanced wastewater treatment facility. The present septage handling facilities were adequate to handle the flows from just the immediate service area but they are not adequate to handle the quantity and quality of wastes directed to this facility by the Department. It is the intent of this project to develop and implement a comprehensive plan to evaluate the capability of the treatment facility to accept additional septage wastes and to recommend necessary modifications be constructed.

**Project Description**

Parsippany-Troy Hills Wastewater Treatment Plant will have responsibility of treating an estimated 54000 GPD of septage. In order to handle these wastes Parsippany-Troy Hills has completed an NJDEP approved septage management plan which recommends construction of facilities that include the truck receiving area gravel trap coarse bar screens holding tank and associated appurtenances.

**Need for Project**

Although the unsewered areas are included in the Planning Area for Northwest Bergen County Utilities Authority there is presently no formal provision to treat septage from these areas. Septage from NWBCUA is presently being taken by informal agreement to Bergen County Utilities Authority treatment plant. The distance to this facility creates a climate for illegal dumping. The lack of a long term formal arrangement with Bergen County is unacceptable and the lack of quality assurance is unacceptable.

**Project Description**

This project will provide for the construction of septage handling facilities to receive all septage generated within the planning area for treatment at the Northwest Bergen treatment plant. The septage facilities will provide for quality assurance to prevent treatment plant upset and will provide odor control. The construction of septage facilities in conjunction with the initiation of a voucher system for tracking septage from cradle to grave will assure control collection disposal and treatment of septage wastes from approximately 50000 people in the planning area thereby eliminating present unacceptable trucking and disposal of septage.

**Service Area**

Egg Harbor Township

**Need for Project**

The existing septic systems serving the single family dwellings and commercial businesses in the project area are failing.

**Project Description**

The EHTMUA proposes to extend a gravity collection system to service twenty-seven (27) existing homes and four (4) commercial establishments located on Doughty Road Oak Avenue Blue Spruce Road Woodland Avenue and Marlborough Road in the Farmington section of Egg Harbor Township. The flow will be conveyed via gravity mains to the Washington Avenue trunk line. The flow then is conveyed by gravity to the ACUA Pleasantville pump station which is then pumped to the ACUA City Island Treatment Plant. The project also proposes the removal and replacement of an existing manhole and removal and replacement of 359 linear feet of PVC sanitary sewer main within the municipality of Pleasantville City in order to connect to the existing trunk line in Washington Avenue.

**Need for Project**

Construction of a detention basin will enable runoff to be held for an extended period of time allowing water to recharge back to the basin and settling silt prior to release into the storm system.

**Project Description**

The proposed project includes construction of a detention basin at the new municipal complex. The new basin will control and reduce runoff.

**Service Area**

The sanitary sewer system will serve the Marlboro Township Harbor Rd. Water Treatment Plant.

**Need for Project**

The sewer system is needed to provide for the ability to dispose of the process waste and domestic waste from the water treatment plant. The project will allow the process waste to enter the sanitary sewer system for disposal as opposed to the current discharge to surface water NJPDES Permit method utilized presently.

**Project Description**

The project consists of the construction of a submersible pumping station to convey process and domestic wastewater generated at the Harbor Rd., Water Treatment Plant. The work consists of the following: construction of a pre-cast wet well, valve chamber, submersible pumps, controls and associated gravity sewer and force main

Sanitary Sewer System - New

**Priority List Rank**

735

**County**

Essex

**Existing Population**

39,110

**Service Area**

West Orange Township

**Need for Project**

The existing sewerage system in West Orange has inadequate capacity to allow for future growth potential. New interceptors and appurtenances are required to provide the needed reserve capacity for both planned and proposed sewer connections. The Township of West Orange is included within the sewer service area of the Essex/Union Joint Meeting. Since this project will have no direct impact upon existing water quality, only discharge category points for new systems can be justified.

**Project Description**

Proposed is the construction of new interceptors consisting of both gravity sewers and pump station/force main and appurtenances to provide additional capacity for the First and Second Mountain areas of West Orange and Livingston. An old interceptor line (PS/FM and Gravity) is also proposed for replacement as part of a major sewer system rehabilitation effort.

Sanitary Sewer System - New

**Priority List Rank**

738

**County**

Atlantic

**Existing Population**

37,349

**Service Area**

The proposed project location is the Smithville section of Galloway Township. The project is located within the Township's CC Community Commercial zoning district. The proposed pump station will be located on Lot 1.03 in Block 1173.02

**Need for Project**

The intent of the State Plan for Suburban Planning Areas is to promote growth in Centers and other compact forms, to protect the character of existing stable communities, to protect natural resources, redesign areas of sprawl, to reverse the current trend towards further sprawl and to revitalize cities and towns. The State Plan indicates that these goals can be met by upgrading or replacing aging infrastructure systems to eliminate deficiencies and provide capacity for sustainable development and redevelopment in the region. This project would eliminate aging systems and redirect flow to upgraded more environmentally sound infrastructure.

**Project Description**

This project involves the construction of a new pump station on Lot 1.03 in Block 1173.02 and the construction of approximately 850 linear feet gravity main and 800 linear feet force main. The proposed gravity main will redirect existing flow to the proposed pump station. The project also consists of the lining of 1000 linear feet of 14 main. The other improvements proposed as part of the pump station construction include wet wells duplex submersible pumps a control building standby generator for power and a cellular based alarm system.

**Need for Project**

To remove aging septic systems and replace them with sanitary sewer extensions and to rehabilitate aging pump stations.

**Project Description**

The Township of Cherry Hill plans to extend their sanitary sewers to reach several remaining unsewered sections of the Township. The various extensions are spread throughout the Township. The project will consist of gravity sewer mains several force mains house connections all restorations and appurtenances. Also the Peppermill Pump Station and Batesville Pump Station will be rehabilitated. The project may include the elimination of the School Lane Pump Station and connection by gravity sewer to an existing Camden County MUA interceptor. The Peppermill Pump Station has an existing peak flow rate of 0.13 mgd and the Batesville Pump Station has an existing flow rate of 0.52 mgd. Each pump station will have their wetwells and pumps replaced along with related electrical services.

Sewage Treatment Plant (STP) - Improvement/Upgrade

**Priority List Rank**

740

**County**

Burlington

**Existing Population**

31,340

**Service Area**

Portions of Pemberton Township including areas designated as regional growth within the Pinelands

**Need for Project**

The implementation of the upgrading of the Pemberton Township Municipal Utilities Authority Wastewater Treatment System will serve to enhance the groundwater quality in those area which are presently serviced by on-site septic systems. The properly planned expansion of the system will protect the environment from improper discharges to the groundwater and surface water. The upgrading of the existing facilities at the Authoritys STP will be necessary to maintain the high level of treatment required for discharge into the North Branch of the Rancocas Creek in accordance with NJPDES permit No. NJ0024821. The existing plant is over twenty (20) years old is in need of rehabilitation and replacement of equipment. In the event that the collection system is enlarged the treatment plant capacity will have to expand to meet the demand.

**Project Description**

The proposed project includes the construction of a regional collection system and repairreplacement of various treatment units to improve treatment capabilities at the Pemberton Township MUAs STP.

Winslow Township

**Need for Project**

The West Atco area is comprised of approximately 182 acres and is contained within the Pinelands Regional Growth Area and is designated as a sewer service area in the current CCMUA Wastewater Management Plan. Existing development within this area consists of approximately 200 single family homes on small lots with wells that rely upon individual septic systems. There have been a number of failing septic systems within the West Atco area

**Project Description**

The proposed project includes construction of a sanitary sewer collection system a pumping station and a force main.

**Service Area**

Deptford Township

**Need for Project**

The RCA sewer-pumping station is a 35-year-old Can station. Failure of the station may cause contamination of the Alomonesson Creek and the Delaware River. The station conveys wastewater from the busiest section of the Township to a Gloucester County UA pump station and ultimately to GCUA for treatment. Upgrades and expansion will assure proper operation.

**Project Description**

The proposed project includes construction of a new larger wet well with 3 submersible variable speed pumps. The controls for the new facility will be above ground in a secure building to do away with the Can station. New instrumentation pumps alarm system and a natural gas generator for emergency supply will be installed. Upon completion of the project the existing pump station shall be abandoned the property graded and a new fence installed to secure the area.

**Need for Project**

The project is necessary to provide sewer service to the areas of the Township which are not presently sewered in order to prevent future contamination of the ground water quality.

**Project Description**

The proposed project consists of the construction of a collection system within Hamilton Township. The flow will be conveyed through two pump stations and gravity sewers of PVC design ranging from 8-inch to 24-inch. The estimated design flow is 1.2 MGD. The wastewater will be treated at the Atlantic County Utilities Authority (ACUA) City Island Treatment Plant.

Sanitary Sewer System - New

**Priority List Rank**

751

**County**

Monmouth

**Existing Population**

18,210

**Service Area**

The project area is located in the Woodfield area of the Township of Aberdeen, bounded by Matawan Borough. A portion of the proposed force main to be installed as part of this Project will be located with Matawan Borough.

**Need for Project**

The Woodfield area of Aberdeen Township consists primarily of residential homes that are serviced by individual sewage treatment systems (septic). The septic systems have been susceptible to failure throughout the years. Failure of these systems has become a substantial burden and health concern to the affected residents within the community and has resulted in costly repairs for the homeowners and has impacted their quality of life. As a result of the failed systems, the stormwater quality has been negatively impacted as the septic discharge does not adequately percolate into the soils and has remained near the surface, ultimately draining into the stormwater facility and discharging into Lake Lefferts. The Township desires to install a sanitary collection system within the Woodfield area to eliminate the poor septic conditions and improve the stormwater quality and quality of life for the affected residents of the municipality.

**Project Description**

Install sanitary sewerage facilities (gravity sewer pump station force main) to eliminate failing septic systems for 81 residents within the Woodfield Area of the Township.

**Project Name, Number**

Montclair State University  
S340321-02  
Sanitary Sewer System Rehabilitation

**Priority List Rank**

752

**County**

Passaic

**Existing Population**

18,000

**Service Area**

Montclair State University

**Need for Project**

The project is required to upgrade the sanitary sewer infrastructure for the University in order to meet the sewer demands of the proposed University expansion. The project will involve construction of 8200 ft of new sanitary sewer infrastructure and upgrades to existing sewage pump stations force mains and gravity mains. The project intended to reduce the downstream capacity problems that the Montclair Township sanitary sewer infrastructure is facing and allowing the University to expand in the next few years.

**Project Description**

The project area is located with the Montclair State University (Montclair and Little Falls Townships) and within Montclair Township and involves construction of approximately 8200 ft of new sanitary sewer that will convey sanitary sewer flows from the Montclair University campus to the Montclair Township sewer. The project also involves upgrading the existing sanitary sewer infrastructure within the Montclair State University Campus including upgrading pump stations and force mains upsizing gravity mains and lining gravity mains within to handle the additional sewer flows that will be generated by the proposed University Expansion and construction of new campus buildings.

S340514-02  
Sanitary Sewer System - New

**Priority List Rank**

353

**County**

Gloucester

**Existing Population**

15,217

**Service Area**

The Township population is 15,217 residents, based on the 2010 census. The sanitary sewer collection system is owned and maintained by the Mantua Township Municipal Utilities Authority (MTMUA). Sanitary sewer generated by the Township is conveyed to the Gloucester County Utility Authority (GCUA) for treatment.

**Need for Project**

This project is being undertaken in order to protect and enhance existing sanitary sewer infrastructure within the MTMUA service area. Failing to maintain the current infrastructure will only serve to increase the risk of future service interruption. The replacement of existing sanitary sewer infrastructure will serve to protect local water quality from disturbances related to chemical leaching and accidental discharges from aging infrastructure. Overall the proposed work will enable MTMUA to keep the municipal infrastructure in good operating condition, reduce unscheduled maintenance, and improve system monitoring.

**Project Description**

The Mantua Township Municipal Utilities Authority (MTMUA) has been evaluating the water and sewer infrastructure within the Township in an effort to identify equipment and components that are aging and reaching the end of its life cycle. The Authority is looking to be proactive and has identified three (3) sanitary sewer projects that will lessen maintenance time / costs, improve safety and allow for improved system monitoring. The Barnsboro PS project consist of the construction of a new construct a gravity collection system, duplex pumping station, and force main to support existing properties along Barnsboro Road (County Route 609) and Breakneck Road (County Route 603) in Mantua Township, New Jersey. This need has been identified as a result of aging septic systems, where approximately 80% of the properties were constructed prior to 1980. The proposed pump station will be located on Block 276.01, Lot 7. The existing property is owned by Gloucester County, easements will be obtained

**Service Area**

Hackettstown Town Independence Township

**Need for Project**

Disposing of septage in unlined landfills was prohibited as of March 15 1985 to prevent degradation of groundwater quality. An alternative disposal method is the utilization of existing treatment facilities. Therefore the municipalities indicated above have been assigned to the Hackettstown Municipal Utilities Authority treatment plant as designated in Appendix A of the Statewide Septage Management Plan. This project is necessary to ensure that septage disposal for existing and future development is in conformance with said plan. It should also be noted that the present facilities for handling septage wastes generated within the above service area are inadequate to handle the quantity and quality of wastes proposed to be accepted.

**Project Description**

A septage management plan has already been approved by the NJDEP. The facility plan recommends the construction of additional septage handling facilities at the HMUA wastewater treatment plant. The proposed facilities consist of a receiving station receiving chamber holding tank pumping station piping valves and miscellaneous equipment to provide the capability of diverting septage at a controlled rate to the primary digester or the division box upstream of the primary clarifier.

**Project Name, Number**

Waterford Township Municipal Utilities Authority  
S340163-01  
Sanitary Sewer System - New

**Priority List Rank**

762

**County**

Camden

**Existing Population**

10,940

**Service Area**

Waterford Township

**Need for Project**

The proposed service area is currently using on-site systems. The area is in the Pinelands regional growth area the Pinelands management plan promotes sewers in the growth area due to higher densities and water quality issues.

**Project Description**

The proposed project includes installation of sewer mains force main and one pump station. The proposed force main will connect to an existing sewer main which then pumps into the CCMUA regional system.

**Service Area**

Harrison Township

**Need for Project**

Although the Township has an existing wastewater treatment facility it does not service the area of the proposed development requiring construction of the entirely new Richard WRF. The proposed Richwood WRF will still utilize a membrane bioreactor (MBR) for biochemical oxygen demand (BOD) and total suspended solids (TSS) removal and nitrificationdenitrification. Influent will be screened prior to entering the MBR system via two (2) parallel rotary drum screens. MBR permeate will be treated by UV disinfection and disposed of sub-surface via groundwater recharge. The new wastewater facility will be designed for a maximum month flow of 0.98 MGD although the first phase will be for a maximum month flow of 0.375 MGD.

