

Contaminated Site Remediation & Redevelopment

Learn More About CSRR!

SITE CONTAMINANTS

Substances like heavy metals, gases, oil, herbicides, pesticides, and long-lasting chemicals can pollute and make them dangerous. They can harm our health and wreck the environment, it's important to clean those substances up to keep everyone safe.

CONTAMINATED SITE REMEDIATION & REDEVELOPMENT

Contaminated Site Remediation & Redevelopment is a program that focuses on cleaning up contaminated areas in New Jersey and turning them into safe, usable spaces again. This is important because it means people can grow up in cleaner communities with more parks, homes, and places to enjoy.

CLEAN UP & PREVENTION

CSRR uses remediation methods like digging up contaminated soil, removing harmful gases from the ground, and cleaning up dirty water to make it safe again. These techniques help stop pollution from spreading, protect our health, and make sure our environment stays clean and healthy for everyone to enjoy.

HEALTH IMPACTS

Minor Issues: Irritated Skin, Digestive Issues, Headaches, Eye Irritation, Fatigue

Major Issues: Cancer, Breathing Issues, Brain Disorders, Organ Damage, Fertility Issues

COMMUNITY INVOLVEMENT

Citizens can prevent site contaminations by properly disposing of household chemicals and participating in community clean-up events. By raising awareness about environmental issues and advocating for pollution prevention measures, citizens contribute to keeping their communities clean and safe.