**Project Description**

The Richwood Sewer Service Area is approved for a wastewater treatment and disposal facility of 980000 gallons per day. (Currently there are no such facilities in the Richwood Sewer Service Area.) A new treatment plant will be constructed on Township-owned property and will be owned operated and maintained by the Township once completed. The facilities as designed will have a total capacity of 690000 gallons per day (gpd) and will be built in two phases. Phase 1 of the facility is projected to cost approximately \$15250000 (\$14000000 for treatment and disposal \$1250000 for conveyance systems). Phase 2 is projected to cost approximately \$4000000 for treatment and disposal.

**Service Area**

City of Cape May Borough of West Cape May Borough of Cape May Point portion of Lower Township and Coast Guard Base

**Need for Project**

The Cohansey Aquifer from which the Cape May Water Utility draws its potable water is experiencing salt water intrusion. To prolong the life of the Cohansey Aquifer and to meet summer water needs the City is proposing to derive 1.4 MGD of brackish water from the Atlantic City 800-foot deep sand aquifer and build a desalination facility employing a reverse osmosis process.

**Project Description**

The desalination facility will generate 1.0 MGD of potable water 0.4 MGD of concentrate and 1000 gpd of sanitary wastewater. The conveyance facilities is included in this project and involves the construction of two force mains. One force main will be 2-inch diameter 2300 feet long and will carry sanitary waste membrane wash water and water from floor drains to the West Cape May Boroughs sewer system where it will flow to the Cape May County MUAs STP for treatment and disposal in the Atlantic Ocean. The second force main will be 6-inch diameter 2700 feet long and will be designed to carry 0.4 MGD of desalination concentrate to the Cape Island Creek.

**Service Area**

Cresse Avenue to 26th Street Beaches City of Wildwood

**Need for Project**

The sand on the Wildwood beach has accreted approximately 1700 feet since 1950 creating a beach front that is over a quarter mile from the Boardwalk to the waters edge. The existing outfall lines no longer extend far enough out into the ocean. Storm drain runoff containing animal and bird excrement washes back onto our bathing beaches. High fecal coliform counts detected in the weekly sampling conducted by the Cape May County Health Department each summer has confirmed unsafe condition and has resulted in beach closing. Ponding of this contaminated water occurs at the terminus of the outfall lines after each rain and the area must be plowed and leveled. The health and safety of the beach bathers have been imperiled and the beach closings produce a tremendous negative impact on tourism for many weeks thereafter.

**Project Description**

The ten (10) outfall lines will be retrenched and pilings and cross-beams will be installed to support and contain the lines with 1400 foot extensions. Trenches for the extensions will be dug during the low tide and the entire line will be re-covered with the accumulated sand.

Buena Borough Municipal Utilities Authority  
S340518-05  
Sewage Treatment Plant (STP) - New

**Priority List Rank**

772

**County**

Atlantic

**Existing Population**

3,700

**Service Area**

Buena Borough

**Need for Project**

The Borough of Buena Wastewater Treatment Plant currently discharges effluent to the surface waters of Deep Run. The BBMUA WWTP is located within the New Jersey Pinelands jurisdiction as well is the outfall. Under the New Jersey Pinelands Comprehensive Management Plan discharging to surface waters within the Pinelands is prohibited. The BBBMA Buena Vista Township and Pinelands Commission has entered into a MOA mandating the BBMUA WWTP. The BBMUA WWTP NJPDES is NJ0021717. The design flow for the WWTP is 0.4 MGD and the actual flow is approximately

**Project Description**

Construct an Effluent Disposal Facility to facilitate the discharge of wastewater effluent to ground water. Additionally a pump station will be constructed along with force main transmit the effluent to the Effluent Disposal Facility. The pump station will be constructed at the Borough of Buena Municipal Utilities Authority Waste Water Treatment Plant (BBMUA WWTP) and the Effluent Disposal Facility will be constructed on Block 106 Lot 6 within the Borough of Buena. The force main will extend from the BBMUA WWTP to the Effluent Disposal Facility along Plymouth Road North Boulevard and Weymouth - Malaga Road.

**Service Area**

Woodbine Borough

**Need for Project**

The existing residences are served by individual on-site septic systems which are suspected to contribute to groundwater pollution. The State Department of Human Services owns and operates the only treatment facility in the Borough and it is located at and serves only the Woodbine Development Center.

**Project Description**

The proposed project involves the acquisition of the Woodbine Development Centers STP and the upgrade and expansion of the treatment facility from 0.16 MGD to 0.5 MGD. The upgrade will employ the sequential batch reactor process and denitrification. In addition the project includes pump stations force mains and approximately 60000 linear feet of gravity sewers to collect and transport wastewater to the upgraded STP.

**Service Area**

Fortescue and Gandy's Beach

**Need for Project**

The objective of this project is to connect homes to a collection system and centralized treatment facility that would reduce the vulnerabilities of their individual sewage systems. The community currently is not serviced by a community sewage collection and treatment system. All properties have historically had private septic systems. Due to the repeated failure of these individual septic systems resulting from flooding events, the County is now interested in proceeding to connect these homes to a piped sewage collection system with central treatment facility.

**Project Description**

Construction of wastewater treatment plan and collection system for Fortescue and Gandys Beach.to replace existng on-site individual septic systems.

**Priority List Rank**

781

**County**

Ocean

**Existing Population**

20,065

**Service Area**

The drainage improvements proposed impact the Mystic Island section of the Township.

**Need for Project**

The proposed work is necessary to improve the existing storm drainage infrastructure that is mostly comprised of corrugated metal pipe approximately 40 to 50 years old that is deteriorating and undersized to handle the contributing drainage flow. Water quality will be impacted through the potential reduction of sediment and other particulates that would normally accumulate in area properties and roadways after storm events and then drain into the existing collection system, which would ultimately be discharged into uncoded tributaries that feed Big Creek, a Category 1 waterbody according to NJDEP's Digital GeoWeb Data. Big Creek flows into the Great Bay, which is part of the Mullica Watershed Management Area, and is adjacent to the Barnegat Bay Watershed Management Area.

**Project Description**

The Township proposes to replace approximately 1,500 lineal feet (LF) of existing corrugated metal drainage pipe and up to 17 drainage inlets with new drainage piping and inlets. Additionally, install up to 1,000 LF of new drainage piping and multiple inlets, as well as, approximately 5,500 square feet of in kind easement restoration and roadway restoration along West and East Mullica Roads, West and East Delaware Drives, and West Mohawk Drive edge to edge once all construction is completed.

Borough of Hopatcong

**Need for Project**

Stormwater runoff in the area discharges shallow concentrated flow over existing residential septic systems. Stream testing has confirmed high levels of coliform as a result of the existing drainage patterns. The project will eliminate concentrated stormwater flow over the existing septic systems.

**Project Description**

The proposed project includes the installation of a new stormwater conveyance system to control erosion and divert stormwater away from septic systems.

**Service Area**

The entire Borough of Hightstown is the service area affected by the proposed improvements.

**Need for Project**

The sixteen existing stormwater outfall headwalls have been in continuous use without any major repair or replacement. The headwalls are beyond repair and must be replaced in order to maintain compliance with all NJDEP and Soil Erosion and Sediment Control Standards.

**Project Description**

The Borough is planning to remove and replace the 16 existing stormwater outlet headwalls with concrete headwalls with the outfall structures designed to the present standards for outlet protection at the headwalls. The replacement will reduce flow velocities at the pipe outlets and the deterioration of the area around the headwalls thus reducing siltation in the waterways. Disturbance will only be within the vicinity of the existing outfall structures.

**Project Name, Number**  
Wildwood City  
S340664-05  
Stormwater Management

**Priority List Rank**

788

**County**

Cape May

**Existing Population**

5,325

**Service Area**

The project is located in the City of Wildwood, Cape May County. It is bounded by Pacific Avenue on the west, the Wildwood Boardwalk on the east, Cresse Avenue on south and Montgomery Avenue on the north. The project will include installation of storm drains along portions of Pacific Avenue, Hildreth Avenue, Bennett Avenue, Leaming Avenue, Hand Avenue, Taylor Avenue, Andrews Avenue, Burk Avenue, Davis Avenue, Montgomery Avenue, Cresse Avenue, Atlantic Avenue and Ocean Avenue. These storm drains will convey surface runoff to a proposed storm water pump station located at the boardwalk street end of Leaming Avenue.

**Need for Project**

This project will not increase the quantity of storm water flow, this project is designed to remediate storm sewer water to make its conveyance more efficient. By installing storm drains along portions of the roadways within the project area and installing a storm water pump station, it will be possible to create roadways that will remain passable during storm and high tide events. The same amount of storm water discharge will occur, but it will now occur at a larger gallon per minute rate.

**Project Description**

The City of Wildwood will address stormwater issues along Pacific Avenue, from Creese Avenue to Davis Avenue. The project will include installation of storm drains to convey surface runoff to a proposed storm water pump station. The runoff will be pumped, via force main, into the Atlantic Ocean thus allowing elimination of five (5) existing malfunctioning ocean outfalls. The existing outfall sewers at the project location are approximately 440 linear feet from the mean high water level. Therefore, the City must dig out the existing outfalls each day to allow water to rise to the surface of the beach and flow over the beach to the ocean. This consumes many hours of labor and equipment costs (fuel). The proposed project, when complete, will include the removal of the five (5) existing outfalls, thus providing maintenance cost savings to the City.

**Service Area**

The project is located on an island Borough in Cape May County. The Borough only has one bridge to allow residents and first responders access to the area. The Boroughs plan for the area is to raise all the roadway elevations and create a better flowing storm sewer system so that travelling becomes less hazardous during storm events.

**Need for Project**

This project will not increase quantity of storm sewer flow, this project is designed to make storm water conveyance more efficient. By regrading existing topography and adjusting slope on existing storm sewers it will be possible to create roadways that can remain passable during storm and hi tide events. The same amount of storm water discharge will occur, ultimately it will just occur at a larger gallon per minute.

**Project Description**

West Wildwood proposes to address the issue of standing water during abnormally hi tides and strong storm events with a multi-step program of raising the street elevations and improving storm water collection and conveyance via improved roadway pitch and an upgraded inlet configuration throughout the Borough. This project will be the first of many of this nature and will address the streets based on the priority principle. The streets for this project has had the greatest standing water in comparison to the rest of the Boroughs roadways. The project will consist of installing new inlets, storm sewer pipes, curb and their corresponding sidewalks to higher elevations and then will pave the street to match the proposed upgrades.

This is a de-silting project at a 180 degree bend of the Rahway River. This project will reduce the river bank soil erosion along the westerly banks that abut the residential homes. Approximately 250 cubic yards of silt along a 500 linear foot stretch of the river will be tested and removed. This program will also help in cleaning the Rahway River of sediment and potential toxins. The Rahway River is a potable water source for the downstream community of Rahway and a very active recreational river for Cranford other adjoining communities.

**Project Description**

This is a de-silting project at a 180 degree bend of the Rahway River located between the two Eastman Street bridges. The project is located along the Rahway River in McConnell Park which is located along Eastman street between Hampton and Holly Streets. This project will reduce the river bank soil erosion along the westerly banks that abut the residential homes. Approximately 250 cubic yards of silt along a 500 linear foot stretch of the river will be tested and removed. This program will help in cleaning the Rahway River of sediment and potential toxins.

**Service Area**

Hammonton Town

**Need for Project**

In accordance with the NJPDES Municipal Stormwater Regulation Program Hammonton is implementing a street-sweeping program to reduce solids and floatables from entering the storm sewer system.

**Project Description**

The proposed project involves the purchase of two street sweepers.

**Service Area**

Bergen County Utility Authority Little Ferry Plant The Ridgefield Park Infrastructure Project consists of the development, construction, and thereafter operational management of 4 components, including a retail center, new residential units, a hotel and conference center. The project site consists of primarily of vacant land that and surplus property of the New Jersey Turnpike Authority. The land currently has limited access from the adjacent roadways. Complete access to the development will be created by the installation of \$65 Million in improvements which will provide the necessary infrastructure to the site.

**Need for Project**

All stormwater discharges are treated for water-quality in accordance with NJDEP Stormwater Regulations

**Project Description**

This is the installation of Stormwater management and Sanitary Sewer lines and ancillary work for the development of the SkyMark Center development. The Stormwater management system also carries the runoff from surrounding roadways.

**Service Area**

Borough of Matawan

**Need for Project**

The Borough of Matawan is located in a relatively low lying area surrounding Lake Lefferts and Matawan Lake. Periodically the Boroughs storm sewers collect debris and contaminants which eventually pass through the storm sewer system and into the lakes and surrounding waterways. The Borough is concerned with the non-point source pollution problem and believes this problem can be reduced through better maintenance which will be enhanced by the use of Jet Vac equipment and certain specific improvements to the existing stormwater facilities.

**Project Description**

The proposed project involves the purchase of a Jet-Vac Truck to clean debris from the storm sewers and minimize adverse impacts on Lake Lefferts.

**Project Name, Number**  
Dunellen Borough  
S340916-03  
Stormwater Management

**Priority List Rank**

796

**County**

Middlesex

**Existing Population**

7,227

**Service Area**

The service area for the Supplementary Railroad Culvert is the south side of the Borough of Dunellen. The Borough of Dunellen is located in Middlesex County and is bordered by the Borough of Middlesex to the southwest, Piscataway Township to the southeast, the City of Plainfield in Union County to the northeast and Green Brook Township in Somerset County to the northwest.

**Need for Project**

The Borough of Dunellen has a prolonged history of flood related issues on the southerly side of the Borough. The Bonygut Brook, which traverses the Borough from east to west, conveys flows through the Borough of Dunellen from Piscataway Township and ultimately discharges into the Green Brook in the Borough of Middlesex. The primary cause of flooding in the Borough has been the inadequate size of the culverts along the brook that convey flows under several roadways as well as the culverts that exist under the NJ Transit Railroad embankment on the westerly side of town. The County of Middlesex is presently advancing the design and construction of several culverts along the brook; however, the flooding will persist due to the inadequacy of the aforementioned existing railroad culverts which restrict the flows leaving the Borough. This project will supplement the existing railroad culverts in an effort to improve the flood conditions on the south side of the Borough.

**Project Description**

The Supplementary Railroad Culvert project is proposed as an initial flood improvement measure to address the severe and frequent flooding in the Borough of Dunellen. The project has previously been fully designed and all necessary permits have been obtained. The project generally consists of the construction of supplementary twin 72" diameter storm drainage culverts crossing the NJTRANSIT Raritan Valley Line including reinforced concrete headwalls, a reinforced concrete junction chamber with 72" flexible flanged end check valves, the installation of a precast 12 foot by 4 foot box culvert, storm drainage improvements, excavation, backfill, grading, pavement and turf restoration, riprap slope stabilization, landscape restoration and offsite riparian mitigation plantings.

**Service Area**

The D&R Canal extends from the Delaware River at Bulls Island to the Raritan River in New Brunswick for a distance of approximately 60 miles. The 10.5 mile segment of the Canal to be dredged is located in the Delaware and Raritan Canal State Park and the project area extends from Lincoln Highway - Route 27 (Station 1862+00) to Amwell Road (Station 2406+50) in Franklin Township, Somerset County.

**Need for Project**

The purpose of this project is to improve water quality and maintain hydraulic capacity by removing accumulated sediment, aquatic vegetation growth and debris. With dredging the velocity in the canal will be reduced thereby reducing sediment resuspension and raw water turbidity. The reduced solids loading will allow for lower coagulant dosage at the water treatment plants. The in situ sediments also contain organics and their removal would help to control the total organic carbon concentration of the raw water. Removal of the submerged aquatic vegetation (SAV) will reduce disinfection byproduct precursors in the finished water of downstream users. Additionally, decaying SAV could result in anaerobic conditions with resulting taste and odors and possible dissolved metals (iron and manganese) released into the water column.

**Project Description**

Remove by dredging approximately 240,000 cubic yards of sediment from a 10 mile segment of the D&R Canal between Route 27 and Amwell Road in Franklin Township, Somerset County.

**Service Area**

Monmouth County

**Need for Project**

Sediment build up in many of the lakes and ponds in the County has lead to poor water quality algae growth mosquito breeding odors and low oxygen levels. Many beach closings are attributable to stormwater runoff from coastal lakes. Deepening the lakes will improve habitat and increase assimilative capacity for nutrients and other pollutants.

**Project Description**

The proposed project includes establishment of a silt removal program including purchase of dredging equipment and implementation of other measures to restore lakes and ponds to their original storage capacity.

Heros Island in PennsuakenCherry Hill

**Need for Project**

Veterans Island in the Cooper River is suffering serious erosion with its banks being washed away at a rapid rate causing silt build-up elsewhere in the river and effecting the overall quality of the river. The Island also acts as a natural barrier to erosion along a sensitive area of Cooper River Park. The Islands banks need to be restored and stabilized to stem erosion and reduce solids transportation.

**Project Description**

The proposed project includes a bank restoration and stabilization through the use of crib walls and vegetative plantings to provide for safe embankments and prevent further soil erosion.

**Service Area**

Trotters Lane Branch Drainage Area

**Need for Project**

The project is needed to relieve flooding in Morris Avenue and in the Kean College Dormitory area and to screen out debris from the stormwater prior to discharge in the Trotters Lane Branch of the Elizabeth River. The existing brick storm drain from the west side of Morris Avenue to the Elizabeth River is too small and needs to be replaced.

**Project Description**

The proposed project involves the replacement of the storm drain with an adequately sized concrete box culvert. The upstream end of the culvert will be equipped with a screen to collect debris.

**Need for Project**

The project is being undertaken to 1. Improve storm water conveyance and stream morphology 2. Generally reduce local bank erosion around obstructions 3. Lessen the risk of damage to bridges 4. Improve recreation amenity 5. Reduce flooding impacts locally specifically for lower flow events.

**Project Description**

The Rancocas Creek Obstruction Removal/Desnagging project includes the removal of obstruction fields and sediment dams along 8 Rancocas Creek miles extending from Landing Street in Southampton Township to Main Street in Lumberton Township and from the Flying W Airport to Bridge Road in Lumberton Township. Overall it includes the removal of 126 obstruction fields and sediment dams. The project is being undertaken to 1. Improve water conveyance and stream morphology 2. Generally reduce local bank erosion around obstructions 3. Lessen the risk of damage to bridges 4. Improve recreation amenity 5. Reduce flooding impacts locally specifically for lower flow events.

**Need for Project**

A former chemical site requires remedial measures to support brownfield development and provide significant environmental benefits. Placement of an impermeable cap along with installation of stormwater controls will ensure that rain water will not mobilize contaminants and pollute groundwater or the adjacent waterways.

**Project Description**

The proposed project includes demolition of existing buildings installation of an impermeable cap and cover system installation of stormwater controls. The project also includes installation of sanitary sewerage collection infrastructure to collect sewage generated from the proposed redevelopment.

**Need for Project**

The proposed improvements will remove accumulated sediment and vegetation overgrowth and minimize ponding onto existing residential roadways reducing potential health and safety concerns via eroded roadways and standing water (mosquito breeding). The purchase of the equipment will reduce the amount of solids and floatables entering the Townships waterways.

**Project Description**

Drainage improvements to 5 existing areas throughout the Township to address accumulated sediment vegetation overgrowth and substandard drainage infrastructure. Locations include the Blue Sea cul-de-sac Parkside and Coolidge Avenues intersection Heritage Way Yvonne Drive and Shasta Drive intersection and the Parkside Ave and Gilford Place. The project will include drainage pipe replacement installation of additional catch basins and cleaning of existing pipes and structures in order to address pavement deterioration road hazards and health concerns associated with standing waters. The Township proposes to purchase equipment (i.e. street sweepers brush hogs jet vac truck and new ECO inlet heads) to assist in the removal of floatables and solids from the Township streets and infrastructure.

**Need for Project**

Shadow Lake provides both natural and recreational resource to Township residents and is designated for trout production or maintenance by the NJ Water Quality Standards (N.J.A.C. 7:9B). A study by the NJ Division of Fish, Game, and Wildlife in 1994 documented 15 different fish species within the lake. In 1996 trout were reintroduced to the lake and are now regularly stocked. As a result of residential and commercial development over the past twenty years the lake has been subjected to excessive sedimentation. This sedimentation has deteriorated the lake's water quality, reduced fish populations, choked the lake banks with aquatic plants, and limited navigable areas to even small boats. Additionally, since Shadow Lake discharges into the upper reaches of the Navesink River dredging of the lake will inherently improve water quality in the Navesink River. Dredging will also reduce the frequency, or possibly eliminate the Township's need to continue using chemical herbicides to

**Project Description**

(Carryover SFY2015) - The proposed project includes dredging to remove approximately 150000 cubic yards of sediment from the upper portion of Shadow Lake. This will restore the lake to its original depth eliminate the swamp like conditions and lower the phosphorous concentration.

Middletown Township

**Need for Project**

The proposed project will address health and safety concerns associated with the frequent backup of the drainage systems as well as potential hazards associated with standing waters. The addition of new inlets will also minimize erosion via the conveyance of stormwater away from the landward limits of the beach.

**Project Description**

The Township proposes improvements to its existing stormwater system located within the rights-of-way along North Leonard Avenue Burlington Avenue and Roop Avenue and between residential properties located on Burlington Avenue and within an earthen berm located along the landward limit of the beach adjacent to Sandy Hook Bay. Presently stormwater drains to an existing outfall pipe that is situated perpendicular to the shoreline of Sandy Hook Bay. A section of the existing 36-inch RCP pipe was destroyed during storm events in early 1990. A temporary repair to the outfall was made in 1991 by replacing the damaged section with a 24-inch diameter plastic pipe. The proposed project will permanently repair and improve the overall function of the entire system. The existing pipe will be replaced with a 48-inch RCCP outfall and timber pile bent. The outfall pipe will extend below the Mean High Water line of Sandy Hook Bay. The pipes within the rights-of-way and properties noted above will also be replaced and new manholes and inlets will be installed.

Camden

**Existing Population**

64,634

**Service Area**

The immediate service area is a small community in the southwest corner of the township. However, the consequences of flooding events have a financial impact on the entire township.

**Need for Project**

This is a flood control project. Control of flooding will reduce the amount of sediment entering the stream.

**Project Description**

(Carryover SFY2015) - The purpose is to provide stormwater management along a stream that frequently floods Redwood Street. This flooding not only isolates a small community in the southwest portion of the township it also causes erosion which results in downstream water quality deterioration. The project involves a significant increase in the size of the culvert crossing, revisions to the profile of the roadway in order to raise the street above the new culvert, and improvements to the channel. All permitting has been received.

S340364-15  
Stormwater Management

**Priority List Rank**

813

**County**

Camden

**Existing Population**

64,634

**Service Area**

Project serves township residential areas through out the township. Gloucester Township is located in western portion of Camden County and is bounded by the Borough of Runnemede on the north, the Borough of Lindenwold, Stratford and Pine Hill on the east, Winslow Township on the south, and Deptford Township on the west. The Township consists of 23.3 square miles. Based on 2010 US Census the Township has a population of 64,634 persons and 23,566 households. The stormwater projects are within different areas of the township but also help upstream and downstream areas.

**Need for Project**

No significant adverse impacts on water quality or hydrology are expected as a result of the proposed projects. It is anticipated that water quality and hydrology will be improved since the projects propose to repair/reconstruct failing stormwater outfall structures and stabilize eroded areas. The reconstruction of the failing stormwater outfalls is anticipated to reduce the current erosion concerns, thereby improving surface water quality.

**Project Description**

Gloucester Township proposes to rehabilitate portions of the existing stormwater collection system that services many users throughout the municipality. The proposed improvements include repairs to existing stormwater outfalls leading to streams, stormwater infrastructure piping, and bank stabilization. The purpose of these projects is to replace/repair aging infrastructure, and maintain the stability of the soil near these stormwater outfalls.

**Service Area**

City of Plainfield. Other customer communities of the facility include Linden, Fanwood, Scotch Plains, South Plainfield, North Plainfield and Green Brook.

**Need for Project**

The proposed improvements will improve the site conditions and will provide better storm water management. These activities will improve the runoff quality and will mitigate the impact on surface water.

**Project Description**

The project generally consists of the construction of Material Recovery Facility (MRF) at the existing Rock Avenue Transfer Station, owned and operated by the PMUA. The Material Recovery Facility will process construction and demolition solid waste and segregates recyclable commodity materials from the waste stream. The commodity materials will be transferred to be recycled. The operation of the MRF will reduce the amount of waste disposed at landfills or processed at waste incinerators. The construction of the facility will redevelop an existing waste/soil pile to be part of the footprint of the MRF. The proposed improvements will improve the site conditions and will provide better storm water management. These activities will improve the runoff quality and will mitigate the impact on surface water. The project includes the construction of a building to house the solid waste processing equipment and operation, procurement and installation of the sorting equipment, truck scales

**Need for Project**

Stormwater runoff is the most common way that nonpoint source pollution reaches local rivers creeks and lakes. Rainwater carries chemicals nutrients sediments and other forms of nonpoint source pollution into local streams if the water is not absorbed by soil and vegetation. The Townships goal with its stormwater management plan is to increase absorption of rainwater by soil and vegetation using mechanisms that reduce the velocity of flow and retain the water in natural areas.

**Project Description**

The proposed project includes repairs to three culverts and purchase of two pure vacuum street sweepers with broom assist.

Mount Laurel Township

**Need for Project**

Pennsauken Creek has a build up of sediment and debris which leads to flooding and sewage overflows.

**Project Description**

The proposed project includes dredging and debris removal from Pennsauken creek.

Anticipated Recipient:	Galloway Township

**Need for Project**

The water quality of Patriot Lake is deteriorating due to an inflow of excessive untreated stormwater. The project will help decrease sedimentation and pollution in the Lake. A new stormwater basin will provide treatment and groundwater recharge measures to overflows from the Lake.

**Project Description**

The proposed project includes construction of an infiltration and water treatment basin adjacent to Patriot Lake.

**Need for Project**

Three lakes within the Township suffer from excessive sediment deposits. Water quality will improve from removing sediment. The lakes do not settle out as they used to based on the limited volume to allow this to happen prior to discharge. There is limited if any water quality from the outfall from these lakes due to the nature of its capacity and material.

**Project Description**

This project consists of the dredging of all three (3) lakes within the Township. Lake Alberta which is located along Neptune Boulevard east of Highway 33 at the border with Neptune City Fletcher Lake which is located at the south end of Ocean Grove along the border of Bradley Beach and Wesley Lake which is located at the north end of Ocean Grove on the border of Asbury Park.

**Need for Project**

The existing bulkhead is severely compromised. In certain areas it is to the point that it is no longer stabilizing in some areas. Due to the current state of the bulkhead sand and soil are entering the Shark River through the bulkhead. The storm drain pipes behind the bulkhead are compromised and broken in some areas. These pipes need to be replaced and retrofitted with stormwater devices. By limiting the siltation and the runoff the nonpoint source pollution of the Shark River will be greatly decreased.

**Project Description**

The Shark River Marina is located adjacent to South Riverside Drive in the Shark River Hills Section of Neptune. The proposed project includes replacement of the bulkhead dredging of the channel rehabilitation of storm drainage and installation of tide flex valves and cofferdam around the existing underground storage tank.

**Need for Project**

The existing salt storage on the Public Works site is only encapsulated on three (3) sides. As part of our Stormwater Management Permit from the State a contained Salt Storage facility is required. The proposed facility will reduce runoff and siltation to the on-site stormwater system and also reduce siltation and non point source runoff to Wesley Lake. Wesley Lake is in need of maintenance dredging and construction of the salt dome will help to alleviate the ongoing need of dredging the lake by minimizing the siltation in the runoff to the lake.

**Project Description**

The project consists of the construction of a prefabricated salt dome at our Public Works Garage located on Heck Avenue. The proposed structure is to be sixty-one(61) feet in diameter on a ten (10) foot tall concrete base wall.

**Need for Project**

The Township needs to reduce flooding and reduce solids transportation. The project would reduce the sediment load to prevent creation of sediment islands and minimize the scour effect on stream banks.

**Project Description**

The proposed project will address the degradation of the water quality in a tributary to the Gold Run by stabilizing its banks and restoring the bed to its original configuration. The stream has many areas of severe erosion that are causing significant property damage. The stabilization is approximately 1300 feet in length and will restore the conveyance area to reduce erosive velocities.

**Service Area**

Maplewood Township

**Need for Project**

The Township needs to reduce flooding and reduce solids transportation. The project would reduce the sediment load to prevent creation of sediment islands and minimize the scour effect on stream banks.

**Project Description**

The proposed project will address the degradation of the water quality in East Branch of the Rahway River by stabilizing its banks and restoring the bed to its original configuration.

**Service Area**

The Bayshore Estates area on either side of Roseann Avenue is included in the service area. It is estimated that the existing contributory watershed to Roseann Avenue is over 145 acres in size.

**Need for Project**

NA

**Project Description**

The Roseann Avenue stormwater trunk line is 50 to 60 percent filled with debris, which undermines its ability to drain. Phase 1 and 2 of this project consists of replacement of the stormwater system from Clearwater in an east direction. Phase 3, the topic of this application, will complete this project with the replacement of 1,000 ft. of stormwater pipe and roadway reconstruction to Bayshore Road.

**Need for Project**

Currently the open ditch stormwater conveyances are overgrown with vegetation and silt buildup and have not been adequately maintained. The removal of vegetation and silt build up will result in higher quantity storms being conveyed downstream to ultimate discharge point reduce stagnant water conditions prevent upstream flooding and provide overall better aesthetics in residential and commercial area.

**Project Description**

The project includes storm sewer rehabilitation in commercial/industrial area of Milik Street including new regional basin rehabilitation of open ditch stormwater conveyance and tv inspection and repair of existing storm sewer piping.

**Need for Project**

The Birchwood Lakes and Blue Lake are essential to Medfords storm drainage system and flood control. Sediment needs to be removed to restore proper storm drainage. The bulkhead reduces the amount of sediment that builds up in the lakes and without it sediment and debris is flowing into the lakes and downstream.

**Project Description**

The proposed project includes removal of sediment and debris from the lakes and replacement/repair of bulkheads to reduce erosion and control solids/floatables.

**Need for Project**

Various flood control improvements within the White Beeches Berkeley Place and Roosevelt Avenue sections of the Borough that discharge into the Oradell Reservoir and Hirschfeld Brook drainage basins. Proposed improvements include replacement of undersized piping and inlets cleaning of existing piping and structures cleaning and re-profiling of existing ponds and culverts at an existing Golf Course and installation of additional piping and inlets.

**Project Description**

The existing drainage systems are severely undersized and silted causing frequent flooding resulting in an eroding drainage system and stormwater pollution that discharges into the Oradell Reservoir and Hirschfeld Brook.

Princeton  
S340656-10  
Stormwater Management

**Priority List Rank**

843

**County**

Mercer

**Existing Population**

16,265

**Service Area**

This project will serve the population of Princeton. It will also serve the population of Montgomery Township, which is not taken into account in the above provided borrower population served by the project.

**Need for Project**

This project is a stormwater project, which will potentially improve the water quality of the adjacent stream, Cherry Run.

**Project Description**

Princeton and Montgomery Twp are jointly proposing stormwater improvements on a 2,400' section of Cherry Valley Road from west of Cherry Hill Road to the Mercer County Bridge. The existing roadway drainage system consists of undersized roadside ditches, which pose hazards to the motorists and significant barriers to pedestrians. Two existing outfalls carry stormwater under Cherry Valley Road to Cherry Run stream located on the south side of the road. The outfalls lack proper outlet protection to reduce the exit velocity. A new drainage system will replace the roadside ditches and safely convey stormwater to Cherry Run utilizing existing outfall locations. New outlet protections are proposed for the outfalls. A new manufactured treatment device is proposed for water quality purposes. In addition, roadway improvements will include widening the pavement from 20' to 34'; new curbing on both sides; new retaining walls; and new 6' wide porous asphalt walking path on south side of the road.

**Need for Project**

The Borough plans to inspect and map the storm sewer system to identify sensitive areas affected by the discharge of storm sewer flows and to locate any existing cross connections. This will enable the Borough to respond better to potential future hazardous material spills. In addition storm sewer system cleaning and rehabilitation will improve water quality and reduce localized flooding.

**Project Description**

This project proposes to clean TV inspect and map the existing storm sewer system. Deteriorated catch basins and manholes will be rehabilitated broken pipes replaced or repaired and any cross connections eliminated.

**Need for Project**

The need for the new vac truck is to clean all storm inlets pipes easements etc. This is required so the drainage facilities are in proper working condition. It is also required by the new stormwater regulations. The need for the new street sweeper is to sweep all municipal streets of winter road grits and materials leaves and other miscellaneous debris. This will help prevent sediment build up in our lakes and streams.

**Project Description**

The proposed project includes the purchase a new vac truck to assist in cleaning storm inlets piping easements etc. Also included is purchase a new street sweeper to sweep winter products leaves debris etc from all municipal streets.

**Service Area**

This project includes installation of thirty-six check valves on various locations along the back-bay section of the City. This project is designed to make the stormwater system more resilient, do reduce tidal flooding and to protect public infrastructure and private investments in the area. Without properly functioning check valves tidal water can back up into the City, complicating the impacts of a high tide, storm event.

**Need for Project**

This system is designed to protect public infrastructure and private investments from impacts caused by stormwater flooding and mitigate against future damage to streets, homes, sewer systems, water systems, and other utilities. This project sites consist of well-established neighborhoods that has witnessed frequent flooding and significant impacts from Superstorm Sandy.

**Project Description**

(Carryover SFY2015) - This project includes installation of flood walls in various locations along the back-bay section of the City. This project is designed to make the stormwater system more resilient and to protect public infrastructure and private investments in the area. The flood walls are currently in poor condition complicating the impacts of a high tide storm event. New flood walls are planned for Winchester Avenue (Lily Park) between Little Rock Avenue & Victoria Avenue - 235 LF. \$364240 Winchester Avenue between Marion Avenue & Austin Avenue - 145 LF. \$224750 Ventnor Gardens Plaza at Wissahickon Avenue - 165 LF. \$255750 Sacramento Avenue street end off Monmouth Avenue - 50 LF. \$77500 Derby Avenue street end at Winchester Avenue - 50 LF. \$77500

Decentralized Wastewater (or Septic) System Repair/Replacement

**Priority List Rank**

860

**County**

Atlantic

**Existing Population**

9,450

**Service Area**

1. New Lighthouse Circle Stormwater Pump Station - 34th Street and Bayshore Avenue. This pump will serve a drainage area that includes portions of Brigantine Boulevard, the only access route off of the island. 2. New Hackney Place Stormwater Pump Station - to be located off of West Shore Drive in the Golf Course Section of the City. 3. New Pump Station at Jenkins Parkway, 12th Street North.

**Need for Project**

This system is designed to protect public infrastructure and private investments from impacts caused by stormwater flooding and mitigate against future damage to streets, homes, sewer systems, water systems, and other utilities. This project sites are well-established neighborhood that has witnessed frequent flooding and significant impacts from Superstorm Sandy

**Project Description**

(Carryover SFY2015) - Three additional stormwater management projects are proposed in this application. Each of the pump stations described below will include an Emergency Generator to insure operation during electric power outages 1. New Lighthouse Circle Stormwater Pump Station - 34th Street and Bayshore Avenue. This pump will serve a drainage area that includes portions of Brigantine Boulevard the only access route off of the island. 2. New Hackney Place Stormwater Pump Station - to be located off of West Shore Drive in the Golf Course Section of the City. 3. New Pump Station at Jenkins Parkway 12th Street North. This project is designed to improve and protect groundwater as well as providing for a functional stormwater systems. The project includes a pump station and emergency generator to service the stormwater needs of this area along with water proofing the boat ramp which is at elevation 7 ft. Flood gates will provide this protection. Also planned is the elevation of the boat ramp apron and Bayshore Avenue to reduce flooding. Currently the outlet structure that serves the Ocean Drive and Lagoon Boulevard section of the Inlet area of the City is totally clogged and non-functional. The current 60 outfall pipe is buried and the system no longer functions as designed. It is estimated that the current system operates at or near 25 capacity resulting in localized flooding. This project calls for a new outlet system to be designed that will reroute stormwater within the Seaport Area Drainage Basin to a new outfall. This project includes 1. 12th Street North Stormwater Project - Located on the far northern section of the City. The plan includes raise 12th Street North. The elevation of 12th Street North is specifically included in the County AHMP. 2. Evans Boulevard Stormwater Project - E Evans Boulevard intersects 12th Street North at a 90 degree angle. The improvements on this street include installing 1800 LF of piping along E Evans Boulevard to 12 Street North. The planned pipe system is specifically included in the County AHMP.

This system is designed to improve flood and stormwater control throughout the northern section of Brigantine.

**Need for Project**

By having a properly functioning stormwater system, the silt traps within the catch basins will capture materials that should not be discharged from the system resulting in water quality improvements.

**Project Description**

(Carryover SFY2015) - This project will provide for the removal of accumulated sand from municipal drainage basins in the Golf Course Section of the City of Brigantine. The Golf Course Section of the City was significantly flooded by Superstorm Sandy and silts and sand washed into the underground drainage system. This project is designed to improve and protect groundwater as well as providing for a functional stormwater systems.

**Service Area**

Township of River Vale

**Need for Project**

The Township of River Vale is situated within an area which is critical to public drinking water supply. The Township borders on two reservoirs - Lake Tappan and Oradell Reservoir and has several class one rivers and tributaries within its boundaries (Hackensack River Pascack Brook). The Townships storm sewer system discharges directly into these critical waterbodies. The installation of these compliant castings will greatly reduce the volume of trash and floatables entering the public drinking water systems.

**Project Description**

The proposed project includes the replacement of the existing salt storage facility with a new upgraded facility sized to store 300 to 350 ton capacity. The project also includes minor site restoration as needed around the new facility and replacement of storm water inlet head pieces non-compliant Phase II Stormwater regulation.

**Project Name, Number**

Millstone Township  
S340126-01  
Non-Point Source (NPS) Pollution Controls

**Priority List Rank**

864

**County**

Monmouth

**Existing Population**

8,970

**Service Area**

Millstone Township

**Need for Project**

To comply with the good housekeeping section of the Millstone Township Stormwater Pollution Prevention Plan and to eliminate nonpoint source pollution Millstone proposes to build a truck washing facility designed to allow 100 recycling of water runoff. This process will eliminate truck detergents that contain phosphates from discharging into the local watershed.

**Project Description**

The proposed project includes construction of a truck washing facility for the Department of Public Works.

**Service Area**

Township of Byram

**Need for Project**

Several of Byram Townships settled lakes are regularly subjected to herbicide treatments to control nuisance weeds. Extensive herbicide use is likely to be affecting wells in the Cranberry neighborhood especially along the shoreline.

**Project Description**

The proposed project is for the purchase of a weed harvester to mechanically harvest nuisance weeds in the shallower areas of the lakes thereby reducing the need for the use of herbicides.

**Service Area**

Township of Byram

**Need for Project**

The Township of Byram is pursuing the construction of this wash facility to allow for the washing of municipal trucks police vehicles and equipment in a manner that will eliminate runoff into environmentally sensitive areas (wetlands and a Category 1 stream) located in close proximity to the municipal complex. This facility will also provide measures that will ensure that highly corrosive salt materials do not enter into the existing sanitary sewer system during winter months when de-icing activities occur. When completed this facility will provide the Township with a project which truly promotes water quality and meets the requirements of the Townships Tier A Municipal Stormwater General Permit.

**Project Description**

The project will consist of the construction of a vehicle washing facility at the Byram Township municipal complex. The facility will include the construction of an enclosed wash structure a concrete floor with floor drains an underground oilgritwater separator and piping to connect into existing water and sewer systems. Valve controls will also be an integral part of the project to eliminate flows into the existing sewer system during the winter months when highly corrosive salt material is present.

Borough of Bogota

**Need for Project**

The Borough of Bogota is bordered by the Hackensack River a Class One waterway on its entire western boundary. The Boroughs topography is such that its entire storm water collection system discharges directly into the Hackensack River. This project will greatly reduce the amount of debris and floatables which currently enter the system through the non-compliant inlets.

**Project Description**

The project includes the purchase of a combined sewer vacuum and jet truck.

The existing drainage system is silted and undersized causing frequent flooding resulting in stormwater pollution. The Hackensack River is adjacent to the area of concern and receives all drainage and sediment pollution caused by the ineffective drainage system.

**Project Description**

Construction of a stormwater pump station on a property located off of River Road to alleviate flooding and soil erosion problems. Other improvements also include installation of a force main discharging into the Hackensack River cleaning and stabilization of an existing ditch cleaning of drainage piping and inlets repair of the River Road culvert and installation of additional piping and inlets.

The existing spillways control the water levels in Upper Lake and Cedick Run Lake located upstream of Lake Fred. These lakes provide habitat for threatened and endangered species. The loss of spillways will degrade the delicate ecosystem and possibly the necessary habitat for many species of plants animals and aquatic life.

**Project Description**

The proposed project includes reconstruction of three concrete spillways two timber overflow structures and one corrugated metal culvert.

Wood-Ridge Borough

**Need for Project**

Water quality is improved by the project by efficiently directing storm water (gutter flow) to the existing storm drainage system. Under existing conditions the isolated catch basins are subject to fetid conditions that promote mosquito breeding. The Borough routinely vacuums the isolated catch basins. On-Street water pooling will be addressed by installing catch basins at points that have chronic standing water.

**Project Description**

The Borough of Wood-Ridge seeks to install and/or attach catch basins to the existing storm drainage system at various locations. The six (6) locations have been identified by the Borough as poorly drained.

**Service Area**

Borough of Keyport

**Need for Project**

The Borough needs to remediate certain areas which experience flooding and properly maintain its stormwater sewers. The existing facilities adversely impact water quality in the Raritan Bay.

**Project Description**

The proposed project involves the construction of approximately 200 feet of reinforced concrete pipe (RCP) and two doghouse drainage structures to create a bypass system to divert stormwater runoff to a separate outfall on Broad Street. Also included in the project is the construction of approximately 800 feet of RCP to replace an existing storm system on Second Street Waverly Street and Third Street and the purchase of a Scavenge-Vac to properly maintain the system.

Township of Westampton

**Need for Project**

Runoff from streets carries debris and contaminants which eventually pass through the storm sewer system and into the surrounding waterways. The Township is concerned with the non-point source pollution problem and believes this problem can be reduced through increased streetsweeping.

**Project Description**

The proposed project involves the purchase of a street sweeper to clean debris and contaminants from roadways to minimize adverse impacts on local waterways.

City of Linwood

**Need for Project**

Over time sediment and suspended solids discharge into water bodies lead to the water body becoming shallow. When this occurs it has negative affects on the health of the water body by leaving it susceptible to algae growth which effects other species of the plant and animal life in the water body. The proposed project is essential to the long term future health of three ponds which in turn has a positive net impact on the health and well being of the general public specifically to those residents and business in the immediate vicinity of the ponds one of which is located partially on a school site.

**Project Description**

This water quality project includes the construction and installation of storm water sediment removal devices upstream of six outfall structures at the three different ponds in the City of Linwood. The filters will remove sediment and suspended solids from stormwater runoff prior to it entering the water bodies. The project is designed and will be built in accordance with current New Jersey Storm water Regulations. The intent of the project is to eliminate sediment and suspended solids from entering the ponds from the City streets. The project will also include the retrofitting and or reconstruction of all storm water catch basinsinlets (which ultimately discharge to the ponds) to meet current NJ stormwater regulations.

**Service Area**

The storm sewer systems within the Borough of Paulsboro collect storm water for areas within the Borough and in general discharge storm water flows to Mantua Creek, the Delaware River, or tributaries to Clonmell Creek. The storm sewer systems along Thomson Avenue discharge to both Mantua Creek and an unnamed tributary of Clonmell Creek.

**Need for Project**

This project is being undertaken to mitigate regular flooding that occurs during nearly all moderate to intense precipitation events, regardless of duration. In some locations, due to the saw-toothed nature of the mains, the water has to back up several feet in a manhole before it can even start to flow downstream toward Mantua Creek. The roadway flooding causes unsafe driving conditions, extensive icing of the roads in the winter, premature wear of the roadways, and in severe storms can backup enough to flood into basements and crawl spaces of adjacent residences through basement window wells. In addition the saw-toothed profile of the storm sewer main causes material to collect in the manholes and pipes, which in turn reduces the capacity of the storm sewer even more and increases the cost and effort to keep the system free of blockages. BMPs will also be evaluated to determine what else can be done to lessen the flow that the new mains must convey.

**Project Description**

This project will replace a malfunctioning storm sewer system along Thomson Ave. and Wood St. in Paulsboro. The system regularly backs up and causes flooding of entire intersections during nearly all precipitation events that have any periods of moderate to intense rainfall. The ex. 18-in storm sewer mains are undersized and incorrectly built in a saw-tooth fashion.

The outfall structure will be constructed to provide relief from flooding conditions in Lake Como. Excessive nutrients from a major storm event will be removed from the lake.

**Project Description**

This project consists of the construction of a forcemain outfall connection from Lake Como to the Atlantic Ocean to provide relief from potential for flooding into the neighboring residential properties. The outfall structure will be located at the east end of Lake Como and cross under Ocean Avenue to terminate in the ocean. This forcemain will be connected to a portable hydraulic pump during major storm events. Currently the Lake and surrounding properties flood during a major rain event coupled with a high tide situation.

**Need for Project**

Inadequate facilities to convey and manage stormwater have caused problems such as ponding in certain areas of the Township during storm events. The Township also stores its road maintenance salt and sand in an open uncovered area with the potential for runoff to convey salt and sand to the nearby wetland.

**Project Description**

The proposed project involves construction of storm drainage systems including storm pipes inlets and basins to address the areas impacted adversely by stormwater build up. The proposed project also includes construction of a salt dome.

**Need for Project**

Extreme stormwater runoff in the Borough cannot be handled by existing ditches resulting in soil erosion and loss of trees. Soil erosion contributes to silt deposits in Otter Brook and degrades local wetlands and streams.

**Project Description**

The proposed project involves creating a stormwater detention basin by modifying an existing culvert to restrict flow. Improvements to existing ditches will also be made.

**Service Area**

Borough of Englewood Cliffs

**Need for Project**

The purpose of this project is to alleviate flooding and restore the pond volume for water retention. The purpose of the purchase of the Jetvacuum truck is to assist the DPW in maintaining the integrity of the sewer system. The Pershing Road Pond is subject to storm water runoff from nearby collector streets which creates an overwhelming accumulation of silt and debris. As a result the pond has formed large shoals and is heavily silted in certain areas. This sediment accumulation reduces the drainage capacity of the watercourse raising the ponds water level with each season storm event. The purpose of this project is to alleviate flooding and restore the pond volume for water retention.

**Project Description**

The proposed project includes the equipment purchase of a JetVacuum Sewer Truck to assist the DPW to maintain the integrity of the sewer system.

**Project Name, Number**

Salem City  
S340235-03  
Water Meters

**Priority List Rank**

N/A

**County**

Salem

**Existing Population**

5,146

**Service Area**

The planning area consists of the entire City of Salem, located in the western part of Salem County. The City provides potable water to approximately 4,931 residential and commercial metered public customers.

**Need for Project**

The existing meters are approaching the end of their useful life and require replacement. The meters become less accurate with age and generally run slower. New meters will also enable the City to easily detect leaks within the distribution system and reduce labor costs for meter reads.

**Project Description**

The project involves the replacement of the existing water meters with an automatic meter read system. The existing meters are approaching the end of their useful life and require replacement. The meters become less accurate with age and generally run slower. The City is experiencing lost revenue as a result. New meters will also enable the City to easily detect leaks within the distribution system and reduce labor costs for meter reads. As part of this project, all commercial water meters will be replaced, in addition to a large portion of the residential water meters.

**Service Area**

Highlands Borough

**Need for Project**

The Borough has a known nonpoint source pollution problem which needs to be corrected. The downtown area of the Borough frequently floods during periods of rain or high tides and Jones Creek cuts through the middle of this area. The floods damage property and collect debris and contaminants which are passed through the system to Raritan Bay.

**Project Description**

The proposed project involves the installation of a stormwater pump station.

**Need for Project**

The Borough needs to reduce flooding and reduce solids transportation. The project would reduce the sediment load to prevent creation of sediment islands and minimize the scour effect on stream banks.

**Project Description**

The proposed project includes bank stabilization and water quality improvements. The project consists of deepening the stream and stabilizing sections of the stream bank to prevent further soil erosion.

Stormwater Management

**Priority List Rank**

886

**County**

Monmouth

**Existing Population**

5,005

**Service Area**

The service area includes the entire Borough of Highlands; however, due to the high elevations and steep slopes, runoff flow from adjacent areas of Middletown Township and Atlantic Highlands Borough also drain into the Borough drainage system.

**Need for Project**

The existing drainage system, which drains into the Shrewsbury River, a C1 waterway, is undersized to handle contributing drainage flow and runoff sediment from upland areas. Drainage facilities in low lying areas are inundated by floodwaters originating from NJ Rt. 36 corridor and adjacent upgradient areas of the Borough, Middletown Township and Atlantic Highlands. High intensity rainfall events, coupled with high tides, high stormwater velocities and head conditions result in system back ups and extensive flooding of the low lying areas from Bay Avenue northward.

**Project Description**

(Carryover SFY2015) - Proposed improvements include construction of a new stormwater pump station in Jones Creek, replacement of the existing outfall from the Valley Street Pump Station, the replacement/upgrade of portions of the existing stormwater infrastructure and the installation of additional drainage infrastructure in various portions of the Borough. Merged Carryover and Supplemental Applications into one project for SFY2016

Stormwater Management

**Priority List Rank**

893

**County**

Atlantic

**Existing Population**

4,545

**Service Area**

West Atlantic City section of Egg Harbor Township

**Need for Project**

The existing stormwater collection system in West Atlantic City is physically deteriorating and is inadequate to collect and discharge runoff to Lakes Bay. Under normal conditions tidal flooding often surcharges the system and discharges tidal water back through stormwater inlets due to a lack of back flow prevention devices. This increased flooding increases the amount of sediment and other pollutants that enter the collection system and are discharged to Lakes Bay. A new stormwater system will reduce the amount and frequency of flooding which will decrease the concentration of solids nutrients and fecal coliform in the Bay.

**Project Description**

The proposed project includes construction of a stormwater management system that will handle runoff from a 100-year storm event. This will include replacing all existing inlets and piping eliminating numerous bay discharge points and installing new outfalls.

Borough of Magnolia

**Need for Project**

The existing salt storage has created problems due to runoff discharges to local waterways. The Borough is currently under orders to eliminate such runoff.

**Project Description**

The proposed project includes construction of a salt storage facility.

Bradley Beach Borough  
S340472-02  
Sanitary Sewer System Rehabilitation

**Priority List Rank**

896

**County**

Monmouth

**Existing Population**

4,298

**Service Area**

Sanitary improvements are proposed along Evergreen, Monmouth, Burlington, Pacific, Madison Avenues including portion of Bradley Boulevard. Stormwater improvements will include all 10 outfall into Sylvan Lake at the following intersections with Bradley Boulevard: Main Street, Pacific Avenue, Atlantic Avenue, Madison Avenue and Monmouth Avenue.

**Need for Project**

The Borough of Bradley Beach is requesting funding through the New Jersey Environmental Infrastructure Trust Finance Program (Trust) Clean Water State Revolving Fund for the State Fiscal Year 2016 loan program to improve its aged stormwater and sanitary infrastructure.

**Project Description**

The Borough is currently operating an aged sewer collection system and stormwater system constructed in the early 1900's. It is the Borough's desire to rehabilitate their infrastructure systems over time as funding is available. It is the intent of this application to address about 15% of the sanitary sewer system and approximately 90% of the stormwater infrastructure system to Sylvan Lake. It will address the stormwater sewer system along Bradley Boulevard as follows: - Replace 1,700 feet of storm drain with 18 inch diameter Reinforced Concrete Pipe - Replace 30 drainage inlets - Replace 14 drainage Manholes

Borough of Medford Lakes

**Need for Project**

The Medford Lake are essential to the Boroughs storm drainage system and flood control. The bulkhead reduces the amount of sediment that builds up in the lake and without it sediment and debris is flowing into the lake and downstream.

**Project Description**

The proposed project includes replacement/repair of the bulkhead to reduce erosion and control solids/floatables.

**Need for Project**

Currently several DPW vehicles and pieces of equipment are stored outside in the maintenance yard. Storing the vehicles and equipment within the rehabilitated building will eliminate contamination of the storm water runoff and extend the useful life of the equipment.

**Project Description**

Rehabilitation of an existing equipment storage building that is currently in disrepair and inefficiently sectioned for proper storage of DPW maintenance vehicles. The layout of the building will be changed to provide additional storage bays so equipment can be housed within the structure which is located on the DPW property at 405 Mine Road within the Township. Proper drainage and water quality treatment devices will be installed within the building.

**Need for Project**

The NJDEP has mandated that all discharges of equipment and vehicle wash wastewater from maintenance yard operations be eliminated by 022909. Under the current procedures the wastewater is discharged to the ground surface and enters nearby streams/groundwater. The facility will capture all water used in the cleaning of equipment and vehicles for proper disposal which will greatly improve the water quality in the area.

**Project Description**

Construction of a facility designed to collect equipment and vehicle wash wastewater from maintenance yard operations. Bethlehem Township is coordinating construction of the facility with the local New Jersey Department of Transportation maintenance yard located on State Highway Route 173 in order to share services and reduce costs.

Borough of High Bridge

**Need for Project**

The Borough of High Bridge proposes to build a salt barn to replace two deteriorated buildings where runoff threatens a tributary of the South Branch of the Raritan River. Covered-inside storage will eliminate the possibility of contaminating the stream wells and ground water with salt run-off.

**Project Description**

The proposed project includes construction of a salt barn with 631 tons capacity.

**Service Area**

Liberty Township

**Need for Project**

Liberty Township is in need of a street sweeper. The purchase of this equipment will help the Township reduce the amount of debris that accumulates in the sewer system and in turn reduce solidsfloatables from entering the waters of the Pequest Watershed.

**Project Description**

The proposed project involves the purchase of one street sweeper.

**Service Area**

Borough of Riverdale

**Need for Project**

Periodically the Boroughs storm sewers collect debris and contaminants which eventually pass through the storm sewer system and into the lakes and surrounding waterways. The Borough is concerned with the non-point source pollution problem and believes this problem can be reduced through better maintenance which will be enhanced by the use of Jet Vac equipment and certain specific improvements to the existing stormwater facilities.

**Project Description**

The proposed project involves the purchase of a Jet-Vac Truck to clean debris from the storm sewers and minimize adverse impacts on local waterways.

**Service Area**

Sylvan Lake is a coastal lake located between Avon-by-the-Sea and Bradley Beach. The Lake is fed by a small unnamed tributary to the northwest and thirty stormwater outfalls from a highly urbanized watershed that includes both residential and highway/commercial land uses spanning the municipalities of Avon-by-the-Sea, Bradley Beach, Neptune City and Neptune Township. Stormwater is then temporarily detained in the lake prior to directly discharging into the Atlantic Ocean just offshore of Avon's bathing beaches.

**Need for Project**

The proposed rehabilitation of the Sylvan Lake Stormwater Management capacity and infrastructure will address known water quality problems within the lake and ultimately, the proximate Atlantic Ocean bathing beaches. Presently, the lake is subject to pathogen contamination, algal blooms, aquatic weed overgrowth and eutrophication that are primarily related to inputs of stormwater and runoff from the surrounding watershed. These contaminated waters chronically persist, and the contaminated waters are continuously discharged to the Atlantic Ocean via an ocean outfall that discharges onto the bathing beach areas. The discharges are acutely worse during rainfall events when the lake discharges to the ocean at increased rates. Lastly, the outfall structure is structurally compromised, causing leakage of the contaminated lake water into the beach groundwater and limiting the ability of local authorities to control the discharge during storm events.

**Project Description**

The Sylvan Lake Water Quality Project aims to increase the lake's capacity to store stormwater. In order to do this, dredging of the lake is required. In addition, the proposed project will address known water quality issues within the lake that result from stormwater runoff from the surrounding watershed. Also, the outfall structure that discharges this water to the Atlantic Ocean is structurally compromised and needs replacement.

Borough of Sea Bright

**Need for Project**

Sea Bright is a barrier island surrounded by the Shrewsbury River on the west and the Atlantic Ocean on the East. Both the River and the Ocean must be protected from the possible leak of sanitary sewage from an old antiquated system (sanitary sewer rehabilitation and further the land must be protected from flooding both for the protection of life and property and the mixing and discharging of sewage during flood events. The storm water system and pumps will keep storm and sewage separate by removing the threat of floods on minor and intermediate storms.

**Project Description**

Construction of Sanitary Sewer Piping on Badmitton Court Construction of Stormwater Pump stations and Stormwater Piping in Osborne Church River and Peninsula Streets and upgrades to River street and Middle Pump Stations.

**Service Area**

The planning area for this project consists of the entire Borough of Hampton in Hunterdon County, New Jersey. Hampton encompasses approximately 1.5 square miles. The Township has a total population of 1,253 and 506 total housing units. Hampton is bordered by Lebanon Township to the northeast, by Glen Gardner Borough to the east, by Bethlehem Township to the south, and by Washington Township (Warren County) to the northwest.

**Need for Project**

The purpose of this project is to provide the DPW with a means of more efficiently and effectively retrieving leaves from the side of the road. Leaves piled on the road have the potential to enter into the storm sewer system and negatively impact water quality.

**Project Description**

The project will result in the purchase of a leaf vacuum to be used by the Borough Department of Public Works (DPW); the DPW provides leaf pickup services throughout the Borough. The selected equipment is a Tarco Hurricane 1000 Series leaf loader, with a 17 cubic yard box capacities and a dual tire dual axle 18,000 lb. axle rating trailer.

**Need for Project**

When the free flow of tidal waters in and among the multiple tidal creeks and salt marsh is hindered by shoaling the natural flushing and cleansing effect of the tides is hindered. This results in the trapping or slowing of waters within certain areas and accompanying loss of water quality. When shoaling is left unaddressed the problem is compounded and water quality continues to decrease. Detrimental effects of the poor water quality in the back bays includes increased risk of bacteriological contamination and the concentration of other contaminants (metals etc.) in shoaled areas where water velocity is slowed and the contaminants drop to the bay floor rather than continue to disperse throughout the system.

**Project Description**

The project includes dredging of several back bays and water ways impacted by Sandy.

**Service Area**

Teterboro Airport and West Riser Ditch Storm Drainage Systems

**Need for Project**

The existing pump station was built in 1950 to assist two smaller pump houses which date back to 1917. Currently all three pumps are in operation and the system is in need of repair.

**Project Description**

The proposed project is to extend the two existing 60-inch diameter storm trunk mains to a new pump house constructed with an emergency generator and a variable speed pumping system. Also included is the abandonment and demolition of the two 1917 pump houses and alterations associated with the riser ditch and bulkhead.

**County**

Middlesex

**Existing Population**

50,814

**Service Area**

Service area is limited to the area within City limits only.

**Need for Project**

There is no water quality related with this project. This is to replace the existing water meters that are over 15 years old and have found many that are providing inaccurate reading. Additionally, the existing meters can very easily be tampered with. Both of this issues contribute to an inaccurate percent for unaccounted for water. The replacement of these meters will reduce the percent of unaccounted for water.

**Project Description**

The majority of the water meters installed in Perth Amboy have been in the system for at least 15 years. There has been complaints of high bill where the city has investigated the possible reason of the high bill and on many occasions has discovered that the meter is not registering accurately resulting in an adjustment to the customer's water bill. Additionally, it has been observed that the existing meters can be very easily tampered with allowing the customer use water that is not been registered by the meter and therefore increasing the percentage of unaccounted for water. To stop or at least reduce the stilling of water by tampering the meters, the city has decided to replace all of the meters with a meter that will prevent tampering with. The City will use the existing meter routes to divide the system and replace the water meters. The first section will be the south east section of town where most of the tampered meters have been found.

City of Newark

**Need for Project**

A former industrial facility requires remedial measures to support brownfield development and provide significant environmental benefits. Placement of an impermeable cap along with installation of stormwater controls will ensure that rain water will not mobilize contaminants and pollute groundwater or the adjacent waterways.

**Project Description**

This is a proposed redevelopment of a brownfield site located in the City of Newark in Essex County in the Third Industrial District and the Industrial River Urban Renewal Plan Area adjacent to the Route 1&9 Interchange on Delancy Street. The project will consists of remediation requirements included in an approved Remedial Action Work Plan as well as additional environmental and clean water improvements necessary as part of the overall redevelopment. The project consists of a warehouse/industrial facility that includes two (2) buildings of 705000 square feet and 105775 square feet with 20000 square feet of office space and 5000 square feet of office space respectively. The project site is currently a vacant former industrial site from which the structures have been removed. Piersons Creek bisects the project site which is to be enhanced and improved. It is anticipated the project will be occupied by a combination of warehouse distribution and industrial uses.

Jersey City

**Need for Project**

The City plans to purchase land for water quality protection. The preservation and conservation of land is important to help protect and maintain water quality in the project area. In general the loss of open space is known to have adverse water quality impacts that result from increases in impervious cover loss of recharge areas or buffer zones and undesirable changes in historic stormwater drainage patterns.

**Project Description**

The proposed project includes the purchase 6.2 acres along the PRR Harimus Branch Embankment to preserve open space and to protect water quality.

Hoboken City  
S343078-01  
Open Space Land Acquisition and Conservation

**Priority List Rank**

927

**County**

Hudson

**Existing Population**

38,577

**Service Area**

City of Hoboken

**Need for Project**

The project will acquire and develop passive recreational open space for the enjoyment of Hoboken residents and visitors but will also help retain stormwater runoff and reduce flooding. Situated along the Hudson River the City of Hoboken is prone to severe flooding when heavy rains combine with high tide. This is particularly an issue in Hobokens southwest which is one of the more densely populated areas of the City and currently has no open space or parkland. As a result of the creation and preservation of open space stormwater will be retained naturally which will help to alleviate flooding reduce volume flowing into the Citys combined stormwatersewer system and prevent sewage discharges into the Hudson River as a result of overflow to the combined sewer system.

**Project Description**

The City of Hoboken will acquire and develop parkland in the Southwest portion of the City. The new park will provide open space access in a congested neighborhood of town will help retain stormwater runoff and will reduce overflows to the combined sewerstormwater management system.

Manchester Township  
S340650-08  
Water Meters

**Priority List Rank**

188

**County**

Ocean

**Existing Population**

21,650

**Service Area**

The service area is Manchester Township Water Utility's Eastern Service Area which is generally the eastern portion of the Township. It includes the areas east of Lakehurst, the military base (Joint Base McGuire-Dix-Lakehurst) and the Consolidated Rail tracks that lie just west of and parallel to State Highway Route 37 West as well as the proposed development area (approximately 1,000 acres) of the Heritage Minerals tract that lies to the west of the aforementioned Consolidated Rail tracks.

**Need for Project**

Consumer's water quality will be improved in those locations that water meters are being replaced since the existing water meters were manufactured long before the current standards were implemented. The current standards reduced the probability of lead leaching into water from drinking water system components including water meters.

**Project Description**

Install an automated water meter reading system capable of remotely reading meters without entering the properties at which they are located. Also, the project will include the replacement of meters that are beyond their expected service life.

**Service Area**

The service area for the proposed project includes the entire municipality.

**Need for Project**

Proposed project is intended to replace aging meters with current technology that is in compliance with AWWA standards, as well as, assist the Borough in tracking water usage and enhancing leak detection.

**Project Description**

The proposed project includes replacement of existing aging water meters with new SENSUS IPERL radio read smart point readers. The project will include disposal of the existing meters, installation of up to 3400 new water service meters throughout the Borough, and construction of a receiving base station (both hardware and software) to be located on the Borough's existing water tower in order to track water usage data. All replacement work will be done inside residential and commercial properties.

S340924-07  
Water Meters

**Priority List Rank**

232

**County**

Hunterdon

**Existing Population**

2,719

**Service Area**

This is a system-wide replacement project that covers sections of Clinton Town, Lebanon Borough, Clinton Township, Franklin Township and Union Township.

**Need for Project**

Installation of these meters will increase the level of accuracy on the quantities measured for billing. It is anticipated that the existing aged meters at these locations are not fully capturing actual usage by the customer. In turn, the new meters will yield more accurate reading, which will impose water conservation measures by each customer, and a decrease in waste water returns.

**Project Description**

Pursuant to the Capital Improvement Plan derived from the Asset Management Plan (AMP) for the system, the Town of Clinton is continuing efforts to implement the AMP to resume the conversion of customer service meters to radio read in order to improve billing accuracy, further reduce the percentage of non-revenue water in the water system and in part minimize the wastewater return to the sanitary sewer collection system. Approximately 750 meters remain for replacement. The preferred course of action would be for the procurement of the meters to be through the co-op and advertise publicly for the installation of the meters. The preparation of the asset management plan, evaluation of the system wide meter inventory and incorporating these assets in GIS as well as ongoing analysis of financing options and rate analysis are part of the extensive planning efforts to identify the scope and priority of this capital improvement project.

**Service Area**

Water meters and pits will be installed at all residential dwelling units within the municipality.

**Need for Project**

This project will address the requirements of the previously issued water allocation permit.

**Project Description**

The Borough proposes to provide water meters in meter pits for every unmetered service connection within the Borough. The number of connections is approximately 1350. The Borough currently has 500 Sensus Meter installations. Ship Bottom has a shared service agreement with Stafford Township and the Township will install the 1350 meters over a 3 year period. Stafford & Ship Bottom also have a Cooperative Pricing System Agreement for meter pits and materials needed for the installation. Bid documents have been prepared and are included with this application.

**Project Name, Number**

Wildwood Crest Borough  
S343041-01  
Open Space Land Acquisition and Conservation

**Priority List Rank**

937

**County**

Cape May

**Existing Population**

3,980

**Service Area**

Borough of Wildwood Crest

**Need for Project**

The Borough plans to purchase land for water quality protection. The preservation and conservation of land is important to help protect and maintain water quality in the project area. In general the loss of open space is known to have adverse water quality impacts that result from increases in impervious cover loss of recharge areas or buffer zones and undesirable changes in historic stormwater drainage patterns.

**Project Description**

The proposed project includes the purchase of a 2.5-acre parcel adjacent to the beachfront in the southern portion of the island to prevent ponding of stormwater runoff and to maintain or improve existing drainage patterns.

Anticipated Recipient:	Brick Township

Landfill Closure

**Priority List Rank**

938

**County**

Ocean

**Existing Population**

76,119

**Service Area**

Township of Brick

**Need for Project**

The uncapped landfill is the source for groundwater contamination documented at the site. A contamination plume emanates from the landfill encompassing approximately 470 acres. As a result of contamination (volatile organic compounds) a Groundwater Use Restriction Area and Classification Exception Area were established and a maintained private water and irrigation wells were closed and residents within the affected area were required to connect to water service. Although the impacted Kirkwood-Cohansey aquifer system is hydraulically connected to Barnegat Bay it is not expected that elevated contamination levels can be traced to the landfill site.

**Project Description**

The remedial action consists of the re-grading of the landfill installation of a cap including gas vents and construction of a stormwater management system.

Buena Vista Township  
S342023-01  
Landfill Closure

**Priority List Rank**

940

**County**

Atlantic

**Existing Population**

7,570

**Service Area**

Former Buena Vista Solid Waste Landfill ceased operation between 1979 and 1982; is now currently known as Buena Vista Township Department of Public Works bounded by agricultural land (farm fields) on the North and West, by a residential property to the South, and Union Road to the East. On the other side of Union is agricultural land with a residence and other out buildings. The nearest residence is adjacent to the Buena Vista Township Public works Yard. There are 31 impacted wells located to the south and southwest and down gradient of the Buena Vista Public Works Yard. The affected homes/wells are being provided with point of entry treatment systems (POETS) through the NJDEP Spill Fund. The highest level of contamination occurs on the southwest corner of the Public Works yard created by commercial agricultural activities (cultivation of produce for human consumption)

**Need for Project**

Task 1: Project Planning \$30,000 detailed review of project files, site inspections, meetings with client and regulatory agencies and development of a conceptual model that will assist in understanding the project details and become the basis for the required remedial investigation; Task 2: Ground Water Investigation \$235,000 Monitoring Well Installation, traffic control, road opening, cost for sampling the monitoring well network twice, and associated data management; Task 3 Landfill investigation \$100,000; Task 4 Prepare Remedial Investigation report and action plan \$50,000; Task 5 Preparation for Landfill closure \$60,000; Task 6 Project Management \$40,000; Task 7-9 Implement ground remediation, construct recommended landfill closure plan, submit remedial action report \$40,000; Task 10 submission post closure plan report and file deed notice \$40,000 Task 11 Long term monitoring of well. Task 8,11 will be developed at a later date based on the findings of prior tasks.

**Project Description**

In a letter dated September 24, 2015, the New Jersey Department of Environmental Protection's (NJDEP) Site Remediation Program notified Buena Vista Township that the NJDEP has documented the release of hazardous substances at the former Buena Vista Solid Waste landfill, which ceased operations between 1977 and 1982. The property is currently the Township's Public Works Yard. The NJDEP conducted a ground water investigation at the former Buena Vista landfill and the ground water sample results showed that contamination was present on site. Based on this, the NJDEP stated that Buena Vista Township may have responsibility under the New Jersey Spill Compensation and Control Act for the investigation and remediation of contamination at the subject site. The Township was required to retain a License Site Remediation Professional (LSRP) and conduct the required remedial investigation and remedial action for landfill closure and groundwater contamination.

**Need for Project**

Currently, leachate from landfill is being discharged to Big Timber Creek, a tidal tributary of the Delaware River. The proposed remediation work components that are the subject of this application are integral and necessary components of the NJDEP approved remedial action work plan ("RAWP").

**Project Description**

(Carryover SFY2015) - The proposed project includes closure of a landfill. The closure includes soil cover improved grading a structural landfill cap creek stabilization and a methane gas collection system as well as long term surface and groundwater monitoring programs.

County of Mercer

**Need for Project**

The County plans to purchase land for water quality protection. Preservation and conservation of land is important to help protect and maintain water quality in the project area. In general the loss of open space is known to have adverse water quality impacts that result from increases in impervious cover loss of recharge areas or buffer zones and undesirable changes in historic stormwater drainage patterns.

**Project Description**

The proposed project is for the purchase of land adjacent to the Delaware and Raritan Canal within one mile of both Baldpate Mountain preserve and Mercer County Howell Living History Farm to preserve open space and to protect water quality.

**Need for Project**

The planned improvements will protect ground water by ensuring that landfill leachate is removed from the landfill in a timely manner and transported for disposal through a secure conveyance system.

**Project Description**

The proposed project includes the rehabilitaion of six leachate lift stations and the replacement of approximately 1300 feet of single wall leachate force main with double wall pipe. Included will be new pumps electrical instrumentation and other appurtenances.

Gloucester County

**Need for Project**

The County plans to purchase land for water quality protection. The preservation and conservation of land is important to help protect and maintain water quality in the Raccoon Creek and the neighboring Delaware River. In general the loss of open space is known to have adverse water quality impacts that result from increases in impervious cover loss of recharge areas or buffer zones and undesirable changes in historic stormwater drainage patterns.

**Project Description**

The proposed project includes the purchase of land in Logan Township to preserve open space and to protect water quality.

**Service Area**

N/A - only involves leachate and sanitary flow from SCMUA Solid Waste facility

**Need for Project**

Provide for long-term transmission of leachate for treatment at the SCMUA Upper Wallkill WPCF

**Project Description**

This project includes a pumping station and force main to convey landfill leachate to the Upper Wallkill Water Pollution Control Facility (WPCF) rather than continuing the practice of trucking leachate for treatment and disposal. Currently, leachate generated from the landfill is collected and stored at the SCMUA Solid Waste Facility in a 1.1 million gallon tank. The leachate is then hauled by SCMUA via tanker truck approximately 6 miles to its Upper Wallkill WPCF in Hardyston, New Jersey, for treatment. The current leachate treatment and disposal scheme is regulated by the New Jersey Department of Environmental Protection (NJDEP) under NJPDES/SIU Permit No. NJ0103811, which provides for the disposal of 35,000 gallons per day (annual average) of leachate at the SCMUA's Upper Wallkill WPCF.

**Service Area**

Edison Landfill is a former 35 acre municipal landfill, disused since 1991, has no defined service area as a result of its continuing inactive status since that time. More details are provided in the uploaded/attached Edison Landfill History.

**Need for Project**

The Edison Landfill Closure Project will eliminate subsurface leachate migration into the adjacent Raritan River and contiguous properties. This will be achieved primarily through the capping of the Edison Landfill and an engineered leachate containment and pumping system for proper leachate conveyance to the MCUA.

**Project Description**

(Carryover SFY2015) - The closure of the Edison Landfill will include the following activities Landfill plateau capped with geomembranegeosynthetic clay liner reinforcement textile soil cover and vegetative layer. Sides capped with ordinary soil cover and vegetative layer. Landfill plateau and sides capping shall also utilize waste-derived material such as stabilized sludge. Stormwater channels shall utilize waste-derived materials such as glass cullet or crushed concrete in cover materials. Leachate collection pumping and disposal systems to MCUA via a siphon crossing the Raritan River shall be designed fabricated installed commissioned and operated on a continuing basis. A methane gas extraction system shall also be designed fabricated installed commissioned and operated on a continuing basis. A surface-mounted ballasted 100kWh PVSE system shall be installed as well as an extension of an existing walkway adjacent to the Raritan River under a disruptionrestoration component.

**Project Name, Number**

Brick Township  
S343010-02  
Open Space Land Acquisition and Conservation

**Priority List Rank**

957

**County**

Ocean

**Existing Population**

66,473

**Service Area**

Township of Brick

**Need for Project**

The Township plans to purchase land for water quality protection. The preservation and conservation of land is important to help protect and maintain water quality in the project area including the Kettle Creek drainage area Beaver Dam watershed and unnamed tributaries of the Metedecank River. In general the loss of open space is known to have adverse water quality impacts that result from increases in impervious cover loss of recharge areas or buffer zones and undesirable changes in historic stormwater drainage patterns.

**Project Description**

The proposed project includes the purchase eight parcels of land to preserve open space and to protect water quality. The purchase of the parcels will expand the Cedar Bridge Branch Greenway Midstreams Greenway and Metedecank Greenway.

Open Space Land Acquisition and Conservation

**Priority List Rank**

968

**County**

Monmouth

**Existing Population**

36,398

**Service Area**

Township of Marlboro

**Need for Project**

The Township plans to purchase land for water quality protection. Preservation and conservation of land is important to help protect and maintain water quality in the project area. In general the loss of open space is known to have adverse water quality impacts that result from increases in impervious cover loss of recharge areas or buffer zones and undesirable changes in historic stormwater drainage patterns.

**Project Description**

The proposed project is for the purchase of land to preserve open space and to protect water quality.

**Need for Project**

The Townships former landfill is generating leachate, which is causing surface and groundwater impacts in an area containing the headwaters of two drainage basins. A capping system is needed to reduce infiltration, which will subsequently minimize further leachate generation and migration.

**Project Description**

The proposed project will include the construction of a capping system consisting of an impervious clay cap, a sand drainage layer, a vegetative layer, a ground/surface water monitoring system, and drainage improvements. The entire landfill will be re-contoured to remove waste around the perimeter and to establish appropriate cross slope grades.

**Project Name, Number**

Readington Township  
S343034-04  
Open Space Land Acquisition and Conservation

**Priority List Rank**

978

**County**

Hunterdon

**Existing Population**

15,803

**Service Area**

Township of Readington

**Need for Project**

Open lands still remaining in Readington serve as water quality protection for the headwaters of vital tributaries to the North and South Branches to the Raritan River. The preservation and conservation of land is important to help protect and maintain water quality in the project area. In general the loss of open space is known to have adverse water quality impacts that result from increases in impervious cover loss of recharge areas or buffer zones and undesirable changes in historic stormwater drainage patterns.

**Project Description**

The proposed project is for the purchase of land including parcels in the Raritan Basin Management Area to preserve open space and to protect water quality.

Anticipated Recipient:	Clinton Township

**Project Name, Number**

Byram Township  
S343047-01  
Open Space Land Acquisition and Conservation

**Priority List Rank**

989

**County**

Sussex

**Existing Population**

8,254

**Service Area**

Township of Byram

**Need for Project**

The Township plans to purchase land for water quality protection. Preservation of the Lubbers Run Greenway will preserve and protect the stream corridor wetlands and watershed of Lubbers Run a trout maintenance stream and the largest tributary to the Musconetcong River. Byram is under extreme development pressure and the geological resources conducive to groundwater supplies are limited. Areas of high recharge like Lubbers Run Greenway need to be protected to maintain groundwater supplies in the Township.

**Project Description**

The proposed project is for the purchase of an easement on land adjacent to Lubbers Run Greenway. Purchase of this land will limit development and sprawl and will preserve open space and protect water quality.

**Service Area**

Township of Fairfield

**Need for Project**

The municipal landfill in Fairfield is generating leachate which is impacting surface and ground water. The site adjoins a waterway known as Rattlesnake Gut which flows directly into the Cohansey River. A capping system is needed to prevent further leachate impacts.

**Project Description**

The proposed project includes construction of fill and an impervious cap to prevent infiltration. Since the site adjoins an intermittent waterway it may be necessary to remove some of the landfill adjacent to the stream for wetlands reclamation and buffering.

Open Space Land Acquisition and Conservation

**Priority List Rank**

999

**County**

Morris

**Existing Population**

4,537

**Service Area**

Township of Mendham

**Need for Project**

The Township plans to purchase the Clyde Potts Reservoir and the surrounding drainage basin. The preservation and conservation of land is important to help protect and maintain water quality in the project area. In general the loss of open space is known to have adverse water quality impacts that result from increases in impervious cover loss of recharge areas or buffer zones and undesirable changes in historic stormwater drainage patterns.

**Project Description**

The proposed project is for the purchase of the Clyde Potts Reservoir and the surrounding drainage basin to preserve open space and to protect water quality.

**Service Area**

City of Cape May

**Need for Project**

The City plans to purchase land for water quality protection. The preservation and conservation of land is important to help protect and maintain water quality in the project area. This project is less than 2000 feet from the Atlantic Ocean and 1000 feet from a Green Acres conservation area which protects the southern shoreline of Cape May Harbor. In general the loss of open space is known to have adverse water quality impacts that result from increases in impervious cover loss of recharge areas or buffer zones and undesirable changes in historic stormwater drainage patterns.

**Project Description**

The proposed project includes the purchase of Sewell Point Tract which consists of approximately 90 palustrine wetlands that are stated to be of exceptional resource value. The parcel currently exists as a wildlife sanctuary with the threat of residential development on 10 of the parcel. The proposed project will not only preserve open space and protect water quality but will also protect several species of threatened and endangered birds that have been identified on the parcel.

**Service Area**

National Park Borough

**Need for Project**

The Borough of National Park is required by the State Regulations to implement the closure of the landfill site in accordance with the applicable Solid Waste Rules. The implementation of the closure and preparing the site for development is a priority for the Borough of National Park. This sizable contaminated property is situated in the center of the Borough with no prospects for development. The Borough is very much interested in getting the property to be put to a productive use. The Borough has two alternatives implementation of closure only or implementation of closure and development of the site for the installation of PV Solar system. Therefore the implementation of the landfill closure is needed for both alternatives.

**Project Description**

It is the intent of the Borough of National Park to implement an NJDEP approved environmentally sound closure of the landfill and prepare the site for future use. The Borough has solicited bids for the installation of a Photo Voltaic solar system on the site and has faced a difficulty in getting the site closed and developed due to the high cost of implementing proper closure.

**Service Area**

Peninsula at Bayonne Harbor

**Need for Project**

Existing conditions on the site allow for stormwater to collect within the exposed basement of the former industrial building and stagnatemix with the demolition debris. These conditions contribute to water stagnation and unknown water quality consequences of standing water in demolition debris. The proposed project will 1) result in removal fo the debris 2) bring the site to grade so that basement water collection cannot occur and 3) facilitate the collection of stormwater into the existing on-site system. The project will also serve to prepare the site for DEP-approved redevelopment of the site which includes substantial water quality and flood control measures.

**Project Description**

The project is located on the Peninsula at Bayonne Harbor which is the site of the former Military Ocean Terminal - Bayonne (MOTBY). The proposed work consists of completing the US Armys unfinished demolition of a former warehouse structure and preparing the demolished footprint for collection of stormwater into the existing system. Under existing conditions the unfinished demolition has created a hole in the ground which collects stormwater that stagnates and mixes with the debris. The proposed work will complete the demolition and removal of concrete from the basement hole fill in the hole with material and prepare the surface for routing of stormwater to the existing system that surrounds the former building. The project is fully permitted with the exception of soil erosion and sediment control permit application that is currently being prepared.

**Service Area**

Peninsula at Bayonne Harbor

**Need for Project**

Existing conditions on the site allow for stormwater to fall on 90 acres of unstabilized soil that has been placed on the Peninsula to raise the site out of the floodplain. These conditions contribute suspended sediment into the stormwater via both 1) sheetflow and 2) wind-blown sand that deposits on the street system. The proposed project will substantially reduce soil erosion and the introduction of suspended sediment into the adjoining New York Harbor.

**Project Description**

The project is located on the Peninsula at Bayonne Harbor site of the former Military Ocean Terminal - Bayonne (MOTBY). The proposed work consists of stabilizing approximately 90 acres of unstabilized soil that has been deposited on the site to raise it out of the floodplain. Specifically the work consists of final grading and the placement of topsoil & hydroseed to stabilize the 90 acre area. Upon completion stormwater across the stabilized area will be collected in a stormwater collection and treatment system that is currently under construction (using NJEIT funding). The project is fully permitted and shovel ready.

**Service Area**

Peninsula at Bayonne Harbor

**Need for Project**

Existing conditions on the site allow for stormwater to sheetflow across the site and directly over the collapsed bulkhead and into New York Harbor. These conditions contribute to poor water quality and sedimentation of the Harbor. The proposed project will 1) prevent additional erosion and associated Harbor siltation from occurring 2) facilitate stormwater collection and discharge and 3) serve as the basis for the DEP-approved redevelopment of the site which includes substantial water quality and flood control measures.

**Project Description**

The project is located on the Peninsula at Bayonne Harbor site of the former Military Ocean Terminal - Bayonne (MOTBY). The proposed work consists of reconstructing a shoreline area where approximately 1800 feet of bulkhead has completely collapsed and the associated upland stormwater collection system is no longer functional. The existing conditions allow unfettered stormwater sheetflow to enter directly into New York Harbor. The proposed project would reconstruct the 1800 foot section of failed bulkhead stormwater outfalls and associated upland stormwater collection infrastructure for purposes of remedying the existing uncontrolled condition. The project is fully permitted (NJDEP and Army Corps) with the exception of a soil erosion and sediment control permit for which a permit application is presently being prepared.

Remedial Action/Contaminated Site Cleanups (Brownfields)

**Priority List Rank**

1012

**County**

Hudson

**Existing Population**

40,684

**Service Area**

This project is proposed at the 24-acre Gunnel Oval Recreational Complex which services the entire populous of the Town of Kearny that participates in active or passive recreation. It is a multi-sport facility whose existing and proposed facilities include various regulation sized fields for baseball, softball, soccer, and football as well as a skate park and proposed basketball courts. This project proposes to mitigate exposure to existing historic fill materials through design of an engineered cap which incorporates the artificial turf and underdrain cross-section, for which the Town has submitted to the State's Hazardous Discharge Site Remediation Fund (HDSRF). This project will also positively impact the surrounding residential and industrial neighborhoods through construction of improved stormwater management controls to mitigate the impact of flooding in connection with the tidal influence of the Kearny Marsh ecosystem.

**Need for Project**

This project will also positively impact the surrounding residential and industrial neighborhoods through construction of improved stormwater management controls to mitigate the impact of flooding in connection with the tidal influence of the Kearny Marsh ecosystem. The proposed stormwater management controls include direct collection of runoff through the artificial turf underdrain system, establishing on-site detention systems for volume control, potential extended detention systems for NJDEP water quality compliance, and improved discharge capabilities through construction of new outfalls with backflow preventors within the tidal Kearny Marsh ecosystem.

**Project Description**

This project has both a Remedial Action Contaminated Site Cleanup (Brownfield) component as well as a Stormwater Management (Clean Water) initiative component. The primary objective of this project is redevelopment of the Gunnel Oval Recreational Complex as a modern artificial turf sports complex including the environmental component of an engineered cap to minimize potential exposure to historic fill materials present on-site while implementing stormwater management controls that minimize the impact of frequent flooding at this complex and surrounding residential and industrial neighborhoods due to the influence of the tidal Kearny Marsh.

**Service Area**

This proposed project will enhance the water quality for the Kearny Point Industrial Park located on the southern most tip of the Kearny peninsula.

**Need for Project**

The general condition of the Water Facilities is very poor. The differential soil settlement on the Project Service Area has caused negative drainage slopes and damage to the underground piping, which requires constant repairs in order to keep the existing Water Facilities in just a minimally functional capacity. The paved areas of the Project Service Area are primarily uncurbed and have poor positive drainage, which results in water being improperly channeled and draining directly into adjacent waterways. Due to the obsolete and ineffective underground Water Facilities, stormwater on the site is not cleaned of impurities, as required by current water quality standards.

**Project Description**

The proposed water quality improvement project at Kearny Point Industrial Park will provide necessary and substantial improvements and enhancements to the water stormwater and sanitary sewer infrastructure systems at Kearny Point. The Project components include the demolition of existing substandard buildings and infrastructure removal and replacement of the deteriorating Water Facilities implementation of a necessary ground improvement program on soils on the site to minimize settlement that would damage the reconstructed Water Facilities and construction of an impervious cap through appropriate building foundations and asphalt-paved roadways that will mitigate and prevent any further contamination of the site the surrounding areas and the Hackensack River.

**Service Area**

These improvements shall be available to service all recreational boaters and fisherman along the Arthur Kill, between Perth Amboy and Elizabeth by providing a marina with approximately 200 slips, as well as those from outside the immediate area who wish to store their vessels in the marina. The marina will also service boaters from outside of this area who are passing through the Arthur Kill.

**Need for Project**

Water quality will be enhanced by the removal and amendment of existing contaminated materials within the existing cove, totaling approximately 130,000 cubic yards. Many of these contaminants are due to industrial processes and dumping which occurred along the Arthur Kill throughout the twentieth century. Guided by multiple soil boring throughout the existing cove, this project proposes the complete removal all contaminated sediment with appropriate bulkheads and slope stabilization to prevent further migration of contaminants into the Arthur Kill to improve the overall quality of the waterway for native species and recreational users.

**Project Description**

The project generally consists of the dredging of approximately 130,000 cubic yards of contaminated sediment from the Carteret Marina, and the construction of a bulkhead, wetlands mudflat enhancements, and bio-engineered slope stabilization. The sediment contains a number of contaminants, including arsenic and semi-volatile organic compounds. Contaminated sediment will be dredged and disposed of in accordance with all applicable NJDEP requirements.

**Need for Project**

The landfill cell construction is needed to provide for the environmentally sound disposal of Salem County's solid waste in accordance with the County and State solid waste management policies and regulations. The landfill cell will include a double-composite liner system designed and constructed in accordance with NJDEP regulations and the SCIA solid waste facility permit to protect ground water and surface water quality.

**Project Description**

The project includes an 8.3-acre landfill cell, which is one phase of a 31-acre landfill expansion. The landfill design includes a double composite liner system designed and permitted in accordance with NJDEP regulations.

**Service Area**

The Pennsauken Sanitary Landfill (PSL) owned and operated by the Pollution Financing Control Authority of Camden County (PCFACC) provides waste management services for the residents and businesses of Camden County. On a multi-year annual average, the PSL receives about 80,000 tons of type 10, 13, 13C, 23, 25, and 27 waste for disposal. At this tipping rate, the PSL has spare capacity for seven (7) years. The PCFACC is pro-actively engaged in long-term planning to continue serving the rate payers. For operational purposes, early construction of the proposed capital improvement will facilitate more effective site operations. The PCFACC is applying for financing assistance for the design and construction of the Phase VI Expansion.

**Need for Project**

The construction of the MSE berm in conjunction with the extension of the baseliner key-in trench will eliminate a pathway for leachate entering the storm- and groundwater resources. The interior side of the MSE berm will include a baseliner, keyed into the existing liner system creating a continuous barrier. Furthermore the MSE berm will incorporate stormwater management features and improve drainage adjacent to the proposed berm.

**Project Description**

The Project consists of the construction of a Mechanically Stabilized Earthen (MSE) berm along a 1,700 FT segment of the eastern boundary of the landfill and a baseliner key-in extension. In conjunction with an increased final elevation from 114 FT to 160 FT, the berm will increase the capacity of the Site E landfill by 819,000 CY. The berm and elevation increase are subject to a major modification of the solid waste facility permit. The MSE berm height will vary from approximately 0 to 50 feet above existing ground and will have a length of approximately 1,700 FT. The objective of the baseliner key-in extension is to raise the anchor trench above grade level, eliminating a potential pathway for leachate into the subsurface.

**Service Area**

The Gloucester Solid Waste Complex receives solid waste from both Gloucester County and outside the County.

**Need for Project**

A dual leachate collection system will be constructed to intercept, treat, and properly dispose much of the precipitation falling. Use of a double-liner system will prevent leachate leakage and protect the groundwater quality. In order to prevent Non-Point Source Pollution from the GCSWC, the new construction will include a Soil Erosion & Sediment Control Plan that will include stormwater run-on and run-off controls and sedimentation/detention basins to mitigate adverse impacts associated with site hydrology.

**Project Description**

The proposed project includes the construction of new landfill Cell 14 within the existing Gloucester County Solid Waste Complex (GCSWC). On April 20, 2012, NJDEP issued the Solid Waste Facility Permit for the Phase VII expansion, which included Cell 14. Cell 14 as approved by the NJDEP is about 13.75 acres in extent and will be constructed at the southern end of the landfill adjacent to the newly constructed Cell 13. The landfill was expanded in a phased manner and in its present configuration occupies about 112 acres (Cells 1 through 13). GCIA has utilized all the available permitted space in Cells 1 through 12. Landfilling operations are currently underway in Cell 13. Cell 13 construction was completed in April 2017.

Landfill Construction

**Priority List Rank**

1030

**County**

Gloucester

**Existing Population**

288,288

**Service Area**

The Gloucester Solid Waste Complex receives solid waste from both Gloucester County and outside the County.

**Need for Project**

In order to prevent Non-Point Source Pollution from the GCSWC, the new construction will include a Soil Erosion & Sediment Control Plan that will include stormwater run-on and run-off controls and sedimentation/detection basins to mitigate adverse impacts to site hydrology. A dual leachate collection system will be constructed to intercept, treat, and properly dispose much of the precipitation. Use of temporary rain covers also will direct precipitation to stormwater basins to be discharged to groundwater. Use of a double-liner system will prevent leachate leakage and preserve the integrity of the groundwater.

**Project Description**

The proposed project includes the construction of new landfill Cell 13 within the existing Gloucester County Solid Waste Complex (GCSWC). The landfill was expanded in a phased manner and in its present configuration occupies about 101.4 acres (Cells 1 through 12). GCIA has utilized all the available permitted space in Cells 1 through 11. Landfilling operations are currently underway in Cell 12. Cell 12 construction was completed in January 2015. On April 20, 2012, NJDEP issued the Solid Waste Facility Permit for the Phase VII expansion, which included Cell 13. Cell 13 as approved by the NJDEP is about 10.5 acres in extent and will be constructed at the southern end of the landfill adjacent to the newly constructed Cell 12.

**Service Area**

SCMUA provides Solid Waste Disposal and Recycling Services to the County of Sussex

**Need for Project**

Provide for the proper disposal of solid waste, thereby preventing non-point source water quality impacts.

**Project Description**

The construction of a Mechanically Stabilized Earthen (MSE) perimeter berm is proposed as part of this Stage 1 Landfill Expansion application. The MSE berm will enable the vertical expansion of the landfill to be established and maintained within the existing facility boundary and enable excavation work to be done within the existing landfill footprint. For Stage 1, the berm will be constructed at the north side of the existing landfill cells 2A/2B and progress west to cell 3B. The north berm is likely to be constructed with a "step" berm on the outside to allow for utilities and SCMUA personnel and access. The berm will transition from the step design to a single berm as it wraps around and continues south along the west side of cell 3B. The MSE berm height will vary from approximately 10 to 17 feet above existing ground surface elevations.

**Project Name, Number**

Two Rivers Water Reclamation Authority  
S340117-06  
Sanitary Sewer System - New

**Priority List Rank**

1035

**County**

Monmouth

**Existing Population**

100,000

**Service Area**

The Two Rivers Water Reclamation Authority (TRWRA) collects and treats the wastewater from six Member Communities (Boroughs of Monmouth Beach, Oceanport, West Long Branch, Fair Haven, Little Silver, and Shrewsbury), six Customer Communities (Red Bank, Rumson, Sea Bright, Tinton Falls, Eatontown, Shrewsbury Township), and two portions of Fort Monmouth in Monmouth County, NJ under its NJPDES permit number NJ0026735. Service areas contain both residential and commercial properties. The population served by TRWRA totals 85,570, including both Member and Customer Communities. The project will affect the Oceanport Section of the former Fort Monmouth property that is served by TRWRA; the property is planned to be reused and redeveloped as a result of the base closing. The population of Oceanport is 5,832.

**Need for Project**

The project is needed because the existing pump stations and sanitary sewer lines have been determined to be in disrepair and improperly designed. There are no re-usable sections of the existing sanitary sewer system without replacement of a significant portion of the system and replacement of existing pump stations that are not needed if the system is designed properly.

**Project Description**

The Sanitary Sewer Conveyance System Installation project will result in a new and improved sanitary sewer system in the Oceanport Section of what was formerly known as Fort Monmouth in Monmouth County New Jersey to provide sanitary sewer service for future developers to connect to and for the existing buildings to remain. The project will provide the main components of the sewer system including the North Interceptor Southwest Interceptor New East Area Pump Station and Gravity Sewer Extensions to the existing pump stations to be abandoned.

**Need for Project**

This project will reduce green house gas emissions in several manners This project fueled by scrubbed landfill gas will destroy methane produced by the landfill. The generator fuel will be scrubbed of sulfur compounds siloxane compounds particulate matter and moisture thereby reducing these constituents to de minimis amounts. By generating two (2) megawatts of electricity the CMCMUA is supplying the need for two (2) megawatts of electricity that would otherwise be generated by fossil fueled plants. This project will result in benefits other than direct reductions of greenhouse gas emissions The engines will reduce atmospheric discharge by over 61000 metric tons of CO2 equivalents. Two (2) less megawatts of power will be necessary for other plants to generate. Sulfur compounds siloxane compounds and particulate matter will be also reduced from landfill emissions. Jobs are always maintained or created by construction expenditures. This project also provides added benefits As this project will not be eligible for net metering andor net metering criteria projects no other funding is currently available. This project can be easily replicated. We have had many visitors to our site to see how we have constructed our first electrical generating plant for their own plans for construction. All gas is metered and tested which will result in measurable data. The project is not only ready to proceed but has already completed the required feasibility studies by PJM and ACE. The CMCMUA has the experience and the capacity to complete this project as we have already constructed a three (3) engine 450 kw electrical generating plant which has been in operation since March 2007.

**Project Description**

This project will be to construct a two (2) megawatt generating plant at the Cape May County Municipal Utilities Authoritys (CMCMUA) Landfill and Recycling Complex. Landfill gas a renewable energy will be used as fuel for the engines. Since the landfill site is already generating enough electricity to be self sufficient there is no need for net metering and this additional generation will be sold back to the grid.

**Need for Project**

The project will re-create a surface water course that had disappeared due to prior industrial use where the former stream was placed within a below grade pipe system along with completion of soil remediation to remove contaminants currently impacting ground water. Additional stormwater controls will be provided to improve water quality at the property along with various utility infrastructure

**Project Description**

The proposed project will update the stormwater collection system including re-creating a vegetated stream channel lost to industrial use new sanitary sewer collection system and provide for remediation of contamination in accordance with NJDEP standards.

**Need for Project**

The removal of silt from Colonial Lake improved the water quality of the lake provided rehabilitation of the overall stormwater management capability re-established fish habitation in the lake and enhanced the dissolved oxygen levels and increased the amount of aquatic biota. The silt was stockpiled on a 28.3 acre site. Environmental investigations of the stockpiled material have revealed the presence of polynuclear aromatic hydrocarbons at concentrations above the soil cleanup criteria requiring either removal or capping.

**Project Description**

The proposed project includes either the removal and off-site disposal of contaminated spoils or the capping of the spoils on-site or a combination of remedial activities.

**Need for Project**

Stormwater Management - The proposed stormwater collection system collects and conveys the stormwater runoff from the site to four new outfalls discharging to Mill Pond. The proposed stormwater collection and conveyance system consists of approximately 4,000 linear feet of 15-inch high-density polyethylene (HDPE) pipe, 900 linear feet of 18-inch HDPE, 1,200 linear feet of 24-inch HDPE and 100 linear feet of 30-inch HDPE, as well as associated catch basins, manholes, scour holes and water quality treatment units (Vortechs by Contech, for 50% TSS removal) which are necessary to provide adequate stormwater management for the proposed project. In addition, approximately 13,700 linear feet of concrete curb and 31,200 square yards of asphalt pavement are required to convey stormwater runoff throughout the site. Stormwater Treatment - The project site is located on Mill Pond, upstream of Lake Farrington, which is drinking water supply source. Prior to discharge, the runoff is treated via stru

**Project Description**

(Carryover SFY2015) - This project proposes a mixed use of the old Michelin Tire Company site along Ford Avenue. The project will consist of 350 residential midrise apartments and townhouse units a restaurant 2000 square feet of retail space a residential club facility and leasing office including a town square and waterside pathways. The existing 12-inch sewer system on-site will be abandoned in-place and replaced with a new 12-inch PVC sanitary sewer main which will provide service to the buildings.

**Need for Project**

A site along approximately two miles of the Raritan River waterfront has concerns of contamination from acids and radiological soils to the river groundwater and wetlands. The project is needed to remediate the soils and groundwater to restore the site and eliminate future contamination.

**Project Description**

The proposed project includes the remediation of an approximately 400 acre waterfront tract that requires infrastructure and environmental remediation to clean up groundwater and radiological soils and other contaminants that potentially effect ground and surface waters.

**Need for Project**

The redevelopment of the former GM Linden plant will result in significant improvement to the States water quality by both infrastructure improvements and site re-mediation activities. Infrastructure improvements will include creation of new and replacement of old storm water conveyances ensuring proper handling and transportation of storm water away from impervious surfaces and into the existing municipal system the installation of catch basins that will reduce TSS and sediment transport to surface water and complete replacement of the sanitary system that served the GM plant with new systems that will prevent infiltration of wastewater to groundwater. Site remediation activities will include re-mediation of groundwater contamination originating from the GM site excavation of contaminated soil and other sources of groundwater contamination and installation of engineering and institutional controls to protect water quality. Linden Development anticipates use of sustainable building components including solar panels and low TSS roofing to mitigate sediment runoff.

**Project Description**

Demolition environmental re-mediation new infrastructure and redevelopment of a shuttered General Motors Plant at 1016 W. Edgar Rd. (US Rte. 1 & 9) in Linden New Jersey. It is about 13 miles from Manhattan adjacent to a major thoroughfare. The site is approximately 102 contiguous acres in size and will be re-developed into mixed-commercial uses. This revitalization project will bring a significant number of sorely needed jobs to the area and will dramatically increase tax income for the City and the State. This project is fully supported by the City of Linden Mayors office and administrative office.

**Need for Project**

A former chemical site requires remedial measures to support brownfield development and provide significant environmental benefits. Placement of an impermeable cap along with installation of stormwater controls will ensure that rain water will not mobilize contaminants and pollute groundwater or the adjacent waterways.

**Project Description**

The proposed project includes clean-up of soils and groundwater installation of an impermeable cap and cover system installation of stormwater controls.

**Need for Project**

The Shackamaxon Lake has not been dredged since 1997. Since the sediment has accumulated in many areas to the point where it is above the surface elevation of the Lake. The Lake is no longer able to serve the purpose of sedimentation of pollutants prior to flowing downstream. Cleaning the Lake and restoring its storage capacity will increase the quality of the water flowing into the Middlesex Water Company Reservoir that is less than one mile downstream of the dam and will limit rainfall induced flooding downstream. Removing and replacing the inadequately sized bridges with properly engineered bridges will eliminate bank erosion around the bridges and will reduce the amount of silt accumulation in the storage volume from these areas.

**Project Description**

The proposed project includes dredging accumulated sediment that comes from upstream roads lawns and stream banks stabilization of eroded bank areas and removal and replacement of inadequately sized RCP pipe vehicand pedestrian bridges.

**Need for Project**

The Riverview at Delaware Station development project will reinvigorate Phillipsburg. The area is contaminated. It has a Contaminated Historic Fill Chlorinated Solvent Impacted Soil and Ground Water TPHC Impacted Soil Impacted Subsurface Soil Gas Vapor Suspected Gasoline UST Abandoned Seepage Pit and Asbestos impacts.

**Project Description**

The project involves the remediation of an old railway train station and the building of 449 town house residential units on the site. The project seeks funding to embark on the remediation of the site as well as construction of storm water remediation systems and drinking water and waste water systems. The developers have done a storm water plan according to NJDEP storm water regulations. Storm water management will be achieved on the site through the use of a conventional storm water collection system of 8230 linear feet of reinforced concrete pipe and 66 storm water inlets. The collected storm water is routed through two detention/infiltration basins and one retention basin before being discharged into the Delaware River. Through the review of local county and state regulatory agencies the system as designed meets the required regulatory design standards. This project has received all state county and municipal and DEP approvals based on current plans. The project involves a land remediation process. Areas needing remedial action include the Contaminated Historic Fill Chlorinated Solvent Impacted Soil and Ground Water TPHC Impacted Soil Impacted Subsurface Soil Gas Vapor Suspected Gasoline UST Abandoned Seepage Pit Closure Railroad Tie removal and disposal and Asbestos Removal. This involves a number of processes including Strip Topsoil - 1 depth General Excavation Fill compaction Rough Grade R.O.W. Landscape Berm Grading Detention Basin Grading Basin Topsoil Return Subgrade after utilities Fine grade topsoil return Rough Grade Open Space Truck in fill Excavation of loose material and Re-Install & Compact Material
